STEVEDORES: Advise before 1600 hrs. ETA in order to commence 1800 hrs. same day or 0800 hrs. next day.

MEDICAL: No advance notice except in case of serious illness to be included in arrival cable, ample hospital facilities available.

TANKERS: Discharge lines 6 in., 8 in., 10 in., 12 in. No slop facilities.

Holyrood Refinery: 47.23 N. 53.08 W.

A bunkering port of Ultramar Canada Ltd., situated in the South Arm of Holyrood Bay at the head of Conception Bay, S.E. coast of Newfoundland.

Channel depth: 35 ft. right up to wharf. Tidal range is 4 ft. – 5 ft. at springs, and 3.5 ft. at neaps. Good anchorage in Holyrood Arm.

One 275 ft. long berth, depth alongside 34 ft. 6 in. high water, 32 ft. low water, with moorings for Bow and stern lines on shore. Situated at Ultramar Refinery. 3 in. water mains for fresh water.

DENSITY: 1025.

FRESH WATER: Fresh water available all berths. Order through Agent. Rate approx. 25 t.p.h.

FUEL: Oil delivered by pipeline at 8 berths, and by tank trucks at all other berths. Major grades of bunker fuel and diesel as well as marine lubricants can be obtained through suppliers.

CONSULS:

Brazil	726-7702	Netherlands	726-2961
Denmark	726-8000	Norway	579-5006
Dominican Rep.	579-5081	Portugal	726-6958

Iceland	722-4270	U.S.A.	726-4524

REPAIRS: Most deck and engine repairs possible.

DRY DOCKS: St. John's Dry Dock (owned by Marine Atlantic Inc.). Length at coping head, 173.9 m.; at floor head, 173.2 m.; maximum length of keel blocks 167.1 m.; width at coping, 23.3 m.; depth of water over sill, 8.2 m.

Machine shop is equipped for major repairs to hulls machinery.

Synchrolift designed to lift ships up to 3,640 tonnes out of the water.

SURVEYORS: Lloyd's Register, P.O.Box 5054, St. John's, NF, A1C 5V3. Tel: (709) 726-0543, (709) 368-2538 (Residence).

GANGWAY/DECK WATCHMEN: Usually ship's crew. Ship's gangway used.

OPENING/CLOSING HATCHES: Stevedores or ship's crew whichever to ship's advantage.

CERTIFICATES:
Construction Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Load Line Certificate.
Cargo Gear Book.

CUSTOMS ALLOWANCES: Tobacco: Each man 200 cigarettes per week. Wine and Spirit: Each man 40 oz. wine or spirits, per week.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Distance 4 miles served by Air Canada and Canadian Pacific.

TIME: GMT less 3.5 hours. First Sunday in April clocks advanced 1 hour. Last Sunday October clocks retarded 1 hour.

HOLIDAYS: New Year's Day; St. Patrick's Day; Good Friday; St. George's Day; Commonwealth Day; Discovery Day; Memorial Day; Orangemen's Day; Labour Day; Armistice Day; Christmas Day; Boxing Day.

Except for Easter and Christmas, the above holidays are normally taken on the nearest Monday to the festival date.

POLICE/AMBULANCE/FIRE: Police 722-5111; Ambulance 726-3037; Fire 722-1234. Emergency No. 911. Ports Canada Police 772-4669.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard, Search and Rescue (St. John's, Newfoundland). Tel: (709) 772-5151.

SERVICES: Compass adjusting, radar repairs, RT repairs, gyro compass repairs, all types electronic equipment repaired. Divers available for surveys and underwater repairs.

SHIP SUPPLY SERVICE: *Offshore Services:*
1. Seabase Limited, P.O.Box 5099, Suite 809, Atlantic Place, St. John's, Newfoundland A1C 5V3.
2. Harvey Offshore Services, P.O.Box 5128, St. John's, Newfoundland A1C 5V6.
3. Petro Canada Exploration Ltd., P.O.Box 5190, St. John's, Newfoundland A1C 5V5.

Helicopter Services: Helicopter services are available from St. John's Airport just minutes from the St. John's waterfront. These are operated by private interests as follows:
1. Sealand Helicopters Ltd., P.O.Box 5188, St. John's, Newfoundland A1C 5V5.
2. Universal Helicopters, P.O.Box 9025, Station "B", St. John's, Newfoundland A1A 2X3.

SHORE LEAVE: No Restrictions.

CREW IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: BFI Waste Systems, Sugarloaf Road. Tel: 753-3030.

Newfound Disposal Systems Ltd., 341 Portugal Cove Road. Tel: 739-9302.

A 6 cu.yr. container can be provided onboard or alongside.

Charges - Delivery - $80, Lift - $80, Incineration - $105, and Transportation - $157.

WASTE OIL DISPOSAL: Crosbie Industrial Services Ltd., P.O.Box 9341, St.Johns. Tel: (709) 722-8212/3. Fax: (709) 739-7540, can provide a wide range of services including septic waste disposal, sludge removal, sump and tank cleaning, trucking and cleaning services.

CURRENCY: Canadian Dollar (C$).

REGULATIONS: Fishing ships must advise of weekend arrival on Friday so that permit to take supplies can be obtained from Federal Dept. of Fisheries.

AUTHORITY: St. John's Port Corporation, P.O.Box 6178, 3 Water Street, St. John's, NF, A1C 5X8, Canada. *Tel:* (709) 772-4664, 772-4665, 772-4666. *FAX:* (709) 772-4689. *Contact:* D.J. Fox, Port Manager and Chief Executive Officer.

Captain H. Flight, Harbour Master. *Tel:* (709) 772-4667, 772-4668.

Lieut. M.L. Kenny, Director of Ports, Canada Police. Tel: (709) 772-4669.

SARNIA, Ontario: 42.59 N. 82.25 W. **(See Plan)**

Refer to "St. Lawrence Seaway" for important general information.

DOCUMENTS: All documentation carried out by Authorities in Montreal. Only when vessels have called at United States port after departing Montreal will any changes in documentation be necessary, which will consist of a United States Customs Clearance Certificate, to be available on board.
Immigration Papers.
1 copy QS2 (Health Certificate).
3 Stores Lists.
Crew Personal Effects List.
Customs Clearance.
All of the above will have been stamped in Montreal.

PILOTAGE: Notice of ETA should be given to Pilots at least 12 hours before arrival at Sarnia to avoid delays. Accommodation ladder and pilot ladder should be rigged in readiness.
RESTRICTIONS: Navigation season – ice forms about December 15th and breaks up about the middle of March. Vessels size restricted by Seaway locks.
MAX. SIZE: Length 730 ft., beam 75 ft. 6 in., draft 25 ft. 6 in.
HEALTH: Pratique granted at Montreal.
RADIO: Sarnia Radio, call sign VBE, communicate on either AM or FM radio telephone.
TUGS: Available. Tel: Sarnia 336-5588.
BERTHING: Over 2 miles of waterfront including main wharves listed below:

C.N.R. Dock, length 1,100 ft., depth alongside 23 ft.; Empire Hanna Coal Dock, length 900 ft., depth alongside 19 ft.; Elevator Dock, length 900 ft., depth alongside 27 ft.; Dept. of Transport Dock, length 1,045 ft., depth alongside 27 ft.; Reid Aggregate Dock, length 500 ft., depth alongside 26 ft.; Imperial Oil Docks – Upper Dock, length 592 ft., depth alongside 23 ft.; Fueling Dock, length 928 ft., depth alongside 26 ft.; Special Products Dock, length 284 ft., depth alongside 26 ft.; Lower Dock, length 720 ft., depth alongside 23 ft.; Polysar Corp. Dock, length 600 ft., depth alongside 26 ft.; Dow Chemical Dock, length 680 ft., depth alongside 26 ft.; Sun Oil Dock North Dock, length 600 ft., depth alongside 26 ft.; South Dock, length 500 ft., depth alongside 26 ft.; Shell Oil Dock North Dock, length 1,000 ft., depth alongside 26 ft.; Middle Dock, length 500 ft., depth alongside 26 ft.; South Dock, length 500 ft., depth alongside 26 ft.

MEDICAL: Hospital facilities at Sarnia. All assistance available.
DENSITY: Fresh water.
FRESH WATER: Available at all berths.
FUEL: All grades available from Imperial Oil and Shell Co. berths.
REPAIRS: Hull, boiler and engine repairs can be effected. No dry docks.
AUTHORITY: Transport Canada, P.O.Box 325, Sarnia, Ontario,Canada N7T 7J2. *Tel:* (519) 337-5121. *Contact:* W. D. McCart, Harbour Master.

SAULT STE. MARIE, Ontario: 46.28 N. 84.22 W.

(See Plan)

Refer to "St. Lawrence Seaway" for important general information.
Note: The water depths quoted are at extreme low water, normally more water available.
DOCUMENTS: See "Montreal".
PILOTAGE: River or local Pilots available on 24 hours' notice. U.S. Corps of Engineers, Sault area operate and control St. Mary's River Falls Canal and regulate traffic through all locks in both cities.
HEALTH: Board of Health Officers can make a call to the ship.
RADIO: Good ship-to-shore telecommunication available through Department of Transport Radio Station (UBB 800), Canadian Pacific Telecommunications and Canadian National Telecommunications. United States Coast Guard maintain fully equipped Coast Guard Base and have radio communication for all frequencies in entire St. Mary's River and Harbour area; they are available immediately for information pertaining to shipping in area and movement of ships in River.
TUGS: Harbour tugs available when required, but prefer advance notice order avoid delays. In Sault Ste. Marie, Ontario tugs available.
BERTHING: Transport Canada Dock, "L" shaped pier, length 500 ft. on East side 18 ft. deep. On South side, the river side, it is 356 ft. long, 20 ft. deep. This dock is used for discharging general cargo. No crane facilities for loading and unloading, unless ship's gear is used, mobile cranes have to be brought in. No tug required to berth or unberth a ship at this dock under normal weather conditions.

Algoma Steel Corporation Dock. Situated above Canadian Canal with following berths available:

(a) Coal and ore dock with a combined length of 2,800 ft.
(b) Commercial dock on West side of slip 400 ft. long.
(c) Limestone dock, "L"-shaped dock on West side 355 ft. long and on South side 450 ft. For loading finished steel.

All 3 Algoma Steel Corporation docks 21 ft. 6 in. deep. Only material consigned to or being shipped from Algoma Steel Corporation have access to these docks.

Parks Canada Pier: Northeast pier at Canadian Canal which could be used for berthing ships and also used occasionally to load or unload cargo into trucks. This pier approx. 500 ft. long and mobile lifting equipment could be utilised here if necessary. Depth of water 18 ft. Pier mostly used as tie-up for making minor repairs afloat, for medical purposes, or waiting for berth at Algoma Steel Corporation Dock. Berthing and unberthing carried out any time, Sundays and holidays with exception of extreme bad weather, high winds, or fog. Canal Hours 0700-2300.

STEVEDORES: Available for loading and unloading at any berths in Sault Ste. Marie area.
TANKERS: Gulf Oil Canada Ltd. Dock: Berthing length 400 ft. Depth 18.5 ft. The West side is the Government Dock, depth 22 ft. 12 tanks (capacity 12,000,000 gallons). For fuel oil and gasoline.
FRESH WATER: Available either by hose or by pumper truck at any dock.
FUEL: Diesel bunkers available at any berths via tank trucks. No bunker "C" facilities available at Sault St. Marie.
REPAIRS: Normal ship repairs are carried out on very short notice if required.
AUTHORITY: Canada Ports Corporation, 99 Metcalfe Street, Ottawa, Ontario K1A ON6. *Contact:* Senior Port Manager.

Ron Lamon, Harbour Master. Tel: (705) 946-0800.

AGENT: Algoma Steel Inc., Marine Division, P.O.Box 1400, Sault Ste. Marie, Ontario, Canada P6A 5P2. Tel: (705) 945-3060. Fax: (705) 945-3112.

SEPT ILES (Seven Islands), Quebec: 50.11 N. 66.23 W.

(See Plan)

LOCATION: The City of Sept-Iles is located on the N.E. side of the Baie des Sept-Iles, a sheltered circular basin screened to seaward by 7 small islands, on the North shore of the St. Lawrence River in Lat. 50° 11′ N. and Long. 66° 23′ W.
DOCUMENTS: The following inward papers are to be completed prior to arrival and presented to custom officer on boarding:

Health	QS-2001 Quarantine Form	in duplicate
Immigration	IMM-200 Crew List	in triplicate
Customs	A-6 Report Inward	in triplicate
Customs	Y-14 Crew Declaration	in triplicate
Customs	E-1 Ship's Stores	in triplicate
Clearance from last port		

The above forms will be supplied by mail on request.

Note: On Canadian or International Crew Lists, black pen or typewriter must be used. Blue is not acceptable because of copy reproduction difficulties.

Designation and dates of expiry of all major trading certificates is required for outward clearance.

Arrangements have been made so that loading of iron ore can commence before customs entry has been completed, and customs outward papers will be completed so as not to interfere with immediate departure after completion of loading.

Tankers: Charterers or Operators nominating tankers for discharge at Canadian ports should ensure that the vessel is provided with a "Non-Canadian Ship's Compliance Certificate" prior to sailing for Canada. All major Classification Societies are authorised to issue such a certificate.
DOCKING MASTER: The use of a Docking Master is compulsory for vessels docking, shifting and leaving all docks. When docking on arrival, Docking Master will board inside harbour limits in area of 50° 10′ N. and 66° 24′ W. Ships normally proceed to anchorage without assistance, which can be provided on request.

All vessels shall provide rope ladder for boarding Docking Master on arrival and disembarking Docking Master on departure. Ladder must be well secured by adequate lashings to rail or deck.

Power hoists, in good order and properly attended, are acceptable for boarding. In freezing temperatures however, they should not be used unless electrically powered.

Shipmaster's Report: August 1983: With all bridge and engine room equipment working well, we berthed in thick fog (visibility 50 yards – 100 yards). Pilot and tugs most efficient.
ANCHORAGE: Ships should anchor at least 1 mile off dock to facilitate ship movements in bay and should not proceed closer than 1 mile from dock while waiting for Docking Master to board. Vessels may be requested to shift anchorage if their position interferes with normal docking approaches.
MAX. SIZE: Iron Ore Co. Loading Dock (Old): Length 800 ft., beam 130 ft., draft 43 ft. Iron Ore Co. Loading Dock (New): Length 1,600 ft., beam 175 ft., draft 57 ft. Imperial Oil Dock: Length 775 ft., draft 40 ft.

Vessels arriving in ballast to load at No. 2 Dock are requested to present in accordance with the following recommended arrival drafts to ensure safe handling procedures, keeping in mind indicated ship loading rates and ship loader clearances. These drafts are intended to mean minimum draft aft with normal vessel trim.

Summer Deadweight	*Recommended Arrival Drafts*
Under 30,000	4.0 m. to 4.6 m.
30,000 to 40,000	4.6 m. to 5.2 m.
40,000 to 60,000	4.9 m. to 5.8 m.
60,000 to 75,000	5.5 m. to 6.4 m.
75,000 to 100,000	6.1 m. to 7.3 m.
100,000 to 150,000	8.5 m. to 11.0 m.
150,000 to 200,000	11.0 m. to 13.0 m.
200,000 to 250,000	13.0 m. to 14.0 m.
250,000 and over	14 m. and over

Any vessels unable to meet these suggested drafts due to insufficient ballast capacity, anticipated deballasting problems, etc., should state this in 48 hours ETA, along with estimated deballasting time.

Usually ships berth port side to for iron ore loading.

Note: Vessels have berthed with lesser draft than recommended when weather conditions permit.

HEALTH:

1. Vessels calling at Canadian ports no longer require Radio Pratique unless:
   (i) there is a condition of health irregularity aboard or,
   (ii) if vessel has called at an infected port during this same voyage or,
   (iii) if Derat Certificate is no longer valid or will soon expire.
2. Only vessels to which any of the above conditions apply, should cable "Quarantine Quebec" giving name of vessel, last port of call and detail regarding health conditions aboard.

RADIO: Sept-Iles Radio, Canadian Coast Guard Station, Call sign "VCK", Tel: (418) 968-3118, operates 24 hours a day.

CW	Calling frequency	500	kHz	
	Working frequency	420	kHz	
RT	Calling frequency	2182	kHz	Ch. 51
RT (Working Frequency)	Transmitting	2514	kHz	Ch. 57
	Receiving	2118	kHz	Ch. 57
VHF	Calling Frequency	156.8	MHz	Ch. 16
VHF (Working Frequency)	Transmitting	161.9	MHz	Ch. 26
	Receiving	157.3	MHz	Ch. 26
	Transmitting	161.8	MHz	Ch. 24
	Receiving	157.2	MHz	Ch. 24
	Port Operations	156.6	MHz	Ch. 12
Traffic Lists	420 kHz – Odd hours plus 50 minutes GMT			
	2582/161.9 0240 UTC – Every 4 hours			

Weather, Ice Reports and Notice to Shipping: A continuous marine broadcast is available on VHF Ch. 21, 161.65 MHz. and Channel 83B, 161.775 MHz. Recorded information is updated continuously as received 24 hours per day.

Extended VHF communications facilities are also available in Mingan 50° 16′ 24″ N., 64° 07′ 56″ W. and Natashquan 50° 08′ 40″ N., 61° 48′ 00″ W.

Ore Carriers:

Advising Arrival: Cable address "Iroccan" Sept-Iles.

Please advise ETA 96 hours, 72 hours, 48 hours and 24 hours out, including in 96 hours ETA the amount of cargo required in metric tons.

Vessels sailing in ballast from Montreal, Sorel, Three Rivers or Quebec should send ETA on departure from these ports with corrected ETA later if necessary.

Advise with 24 hour ETA probable ballast pumping time required on arrival. If any change in ETA or in ballast situation should occur after 24 hour ETA, it should be advised as soon as possible.

The Marine Services office is equipped with VHF radio on 156.6 MHz Channel 12, and also 156.35 MHz, Channel 18A. Vessels calling at Sept-Iles should be fitted with these VHF Channels for efficient harbour communications.

Use of Channel 12 restricted to vessel movements only.

Docking Instructions: Ships are to request instructions 8 hours before arrival. These instructions will be given as promptly and concisely as conditions permit.

Marine Services is set up to receive radio messages on 24 hour basis. Radio traffic by ships at anchor is permissible in Sept-Iles harbour area.

TRAFFIC REGULATIONS: *Traffic Regulations for the Gulf and River St. Lawrence:*

1. Eastern Canada Traffic Zone Regulations (ECAREG)
   The zone extends from outside of Belle Isle and Cabot Straits to 66° 00′ W.

   In general, it states that a ship crossing seaward boundary, either entering or leaving the zone, must report to ECAREG via any Canadian Coast Guard Radio Station. Clearance to move within the zone must be obtained from ECAREG and there are "calling-in-points" where a ship has to report.

   There are also additional reports to be made in case of any defects in machinery, navigational aids, accidents, stranding, pollution, etc.
2. The St. Lawrence Waterway Traffic Regulations.
   The zone extends from 66° 00′ W. to Montreal.

   In general, the regulations state that a ship must report to the marine traffic regulator by contacting Channel Escoumins on 156.7 MHz, Channel 14 before entering Zone 1. (i.e. crossing 66° 00′ W.) The port of Sept-Iles is in Zone 1.

   Ships have to maintain a continuous radio watch on Channel 14, except when alongside. Authorisation to communicate on another Channel has to be requested from Channel Escoumins, unless the vessel is equipped with two radios.

   Clearance must be obtained from Channel Escoumins to move within the harbour.

TUGS: Tug service is compulsory at Iron Ore Company docks and Wabush Mines Docks. Two tugs of 5,400 h.p. available.

All communications between tugs and Pilots are by VHF. Tugs operate on 156.9 (Channel 18A).

All ships should be equipped with wire cable towing line with nylon pendant for tug use in undocking. Ships not so equipped will be provided with tug tow lines. Docking Master to determine adequacy of ship's tow lines.

CRANES: Heavy-lift cranes available. Max. capacity 150 tons.

MEDICAL: Masters are requested to have ready for inspection ship's Derat Certificate.

All crew members requiring medical attention should be available upon ship's arrival. Sick Mariners dues no longer apply for treatment of seamen. Agent will provide form of application to be given to doctor for crew members requiring medical attention.

BERTHING:

Berth	Berth No.	Wharf length (ft.)	Depth at Low Water (ft.)	Remarks
Ports Canada – Facilities				
Pointe-aux-Basques	7	600	25	Small open section at East end of Shed No. 1 2 General cargo sheds 1 Bulk shed
Oil Dock	8	300	38	Dolphins increase capacity for berthing. Max. size 60,000 d.w.t.
Mgr.Blanche Wharf	14	800	25	General cargo berth. 2 sheds available.
Town Wharf*	20	381	16	Used by coastal fishing boats.
Pointe Noire Wharf	40	853	45	La Relance Wharf offering storage and transit area (30 acres), crane, ship unloader, Ro-Ro ramp and 655 acres of land for port orientated development
	41	460	33	Railcar/truck ferry terminal. Also used for general cargoes.

*This wharf has been transferred to Fisheries and Oceans Canada.

Berth	Berth No.	Wharf length (ft.)	Depth at Low Water (ft.)	Remarks
Private Facilities				
Wabush Mine Co.				
Mooring Dock	30	650	36	General cargo and mooring berth (East end).
Loading Dock	30	950	36	Iron Ore loading berth (West end). Loading ore by means of 2 travelling boom conveyors. Total capacity 8,000 long t.p.h.
Iron Ore Company of Canada				
Waiting Berth				
Terminal	5	800	34	Mooring and general cargo receiving berth (West)
Southeast Berth				
No. 1 Dock	4	800	37	Waiting berth.
No. 2 Dock	2	1,600	60	Total effective mooring length approx. 1,600 ft. 2 travelling shuttle boom loaders with 764 ft. of travel. Max. design capacity 7,500 long t.p.h. each

See also following information on The Ore Company berths. Vessels usually berth port-side alongside.

Number 1 Dock: 2,200 ft. (670 m.) dock divided into 3 berths. The S.E. or Loading Berth is 800 ft. (224 m.) in length and is fendered with large truck tyres mounted over the dock face. The adjoining 800 ft. (244 m.) mooring or waiting berth is also fendered with large truck tyres. The third and last section, 600 ft. (183 m.) in length, is a Government Berth used for general cargo.

Dredged depth at the loading berth is 37 ft. (11.3 m.) at MLW, 34 ft. (10.4 m.) at mooring berth. Designed depth at the Government Berth is 25 ft. (7.6 m.). Number 1 Dock is fitted with bollards spaced at 50 ft. (15 m.) centres.

Number 2 Dock: Deepwater berth is located some 900 ft. (274 m.) S.E. of original dock and extends approx. 230 ft. (70 m.) further into bay. This single berth is open cell construction with 9 parallel cribs giving total berthing face of approx. 925 ft. (282 m.). A tenth transfer house crib, inset from dock face and a dolphin, both structures fitted with mooring winch and bollards, are located approx. 150 ft. (46 m.) and 350 ft. (107 m.) respectively from N.W. corner of dock face. Two additional dolphins, also fitted with mooring winch and bollards, are situated in a line approx. 150 ft. (46 m.) inside dock face and approx. 100 ft. (30 m.) and 400 ft. (122 m.) from S.E. corner of dock. Dolphins are joined to main dock structure by catwalks. Total effective mooring length is approx. 1,600 ft. (488 m.). Cribs are fendered to waterline with triple sets of extra large truck tyres. Dredged depth is 60 ft. (18.0 m.) MLW. Dock is fitted with 2 travelling shuttle boom loaders with 764 ft. (233 m.) of available shiploader travel, and a maximum design capacity of 7,500 long t.p.h. each. Number 2 Dock is fitted with bollards spaced at 100 ft. (30 m.) centres. Recommended maximum airdraft for this berth is 17.0 m.

Tidal characteristics		
	Neaps	1.68 m.
	Springs	3.05 m.

TANKERS: Berth at Oil Dock. (Max. draft 38 ft.) and Ports Canada facilities at Pointe-aux-Basques.

FRESH WATER: Can be supplied at the approx. rate of 35 t.p.h. Hose is available on the dock but ship's crew are required for connecting and disconnecting.

FUEL: Available on an emergency basis only and subject to inventory situation. All enquiries should be directed to BunkerEsso Montreal.

REPAIRS: Major repairs, except dry dock, can be effected at Sept-Iles. Repairs to be conducted under the supervision of ships' personnel.

CUSTOMS ALLOWANCES: Each crew member is allowed to retain in his possession for his personal consumption 200 cigarettes, 40 ounces of spirits, 50 cigars or 2 pounds of pipe tobacco. All quantities must be declared on Crew Declaration form Y-14 along with all personal effects such as radios, cameras, tape recorders, binoculars, etc., plus serial numbers of each such item.

Canadian seamen returning from voyages to American or other foreign ports are permitted $50 value of duty free merchandise every quarter for periods outside Canada of over 48 hours and $150 once a year for periods outside Canada of 7 days.

TIME: Sept-Iles maintains Eastern Standard Time (GMT minus 5) from last Sunday in October until first Sunday in April. Eastern daylight time (GMT minus 4) is maintained the balance of the year.

SHORE LEAVE: Crew not allowed ashore until permission granted by the authorities.

GARBAGE DISPOSAL: Disposal of "international" garbage is not permitted at Sept-Iles.

WASTE OIL DISPOSAL: There are 3 companies which can service vessel's needs.

Sani Mobile, Tel: (418) 968-9862. Fax: (418) 962-9461.
S.O.S. Marine Services, Tel: (418) 968-3738.

SEAMAN'S CLUBS: Stella Maris, Pointe-aux Basques Wharf, Sept Iles. Tel: (418) 962-7310. Hours: Daily from 1000 – 1200, 1400 – 1600 and 1900 – 2100. Services: Postage, post cards, stationery, refreshments, international telephone, currency exchange, book exchange and free magazines, table tennis and darts, shopping assistance, football matches arranged.

CURRENCY: Canadian Dollar.

SAFETY: It is compulsory to have a net under the gangway.

GENERAL: *Customs of the Port:* Ships will be loaded in regular turn of vessels, subject to cargo availability and providing they present with starting hatches open and do not have ballast pumping which will exceed expected loading time. This loading time should be calculated at the rate of 6,600 metric tons/hr. at Dock No. 1 and 10,000 metric tons/hr. at Dock No. 2.

For establishing turn of vessels, a ship will be considered "arrived" at the time of crossing line between Pointe au Corbeau and Pointe aux Basques.

Loading plans should be presented to the loading foreman on arrival.

Ore-Oil and OBO vessels having discharged petroleum products at last port must advise this in first ETA. If gas-free certificate not already granted by independent chemist, arrangements will be made to have chemist attend. The arrangement for such service implies no liability whatsoever on the part of Iron Ore Co. of Canada Marine Services. Expense for ship's account.

Ships will leave the loading dock immediately upon completion of cargo and secure for sea in the bay. If any delays occur on documentation, crew members missing, etc., ship will leave the dock and all matters will be handled from anchorage.

Vessels must have main engine ready when alongside loading docks. Permission to perform work that would affect the readiness of the vessel to leave berth in case of emergency must be obtained from the Port Authority before proceeding with such work.

Services: Most supplies can be readily obtained at Sept-Iles. Quantity orders should be included in 48 hour ETA. Requests for bonded stores should be included in 96 hour ETA.

Launch service is available on request through Marine Services.

Ice Navigation in Canadian Waters: During the Winter, ECAREG CANADA (East of 66° 00′ W.) and the St. Lawrence River Vessel Traffic Management (VTM), West of 66° 00′ W. to Montreal, provide a service consisting of the promulgation of up-to-date information on ice conditions, routeing, the provision of icebreaker support where available and considered necessary, and organisation of convoys as required.

Masters requesting this service should address their request to ECAREG CANADA through any convenient Canadian Coast Guard radio station which will handle the message free of charge.

Basically, each system is under the surveillance of Canadian Coast Guard Traffic Centres which Masters may contact for advice and assistance. These centres have access to a complete and current picture of the ice conditions prevailing and the anticipated trend of conditions. The centres are therefore, well equipped to provide advice on the best route to follow. In order to obtain the maximum benefit from the service, it is essential that Masters report to the appropriate Canadian Coast Guard Traffic Centre before their ships enter waters where ice may be encountered.

Radio communications play a very important part in successful ice navigation. The Master relies upon the receipt of accurate ice information and advice upon which he can base his decisions as to his future course and progress.

Ships proceeding independently throughout the Gulf of St. Lawrence when ice is present should report their positions and progress to "Ice Halifax" at 0800 hrs. and 2000 hrs. A.S.T.

Radiogram: "Ice Halifax". Radio Station: Halifax, Call sign VCS.

Ships inbound from sea to a port in Zone B should report to "Ice Halifax" 36 hours before passing Cape Ray. Ships outbound should report to "Ice Halifax" 12 hours before departure.

DEVELOPMENTS: In 1983, the Government of Canada announced a new project development in the Pointe Noire sector.

The new project consists of building a 260 m. long wharf with an existing depth of 14.5 m. and more, the construction on an on-site access road including all services such as waterline of 400 mm., power and waste disposal services, embankments and dykes, as well as a 12 hectares storage area. These new marine infrastructures will also permit access to more than 265 hectares of land owned by Ports Canada for industrial developments.

General cargo as well as bulk commodities are handled in this sector.

In September 1989 a 1.2 billion dollar investment was announced for the Pointe Noire area. Consortium Alouette are to build an aluminum smelter with a design capacity of 215,000 metric tons of finished products in the First Phase. A Second Phase could double this capacity before 1995. Meanwhile, Ports Canada has invested 100 Million Dollars in port facilities such as a bulk unloader, conveyors, silos, a railcar ferry, etc., to accommodate the new smelter.

SHIPMASTER'S REPORT: December 1989.

Pilot: Pilot embarks and disembarks from tug.

Radio: When the vessel is alongside it is simple and quick to walk to the Agent's dock office and send a telex or telefax message. When the vessel is at anchor all cables have to be routed through VCK (Sept Iles Coastguard Station) as Agents are not permitted to occupy the VHF with long messages. If however the Port Warden has to visit the ship for an inspection then it is again simple to have him take a message ashore for the Agent to transmit as a telex, etc.

Tugs: The two tugs are on stand-by 24 hours. Tugs lines normally used. For vessels of 200,000 d.w.t. and over, a third tug is used from Port Cartier.

AUTHORITY: Ports Canada – Port of Sept-Iles, 421 Arnaud Avenue, Room 202, P.O.Box 280, Sept-Iles, Quebec Province G4R 3B3. *Tel:* (418) 968-1231. *FAX:* (418) 962-4445. *Contact:* Jean-Maurice Gaudreau, General Manager.

SHEET HARBOUR, N.S.: 44.50 N. 62.30 W. (See Plan)

DOCUMENTS: See "Montreal".
ICE: Open all year with aid of icebreaker during January, February and March. Ice forms about January 15th and breaks up between March 1st and 15th.
PILOTAGE: Pilotage is not compulsory, but may be arranged through "Pilots Halifax". Boarding station is Lat. 44° 44′ 28″ N., Long. 62° 28′ 09″ W., or in Winter off Halifax in position Lat. 44° 31′ 24″ N., Long. 63° 30′ 24″ W.
ANCHORAGE: Anywhere in harbour in depths up to 10 fathoms.
MAX. SIZE: See "Berthing".
RADIO: Ship-to-shore communications: through Halifax (VCS).
TUGS: None.
BERTHING: *Transport Canada Wharf:* Length 54.8 m. Depth at LW 6.4 m. No railroad or handling facilities on wharf. Open storage area alongside for handling general cargo.
STEVEDORES: Skilled labour available. Gangs consist of 20 men.
MEDICAL: Hospitals available.
FRESH WATER: Available by hose from mill.
FUEL: Available.
REPAIRS: No facilities available.
AIRPORT: Halifax 75 miles.
TIME: GMT minus 3 hours in Summer. GMT minus 4 hours Winter.
AUTHORITY: Transport Canada, Office of Harbours and Ports, Maritimes Region, P. O. Box 1013, Dartmouth, N.S., B2Y 4K2. *Contact:* The Regional Manager. *Tel:* (902) 426-2588.

SHIP HARBOUR, Nova Scotia: 44.49 N. 62.53 W.

ANCHORAGE: The best anchorage in the harbour is between Salmon Point and Whale Islet. 7.31 m. to 11.89 m. of water in mud bottom.
BERTHING: Government wharf no longer usable.
Tides: LWOST, 0.2 m. above chart datum. HWOST, 2.2 m. above chart datum.
MEDICAL: Hospital at Sheet Harbour, 20 km.
AIRPORT: Halifax International airport, 120 km.
AUTHORITY: Transport Canada, 73 Tacoma Drive. (P.O.Box 1013). Dartmouth, Nova Scotia, B2Y 3Z7. *Tel:* 426-2588. *Telex:* 01922757.

SHIPPEGAN HARBOUR, N.B.: 47.45 N. 64.42 W.
CARAQUET HARBOUR, N.B: 47.48 N. 64.56 W. (See Plan)

DOCUMENTS: See "Montreal".
PILOTAGE: Boarding station is Lat. 47° 54′ 24″ N., Long. 64° 48′ 30″ W. Pilot may be arranged by calling (605) 727-5642.
ANCHORAGE: Good anchorage with depth 16.5 m., usually by Fairway Buoy.
RESTRICTIONS: Entry possible night and day, good vision, lighted buoys and beacon lights.
MAX. SIZE: High tide: 23 ft. low tide: 17 ft. (Shippegan, max. tide: 20 ft.).
HEALTH: See "Montreal".
RADIO: VCN Grindstone Radio and VCG Fox River.
VHF: Ports on Channel 16.
TUGS: Not required for these ports.
BERTHING: Caraquet Wharf, 21 ft., Shippegan 25 ft. alongside outer side and 3.2 m. alongside at normal low water along the inside face of wharf.
CRANES: Cranes up to 150 tons capacity available.
MEDICAL: No notice required, hospital available, as required when conditions warrant.
FRESH WATER: Available.
REPAIRS: Minor ship repairs and all electrical repairs.
CUSTOMS ALLOWANCE: Tobacco, 200 cigarettes per week per man. Wine/Spirits, Spirits allowed to officers. Beer to crew.
AIRPORT: Moncton, 150 miles, Chatham, 70 miles. Pokemouche, 4 miles.
TIME: Atlantic Standard Time GMT minus 4 hours, Daylight saving time from first week-end in April to last week-end in October, clocks advanced 1 hour.
POLICE/AMBULANCE/FIRE: *Caraquet:* Police RCMP 727-5222; Town Police, 727-1700; Fire, 727-1700; Hospital, 727-3435. *Shippegan:* Police, RCMP, 336-6444. Hospital, 344-2261.
BANKS:

National Bank of Canada. Tel: 727-3495.

GARBAGE DISPOSAL: Service is available. Collection can be made to ship's requirements. Charges are dependant on quantity.
WASTE OIL DISPOSAL: Small quantities (approx. 1,000 gallons) can be disposed of using Terminal's own facilities. For larger quantities a specialist contractor is required. Contact: Inland Oil Ltd., Truro, Nova Scotia. Tel: 1-800-565-4383. Fax: 902-895-6349.
SEAMAN'S CLUBS: Club associated with local Catholic church. Dances can be arranged and mini-bus collection is available.
AUTHORITY: Fisheries and Oceans Canada, Small Craft Harbours Branch, P.O.Box 717, Tracadie, N.B. E0C 2B0. *Contact:* Tilmon Hache, Harbour Manager (Shippegan). *Tel:* (506) 336-4010, 336-8583.

Le Comite du Port de Caraquet Inc., 26 Rue de Quai, Caraquet, New Brunswick, Canada E1W 1B6. *Tel:* (506) 727-6145. *FAX:* (506) 727-2020. *Contact:* Rufin Doiron, Port Manager, 44 Chemin St. Simon, Caraquet, N.B., E1W 1B3. Tel: (506) 727-6145 (Office), 727-4311 (Home).

SORÉL, Quebec: 46.02 N. 73.07 W. **(See Plan)**

LOCATION: Situated on the South shore of the St. Lawrence River at the mouth of the Richelieu River, approximately 75 km. downstream from Montreal.

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
3 Crew Declarations (Canadian Form Y14).
3 Store Lists (Canadian Form E.1).
Health Declaration (Canadian Form QS.2001).
3 Cargo Manifests.
3 Bills of Lading.
General Declaration.

PILOTAGE: Compulsory. Under the Montreal Pilotage Authority. Vessels coming in from sea secure Pilots at Escoumins, Quebec and Three Rivers.

ANCHORAGE: Safe and roomy anchorage is provided in the St. Lawrence River off Sorel in a basin 9 miles long by 0.5 miles wide with 30 ft. to 50 ft. water depth. There is no tidal influence at this point.

RESTRICTIONS: Speed limits not to exceed 8 knots in the Harbour of Sorel. Sections 8, 9 and 10 reserved for D.O.T. vessels.

MAX. SIZE: From St. Lawrence Ship Channel there is a clear approach for 10.67 m. draft vessels to Outer Dock No. 15 and from 6.10 m. to 9.14 m. to almost all other docks.

HEALTH: Pratique may be obtained by radio to Quarantine Quebec. Health Officer boards on arrival.

Sorel is also an organised quarantine sub-station. (See "Canadian Quarantine Requirements" for full particulars).

RADIO: St. Lawrence River Marine Traffic Control, call sign VFN Sorel and VBK Three Rivers.

RADAR: Radar service may be obtained by VHF from Montreal (80 km.).

TUGS: Tugs are available all year round at Sorel. Their use is advisable for all berths in the Richelieu River, for berths in Lanctot Basin and at Section 5 for ships exceeding 250 ft. in length or having low manoeuvrability. They are also needed for large ships at Sections 15 and 21 when leaving with an Easterly destination.

BERTHING: Following depths are expressed in metres reduced to chart datum and must be used as guidance only. For up-to-date information refer to Canadian Marine Chart No. 1338 (Sorel Harbour).

Berth	*Length* (m.)	*Depth* (m.)
Public Wharves (Transport Canada):		
Section 5	190	7.6
Section 6	107	7.6
Section 7	172	7.3
Section 8	160	6.1
Section 9	61	6.1
Section 10	160	6.1
Section 16	110	5.0
Section 17	144	5.0
Private Wharves (Les Elevateurs de Sorel Ltee):		
Section 11	152.4	7.32

(Marine Industrie Ltee):		
Section 19	182.9	6.10
(Fer et Titane du Quebec):		
Sections 20 and 21	335.3	9.14

CRANES: Mobile cranes up to 150 tons capacity available from local firms.

BULK CARGO FACILITIES: (Public Wharves). Open storage space of 25,000 sq.m.

(Private Wharves). Les Elevateurs de Sorel Ltee: Steel and concrete grain elevators 5,500,000 bushels capacity, loading rate 144,000 bushels/hr. Fer & Titane de Quebec: Electric mobile bridge capacity 900 t.p.h.

STEVEDORES: Available for loading and unloading at any berths. Working hours: 0800 hrs. – 1700 hrs.

MEDICAL: Doctors and hospitals facilities available.

DENSITY: Fresh water (1000).

FRESH WATER: Available by pipeline or tank-trucks at all berths.

FUEL: Available from major oil companies by tank-trucks. Can also be obtained by barges from Montreal (50 miles).

CONSULS: Almost all countries, nearest offices at Montreal.

REPAIRS/DRY DOCKS: Marine Industries Ltd. shops are equipped for steel shipbuilding, construction of engines and boilers and repair services of all kinds. The Company has two marine railways, one of which is the largest end-hauling marine railway in the world, capable of launching and dry-docking cargo ships up to 12,000 tons deadweight with transfer or building area admitting of the construction of 8 ships at the same time. Ships of 5,000 d.w.t or smaller can be launched on the second marine railway. The facilities include modern shops, gas and air plants, as required for the building and repairing of all types of hulls and machineries, while subsidiary and associated companies in the same vicinity for rolling mills, heavy and precision machinery, heavy forgings, all kinds of steel brass and metal castings, propellers, etc. Omnimar Ltd., has docking facilities for repairs afloat of equipment, engine and general ship repairs.

CUSTOMS: Sorel is a port of entry, customs board ships.

CUSTOMS ALLOWANCES: 200 cigarettes for each man, Officers may be allowed one bottle wine/spirit, Master up to five bottles.

REPATRIATION: Can be arranged through Department of Manpower and Immigration.

AIRPORT: Nearest at Montreal (Dorval) 70 miles.

TIME: GMT minus 5 hours. Daylight Saving Time: GMT minus 4 hours, applied from first Sunday of April until last Sunday of October each year.

HOLIDAYS: New Year's Day, Good Friday, Easter Monday, St. John the Baptist Day, Dominion Day, Labour Day, Queen's Birthday, Thanksgiving (2nd Monday in October), Remembrance Day, Christmas Day, Boxing Day.

POLICE/AMBULANCE/FIRE: Call 911.

SERVICES: Ship's stores can be secured in Port. Tank cleaning equipment available.

SHORE LEAVE: Crew members allowed ashore. No restrictions.

REGULATIONS: Public Harbours Regulations.

AUTHORITY: Transport Canada, Ports and Harbours Directorate, 901 Rue Cap-Diamant, 4th Floor, Quebec G1K 4K1, Canada. *Tel:* (514) 743-7931. *Telex:* 055-60882. *Contact:* Andre Cardin, Harbour Master – Sorel.

SPRINGDALE, Newfoundland: 49.30 N. 56.05 W.

LOCATION: Springdale is in Hall's Bay, a deep narrow inlet situated at the S.W. part of Notre Dame Bay, North coast of Newfoundland.

RADIO: Comfort Cove (VOO).

BERTHING: (1) The Main Government Wharf is a finger pier with length 90 m. and depth 10.0 m. Used for general freight. Oil pipelines on wharf. There is a red fixed electric light on outer end of wharf.

(2) George Warr Wharf, berthing length 65 ft., depth alongside at LW 28 ft. aft, 13 ft. forward. Shed 50 ft. × 30 ft. Used for general freight.

No crane, electric light or water main on the wharves. Large ships load pulpwood at West Bottom.

FRESH WATER: Not available.

SURVEYORS: Lloyd's at St. John's. ABS at Halifax.

GENERAL: *Services:* Post Office, Telegraph.

Trade: Sawn lumber and pulpwood is exported. General merchandise is imported.

Charts: Canadian Chart No. 4591. BA Chart No. 3223.

AUTHORITY: Transport Canada, P.O.Box 1300, St. Johns, Newfoundland A1C 6H8. *Tel:* (709) 772-2288. *Contact:* Harbour and Ports Department.

STEPHENVILLE, Newfoundland: 48.30 N. 58.33 W. (See Plan)

PORT LIMITS: Beginning at Indian Head (Lat. 48° 29′ 58″ N., Long. 58° 31′ 49″ W.); thence running true 210° for 1,700 yards; thence running true 320° for 6,000 yards; thence running true north for a distance of 2,100 yards more or less to the high water mark.
DOCUMENTS:
Completed Declaration of Health
Valid Derat Certificate
3 Crew Lists (Form 200)
3 Crew Declarations (Form Y14)
3 Ship's Stores (Form E–1)
3 Passenger Lists
Manifests
Clearance from Last Port
PILOTAGE: Compulsory. Pilot boards at Lat. 48° 29′ 40″ N., Long. 58° 33′ W. Pilot ordered by reporting via any coastal radio station by radiotelephone or radiotelegraph to Pilots, Stephenville. 12 hours and 4 hours notice of ETA required. Time used must be UTC. The Pilot at Stephenville guards Channel 16 (156.8 MHz.) and works Channel 11 (156.66 MHz.).
ANCHORAGE: No sheltered anchorage in the harbour; vessels are exposed to prevailing westerly winds. Limited swinging room and poor holding ground.
RESTRICTIONS: A 75 m. wide × 2,200 m. long channel with a limiting depth of 10 m. has to be navigated to gain access to the turning basin which has a limiting depth of 9.2 m. Tidal range 1.1 m. at mean tides and 1.7 m. at large tides. Mariners are advised to obtain a copy of the Canadian Hydrographic Services Sailing Directions for Newfoundland and Chart No. 4885 and contact the Harbour Master for any changes in depth restrictions.
RADIO: Stephenville Marine Radio, call sign VOJ. Halifax Marine Radio is recommended for all messages.
BERTHING: Marginal Wharf: Length 293 m., depth 9.2 m.
STEVEDORES: Ordered by Agent.
MEDICAL: No advance notice required unless serious emergency. Hospital facilities available.
TANKERS: Tanker berth is the main government wharf (960 ft. long). Discharge lines are: 1×6 in., 1×8 in. and 2×10 in. The pipelines and nearby tanks are owned by Harmon Corporation and are leased to users.
DENSITY: Salt water.
FRESH WATER: Available from pipes on dock at $1.00 per ton. Water pipe is operated by the Town of Stephenville.
FUEL: Marine diesel available. Delivery by truck.
CONSULS: Nearest Consuls are situated in St. John's, which is approximately 500 miles away.
REPAIRS: Minor repairs are possible locally.
GANGWAY/DECK WATCHMEN: Usually crew.
OPENING/CLOSING HATCHES: Normally carried out by vessel's crew.
REPATRIATION: Can be arranged.
AIRPORT: 5 miles from dock.
TIME: GMT less 3.5 hours. Clocks advanced from first Sunday in April until last Sunday in October. 2 hours in 1988.
POLICE/FIRE/AMBULANCE: Police 643-2118, Fire 643-2176, Russell's Ambulance 643-2472, Hospital 643-5131
EMERGENCY CO-ORDINATION CENTRE: Coast Guard, St. John's, Newfoundland. Tel: (709) 772-5151.
TELEPHONES: Can be arranged through Newfoundland Telephone Company Limited, Market Division, P.O.Box 98, Corner Brook, Nfld. Phone: 643-3197. Phone jack has already been installed on the dock.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
GENERAL: Ice is navigable throughout the Winter season. Extra information can be obtained from Ice Operations in St. John's – Newfoundland, Tel: 709-737-2083. Cables: Ice Operations – St. John's – Canadian Coast Guard.
AUTHORITY: Transport Canada, P.O.Box 1300, St. John's, Newfoundland A1C 6H8. *Tel:* (709) 772-5154. *Telex:* 016-3369. *FAX:* (709) 772-5127. *Contact:* D.A. Lester, Regional Manager, Harbours and Ports.

Local Authority: G.R. McLaughlin, Area Manager, Harbours and Ports, Stephenville, Newfoundland. Tel: (709) 643-3632.

SUMMERSIDE, P.E.I.: 46.23 N. 63.47 W. (See Plan)

DOCUMENTS:
2 IMM.200.
3 E.1.
1 Quarantine 2001.
2 Passenger Lists.
1 Customs Document A.6.
PILOTAGE: Pilotage is not compulsory, but may be arranged. Message to "Pilots Summerside" or through Agent 12 hours and 6 hours before arrival. Boarding station is at Lat. 46° 19′ N., Long. 63° 53′ W.
ANCHORAGE: At Fairway Buoy in depths of 30 ft. – 35 ft.
MAX. SIZE: 550 ft. length, 75 ft. beam, 24 ft. draft.
HEALTH: Vessels coming from U.S.A. accepted without Pratique. Vessel from other countries radio telephone for permission. See also "Montreal".
RADIO: Halifax N.S., Sydney N.S., Grindstone M.I., Charlottetown, P.E.I.
TUGS: None available.
BERTHING: Transport Canada Wharf: Length (West side) 600 ft. Depth at LW 26 ft. East side, length 600 ft. Depth at LW 19 ft.
Additional Wharf: Length 300 ft., depth 17 ft.
Holman Wharf: Length 300 ft., depth at LW 8 ft.
Queen's Wharf: "L" shaped wharf, head length 155 ft., depth 5 ft.
STEVEDORES: 24 hours notice required.
MEDICAL: Hospital facilities available. Current vaccination/fever certificates required.
FRESH WATER: Available 30 t.p.h.
FUEL: Limited quantities by road tanker.
REPAIRS: Only minor repairs.
OPENING/CLOSING HATCHES: Crew/Stevedores.
CUSTOMS ALLOWANCES: Tobacco: 1 carton per man per week. Wine/Spirits: Spirits 40 oz. per man per week. Further allowances made if Master requests.
REPATRIATION: Can be arranged.
AIRPORT: Charlottetown Airport 39 miles away.
TIME: Atlantic Standard Time with daylight saving in Summer.
HOLIDAYS: New Year's Day; Good Friday; Victoria Day (19th May); Dominion Day (1st July); Remembrance Day (11th November); Thanksgiving (13th October); Labour Day (1st September); Christmas Day. Plus all Saturday afternoons and Sundays.
POLICE/AMBULANCE/FIRE: Police 436-9222; Ambulance dial "O" call operator; Fire 436-4848.
TELEPHONES: Telephones can be placed on board.
SHORE LEAVE: Crew allowed ashore.
IDENTIFICATION CARDS: Passports required.
AUTHORITY: Transport Canada, Charlottetown, Prince Edward Island. *Tel:* 566-7973. *Contact:* Wendall Morrison, Harbour Master and Wharfinger, 2 Morrison Ct., Summerside P.E.I. *Tel:* (Office) (902) 436-2924, (Home) (902) 436-5269.

Transport Canada, P.O.Box 1013, Dartmouth, Nova Scotia, B2Y 4K2.

SYDNEY, N.S.: 46.09 N. 60.12 W. (See Plan)

DOCUMENTS:
Crew's Declaration Y.14 in triplicate.
Ship's Stores E.1 in triplicate.
Crew Tally IMM.201 in duplicate.
Report Inward A.6 in triplicate.
PILOTAGE: Compulsory pilotage distance is approximately 12 miles and administered under the Atlantic Pilotage Authority. Boarding station is at Lat. 46° 20′ 30″ N., Long. 60° 07′ W. Message to "Pilots Cape Breton" 12 hours and 6 hours before arrival.
ANCHORAGES: The land-locked harbour affords safe anchorage for a large number of any size vessels with depths ranging from 40 ft. to 60 ft.
RESTRICTIONS: Berthing allowed day or night. "Harbour Ice", January to March, "Drift Ice" April to May. Navigable with aid of ice breakers requested from Ice Control at Sydney.
MAX. SIZE: Governed by least depth in channel of 11.6 m. at the lowest normal tides (average rise and fall 1.0 m. – 1.5 m.).
HEALTH: Sydney is an official quarantine station. Radio Pratique obtained between 0900 and 1700 hrs. local time by radio message to "Quarantine Sydney". Information required from vessel is as follows:
Name and nationality of vessel.
Name of three previous ports called at during voyage.
Port of destination and name of Agent.
Nature of cargo.
Date and place of last deratting or exemption certificate.
Number of crew and passengers.
Condition of health of all on board with details of any sickness or death occurring during the voyage.
Vaccination status of crew and passengers.
The ETA and any other information that may be required by the Quarantine Officers.

The ship will require usual inspection on arrival. However, Radio Pratique will enable vessel to enter port, dock and commence loading or unloading operations prior to official quarantine clearance. Vessels which have not applied for Radio Pratique and all vessels with suspected infectious disease aboard will remain in quarantine until cleared.

Halifax Radio	VBO	530
Cape Race	VCE	500

TUGS: Available but not compulsory.
BERTHING: *Syd-Port Industrial Park:*

Main Jetty: The outer face of the main jetty is 259 m. long with a 11 m. depth at LW. The inner face is 244 m. with 8.0 m. LW depth.

Inner Quay: The length of the East face wall is 228.6 m. with 6.0 m. at LWOST. The North face wall is 183 m. with a maximum LW depth of 6.0 m. graduating to 3.0 m. LWOST.

Services: The services include fresh water, sewage, electric power, all weather paved roads joining the Trans Canada Highway network and 4,564 feet of rail sidings connecting to major Canadian and U.S. rail systems.

Sydney Steel Corporation Piers:

No. 3 Pier: (Bulk Discharge Berth) Berthing length 213 m. Depth at LW 11.6 m. Equipped to handle bulk cargoes by self-unloading boom type vessels and conventional bulkers. Tower to be modified to enable handling of steel scrap cargoes.

No. 4 Pier: (Steel Loading Berth) Berthing length 218 m. Depth at LW 12.5 m. Equipped with one mobile portal type 46 tonne capacity crane to handle the loading of finished and unfinished steel products (including 25 m. steel rails) and the discharging of scrap and other general cargoes.

Crane equipped with a 120 ft. hinged boom with a 60 ft. back reach. Travel distance 430 ft. Pier equipped with three railway tracks under centre section of crane and one track on the water side. Fresh water is available along with pipeline for marine diesel and bunker fuel.

Cape Breton Development Corporation Coal Piers:

Coal Pier No. 4 has a berthing length of 246 m. with 9.14 m. of water alongside at LW. There is a 15,000 short ton storage pocket for coal and coke with an additional 2,000 tons loaded car storage over full bin. A conveyor belt system carries product to the pier head where it is boom loaded into vessels at an average rate of 2,000 short tons per hour. This pier, the main of a series of three is connected with the CN railway system. Equipped with 4 in. line for fresh water.

Also see "Shipmaster's Report" and "General".

Sydney Government Wharf:

The berthing length of the West face is 242 m. with a 9.2 m. LW depth. The South face is 91 m. long sloping off to 4.5 m. LW depth. Facilities include a bonded warehouse (30 m. × 60 m.) and 30,480 sq.m. of bonded open storage with a rail spur line on the waterside with tailgate delivery in the rear. Fresh water and diesel bunkers also available.

STEVEDORES: Available by phoning Rowe Freight & Marine Service Ltd. (Tel: (902) 564-8452. Fax: (902) 562-8064) 24 hours before ETA of vessel. Ships cargo gear is usually employed but mobile cranes up to 125 tonnes are available at short notice for extended hire.

MEDICAL: Two hospitals.

TANKERS:

Irving Oil Pier: Berthing length 24 ft. Depth alongside 23 ft. at LW. 2×8 in. pipelines.

Petrofina Wharf: "T" head pier. Berthing length 74 ft. Depth alongside 22 ft. 1×10 in. pipeline.

DENSITY: Average 1023.

FRESH WATER: Available anytime, supplied through 2.5 in. hose at rate of 25 t.p.h., cost depending on tonnages, from $1.00 to 0.45 cents per ton, plus labour.

FUEL: Marine diesel, bunker fuel and galley fuels are obtainable by pipeline at Pier Nos. 2, 3 and 4. Rate of bunkering approximately 100 t.p.h.

Suppliers: Northern Petroleum Ltd., 48 Fairview Street, Sydney, N.S. B1P 1P9. Tel: (902) 564-5152.

Gulf Canada, 2020 University Street, Montreal, P.Q. H3A 2L4. Tel: (514) 284-7837.

Petrofina Canada Inc., Marine Terminal, Sydney River, N.S. Tel: (902) 539-6446.

Irving Oil, Bulk Plant, Kings Rd., Sydney, N.S. Tel: (902) 564-5566.

CONSULS:

British and Canadian Shipping Master.
Portugal Vice-Consul 794-3515.
Honorary French Consular Agent, North Sydney 794-4800.
Norwegian Vice-Consul, Sydney 564-9288.

REPAIRS/DRY DOCKS: The Sydney Engineering and Drydocks have 40,000 sq. ft. of production plants using skilled marine tradesmen. Also see "North Sydney".

SURVEYORS: See "North Sydney".

GANGWAY/DECK WATCHMEN: Crew sufficient.

OPENING/CLOSING HATCHES: Crew.

CUSTOMS ALLOWANCES: 200 cigarettes or 0.5 lb. tobacco or 15 cigars, each officer. 40 oz. of spirit per officer.

REPATRIATION: Can be arranged.

AIRPORT: Served by Air Canada, Air St. Pierre and C.P. Air.

TIME: Sydney is on Atlantic Standard Time from the last Sunday in October to the first Sunday in April, and on Atlantic Daylight Time from the first Sunday in April to the last Sunday in October. GMT minus 4 hours on Atlantic Standard Time and GMT minus 3 hours on Atlantic Daylight Time.

HOLIDAYS: Christmas Day; New Year; Good Friday; Dominion Day; Thanksgiving Day; Labour Day. No work as a rule from 0800 to 0800 hrs. next day.

POLICE/AMBULANCE/FIRE: Police 564-4415; Ambulance 564-5507; Fire 539-3552.

EMERGENCY CO-ORDINATION CENTRE: Canadian Coast Guard: Oil spills and other emergencies from Sydney Harbour Area (no charge) ask operator for Zenith 49000.

SERVICES: Compass adjusting, tank cleaning.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Seaman's identity cards.

GENERAL: *Loading Devco Coal:* The Canadian Coast Guard has issued instruction for Masters loading Devco coal at Sydney.

All Masters will receive the instructions before loading commences and Coast Guard surveyors will be in attendance prior to and during loading.

One of the important instructions is that the vessel must be equipped with a suitable surface ventilation system.

SHIPMASTER'S REPORT: February 1988.

Cape Breton's International Coal Pier has only one fixed pipe and is very unsuitable and unsafe for larger vessels, especially during Westerly winds, so it is suggested that Masters give a Letter of Protest to whom it may concern immediately after berthing. It is also suggested that the Chief Officer checks the density and reduces it for water temperature as the water is brackish, otherwise they can have significant discrepancies in quantity of cargo to be loaded.

Max. air draft permitted at pier is 30 ft.

AUTHORITY: Sydney Ports, Marine and Cruise Development, P.O. Box 1448, Sydney, Nova Scotia B1P 6R7, Canada. *Tel:* (902) 564-4344. *FAX:* (902) 564-5422. *Contact:* George Wheeliker, Executive Director. Donald F.Rowe, Harbour Master.

THOROLD, Ontario: 43.05 N. 79.10 W.

LOCATION: Town on Welland Canal, about 8 km. South of Port Weller and 32 km. North of Port Colborne, both ports being the entrances of the Canal linking Lake Ontario with Lake Erie.

RESTRICTIONS: Channel depth: Maximum permissible draft in the Welland Canal and approaches is 8.0 m. (26 ft. 3 in.).

Navigation season: April 1st to December 30th on the average.

HEALTH: Incoming vessels obtain clearance at Quebec City when coming from a foreign port.

RADIO: Ship-to-shore communications: Through Prescott Coast Guard (VBR) or Buffalo (WBL).

BERTHING:

Industrial Dock, Wharf No. 5:

Type: Coal.
Equipment: Self-unloaders.
Length: 152.4 m. (500 ft.)
Depth: 5.50 m. (18 ft.)
Operator: Industrial Docks & Supplies Ltd.

Industrial Dock, Wharf No. 6:

Type: Various Bulk and General Cargo Commodities.
Equipment: 1–2.7 ton Crawler Crane, 1–3.2 ton Crawler Crane.
Length: Dock Wall 121.9 m. (400 ft.), Berth 342.9 m. (1,125 ft.)
Depth: 7.80 m.
Capacity: 90,000 tonnes.
Operator: Industrial Docks & Supplies Ltd.

Ontario Paper Pulpwood Dock, Wharf No. 7:

Type: Unloads Chemicals.
Equipment: Ship's Gear
Length: 186 m. (610 ft.) plus 210 m. (690 ft.) between dolphins at East end.
Depth: 7.80 m.
Operator: The Ontario Paper Company Ltd.

Ontario Paper Dock, Wharf No. 8:

No longer in commercial use.
Length: 132.3 m. (434 ft.)
Depth: 7.3 m. (24 ft.)

Beaverboard Dock, Wharf No. 9:

No longer in commercial use.
Length: 306.3 m. (1,005 ft.)
Depth: 8.23 m. (27 ft.)

MEDICAL: Maplehurst Hospital, Thorold; St. Catharines General Hospital, and Hotel-Dieu Hospital, both in St. Catharines.

REPAIRS: Minor repairs possible.

DRY DOCKS: Port Weller Dry Dock – Welland Canal.

HOLIDAYS: Customs and Canal Officials always available during the season.

SERVICES: Supplies available.

GARBAGE DISPOSAL: Available through companies in the Welland Canal.

WASTE OIL DISPOSAL: Mobile reception facilities available in the Welland Canal.

SEAMAN'S CLUBS: None.

GENERAL: *Publications:* Sailing Direction: Great Lakes, Volume I. Seaway Handbook.

AUTHORITY: St. Lawrence Seaway Authority, Niagara Region, P.O.Box 370, 508 Glendale Avenue, St. Catharines, Ontario L2R 6V8, Canada. *Tel:* (905) 641-1932, (nights (905) 641-1939). *FAX:* (905) 641-4632. *Contact:* Captain A. Soni, Coordinator – Vessel Traffic Services.

THUNDER BAY: 48.25 N. 89.13 W. (See Plan)

For important General Information refer to "St. Lawrence Seaway".

DOCUMENTS: As inland Port all documentation carried out by Authorities in Montreal, prior arriving. Only when vessels have called at United States Port after departing Montreal, and prior arriving at Thunder Bay, will any changes in documentation be necessary; which will consist of a United States Customs Clearance. Certificates to be available on board:

Immigration papers.
1 copy QS 2 (Health Certificate).
3 copies of Ships' Stores.
Crew Declaration.
Customs Clearance.

All of the above will have been stamped in Montreal.

PILOTAGE: Pilots are obtained by Agent at Master's request, at which time the location of boarding the ship will be stipulated. Ship's Masters are able to contact Agent by ship-shore duplex through VBA Marine Radio, Thunder Bay.

ANCHORAGE: Anchorage areas defined by Thunder Bay Harbour Commission but due to large area and number of entrances to Harbour, Masters are permitted considerable latitude in making own decisions. Usual areas are approximately 1 mile outside of Harbour breakwall, free of shipping lanes.

HEALTH: Pratique granted at Montreal.

RADIO: Radio station: VBA Thunder Bay is Transport Canada station offering duplex services.

VBA operates 24 hours per day during shipping season on following frequencies:

VBA Canadian Coast Guard Radio Station, Federal Post Office Building, 244-33 South Court Street, Thunder Bay, Ontario P7B 5L2. Temp. Tel. (807) 345-8084.
(FM) Channels 16, 26, and 28

VBA: Thunder Bay Coast Guard Radio
Telecommunications Operations Manager
Canadian Coast Guard.
244 Lincoln St., Room M 11.
(807) 345-4918

TUGS: Arranged mutually by Shipmaster's and Agents on arrival in port. Ship lines used. Four tugs available.

Tug Service: Gravel & Lake Services
P.O.Box 2180
Thunder Bay, Ontario
(807) 345-7305
Thunder Bay Tug Services,
RR No. 6
Thunder Bay, Ontario P7C 5N5
Tel: (807) 343-4784

BERTHING: Navigational Channels for approaching or leaving the Port of Thunder Bay are identified on Canadian Hydrographic Chart 2301. Chart 2314 is the official chart for navigation within the Port. All vessels within the harbour limits are subject to Thunder Bay Harbour Commission By-Laws.

The Port is divided into four sections: Main Harbour North, Main Harbour Centre, Main Harbour South and Delta Harbour. There are three entrances into Main Harbour and two entrances into Delta Harbour. The Port is accessible on a 24 hour basis.

Berthing Facilities:

Main Harbour North:

PASCOL Engineering.	Dry dock 228 m.	Ship repairs
	Marginal dock 427 m.	
United Grain Growers "A"	Berthing length 452 m.	Grain
Saskatchewan Wheat Pool 4A and 4B	Berthing length 414 m.	Grain
Richardson Terminals Ltd.	Berthing length 274 m.	Grain
Great West Timber	Berthing length 250 m.	Forest Products.

Main Harbour Centre:

Northern Wood Preservers	Berthing length 189 m.	Forest Products
Manitoba Pool Elevator 3	Berthing length 335 m.	Grain

Elevator M		91,000	2,300
Western Grain By-Products Storage Limited	Pellets, By-Products, Speciality Crops Custom Bagging	30,000	1,200

DRY BULK FACILITIES: Dry bulk commodities such as coal, potash, and other free-flowing mineral and agricultural products account for about 25% of the port's overall tonnage. Coal and potash are railed from Canada's prairie provinces into Thunder Bay, where ships take on loads of up to 30,000 tonnes.

Thunder Bay Terminals Limited and Valley Camp Inc. handle such commodities as coal, potash, urea, sand, stone, salt, gold concentrates, limestone, bark chips, uncleaned grain, and grain by-products.

Thunder Bay Terminals Ltd.: Thunder Bay Terminals Ltd. provides the link between rail and vessel for the movement of low sulphur bituminous and lignite coal from mines in British Columbia, Alberta, and Saskatchewan, destined for Ontario Hydro's thermal generating stations. The facility also handles metallurgical coal for Ontario and international markets, as well as other dry bulk commodities such as potash, urea and various agri-products. A 262 m. berth is available for ships. In terms of rail capabilities, unit trains of approximately 100 gondola cars each, arrive at the terminal along a 400 m. elevated loop track that surrounds the property. A complete unit train can be unloaded within two and a half hours. In 1984, a new, highly efficient dry bulk handling system was added for direct rail to vessel transshipment of virtually any free-flowing dry bulk commodity. Trains of up to 120 bottom dump hopper cars can be unloaded in less than 3 hours. Product quality is maintained by features which virtually eliminate product contamination, degradation, and segregation. The site is serviced by road and CP Rail, with CN Rail access for all commodities.

Storage capacity: 1,500,000 tonnes. Rate: Up to 8,000 tonnes/hr. and average 5,000 tonnes/hr. for coal, and up to 7,500 tonnes/hr. and average 4,000 tonnes/hrs. for dry bulk cargoes (potash, grain, urea, pellets).

Valley Camp Inc.: Valley Camp Inc. has 3 cargo handling areas. The facility has a free-flowing dry bulk transfer system, a bulk commodity dock with cranes, and a dry bulk handling facility. The latter was added in 1984 to meet the growing demands of the industry. This highly efficient system offers covered transfer, so that clean product flow is maintained and there is no fear of product contamination or degradation. The facility can accommodate vessels up to 304 m. at its docks which are 550 m. and 201 m. in length. A 24 m. deck scale for heavy bulk trucking is also available on the site. Valley Camp offers outside ground storage for over 2 million tonnes of cargo, and has an annual throughput capacity for 10 million tonnes of cargo. The site is serviced by road and CN Rail, with CP access via CN switching.

Rates:

Loading System	*Equipment*	*Commodities Handled*	*Storage Capacity* (tonnes)	*Loading Rate* (tonnes/hr.)
Dry Bulk Handling Facility	All weather covered conveyors, dumper pit, quandrant-type shiploaders.	Potash, grain area grain by-products and agri-products.		Up to 6,000 average 4,000
Dry bulk Transfer Facility	Shiploaders, dumper pit, radial stacker, bucket wheel reclaimers.	Coarse ore, iron ore pellets, coal.	1,500,000	Up to 6,700 average 5,000

Loading System	*Equipment*	*Commodities Handled*	*Storage Capacity* (tonnes)	*Loading Rate* (tonnes/hr.)
Bulk Commodity Dock	2 Gantry Bridge Cranes 20 ton & 12 ton	Aggregate, coal, scrap metal, structural steel, mineral concentrates and other like products.	500,000	Dependent on commodity

GENERAL CARGO FACILITIES: The Keefer Terminal is the principal general cargo facility available at Thunder Bay. The ocean vessel shed is 121.9 m. long, has a dock 198.1 m. long with a maximum apron width of 19.8 m. All types of import and export general cargo and heavy lifts can be handled at this Terminal. Rental mobile cranes are available. Dockside rail available.

MEDICAL: All facilities available and may be arranged through Agent or by calling 623-7451.

TANKERS: *Petroleum Products:* There are two petroleum companies that use the Port of Thunder Bay – Esso Petroleum Canada and Petro Canada Inc. The products are shipped to Thunder Bay for storage and further distribution to service stations, manufacturing and pulp and paper industries.

Chemicals: There are two chemical companies which maintain storage facilities at the port. General Chemical Co. receives calcium chloride, via the marine mode, from Southern Ontario. It is offloaded into storage tanks for distribution throughout Northwestern Ontario.

Dow Chemical Canada receives caustic soda by rail from Alberta. The product is offloaded into large storage tanks for local use and for further shipment to Eastern Canada and the United States.

The port has available storage tanks and docks for initiatives in canola oil, liquid nitrogen or other liquid bulk products.

Also see "Berthing".

DENSITY: Fresh water port. No tide.

FRESH WATER: Available. Contact: Keefer Terminal, P.O.Box 2266, Thunder Bay, Ontario. Tel: (807) 345-6400.

FUEL: Light diesel available by tank truck. Bunker "C" only in emergencies. Contact: Esso Petroleum Canada, 1020 Pacific Avenue, P.O.Box 632, Thunder Bay, Ontario. Tel: (807) 623-1551.

CONSULS: Following countries are represented at Thunder Bay:

Denmark, Finland, Greece, Italy, Netherlands and Norway.

REPAIRS: Full repairs available. Includes mobile equipment by both land and water conveyances.

Ship Repairs: PASCOL Engineering, P.O.Box 2690, Thunder Bay, Ontario. Tel: (807) 683-6261.

Fabmar Industrial & Marine Fabricators, 1019 Pacific Avenue, Thunder Bay, Ontario P7C 2S7. Tel: (807) 623-5212.

WASTE OIL DISPOSAL: Potter Pumping Service Ltd., RR2, Arthur St., Thunder Bay, P7C 4U1. Tel: (807) 939-2994.

A-1 Sewage Service Ltd., RR5, Highway 17, Thunder Bay, P7C 5N9. Tel: (807) 939-2712.

SEAMAN'S CLUBS: Missions to Seamen, c/o Keefer Terminal, Main Street at Waterfront, Thunder Bay. Tel: (807) 344-8241.

CURRENCY: Canadian Dollar.

AUTHORITY: Port of Thunder Bay, Thunder Bay Harbour Commission, 100 Main Street, Thunder Bay, Ontario P7B 6R9, Canada. *Tel:* (807) 345-6400. *FAX:* (807) 345-9058. *Contact:* Dennis Johnson, Harbour Master.

TORONTO, Ontario: 43.40 N. 79.25 W. (See Plan)

For important general information refer to "St. Lawrence Seaway".

DOCUMENTS: Master should prepare for boarding of Customs, Immigration Officers:

Customs: Crew Declaration Lists (in triplicate) and Ship Store Lists (in triplicate).

Immigration: Crew List and Passenger List (in duplicate).

PILOTAGE: As required by Great Lakes Pilotage Authority.

ANCHORAGES: Vessels anchor in Humber Bay or in Inner Harbour. Anchorages allotted by the Harbour Master.

RESTRICTIONS: Vessels may enter port area at any time.

MAX. SIZE: The port has facilities to accommodate any vessel which can navigate the St. Lawrence Seaway Locks.

Max. size of vessels permitted to transit the Seaway:

(a) Ships not exceeding 730 ft. overall and 75 ft. 6 in. extreme breadth may transit.
(b) Masts must not exceed 117 ft. above the water level.
(c) Max. draft 26 ft.

HEALTH: See "Montreal".

RADIO: Controlling radio station in the Toronto area is VBG Toronto. A port communications centre is located in the Harbour Master's Office and operated for emergency, safety and operational requirements. Ships entering Toronto Harbour should contact the Toronto Harbour Master's Office for information by radio telephone. Call sign XJF on frequencies:

156.8 MHz – Safety
156.6 MHz – Working and Calling
156.7 MHz – Alternate Working

TUGS: Not normally required but available. Tugs use ship's lines.

BERTHING: 20 berths available, 2 of which are Ro/Ro berths.

CRANES: Stationary dockside crane, capacity 300 short tons at Marine Terminal 35, floating crane 50 ton capacity and mobile crane 40 ton capacity available.

SPECIALISED CARGO HANDLING FACILITIES: The following companies offer berthage and storage for the bulk commodities indicated:

Liquid Chemicals: Allied Chemical Co., Domtar (no waterside storage tanks, trucked directly from vessel). Liquiterminals at Berth No. 425.

Cement: Essroc Canada, Lafarge Canada.

Molasses: Gooderham & Wortz.

Oil: Texaco, Imperial Oil, Sun Oil, Canadian Fuel Marketers, BP, Gulf, Shell, Roy-L Canadian Fuel, Milnes Fuel Oil, Caloil.

Salt: Canadian Salt Co., Domtar, Akzo Salt.

Chemicals: Domtar.

Sugar: Redpath Sugars Ltd.

Vegetable Oils: Rothesay Concentrates Co. Ltd., Liquiterminals Ltd.

BRIDGES: Two bridges – Ship Channel Bridge and Keating Channel Bridge. Both lift bridges, no height restriction.

STEVEDORES: General rule is 24 hours notice.

To work ship at 1300 hrs., order gangs by 1030 hrs. the same day.
To work ship at 1800 hrs., order gangs by 1600 hrs. the same day.
To work ship at 0800 hrs., order gangs by 1530 hrs. previous day.

MEDICAL: Doctor and hospital facilities available.

TANKERS: Diameter of load/discharge lines are the American Standard 8 in. Max. draft at berths is 26 ft.

DENSITY: Fresh water.

FRESH WATER: Available at all berths.

FUEL: In most cases, vessels bunker in Montreal. Fuel available at 12 hours notice, either by road tanker or at oil berths.

Shipmaster's Report: Fuel and lub-oils only delivered by road tankers and vessels are not allowed to bunker while alongside Redpath Sugar Berth. Bunkers not available on Sundays and holidays due to Department of Transportation regulations ruling that no trucks are allowed on highways those days.

REPAIRS: Most repairs not requiring dry dock can be carried out in Toronto. Nearest dry dock is located at Port Weller, 30 miles distant.

GANGWAY/DECK WATCHMEN: Crew member or hired by Agent.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CERTIFICATES:

Certificate of Registry.
Articles of Agreement.
Log Book.
Safety of Life at Sea.
Safety Equipment Certificate.
Safety Construction Certificate issued by the Country to which the ship is registered.

CUSTOMS ALLOWANCES: Tobacco, Crew entitlement on first arrival in Canada – 200 cigarettes, 50 cigars, 2 pounds of tobacco. Wine and/or Spirit, Crew entitlement on first arrival in Canada – 40 oz. of spirits, liquors or wines.

CARGO GEAR: Vessel requires a tackle equipment book and a certificate covering cargo equipment which must be kept up to date and notated every 12 months by a competent person. Port of Toronto has modern equipment including stationary Atlas crane, 300 ton capacity; mobile container crane designed for loading and unloading 20 ft. and 40 ft. containers; 56 ton overhead lift truck equipped with a 40 ft. spreader frame; 12 mobile cranes with capacity 16 tonnes – 46 tonnes.

Two additional container handlers and 50 ton floating crane. Private cranes, ranging in capacity from 20 tons to 150 tons are available by arrangement.
REPATRIATION: All facilities.
AIRPORT: (1) Toronto Island Airport located at Western end of harbour. General aviation only with regular airlines.
(2) Toronto International Airport approximately 15 miles distant. Airport is served by nine regular airlines.
TIME: GMT minus 5 hours. Two alterations made to clocks during year (1) First Sunday morning in April, Eastern Standard Time to Eastern Daylight Time 1 hour ahead. (2) Last Sunday morning in October, Daylight Time to Eastern Standard Time 1 hour back.
HOLIDAYS: Work can be arranged on any holiday at double time rate with the exception of Labour Day which is the first Monday in September of each year. No work is done on this day.
POLICE/AMBULANCE/FIRE: Emergency numbers as follows: Marine Unit 324-0500; Port Security 462-1244; Emergency No. 911.
TELEPHONES: No arrangements available for placing telephones on board.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Visitor passes available from port police office.
GARBAGE DISPOSAL: Contact Waterman's Services (Scott) Ltd. Tel: 466-3047. Pick-up only as required by vessel. Cost per visit $ 75.00 (for regular amount of garbage), $ 125.00 per visit for excessive amounts.
WASTE OIL DISPOSAL: Local waste disposal services by tank trucks. Large quantities handled by barge. Contact McKeil Marine, Hamilton, Ontario. Tel: (416) 528-4780.
SEAMAN'S CLUBS: The Missions to Seamen provides all types of facilities and arranges private bus trips to Niagara Falls.
AUTHORITY: The Toronto Harbour Commissioners, 60 Harbour Street, Toronto, Ontario, Canada M5J 1B7. *Tel:* (416) 862-2000. *Telex:* 06-219666. *FAX:* (416) 863-4830. *Cables:* Torport or Worldtrade Toronto. *Contact:* John Jursa, Director – Public Affairs. G.F. Reid, Acting General Manager. Captain J.W. Brewster, Harbour Master and Director of Terminal Operations.

TROIS RIVIERES, Quebec: 46.22 N. 72.34 W.

(See Plan)

DOCUMENTS:
1 set Crew List.
1 set Passenger List.
1 copy Health Document.
3 sets Cargo Manifest or Bill of Lading.
1 set Ship's Stores List.
1 set Crew Effects Declaration.
1 copy Last Port Clearance.
1 copy Ship's Papers.

PILOTAGE: Pilots take charge of vessel at Quebec for Trois Rivieres destination. See "Quebec" for further information.
ANCHORAGES: No vessel shall, except in an emergency, anchor within the harbour without prior permission from the Port Manager and then only at such place as is assigned. The anchorage area used for Trois-Rivieres is located approximately 2 miles up river.
RESTRICTIONS: Port open to navigation 12 months of the year. From January – March inclusive, vessels should be reinforced for ice.
MAX. SIZE: Max. draft 11.0 m. (no tide).
HEALTH: Trois-Rivieres is a Port of Entry. Port doctor at the service of vessels. Also see "Montreal".
RADIO: St. Lawrence River Marine Traffic Control call system letters VBK Trois-Rivieres.
TUGS: Not usually considered necessary for berthing ships. However tugs can be made available upon advance notice.
BERTHING: 20 berths are available, including 16 open and 4 shedded. Total berthing length: 3,189 m., including 2 private berths.

Ports Canada Facilities:

No. 1 No. 2 No. 3	110,000	16	2,100	2 Marine legs at Berth 17 Unloading capacity 1,960 tonnes per hour

CRANES: Mobile cranes (private) up to capacity 200 tons available.
STEVEDORES: Stevedores available through local stevedoring firms.
MEDICAL: If medical service is required upon arrival, call through No. 7 (St. Lawrence River Marine Traffic Control System). Hospital facilities available.
TANKERS: Chemical products handled at 2 wharves with depths 9.1 m. and 10.6 m. Diameter of lines 8 in.
FRESH WATER: Hoses connected to harbour hydrants at 14 berths; rate 15 tonnes per hour.
FUEL: Certain types of fuel oil, in quantity, supplied to ships by truck. Diesel oil is also available.
CONSULS: At Montreal.
DRY DOCKS: None.
REPAIRS: Minor repairs done by local machine shops.
GANGWAY/DECK WATCHMEN: Not necessary except if dangerous cargo on board.
OPENING/CLOSING HATCHES: Carried out by stevedores.
CUSTOMS ALLOWANCES: 200 cigarettes each and/or 2 lb. tobacco. Wine and/or Spirits: One bottle each.
REPATRIATION: Can be arranged.
AIRPORT: 5 miles distant. No scheduled flights.
TIME: EDST from first Sunday of April to last Sunday of October, then normal EST.
HOLIDAYS: New Year's Day (Jan. 1st and Jan. 2nd); Good Friday; Easter Monday; Victoria Day; St. Jean Baptiste Day; Canada Day; Labour Day; Thanksgiving Day; Remembrance Day; Christmas Day, Boxing Day (Dec. 25th and Dec. 26th).
POLICE/AMBULANCE/FIRE: Police and Fire 374-3535; Ambulance 373-0505, 376-1212, 376-1286; Poison Treatment 1-800-463-6050.
SERVICES: Compass adjusting only.
SHORE LEAVE: Crew allowed ashore.
IDENTIFICATION CARDS: Seamen's card and/or passport.
GARBAGE DISPOSAL: Arrangements through ship's local agent.
WASTE OIL DISPOSAL: Arrangements through ship's local agent.
SEAMAN'S CLUBS: None.
CURRENCY: Canadian Dollar. U.S.$1.00 = C$1.35 (daily variations).
AUTHORITY: Port of Trois-Rivieres, 1545 du Fleuve, P.O.Box 999, Trois-Rivieres, Quebec G9A 5K2. *Tel:* (819) 378-3939. *Fax:* (819) 378-2487. *Contact:* Captain Serge Tremblay, General Manager. Robert Masson, Manager, Projects and Development. Rejean Nadeau, Manager, Technical Services.

TWILLINGATE, Newfoundland: 49.40 N. 54.45 W.

(See Plan)

PILOTAGE: Pilotage is not compulsory, however, a licensed Pilot is available if desired. A Pilot can be arranged by giving 24 hours notice of requirement to "Pilots, St. John's".

The Pilot will board off St. John's in position Lat. 47° 33′ 42″ N., Long. 52° 37′ 54″ W. or off Twillingate Harbour provided the vessel's Local Agent arranges for a boat to embark the Pilot. Alternatively, Shipmasters may arrange to use local persons in the community for pilotage purposes.
ANCHORAGES: The anchorage in Twillingate Harbour is not good as it is open to N.E. winds that send in a heavy sea, and the holding ground is indifferent. The best anchorage is off the West shore N.E. of Twillingate Wharf Light in depths of 6 fathoms (11 m.).
RESTRICTIONS: Navigable from April to February.
BERTHING: The Government Wharf, on the West side of the harbour about 1.4 miles South of Cuckold Point, is 300 ft. (91 m.) long and 35 ft. (11 m.) wide. On the North side of the wharf, the outer 90 ft. (27 m.) decreases gradually from a depth of 34 ft. (10.4 m.) at the head to 21 ft. (6.4 m.), and the next 70 ft. (21 m.) gradually decreases to 13 ft. (4 m.). On the South side, the outer 90 ft. (27 m.) decreases from a depth of 33 ft. (10.1 m.) at the head to 15 ft. (4.6 m.), and the next 90 ft. (27 m.) decreases to a depth of 5 ft. (1.5 m.).

At the boat landing, at the root of the South side of the pier, there is a depth of 2 ft. (0.6 m.). The deck of wharf has an elevation of 10 ft. (3 m.).

A shed 90 ft. (27 m.) long and 41 ft. (12 m.) wide stands on the Government Wharf and is the base for the Canadian Coast Guard Search and Rescue Station. A bait depot is located adjacent to the Government Wharf.

A rubble mound breakwater 560 ft. (171 m.) long extends West from the North end of Fishery Products Wharf, situated on the East shore near the head of the harbour, Three finger piers, with depths of 5 ft. to 8 ft. (1.5 m. to 2.4 m.) alongside, extend 240 ft. (73 m.) South from this breakwater.

At Jenkins Cove, on the N.E. side of the harbour, there is a Community Wharf 163 ft. (50 m.) long and 21 ft. (6 m.) wide with a least depth of 11 ft. (3.4 m.) at the face. A wharf and fish storage shed extend at a right angle from the Community Wharf; this wharf is 175 ft. (53 m.) long with a depth of 3 ft. (0.9 m.) alongside the face.

Another wharf, at Jenkins Cove, is 200 ft. (61 m.) long and 20 ft. (6.0 m.) wide with a reported depth of 15 ft. (4.6 m.) at HW at outer end.

MEDICAL: Full hospital facilities available. Tel: (709) 884-2131.

SURVEYORS: Not available locally. Lloyd's Register, P.O.Box 5054, St. John's, Newfoundland, A1C 5V3. Tel: (709) 726-0543, (709) 368-2538 (Residence).

GANGWAY/DECK WATCHMEN: Usually crew.

CARGO GEAR: Mobile crane can be arranged through Agent.

AIRPORT: 100 km. by paved road to International Airport (Gander).

POLICE/AMBULANCE/FIRE:

Police: R.C.M.P. local detachment (709) 884-2811.
Ambulance: Available locally (709) 884-2131.
Fire: (709) 884-2224.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard, St. John's. Tel: (709) 772-5151 or ask operator for Zenith 07021.

BANKS: Scotia Bank (709) 884-2121.

SHORE LEAVE: No restrictions.

GARBAGE DISPOSAL: Garbage collection service available. Garbage to be placed on wharf in bags. No drums or skips are provided. Garbage collector Mr.Norm Stuckless, Tel: 884-5359. Town Office, Tel: 884-2438. Garbage collected every Thursday, and should be ready for collection no later than 0800 hrs.

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: No Seaman's Clubs as of such but there are bars available such as: Anchor Inn Motel, Royal Canadian Legion, Lions Club.

Many small shops available as well as various churches. Post Office available.

CURRENCY: Canadian Dollar.

GENERAL: Chart No. 4548 covers the port.

AUTHORITY: Canadian Coast Guard, P.O. Box 1300, St. John's, Newfoundland A1C 5H8, Canada. *Tel:* 772-5154. *Telex:* 061-3369. *FAX:* 772-2193. *Contact:* D.A. Lester, Regional Manager.

VANCOUVER, B.C.: 49.17 N. 123.07 W. (See Plan)

The port is located in an excellent sheltered natural harbour, open to navigation all year round with a minimum depth of 15 m. in the approach channel and at many berths.

PORT LIMITS: The seaward boundary of the inner port within which a vessel is considered to be an "arrived vessel" is a line drawn between Port Atkinson and Port Grey at the entrance to English Bay. The seaward boundary of the outer port is running North-South between the North Arm of the Fraser River and the International Boundary and being 5 miles offshore in the Straits of Georgia.

DOCUMENTS: The following documents are required to be prepared prior to arrival:

3 copies Canadian Customs Form E1-List of ship's stores.
3 copies Canadian Customs Form Y14-List of crew's possessions.
3 copies List of ship's slop chest stores for sale.
3 copies Canadian Immigration Form 200-Crew List.
1 copy Canadian Quarantine Form CS1.

Manifests and other documents are prepared by the Agent.

PILOTAGE: Pilotage is compulsory. Pilots board at the Fairway Buoy off Victoria, Vancouver Island. ETA to be sent to "Pilots Victoria" at least 12 hours before arrival and confirmed 4 hours before arrival. Distance to Vancouver – 135 km.

Victoria Traffic Separation: Vessel Traffic Separations schemes are in effect – Straits of Juan de Fuca and Georgia Strait. Vessel Traffic System – VTS are under the control of the U.S. Coast Guard (Seattle Traffic) and the Canadian Coast Guard (Vancouver Traffic) within the respective territorial limits.

Also see "Shipmaster's Report" – "Notice", dated October 1991.

SECOND NARROWS TRAFFIC CONTROL: The following procedures are mandatory and apply to vessels intending to enter or move within the area defined in "Area" below.

In addition, East of the line joining Point Grey (Lat. 49° 15' 54" N., Long. 123° 15' 44" W.) and Point Atkinson (Lat. 49° 19' 50" N., Long. 123° 15' 48" W.), the clearance and reporting procedures detailed in *Vancouver Traffic Zone* (G1130) are mandatory for the vessels specified in G1130.

Call: CJU52.

Location: CN Railway Bridge, Second Narrows.

Frequency: Channel 12.

Area: Second Narrows Movement Restriction Area (MRA) lies between the following limits:

(a) West limit: Line due North from the light at the N.E. end of Terminal Dock to Neptune Terminals.
(b) East limit: Line due North from Berry Point Light to the North shore.

Procedure: (1) At least 12 hours before entering the MRA, the following vessels should advise Vancouver Harbour Master of their proposed transit time:

(a) Vessels of 20 m. and over in length.
(b) Towing vessels of 8 m. and over in length.
(c) Towing vessels where breadth of tow is 20 m. and over, or length of tow is 30 m. and over.

Any subsequent amendments should be notified.

(2) All deep sea vessels (i.e. vessels requiring a Pilot) intending to pass through the Second Narrows bridges should report their intentions and ETA at CN Railway Bridge to the bridge operator on Channel 12 when entering the harbour limits and before leaving a berth or anchorage in the harbour. ETA should be confirmed on arrival at the limit of the MRA.

(3) Vessels requiring the lift span of the railway bridge raised should contact the bridge operator on Channel 12 – (1) prior to departing berth or anchorage. (2) upon entering port limits if direct from sea. This signal will be acknowledged by the bridge operator on Channel 12.

ANCHORAGE: There are 26 designated anchorages in the port. 15 in English Bay (See Table below and "Plan Section"), 5 in main harbour, plus 2 emergency anchorages, and 3 anchorages, plus 1 emergency anchorage above Second Narrows. Main Harbour anchorages reserved mainly for vessels clearing for grain, bunkering or awaiting berths or tides. Main Harbour anchorages range from 9 to 21 fathoms and English Bay anchorage from 8 to 16 fathoms. Largest vessels using and expected to use Vancouver Harbour can be accommodated at designated anchorages. Holding ground is good and anchorages are protected. Requests for permission to anchor must be made to the Harbour Master.

English Bay Anchorages: Realigned anchorage positions taken from Chart No. 3481. Bearings and distances dependant on the position of V.T.S. being Lat. 49° 19' 32" N., Long. 123° 08' 01" W.

Anchorage No.	*Bearing* (T)	*Distance* (nautical miles)	*Latitude* *N.*	*Longitude* W.
1	220.5°	2.75	48° 17' 27"	123° 10' 42"
2	229°	2.5	49° 17' 53.5"	123° 10' 53.5"
3	240°	2.3	49° 18' 22"	123° 11' 04"
4	225.5°	3.14	49° 17' 20"	123° 11' 27"
5	233.5°	2.91	49° 17' 44"	123° 11' 36.5"
6	242.5°	2.76	49° 18' 15"	123° 11' 46.5"
7	230°	3.55	49° 17' 13.5"	123° 12' 11"
8	236.5°	3.37	49° 17' 41"	123° 12' 20"
9	244.5°	3.24	49° 18' 09"	123° 12' 30.5"
10	238.75°	3.81	49° 17' 35"	123° 13' 05"
11	245.75°	3.705	49° 18' 02.5"	123° 13' 15"
12	247°	4.18	49° 17' 55.5"	123° 13' 57.5"

Note: North Shore Anchorages to be renumbered No. 13, No. 14 and No. 15, but remain in same position and are same size.

RESTRICTIONS: Min. depth at LW is 15.00 m. at the First Narrows. Min. clearance at HW is 60.36 m. under First Narrows Bridge (Lions Gate); Min. depth at LW is 13.3 m. at the Second Narrows. Min. clearance at HW is 44.00 m. under Second Narrows Bridge. Vessels are allowed to transit the Second Narrows Movement Restriction Area (MRA) under conditions contained in the Second Narrows MRA Standing Orders (during periods either side of slack water and stemming the tidal current). (All Oil Terminals and Pacific Coast Bulk Terminal lie above the Second Narrows.)

Vessels carrying dangerous goods, tankers, combined carriers, must obtain special clearance from the Harbour Master prior to entry and/or departure.

Canadian Coast Guard maintain and operate the Vessel Traffic System.

All International and National pollution controls are strictly enforced.

MAX. SIZE: Berthing for vessels up to 250,000 d.w.t. and draft up to 75 ft. at Roberts Bank.

HEALTH: *Quarantine Regulations:* Vessels need only apply by radio (Station VAK), where a condition of health irregularity is suspect, or the vessel has called at a country listed under the World Health Organisation as being infected with plague, or has an expired Derat Certificate.

RADIO: VAI/Vancouver Coast Guard Radio.

VHF: VAS/Vancouver Traffic located just North of the First Narrows Bridge. Manned 24 hours per day. Pilots on radio/telephone contact with Vancouver Traffic at all times. Vessels normally communicate on Channel 12 from Iona Jetty/Cape Roger Curtis inwards. Other frequencies available for communication are 16, 6, 14 and 11.

RADAR: Vancouver Traffic continuous radar surveillance from Point Grey/Point Atkinson inward Second Narrows. Anchorage assistance available.

TUGS: Meet vessels East of First Narrows and off berth. Ship's lines are used. Pilots communicate with tugs by VHF Channel 17.

Attendant tugs are required to escort Deep Sea Vessels through the Second Narrows MRA in the vicinity of the Second Narrows Bridges in accordance with the Vancouver Port Corporation (Port of Vancouver) Second Narrows MRA standing orders.

Also see "Shipmaster's Report" – "Notice", dated October 1991.

BERTHING: Five vessel Inner Harbour anchorages, 3 anchorages at mouth of Indian Arm and one anchorage in position 49° 17' 39.5" N., 122° 58' W. (all East of Second Narrows Bridge) for vessels awaiting Grain Inspection/Clearance, etc. 15 large vessel anchorages in English Bay for vessels awaiting to berth are available.

Terminal	*No. of Berths*	*Total Length (m.)*	*Depth (m.)*	*Remarks*
Canada Place Cruise Ship Facility	3	746	9.0	Cruise ship terminal 326 m. (West Side) 110 m. (North Side) 310 m. (East side)

Cargo handled: Coal, potash, feed pellets, chemical fertilisers, phosphate rock and rape seed oil. Equipment: No. 1 – 1 stacker/reclaimer 4,000 t.p.h. and 1 reclaimer 1,000 t.p.h. 2 shiploaders of 3,000 t.p.h. No. 2 – 3 car dumper, 2 shiploaders of 2,000 t.p.h. each (3,500 t.p.h. combined). No. 3 – 2 bridges of 1,000 t.p.h. each. Hopper capacity 50 tonnes each. There is tank storage for 19,000 tonnes of canola oil which can be loaded at Berths No. 1 and 2.
United Grain Growers Elevators	2	427	7.3-11.6	Depth: 7.3 m. (East Side), 11.6 m. (West Side). 2 belts×500 t.p.h. each. Storage capacity: 102,000 tonnes. Products handled: Grain and by-products.
Pacific Elevators	3	560	7.66	Berth No. 1 – Length 134 m. plus overhang.Depth 10.6 m. Loading rate 4×16,000 bu./hr. Berth No. 2 – Length 182 m. plus overhang. Depth 13.72 m. Loading rate 4×16,000 bu./hr. Berth No. 4 – Length 244 m. Depth 9.75 m. Loading rate 2×16,000 bu./hr. Cargo handled: Wheat, barley and rye. Storage capacity: 199,150 tonnes.
Vancouver Wharves	5	1,042	10.7–12.8	Berth No. 1, 2 & 3 – Length 540 m. No. 4 & 5 – Length 502 m. Depths: No. 1 – 10.7 m. No. 2 & 3 – 11.3 m. No. 4 & 5 – 12.8 m. Facilities: No. 1: Car unloader, storage sheds, travelling shiploader. Extension with gantry unloader. Methanol receiving/ shipping systems, storage tanks. No. 2: Pulp and paper mobile equipment, storage sheds. Methanol shipping system. No. 3: Pulp and paper mobile equipment, storage sheds. No. 4 & 5: Railcar dumper; bottom-door railcar dumper, sulphur, potash, phosrock, fertiliser shipping/receiving systems. Storage silo, sheds, pads No. 4 berth has twin quadrant retractable shiploaders, and the phosrock receiving system. No. 5 berth has a travelling shiploader trimmer. Storage capacity approximately 800,000 tonnes.
Pacific Coast Terminals	2	386	13.7	2 shiploaders: 1×2,500 t.p.h. and 1×1,800 t.p.h. Bulk liquids – 600 t.p.h. (Shiploader being renewed). Storage capacity: Sulphur (200,000 tonnes), Ethylene Glycol (13,500 tonnes, Styrene Monomer (13,500 tonnes).
Westshore Terminals				See "Roberts Bank"
Alberta Wheat Pool	1		10.05-15.24	4× 380 t.p.h. spouts. 282,800 tonnes storage for grain.
Pioneer Grain Terminal	1	180	14.30	2 loaders of 1,000 tonnes/hr. each. Storage capacity 108,000 tonnes. Cargo handled: Grain, grain by-products, flax.
Saskatchewan Wheat Pool	2	460	12.2-15.3	Depths: 12.2 m. (inshore), 15.3 m. (outshore). 5 spouts at each berth. Loading rate up to 2,000 tonnes/hr. (2 commodities maximum). Storage capacity 240,000 tonnes of grain. Products handled: Wheat, canola, barley, grain by-products and durum.
B.C. Sugar Terminal	1	130	9.1	Sugar Gantry Cranes
Goodwin Johnson				To be redeveloped.
Imperial Oil Ltd.	1	165	10.1	Petroleum Products
Chevron Canada Ltd.	1	200 (Max.LOA)	9.1	Petroleum Products
Transmountain Oil Pipeline Ltd.	1	91.4 (305 m. between dolphins)	11.0	Crude oil: 12 in. and 24 in. lines 2 × 10 in. hoses for crude. Crude 20,000-25,000 bbls./hr. (Also see "Shipmaster's Report" dated October 1991).
Petrocanada Inc.	2	58 40	10.2 4.6	Petroleum Products
Canadian Occidental	1	152	10.66	Salt and Chemicals 3×11,000 tonne tanks and 27,000 tonnes ground storage.
Dow Chemicals (Lynnterm No. 4)	1	200	11.7	Caustic Soda (1,200 t.p.h.), Ethylene Dichloride (1,000 t.p.h.), Ethylene Glycol (800 t.p.h.) Storage: Caustic soda (40,000 tonnes). Ethylene Dichloride (30,000 tonnes). Ethylene Glycol (17,000 tonnes).

There are a number of smaller terminals used principally by the coastal ferry and towing services.

Roberts Bank:
Owners: Westar Group.
Operator: Westshore Terminals Ltd: Roberts Bank, Delta, BC, V4K 3N2. Tel: 946-4491. Telex: 04-355799.
Specialist handling: Coal and coke.

Berth 1: Equipped with a single travelling shiploader. Berthing velocity: Maximum 12 cm./second for a 250,000 d.w.t. vessel fully loaded, approaching 90° to the berth face. Horizontal shuttle range of discharge route: 28.7 m. Maximum chute reach from berth face: With boom elevated 15° – 39.5 m.; with boom horizontal – 41.6 m.; with boom down – 10° – 40.9 m. Operational longitudinal travel along wharf: 243.8 m. Operating luffing range of shiploader boom: 15° above horizontal to 10° below horizontal. Vertical telescopic range of discharge chute: 7.6 m. Vertical clearance under boom above HHWL at berth face: with boom elevated 15° – 19.6 m.; with boom horizontal – 14.8 m.; with boom down 10° – 10.3 m. Water depth: 22.9 m.

Berth 2: Equipped with 2 quadrant shiploaders. Berthing velocity: Maximum 12 cm./second for a 100,000 d.w.t. vessel fully loaded, approaching at 90° to berth face. Horizontal shuttle range of boom: 22.86 m. Operating slewing arc of boom: 71°. Operating luffing range of shiploader boom: 18° above and below horizontal. Vertical clearance at berth face under boom above HHWL: 18.3 m. with boom elevated 18° and fully extended; 25.7 m. with boom elevated 18° and fully retracted; 16.6 m. with boom horizontal. Vertical distance of bottom of trimmer above HHWL: 19 m. with boom elevated 18°, 6.7 m. with boom horizontal. Maximum boom reach from berth face: 34.9 m. with boom elevated 18° and fully extended; 12.04 m. with boom elevated 18° and fully retracted; 13.41 m. with boom horizontal and fully retracted. Water depth: 20.8 m.

Also see "Shipmaster's Report", dated June 1988.

CRANES: Floating cranes, 45, 75 and 100 tons and mobile cranes of 150 and 250 tons available.

BRIDGES: See "Restrictions".

STEVEDORES: Gangs normally ordered day before ship's arrival, can be ordered same day for afternoon or evening work.

MEDICAL: (1) The Mariners Medical Clinic Ltd. is located at: Suite 401, 1160 Burrard Street, Vancouver, B.C., V6Z 2E8. Contact: Dr. A.J.Trudel. Tel: 683-0206. Clinic Office Hours: Monday through Friday: 0900 hrs. to 1700 hrs. Saturday: 0900 hrs. to 1200 hrs.
Emergency Only: After clinic office hours patients must be referred to St. Paul's Hospital Emergency Department at 1081 Burrard Street, Vancouver.
(2) The Dental Clinic is at the same address as the doctor.

Please note that vessels of Norwegian registry are not covered under this arrangement but do, however, have an arrangement of their own through the Norwegian Consulate. Please contact agent for more information with repect to this situation.

TANKERS: See "Berthing".
Report: February 1985.

Herewith is an outline of requirements for chemical tankers which are scheduled to call Vancouver/British Columbia ports.

1. Vessel must have on board a valid non-Canadian Ship's Compliance Certificate (or obtain it on arrival).
2. Certificate of Fitness and date.
3. Provide Agents with 7, 4, 2 and 1 day's notice prior to arrival.
4. Advise Agents of the last 2 cargoes.
5. Advise of any cargo in transit (quantity and type).
6. Vessel is required, in Vancouver, to have a clear passage while transiting the First and Second Narrows Bridge – with a minimum of 1 mile visibility. Vancouver Traffic Centre will advise vessel accordingly upon arrival.
7. Canadian Coast Guard will attend on board upon arrival for safety inspection.

Also see "Shipmaster's Report" dated October 1991.

DENSITY: Density varies in different sections of harbour, according to times of year.

FRESH WATER: Available at most berths or by barge. Hose supplied. Delivery 25 t.p.h.

FUEL: All grades of heavy fuel oil and diesel oil are available, delivery by barge or tank truck. Suppliers are:
Chevron, Shell, Imperial, ICS Petroleum, Marine Petrobulk and Petrocanada.

FIRE PRECAUTIONS: All vessels to have suitable towing wires over offshore bow and offshore quarter.

GANGWAY/DECK WATCHMEN: If required, employment arranged through Agent.

OPENING/CLOSING HATCHES: Normally carried out by stevedores, except in cases of bulk carriers.

CUSTOMS ALLOWANCES: 200 cigarettes or 50 cigars or 2 lbs. (0.9 kg.) tobacco and 40 oz. (1.1 litres) of liquor or 288 oz. (8.2 litres) of beer per person.

AIRPORT: 30 minutes to Vancouver International Airport.

TIME: Pacific Standard Time GMT minus 8 hours. Clocks will be adjusted to Summer Time (plus 1 hour) when advised.

HOLIDAYS: New Year's Day*; Good Friday**; Easter Monday**; Victoria Day**; Canada Day**; British Columbia Day**; Labour Day*; Thanksgiving Day**; Remembrance Day**; Christmas Day**; Boxing Day**.
*Non-working holidays.
**Labour available at premium rates.

Work ceases at noon on December 24th and resumes at 0100 hrs. December 26th; ceases at noon on December 31st and resumes at 0100 hrs. January 2nd.

POLICE/AMBULANCE/FIRE: Police 911; Ambulance 879–4511; Fire Vancouver 911; Air-Sea Rescue 732–4272; Ports Canada Police 666–3131.

TELEPHONES: Are placed on board vessels at all berths.

SERVICES: Stevedore companies equipped with tank cleaning equipment. Sludge barge available. Services of compass adjuster may be obtained.

STORING: Deep sea ship work – crew members may, at the option of the vessel, perform such work when the job is less than 2 hours duration. When the loading of ship's stores exceeds 2 hours, the Master and/or owners can expect a pay claim from the ILWU (Longshoremen) as this work is covered in their agreement.

Exception: The maximum duration for handling ship's stores by crew members shall be 4 hours at docks where it is not possible for a delivery truck to get alongside a vessel's gangway.

SHORE LEAVE: No restrictions, but Immigration will advise of any special circumstances where restrictions might be enforced.

GARBAGE DISPOSAL: Garbage to launch/barge on offshore side. Charges and collection times by arrangement.
Contact: Pacific Incinerations. Tel: 254-2446. Fax: 254-8086.
Tymac Launch Service. Tel: 681-8628. Fax: 685-1216.

WASTE OIL DISPOSAL: Oily slops to barge or tanker truck.
Contact: Sprayaway Marine Services Ltd. Tel: 433-8020.

SEAMAN'S CLUBS: Missions to Seamen, 50 N.Dunlevy Street, Vancouver B.C., V6A 3R1. Tel: 253-4421.

Services: Shop, international telephone service for seafarers, church services, football matches arranged, dances, mini-bus collection, postage facilities, games available at the Clubs.

GENERAL: Vessels not permitted pump bilges or discharge oil, contaminated ballast or galley refuse into water. Every vessel boarded on arrival by Harbour Master's Patrol Personnel and furnished with applicable excerpts from Harbour by-laws.

Overboard discharges for ballast and hold/engine room bilges to be sealed.

All vessels are to comply with Canadian Coast Guard Regulations concerning Oil Pollution Prevention and Response Information concerning fees to Response Authorities to be obtained from Chamber of Shipping of B.C., 1550 - 555 West Hastings Street, Vancouver, B.C., Canada, V6B 4N6. Tel: (604) 681-2351. Fax: (604) 681-4364.

DEVELOPMENTS:
Deltaport: (See "Plan").

A 40-hectare site (100 acres).

Two container berths totalling 670 m. in length (2,198 ft.).

Berth of 15.85 m. (52 ft.) depth.

A total of 5 Post-Panamax container gantry cranes capable of handling 18-wide ships with 50-tonne capacity (4 cranes at opening).

Grounded operation utilising rubber tyred gantries (RTG) equipped with auto-steering and a positional determination system, and multiple trailer system (MTS).

Container yard storage capacity at three-high of 13,000 TEU's.

Capacity for 600 reefer points equipped with four-high platforms (420 at opening).

Advanced computerised systems including full EDI capability, yard and ship planning, and fully integrated container control.

Four rail tracks of 3,500 ft. each, providing capacity for 2×7,000 ft. double-stacked trains (440 TEU's per train). Grounded storage capacity in the Intermodal Yard of approximately 1,200 TEU's – serviced directly by CN and CP Rail System.

Intermodal operations by up to 4 high-speed rail-mounted gantries also equipped with a positional determination system (2 RMG's at opening).

The Deltaport Partnership brings together the Vancouver Port Corporation and TSI (formerly Empire Stevedoring) with North America's only two transcontinental railways, CN and CP Rail System.

Target completion date for the terminal's construction is the end of 1996. Terminal opening will be early 1997.

Robert's Bank: There is a possibility that "Pod Three", a vacant section of land, may be utilised.

SHIPMASTER'S REPORT: June 1988.
Robert's Bank: 49° 00.6′ N., 123° 09.8′ W.

Operator: Westshore Terminals Ltd. Telex: 04-355799 (Westshore Rbank).

Notice of Arrival: On approaching Strait of Juan de Fuca, Master has to contact Canadian Coast Guard, cable address "Westreg Canada" or Telex No. 043-52586 and request clearance to enter Vancouver Traffic Zone.

Contact should be made:

1. 48 hours before arrival at 50 miles off Vancouver Island.

or

2. 48 hours before arrival at Longitude 127° W.

or

3. 48 hours before arrival at Latitude of Cape Alawa for Northbound vessels.

The Notice of Arrival is to include:
Call sign.
Position.
Course and speed.
Estimated time of arrival at Nos. 1, 2 or 3 above.
Vessel's destination.
Last port of call.
D.W.T.
Draft, forward and aft.

Vessel should also confirm that there are no deficiencies or leakages and that all VHF Channels are available as per Canadian Notice to Mariners Annual Edition or Canadian "Western Region Traffic Services" booklet.

Pilotage: Vessels to contact "Pilots Victoria" (Telex No. 04-97236 PPAPilots Vic.) 48 hours prior to arrival at the Pilot Station. The 48 hour notice to include: Vessel's name, call sign, agent's name, LOA, breadth, depth, deepest draft, trim, speed, propeller characteristics and ETA at Fairway Buoy off Victoria.

Amended notices are required 24 hours, 12 hours and 4 hours prior to arrival.

Anchorage: Vessels awaiting their turn to load at English Bay anchor at Vancouver.

Berths: Berth No. 1: This berth can accept vessels of 250,000 d.w.t., LOA 350 m., beam 53 m. and loaded draft 21 m.

Loading restrictions are as follows: Maximum distance between end hatches 243 m., air draft at berth face 19 m. and air draft to top of hatch cover 21 m.

Vessels may berth port or starboard side alongside. Loading rate 3,500 t.p.h., however, it is possible to load at up to 5,000 t.p.h.

Berth No. 2: This berth can accept vessels up to 100,000 d.w.t., LOA 263 m., beam 42 m. and loaded draft 18 m.

Loading restrictions are as follows: Distance between end hatches 184 m., air draft at berth face 17 m., air draft to top of hatch cover 18 m.

Vessels berth starboard side to. Loading rate approximately 2,500 t.p.h.

Vessels whose length between end hatches (centre to centre) is greater than 184 m. will be loaded at Berth No. 1.

Vessels having their own loading gear will be loaded at Berth No. 2.

Cargoes/Stowage Factors: The following are types of coal loaded, together with approximate stowage factors: Balmer, Elkview, Fording, Crow's Nest, Gregg River, Obed Marsh, Luscar, McIntyre (all grades), stowage factor 43 cu.ft. per long ton. Greenhills, 45 cu.ft. per long ton. Arco (petroleum coke), stowage factor 46-47 cu.ft. per long ton.

Gangway: Terminal gangways are available for use of ship's crew but are the responsibility of the vessel whilst being used.

Density: 1012 – 1025 (varies).

Fresh Water: Fresh water is free of charge. The vessel is to supply hoses and connections.

Emergency Telephones: Fire 946-4155, Police 946-4444, Ambulance 872-5151, Harbour Master 666-2405.

SHIPMASTER'S REPORT: October 1991.

Westreg Canada: Participation to this reporting system has been on a voluntary basis. However a couple of months ago this became compulsory. There is no information mentioned within the Admiralty Publications.

It is required to report 24 hours prior to entering Canadian territorial waters, which extend upto 50 nautical miles offshore. Receipt of this report will be confirmed and permission granted to enter, together with further reporting instructions.

It is said, that complying to the rules will reduce the charge of a visit/extensive inspection by the Canadian Coast Guard.

Arrival: A pilot and a chemist boarded the vessel at Victoria.

A gas certificate was issued with the remarks that the oxygen content was below 8% and that during the portstay the I.G. pressure had to be kept positive.

A terminal representative, boarded the vessel once at anchor in Indian Arm of the Burrard Inlet, near Westridge Terminal to perform an audit similarly to "Safe-T"-inspections.

Information about the terminal was given by the terminal representative, more specific about the closed loading with use of a gas-return line. Plans and progress already being in such a stage that intentions to use the system are February 1992.

No problems were encountered with the Canadian Coast Guard check list (see below). According to the Agent, it is possible to obtain a Non-Canadian Ship Compliance Certificate in Vancouver.

As requested by the Agent, a copy of the Civil Liability Certificate was faxed to them, for forwarding to the Department of Trade at Ottawa.

Pilotage and navigation were performed as laid down in the rules mentioned in the Notices to Pilots, dated January 17, 1990 and in the letter to Chamber of Shipping, dated January 24, 1990 (See "Notices" below).

Canadian Coast Guard Check List: Check List for all tankers entering Canadian West Coast waters.

(a) Name of Ship.
(b) Port of Registry.
(c) Gross Tonnage.
(d) Year of Building.
(e) Summer deadweight.
(f) Tonnage and Description of Cargo.
(g) Bunkers.
(h) Pollution Insurance (CLC/Other).
(i) Issue Date of Non-Canadian Ship Compliance Certificate.
(j) Vessel's Agent.
(k) ETA for Entry into Canadian Waters.
(l) ETA Pilot Station and Location.
(m) Intended Port(s) of Call.
(n) Length, Breadth and Maximum Draft of Vessel.
(o) B.H.P. of Main Engine and Number of Propellers.
(p) Description of Astern Power.
(q) Is Vessel fitted with
    i. Bow/stern thrusters.
    ii. Protective location ballast.
    iii. Segregated/dedicated ballast tanks.
    iv. Double bottom tanks in cargo space.
    vi. C.O.W.
    vii. I.G.
(r) Any Defect in the Ship's.
    i. Hull/deck fittings, or anchors.
    ii. Main propulsion machinery.
    iii. Steering.
    iv. Navigation equipment and charts.
    v. Radio equipment.
    vi. Mooring Lines.
(s) Number of
    i. Deck Officers.
    ii. Engineering officers.
    iii. Ratings.

Message from Trans Mountain Westridge Dock to Master of incoming Vessel:

(A) Pre-Arrival Requirements: A Terminal representative will usually board vessel prior to docking. All items on pre-arrival check list will be reviewed with you.
(B) Second Narrows Restrictions:
    (a) Bridge height of 44.0 m. above high water of 5.5 m.
    (b) Channel depth 13.8 m. at zero tide.
    (c) Channel width 137 m.
    (d) Tankers may transit only during daylight hours at slack tide. Tide height 3.0 m. minimum.
(C) Westridge Dock draft restriction of 11.0 m. minimum at zero tide at berth face. 11.9 m. at 5 m. from dock face.
(D) Berthing to port side to Westridge Dock. Must use all wire mooring lines with 10 m. long synthetic rope tails. Minimum of 12 mooring lines required.
(E) Vessel to be surrounded by boom at all times while docked.
(F) Terminal has 2×12 in., 150 ANS1 loading arms. Connect to 2 adjacent manifolds, maximum 3.0 m. apart.
(G) Clean ballast only may be discharged only after inspection by Harbour Patrol. No ballast reception ashore. Vessel to arrive using only segregated ballast and no ballast in cargo tanks or system.
(H) Odour Control – Cargo Tanks *must* be purged of hydrocarbon vapours prior to arrival at Westridge Dock in order to minimise the potential for odours in nearby residential areas. The loading rate to your vessel *will* be reduced if odours are present.
(I) Venting of Cargo Tanks to minimum positive I.G. pressure prior to arrival allows terminal flexibility in minimising vapour releases.

Please advise soonest:

1. Expiry date of non-Canadian Compliance Certificate.
2. Maximum airdraft from waterline to highest antenna. Special survey permit required if in excess of 42.0 m.

3. Drafts, forward, aft, and amidship.
    (a) Arrival.
    (b) Departure.
4. Distance of manifold flanges from
    (a) Bow – centre manifold.
    (b) Rail.
    (c) Waterline at arrival.
5. Distance of vent stacks/breather valves from bow.
6. Cargo tank details:
    (a) Number of tanks (including slops) to load.
    (b) Volume (capacity) of each tank.
    (c) Cross section area of each tank.
    (d) Ullage when tanks empty.
7. Types/quantities/location of any crude/dirty slops upon berthing (no slop receiving facilities).
8. Last 2 cargoes carried.
9. Loading Plan Details:
    (a) Topping-off sequence by tank number.
    (b) Final loaded volume (cu.m.) each tank.
    (c) Final loaded ullage (m.) each tank.

Pre-Arrival Check List. Please respond minimum of 48 hours before arrival at Victoria Pilot Station:
Note: Non-compliance with this Check List may result in delay of loading or refusal to load vessel.

1.0 Is cargo operations plan ready?
2.0 Are segregated ballast tanks free of oil trace?
2.1 Have SBT lines, passing through oil tanks, been checked for leaks?
2.2 Were any abnormal soundings found in empty tanks or spaces?
3.0 Are automatic and/or manual tank level (Whessoe) gauges in good order?
3.1 Are all high and high/high tank level alarms fully operational?
3.2 Is oxygen content of cargo tanks less than 8%?
3.3 Have oxygen meters been calibrated?
3.4 Have tanks been purged to less than 2% by volume of hydrocarbons?
3.5 Are combustible gas indicators calibrated and in good order?
3.6 Have tanks been purged of H_2S gas (if applicable)?
3.7 Are chemical indicator tubes availble for H_2S measurement?
3.8 Are independent pressure gauges fitted to each tank?
3.9 Will tanks contain minimum positive I.G. pressure on arrival?
4.0 Is vapour lock (closed loading) equipment fully operational?
4.1 Are ullage tables available for vapour lock positions?
4.2 Can cargo ullage/temperature/water be taken without depressurising?
5.0 Is deck I.G. water seal free of oil and operational?
5.1 Is deck I.G. water seal low flow/low level alarm operational?
5.2 Has water/glycol level of PV breaker been checked?
5.3 Has I.G.S. deck line been checked for oil leakage and drained?
5.4 Are I.G. pressure (High/Low) alarms operational?
5.5 Is I.G. pressure continuous recorder operational?
6.0 Have sea chests and air vent pipes been flushed?
6.1 Was bilge overboard valve sealed/locked after clearning?
6.2 Is high level alarm on fuel oil settling tank operational?
7.1 Was sea chest in pump room flushed?
7.2 Was temporary discharge of clean ballast/SBT carried out?
7.3 Was leak test of sea chests tested by means of inspection valve?
7.4 Was stripping overboard line flushed and cleaned?
8.0 Is sea chest valve confirmed closed?
8.1 Was sea chest inspection valve confirmed closed?
8.2 Has overboard valve blind flange been inserted?
8.3 Are air vents on manifold closed?

Notices: Notice from Canadian Coast Guard to Chamber of Shipping of B.C. (Dated January 1990).

Please bring to the attention of your members that, following discussions re the safety of large tankers in Canadian waters of Western Region and to reduce the risk of pollution, the following measures are required for tankers in excess of 40,000 d.w.t. in transit from Vancouver to Victoria Pilot Station when loaded with crude oil.

Pilots: Two pilots required from Vancouver to Victoria Station.

Tugs:

40,000 d.w.t. 50,000 d.w.t.	– 2×2,400 h.p.	tugs through 2nd Narrows and 1st Narrows.
50,000 d.w.t. 60,000 d.w.t.	– 2×2,400 h.p. + 1×1,800 h.p.	tugs through both Narrows tug through 2nd Narrows
over 60,000 d.w.t.	2×2,400 h.p. + 2×1,800 h.p.	tugs through both Narrows tugs through 2nd Narrows

If necessary vessel must anchor in English Bay in order to arrive at East Point at H.W. Slack. Vessel speed between English Bay and East Point not to exceed maximum harbour manoeuvering speed. Speed of transit through Boundary Pass and Haro Strait not to exceed 11 knots, with vessel having escort tug during transit and until pilots are disembarked.

At present these measures apply only to outbound loaded tankers, but similar measures would be applied to inbound tankers should such traffic occur.

The direction was made under the power of a Pollution Prevention Officer as described in the Canada Shipping Act.

Signed: Regional Superintendent, Technical Ship Safety.

Notice from Vancouver Port Corporation (Dated January 1990).

Governed by the Second Narrows Movement Restriction Regulations (1981), tanker movement regulations in the Port of Vancouver are among the most stringent anywhere.

SPECIAL REGULATIONS:

Tankers calling the Port of Vancouver are inspected by the Canadian Coast Guard to ensure that they meet all International and Canadian Safety Requirements.

All foreign deep-sea vessels, including tankers, carry a pilot in and out of Burrard Inlet.

Tankers are given priority for transit of the First and Second Narrows. No other vessel traffic is allowed through the Narrows while tankers are in transit.

Movement of tankers through the Narrows is prohibited in reduced visibility caused by fog, rain, snow, etc. Visibility criteria for the First Narrows is based on the ability to see clearly between Vancouver Wharves and Navy Jack Point. For the Second Narrows, the CN Bridge Operator must be able to clearly see 1 mile to the West and 1.5 miles to the East.

Deep-sea vessel movements in the Second Narrows are restricted to periods of slack water.

The upper size limit for tankers entering Burrard Inlet has been set at 90,000 tonnes deadweight (cargo carrying capacity). Tankers over 50,000 tonnes deadweight are limited to daylight transits of both First and Second Narrows. Tankers more than 170 m. in length are restricted to daylight movements through the Second Narrows.

Tankers and other deep-sea vessels must be escorted through the Second Narrows by a minimum of 2 tugs of ample horsepower – large vessels must be accompanied by 4 tugs. Additional escort may be provided by Harbour Master's patrol boats.

A 6 knot speed limit applies to all vessels transiting the Second Narrows – except in an emergency.

Tanker berth operators place oil containment booms around vessels during loading and unloading.

Tankers are prohibited from anchoring in the Inner Harbour.

OIL SPILL RESPONSE:

The Port of Vancouver has never experienced a major oil spill. However, minor spills do occur – usually when a ship is bunkering or carrying out an internal oil transfer.

In the event of a harbour spill:

The ship must notify the Harbour Master who, in turn, notifies the Canadian Coast Guard and Environment Canada. The Harbour Master or his designate attends the spill site to assess the situation. Environment officers also assess ecological danger and suggest appropriate clean-up methods.

Harbour Master's crews are often able to quickly contain the spill with booms and begin clean-up with absorbent materials.

Large-scale clean-up equipment in the Port of Vancouver is maintained by "Burrard Clean" – a cooperative operated by the oil refineries located in the harbour. Additional clean-up equipment is obtainable from the Canadian Coast Guard. A private contractor is often hired to operate the equipment and provide labour.

A spill investigation can lead to charges being laid by Vancouver Port Corporation, the Coast Guard, or Environment Canada – or all three. Before the ship at fault can leave the port, it must agree to pay clean-up costs.

Notice to Pilots from Pacific Pilotage Authority (Dated January 1990).
Subject: Operating Rules for Loaded Crude Oil Tankers of over 40,000 tons deadweight.

Agreement has been reached between the Coast Guard, the Harbour Master in Vancouver, representatives of the Oil Industry, your Directors, and the Authority that the following rules will apply to all loaded crude oil tankers of over 40,000 tons deadweight.

1. Daylight high slack water Second Narrows with a minimum tide height of 10 ft.
2. Conform to M.R.A. Rules.
3. Order time for outbound loaded vessels to be 2 hours prior to slack water Second Narrows to allow time for the Pilots to go over the passage plan with the Master.
4. Two Pilots to be dispatched to loaded tankers, the Number One Pilot to have the conduct of the vessel and the Number Two Pilot to monitor steering engine and crew performance to ensure the Number One Pilots's orders are carried out properly and to act as back up to the Number One Pilot. Both Pilots are to be on the bridge through Vancouver Harbour and from 3 miles North of East Point to the Victoria Pilot Station.
5. Vessel to anchor at English Bay to await a suitable departure time to arrive at East Point on the next slack high water. Pilots normally to remain on board (At East Point: Maximum current 2 knots.).
6. Two ship's officers and 2 seamen are to be on the bridge at all times when underway.
7. Anchors are to be clear of the pipes and ready for dropping from the terminal to English Bay anchorage.
8. Ship's speed not to exceed 6 knots in the Harbour, full manoeuvering speed between English Bay and 3 miles North of East Point, and 11 knots from East Point to the Victoria Pilot Station.
9. Two extra seamen to be called out on standby from 3 miles North of East Point to the Victoria Pilot Station in case it should be necessary to take tug lines in an emergency.
10. Tugs – Second Narrows:
    (a) 40,000 d.w.t. – 50,000 d.w.t. = 2×2,400 h.p.
    (b) 50,000 d.w.t. – 60,000 d.w.t. = 2×2,400 h.p. + 1×1,800 h.p.
    (c) 60,000 d.w.t. + = 2×2,400 h.p. + 2×1,800 h.p.
    The 2×2,400 h.p. tugs are to be used on lines and should escort the vessel to the Q.B. Buoy.
11. Tugs – Boundry Pass:
    The "Seaspan Discovery" or 2×1,800 h.p. tugs are to be used to escort the vessel from 3 miles North of East Point to the Victoria Pilot Station.
12. Harbour Master's Launch will be available to clear traffic and provide escort services through the Harbour.

AUTHORITY: Vancouver Port Corporation, 1900 Granville Square, 200 Granville Street, Vancouver, B.C. V6C 2P9. *Tel:* (604) 666-3226. *Telex:* 04-53310. *FAX:* (604) 666-3916. *Contact:* Captain N.C. Stark, Port Manager and Chief Executive Officer. Captain J.G. Houston, Harbour Master.

VICTORIA, B.C.: 48.25 N. 123.22 W. (See Plan)

PORT LIMITS: Southern tip of Albert Head, to Southern tip of Trial Island (Canadian Charts 3413, 3423 and 3415).
DOCUMENTS: "See Vancouver".
APPROACHES: The entrance to Victoria Harbour has a deep, wide, open water approach. The only hazard is Brotchie Ledge 900 m. S.W. of the outer end of the harbour entrance breakwater. The outer end of the breakwater and Brotchie Ledge are fitted with beacons.
PILOTAGE: Pilots embark at Victoria for all British Columbia ports. Pilot station within 2 mile radius of buoy in position Lat. 48° 22′ 45″ N., Long. 123° 24′ 56″ W. Radio "Pilots Victoria" through radio station VAK giving ETA at least 12 hours and confirmed 4 hours before arrival. Pilot boat on VHF Channel 16 and 17.
ANCHORAGE:

"A"	Lat. 48° 23′ 46″ N.,	Long. 123° 26′ 58″ W.
"B"	Lat. 48° 24′ 09″ N.,	Long. 123° 27′ 36″ W.
"C"	Lat. 48° 24′ 14″ N.,	Long. 123° 26′ 43″ W.
"D"	Lat. 48° 24′ 24″ N.,	Long. 123° 25′ 54″ W.
"E"	Lat. 48° 24′ 44″ N.,	Long. 123° 26′ 37″ W.
"F"	Lat. 48° 24′ 54″ N.,	Long. 123° 26′ 00″ W.

Anchor berths "A", "C" and "D" have a swinging radius of 1,500 ft. and "B", "E" and "F" 1,200 ft.
RESTRICTIONS: Outer Harbour: Depth 35 ft. MLLW. Inner Harbour: Depth 21 ft. MLLW. Largest vessel to use port, length 800 ft. draft 35 ft.
HEALTH: Quarantine Officials board with Pilot. Advise Agent of ETA.
VHF: Pilot station. VAK.

Harbour Master's Office can be contacted on Channel 73. This Channel is also used by ship's Agents in Victoria.
TUGS: Tugs and barges of various powers and sizes are available from Seaspan International Ltd., 345 Harbour Road, Victoria. B.C. V9A 3S2. Tel: 385-7711. Two harbour tugs of 500 h.p. each service the Victoria area. Additional or larger tugs are available giving minimum 48 hours notice.
BERTHING:

Berth	*Length* (ft.)	*Depth* (ft.)	*Remarks*
Ogden Point "A" N. Side	800	35	For handling lumber, pulp, paper, plywood and general cargo. Fresh water available at 20 t.p.h.
Ogden Point "A" S. Side	1,000	35	
Ogden Point "B" N. Side	800	35-40	Dock to be renovated.
Ogden Point "B" S. Side	800	33-35	The South side is used for permanent international ferry. Leased area – not available for other uses. Fresh water available at 20 t.p.h.

Between Piers A and B (distance 92 m.), at the inner end, is a small fish unloading dock used by the B.C. Packers Cold Storage Plant situated in the terminal area. Ogden Point also has the facilities to handle containers inbound and outbound. The terminal has a 20 acre paved cargo assembly area for trucks. Vessels must be self loading or unloading, but mobile cranes to 25 tons can be ordered if required.
STEVEDORES: 13 gangs available. Refer "Vancouver" for holidays, etc., arranged by Agent.
Working Hours: Westcan Terminals/Stevedores Ltd. offers 24 hour, 7 day cargo handling services. Shifts: first 0100-0430, 0500-0800; second 0800-1200, 1300-1700; third 1700-2100, 2130-0100. Work ceases 1200 on Christmas Eve and New Year's Eve.
MEDICAL: Doctors and hospital facilities available.
DENSITY: Salt water.
FRESH WATER: Available at wharves.

WEYMOUTH, N.S.: 44.27 N. 66.01 W. (See Plan)

DOCUMENTS:

3 Crew Lists.
3 Passenger Lists.
3 Customs Documents.
3 Health Documents.
3 Manifests.
Ship's Papers.

PILOTAGE: Non-compulsory. Ship's Agent contacts vessel through Marine Radio Station, Yarmouth and notifies Pilot, who will then be on lookout. Ship gives standard whistle signal for Pilot, who boards about 2 hours before high tide. In meantime, ship should ride at anchor about quarter mile N.W. of Fairway Buoy. No special pilot boat. Boat used for Pilot is 35 ft. fishing boat.
ANCHORAGE: Good safe anchorage outside harbour in 33 ft. over mud. Also quarter mile N.W. of Fairway Buoy.
MAX. SIZE: Max. length permissible 375 ft., max. beam 55 ft. Draft, approx. 26 ft. of water at high tide.
RADIO: Yarmouth (VAU).
TUGS: No tugs required. The fishing-boat will run lines to wharf if required.
BERTHING: Government Wharf – North Weymouth: L-shaped pier provides 85.3 m. length berth. Depth alongside at LW: 3.0 m. (mean tidal range 6.1 m.) A gravel open storage area available at wharf approach.
STEVEDORES: Available. Experienced loading lumber and pulpwood.
MEDICAL: Hospital: at Digby, 20 miles distant. Ambulance can be arranged.

FRESH WATER: Available; delivery by truck.
GANGWAY/DECK WATCHMEN: No watchmen necessary.
TIME: Atlantic Standard Time GMT minus 4 hours. Daylight saving time from first week-end in April to last week-end in October, clocks advanced 1 hour.
POLICE/AMBULANCE/FIRE: Police Zenith 50000; Ambulance 245-2205; Fire 837-5142.
TELEPHONE: No arrangement for placing telephones on board ship. Telephone available near dock.
DEVELOPMENTS: Re-dredging of channel in near future. Dates not finalised.
AUTHORITY: Transport Canada, Weymouth, Nova Scotia. *Contact:* R.L. Long, Customs Inspector, at Digby, *Tel:* 245-4039. F. Manzer, Harbour Master, Ashmore, Digby County, Nova Scotia. *Tel:* 837-4064, 837-4467.

WINDSOR, Ontario: 42.19 N. 83.03 W. (See Plan)

For important general information refer to "St. Lawrence Seaway".

DOCUMENTS:
Sanitary Health Certificate – fixed on outside of container for agriculture plant protection. 1 paper affixed to each container.
Meat Locker Certificate.
Quarantine Certificate.
3 Crew Lists.
3 Passenger Lists.
3 Stores Lists.
Manifest – 3 A.6 – 2 A.6 out.
Bill of Lading.
PILOTAGE: Pilots board ships at Sarnia Eastbound and Port Weller Westbound.
ANCHORAGES: Windsor Harbour Anchorage lies approximately 0.5 miles North of Fighting Island marked by 2 white buoys, showing flashing white lights, an area of 800 ft. wide and 0.75 miles long. Depth of 5.5 to 6 fathoms. Permission to anchor must be obtained in advance from V.T.S. Sarnia.
MAX. SIZE: Can handle any ship the seaway passes. No tide.
HEALTH: In the case of vessels arriving via the St. Lawrence River Radio Pratique may be obtained from Quarantine Quebec. See also "Montreal".
RADIO: VBE - Sarnia on VHF Channel 85.
RADAR/VHF: No radar service. Harbour Master may be contacted on VHF Channel 14.
TUGS: Available when required.
BERTHING: (Also see "Plan").
1. Canadian Salt Co.: A major rock salt mine producing salt products for highways, water softeners and chemical use. Large tonnages are shipped by water. Lake freighters load at a 730 ft. dock with depth alongside 26 ft..
2. ADM-Grainco: (Archer Daniels Midland): A deep water grain terminal elevator with a storage capacity of 3.9 million bushels. Material handled includes soya beans, corn, wheat, oil seeds, as well as meal from adjacent ADM–Agri Industries Ltd. plant. A 1,300 ft. long (396.2 m.) dock enables ships to load and unload with modern conveyor equipment. The location provides easy access to all major railways and highways in Canada and the United States.
3. ADM-Agri Industries Ltd.: Canada's first multi-oilseed processing plant, located on a 40 acre (16 ha.) site adjacent to the grain terminal elevators and dock. The plant has an on-site storage capacity for 11,000 tonnes of soya meal and 2,500 tonnes of soft-seed meal, and operates in close co-operation with the adjacent grain terminal docking facility.
4. Morterm Limited: A commercial marine terminal on 87 acres, fenced and lit. Providing large open storage facilities. Lumber capacity of 45 million board feet with a fleet of 15 trucks ranging from 52,000 lb. capacity to 5,000 lb. capacity warehouse lift trucks. Two mobile cranes, 110 ton and 225 ton capacities to enable fast movement of goods between ship and the large paved wharves which include a concrete quay-type wharf of 2,400 ft. (731.5 m.) with direct rail transfer in a 200 ft. (60.9 m.) wide slip. Water depth is full Seaway depth. The Essex Terminal Railway connects with all major railroads.
5. Canadian Maritime Transport Ltd.: This is a Roll-on/Roll-off truck ferry service operating between Windsor and Detroit. The dock is 800 ft. in length. The location provides easy access to all major railways and highways in Canada and the United States.
6. Southwestern Sales Ltd.: The East dock is used principally to store construction aggregates. The 660 ft. (201 m.) dock accommodates self-unloaders.
7. Canadian Fine Salt Dock: Primarily for package freight of any kind, including lumber. The dock is 410 ft. long and has a depth of 27 ft.
8. Van De Hogen Group Dock: Provides outside storage area for bulk materials and lumber.
9. Coco Harbour Terminals: This dock is available for receiving and storing of aggregate.
10. Van De Hogen Group: Complete material handling, warehousing distribution and transportation services. 56 acres, marine, rail and truck terminals on the Detroit River, 75,000 sq. ft. inside storage, 3,000 ft. of trackage, heavy lift crane service, public weigh scale, 2 fully licenced motor carriers serving Ontario, Quebec and the United States. The location provides easy access to all major railways and highways in Canada and the United States.
11. K Scrap Resources: Provides dock serviced property for storage and processing metal for re-cycling purpose. The river frontage is 650 ft. (198 m.).
12. Windsor Harbour Commission – Liquid Fuel Dock: Owned by the Windsor Harbour Commission and includes a 1,000 ft. (304 m.) berth with fuel bunkering facilities, operated by Sterling Fuels (Mc Asphalt Industries Inc.) to fuel any vessel transiting the Great Lakes. A full range of fuels is available on a 24 hour basis. Depth alongside 27 ft. (8.2 m.)
13. Windsor Harbour Commission: Dock is located on a site over 30 acres. An 1,100 ft. (335 m.) by 100 ft. (30.5 m.) slip runs along the West side. Goods handled are principally bulk stone and sand from self-unloaders.
(a) Canada Building Materials cement mixing plant occupies part of the N.W. portion of the property. A large open storage area is used to receive stone for the cement operations. Length 315 ft., depth 27 ft. (8.2 m.).
(b) Lafarge Construction Materials has developed a fully integrated bulk aggregates depot on a 10 acre parcel at this site. Length 806 ft., depth 25 ft. – 27 ft. (7.6 m. – 8.2 m.)
14. Adams Cartage Dock: (Dock not in use). A large closed storage shed is on the property as well as open storage. In addition to the dock face, the property includes an 850 ft. (259 m.) by 100 ft. (30.5 m.) slip at an average water depth of 16.4 ft. (5.0 m.).
15. Pyramid Aggregates Ltd: (Dock not in use). Property includes a 450 ft. (137 m.) by 80 ft. (24 m.) slip adjacent to a steel and concrete warehouse.
16. Mill Cove Marina: Operated by Windsor Harbour Commission. A pleasure boat facility featuring indoor dry stack year-round storage, sales and service.
17. Premier Concrete and Lake Ontario Cement Ltd.: (Divisions of ESSROC). Maintain this dock for the storage of building aggregates as well as bulk cement which is off loaded into silos. The 9 acre site has a 1,000 ft. (340 m.) dock face on the Detroit River.
18. Canadian Pacific Railways: (Dock not in use). Norfolk-Southern Railway operates a daily Ro/Ro railroad car ferry to Detroit. Two loading aprons with 3 tracks each move rail cars from ferries and operate on a daily year round schedule.
19. Dieppe Gardens Dock: Owned by the City of Windsor and docking is administered by the Department of Parks and Recreation. Complete with 27 ft. (8 m.) of water at the 800 ft. (244 m.) cement-faced dock, it is used principally for visiting naval ships, cruise ships, etc. Fresh water and sewage disposal are available. Prior application to the Windsor Harbour Commission and the City is required.
20. Vacant.
21. Hiram Walker & Sons Ltd.: A private dock 2,200 ft. long with water depth at dockside from 19 ft. to 21 ft. during normal water conditions.
22. Ford Motor Company of Canada: Dock is a private installation 1,800 ft. (549 m.) long and used mainly for storage of sand.
23. Windsor Yacht Club: A private pleasure boat facility for members.
24. Riverside Marina: A public pleasure boat facility owned by Windsor Harbour Commission – ramp, fuel, sales and service.
25. Lakeview Park Marina: Operated by the City of Windsor as a facility for pleasure craft. Docks, launching ramps and parking areas provide easy access to Lake St. Clair and the Detroit River.
26. Southwestern Sales Ltd.: East Dock: A bulk storage dock accommodating large quantities of crushed stone and sand received from self-unloading vessels. Length 700 ft., depth alongside 28 ft. (8.5 m.).
STEVEDORES: Advice as to number of gangs should be received no later than 1600 hrs. on day preceding. Arrange through Agent.
MEDICAL: Four hospitals.
TANKERS: Sterling Fuels; hoses 14 in. and 10 in. Max. depth 27 ft.
Slop tanks available.
DENSITY: No tide, the water is fresh.
FRESH WATER: Tank truck delivery.
FUEL: Direct liquid fuel bunkering at Sterling Fuel Dock for ships up to and including 1,000 ft. 24 hr. service (VHF Channel 14 or Tel: (519) 253-4694). Dock adjacent to main shipping channel. No coal bunkering available.
FIRE PRECAUTIONS: Fire Dept. requires man at tank installations ashore while pumping, also notify Fire Dept. and Harbour Commission if any spillage.
CONSULS: Italian Consul, tel: 256-0092.
REPAIRS: All repairs above water can be carried out.
SURVEYORS: Lloyd's Register and 4 others.
GANGWAY/DECK WATCHMEN: Not required, but can be supplied.
OPENING/CLOSING HATCHES: Normally done by the stevedoring company.
CUSTOMS ALLOWANCES: See "Montreal".
AIRPORT: Windsor Airport approximately 5 miles. Regular flights 7 days a week by Air Canada.
TIME: GMT minus 5 hours from October to April. DST subject to local vote.
HOLIDAYS: The following are the legally observed holidays; however, vessels will be worked on these days at applicable rates: Christmas, New Year, Good Friday, Victoria Day, Dominion Day. Civic Holiday, Labour Day, Thanksgiving and Veteran's Day.
POLICE/AMBULANCE/FIRE: Police 258-6111; Fire 258-4444; Ambulance 258-2155; Emergency dial 911.
TELEPHONES: Phones can be placed on board by prior arrangement.
SERVICES: Tank truck available for tank-washings, also radio telephone and radar service. Compass adjustor not available.
SHORE LEAVE: No restrictions on shore leave.
IDENTIFICATION CARDS: I.D. cards should be carried.
GENERAL: Fluctuation of water level; high Westerly wind drops water level. Detroit River Light should be contacted for water gauge on VHF 16 for upbound ships, and Belle Isle Coast Guard Stations on VHF 16 for downbound ships.
AUTHORITY: Windsor Harbour Commission, 500 Riverside Drive West, Windsor, Ontario, Canada N9A 5K6. *Tel:* (519) 258-5741. *FAX:* (519) 258-5905. *Contact:* David S.H. Cree, General Manager.

WOODFIBRE, B.C.: 49.40 N. 123.15 W. (See Plan)

LOCATION: Port located in Howe Sound approximately 21 miles from Port Atkinson.
PILOTAGE: See "Vancouver". Arranged through ship's local Agent.
ANCHORAGE: See "Vancouver".
TUGS: Arranged through ship's local Agents. Squamish Tug Tel: 898-3733. Seaspan International Tel: 988-3111. Rivtow Straits Ltd. Tel: 255-1133.
BERTHING: Dock length – 449 ft. Dock width – 24 ft. Depth alongside 30 ft. at Chart Datum. Principal cargo – unitised baled pulp.
STEVEDORES: I.L.W.U. – Arranged through ship's Agents.
MEDICAL: Squamish Hospital Tel: 892-5211, (plus Mill First Aid). Dental – Squamish Tel: 892-3111. Doctor – Squamish Tel: 892-5151.
FRESH WATER: Limited supply available.
FUEL: Not available.
CONSULS: See "Vancouver".
DRY DOCKS/REPAIRS: North Vancouver, Versitile Corp. Tel: 988-2111.
GANGWAY/DECK WATCHMEN: Ship's crew, ship's gangway used.
CUSTOMS: Tel: Vancouver – 665-1545.
AIRPORT: Vancouver.
POLICE/AMBULANCE/FIRE: Police – R.C.M.P., Tel: Squamish – 898-9611. Ambulance, Tel: Squamish – 898-3311. (Plus Mill ambulance). Fire – Mill Fire Department. Emergency number – 911.
SHORE LEAVE: Mill area is a restricted area.
GARBAGE DISPOSAL: No service available.
WASTE OIL DISPOSAL: No service available.
SEAMAN'S CLUBS: None.
CURRENCY: Banks in Squamish or Vancouver.
AUTHORITY: Western Pulp Limited Partnership, Box 5000, Squamish, B.C., V0N 3G0, Canada. *Tel:* (604) 892-6688. *Telex:* 04-508828 (Vancouver). *FAX:* (604) 892-6673. *Cables:* Westpulp Vcr. *Contact:* Jack Westerberg, Fibre and Shipping Superintendent. Maritime Health Declaration.
6 Crew Lists.
2 Provisions Lists.
8 Manifests of cargo for discharge.
PILOTAGE: Pilot is taken at Las Palmas. Vessels should advise ETA to their Agents in advance and contact Las Palmas Pilots on VHF Channel 16 on arrival.
MAX. SIZE: LOA 150 m., draft 8.5 m.
HEALTH: Pratique granted on berthing.
RADIO: Las Palmas Radio.
TUGS: Not normally used, but available from Las Palmas if required.
BERTHING: Private loading quay 200 m. long, depth 8.5 m. – 15 m., can accommodate ships of 150 m. length and 8.5 m. draft. Loading by conveyor belt, 150/200 t.p.h.
MEDICAL: At Las Palmas, full facilities.
FRESH WATER: Available in an emergency only.
FUEL: Not available. Vessels should be stemmed for bunkers at Las Palmas.
REPATRIATION: Arrangeable via Las Palmas Agents.
AIRPORT: Las Palmas Gando Airport – 5 km.
TIME: GMT during Winter. GMT plus 1 hour from first Sunday in April to last Sunday in September.
HOLIDAYS: As for Spain, plus local holiday September 8th.
SHORE LEAVE: Allowed.
AUTHORITY: Compania Insular del Nitrogeno, S.A., P.O.Box 417, 35080 Las Palmas, Grand Canary, Canary Islands. *Tel:* 690688, 695860. *Telex:* 95046. *Cables:* Insunitro Las Palmas.

LAS PALMAS: 28.05 N. 15.27 W. (See Plan)

DOCUMENTS:
5 copies Crew List.
4 copies Passenger List.
5 copies Transit Passenger List.
5 copies List of Passengers Disembarking.
1 copy Tobacco/Spirits/Personal Effects List.
1 copy of Stores and Arms and Ammunition.
1 copy Health Certificate.
1 copy Derat Certificate.
2 copies Load Line Certificate.
1 copy Tonnage Certificate (GT London Conv. 1969).
1 copy Certificate of Nationality.
1 copy Safety Equipment Certificate.
1 copy Cargo Gear Certificate.
2 copies Provisions Lists.
1 copy of Manifest, with Bills of Lading covering cargo for Las Palmas.
PILOTAGE: Compulsory. Masters send radio message to Agents 72 hours, 48 hours and 24 hours prior to arrival giving ETA and requirements. It is compulsory to call both (VTS) Las Palmas Port Control 2 hours before ETA, and Pilot 1 hour in advance on VHF Channel 16. Pilot boats have black hull, white wheel house, with black "P" and boat number painted both sides of wheel house.
Pilot boards approximately 1 mile from harbour entrance.
Pilot Station: Tel: 264302. Fax: 227802.
ANCHORAGE: Good anchorage in roads, depth in excess of 35 m. Sandy bottom in North Roads, sand and shingle in South Roads. Mean tidal range 2.5 m. Tidal velocity negligible. The Anchorage Zone is under vigilance of Radar Las Palmas Port Control (VTS).

If anchoring off Las Palmas great care must be taken in choosing a position to anchor bearing in mind the great depths at relatively short distances from the island and the congested nature of the off-port area. Because the bottom is uneven and rocky ships should not steam to the anchoring position with too much cable walked out but, in view of the depths, it is necessary to lower the anchor to the bottom when all way is off the ship. Several ships have lost their anchors during the anchoring manoeuvre off La Luz.
RESTRICTIONS: No length or beam restrictions. Max. draft for vessels bunkering or working cargo 20.0 m. (Reina Sofia – South Dock). Vessels berth and unberth during day and night. Vessels carrying dangerous cargoes must apply through their Agent with 48 hours advance notice (72 hours for explosives) for permission to enter port, declaring quantity, IMO class and UN numbers also ports of origin and destination of the cargo. Tankers in ballast must declare whether tanks gas-free or inerted.
MAX. SIZE: Vessels of any length and beam can safely berth and normally discharge and load cargo while bunkering. Max. allowable draft 66 ft.
Largest vessel berthed 550,000 d.w.t.
RADIO: Las Palmas Radio Station, call sign EAL. SSB: 2,114 kHz (receiving), 1,689 kHz (transmitting).
Tankers: All tankers are requested to give a 48 hours notice (minimum) to Port Authorities and/or Harbour Master through their Agent, stating arrival conditions (type of comodity, gas free or not, etc.).
VHF:

Las Palmas Radio	Channel 16
Port Control	Channel 16
Pilots	Channels 12 or 14
Tugs	Channel 14
Rescue Co-ordination	Channel 10

RADAR: Port of Las Palmas has a VTS station since January 1995. Vessel's Masters must contact Las Palmas Port Control on VHF Channel 16 two hours prior to arrival. They will be instructed to enter in this port.
TUGS: The following harbour and/or salvage tugs are available: *Tamaran,* 2,375 i.h.p.; *Arucas,* 2,200 i.h.p.; *Boluda Cuarente,* 2,650 i.h.p.; *Orotava,* 2,062 i.h.p.; *Bandama,* 4,134 i.h.p.; *Capero Tres,* 227 h.p.; *Capero Grande,* 240 h.p.; *Capero Chico,* 133 h.p.; *Don Quijote,* 195 c.v.; *Don Quijote I,* 200 c.v.e.
The following salvage tug is available: *Punta Mayor,* 2 engines of 4,000 h.p. each.

BERTHING: Subject to availability. Information should be radioed to Agent 48 hours prior to arrival, if berthing required, and for what purpose. Harbour approach from open sea with no impediments.

Leon y Castillo: Runs North/South, approximately 2,000 m. long. This quay is normally used by vessels bunkering and is fitted with bunker and fresh water line connections along its entire length. In 1997, Leon y Castillo Mole will have a new container terminal.

Height of quay above LW averages 4.5 m. Average rise and fall of tide 2.5 m.

Vessels lie safely alongside at the following maximum drafts:

Berths No. 1 – 69	33 ft.
Berths No. 69 – 84	40 ft.

Vessels using Berths No. 1 to 14 with drafts between 34 ft. and 36 ft. must enter and clear between half and full tide.

The inside of Dique Leon y Castillo is a stone wall fendered about every 12.0 m.

The breakwater berths are allocated by bollard numbers according to the numbers free at the time of allocation. The distance between the two ships on either side of your ship's berth may not be more than 1.1 times your ship's length, therefore careful manoeuvring into berth is essential.

All bollards for moorings are on the edge of the quay spaced 25 m. apart and, therefore, when ships are light, moorings will have a large vertical angle with little breasting effectiveness. At Leon y Castillo Quay, there are double bollards, from Bollard No. 52 to No. 66, and from Bollard No. 70 to No. 82.

The public has access to the main breakwater and no control of smoking is effected. Extreme vigilance must, therefore, be exercised to guard against unauthorised boarding and fire hazards.

Muelle Grande (Ex-Muelle de la Luz): This quay is used mainly for cargo operations and has a total of 1,200 m. of berthing space.

A grain silo is situated at the North end of the quay. Maximum draft for berthing at the silo (capacity 12,000 tons) is 32 ft. Two connections for discharge of edible oils to the local refinery are also on this quay. Maximum drafts alongside the connections are 39 ft. and 32 ft. respectively; at the latter connection there is a length restriction of 150 m. One cold storage installation situated on this quay.

Muelle Pesquero (Ex-Espigon del Castillo) and Ribera Mole: These 2 quays are used mainly by fishing vessels and coastal cargo vessels. Five cold storage installations are situated on the Fish Mole.

Santa Catalina Mole: Length 915 m. (North 160 m., South 280 m., East 175 m., West 100 m. and 200 m.), depth 4 m. – 9 m. (in 1997). This quay is used as a terminal for passenger ships.

Queen Sofia Mole: 4,020 m. (only 2,845 m. for berthing) breakwater with dolphin berth for tankers. Depth of water 22 m. This allows berthing of ULCCs for repairs afloat, painting, underwater cleaning, etc.

Muelle de Gran Canaria (Ex-Muelle EN-1): Length 520 m., depth 12 m. For berthing vessels up to 300 m. LOA. There is a Ro/Ro ramp and container handling facilities.

Muelle Virgen del Pino (Ex-Muelle EN-2): Length 410 m., depth 12 m. For berthing vessels up to 300 m. LOA. Facility used by container vessels.

Muelle de la Elder (Ex-Muelle EN-3): Length 440 m., depth 14 m. For bunkering or using the grain silo. A fertiliser bagging plant and conveyor system is in operation.

CARGO HANDLING EQUIPMENT:

Muelle de Gran Canaria (Ex-Muelle EN-1): Served by 2×32 ton Paceco quay cranes and 2×35 ton Liebherr Tango container gantry cranes, with Ro-Ro ramp.

Total area 14 ha.; 31 mobile cranes (Mannesmann Demag/Pegaso/Magirus/various (1.5 tons – 125 tons)); 10 front handlers (20 tons – 42 tons); 102 yard tractors (ATA/Eurocar/various); 226 yard chassis (Fruehauf/various); CFS on Terminal; 118 forklifts (OMC 2D/Fiat 85/various (1.2 tons – 42 tons)). 100 reefer connections.

Muelle Virgen del Pino (Ex-Muelle EN-2): Total area 8 ha.; simultaneous loading/unloading 5 containers; 100 electric connections for reefer containers; served by one Liebherr container crane (Panamax) 35 tons capacity; one Imenasa conventional crane 30 tons capacity; one Paceco container (Post Panamax) 40 tons capacity; 8 forklifts 40 tons; 2 Paceco transtainers (rubber tyre); five over four/six more truck.

Marine operations 24 hours per day in 6 hour shifts throughout the year. Land operations 0800 hrs. – 2000 hrs., Monday to Friday; 0800 hrs. – 1400 hrs. on Saturdays.

BULK CARGO FACILITIES: Grain silo with 4 extractors. Rate 50 t.p.h. for each extractor. Draft alongside 32 ft. Cement silo with 2 extractors.

STEVEDORES: Loading and discharging of general cargo can be carried out between 0800 hrs. and 0200 hrs. including Saturdays; between 0800 hrs. and 1400 hrs. on Sundays.

Stevedoring labour works on a 6-hour shift system, 4 shifts per 24 hours. The shifts commence at 0800, 1400 and 2000 hrs. Overtime from 0200 hrs. to 0800 hrs.

Labour for the 0800 hrs. shift must be ordered by 0715 hrs., and for the 1400 hrs. and 2000 hrs. shifts on Monday to Fridays by 1315 hrs. Labour for all Saturday shifts must be ordered by 0800 hrs. on Saturday.

MEDICAL: Master should advise Agent if medical attention required on arrival. Hospital and ambulance services available day and night. Vaccination and inoculation available any time but notice should be given prior to arrival.

TANKERS: No facilities for slop discharge. Facilities for sludge. There is a special berth for large tankers with a draft of 22 m.

Each of the main oil companies have their own valve manifolds in pits in the breakwater roadways. These manifolds are connected to the ship's manifold by hoses and, sometimes, hard pipe strung along the breakwater road.

Berthing Procedures at Leon y Castillo: Tugs are made fast, using tug's wires putting eyes over the bitts, before entering harbour. Good messengers are required to lift tug's wires on board, especially if light ship. All ships have one tug on the hook forward, 1 tug on the hook aft and from 1 to 3 tugs alongside on the side away from the berth (usually port side). Communications between ship, tugs and mooring boat are effected by portable VHF sets carried by the Pilots, calling Channel 14 or 6.

On passing the Southern end of Dique del Leon y Castillo, the ship makes a 90° turn to starboard and proceeds to berth. Ships are normally berthed head to wind and as this prevails from the N.E., most berthings are starboard side to the breakwater. If the wind is from a Southerly quarter the ship is swung off the berth before going alongside.

The pilot boat follows the ship into the harbour and runs the head and stern moorings ashore. 2 head lines and 1 stern line are usually first ashore. At this time it is essential that the offside tugs are in a position to be able to retard the ship's movement towards the berth. Spring lines are put ashore by heaving line.

The ship is not spotted on to a hose handling point but is placed centrally between bollard numbers. Extension hoses and sometimes hard pipe are then used to connect the valve pit with the ship's manifold position.

Cargo/Bunker Connections: All hose handling is achieved with the ship's derrick which should be topped ready before berthing. Hoses used for cargo discharge are 8 in. with normally ASA bolted flange connections but some companies use quick release couplings. Hoses for supply of bunkers are 8 in., 6 in. or 4 in. with ASA bolted flange connections.

Preparation of Manifold: Hose derricks to be lifted and plumbed for 1 m. outside ship's rail. For cargo discharge 8 in. outlets should be prepared.

Gangway: Ships must provide their own gangway. Because vehicles pass along the breakwater, gangways must be put out in a fore and aft direction or an accommodation ladder used.

Cargo/Bunkers Handled: B.P., Texaco, Ducar, Cepsa, Disa, Esso, Petrocan, Shell, Mobil import IFO 180, IFO 380 and Marine Gas Oil.

Deballasting Facilities: Clean ballast allowed to be discharged within port limits. Dirty ballast discharge prohibited within port limits. No facility for dirty ballast in port area.

Ullaging, Temperature, Water Finding: To be done after arrival in conjunction with a Shore Inspector.

Cargo/Bunker Handling Facilities: B.P., Texaco, Ducar, Cepsa, Disa, Esso, Petrocan, Shell, Mobil storage are located at the shore-end of Dique Leon y Castillo, at the same elevation as the breakwater road.

The tanks are connected to the berth as follows: (All companies have pipelines in all piers mentioned below).

Pier	*Company*	*Connections* No.
Dique Reina Sofia	B.P.	15
Muelle de la Elder	Ducar	14
	Cepsa, Esso, Shell, Texaco	12
Leon y Castillo	Shell	14
	Cepsa	8
	Ducar	14
	Esso	13
	Texaco	12
	Mobil	2
Primo Ribera and Muelle Grande	Cepsa and Texaco	12
	Shell	11

If other ships require Fuel Oil bunkers during discharge of this grade, these are delivered via the 12 in. line leaving the 16 in. line for discharge.

Bunker deliveries are made at 600/700 t.p.h. maximum. Normal rates 200/500 t.p.h. All bunker deliveries are metered. Bunkers can be delivered by barge to ship at anchor by all companies with 3 barges. There is a barge service to supply fresh water at anchorage.

Passing Traffic, Weather, Tide, Current Problems: No traffic or current problems.

Maximum tidal rise 2.7 m. over datum.

Whilst the weather is generally equable, wind from S.E. can cause a problem to ships with high freeboard due to lack of adequate breasting facilities. A close watch should be kept on moorings and weather conditions.

DENSITY: *Density of Dock Water:* 1025.

FRESH WATER: Available at inner harbour mole delivered by hose at rate of approx. 50 t.p.h. per hose, while bunkering and/or loading/discharging cargo. Also available by barge at anchorage.

FUEL: Masters to include in messages to Agents amount, grade and viscosity of oil required, and name supplier, 48 hours prior arrival.

Bunkers supplied 24 hours. Fuel oil, diesel and gas oil available ex-wharf, rate 1,000 t.p.h.

CONSULS: The following countries have Consular Representations at Las Palmas:

Austria
Belgium
Bolivia
Brazil
Cape Verde
Chile
Colombia
Costa Rica
Cuba
Denmark
Dominican Rep.
Ecuador
El Salvador
Equatorial Guinea
Finland
France
Gambia
Germany
Greece
Guatemala
Guinea Bissau
Italy
Ivory Coast
Japan
Korea Rep.
Luxembourg
Mauritania
Monaco
Morocco
Netherlands
Norway
Panama
Peru
Philippines
Portugal
South Africa
Sweden
Switzerland
Syria
Togo
United Kingdom
United States of America
Uruguay
Venezuela

REPAIRS: All types of deck and engine repairs carried out afloat.

DRY DOCK: Repair Wharf length 560 m. depth 8 m. – 12 m. Syncrolift platform, lifting power 9,500 tons, for vessels up to 212 m. length, 30 m. beam and 30,000 d.w.t. 5 mooring points of 180 m. and 2 of 220 m.

There are 4 slipways, length 347 m. – 360 m., depth 7.0 m.

SURVEYORS: The following Classification Societies have resident appointed Surveyors at Las Palmas: American Bureau of Shipping, Det Norske Veritas, Lloyd's Register of Shipping, Nippon Kaiji Kyokai, Registro Italiano Navale, Bureau Veritas, Comisariado Espanol Maritimo, Com.Tecnico de Peritaciones and Korean Register of Shipping.

Cargo Surveyors: SGS.

GANGWAY/DECK WATCHMEN: Recommended. Arranged by Agents.

Port security and access to the port has been improved. Police patrol boat in operation.

OPENING/CLOSING HATCHES: Performed by stevedores.

CUSTOMS ALLOWANCES: E.E.C. allowances.

REPATRIATION: All facilities for crew changes, by sea and air.

AIRPORT: International Airport 26 km. South of Las Palmas.

TIME: GMT in Winter. Summer-time is GMT plus 1 hour.

HOLIDAYS: Local holidays: Shrove Tuesday; 30th May; 24th June; 8th September.

National Holidays: 1st January; 6th January; 1st May; 25th July; 15th August; 12th October; 6th December; 8th December; 25th December.

Feast Days: Good Friday; Ascension Day.

Cargo handling during holidays and feast days; no stevedoring labour available: 1st January and 25th December, from 2000 hrs. on day prior to and 0800 hrs. on day following holiday. 1st May, Good Friday, 25th July, from 0800 hrs. on day prior to and 0800 hrs. on day following holiday.

POLICE/AMBULANCE/FIRE: Police, 091. Ambulance, 061. Fire, 080. Port Control and Rescue, 900-202202 and VHF Channel 16.

CO-ORDINATION CENTRE: The National Rescue Society has its own Regional Maritime Rescue Co-ordination Centre (MRCC) in the port of Las Palmas. Emergency channels are as follows:

VHF Channel 16.
MMSI 002240995:
DSC: VHF Channel 70.
DSC MF/HF: 2,187.5, 4,207.5/6,312/8,414.5/12,577/16,004.5.
Telephone No.: 900 202202, 467757, 467955.
Fax No.: 467760.

TELEPHONES: Line connected to vessels alongside wharves from Harbour Board exchange if required.

SERVICES: Underwater hull cleaning, painting, surveys are carried out in clear water in outer harbour. Compass adjusting, gyro repairs, radar repairs, etc.

BANKS: The most important banks either Spanish or international have local branches in the city of Las Palmas. Some international banks located in town are:

Barclays Bank. C/Presidente Alvear 25. Tel: (3428) 263354.
Arabic-Spanish Bank. C/Leon y Castillo 324-326. Tel: (3428) 228126.
Credit Lyonnais Spain. C/Jose Franchy Roca 9. Tel: (3428) 276912.

SHORE LEAVE: Permitted. For some nationalities, passes must be issued by Immigration Authorities.

IDENTIFICATION CARDS: Not necessary.

GARBAGE DISPOSAL: Garbage removal is compulsory, fee included in fixed charges of the vessel in port. Domestic waste thrown in drums is collected every day. For cargo associated waste or from vessel maintenance work, a container alongside the vessel is provided on request.

Garbage is removed by a private enterprise: "Esponja del Teide" (Tel: 3428-469851. Fax: 3428-465604).

WASTE OIL DISPOSAL: Collection service is available in the whole port. The company in charge of collecting waste oil with tanker trucks and of Marpol extended certificate is "Emgrisa". Tel: (3428) 463283. Fax: (3428) 463349.

CURRENCY: Peseta. The approximate exchange rate is U.S.$1.00 = 125 Pesetas. Many Bureau de Change located in the main tourist resorts, even though most shops accept the main currencies.

DELAYS: Delays in berthing (about an hour) can sometimes be expected.

OFF-PORT TRANSFERS: 24 hour service throughout the year by helicopter and launch.

Helicopter: Cosmar S.A. Tel: (34-28) 467757/467955/467965. Fax: (34-28) 467760. VHF Channel 10.

Launch: Remolcadores Insulares. Tel: (34-28) 229419. Fax: (34-28) 270098.

Sefare S.L. Tel: (34-28) 414108.

DEVELOPMENTS: The extension by 1 km. of the Mole "Reina Sofia" was completed in June 1995. Its purpose was to increase berth line and to shelter a wide area of the Outer Port from N.E.ly storms, as well as to increase the area for deposit of cargo.

The two main sea works which are being carried out at present are the new container terminal in the Leon y Castillo Mole (1997) and the terminal for local Ro-Ro traffic at Muelle Virgen del Pino (Ex-Muelle EN-2) (1997).

The new container terminal will have a 1,000 m. berth line and a 200,000 sq.m. area for container operations.

The construction of a new pier with 3 ramps between Muelle Virgen del Pino (ex-EN-2) and Muelle de la Elder (ex-EN-3) quays for Ro-Ro vessels, and another ramp between Muelle Virgen del Pino (ex-Muelle EN-2) and Muelle Gran Canaria (ex-EN-1).

AUTHORITY: Autoridad Portuaria de Las Palmas, Explanada Tomas Quevedo s/n, E-35008 Las Palmas de Gran Canaria. *Tel:* (34-28) 300400, 300480. *Telex:* 96004. *FAX:* (34-28) 300422, 300423. *Contact:* Harbour Master (Tel: 468289. Fax: 468269). Port Control (Tel: 467955 (SOS), 300444 (Port Service). Fax: 467760).

AGENT: Intertransport Canary Operations, S.L., Juan Rejon 52-6°, 35008 Las Palmas de Gran Canaria. *Tel:* (28) 469057. *Fax:* (28)468991. *Telex:* 95358 Intcp.

SANTA CRUZ DE TENERIFE: 28.28 N. 16.14 W. (See Plan)

DOCUMENTS:

6 Crew Lists.
6 Passengers in Transit Lists.
8 Passengers Landing Lists.
7 Cargo Landing Manifests.
2 Stores Lists.
1 International Health Declaration.
1 Free Pratique.

If no passenger or cargo landing, must present negative declarations.

PILOTAGE: Compulsory. Recommended give Agent 48, then 24 hours notice of ETA. Contact Pilot station by VHF Channels 14 or 16. Pilot station located at shore end of Muelle Norte. Pilot boards up to 2 miles off extreme end of Muelle Sur. In daytime pilot cutter identified by blue flag with white "P" superimposed; night-time, red and white light. When pilot cutter unable proceed out of harbour due heavy weather, Pilot awaits in lee of extreme end of Muelle Sur. Pilots called by VHF when entering (Channels 16 and 14); on sailing called by local Agent, or by VHF Channel 16 or 14.

ANCHORAGE: Vessels proceeding to anchorage are conducted by Pilot. Anchorage outside breakwater in depths 10 – 40 fathoms.

MAX. SIZE: Floating pipeline terminal at Honduras, up to 240,000 d.w.t. Dolphins, up to 45,000 d.w.t.

Dique del Este (new part), 700 m. long with 300 m. LOA limitation, draft up to 60 ft.

HEALTH: Free Pratique not granted by radio. "Q" Flag must be flown until vessel cleared inward by Port Health Authorities, which procedure is very quick. If suspected disease or fever on board, Agent or Port Health Authorities must be notified by radio.

RADIO: Tenerife Radio – call sign EAT working frequency 472 kHz. Short-wave EAT 3 working frequency 1930 – 0830 hrs., 8742 kHz. Short-wave EAT 4 working frequency 0830 – 1930 hrs., 13092 kHz. Radio telephone call sign "Tenerife Radio" working frequency 1740 kHz.

There is a 24 hour telephone link with vessels within 100 miles range, which vessels may utilise by calling Tenerife Radio on VHF Channel 16 for connection to Agent's telephone number.

TUGS: Join vessels entering approximately 0.5 miles to 1 mile from extreme end of Muelle Sur. Use of tug's lines optional, but when supplied by the tug, extra charges incurred. Use of tugs not compulsory.

Tugs normally available: *Guimar* 1,600 h.p.; *Tarifa* 2,300 h.p.; *Algeciras* 3,200 h.p.; *Coria* 3,200 h.p.; *El Guanche* 2,850 h.p.; *Gran Canaria* 2,850 h.p.

BERTHING:

Dique del Este: 960 m. length, depth alongside 16.0 m. – 19.5 m.; 294 m. length, depth alongside 12 m. Quay used by tankers, bulk carriers and container vessels. Water and bunkering facilities available.

New Container Base (South Dock): Length 450 m. Depth alongside 10 m. Gantry cranes up to 35 tons available.

Dique Muelle Sur: 803 m. length, depth alongside 12 m.; 213 m. length, depth alongside 10 m.; 638 m. length, depth alongside 8.00 m. Bunkering and fresh water connections available. Quay used by passenger vessels and vessels bunkering.

Muelle de Ribera: 412 m. length, depth alongside 10 m.; 131 m. length, depth alongside 9.5 m.; 295 m. length, depth alongside 8 m., 314 m. length, depth alongside 7 m. There are 5 Ro/Ro berths. Bunkers and fresh water available.

Fishing Harbour: Total length 1,850 m. Depth alongside 6 m. Bunkers are supplied by road tanker and water available at certain points along the quay.

Muelle Norte: 103 m. length, depth alongside 8 m. Bunkers and water available.

Container Terminal (N.E. Dock): Length 420 m., depth alongside 10 m.

Honduras Mole: Length 90 m., depth alongside 8 m.

Dolphin Berth: Length 90 m., depth alongside 10 m.

CRANES:

Muella de Ribera: 3×6 ton, 1×40 ton and 8×3 ton Portal cranes.
Muelle Norte: 2×6 ton electric Portal cranes.
Dique del Este: 2×30 ton electric Portal cranes.
Container Terminal (N.E. Dock): 1×30 ton gantry crane. Mobile cranes 180 tons and 125 tons available.
Floating Cranes: 1×80 ton.

BULK HANDLING FACILITIES: Grain silo situated at entrance to East Mole, max. discharge rate per extractor, 200 t.p.h. Two extractors available and can work 24 hours a day. It is only used for government department imports. All other shipments are discharged by grabs at the South Mole.

STEVEDORES: Monday to Saturday gangs ordered at 0600, 1200 and 1800 hrs. On Sunday there is only one shift from 0800 – 1400 hrs. and gangs for Sunday work must be ordered at 1300 hrs. on Saturday. Telegraphic information from Masters to be despatched 48 hours prior arrival giving first ETA. Gangs work three 6-hourly shifts, viz. 0800 – 1400 hrs., 1400 – 2000 hrs., 2000 – 0200 hrs. Fourth shift from 0200 – 0800 hrs. by special request. Orders to be made by 1900 hrs. All necessary gear supplied by stevedores.

MEDICAL: Masters to advise by radio if medical attention required on board. Yellow fever inoculation possible in daytime subject prior notification.

TANKERS: Local refinery (Compania Espanola de Petroleos SA) have ample couplings, hoses and reducers. Slop facilities available.

Tankers up to 240,000 d.w.t. discharge at Floating Pipeline Terminal at Honduras Buoy Zone (See "Shipmaster's Report" dated August 1995).

Loading terminals situated at Dique del Este; at Puerto Honduras (used mainly for LPG and refined spirit loading) for 45,000 d.w.t.; and 2 berths at extreme end of Muelle Sur.

DENSITY: About 1025.

FRESH WATER: Available at all berths, delivered by hose any time day or night. Water barges available 24 hours to supply vessels at anchorage, 500 tons and 400 tons capacity. Night-time at extra cost.

FUEL: All grades available from CEPSA (cables "Spanoil Madrid" and/or "Tenerife"). Fuel available at all berths, average rate of loading 500 t.p.h. – 600 t.p.h. Bunkers at anchor can be supplied by bunkering barge *Mayorga*, 1,400 tons capacity, or *Spabunker*, 6,000 tons fuel; 1,500 tons gas oil. Notice required for refuelling 72 hours, to be confirmed at 48 and 24 hours before arrival.

Also see "Shipmaster's Report".

FIRE PRECAUTIONS: All tugs equipped fire-fighting equipment including foam and 4 water/foam monitors. Refinery well equipped with shore fire-fighting equipment, including mobile foam trucks.

Venezuela

REPAIRS: NUVASA offer a synchro-lift, lifting capacity 2,000 tons, and vessels up to max. 83 m. LOA can slip at their yards, where there is space for 14 vessels at a time. Docking can be effected day and night. Also available is a floating dock with 6,000 tonne capacity.

Their workshops can carry out major repairs to ships afloat, including engine and boiler work, and is equipped with modern machinery.

SURVEYORS: Lloyds, ABS, NKK, RIN, BV, GL and NV available from Las Palmas. BV and GL in Santa Cruz.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

HATCHES: Normally opened by crew, stevedores lifting beams. If whole operation carried out by stevedores, extra charge possible.

CUSTOMS ALLOWANCES: Free port, no restrictions in force.

REPATRIATION: All facilities available for repatriation and crew changes. Daily air flights to Madrid and Europe.

AIRPORT: "Reina Sofia" International Airport situated 65 km. from port, served by Iberia, KLM, Air France, Lufthansa, British Airways and others. Daily flights to and from most European capitals.

TIME: GMT in Winter, GMT plus 1 hour in Summer.

HOLIDAYS: Local holiday: May 3rd. National holidays: January 1st, January 6th, March 19th, Maunday Thursday, Good Friday, May 1st, Corpus Christi, July 25th, August 15th, October 12th, December 8th, December 25th.

POLICE/AMBULANCE/FIRE: Police 091; Ambulance 241502; Fire 220080.

TELEPHONES: Facilities exist for connecting telephones on board.

SERVICES: Underwater hull cleaning, tank cleaning-compounds (Basic Chemicals, etc.), compass adjusting.

Passenger Transport: 8 special craft are available which listen out permanently on Channel 16 VHF.

Transport, Victualling, Lubricants, etc.: There is a fleet of craft operating 24 hours a day for this pupose.

Cleaning of Hulls and Painting Afloat: The company RETRASUB using the Scamp. system operates, and has special craft for hull painting.

Sick Persons: Brought ashore in small craft, and there are ample medical and surgical services available in Tenerife.

Disembarkation of Crew, Technicians etc.: The airports of the island provide wide international coverage for moving crews, etc.

Waiting for Berths: Very reduced tariffs are applied to vessels waiting on stand-by in the anchorage.

SHORE LEAVE: No restrictions, except for Crew members of East European countries. (See "Identification Cards").

IDENTIFICATION CARDS: Not required. Citizens of East European countries may require identification cards.

SHIPMASTER'S REPORT: April 1988.

Vessel called for bunkers only. On contacting Pilot Station, the vessel was given a position to anchor outside the breakwater. The Pilot Station is to be informed after anchoring. The bunker vessel is fitted with a flow meter and the amount of bunkers supplied is ascertained by the same. The Agent boarded the vessel promptly and took care of all the formalities and issued Port Clearance. If a vessel stays for over 6 hours, additional charges are to be paid. On sailing, the Pilot Station is to be informed.

SHIPMASTER'S REPORT: August 1995.

Vessel: 139,000 d.w.t. crude oil tanker.

Charts: B.A. Charts No. 1857, 1858 and 1869.

Cargo: Vessel discharged 130,000 tonnes of crude oil to Compania Espanola de Petroloes S.A. (CEPSA), who were the cargo receivers and the operators of floating pipeline terminal at Honduras Buoy Zone (Puerto Caballo), known as CEPSA Terminal.

Pilots: Vessels are requested to contact Tenerife Pilot on VHF Channel 16, approximately 30 miles before arrival.

Restrictions: Due to safety reasons, mooring and unmooring at CEPSA Terminal is only permitted during daylight hours. To berth on arrival, provided the berth is available, the vessel must arrive at least 3 hours before sunset. That is, the vessel should have the Pilot on board and ready to commence mooring operations, with all required mooring lines (See "Berthing") on board at least 3 hours before sunset. This vessel could not make it at the required time and had to anchor for the night off Dique Muelle del Este, in position Lat. 28° 29.25′ N., Long. 16° 12.00′ W. This position was given by the pilot station. On anchoring and when leaving the anchorage, the pilot station is to be informed. On departure from anchorage, the Pilot boarded vessel 1 mile off the breakwater.

Berthing: The berth is a conventional buoy mooring (CBM) terminal located close to CEPSA Refinery and centred at approximate position Lat. 28° 26.46′ N., Long. 16° 16.08′ W.

Our vessel was required to have the following ready:

(1) Three ropes of 220 m. minimum on forecastle.
(2) Four ropes of 220 m. minimum on aft main deck. Two ropes on each side.
(3) Four ropes of 220 m. minimum on the quarters/poop (Two ropes on each side).
(4) Two ropes of 300 m. minimum and one messenger rope 4 in. × 150 m. at stern.

The use of wire ropes is forbidden by marine authorities.

The berth consists of 6 mooring buoys numbered 1 to 6 (See "Plan"). Starboard anchor with 8-10 shackle length is used. Two 300 m. long mooring lines are secured to Buoy No. 4 from the centre lead aft. This vessel did not have the 300 m. long lines and these were hired from the terminal. The Agents must be informed in advance, if such ropes are to be hired.

Four tugs were used in and out.

CEPSA Loading Master boards vessel during mooring and relieves the Pilot once the vessel is in position.

The depth at the berth is about 50 m., which was confirmed by echo sounder.

Discharging: Through 2×16 in. submarine hoses (ASA 150) connected on port side. Ship to provide winch driver, the picking up and connection to manifold is done by shore gang. Shore gang, which was excellent, consists of 3 auxiliary operators/divers who, along with the Loading Master, stay on board throughout the discharge.

Although the terminal is designed to receive cargo from the ship in a tank close to sea level, but this is not used, instead the ship is asked to pump cargo directly to the refinery tanks which are about 60 m. to 70 m. above sea level. Two booster pumps of 4,000 cu.m./hr. capacity each are provided and are switched on when the ship's manifold pressure reaches 5 bar. A couple of small booster pumps are also available to assist when stripping or pumping at reduced rate. Working pressure is 12 kg./sq.cm., and the vessel is expected to maintain a pressure of 10 kg./sq.cm. at the manifold to obtain a good discharge rate.

General: Bunkering is not permitted when the vessel is at the buoy terminal. Stores and fresh water barge may be allowed on a case to case basis.

AUTHORITY: Junta del Puerto de Santa Cruz de Tenerife, Avenida Francisco la Roche No.49, 38001 Santa Cruz de Tenerife. *Tel:* 922-27-78-50. *Telex:* 92077. *FAX:* (922) 27-12-25. *Contact:* Luis Lara Rubido, Port Director. M. Pintor Domingo, Director.

NOTES

Please also advise Shipping Guides Ltd.

Republic of Cape Verde

PALMEIRA BAY, Sal Island: 16.45 N. 22.59 W.

(See Plan)

DOCUMENTS:

5 Crew Lists.
2 Stores Lists.
2 Personal Effects Lists.
1 Health Declaration.
1 Derat Exemption Certificate.
1 Vaccination List.
1 Statement of Ports of Call from Last Loading Port.
3 Bills of Lading.
2 Certificates of Quality (2 from each shore tank at load port).
3 Certificates of Quantity.
2 Cargo Manifests.
1 Ship Particulars Paper (local supply).

PILOTAGE: Accurate ETA advice is essential, as the Mooring Master and Pilot have to leave St. Vincent over 12 hours prior to the vessel's arrival at Sal. Close radio contact must, therefore, be maintained with St. Vincent. If difficulty is experienced in contacting St. Vincent, messages can be passed via Lisbon Radio. Sal Terminal can be contacted on VHF Channels 16 and 13 and by SSB radio.

Shell, St. Vincent, send a Mooring Master from St. Vincent who will berth the vessel and remain onboard until departure.

ANCHORAGES: Position: Lat. 16° 44′ 47″ N., Long. 22° 59′ 37″ W. Sandy bottom. Pilots recommend NOT to anchor during hours of darkness, especially in the months December/March when heavy swell may be encountered.

RESTRICTIONS: Heavy swell occasionally closes port from December 1st to March 31st inclusive.

RADIO/VHF: Arrival displacement to be stated in ETA message. Also see "Pilotage".

Mooring Masters have portable VHF sets for communication to shore during berthing and discharging operations.

BERTHING: Length of pier 112.0 m. Depth alongside 4.10 m. (seaward 60 m.), 2.00 m. (next 33 m.) and 1.00 m. (Inner 22 m.) Width of pier 25 m. – 22 m. Berthing possible on one side only.

TANKERS: A four-buoy (2 forward and 2 aft) sea berth for the supply of refined products to the Airfield on Sal Island, located in Palmeira Bay. Ship drops port anchor in marked location and pays out approx. 7 shackles cable. Three good ropes are required for each buoy. Shore wires are used when swell present. Bottom is stone and rock with some sand patches. Berthing is impracticable in strong South to North West winds which occur usually during winter months.

Engines should be kept ready at all times. The months December/March particularly critical.

Discharging: Shore gang connect hose, however, ship supplies winch driver. Connection is made amidships on starboard side. 1×8 in. flexible hose to an 8 in. submarine pipeline (length approx 1,000 m.) Max. back pressure 150 lbs./sq.in.

Products Handled: Mogas, Kerosene and Avtur. First product Mogas and last product Avtur.

DENSITY: 1025.

FRESH WATER: None. Nearest at St. Vincent.

FUEL: None. Nearest at St. Vincent.

REPAIRS: None.

GENERAL: A Customs Officer, the Mooring Master and Pilot remain on board during stay in port.

SHIPMASTER'S REPORT: November 1987.

Charts: BA. Charts 366 and 369.

Cargo: Vessel discharged 6,200 tonnes of Jet A-1 to Shell Cabo Verde SARL.

Documents

4 copies Crew List.
1 copy Stores List.
1 copy Ports of Call List.
1 copy Vaccination List.
1 copy Crew Declaration.
Cargo documents from loading port.

Approaches: At night port is easily identified and two sets of leading marks which are visible at a useful distance. In daylight tanks and freezing plant are conspicuous and within 2 miles leading marks can be identified.

Communications: Telex via Portishead Radio to Shell St. Vincent was no problem. Once within 40 miles of the port VHF contact was established on Channels 16 and 13.

Restrictions: Vessels may not berth at night.

Pilotage: Pilotage not compulsory. If Pilot required he is sent by Shell from St. Vincent.

Berthing: The Pilot boards from small boat one mile West of mooring buoys. He is accompanied by the Shell Mooring/Loading Master who used to do the pilotage before Independence and now advises the pilot who advises the Master.

Approach was taken very easily with minimum number of engine movements and the light NNW wind blew the ship into the berth easily.

Two boats pick-up the first lines, 2 lines from each bow and 2 lines from each quarter, the ship is then snugged into position (See "Plan"). One more line is sent to each buoy to complete the tie-up. Lashings are required only for the last line on each buoy, the others being shackled on.

In rougher weather the port anchor is used to assist.

Letting go was simple as an off-shore breeze blew us out to sea as soon as we let go and it was just a matter of turning the ship round.

Discharging: Through 1 × 8 in. hose. Ship provides winch driver. Shore gang pick-up and connect to manifold. Shore gang, which was excellent, consists of 6 to 8 local men who stay on board throughout the discharge.

Throughout the discharge the Loading Master and one Customs Officer remain on board.

The pilot will return if weather deteriorates.

General:

Stores: Lobsters from the local freezer plant can be purchased when available for $7.0 per kilo. They average 1.5 – 2.0 kilos each.

Berth information:

Operator: Shell Cape Verde SARL.
Density: 1025.
Distance from Pilot to berth: 1 mile
Controlling depth in approaches: 46 ft.
Maximum permissible draft in approaches: 40 ft.
Depth of water in berth: 46 ft.
Maximum permissible draft alongside: 40 ft.
Maximum dimensions permissible alongside:

	1st April – 30th November (m.)	1st December – 31st March (m.)
Length	183	175
Beam	21	21
Draft	12.5	11.54

Vessels are berthed/unberthed at night except in Winter months with high winds.

Fresh Water: Not available.
Fuel: Not available.
Tugs: Not available.
Anchorage Area: To South and seaward of berth but not recommended by pilot.
Number of loading/discharge hoses: One.
Size of hose: 8 in.
Max. rate: 400 t.p.h.
Maximum pressure allowed: 150 p.s.i.
Length of Pipeline: 3,150 ft.
Slop possibilities: Only for changing grades.
Repair Facilities: None.
Veritas or Lloyd's Representation: None locally.

AUTHORITY: See "Porto Grande".

PORTO GRANDE, St. Vincent: 16.53 N. 25.00 W.

(See Plan)

PORT LIMITS: Inside of a direct line running from Pta. Joao Ribeiro to Pta. do Morro Blanco.

PORT: Porto Grande at Lat. 16° 52′ 55″ N., Long. 25° 00′ 25″ W. City: Mindelo.

HARBOUR: Porto Grande is a natural semi-circular harbour sheltered and safe, facing island of Santo Antao over a channel approximately 10 miles wide at nearest points. In this channel but nearer St. Vincent is the rock of Ilheu dos Passaros on which is a lighthouse. Entry to harbour is from North to South. Weather conditions throughout year usually good to excellent.

DOCUMENTS: On arrival Masters should hand to Agent:

3 Crew Lists.
3 Passenger Lists.
1 Maritime Health Declaration Certificate.
1 Copy Stores List.

Port Doctor will also wish to sight ship's Derat Certificate.

When discharging cargo a minimum of 5 copies of Bill of Lading and 5 copies of Manifest are required. No special form for Passenger Lists and Crew Lists, and those in general use by the vessel will be accepted.

PILOTAGE: Radio notice of ETA must be sent by Master to Agent at least 48 hours before arrival. Pilot boards mid-way between Bird Island (Ilheu dos Passaros) and the Quay. The Pilot prefers to use pilot ladder. Signal for Pilot is 2 long and 1 short blast on ship's whistle. However, sound signals prohibited between 2000 hrs. and 0800 hrs. local time. Time between Pilot boarding to vessel's anchoring or berthing at piers is 10 to 45 minutes. See "Radio".

Important: The Harbour Master requests Masters not to anchor in harbour before Pilot on board. Pilots available day and night. Pilotage compulsory for all vessels entering harbour for anchoring, or berthing. When sailing, pilotage not compulsory for vessels which anchored in harbour. Pilotage compulsory for all vessels berthing and unberthing at piers.

ANCHORAGE: Anchorage berth in 4 to 20 fathoms.

MAX. SIZE: The harbour of Porto Grande can accommodate vessels up to any size. Also see "Berthing" and "Tankers".

HEALTH: Free Pratique can be obtained before arrival on application by radio to Guarda Mor (port doctor) of Sao Vicente de Cabo Verde confirming that crew are in good health. The port doctor, however, usually boards vessel on arrival in company with Police and Customs Guards, in order to provide any medical assistance which may be required. Crew and passengers should be in possession of Vaccination Certificates. Production of these certificates will not, however, be called for unless there is a very good reason for doing so.

VHF: Pilot may be contacted on Channels 16 and 13.

Also see "Radio".

RADIO: Advice of ETA should be sent through S.Vicente Radio to Agents at least 48 hours prior to entering port.

S.Vicente de Cabo Verde Radio (D4A) keeps watch 24 hours a day on following frequencies:

MF Morse Radiotelegraphy – A1A – 500 kHz (calling frequency).
Working frequencies – 438.5/478.5, 441/481, 447/487, 450/450, 516/466.5.
HF Morse Radiotelegraphy – A1A.
4184, 8368, 12552, 16736 kHz (scanning watch).
HF Radiotelex – 4177, 8378.5, 12481.5, 16688 kHz (scanning watch).
MF Radiotelephony – 2182 kHz.
HF Radiotelephony – 4101, 8198, 12248, 16462 kHz (scanning watch).
VHF Channel 16 (calling channel).
Working channels: 18 and 19 for S.Vicente Island.
20 and 21 for Santiago Island.
22 and 79 for Sal Island.

All VHF channels are remotely controlled from S.Vicente Radio (operating centre in S.Vicente Island).

BERTHING:

Pier No.	*Max. Depth* (m.)	*Length of Pier* (m.)
1*	11.50	310.00
2	11.50	310.00
3	9.50	160.50
4	9.50	160.50
5	8.50	90.00
6	6.50	122.00
7	4.50	61.50
8	3.50	106.75
9	3.50	40.00
10	4.50	100.00
11	5.50	100.00

(*This pier is open to the sea and usable subject to prevailing winds and swell).

Floating and suspended fenders are available at the piers. Suspended fenders are each of 3 lorry tyres, 3 ft. wide with a diameter of 2 ft. 6 in. suspended at intervals of 70 ft. Floating fenders are of 5 tyres with a wooden core and are 4 ft. 6 in. long and 3 ft. 6 in. in diameter and are placed at intervals between the suspended fenders. Cruising vessels normally berth at Pier No. 2. Max. draft 33 ft.

Height of Pier No. 2 above sea level approximately 2 m. Vessels moor port side to pier. No shore gangways available. Cruising vessels with drafts too deep to berth alongside piers can anchor in harbour about 1,250/1,500 m. distance from Custom House Pier where passengers may land. Ship's launches must be used for the transport of passengers to and from shore. With tug assistance vessels may berth or unberth at any time of day or night at Pier Nos. 2, 3 and 4, but in adverse weather or other adverse conditions berthing at night may be prevented. Berthing and unberthing at night at other piers generally not possible.

CRANES: 1 heavy lift floating crane, max. lifting capacity 60 tons.

STEVEDORES: If quantity for loading or discharging is of 10 tons or under, and in comparatively small parcels, then cargo can be loaded or discharged using the only small lighter available for vessels at anchorage. If larger quantity to be handled vessel must berth alongside quay. In both instances ship's tackle must be used. Discharging rate for bagged cargo, i.e. flour, rice, etc., is about 30 t.p.h. per hatch. In all cases vessel's derricks and winches are used. There are no lighters available, therefore as described above all cargo in excess of 10 tons must be loaded or discharged at the piers. The opening/closing of hatches is the responsibility of the crew on board, but can be done by the stevedores by arrangement with the Master under the supervision and responsibility of the ship's officers.

TANKERS: Max. length 775 ft.; max. draft 36 ft. Underkeel clearance 4 ft. Max. d.w.t. 53,000 tons.

Discharge effected by barge from starboard side of tanker at anchorage, also through submarine pipeline in harbour at: Lat. 16° 53′ 30″ N., Long. 25° 00′ 50″ W. length of line, 1,000 m.; diameter, 20 in.; Buoy Berth; hoses 12 in.; number of hoses, 7; position of hose connections, midships starboard side; Max. rate per hour, 2,000 tonnes; density of water at berth 1025.

Submarine Pipe-line Buoy Berth: Tankers moored to 1 forward buoy and 3 stern buoys. Tanker also uses port anchor which is dropped before tying up to buoys. Nature of bottom is coarse sand and gravel. Berthing at buoys carried out 24 hours a day and port tugs of up to 1,200 h.p. used always on berthing and on unberthing according to weather conditions.

Cleaning Tanks: 50 miles from shore only.

Gas Freeing: At present no facilities available.

FRESH WATER: Can be supplied at anchorage or at piers or ex-lighter day or night. Water suppliers request at least 48 hours' notice giving quantity required. A minimum charge covering costs of supply of 20 tons is made on supply for under that quantity. To supply over 750 tons during a 12 hour stay in port with 2 lighters, giving between 25 to 50 t.p.h per hose, would be difficult. Connections of hose couplings from water barges are 3 in. male, 11 threads per inch.

FUEL: Oil bunkering carried out ex-lighter at anchorage at rate of up to 300 t.p.h. dependent upon speed at which vessel can receive. Both fuel and diesel oil bunkers can be supplied at the piers. Gas oil can be supplied in drums to vessel at anchorage or in bulk ex-pipeline on piers. All bunkering at anchorage ex-barge takes place on starboard side of vessel. Supplier: Empresa Nacional de Combustiveis. Telex: 86 Enacol Cv.

CONSULS:

Belgian (Vice-Consul)
Danish (Vice-Consul)
Netherlands (Vice-Consul)
Norwegian (Consul)
Portuguese (Consul)
Spanish (Consul)
Swedish (Vice-Consul)
Venezuelan (Belgian Consul acts in a friendly capacity).

REPAIRS: CABNAVE, s.a.r.l., is the biggest ship repair yard situated at Porto Grande. The yard is privately owned and started operations in 1983. For docking purposes, the yard has a slipway system with a lifting capacity of 2,800 tons, and 6 repair parks, all equipped with fresh water, sea water, compressed air, electric power and telephone connections. The slipway platform can take vessels up to 110 m. long and 18.0 m. wide. The yard is fitted with modern workshops, and it has specialised personnel who are able to execute any kind of repair work on any type of vessel. For repairs afloat, there is a pier 145 m. long and 6.0 m. depth. Repairs can be performed at anchorage with the assistance of the yard's tug.

SURVEYORS: Lloyd's, Bureau Veritas and A.B.Rinave Portuguesa are represented in Mindelo, St.Vincent.

GANGWAY/DECK WATCHMEN: Two Maritime Police are always in attendance and are compulsory.

CUSTOMS ALLOWANCES: Tobacco and Wine and/or Spirits, no restrictions within reason.

REPATRIATION: Facilities exist for effecting crew changes by air, but recommend that Lisbon be contacted by Owners for crew making flights into Sal Island in order to join vessel St. Vincent. Agents should also be informed to make necessary arrangements for flight on local plane from Sal Island to St. Vincent. All crew travelling to Cape Verde must have transit visa issued by Consul in country of origin. All crew, except cases for hospitalisation, must be in possession of a passport before police will permit them to disembark for repatriation. Crew possessing valid Passports or Seaman's Books can land in Cape Verde for medical and/or hospital treatment or for repatriation to country of nationality provided it is country with whom Cape Verde has diplomatic relations and provided Agents of vessel take full responsibility on behalf of Owners for all expenses.

AIRPORT: Airport served by Dove planes for inter-island service only. 35 flights a week in and out of St. Vincent in Winter and 45 flights in and out in Summer; 16 direct from and to Praia and 14 via Sal Island inwards; 8 via Sal and 7 direct Praia outwards. Main Airport is at Sal Island, where more than 20 flights a week by Boeing 727, 747 and DC-10, call to and from Lisbon, Paris, Amsterdam, Boston, Frankfurt, Italy, Russia, South Africa, etc.

Secondary airport at Praia Island, where 8 flights a week by Dove planes and Focker call to and from Dakar, Banjul, Guine-Conakry and Gambia.

At Sal Island, there are 4 hotels, one situated at Airport and the others at Santa Maria Beach. In Praia, there are 4 hotels and in St.Vicente there are 4 hotels.

TIME: GMT minus 1 hour all the year round.

HOLIDAYS: New Year's Day (1st January); National hero's day (20th January); St. Vincent's Day (22nd January); Workman Day (1st May); National Independence Day (5th July); Assumption Day (15th August); All Saints Day (1st November); Christmas Day (25th December).

Although offices closed on holidays, loading and discharging of vessels not generally affected.

POLICE/DOCTOR/AMBULANCE/FIRE: Contact police on board or local Agent.

SHIPMASTER'S REPORT: July, 1984 (Updated 1994).

Pilotage: Pilot boards 0.5 miles from end of breakwater.

Anchorage: Vessel anchored with Mohle No. 2 Light bearing 068° distance 0.5 miles.

Restrictions: Vessel may enter day and night at any stage of the tide.

Tugs: 2 tugs available. Tugs are compulsory for vessels over 2,000 g.r.t.

Radio: Sao Vicente de Cabo Verde.

VHF: Pilot on Channel 16. Port Authority on Channel 15. Agent on Channels 16 and 15.

Documents:

3 copies Crew List.
1 copy Stores List.
Maritime Health Declaration.

Facilities: The following facilities are available: Fresh water. Fresh provisions in limited quantity. Repair facilities. Dry docking facilities for vessels up to 11 m. draft. Machine shop. Lloyd's Surveyor and Salvage Surveyor. Laundry service. Telex. Bunker fuel oil and diesel oil. Doctor and hospital.

Berthing: Vessel berthed at Berth No. 2 (Molhe No. 2). Length of quay 1,000 ft.

Depths: Depths at N.E. end 37 ft. and at S.W. 43 ft. Least depth of water in channel from sea to berth is 44 ft. Mean tidal range 0.8 m. Bottom mud. Density 1025.

Cargo Handling Facilities: Cold storage capacity 24,000 tons. No Ro/Ro and bulk handling facilities. No quay cranes on the main quay. Floating quay available. Forklift trucks of 40 tons capacity are available. No handling equipment or storage facilities for containers. Container vessels must be self-sustaining.

AUTHORITY: Capitania dos Portos de Barlavento, C.P. 7, Mindelo, Republic of Cape Verde. *Tel:* 314492, 314144, 314271 (Area code 238). *Telex:* (993) 3032 Marpor CV. *FAX:* 0 (238) 314271. *Contact:* Antonio Cruz Lopes, Harbour Master.

Empresa Nacional de Administracao dos Portos, E.P., P.O.Box 82, S.Vicente, Republic of Cape Verde. *Tel:* (238) 314414, 314515, 314832. *Telex:* (993) 3049 Enopor CV. *FAX:* (238) 314661.

PORTO PRAIA: 14.54 N. 23.31 W.

LOCATION: The port of Praia covers a surface of 560 ha. with a maximum depth of 13 fathoms, and is situated at Lat. 14° 53′ 49″ N., Long. 23° 30′ 52″ W.

The lighthouse, "Farol de Donna Maria Pia", built on the "Temerosa" headland, rises up 25 m. on a white tower with octagonal form and is 21 m. in height.

DOCUMENTS: On arrival, the Master should be ready to hand to his Agents all the requirements of requests advised by radio. The following documents are to be distributed to local Authorities:

6 copies Crew List.
5 copies Passenger List.
1 copy Maritime Health Declaration.
2 copies Private Effects List.
2 copies Stores List.
5 copies of Bill of Lading (when vessel unloading).
5 copies of Manifest (when vessel unloading).

There is no special form for Passenger and Crew List, those in general used on board will be accepted. Immigration services have their own forms to be filled on arrival.

The Master should also be in possession of a Derat Certificate and Crew Vaccination Certificates, which will be sighted by the Port Doctor.

Officials: When anchoring or berthing operations are completed, Port Health Officer, Customs Officer, Immigration Officer, Maintenance Services Officer and Agents board the vessel for arrival formalities.

PILOTAGE: Pilotage is compulsory for all vessels which call at Praia or Mindelo, and optional outwardbound for those vessels which are anchored. Pilot available day and night. Pilots may be contacted through VHF Channel 16, which is on permanent listening.

The signal for a Pilot is two long and one short blast of the ship's whistle.

The Pilot prefers to use the pilot ladder, and boards the vessel between the lighthouse and the quay.

ANCHORAGE: The Harbour Master recommends that vessels do not anchor in the harbour before Pilot boards the vessel.

In Sao Vicente, there are anchorages in depths of 3 fathoms to 13 fathoms.

RADIO: Notice of ETA must be sent by the Master to his Agent not less than 48 hours in advance of arrival, through "Saovicente Radio", who in turn will be responsible for informing Port Authorities.

Bunker and water requirements should be advised in the first message. It is further recommended that any cash to the Master required, provisions or any other supplies should be done in advance, in order to have all these matters duly prepared before the vessel's arrival.

Any change of the Crew List to be effectuated must be informed in the same way.

For vessels discharging cargo in the harbour, the following information is required: Cargo distribution (general cargo), number of hatches to be worked and number of working gangs required.

RESTRICTIONS: Berthing and unberthing during daylight only.

TUGS: 2×150 h.p. tugs available. Use of tugs is compulsory for vessels over 5,000 g.r.t. when berthing alongside.

BERTHING: The construction of the port begun in 1973 and was completed in 1978. Reconstruction and building of new structures is underway.

Pier No.	*Length* (m.)	*Maximum depth* (m.)
1	210	9.5
2	310	9.5
3	75	7.0

Warehouses: There are 2 warehouses of 2,400 sq.m. each, and a silo divided into 15 compartments of 14,000 tons of grain.

At the end of the first phase of works, the following will be available:

2 open storage areas with a total area of 8,000 sq.m.
1 inter-island open storage area with 2,500 sq.m.
1 warehouse for long-term storage with 1,500 sq.m.

In phase 2 the following will be constructed:

2 long-term open storage areas with 6,500 sq.m. each.
1 long-term storage warehouse of 2,400 sq.m.
1 silo with 5 compartments and 12,000 sq.m. capacity for grain.
1 operations building.
1 administrative building for Port Authorities, Customs and Police.

Specialised Installations:

1 cold storage warehouse of 2,000 cu.m.

CRANES: 3 mobile cranes available (15 tons, 3 tons and 2 tons respectively).

STEVEDORES: Directed by Enapor. The rate of discharging (bagged cargo) varies between 15 tons to 20 tons per hour, depending on how the cargo is stowed.

The normal period of work is from 0800 hrs. – 1200 hrs. and 1430 hrs. – 1800 hrs. from Monday to Saturday midday.

Night work may be possible in the near future from 2000 hrs. – 2400 hrs., 0000 hrs. – 0400 hrs. and 0400 hrs. – 0700 hrs.

MEDICAL: Services available.

FRESH WATER: Limited supply available by truck.

FUEL: Gas oil in drums (200 ltr.) available to fishing vessels and coasting vessels. Lubricating oil available in drums.

REPAIRS: Minor repairs possible.

REPATRIATION: Possible.

OPENING/CLOSING HATCHES: The opening or closing of hatches is the responsibility of the crew, but can be done by the stevedores, after arrangements with the Master and under the supervision of the ship's Officer.

GANGWAY/DECK WATCHMEN: The use of two Maritime Police Guards and one Customs Guard on board is compulsory.

The presence of an Immigration Police Guard is not necessary, unless for reasons of security, Immigration Services, or the Master of the ship requires one.

It is usual and recommended, for the smooth running of the vessel in the harbour, to serve the watchmen meals. But if the Master prefers not to feed them, then he must inform so immediately on arrival, so that the guards can make necessary arrangements concerning their meals.

A charge of U.S.$ 4.80 (CFE 360.00) per guard will be collected for meals not supplied on board.

POLICE/AMBULANCE/FIRE: Contact Agent.

NOTES

Please also advise Shipping Guides Ltd.

Cayman Islands

CAYMAN BRAC: 19.42 N. 79.50 W. (See Plan)

LOCATION: The Port Authority of the Cayman Islands, Cayman Brac, is located on the North side of the island, approximately 2.5 miles West of the Eastern tip of the island.

PORT LIMITS: There are no limits. The dock is situated in open water. Light dues are charged when vessel has docked.

DOCUMENTS: Basic Customs documents for entry:

1 copy Ship's Register.
1 copy Original Clearance from last Port.
4 copies Master's Oath.
4 copies General Declaration.
4 copies Crew List.
4 copies Maritime Health Declaration.
4 copies Crew Personal Effects List.
4 copies Stores List.
4 copies Ship's Particulars List.
4 copies Narcotics List.
4 copies Bond List.
4 copies Manifest and Bill of Lading of cargo to be discharged.
4 copies Manifest of Intransit Cargo.
4 copies Dangerous Cargo List.

PILOTAGE: Not compulsory for vessels under 800 tons, unless requested. Pilotage required for cruise ships and tankers. Approaching vessels contact the Port Authority on VHF Channel 16 – call sign "Cayman Brac Port Authority". If no answer, call "Lloyds Tracking Station". Port Authority's Tel: (809) 94-80428/94-80240 and Fax: (809) 94-80408. Office hours 0830 hrs. – 1630 hrs. weekdays, and Saturdays 0830 hrs. – 1200 hrs. Notice of ETA and request for Pilot must be made to the Port Authority at least 24 hours in advance.

CHANNEL: Situated on the S.W. of the island. Entrance is 150 ft. wide and narrows down to 50 ft. Vessels with draft of no more than 6 ft. are permitted. Range markers ashore: 1 diamond and 1 square used in the daytime. Lights: 1 red and 1 green used in the night.

ANCHORAGE: Anchorage is designated by the Port Official. There are 3 anchorage positions:

1. Scotts' Anchorage: North side, West end. Lat. 19° 41.7′ N., Long. 79° 53.7′ W. Distance 0.3 miles offshore. Depth of water 90 ft. (15 fathoms). Lighthouse bearing 147° True.
2. Anchorage off Creek Dock: The Creek, North side. Lat. 19° 45.3′ N., Long. 79° 45.7′ W. Distance 0.3 miles offshore. Depth of water 90 ft. (15 fathoms).
3. Anchorage – The Channel: West end, South coast. Lat. 19° 40.6′ N., Long. 79° 53.0′ W. Distance 0.6 miles offshore. Depth of water 78 ft. (13 fathoms, 26 m.). Lighthouse bearing 339° True.

RESTRICTIONS: All ships arriving from foreign and locally must have permission from the Customs and Immigration Departments to dock before doing so. Working hours are 0830 hrs. – 1600 hrs. Monday to Friday, and 0830 hrs. – 1200 hrs. Saturdays. Any arrivals after 1600 hrs. (weekdays) or 1200 hrs. (Saturdays) will be charged overtime.

MAX. SIZE: The Port Authority's dock can accommodate ships up to:

Maximum size 800 tons.
Maximum length 200 ft.
Maximum draft 14 ft.

HEALTH: In case of fever, etc., amid crew, etc., notify the Port Authority which will then contact the Faith Hospital. Also see "Medical".

RADIO/VHF: The Port Authority call sign is "Cayman Brac Port Authority". VHF radio stand-by on Channel 16, also a single side band (SSB), stand-by on 8291.1 kHz. Other frequencies 4,125.0, 12,492.2 kHz (ALFA). If vessels cannot contact the Port Authority at night, vessel can call "Lloyds Tracking Station", stand-by on VHF Channel 16.

BERTHING: Dock has 1 slip and 1 Ro-Ro ramp. Depth of water alongside at low tide is 15 ft. – 30 ft. The maximum ship draft at low tide is 15 ft. Cargo is loaded and discharged by the Port Authority's crane or, if requested, by vessel's own crane. Transit shed storage space of 7,500 sq.ft. and yard storage area of 45,000 sq.ft. are available.

CRANES: One Lima 90 ton crane available. Safe lifting weight is 45 tons.

SPECIALISED CARGO HANDLING FACILITIES: There is 1 Ro-Ro ramp to handle cargo that needs to be driven off.

STEVEDORES: If any vessel has its own stevedores, the Port Authority will permit them to work. If stevedores are required, the Port Authority will provide them.

MEDICAL: Full hospital facilities available. Land line telephone No. (809) 94-82242, 94-82243, 94-82245, 94-82325. Emergency 555. Dentist available during working hours, 0830 hrs. – 1600 hrs. Monday to Friday. In case of an emergency, dentist will attend to patient.

TANKERS: One tanker discharges gas oil once every 3 months and is guided in by a Pilot. Vessel drops anchor in 80 ft. of water. After mooring, tanker is in 54 ft. of water.

FRESH WATER/FUEL: No fresh water or diesel are sold at the port. When these commodities are needed, they can be ordered in the following manner.

Water: Sold and delivered by the Water Authority. U.S.$34.58 for 1,056 gallons (minimum delivery) or 1 cu.m. (264 U.S.gals) at U.S.$ 8.50.

Diesel: Sold by Texaco is duty free to vessel entering international waters within 24 hours of diesel purchase, U.S.$1.40 per IMP gallon (subject to change), no personal cheques, travellers cheques or cash only.

FIRE PRECAUTIONS: Smoking is prohibited when handling any inflammable cargo. Smoking is also prohibited in any area where gasoline or diesel are being serviced to the port's equipment.

GANGWAY/DECK WATCHMEN: No requirement for watchmen, except for special vessel conditions or security reasons as determined by the Port Superintendent.

HATCHES: Normally opened and closed by ship's crew.

CARGO GEAR: 1×90 ton crane, 1×24 ton forklift and 2×5 ton forklifts.

AIRPORT: "Gerrad Smith International" Airport is 9.5 miles from the Port Authority. "Cayman Airways" has 1 flight out of Cayman Brac in the morning and arrives in the night. There are also 2 flights daily by "Island Air".

TIME: Local time is Eastern Standard, no changes.

HOLIDAYS: New Year's Day; Ash Wednesday; Good Friday; Easter Monday; Discovery Day; Queen's Birthday; Constitution Day; Remembrance Day; Christmas Day; Boxing Day.

Cargo can be worked on holidays, if the vessel is willing to pay overtime.

POLICE/AMBULANCE/FIRE:
Police, Tel: (809) 94-80331, 94-80441, 94-80223. Emergency 911.
Fire, Tel: (809) 94-81245, 94-81293. Emergency 500 or 911.
Ambulance/Hospital, Tel:(809) 94-82242, 94-82243, 94-82245, 94-82325. Emergency 555.
Air Ambulance, Tel: (809) 94-90241 or 94-96027.

BANKS: Barclays Bank PLC, P.O.Box 248, Stake Bay, Cayman Brac. Tel: (809) 94-82253. Fax: (809) 94-82294. Telex: 4320 BBICR.

Cayman National Bank, P.O.Box 88, West End, Cayman Brac. Tel: (809) 94-81451, 94-81551. Fax: (809) 94-81261.

SHORE LEAVE: Crew members are allowed ashore after clearing Customs and Immigration.

GARBAGE DISPOSAL: Garbage can be picked up from alongside the vessel by means of a garbage truck, provided by the Public Works Department, which can be contacted through the Port Authority.

CURRENCY: Cayman Island Dollar (CI$). U.S. dollars are accepted with exchange rate at stores CI$ 0.80, and at local Banks CI$ 0.84.

SHIPMASTER'S REPORT: February 1979.

Cayman Brac – Lightering Area

Chart: British Admiralty 462.

Radio: Very weak VHF only Channels 16, 10, 6. Call – "Cayman Energy" Agent recommends using Curacao (PJC) for ETAs, etc.

Boarding Positions:

No. 1: Lat. 19° 46′ N., Long. 79° 46.5′ W.
No. 2: Lat. 19° 40′ N., Long. 79° 53′ W.

Documents: 4 Crew Lists, 3 Stores Lists, 3 Personal Effects Lists, 2 Vaccination Lists, Clearance from Last Port, Cargo Manifest and Health Declaration (supplied).

Pilots: Mooring Master boards service vessel, STBL. 2 Pilots, 2 Assistants and 2 Riggers (for fenders). The above 6 men require accommodation on board.

Mooring: According to Operators "Cayman Energy Ltd.", can be carried out anytime day or night.

Cayman Energy Ltd., based in New York, are the operators of the transhipment operation. The local Terminal Manager and Senior Mooring Master resides on Cayman Brac and usually carries out the berthing operation from the service vessel. Ship to ship transfers commenced in 1977, future developments include the construction of a Transhipment Terminal on Little Cayman using SBMs, this project should come into operation late 1979.

The berthing procedure is straightforward and based on the ICS Ship to Ship Transfer Guide. On this occasion, Texaco were using vessels of about 45,000 d.w.t. as service vessels. These ships are in the region of 20 years old and have no modifications for this work. The Officers and crew of these vessels were mainly Italian and well practised in ship-to-ship transfers.

Upon completion of mooring, the Mooring Master departs and the Pilots remain on both vessels in an advisory capacity. 2×10 in. hoses are connected by the respective crews, the shore riggers assisting. Communications between the two vessels is by VHF.

During the transfer operation, the vessels are expected to remain within 4 to 5 miles from the island and the service vessel kept in the lee of the STBL. This entails maintaining a proper bridge watch and frequent use of the engines. The currents invariably set away from the island and can be quite strong at times. The winds during the latter part of January were extremely variable in both direction and force.

The Texaco practice of the STBL taking dirty ballast from the service vessel whilst reducing the risk of pollution, poses stress problems and also requires strict supervision of line draining between each operation. Ideally, water dips and ullages should be taken prior to and after the deballasting.

Unberthing is carried out by the Mooring Master whilst both vessels are drifting. The off-loader is put on the weather side of the STBL. This practice is questionable in winds over 15 knots – the movement of the smaller vessel together with reduced freeboard causes difficulties with the fenders.

The average berth time for each vessel is approximately 30 hours, the number of off-loaders for a ship of this size is five. If a safe and efficient operation is to be maintained throughout the period it is essential that two additional deck officers be available for cargo watch purposes.

SHIPMASTER'S REPORT: January 1980.

Cayman Brac – Little Cayman (See Plan)

Communications: "Cayharb Cayman Brac" via Slidell Radio WNU (See "Admiralty Radio Signals Volume 6").

Via VHF Channel 16:

"Cayman Energy" (good reception)
"Cayman Pilots" (via ship where the Pilot is at the time)
"Cayman Harbour" (weak signal)

Pilot Boarding Station:

Lat. 19° 43′ N., Long. 79° 53′ W. or Lat. 19° 40′ N., Long. 79° 53′ W.

Note: This position may change with seasonal weather conditions. The position is also used for Port Officials who request accommodation ladder in light condition but accept air pilot hoist or pilot ladder in loaded (tanker) condition.

Documents Required: 4 Crew Lists, 4 Cholera Immunisation Lists, 4 Stores Lists that include Stores, Narcotics, Bond, 4 Cargo Manifests, 4 Crew Declaration Lists.
Bond: Bonded Stores locker remains unlocked and issues may be made to the crew for onboard use only.
Postal Address: Cayman Harbour Corporation Ltd., Stake Bay, P.O.Box 50, Cayman Brac, Cayman Islands, British West Indies.
Facilities Available: Food, some stores, fresh water limited from tug.
Bunkers: Via lightering tanker ordered via Owners/Charterers.
Medical: Doctor can board ship at any time.
Hospital: Available.
Derat Certificate: No renewal certificate available but a letter of acceptance of renewal for Cayman Brac is issued.
Shore Side Facilities: Cayman Brac: Shops, hotels, post office. Little Cayman: Clubs (tourists). Fishing when in soundings.
Anchorages (under Pilots guidance):

Off Western end of Cayman Brac	up to 57 ft. draft.
Off Little Cayman	up to 69 ft. draft.

Currents: Variable, depending on season and weather. Ships experienced very little set and drift North of Cayman Brac 1.5 mile – 2.5 mile distance, other times over 2 knots. Generally N.W. direction. Stronger South of Islands.
Ship-to-Ship Cargo Pumping Operations: Cayman Energy Corporation Ltd. Tug: "Cayman Energy". Mooring ship to ship – see Plan. Fibre mooring lines instead of wire preferred. Operations under way, under guidance of Pilot/Loading Master. Ships separated by floating fenders supplied by Cayman Energy Corporation. Pumping may continue when ships are manoeuvring dead slow. Fenders remain alongside between lighterings and it is possible to manoeuvre up to 7 knots. Smaller vessel is moored on the lee side of discharging vessel (the larger one).

Pilot plus 4 assistants remain onboard for the duration of all cargo lightering operations but may be relieved if lighterings are prolonged ones.

Shore leave for ship's crew is possible via pilot boat or "Cayman Energy".
Cayman Brac Airport: Flights to Grand Cayman and then overseas.

SHIPMASTER'S REPORT: November 1980.

Vessel (230,000 d.w.t.) arrived at Cayman Brac for 2 to 3 months storage and lightening operations. No information or charts were on board prior to arrival.

Cayman Brac is a small island about 12 miles by 1.5 miles and is used solely for lightening operations, a maximum of 4 pairs of ships being handled at one time, but usually only 2.

There are 2 Pilot and Port Official Boarding Areas, North Boarding Area Lat. 19° 43′ N., Long. 79° 53′ W. and South Boarding Area Lat. 19° 40′ N., Long. 79° 53′ W., the choice depending on the wind direction. If no chart on board Cayman Brac can be approached to within 1 mile at any draft. There is no proper harbour, the launches have to be boarded from the beach using small boats, the launches remaining at moorings some distance offshore which can make transfer difficult in bad weather, especially for heavy stores.

There are no stores available on Cayman Brac, all stores have to be flown in from Grand Cayman or from Tampa, Florida. There is no official shipchandler on Cayman Brac although the Agent will assist vessels requesting small amounts of stores. We were informed by other vessels that usual method of obtaining large stores was to arrange for a supply by container direct from Tampa, Florida to the ship using a small coastal freighter. Other ships had stored at Barbados on the way in and way out. All stores are very expensive.

On arrival at Cayman Brac contact was initially made with "Cayman Brac Pilots" on Channel 16. However the call sign "Cayman Brac Pilots" is not usually used as this is in fact "Cayman Energy" who organise all Pilots, launch services and lightening operations. "Cayman Energy" is run by Captain H. Banks who appears to man the shore VHF station 24 hours a day, in addition to occasionally acting as a Pilot.

There are very few suitable anchorage positions, due to deepwater existing right up to the reef. There is one at the West end of Cayman Brac suitable for a VLCC with maximum draft of 66 ft. This is close to the boarding areas. Another at the West end of Little Cayman is suitable for a VLCC but 2 hours by launch from boarding area. There is another at East end of Little Cayman suitable only for vessels up to 100,000 tons. We used the anchorage at the West end of Cayman Brac and although very close to shore experienced no dragging during time anchored. We were informed by Pilots that no ship had ever dragged from that anchorage. Pilot essential for anchoring.

Agents are "Cayman Harbour" who monitor Channel 16 and are very helpful at all times. A doctor is available but no dentist. (Cable: "Cayharb Caymanbrac").
Lightening Operations: Normal procedure is for ship to be lightened (STBL) to fender starboard side before berthing, 4 fenders being brought out by launch "Cayman Mariner" or "North Harbour" also 2 hoses and reducers if required, on a barge. The fenders are positioned and hoses connected using 2 shore operators assisted by ship's crew. This can take up to 6 hours, during which time a Pilot is on board. Two Pilots and 2 shore operators remain on board during lightening. Then, if conditions are suitable both vessels steam with wind 15° on starboard bow, STBL at 4 knots and lightening ship comes up from astern on starboard side and closes with STBL, the operation being controlled by Pilot on lightening ship.

Berthing can take from 1 to 3 hours depending on circumstances, so a suitable clear run is required ahead of vessels to enable this to take place without altering course. Needless to say berthing vessels have right of way over all other vessels and this local rule is enforced by "Cayman Energy".

Both ships have a Pilot during the entire berthing, lightening and unberthing operrations, also Pilot remains on STBL until fenders and hoses removed. This is done unless next lightening operation is expected in near future, as fenders are liable to damage if left in position on STBL.

Due to Cayman Brac lying N.E./S.W. and wind during Winter months generally from N.E. there is not much shelter available but even so lightening operations are only occasionally interrupted due to weather.

Ullages and cargo figures on our vessel and lightening ship were checked by Caleb Brett Surveyors, this service having been arranged by charterers, it is not standard procedure, but depends on charterers.

Whilst lightening, navigation is carried out by STBL so bridge must be manned throughout, as well as cargo control room. Vessel steams normally at slow speed to maintain suitable position, with long periods of "stop" when engines are not required. During this time lightening ship's engines are not used. Maximum discharge rate permitted during discharge is 5,000 t.p.h. No difficulties were experienced during berthing or discharge except that due to communication problems with charterers, STBL and lightening ship occasionally had differing orders regarding discharge quantities, however this could usually be sorted out by "Cayman Harbour" in a short time.

There is a twice daily flight from Grand Cayman to Cayman Brac. This flight is always fully booked but even so seats are usually available. Extra flights are also made when required. Flight lasts 50 minutes and costs £10.00 single. There are 2 hotels on Cayman Brac and rooms are usually available.
Documents: On arrival Customs and Immigration board and require 4 copies each:

Crew Personal Effects Lists (Crew Lists also required before sailing).
Stores Lists including Narcotics.
Crew Lists (with full names).
Vaccination Lists.

Currency is Cayman Island Dollars (CI$), but U.S. Dollars are accepted with exchange rate U.S.$ 1.00 = CI$ 0.82.

AUTHORITY: Port Authority of the Cayman Islands, P.O.Box 1358, Harbour Drive, Grand Cayman, Cayman Islands. *Tel:* (809) 94-92055. *Cables:* Portcay. *FAX:* (809) 94-95820. *Contact:* Dale Christian, Marine Officer.

GEORGETOWN, Grand Cayman: 19.18 N. 81.23 W.

(See Plan)

DOCUMENTS:

Bills of Lading.
Crew List.
Cargo Manifest.
Ship's Register.
Safety Certificates.
Clearance from Last Port.

PILOTAGE: Available on request.
ANCHORAGE: With Georgetown Lighthouse bearing 125° – 150° distance 750 m. to 1,200 m.
RESTRICTIONS: Anchoring is not allowed on coral anywhere in the Cayman Islands.
RADIO: SSB: 8294 kHz, 0800 hrs. – 1200 hrs. Monday to Saturday. 8294.1 kHz, 1210 hrs. – 1700 hrs. Monday to Friday.
VHF: Channel 16, 24 hours a day.
TUGS: Launches available. No tugs available.
BERTHING:
South Wharf: Length 445 ft. depth 11 ft. – 24 ft.
West Wharf: Length 240 ft. depth 13 ft.
Ro/Ro Ramps: South Wharf: 1 ramp with depth 11 ft. Finger Pier at South Wharf: 1 ramp with depth 21 ft. – 26 ft. West Wharf (South End): 1 ramp with depth 13 ft. – 20 ft.
Cranes: 20 ton, 50 ton and 100 ton cranes available for hire.
Fork Lifts: 5×2.5 tons, 1×5 tons, 1×26 tons, 2×35 tons.
STEVEDORES: Stevedores arranged by Agent, recommended by the Port Authority.
Working Hours:

	0800-1200	Monday to Friday
	1300-1700	
	0800-1200	Saturdays
Overtime	1700-2100	Monday to Friday
	1300-1800	Saturdays

In the event that a vessel may finish discharging and sail, 1 additional hour may be worked.

No work Sundays and Holidays unless Port Director considers it necessary.
MEDICAL: Hospital available.
TANKERS: See "Shipmaster's Report".
FRESH WATER: Supplied by truck.
FUEL: Marine diesel only, delivered by truck.
AIRPORT: Scheduled flights by international carriers.
HOLIDAYS: New Year's Day, Ash Wednesday, Good Friday, Easter Monday, Commonwealth Day or Tree Planting Day (3rd Monday in May), Queen's Birthday, Constitution Day (1st Monday in July), Monday after Remembrance Sunday, Christmas Day, 26th December.
GARBAGE DISPOSAL: Garbage collection is provided by the Environmental Health Service twice weekly at a cost of U.S.$30.00 per day.
WASTE OIL DISPOSAL: There are no waste oil facilities available. Vessels are required to be fitted with holding tanks for such waste.
SEAMAN'S CLUBS: None.
CURRENCY: Cayman Dollar.
SERVICES: Ship chandlers available.

SHIPMASTER'S REPORT: February 1987 (updated 1990).
Port Limits: 12 miles off.
Documents:

6 Crew Lists.
4 Cargo Manifests.
2 Crew Declarations.
2 Stores Lists.
2 copies of Bills of Lading.
1 copy Ship's Particulars if first visit.
Clearance from Last Port.

Ship was cleared by Agent and 1 Customs Officer. The Immigration Officer comes aboard if any crew leaving or joining. Clearance was given to leave at this time. Officials were polite and friendly.

Pilotage: Pilot requested through Agent 48 hours in advance but Pilot lives locally and says 30 minutes notice is all he needs and is often all he gets. All communications are carried out through Port Security on Channel 16 and working Channel of vessel's choice. Port Security will contact Pilot, Agent or anyone else vessel wishes to talk to. Pilot boards from small work boat, either the "Eagle" or "Rambler", about 1 mile West of oil tanks. These boats have VHF Channel 6 and Pilot can be contacted on this Channel when he is under way.

Anchorages: Pilot recommended position with South Cay Light 350° by 6 cables if wind from North and at any other time just off town as marked on the Admiralty chart. He stated that at times there were up to 5 passenger vessels anchored here so it could be crowded. Unless vessel is expecting a long delay it is better to lie off.

Restrictions: Tankers berth between daylight and 1800 hrs. but can leave at anytime. Only restriction in berth is max. length of about 600 ft., depth in berth 60 ft. No restriction on breadth.

Health: Pratique granted by Customs Officer.

Radio: Sat Com.

VHF: All communications made through Port Security on Channel 16.

Radar: None.

Tugs: None.

Berthing: See "Plan" for final mooring position.

Vessel approached from the South and passed aft buoy close to starboard, 2 head lines were run to forward buoy and when weight was on these ropes engine was stopped and 2 lines were run aft to buoy. Vessel was then manoeuvred into position on a fore and aft line and a line was run to the port bow buoy. 2 breast lines were then run from the main deck and these were heaved together and vessel pulled towards the shore until it was close to the submarine marker buoy. These lines are very long and even when vessel is in position 1 line was too short. The lines were run efficiently and the 2 work boats being well crewed. The accommodation ladder was rigged on the port side.

Bridges: None.

Medical: Local hospital and ambulance service. Call Port Security on Channel 16 for service.

Tankers: 1×8 in. pipeline. This is always left in gasoil so if possible leave gasoil parcel to last or if necessary split discharge. This is no problem as grades are pumped face to face. Average rate of discharge was about 700 cu.m.p.h. and max. back pressure 120 p.s.i.

Density: 1024.

Fresh Water: Can be obtained, but expensive.

Fuel: Not available.

Fire Precautions: Usual ship precautions, no tugs so no fire service to ships.

Consuls: American Consular Agent.

Repairs: No facilities.

Dry Docks: None.

Surveyors: B.V. and Lloyd's.

Gangway/Watchmen: None.

Customs Allowances: 200 cigarettes and 40 oz. spirits. Bond sealed.

Repatriation: No problems with staff or crew changes.

Airport: International airport 4 miles from berth. Cayman Airlines, Northwest and American.

Time: GMT minus 5 hours.

Police/Ambulance/Fire: None.

Emergency Co-Ordination Centre: None.

Telephones: None.

Services: None.

Banks: All major banks.

Storing: Small supplies of all stores, but very, very expensive.

Shore Leave: No restrictions. One of the rope handling boats stays with the ship and runs personnel ashore when required.

Identification Cards: Not required.

Regulations: None.

Sanitation: Vessels are required to be fitted with holding tanks.

Delays: Bad weather and daylight berthing.

Developments: None expected.

General: Research Submersibles Ltd. have small submarines that take tourists down 600 ft., these can be encountered near the berth.

AUTHORITY: Cayman Islands Port Authority, P.O.Box 1358, Harbour Drive, Georgetown, Grand Cayman, Cayman Islands. *Tel:* 809-949-2055, 2228. *Cables:* Portacay. *FAX:* 809-949-5820. *Contact:* Errol L. Bush, Port Director. Dale Christian, Marine Officer.

NOTES

Chile

GENERAL (See Plan)

The Superior Maritime Authority in the Republic of Chile is the General Director for the Maritime Territory and Merchant Marine at Valparaiso's Headquarters, having jurisdiction over lakes and maritime river ports in the territorial, ancestrial maritime zones and its national liability in accordance with the responsibilties and power granted by current legislation mainly contained in the "Navigation Law" approved by Decree Law No.2.222, 1978, and the regulation approved by DFL No. 292, 1953.

In order to fulfil his instruction, the General Director delegates such responsibilities and functions to the Maritime Authorities called Maritime Governors and Port Captains, located at the main ports of the country.

The Maritime Authority is fundamentally responsible for watching over the safety of life at sea and safety of navigation at sea; their activities are directly related to navigation control; coastal signalling; piloting and pilotage of vessels; maritime radio communications; conservation of marine environment; order, security and discipline of ships and ports of the Republic; the reception and dispatch of vessels and the Maritime Search and Rescue Service.

Nautical Bibliography: The bibliographies (the ones mariners are interested in) are publications issued by the Hydrographic Institute of the Chilean Navy (IHA) and consist of nautical charts of the whole national maritime area as well as the following publications among others:

1. Catalogue of nautical charts and publications (IHA Publication 3.000), which contains detailed information related to chartography and nautical publications of the Chilean coast, following the recommendations and resolutions of the International Hydrographic Organisation (IHO) on the matter.
2. Sailing Directions of the Chilean coast consisting of 6 volumes:

Volume I:	IHA PUB. 3001, from Africa to Canal Chacao.
Volume II:	IHA PUB. 3002, from Canal Chacao to Golfo de Penas.
Volume III:	IHA PUB. 3003, from Golfo de Penas to Western entrance of Magellan Strait.
Volume IV:	IHA PUB. 3004, Strait of Magellan and adjacent waters.
Volume V:	IHA PUB. 3005, Tierra del Fuego and adjacent channels and islands.
Volume VI:	IHA PUB. 3006, Chilean Antarctic Territory.

3. IHA. PUB. 3007 – Lights Register contains the the most complete information about Navigation Aids, more than appears in the sailing directions and nautical charts. Such publication is looked up preferentially when mariners need to know light signals, fog signals and unlighted signals characteristics., moreover, it contains information on the beaconing system employed in Chile.
4. IHA PUB. 3008 – Radio Aids to Navigation, which is preferentially consulted when mariners need to know characteristics of radio beacon emissions, hourly signals and maritime radio stations broadcasting meteorological bulletins and any other relevant information related to navigational aids transmitted by radio.
5. IHA PUB. 3009 – Tide Tables of the Chilean Coast containing tidal predictions of national ports and the foreign ports of Cristobal and Balboa – Panama; Buenaventura – Colombia; Guayaquil, Puerto Maritimo and Posorja – Ecuador; and Talara, Callao and Matarani – Peru. In addition, it contains current predictions and astronomical forecasts such as moon phases and declinations, rise and setting of sun and moon, etc.

There are also 27 nautical publications issued by the same Institute, all of which are for sale at the main ports in Chile.

NOTICE: Every vessel coming directly from a foreign country and preceeding to a national port, must report her arrival to the Maritime Authority of the port, a minimum of 24 hours in advance. The latter can be executed by means of a message containing the following information:

Name of the vessel, call sign and flag.
Estimated time of arrival (ETA), indicating date.
Information about sanitary conditions and if she carries sick crew.
Drafts.

Commerical ports have maritime radio stations permanently listening on VHF Channel 16, 421 kHz and 2182 kHz.

POSITION REPORTING: Vessels sailing in the maritime zone of national responsibility as far as Maritime Search and Rescue is concerned, are required to communicate their position employing the notification system of vessel situation.

Such notification system employed is the one recommended in Chapter 6 of the Annex to the "International Search and Rescue Convention", 1979.

In regard to the matter, it is important to underline that such service and its use are free of charge for the user when communication is sent through the Maritime Telecommunications Network (See "Radio"); the sending of the message will facilitate prompt assistance in case of emergency.

Notwithstanding, it is reciprocally compulsory for those vessels registered in countries where Chilean ships are obliged to execute similar arrangements or equivalent to the already established ones, to give inmediately their position and navigation plan when navigating in waters under the Chilean national jurisdiction: they also need to show their names, call signals or identity of the vessel station, next calling port and destination, planned route and speed. Likewise, it is compulsory to communicate their position daily at 0800 hrs. and 2000 hrs. Chilean local time.

SHIPS NOTIFICATION SYSTEM: The fundamental objective of the system is to provide the Maritime Search and Rescue (SERBREM) and the Search and Rescue Operation (COBREM) with some information in order to attain a timely and effective action in a search and rescue operation.

The typical messages given by "SISNAV" are the following:

1. Initial Report (I.I)
   (a) When vessels go into national waters:
   The ship's Master must send the entry message through the maritime radio station intermediary corresponding to the Maritime Search and Rescue Service area or the first one he might make contact with.
2. Position Report (I.P)
   The ship's Master has to make a daily report at 0800 hrs. and 2000 hrs. with respect to the vessel situation or when such a situation changes substantially more than estimated. This fact must be informed through the maritime radio station concerned or through the first he might make contact with.
3. Final Report (I.F)
   (a) When going out of the national responsibility area.
   The ship's Master must send the message concerned through the maritime radio station intermediary of the Maritime Search and Rescue Service area in which he might be navigating or the first he could get in contact with.
   SISNAV Communications are produced through the Maritime Telecommunications Network, which can receive any sort of message (Distress, Disaster or Urgent) and those corresponding to the system.
   The Maritime Telecommunications Network is indicated in the Radio List IV, Vol. 1 & 2 of the ITU's Coastline Station List and, for the purpose of SISNAV system, the following radio stations are considered to be the most important ones: Autofagasta Radio (CBA), Playa Ancha Radio (CBV), Talcahuano Radio (CBT), Puerto Montt Radio (CBP) and Magallanes Radio (CBM).
   In order to expedite the typical message format, the operator mechanics are listed below:

Message requirements: Vessels must send:

(1) The "II" Report when entering into Chilean waters or leaving Chilean ports.
(2) The "IP" Report is made daily at 0800 hrs. and at 2000 hrs. (Chilean time) (see ALRS 5 for Local Time matters).
(3) The "IF" Report inmediately before arriving at a Chilean port or leaving Chilean waters.

Kinds of messages: Addressed to DIRECTEMAR VALPARAISO. At the same time, northbound vessels must inform the Maritime Authority of Punta Arenas, Talcahuano or Valparaiso, addressed to the Maritime Governor (MARITGOS-Port).

SP Report (Initial Report):
(a) SISNAV.
(b) SP (I.I.).
(c) Name of the ship and call sign.
(d) Local time and date (6 digits for LT, Example: 012200LT).
(e) Port of departure.
(f) Position (Latitude and Longitude – i.e.: 1832 S. 7021 W.).
(g) True course (group of 3 digits).
(h) Speed (2 digits).
(i) The letters "CO".
(j) ETA (format as for (d)) and destination port.
(k) Name and call sign of the radio station through which the report is sent.
(l) Date and local time (format as for (d)) of next port.

IP Report (Position Report):
(a) SISNAV.
(b) PR (I.P.).
(c) Name of the ship and call sign.
(d) Date and local time (0800 or 2000), 6 digits followed by LT – (Example: 010800LT).
(e) Position (Latitude and Longitude i.e.: 1924 S. 7032 W.).
(f) True course (group of 3 digits).
(g) Speed.
(h) Name and call signal of radio station through which the report sent.
(j) Date and local time (format as for (d)) of next port.

IF Report (Final Report):
(a) SISNAV.
(b) FR (I.F.)
(c) Name of the ship and call sign.
(d) Date and local time (6 digits followed by LT, Example: 252820 LT)
(e) Port of arrival or "Chilean waters departure".

Shipmaster's Report: October 1991.

The following compliments the information above:

Transmission of Message: Reports should be sent free of charge through a Chilean Coast Radio Station which accepts public correspondence.

They can also be transmitted via SATCOM to Telex No. 230602 or 330461 (Telex numbers of Valparaiso Radio), if they are addressed to DIRECTEMAR VALPARAISO-PORT.

SATCOM charges have to be paid by vessel.

Example of Message: SISNAV/SP/CASTOR/S6HG/122300LT/CALLAO/1820S/07540W/166/14/CO/151600LT/VALPARAISO/VCO1860/130800LT/

The same message via Valparaiso Radio and SATCOM should read:
TO: VALPARAISO RADIO (VCO 1860)
FR: MASTER M.V. ....
DATE: ....
TGM
DIRECTEMAR VALPARAISO
Text as given in above example.

Shipmaster's Note: Send by telex if possible, in order that vessel may have a record with answerback, in case there are complications after arrival. Fines are imposed if messages are not sent.

VESSELS RECEPTION AND DISPATCH: Particular Dispositions regarding vessels reception and dispatch are contained in the Regulations concerned approved by SD No. 364, 1980.

The formal reception of ships is carried out at the first landfall port, and dispatch at the last port, with participation of authorities taking part as far as controls to be realised are concerned.

The vessels' Reception and Dispatch Commission is presided over by the Maritime Authority. Furthermore, Customs Authority, International Police (Alien Division) and Human and Vegetable Health will be also take part.

Documents to be submitted to the Vessel's Reception and Dispatch Commission are in type and quantity, those required by the "Convention on Facilitation of International Maritime Traffic – 1965" from the IMO, ratified by the Republic of Chile, apart from the Ammunition and Arms Declaration (two copies).

The following is for quidance only:

General Health Declaration	1 (First Port)
Clearance Document from last port	1
Vessel's General Declaration	5
Crew List	5
List of Crew's Personal Effects	3
List of Passengers for the Port	5
List of Passengers in Transit	5
Mail Declaration or Negative	5
List of Provisions	6
Cargo Manifest for the Port	10
Manifest for Cargo in Transit	10
IMO Hazardous Cargo Declaration	6
Declaration of Arms and Ammunition	2

Ship's Officer's Report: The following documents are required at the second and subsequent ports: 4 copies Crew List, 4 copies Crew Personal Effects List and 4 copies Ship's Stores Declaration.

Port Captain will be able to ask for any vessel certificates: however, only the following will usually be required:

Safety Equipment Certificate.
Radio Telephony Certificate.
Radio Telegraphy Certificate.
Safety Construction Certificate.
International Tonnage Certificate.
Payment of Lights and Beacons Service's Certificate.
Civil Liability Certificate for Oil Pollution, pursuant to the International Legal Conference on Marine Pollution Damage, 1969.
Oil Record Book, pursuant to the International Convention for the Prevention of Pollution of the Sea by Oil, 1954.

At landfall port, the Alien Division will ask for passports of passengers and crew in order to make the identity cards which will identify them. Such cards have to be given back when ships leave.

Before departing, the ship must be suitably secured for sea, with hatches closed, derricks lowered and deck cargo inspection carried out by a Maritime Authority's Supervisor.

When a vessel leaves port, the Maritime Authority grants a "Departure Bill", endorsed by the Customs. The Crew and/or Passenger List is enclosed authorised by the Alien Division.

Changes of crew and passengers from/to the vessel are not allowed, after Bill has be granted. If the ship does not leave within a short period of time, due to unforeseen circumstances, the fact will be reported to the Port Captain, who will ask for the documents to be changed if appropriate.

Every ship arriving at a Chilean port has to fly the flag of the country to which it belongs on the mainmast, and the Chilean flag.

On entering port, the "Q" flag will be hoisted, and when "Free Pratique" is granted it will be hauled down.

The use of whistles and syrens will be in accordance with the International Regulations for Preventing Collisions at Sea.

Shipmaster's Report: October 1991.

The following documents should be presented by vessel on arrival:

		Total	Presented by Agent
Cargo Manifest	sometimes	2	8
Cargo in Transit Manifest	sometimes	2	8
IMO Cargo Manifest	sometimes	2	4
IMO Cargo in Transit Manifest	sometimes	2	4
Crew List		6	
Passenger List or "Nil" Declaration		3	
List of Passengers in Transit or "Nil" Declaration			
Ship Stores List (including radios, refrigerators, etc.)		5	
Crew Effects Declaration		3	
List of Passengers Baggage or "Nil" Declaration			
List of unaccompanied Baggage or "Nil" Declaration			
Maritime Declaration of Health		1	
Vaccination List		1	
Mail List or "Nil" Declaration		5	
List of Arms and Ammunition or "Nil" Declaration		3	
List of Animals or "Nil" Declaration		3	
Port of Call List (last 30 days)		2	
Last Port Clearance		1	
Light Dues from last Chilean Port		1	

HEALTH: The following is handed to vessels arriving from Peruvian waters.

Quote

To: Master M.V. ......

Dear Master,

The following are instructions from the Chilean Maritime Authorities concerning the steps and precautions you are required to take as your vessel has recently been in Peruvian waters.

Report from the Chilean Navy

Re: Preventive methods against Cholera epidemic in Peru.

Antofagasta,

Observations: The Cholera epidemic that affects the Republic of Peru and the necessity to adopt preventive methods; the Judiciary Office No. 4 A/735 of the February 8th, 1991, of the Subsecretary of Health, and having presently ordered under the by-laws of Maritime Health, Air and Boarders, Decree 263/85, by-laws of Reception and Dispatch of Vessels, Decree 680/80, and the general by-laws of Order, Health and Discipline of Vessels and the Coast of the Republic, D.S. No. 1340 to 41.

Be it resolved:

1. As of the present date, vessels and naval craft proceeding from the ports and waters situated off the coast of Peru, will observe the conditions indicated in the following.
2. The preventive sanitary measures dictated by the Health Department of this country, will be strictly followed, as much in navigation as in ports.
3. The Master of the vessel will advise his arrival to whichever national port with a minimum notice of 48 hours without compressing the information that will direct the Health Authorities.
4. The notification will contain at least the following information:
   (a) Name of the vessel, flag and international call sign.
   (b) Preceeding port and next port of call.
   (c) Ports visited during the last 7 days before this notification.
   (d) Date and hour of arrival.
   (e) General state of Health of the crew, giving special attention to gastro-intestinal pain, and/or fevers, if such exists.
   (f) Information on intake of fresh water and ballast coming from effected zones.
   (g) Ports that will be visited in Chile.
5. The following preventive measures shall be adopted without compromising the completion of the existing laws and those which are being issued by competent authorities.
   A. General Measures:
   The water deposits of the ship will be chlorinated, with the objective of obtaining a minimum 0.2 p.p.m. of free chlorine at the furthest point of the system, through the use of a chlorine colorimeter with a base of D.P.D. This arrangement will be controlled by the Health Authorities on arrival of the vessel at port and by the notation of the vessel for the duration of its stay in Chilean waters. The equipment can be provided by the respective vessel's Agent.
   The presence of flies and roaches shall be fought.
   The deposits of garbage should be located aft, sealed hermetically in a permanent form, and sprayed periodically with insecticides that impede the access and proliferation of insects.
   B. In Port:
   All vessels will be prohibited from discharging waste and bilge water in the waters of the ports and bays, this will be permanently controlled in coordination with the Department of Health.
   If vessels do not have a special location for the storage of service water and bilge water, this should be informed upon arrival in order to coordinate with the Department of Health, authorisation for a preliminary examination by said authority and the Maritime Authorities. The necessary methods will be established in order to obtain an immediate disinfection of this type of refuse. The previous subject to final agreement by order of Sanitory Authorities.
   Berthed vessels should permanently maintain anti-rat defenses on the mooring lines.
   Gangways and ladders should be heaved up when not in use.
6. Vessel that do not possess an adequate system aboard for the retention of garbage, should inform this upon arrival and coordinate at vessel's expense the daily removal for incineration, or discharge at least 12 miles from the coast, depending how so ordered.
7. In case that during navigation it is detected on board any persons suffering from Cholera, or having symptoms of said epidemic, the situation should be reported immediately, and upon approaching land the 'Q' flag and the 'L' flag of the international code of signals shall be flown.
8. The reception of the vessel will take place at anchorage, in a place indicated by local Maritime Authorities, not permitting access nor the disembarkation of persons until the vessel is declared in "Free Pratique". If during the reception, cases, or suspected cases, are detected, the instructions of the Sanitation Authorities will be followed.
9. The Captain who has on board contagious persons, or with symptoms of Cholera, and does not communicate with the Maritime of Santiation Authorities as ordered during the navigation of national waters, at the moment of reception or during the vessel's dockage at port, the prescribed sanction will be issued according to Art. 144 of D.S. 1340/91 General Regiment of Order, Security and Discipline on Vessels and the Coast of the Republic, as well as the corresponding of other authorities.
10. All vessels will be prohibited from discharging ballast in Chilean waters (Ports and Bays).

Unquote.

Shipmaster's comment on the above:

Procedure: The cable can be sent free of charge via any Chilean Coast Radio Station which accepts public traffic. It should be addressed to Area Sanidad Maritima DGTM Y MM "Port Name".
Ref. DGTM Y MM ORDINARIO N. 12600/300 VRS.
Then following details for (a) to (g) - See No.4 above:
Experience recommends that this cable be sent to Valparaiso Radio via Telex or Satcom. Telex No. 230602 DGTMM CL. Address on this telex should read like that shown above.
Notes: Check ratguards hourly as Port Captains will fine vessel if any have fallen off.

FUMIGATION: If the Derat Certificate of a ship has expired, it can be granted the appropriate exemption, provided that authorities may prove there are no rats on board and that the vessel has not recently called at any port affected by the bubonic plague.

Fumigation can be carried out by the Agriculture and Cattle Raising Bureau. In such cases, the ship must remain permanently moored with one or two anchors ahead. Her crew must be put ashore for 24 hours.

STEVEDORES: At every Chilean port there are stowage and breakbulk companies having port elements and workers trained to fulfil vessels' loading and discharging activities.

Chilean ports work daily on a shift basis:

First Shift : 0800 hrs. – 1530 hrs.
Second Shift : 1530 hrs. – 2300 hrs.
Third Shift : 2300 hrs. – 0600 hrs.

Ships in port must be watched by a maritime guard at their accesses. He is responsible for watching over the vessel's security. Nobody foreign to the ship can go on board without presenting a special authorisation.

Port labour is periodically supervised by a Security Patrol, which must take care of the stowage and break bulk activities. These have to be accomplished in accordance with national and international security standards. This patrol keeps the Port Captain informed.

FUEL: Fuel oil can be taken at any Chilean port by means of the trucks. The price is in accordance with international market fluctuations. The ship's agent will have to ask for the required amount of fuel in advance.

HOLIDAYS: The following days are holidays in Chile:

January 1st.
Easter ((holy Friday and Saturday) March/April).
May 1st. : Labour Day.
May 21st. : Iquique's Naval Combat.
June 2nd. : Corpus Christi.
June 29th. : St. Peter and Paul.
August 15th. : Virgin Mary's Assumption.
September 11th. : National Liberation's Day.
September 18th. : Independance Day.
September 19th. : Army Glories' Day
October 12th. : The Discovery of the New World.
November 1st. : All Saint's Day.
December 8th. : Immaculate Concepcion.
December 25th. : Christmas Day.

Holidays do not affect the efficiency of Port Labour System

CREW: Foreign merchant ships can hire Chilean crew without problems; they only have to ask for the suitable Embarkation Contract.

RADIO: There are 74 radio stations along the coast. Messages to ships are broadcast from Valparaiso, Punta Tumbes, Puerto Montt, Faro Corona, Punta Arenas and Punta Delgada.

Local weather observations are broadcast by radiotelephony by the following radio stations:

Playa Ancha	CBV
Talcahuano	CBT
Calbuco Radio	CBP-22
Guafo Radio	CBP-4
Raper Radio	CBM-2
Magallanes Radio	CBM

Special and general forecasts, for the area from Africa to San Pedro are broadcast by Radio Playa Ancha on frequencies 464, 4,228, 12,663 and 16,914.5 kHz.

The following information is sent by facsimile:

1130 hrs. GMT: Surface Chart.
1920 hrs. GMT: Nephoanalysis.
1940 hrs. GMT: Wave Analysis.
2310 hrs. GMT: Surface Chart.

By the telegraphic system:

0110 hrs. GMT: Meteorological Forecasting Zone I-VI
1210 hrs. GMT: Meteorological Forecasting Zone I-VI
1210 hrs. GMT: Analysis
1210 hrs. GMT: Meteorological Forecasting Zone X
2020 hrs. GMT: Meteorological Forecasting Zone X
2030 hrs. GMT: Analysis

By NAVTEX at:

0110, 0410, 0810, 1210, 1610, and 2010 hrs. GMT.
0200 hrs. GMT: Wave Forecasting Chart.

The Naval Radio Station of Magallanes broadcasts in telegraphy the General Forecast for Zones VII-VIII and X.

For weather forecasting, the country has been divided from the North to the South into the following areas or zones.

Zone I : from Arica to Coquimbo.
Zone II : from Coquimbo to Valparaiso.
Zone III : from Valparaiso to Constitucion.
Zone IV : from Constitucion to Isla Mocha.
Zone V : from Isla Mocha to Puerto Montt.
Zone VI : from Puerto Montt to Isla San Pedro.
Zone VII : from Isla San Pedro to Faro Evangelista.
Zone VIII : from Faro Islotes Evangelistas to Lat. 60° 00'S.
Zone IX : from Lat. 60° 00'S. to Lat. 90° 00'S.
Zone X : from Long. 80° 00'W. to Long. 120° 00'W.

Chile is normally 4 hours behind GMT, but from the second Saturday of March, clocks must be moved ahead 1 hour. However, for radio transmissions, GMT time will continue to be used.

For ETA messages, it is recommended to use GMT.

PILOTAGE: The use of a pilot is compulsory at all Chilean ports for berthing and unberthing. Pilotage also compulsory at all tanker and bulk terminals.

Pilotage is compulsory in the Magellan Strait. The pilot must be taken aboard (for vessels coming from the North) in Valparaiso, Ancud or at the Pilot Station of Laitec, in Quellon. For ships coming from the Atlantic, pilots board at the Pilot Station located at Bahia Possession at the Eastern Entrance of the Magellan Strait and for vessels coming from the Antarctic, pilots board at Isla Hornos or Cabo San Pio.

POLLUTION: Throwing away of any kind of ballast or waste in the sea is prohibited, as well as spilling oil of any derivative or residue of contaminated waters from processing plants or any other noxious matter, either at ports or within the 200 mile jurisdictional Chilean waters, without the Port Captain's authorisation. Current rules state that no oil tanker can spill hydrocarbons or any other derivative substance, within 50 miles of the coast.

According to international standards, ships navigating in Chilean jurisdictional waters, must be in possesion of an insurance policy. In cases of pollution, regardless of administrative sanctions imposed, Civil Liability Regulations sanctions imposed, Civil Liability Regulations will be applied as established in the international regulations.

BALLAST: The following telex was received from "Directemar Chile".

Quote

1. As from this date on, all vessels proceeding from other countries already ballasted with sea water, should replace the ballast at least one time, 12 nautical miles from the coast before arrival to Chilean ports, registering these procedures in the Deck Log, and in the Engine Room Log, detailing following information:
   Place: Geographical coordinates where the work was done.
   Volume: Quantity of water replaced and percentage ICW to total capacity of ballast.
   Date and hour: The interchange of ballast water was undertaken.
2. In case it cannot be proven in a convincing form through the Deck and the Engine Room Log, the vessel will add to the ballast tank 100 grams of sodium hipochloride in powder or 14 grams of calcium hipochloride in powder per ballast water ton before start of the ballast operation. Assuring the mixer in all water volume, and leaving to pass minimum 24 hours before to start emptying. This work should be done under Maritime Port Authorities' supervision.
3. All vessels proceeding from zones affected by Cholera, or other catching epidemics, should take the procedures indicated in Paragraph 1 and 2 of this resolution.

Unquote.

Shipmaster's Note: May 1992.

It all comes down to recording in the ship's logbook where each tank has been ballasted, in order to prove/show that all ballast is from outside the 12 mile zone.

If the vessel has to ballast at any port, this to be changed at sea outside the 12 mile zone, before reaching the next port.

MARITIME SEARCH AND RESCUE: (See "Plan").

Pursuant to the responsibility that the Chilean National Law awards to the General Direction for the Maritime Territory and Merchant Marine and to the International Agreements that Chile has acceded to regarding Maritime Search and Rescue, this activity is organised along the country, according to the Supreme Decree No. 1190 of 1976 that "Organise the Maritime Search and Rescue Service dependent from Chilean Navy".

Mission: Organise and carry out search for vessels, naval craft or any other craft in the maritime area of national responsibility, in order to rescue passengers and crew being in danger due to a sea casualty.

Cooperate by own initiative or required by authorities or individuals, and in the way prescribed by the Commander-in-Chief of the Navy, to the Human Life Search and Rescue, and materials not related to general maritime activites being in danger or lost at sea, rivers or lakes, where maritime authorities can be found.

The maritime area of national responsibility as far as Maritime Search and Rescue is concerned, includes all waters under national maritime jurisdiction and Pacific Ocean waters included among these, and parallel 18° 20' 08" N., Meridian 120° W. to the West, Antarctic Territory in the South and waters of Drake Passage.

Organisation: The Maritime Search and Rescue Service's Headquarters are located at the General Direction for the Maritime Territory and Merchant Marine, in Valparaiso (JEFSERBREM), and for its operation, it is organised and divided into 5 Maritime Search and Rescue Centres, called COBREM, located at the ports of Iquique, Valparaiso, Talcahuano, Puerto Montt and Punta Arenas.

Districts concerning each of the Maritime Search and Rescue Centres are as follows:

(a) First District of Maritime Search and Rescue:
From Lat. 18° 20' 08" S. in the North to Lat. 26° 00' S., in the South. The Maritime Search and Rescue Coordination Centre is located at the Maritime Governor's Headquarters of Valparaiso.

(b) Second District of Maritime Search and Rescue:
From Latitude 26° 00' S. to Latitude 34° 09' S.
The Maritime Search and Rescue Centre is located at the Maritime Governor's Headquarters of Valparaiso.

(c) Third District of Maritime Search and Rescue:
From Latitude 34° 09' S. to Latitude 47° 00' S., excluding the territory comprised in the Fourth District.
The Maritime Search and Rescue Centre is located at the Maritime Governor's Headquarters of Talcahuano.

(d) Fourth District of Maritime Search and Rescue:
From Latitude 41° 21' S. and Longitude 74° 00' W., corresponding to inland Chilean waters, upto Lat. 43° 16' S. and Long. 76° 00' W.The Maritime Search and Rescue Centre is located at the Maritime Governor's Headquarters of Puerto Montt.

(e) Fifth District of Maritime Search and Rescue:
From Latitude 47° 00' S. to Latitude 90° S. The Western limit comprises, exactly like the rest of the districts, meridian 120° W., and the Eastern limit, the imaginary line joining the following points:

	Latitude	Longitude
(a)	55° 07.3' S.	66° 25.0' W.
(b)	55° 11.0' S.	66° 04.7' W.
(c)	55° 22.9' S.	65° 43.6' W.
(d)	56° 22.8' S.	65° 43.6' W.
(e)	56° 22.8' S.	67° 16.0' W.
(f)	58° 21.1' S.	67° 16.0' W.

and from the last point directly to the East, through Drake Passage following parallel 58° 21.1' S., till touching the point located at Latitude 58° 21.1' S., and Longitude 53° 00' W., and from there along the meridian 53° 00' W., to the South Pole.

STRAIT OF MAGELLAN: Magellan Strait is a geographical fault crossing the South American Continent at the Southern zone of Chile and joins the Pacific Ocean to the Atlantic Ocean.

As the Strait of Magellan is a zone of great maritime traffic density with intense marine currents of variable direction and strength, especially in the First and Second Passages located in the Eastern part, and has a high percentage of rough weather and a great number of exploration and exportation platforms on the seabed at its Pacific entrance, mariners should navigate very cautiously in these waters, executing security measures established for that purpose.

Despite the fact that there are excellent aids to navigation and beacon systems, the use of 2 pilots is compulsory. They must verify the most favourable conditions for the navigation of a vessel.

It is not compulsory to use pilots in the area between the Western entrance of the Strait and Punta Arenas City but is available when necessary.

Security Standards: Every ship of any kind and nationality, using the Strait of Magellan for navigating, should fulfil the following:

(a) She must report her ETA when entering into the Strait, 12 hours in advance. Such message must contain the following information:

No. of messages.
Name of the Ship.
No. of Words.
Date.
UTC time.
MARITGOG PAR.
Text.

Name of the ship, ETA, length, maximum draft, gross tonnage, destination port, ETA, pilots zone, Master's name.

(b) During the whole voyage along the Strait, ships must keep in touch, permanently listening and standing by on VHF Channel 16 and 2182 kHz.

(c) The time of arrival and departure from the Strait and time passing Punta Dungeness lighthouse, Punta Anxious lighthouse, Isla Tamar or Cabo Pilar, depending on circumstance, must be sent to the Maritime Governor's Headquarters.

During navigation in the Strait, geographical situation and speed must be advised, according to the following criteria:

(1) Ships navigating without pilot: Every 4 hours.
(2) Ships navigating with pilot: At 0800 hrs. and 2000 hrs.

(d) There are 3 waiting areas for ships needing to anchor for safety at sea's purposes and for ships waiting to cross the passages, in accordance with the instructions imposed by the Maritime Authority, according to the traffic requirements.

For such purposes, the following waiting areas are established within specific limits for crossing the First and Second Passages (Primera y Segunda Angostura):

	Latitude	Longitude
Bahia Possession:	52° 19' 20" S.	68° 58' 30" W.
	52° 19' 20" S.	68° 53' 30" W.
	52° 21' 20" S.	68° 58' 30" W.
	52° 21' 20" S.	68° 53' 30" W.
Bahia Felipe:	52° 45' 05" S.	70° 00' 20" W.
	52° 44' 25" S.	69° 58' 10" W.
	52° 45' 15" S.	69° 57' 15" W.
	52° 45' 55" S.	69° 59' 30" W.
Punta Arenas:	53° 10' 53" S.	70° 54' 06" W.
	53° 10' 53" S.	70° 53' 27" W.
	53° 11' 19" S.	70° 53' 27" W.
	53° 11' 19" S.	70° 54' 06" W.

(e) Vessel must have the following valid international certificates, in accordance with the type of vessel:

1. Safety Construction Certificate.
2. Safety Equipment Certificate.
3. Radiotelegraphy or Radiotelephony Safety Certificates, according to the circumstances.
4. Certificate guaranteeing that the ship is insured or is in possession of other financial guarantees, in accordance with Art.146 of Navigation Law (from Civil Liability for Oil Pollution Damage and other noxious substances).

These certificates will be accepted, unless there is clear evidence for suspecting that the ship or equipment condition is not in accordance with that stipulated on such affidavit.

(f) Also vessels must comply with the following requirements:

To have a gyro-compass in good working order, with a duly know error margin and a repeater on deck operating normally, and their steering magnetic compasses suitably compensated for navigation with the updated deviation table; such table shall not be older than one year.

To be provided with navigational equipment in accordance with rules for the ship, contained in the Annex to the International Conference on Safety of Life at Sea, 1974.

To have at least one radar in good condition.

To have updated Chilean publications on board: navigational charts, sailing directions, light lists, tide tables and nautical publications necessary for conducting a ship through the Strait of Magellan.

To have in good condition, all anchoring and manoeuvring elements; main, auxiliary and emergency engines and aids to navigation.

To maintain derricks or cranes in a secure position so as not to interfere with visibility from the upper bridge of the ship.

(g) While navigating along the Strait, pilot aboard checks the existence and validity of the above mentioned certificates and the fulfillment of requirements contained in the preceding paragraphs.

(h) For those vessel's neither having certificates in force nor fulfilling requirements regarding equipment and elements for navigation, the Maritime Authority will make arrangements so that the ship adjusts her necessary conditions for safety of navigation and life at sea.

The Maritime Authority will approve navigation as soon as pertinent instructions have been executed.

Aspect relative to aids to navigation or piloting's collection:

For the collection of piloting and aids to navigation services, tariffs stipulated will be applied according to the Tariffs and Duties' Regulation of the General Direction for the Maritime Territory and Merchant Marine, approved by S.D. (M) No. 427 of June 25th, 1979.

If there was occasional piloting or if piloting was carried out over part of the Strait, at ship's Masters request, 100% of the corresponding piloting tariff will be applied.

Other complementary standards:

Every ship navigating in the Strait of Magellan experiencing an abnormal situation, either navigational or maritime fire occurence possibility, must report it to the maritime authority in order that prompt assistance may be rendered if necessary.

It is definitively prohibited to throw overboard ballast, debris or garbage and to spill oil or its derivatives or residues subjected to the indicated jurisdiction, in accordance with the international agreements subscribed to by Chile and current internal regulations on this matter.

The Government of Chile has established a new Aids to Navigation System in the Strait of Magellan, in order to give support to navigation and piloting in the zone, by means of the centralised information exchange with vessels, fully assuring safety of life at sea. This system consists of Radar Stations, installed at Punta Dungeness lighthouse and the Port Captain's Office at Punta Delgada renders service to any vessel that needs it; free of charge for the user, and it allows navigation via Boca Oriental and Banco Triton, or vice-versa.

Ships coming from the Atlantic Ocean, must inform their arrival to the landfall port located at Latitude 52° 35' S., Long. 68° 10' W., at least 24 hours in advance, to the Maritime Radio Station of Punta Arenas (CBM), using frequencies and schedules indicated in the book of Coastline Stations, List IV, of the International Telecommunication Union (ITU).

There must be direct contact with Punta Dungeness lighthouse (CBM-71) or Cabo Espiritu Santo lighthouse (CBM-72), 20 nautical miles from the landfall point, on VHF Channel 16.

Punta Arenas and Punta Delgada Stations will also provide the following information:

Traffic existing in the area.
Position of oil platforms and naval installations.
Indication of anchoring zone and waiting area for pilot.
Weather conditions.
Indications about tides.
Information about urgent Notice to Mariners.

Shipmaster's Report: January 1986.

The transit through Magellan Strait went very smoothly. There are no great difficulties as long as vessel has a good and reliable radar. Extra caution in necessary in Paso Turtoso but there is no problem in passing there during darkness.

Communications with our Agent were good. We sent telex over Maritex and they answered with cable via Valparaiso Radio. Information required by them was a minimum, g.r.t. the most important for obvious reasons. There are no paper formalities at Punta Arenas, pilot boarding was straight forward.

Pilot boards one mile due East of Punta Arenas breakwater, and leaves at Possession Bay. Our pilot left just after the First Narrows inposition: Lat. 52° 24' S., Long. 69° 24' W. There are plans to build aPilot Station at Punta Felix in position: Lat. 52° 58' S., Long. 74° 04' W.and thus making it compulsory to take a Pilot for the whole Strait (ocean to ocean). According to our pilot this to be effective late 1986 or early 1987.

There are now two reporting points, Los Evangelistas in position: Lat. 52° 23' S., Long. 75° 07' W. at the West entrance, and Cabo Espiritu Santo in position: Lat. 52° 40' S., Long. 68° 36' W. at the East entrance.

VHF contact to be made with these stations when passing them. They require such information as g.r.t. length, cargo, etc. Their English is fairly good.

Our Pilot did not agree that the best time to pass Punta Arenas was at high water. Because the tide varies in such a way that vessel still has the tide against in the Narrows. Instead he recommended that the tide was calculated for the First and Second Narrows respectively, (with Chilean tables). And then the transit to be made in such a way that the vessel transits the First Narrows just after high slack water. This meant that the vessel would sometimes run against the tide in the Second Narrows. Since the tide in the First Narrows in much stronger, this is more favourable.

Advice from Agent: The Chilean Government issued Decree No. 397 imposing compulsory pilotage for the transit of Magellan Strait in both directions.

Same will become effective from 1st December, 1985, and will apply to all vessels, even those crossing ocean to ocean.

Vessels to request Pilots through an Agent in Punta Arenas well in advance of their ETA at either entrance of the Strait.

Westbound traffic will embark Pilots at Possession Bay (Lat. 52° 16' S., Long. 69° 10' W.) and disembark them at Punta Arenas.

Eastbound traffic will embark Pilots at Punta Arenas and disembark them at Possession Bay.

Also see "Shipmaster's Report" dated February 1993.

SHIPMASTER'S REPORT: January 1985.

Painting: We called recently at Iquique – Antofagasta – Valparaiso – San Vicente. In *all* ports scraping and painting the hull only allowed after having received permission from Port Captain.

Containers: When more than 6 containers have been (re)loaded on deck the lashing of same are to be checked by Surveyor of Port Captain's Office. Surveyor at San Vicente insisted on chains, even when twistlocks were used and containers only single stacked.

Stability: Prior departure last Chilean port, stability particulars to be given to Surveyor from Port Captain's Office.
Time: Summertime is kept, GMT minus 3 hours.

SHIPMASTER'S REPORT: February 1993.
Passage: Buenos Aires to Punta Arenas, Valparaiso, Talcahuano via Magallanes Strait and Chilean Inland Waters.
Prologue: Our vessel was the first company vessel to transit Magallanes, as the South American liner service was extended to include ports in Chile. We sailed from Buenos Aires on 25th February bound for Punta Arenas, which is situated in the Magallanes Strait.
Pilotage: It is mandatory for foreign flag vessels to embark 2 pilots at Possesion Bay, which is situated about 23 miles West of Punta Dungeness Light. Arrangment of pilot should be made through the main Agent at Valparaiso, at least 3-4 days prior to arrival. Pilots fly from Valparaiso to Punta Arenas and then by road to Possesion Bay. Pilotage is compulsory from Possesion Bay to Punta Arenas and vice versa. It is also compulsory to take 2 pilots from Possesion Bay if vessel is bound for any ports in Chile. However, it is not mandatory to take a pilot on departing Punta Arenas if vessel is Westbound through the Magallanes Strait (exiting at Cabo Pillar), and not calling at any Chilean ports on the Pacific side. But it should be borne in mind that, should a Master decide to embark pilots (always 2 pilots) at Punta Arenas or Possesion Bay for the passage through the optional pilotage area between Punta Arenas to Cabo Pillar, the pilots cannot be disembarked at Cabo Pillar.

The vessel has to proceed Northward (through Pacific) along the Chilean coast for over 2 days, until the pilot disembarkation points at Golfo de Penas (approximate position 43° 20' S., 73° 38' W.) or at Ancud (approximate position 41° 51' S., 73° 50' W.) or until Concepcion Bay or Valparaiso. No matter where the pilots are disembarked (at any points as mentioned above), they return to their base at Valparaiso (all expense on owners' account).

The exercise of having to overcarry 2 pilots beyond Cabo Pillar may sound quite strange, but the fact becomes quite clear when the vessel invariably meets hostile weather at the Western part of the Magallanes Strait (where it meets Pacific), as such pilot disembarkation facilities do not exist. The seas in that area are always very rough with heavy swell, especially when the wind is S.W. to West, which unfortunately is the case most the time, and billowing to Force 8 – 9 or more with swells 4 m. – 6 m. in height under normal circumstances.

Weather in this part changes without warning. North or Northwesterly wind brings some respite from Westerly swell, but as soon as the wind backs to West or S.W., heavy rolling cannot be escaped. In order to avoid this notorious zone, the only escape is to take the inland route instead of exiting to Pacific at Cabo Pillar.

As regards the pilotage fees from Punta Arenas up to Valparaiso, it is a fixed amount depending upon the ship's g.r.t., and it is regardless of the fact whether vessel chooses to proceed via inland waters or via Pacific. Pilots however only take charge if vessel transits inland sea/channels. In our case, we arrived in Possesion Bay on 2nd March and embarked 2 pilots, who took us to Punta Arenas as we had cargo to discharge. The vessel was berthed by the Harbour Pilot on arrival at Punta Arenas, and the Magallanes Strait pilots disembarked to proceed to hotel ashore (all expenses on ship's account). We sailed from Punta Arenas on 5th March, and the Magallanes pilots returned onboard about one hour prior to sailing. We were bound for Valparaiso.

It is mandatory to provide senior officer status to the pilots, and they should be lodged in separate cabins. They certainly deserve excellent treatment, as their job is really demanding considering more than 700 miles of arduous passage through the inland waters. The pilots appeared to be very helpful and congenial.
Route Selection: It remains the Master's prerogative to opt for inland channel (which commences about 31 miles S.E. of the Cabo Pillar), or taking to Pacific after exiting at Cabo Pillar. The passage through the inland channel is about 17 miles longer and very exciting with 2 bottlenecks which require special care and precise timing. On proceeding (Northward) via inland channel, it is necessary to pass Summer Passage (Paso Summer) with a maximum draft of 25 ft. at any state of tide, and remain within yards of the shoal marking buoy. This stretch is maximum 300 m. long and safe width of about 100 m. Speed was reduced to minimum prior to the shoal depth, and the engine was stopped in time to prevent any squatting. The bottom is flat rock and the sounding increases to 60 m. or more immediately before or after the shoal patch. We had reduced our draft to 7.0 m. with a trim of 50 cm. by the stern, in order to have good steerage. However, there is an alternate passage (via Canal Gray), which may have as narrow navigable channel as Summer Passage (maximum draft 10.0 m.). But this channel has to be passed only in daylight hours and with reasonable visibility.

The second constriction is the English Narrows (Lat. 48° 59' S., Long. 74° 26' W.), which must be navigated in daylight hours and precisely at slack water. Vessels up to 180.0 m. LOA are allowed to pass via English Narrows. This is a real bottleneck and involves 2 alterations of course of more than 90° each within a distance of less than 0.75 miles. These turns had to be negotiated at full speed with generous use of helm. The exercise is breathtaking and even more exciting when proceeding in the opposite direction.

In order to avoid the English Narrows, a vessel may exit to Pacific by making the detour at Paso Caffin (50° 09' S., 74° 44' W.), and leave via Trinidad Channel. But the decision to opt for Trinidad Channel should be made only if it is considered safe enough for the subsequent Northward passage through the Pacific, as weather there may not be too different from what it has been near the Western entrance of Magallanes Strait. If continuing via English Narrows, the inland sea terminates at San Pedro (in Golfo de Penas). The whole stretch of this passage, beginning from Estrecho de Magallanes until San Pedro, is known as Patagonian Channel. The Patagonian Channel is about 300 miles long and affords relatively smooth waters as compared to the frequent gales and heavy weather associated with heavy deep swell, so often experienced along the Chilean coast in the Pacific.

The passage via Patagonian Channel features high and abrupt shores, steep to and sheer cliffs, numerous peaks and mountain ranges often capped with snow, waterfalls, glaciers, ice and icebergs. We met small icebergs between Canal Wide and Canal Concepcion. These icebergs originate from the adjacent glaciers, and are driven into inland seas by Easterly wind, most frequently in Summer, and sometimes are menacing enough to warrant reduction in speed or stoppage to avoid propeller damage or nipping. We did not meet with any icebergs during our Northward passage, but encountered many of them during our return passage 11 days later. On the whole, the Patagonian Channel offers perhaps the most panoramic views and grandeur rarely seen anywhere.

Another important fact about pilotage that should be known is that, although the pilots remain on board until their disembarkation at any positions as have been mentioned earlier, the pilotage fees are payable up to their return to Valparaiso (regardless of point of disembarkation), but their responsibility ceases when passing San Pedro Light (47° 43.5' S., 74° 47.5' W.) in Golfo de Penas. There is an optional patch of inland channel of about 280 miles which begins at Darwin Channel, and continues via Moraleda Channel and terminates at Ancud Pilot Station. This optional pilotage costs around U.S.$ 3,400.00 for this size of vessel (15,125 g.r.t.), and may be used, should it be necessary to avoid heavy seas. However, during our passage both North and Southbound, we did not use this optional channel as the weather was not so harsh as to warrant use. The optional pilotage though increases the distance by about 90 miles, but pays a handsome dividend in terms of relatively calm weather. Informatively, there is a surcharge of 5% on normal pilotage fees, should a vessel meet with heavy weather in Pacific after having decided to proceed along the same instead of the Patagonian Channel. An additional 5% surcharge is levied in the event of an erratic gyro compass.
Passage: Once it was decided to use the Patagonian Channel as described under "Route Selection", it is now described below, the passages through which we transitted, as it may serve as a good lead in the study of charts and Admiralty sailing directions. Details of routes are given from Possesion Bay up to Valparaiso in several parts.
Possesion Bay to Punta Arenas: B.A. Charts No. 1692, 1693 and 1694.

On rounding into Possesion Bay from a position South of Punta Dungeness, great care was exercised due to very strong tide. Pilot boarded precisely at the position marked on chart. Vessel followed the printed track on the chart until up to Punta Delgada. A radar station is situated there to track all ships approaching from the East, as well as all outbound ships. At times of heavy weather, pilots board near Punta Delgada. Great caution is necessary when transitting Primera Angostura and Segunda Angostura, due to strong tide which may attain 6 – 8 knots at Spring tide. The safest passage is to keep the vessel mid-channel. After clearing the Segunda Angostura, strength of tide gradually diminishes to around 1 – 2 knots. After passing about 1 mile East of Isla Magdalena, we proceeded direct to Punta Arenas, as prudent as navigation would permit.
Punta Arenas – Golfo de Penas: Chart No. 1281.

After sailing from Punta Arenas, the passage Westward through the Paso Ancho – Paso Ingles – Paso Larga – Paso del Mar and Magallanes Strait are deep and wide. On passing Cabo Froward whereafter may be the beginning of rain, snow, strong winds, gales, squalls and thick weather, which may progressively worsen as vessel proceeds N.W. through the Strait.

Interestingly, Cabo Froward (53° 54' S., 71° 18' W.) is the Southern most tip of the South American continent. The lands South of this point and on the Southern shore of Magallanes Strait are all islands, and obviously not connected to the mainland of South America.

It would be pertinent to quote from the sailing directions that "at Cabo Froward, the squalls are exceptionally heavy, the weather frequently changes to heavy rain or snow, and the shores are often obscured. This change in weather is often very striking. It is seldom however, that there are not occasional clearings which enable the position of the vessel to be ascertained".

Canal Smyth: Charts No. 631 and 1282.

When passing the Racon at Pasa Roda (52° 55.2' S., 73° 49.5' W.), course is altered to N.N.E. to head for fairway light at the entrance to the Canal Smyth, and the recommended track as printed on the charts is followed.

Canal Mayne/Canal Gray: Charts No. 631 and 1282.

After following the charted track for about 24 miles, generally Northward beginning abeam to fairway light, vessel would arrive at position Lat. 52° 25.5' S., Long. 73° 40' W., abeam of Punta Mary, where choice has to be made whether to follow Canal Mayne or Canal Gray (Canal Gray is only navigable during daylight hours as stipulated by Chilean rules). Canal Mayne leads to Paso Summer, which can be transitted at any time, but maximum draft is restricted to 24 ft., as advised by the pilot. However, admiralty sailing directions quotes " Canal Mayne is usually preferred by vessel with a draft not exceeding 6.7 m.". We passed with 6.8 m. draft during Northward passage, and 7.0 m. during Southward passage. We stopped engine when passing the first buoy (going up from South), which is located at Lat. 52° 19.1' S., Long. 73° 58.5' W., on our starboard, and remained within a few metres from the same in order to avail the relatively greater depth of 8.8 m. (as per Chilean Chart), adjacent to the buoy and along the reference line. Keeping the Hozven Light right ahead until abeam of the shoal marking buoy to starboard on the Northern bank of Banco San Juan, adjacent to Isla Larga and then alter to N.N.E., passing about 3 cables abeam to port "Ra Sim Lt" on Isla Cutler (see Chart No. 630). Distance about 11 miles from Point Mary to abeam to Northern tip of Isla Larga.

Estrecho de Collingwood: Charts No. 1282 and 630.

After steaming past the Isla Larga in Paso Summer (Canal Mayne), we followed the printed track for about 22 miles to enter Estrecho de Collingwood via Paso Victoria and then to Sarmiento Canal via Paso Farquhar (distance from Paso Victoria to Paso Farquhar is about 15 miles). Numerous shoals and reefs exist along the route, but vessels can safely steer past all dangers by remaining in mid-channel.

Canal Sarmiento: Charts No. 1282, 630 and 537.

Followed Canal Sarmiento for about 50 miles (from Paso Farquhar) until a constriction at Punta San Marcos which is about 0.5 miles wide. Then another 2 similar bottlenecks at Punta Passage (about 18 miles further North of Punta San Marcos) and the other at Punta Propoise (a passage of about 4 miles, N.W. of Punta Passage), and thereafter the canal widens to a basin before entering into Canal Inocentes at Isla Juan Light, which is a further 6 miles of steaming (total distance of Canal Sarmiento beginning at Paso Farquhar until abeam to Isla Juan Light is about 78 miles).

Canal Inocentes: Charts No. 1282, 1286 and 537.

This canal is an open basin and continued for about 11 miles before merging with Canal Concepcion. It was a relatively comfortable passage.

Canal Concepcion: Charts No. 1286 and 537.

We continued past Isla Inocentes for about 9 miles along the printed track and merged with Canal Wide 22 miles later. This is a "Y" junction, and if altering to port (when going North), would lead to Canal Trinidad via Paso Caffin. Canal Trinidad is the exit route to Pacific, and can be utilised if the weather in the adjacent areas is considered to be safe enough from heavy seas. If exiting via Canal Trinidad, then the inland pilotage ceases on clearing Cabo Trinidad, but pilots have to be overcarried until up to any of the Pilot Stations mentioned earlier.

In our case, it was preferred to continue via the inland sea owing to adverse weather conditions on the Pacific side along the Chilean coast.

Canal Wide: Charts No. 1286 and 537.

The area contained between Canal Concepcion and Canal Wide (i.e. Punta Wilmot in the North and Isla Canning in the South) are sometimes infested with drift ice and icebergs, which flow out from the adjacent glaciers via Seno Penguin and Seno Europa. During our Northward passage, we did not encounter any ice, but during our Southward passage, small sized icebergs were found scattered all over the area. In Summer time with an Easterly wind, large amounts of icebergs flow into the canal. The sights of the icebergs were very pleasant to watch by day (as long as they were no bigger), but can pose significant problems during night for obvious reasons.

After entering Canal Wide (at Punta Squire), we steamed about 32 miles along the recommended track before meeting another "Y" junction at the South end of Isla Saumarez. The choice of route was to pass via Canal Grappler or Paso del Abismo-Canal Escape (these canals are located on either side of Isla Saumarez).

The pilot told us that it is conventional to use Canal Grappler when Northbound and Canal Escape when Southbound. This stretch is about 18 – 20 miles long either way. As we were Northbound, we passed through Canal Grappler. When Southbound, we passed through Canal Escape and Paso del Abismo, and it was one of our most spectacular and memorable passage. This passage is only 2 cables or less wide with sheer and steep rocky mountains rising to staggering ranges of 2,000 ft. – 4,000 ft. The depth in the canal seems to be abysmal in relation to our draft, hence of no consideration. We only kept mid-channel and watched with wonder, as we darted through the passage, and broke the silence as we blew our horn which resonanced long enough to feel like eternity.

Angostura Ingles (English Narrows): Charts No. 570 and 1286.

After passing the island situated a few miles North of Isla Saumarez, begins the phobia of English Narrows which lies 25 miles ahead. This is the narrowest part of the whole channel and perhaps the most thrilling for any navigator. It lies between Isla Wellington and the mainland and extends 4 miles N.N.E. to Canal Messier. The pilot suggested that the passage through the English Narrows should only be attempted in daytime with fair weather and slack water. The narrowest parts are barely 1 – 2 cables wide and involve 2 alterations at right angle within a span of 0.75 miles. In order to properly time arrival at English Narrows, it might be necessary to anchor at Puerto Eden when Northbound, or at Puerto Gray when Southbound. The tide through the narrows attain 3 – 5 knots, and as such it is necessary to await slack water. Daytime transit is imperative for a better and correct perception of ship's rate of swing.

The pilots gave us written instructions to exercise all possible cautions including manning of forward anchor station. We found the pilots to be very confident and capable, which are befitting their experience of transitting the English Narrows hundreds of times.

The Southbound passage through the English Narrows requires more skilled, judicious and timely use of helm and engine. I would like to describe the manoeuvre of our Southward passage for the benefit of the readers of this report, and should be read in conjunction with the enclosed extract from Chilean chart for the relevant portion (See "Plan"). About half an hour before the final approach, the pilot observed the helm response at various degrees of helm. Then the vessel was lined up on heading 175° with the unlighted beacon off Isla Cabrales. We have been maintaining sea speed at 105 r.p.m. As the buoy "Bo Caution Norte" bore 3 points on starboard bow, starboard helm of 15° was given. Then as the beacon on the Northern end of Isla Medio Canal opened out to 2 points on the port bow, helm was eased off to midship and soon after, 15° of port helm was applied. At the same time double ring was given on the telegraph (prearranged with the Chief Engineer) for maximum r.p.m. As the r.p.m. shot up to 115 – 118 within seconds, the initial swing to starboard was arrested and very soon bow fell off to port under the effect of 15° port helm. At that instant, I think I was holding my breath which I only let go once I saw the bow swinging to port, thus getting away from the mountain which laid dead ahead at 0.5 cables from the forecastle, while the vessel was moving at break neck speed. Thanks to the transverse thrust of propeller which must have augmented the ship's rate of swing. In less than 5 minutes, the whole exercise was safely over and a job well done. It is much easier said than done, and I could not conceal my gratitude to the pilots in admiration for one of the most spectacular manoeuvres I have ever had the pleasure to witness. In my opinion, the Southward passage through the narrows is more tedious than the Northward passage through the same.

Canal Messier: From English Narrows (going up North), we entered Canal Messier which is fairly wide (2 – 3 miles), and continued for another 75 miles until abeam of San Pedro Light (in Golfo de Penas). The inland pilotage ceased at San Pedro Light. Total distance (pilotage) from Punta Arenas to San Pedro is about 600 miles and was piloted in 45 hours. However the transit time is liable to increase if the ship has to wait for slack water and daylight to pass English Narrows.

The current in the Patagonian Channel is tidal and rarely exceeds 2 knots, except at the bottlenecks where it is quite strong. The current runs along the axis of the channel and so does the wind, which is either from ahead or following. Occasional rain showers were experienced, but it hardly lasted beyond a few miles as the topography of the mountains changed.

The mountains and its shore line (if any) are desolate, except for the frequent schools of seals/sea wolves and water ducks which can be seen on the shores. The mountains are rocky with thin layers of top soil in most places, giving rise to wild trees, which all appear to be leaning to South owing to predominantly Northerly wind. The leeward sides of the peaks were still generally covered with snow, giving an indication of harsh weather in Winter.

The pilots issued certificates to all members on board conferring the title of "Honourable Explorer of the Magallanes Strait". This is a very impressive certificate and issued to seafarers transitting the Magallanes Strait for the first time.

San Pedro to Valparaiso: The passage from San Pedro in Golfo de Penas to Valparaiso was uneventful with a moderate amount of rolling, as such I decided not to use the optional pilotage area which involved additional pilotage dues, as have been mentioned earlier in detail. We arrived at Valparaiso on 9th March and the Magallanes pilots disembarked there.

Valparaiso to Talcahuano (in Concepcion Bay): We sailed from Valparaiso on 12th March and arrived Talcahuano on 13th March. The passage was normal. As we were due to sail for Santos on 15th March, through the same route (Patagonian Channel and Magallanes Strait), we had to embark pilots (2 pilots) at Talcahuano, who arrived from Valparaiso on 14th March and came on board just before our sailing on 15th March at 1030 hrs.

Talcahuano to Possesion Bay: During the sea passage up to San Pedro, we met with dense fog in the North and very rough sea in the Southern half of our passage. When we were about 100 miles S.W. of the Pilot Station at Ancud (located North of Chiloe Island), we had to make a deviation to land a crew member who was suspected to be suffering from kidney stones. The radio medical advice was sought from Goonhilly, U.K., and the doctor advised immediate hospitalisation within 2 – 4 hours. The nearest port with medical facilities was at Ancud, though it amounted to a deviation on a reciprocal course for about 6.5 hours. On arrival at Ancud Anchorage we dropped anchor. The Agent boarded immediately with doctor, Immigration Officer and a Naval Officer. The doctor examined the patient and also suggested immediate hospitalisation. The crew member was landed right away and we were underway again in less than an hour. However, we lost nearly 14 hours on this emergency. It is noteworthy that South of Chiloe Island, there is no other place until Punta Arenas where proper medical facilities are available. This delay was a blessing in disguise as we were able to transit the English Narrows without having to anchor for daylight and slack water.

The remainder of the passage from San Pedro until Possesion Bay was uneventful, and we disembarked the pilots (at Possesion Bay) on 20th March at 0105 hrs., and then continued with our onward passage to Santos.

Weather Forecasts: After sailing from Buenos Aires enroute to Punta Arenas, no weather forecast is available in English, although Argentinian station is supposed to cover all these areas in English as well. Faced with this handicap, the Marine Superintendent arranged the services of the Oceanroute Inc., USA, to furnish us with weather reports as well as weather route. We found their predictions of lows, highs and direction of wind and swell very accurate. Their prognosis for the next 3 days were in accordance with the projected position of the ship and as such were of immense help to decide on the choice of route. However, their forecasts do not include the Patagonian Channel, which of course was not of much importance to us as the channel is well sheltered, and we were primarily concerned with the weather on the Pacific side, in order to decide if to use the Patagonian Channel or exit the Pacific at Cabo Pillar or at Cabo Trinidad. The weather report which is available (on W/T) in English from Chile is good but forecast valid for 12 hours only, as such it was not possible to make correct assessment in advance, which is of great importance in view of the frequent bad weather in the Southern part of Chile. Furthermore, the above forecast was available in English only once in 24 hours (at 1210 UTC after the forecast in Spanish, from Valparaiso Radio/CBV). However, they broadcast weather forecasts twice daily in Spanish (also valid for 12 hours only). On the whole, the services of Oceanroute was worthwhile, but in my opinion it is of not much use to weather route a ship in these waters.

Position Report: While within Argentinian waters, Position Report has to be made on W/T to Naval Radio Station L2V at 1000 hrs. LT and 2000 hrs. LT. Similar report has to be made to any Chilean Coast Station (while within Chilean waters) daily at 0800 hrs. LT and 2000 hrs. LT. The report comprises of ship's name, Call Sign, Port of Registry, position, course, speed and ETA.

AUTHORITY: Direccion General del Territorio Maritimo Y de Marina Mercante, Errazuriz 537, Valparaiso, Chile. *Tel:* 258091. *Telex:* 230602, 330461.

CHILREP: Chilean Ship Reporting System: (See Plan)

The Chilean Ship Reporting System (CHILREP) has been established in accordance with the International Convention on Maritime Search and Rescue, 1979 (SAR Convention), which came into effect in June 1985, and requires signatories to the Convention to provide, amongst other actions, marine search and rescue (SAR) facilities for prescribed areas, and also recommends the establishment of a Ship Reporting System. Chile ratified the Convention in October 1981, and has accepted SAR responsibility for the area shown in the attached general instructions and CHILREP procedures (See "Plan").

The CHILREP is operated by the General Directorate of the Maritime Territory and Merchant Marine (DGTM y MM) which is a Directorate of the Navy. It is a "positive" system, that is, if a Position or Final Report is missed, the Maritime Search and Rescue Coordinator Centre or Subcentre will initiate checks to establish the Safety of the vessel. These checks are aimed solely at establishing whether a vessel is safe, and include broadcasts to shipping and communications with owners, agents or charterers. If these checks are unsuccessful, then search actions will be initiated.

Should you need any further information, please do not hesitate to contact the Head of the Maritime Search and Rescue Service (Tel: 258091. Telex: 230602 DGTM CL and 330461 DGTM CK. Fax: 252539).

Chile has an extensive coast where 5 Maritime Search and Rescue Coordination Centres (MRCCS) and 11 Subcentres (MRSCs) are located, fitted with modern maritime communication systems and facilities to carry out search and rescue operations. The responsibility area also covers the Drake Passage and an area which extends to the Antarctic, where weather conditions are generally adverse. There is an Antarctic Patrol stationed at such area during Summer months, in order to assist vessels which may require assistance and to combat oil spills.

Chile also has a LUT (Local Users Terminal) of COSPAS-SARSAT System (International Satellite System for Search and Rescue), which receives alerts from radio beacons in 406 MHz and 121.5 MHz.

Participation in this system is voluntary for foreign vessels and it began in December 1991.

Notwithstanding that participation in the system is voluntary, domestic regulations provide that every foreign vessel bound to a Chilean port must report her arrival at least 24 hours in advance. When foreign vessels navigate inland waters of the Chilean Republic, they must report their position at 1200 Z and 2400 Z. In all other conditions, the system considers a daily report between 1200 Z and 1600 Z.

FUNCTIONS OF THE MARITIME SEARCH AND RESCUE SERVICE:

The International Convention for the Safety of Life at Sea requires governments to ".... ensure that any necessary arrangements are made for the rescue of persons in distress at sea, around its coasts". The Chilean Government, being part to the Convention, established the Maritime Search and Rescue Service in December 1976.

The Maritime Search and Rescue Service depends on the General Directorate of the Maritime Territory and Merchant Marine which is the National Maritime Authority.

The principal function of this Service is the coordination of marine search and rescue activity within the area of Chilean responsibility.

The facilities are available to all seafarers whether they are private boating enthusiasts, commercial fishermen or professional seamen of the merchant fleets of the world.

The Service is operated 24 hours a day by officers with considerable marine qualifications and experience and specialised knowledge of search and rescue procedures.

Communications are the very heart of all search and rescue coordination, and the Service is well equipped with a network giving worldwide coverage.

CHILEAN SHIP REPORTING SYSTEM GENERAL INSTRUCTIONS:

1. **Introduction:**
   The CHILREP is a ship reporting system established in accordance with the International Convention for the Safety of Life at Sea and the Convention on Maritime Search and Rescue. Its objectives are:
   (a) To limit the time between the loss of a vessel and the initiation of search and rescue action, in cases where no distress signal is sent out.
   (b) To limit the search area for a rescue action.
   (c) To provide up-to-date information on shipping resources available in the area, in the event of a search and rescue incident.

   The coverage of CHILREP and the Chilean maritime search and rescue area, as advised to the International Maritime Organisation (IMO), are identical.

2. **Main Features of CHILREP:**
   On departure from a Chilean port or on entering the CHILREP area, a Sailing Plan (SP) is sent to the Communications Station which relays the information to the Service where a computerised plot is maintained for the vessel position. Position Reports (PR) are sent once a day between 1200 Z and 1600 Z, so that a report is received every 24 hours. Should a vessel at any time be in a position more than 2 hours steaming from the position that would be predicted from the last SP or PR, then a Deviation Report (DR) must be sent. Failure to do so will result in the search being concentrated in the wrong area in the event of a missed report, and the possibility that survivors from a striken ship may not be found. On arrival at the ship's destination or on departure from the CHILREP area, a Final Report (FR) is to be sent. CHILREP is a positive reporting system in that, should an expected report become overdue, actions which include worldwide communication checks, the alerting of ships in the vicinity and the launching of search aircraft, will be initiated.

   Dates and times contained in CHILREP reports are to be in Universal Coordinated Time which is indicatd by the suffix "Z".

CHILREP FORMAL COMPONENTS:

The following list shows all the CHILREP format components. The full list of components do not have to be included when sending CHILREP reports. Master should include those components shown in the examples given for each report, others may be included at the Master's discretion or when relevant to the type of report being sent.

The following format complies with IMO Resolution A.648(16) of 31st October 1989.

A. Vessel's name and call sign.
B. Date/Time of Position (UTC).
C. Position (Latitude and Longitude).
D. Geographical position (optional, to be used when sailing near the coast or inland waters).
E. Course.
F. Speed (vessels's anticipated average speed until next report).
G. Name of last port of call (when entering from overseas).
H. Date/Time and point of entry into CHILREP system (point of entry is the latitude/longitude at which the vessel is entering the CHILREP area, or the Chilean port from which the vessel is departing).
I. Next overseas destination and estimated date and time of arrival.
J. Whether pilot is carried on vessel.
K. Date/Time and point of exit from CHILREP system (point of exit is the latitude/longitude at which the vessel is leaving the CHILREP area, or the Chilean port the vessel is to arrive).
L. Route (vessel's intended track-state-Rhumb Line/Coastal/Great Circle).
M. Coast radio/maritime communications stations monitored (include INMARSAT and SELCALL number, if fitted).
N. Date/Time of next report (reports between 1200 Z and 1600 Z).
O. Draft.
P. Cargo (brief indication).
Q.* Defects or other limitations.
R.* Pollution (reports of any pollution seen).
S. Weather conditions in area (optional).
T. Ship's Agents.
U. Ship type and size.
V. Medical personnel carried (Sailing Plan only).
W. Number of persons on board.
X.* Remarks.

* Harmful substances, Marine Pollution and Dangerous Goods refer Appendix A.

TYPES OF REPORTS:

1. **Sailing Plan Report (CHILREP SP):**
   A Sailing Plan Report is sent to the communications stations within 24 hours prior or up to 2 hours after entry into the CHILREP area or departure from a port within the CHILREP area.
   The SP contains information necessary to initiate a plot and give an outline of the intended passage.
2. **Example of SP on Entering CHILREP Area:**

Format	*Example*
CHILREP SP	CHILREP SP
A. Vessel's name and call sign.	A. MAIPO/ELDQ4
F. Speed	F. 14
G. Name of last port of call (when entering from overseas).	G. AUCKLAND
H. Date/Time and point of entry into CHILREP system.	H. 280930Z 3320S 12000W
K. Date/Time and point of exit from CHILREP system (Chilean port of arrival).	K. VALPARAISO 042000Z
L. Route	L. GC
M. Coast radio/maritime communications stations monitored (INMARSAT and SELCALL number, if fitted).	M. CBV, CBT, INMARSAT 1242731
N. Date/Time of next report.	N. 281400Z
V. Medical personnel	V. NO
X. Remarks	X. NIL

Message Transmitted: CHILREP SP A MAIPO/ELDQ4 F 14 G AUCKLAND H 280930Z 3320S 12000W K VALPARAISO 042000Z L GC M CBV CBT INMARSAT 1242731 N 281400Z V NO X NIL.

3. **Example of SP Submitted on Departure from a Port within CHILREP Area to a Port Outside CHILREP Area:** (May be submitted prior to sailing and up to 2 hours after departure).

Format	*Example*
CHILREP SP	CHILREP SP
A. Vessel's name and call sign.	A. ACONCAGUA/CBAC
F. Speed	F. 16
H. Date/Time and departure port for this voyage.	H. 161300Z ANTOFAGASTA
I. Next overseas destination and ETA.	I. CALLAO 181500Z
K. Date/Time and point of exit from CHILREP area.	K. 171430Z 1821S 07530W
L. Route (vessel's intended track).	L. RL
M. Coast radio/maritime communications stations monitored.	M. CBA, CBA2
N. Date/Time of next report.	N. 171500Z
V. Medical personnel	V. NO
X. Remarks	X. NIL

Message Transmitted: CHILREP SP A ACONCAGUA/CBAC F 16 H 161300Z ANTOFAGASTA I CALLAO 181500Z K 17143)Z 1821S 07530W L RL M CBA, CBA2 N 171500Z V NO X NIL.

4. **Example of SP Submitted on Departure from and to a Port both within CHILREP Area:** (May be submitted prior to sailing and up to 2 hours after departure).

	Format		*Example*
	CHILREP SP		CHILREP SP
A.	Vessel's name and call sign.	A.	ANAKENA/CBAK

L.	Route	L.	RL to enter CHILREP then G.
M.	Coast radio/maritime stations monitored.	M.	CBM, CBV, ZLB
N.	Date/Time of next report.	N.	151600Z
V.	Medical personnel carried.	V.	NO

Message Transmitted: CHILREP SP A MAIPO/ELDQ4 F 16 G BUENOS AIRES H 150230Z 5630S 06716W I AUCKLAND 301600Z K 212300Z 5500S 12000W L RL TO ENTER CHILREP THEN GC M CBM, CBV, ZLB N 151600Z V NO.

6. **Position Report (CHILREP PR):**

Each day between 1200Z and 1600Z, a PR should be transmitted to the communications centres. The information contained in the PR will be used to update the plot. The PR must reflect the position, course and speed of the ship at the time of the report. If it is necessary to alter the nominated daily reporting time, the alterations should be shown in the PR sent before the change.

7. **Example of a PR:**

	Format		*Example*
	CHILREP PR		CHILREP PR
A.	Vessel's name and call sign.	A.	MAKEDONIA STAR/ CBMK
B.	Date/Time of position (UTC).	B.	141200Z
C.	Position	C.	4230S 07715W
E.	Course	E.	180
F.	Speed	F.	14
X.	Remarks (for example, change of reporting time or revised ETA).	X.	NIL

Message Transmitted: CHILREP PR A MAKEDONIA STAR/CBMK B 141200Z C 4230S 07715W E 180 F 14 X NIL.

8. **Deviation Report (CHILREP DR):**

Should a vessel, at any time be in a position more than 2 hours steaming from the position that would be predicted from the last SP or PR a Deviation Report must be sent.

9. **Example of a DR:**

	Format		*Example*
	CHILREP DR		CHILREP DR
A.	Vessel's name and call sign.	A.	MAKEDONIA STAR/ CBMK
B.	Date/Time of position (UTC).	B.	071700Z
C.	Position	C.	4730S 07710W
F.	Speed	F.	8
I.	Destination and ETA	I.	TALCAHUANO 092330Z
X.	Remarks (include reason for deviation, for example, reduction in speed due to weather, change of route or port of destination, etc.)	X.	Reduced speed due to heavy weather.

Message Transmitted: CHILREP DR A MAKEDONIA STAR/CBMK B 071700Z C 4730S 07710W F 8 I TALCAHUANO 092330Z X REDUCED SPEED DUE TO HEAVY WEATHER.

10. **Final Report (CHILREP FR):**

The Final Report FR is the information to terminate participation in the system. Accordingly reports should be sent prior to or on arrival at port, or when a ship has departed from the service area of the system.

When a FR is intended to be sent after departing from the service area, such a report should be sent as soon as practicable.

11. **Example of a FR on Arrival at a Port in CHILREP Area:**

	Format		*Example*
	CHILREP FR		CHILREP FR
A.	Vessel's name and call sign.	A.	ACONCAGUA/CBAC
K.	Date/Time and port of arrival.	K.	181315Z ARICA
X.	Remarks (must include the words final report).	X.	FINAL REPORT

Message Transmitted: CHILREP FR A ACONCAGUA/CBAC K 181315Z ARICA X FINAL REPORT.

12. **Example of FR, Vessel Departing CHILREP Area:**

	Format		*Example*
	CHILREP FR		CHILREP FR
A.	Vessel's name and call sign.	A.	QUEEN ELIZABETH 2/ GBTT
K.	Date/Time and point of exit from CHILREP area.	K.	110430Z 1821S 08745W
X.	Remarks (must include the words final report).	X.	FINAL REPORT

Message Transmitted: CHILREP A QUEEN ELIZABETH 2/GBTT K 110430Z 1821S 08745W X FINAL REPORT.

13. **Method of Passing Reports:**

(a) **In a Chilean Port:**

Reports may be transmitted either to the local coast radio station or to a main coastal station by any communications systems used.

Alternatively they may be passed in a written note which is to be sent to the Local Maritime Authority through the vessel's Agent.

(b) **At Sea:**

Reports must be transmitted to any main coast stations in times and frequencies indicated in List of Coast Radio Stations (UIT LIST IV) or in other publications which contain these updated data.

OVERDUE REPORTS:

To avoid unnecessary search action, it is important that ships report at the nominated reporting time each day, and send their FINAL REPORT when leaving the CHILREP area. If a ship is unable to pass a position report due to unserviceable radio equipment or illness of the radio officer, all attempts must be made to pass a signal to this effect through another vessel, port or other shore authority, either by VHF or use of emergency transmitter.

NOTES ON PROCEDURES:

1. **Date/Time Group:**

Dates and times contained in CHILREP reports are to be in Universal Coordinated Time (UTC) which is indicated by the suffix "Z".

Example: 17 October 1990, 1200 LMT, transmitted as 171600Z (+4).

2. **Latitude and Longitude:**

Latitude is a four digit group expressed in degrees and minutes, and suffixed with "N" for North or "S" for South.

Longitude is a five digit group expressed in degrees and minutes, and suffixed with "E" for East or "W" for West.

Example: 4230S for Lat. 42° 30' S, and 07840W for Long. 78° 40' W.

3. **Intended Route:**

Indicate Great Circle (GC), Rhumb Line (RL) or coastal with way points being followed, expressed in latitude or longitude. Courses are not required if way points are mentioned.

4. **Speed:**

Anticipated average speed vessel will make until next report time.

5. **Course:**

True course anticipated until next reporting time using three digit group. When more than one course will be steered, enter "various", the Service will interpret this as being the normal courses a vessel will follow on that particular passage. However, if the above assumption does not apply, clarification should be made.

6. **Radio Stations Monitored:**

List stations which the vessel normally works to contact managers, owners, charterers and agents, etc., in addition to Chilean maritime communications stations monitored. If the ship is fitted with INMARSAT, or SELCALL, the number should also be included.

7. **Severe Weather:**

Vessels which anticipate passing through areas of severe weather conditions or are experiencing severe weather, are urged to report their position at more frequent intervals to the Service.

8. **Geographical Position:**

When used, give well known names of landmarks.

9. **Weather Conditions in the Area:**

This is optional but desirable, when reported, the following items are recommended:

Pressure (HP), four digits. E.g.: 1024.
Wind direction and force in knots. E.g.: 220-18.
Air and water temperature when available (°C). E.g.: 12-6.
Dew point expressed in three digits (°C). E.g.: 135 (13.5).

APPENDIX A: Detailed Reporting Requirements:

1. **Dangerous Goods Reports (CHILREP DG):**

Primary reports should contain items A, B, C, M, Q, R, S, T, U of the standard reporting format; details for R should be as follows:

R. 1. Correct technical name or names of goods.
2. UN number or numbers.
3. IMO hazard class or classes.
4. Names of manufacturers of goods when known, or consignee or consignor.
5. Types of packages including identification marks or whether in portable tank or tank vehicle or packaged in vehicle, freight container or other transport unit.
6. An estimate of the quantity and likely condition of the goods.
7. Whether lost goods floated or sank.
8. Whether loss is continuing.
9. Cause of loss.

If the condition of the ship is such that there is danger of further loss of packaged dangerous goods into the sea, items P and Q of the standard reporting format should be reported; details for P should be as follows:

P. 1. Correct technical name or names of goods.
2. UN number or numbers.
3. IMO hazard class or classes.
4. Names of manufacturers of goods when known, or consignee or consignor.
5. Types of packages including identification marks or whether in portable tank or tank vehicle or packaged in vehicle, freight container or other transport unit.
6. An estimate of the quantity and likely condition of the goods.

Particulars not immediately available should be inserted in a supplementary message or messages.

2. **Harmful Substances Reports (CHILREP HS):**

In the case of actual discharge primary harmful substances reports should contain items A, B, C, E, F, L, M, N, Q, R, S, T, U, X of the standard reporting format. In the case of probable discharge, items B should also be included. Details for P, Q, R, T and X should be as follows:

P. 1. Oil or the correct technical name of the noxious liquid substances on board.
2. UN number or numbers.
3. Pollution category (A, B, C or D), for noxious liquid substances.
4. Names of manufacturers of substances, if appropriate, where they are known, or consignee or consignor.
5. Quantity.

Q. 1. Condition of the ship as relevant.
2. Ability to transfer cargo-ballast-fuel.

R. 1. Oil or the correct technical name of the noxious liquid discharged into the sea.
2. UN number or numbers.
3. Pollution category (A, B, C or D), for noxious liquid substances.
4. Names of manufacturers of substances, if appropriate, where they are known, or consignee or consignor.
5. An estimate of the quantity of the substances.
6. Whether lost substances floated or sank.
7. Whether loss is continuing.
8. Cause of loss.
9. Estimate of movement of the discharge or lost substances, giving current conditions if known.
10. Estimate of the surface area of the spill if possible.

T. 1. Name, address, telex and telephone number of the ship's owner and representative (charterer, manager or operator of the ship or their agent).

X. 1. Actions being taken with regard to the discharge and the movement of the ship.
2. Assistance or salvage efforts which have been requested or which have been provided by others.
3. The Master of an assisting or salvaging ship should report the particulars of the action undertaken or planned.

Particulars not immediately available should be inserted in a supplementary message or messages.

The Master of any ship engaged in, or requested to engage in an operation to render assistance or undertake salvage should report, as far as practicable, items A, B, C, E, F, L, M, N, Q, R, S, T, U, X of the standard reporting format.

3. **Marine Pollutants Reports (CHILREP MP):**

In the case of actual discharges, primary marine pollutants reports should contain items A, B, C, M, Q, R, S, T, U, X of the standard reporting format. In the case of probable discharge, items P should also be included. Details of P, Q, R, T and X should be as follows:

P. 1. Correct technical name or names of goods.
2. UN number or numbers.
3. IMO hazard class or classes.
4. Names of manufacturers of goods when known, or consignee or consignor.
5. Types of packages including identification marks or whether in portable tank or tank vehicle or packaged in vehicle, freight container or other transport unit.
6. An estimate of the quantity and likely condition of the goods.

Q. 1. Condition of the ship as relevant.
2. Ability to transfer cargo-ballast-fuel.

R. 1. Correct technical name or names of goods.
2. UN number or numbers.
3. IMO hazard class or classes.
4. Names of manufacturers of goods when known, or consignee or consignor.
5. Types of packages including identification marks or whether in portable tank or tank vehicle or packaged in vehicle, freight container or other transport unit.
6. An estimate of the quantity and likely condition of the goods.
7. Whether lost goods floated or sank.
8. Whether loss is continuing.
9. Cause of loss.

T. 1. Name, address, telex and telephone number of the ship's owner and representative (charterer, manager or operator of the ship or their agent).

X. 1. Action being taken with regard to the discharge and movement of the ship.
2. Assistance or salvage efforts which have been requested or which have been provided by others.
3. The Master of an assisting or salvaging ship should report the particulars of the action undertaken or planned.

Particulars not immediately available should be inserted in a supplementary message or messages.

The Master of any ship engaged in or requested to engage in an operation to render assistance or undertake salvage should report, as far as practicable, items A, B, C, M, P, Q, R, S, T, U, X of the standard reporting format.

APPENDIX C: Check List for CHILREP Reports:

CHILEAN REPORTS CHECK LIST

	SP	PR	FR	DR	
A	*	*	*	*	Name/Call Sign.
B		*		*	Date/time of position.
C		*		*	Lat./Long. of position.
E		*		+	Course
F	*	*		+	Speed
G	%%				Last port of call, only when entering from overseas.
H	*				Date/time and point of entry (Lat./Long.) into CHILREP area or Chilean port of departure.
I	%%			+	Next overseas destination and ETA.
J	%				Whether pilot is carried on vessel.
K	*		*	+	Date/time and point of exit, either the next Chilean port OR Lat./Long. when leaving the CHILREP area.
L	*			+	Route
M	*			+	Radio Stations monitored/INMARSAT and SELCALL number (if fitted).
N	*			+	Nominated daily reporting time.
V	*				Medical personnel carried.
X			*	+	Remarks

* Mandatory.

%% This information is only required when entering or departing the CHILREP area.

+ Include these only if affected by the deviation.

% Notification of pilot is required when route considers inland waters navigation.

ANTOFAGASTA (including La Chimba Cove):

23.39 S. 70.25 W. **(See Plan)**

DOCUMENTS: *Customs:*

General Ship's Manifest.
Cargo Manifest for the port.
Crew and Passenger List.
Personal Effects List.
Stores List.
General Declaration.

Maritime Authority:

Ship's Clearance from Last Port.
Crew List.
Passenger List.
Weapons Declaration.
Dangerous Cargo Declaration.

National Health Service:

Health Declaration.
Derat Certificate.

Agriculture Department:

Stores List.
General Declaration.

Interpol:

Crew List.
Passenger List.

APPROACHES: *Traffic Separation Scheme:* A separation scheme exists at the entrance to the port, one mile wide, covering following geographical points:

(a) Lat. 23° 37' 52" S., Long. 70° 25' 31" W.
(b) Lat. 23° 37' 52" S., Long. 70° 28' 50" W.

There is one-way traffic for ships sailing West, located between the mentioned separation scheme and a line between the following geographical points:

(a) Lat. 23° 36' 23" S., Long. 70° 25' 31" W.
(b) Lat. 23° 35' 30" S., Long. 70° 26' 58" W.

There is one-way traffic for ships sailing East, located between the mentioned separation scheme and a line between the following geographical points:

(a) Lat. 23° 39' 22" S., Long. 70° 25' 32" W.
(b) Lat. 23° 40' 22" S., Long. 70° 26' 30" W.

Principal traffic course is 090° – 270°.

PILOTAGE: Compulsory. Vessels calling at Antofagasta and willing to berth on arrival must proceed to the pilotage boarding station. Vessels that are to wait because of congestion or any other reason, are to anchor in the anchorage zone. Pilot will travel to and from the vessel in a launch specially assigned for this purpose. The launch is also used for mooring, and has VHF radio.

In order to have the vessel authorisation for manoeuvring, the ship must have:

(a) Two bower anchors with not less than 7 shackles of chain on each.
(b) Four mooring lines and two springs.

For vessels and port safety, in all berthing and/or unberthing, the assistance of one tug is compulsory. Vessels of less than 75 m. LOA do not need to comply with the above mentioned rule.

Two tugs wil be required for ships over 220 m. LOA.

Two tugs will also be required under the following special situations:

(a) Pier No. 4: Berthing of ships starboard side to, when other ships are docked at Piers No. 3 and No. 5.
(b) Pier No. 5: Unberthing of vessels docked starboard side to with no anchor in water.

Because of other ships in port, weather conditions or any other special situation, it is up to the Pilot to request a second tug.

All ships manoeuvring must request permission 4 hours in advance.

24 hours before arrival, vessels must inform the Maritime Authority their ETA, name, call sign, nationality, draft, last port of call and if there is any sickness on board.

Pilot Boarding Station:

The boarding area is within the following geographical points:

(1) Lat. 23° 37' 37" S., Long. 70° 24' 37" W.
(2) Lat. 23° 37' 37" S., Long. 70° 24' 18" W.
(3) Lat. 23° 38' 07" S., Long. 70° 24' 18" W.
(4) Lat. 23° 38' 07" S., Long. 70° 24' 37" W.

ANCHORAGE: Located outside the harbour between Paita Rocks and Cobre Norte Cove, with a depth from 25 m. to 40 m., with a good sand and mud seabed.

RESTRICTIONS: From May to July the surge is stronger and results in rough seas lasting from 2 to 4 days interrupting the traffic of small craft.

MAX. SIZE: See "Berthing" and "Tankers".

RADIO: Antofagasta Radio Station, call sign CBA-3, attends 24 hours on following frequencies:

Service	*Emission*	*Maritime Zone*
500 kHz	A1A A2A	A1 A2
518 kHz	F1B	
2182 kHz	H3E J3E	
8461 kHz	A1A	
C – 421	J3E	
C – 16	G3E	
C – 26	G3E	

Emission of urgent messages for ships (NURNAV) and meteorological information are provided on following frequencies and hours.

Service	*Emission*	*Times*
476 kHz	A1A	1405 & 0205
2738 kHz	J3E	1415 & 0215
C – 14	G3E	1430 & 0230

Security frequencies are attended as follows:

2182 kHz	Night Service	2200 & 1200
C – 421	Day Service	1200 & 2200

Navtex international emission:
Covering "A" Zone:
Time table (UTC) 0000 – 0010 0400 – 0410 0800 – 0810
1200 – 1210 1600 – 1610 2000 – 2010

Traffic list emission on 476 kHz and C – 401, will be H+50 of every even hour.

HF telephonic frequency in bands of maritime mobile service will be attended via Playa Ancha "CBV" Radio.

VHF: Harbour Master and Pilot on Channel 16 throughout 24 hours.

TUGS: 3 tugs available, 970 h.p., 1,440 h.p. and 4,100 h.p.

Also see "Pilotage".

Tankers: Vessels in excess of 75 m. LOA mooring at the buoys will require the assistance of one tug.

BERTHING:

Pier	*Length* (m.)	*Max. Draft* (m.)
Fishing zone	135	7.32
Pier 1	210	9.14
Pier 2	180	9.14
Pier 3	230	9.14
Wharf zone	130	4.87
Pier 4	142	8.71
Pier 5	175	8.99
Pier 6	130	9.45
Pier 7	220	11.25

CRANES: Pier No. 1, 2 and 3: 6×12 tons and 4×5 tons.

Pier No. 4 and 5: 4×7 tons.

Pier No. 6 and 7: Under repair.

STEVEDORES: Available through the Agents working 24 hours a day in 3 shifts, from 0800–1530 hrs., 1530–2300 hrs. and from 2300–0630 hrs.

MEDICAL: A first class hospital is available with 690 beds and all necessary elements and services. Two modern medical centres also available.

TANKERS: There are 3 tanker terminals in the North part of Antofagasta Bay.

Esso Terminal:

Owner: Esso Standard Oil Co., Chile.

Max. Length: 235 m.

Max. Draft: 60 ft.

Products Handled: Petroleum and clean products.

Mooring Facilities: The terminal has 3 buoys, painted white, buoys are named "North Buoy", "South Buoy" and "Manoeuvring Buoy".

General: For positioning of anchors there are leading marks on the shore. They are 2 metal circles, painted orange with black crosses in the centre.

Vessels must have at least 2 mooring lines of 220 m. each for sending to each buoy.

All buoys have slip hooks.

When mooring, the vessel will be berthed on a heading of 235°. Vessels are to use both anchors, with 8 shackles on the starboard anchor and 6 shackles on the port anchor.

Vessels cannot moor when the swell covers the tops of the rocks or if the wind is Force 4 or over.

The assistance of a tug is required for mooring.

Mooring is only carried out during daylight hours. Unmooring is possible at night, weather permitting.

Hoses: 3×12 in. flexible hoses are used for unloading.

Codelco Terminal:

Owner: Codelco Chile Div. Chuquicamata.

Max. Length: 235 m. Max. Draft: 60 ft.

Products handled: Petroleum and clean products.

Mooring facilities: The terminal has 3 buoys painted yellow. Mooring operation is similar to the "Esso Terminal" above.

Hoses: Diesel and petroleum products are discharged through flexible hoses. Length of hoses 670 m.

Shell Terminal:

Owner: Shell Chile Ltda.

Max. Length: 235 m.

Max. Draft: 40 ft.

Products handled: Clean products and lubricating oils.

General: The mooring facilities consist of 3 buoys, painted yellow.

On the shore there are 3 metallic circles painted orange to assist with lining up of vessel.

For mooring, vessels must have at least 2 mooring lines of 220 m. for each buoy. All buoys have slip hooks.

Mooring in daylight only. Unmooring possible during night time, weather permitting.

When vessel is in the moored position the heading is 235° True. Both anchors used for mooring, 8 shackles used on starboard anchor and 6 shackles used on port anchor.

Hoses: Clean products are discharged through 12 in. flexible hoses.

Chimba Cove:

Emalco Gas Terminal:

Owner: Empresa Nacional de Petroleo.

Operator: Emalco.

Max. Length: 110 m.

Max. Draft: 27 ft.

Product Handled: LNG.

General: Vessels moor using 2 anchor, 2 buoys and 1 bollard on the shore on Guaman Island.

There are two orange circles on the shore which are the leading lines for dropping the anchors.

Vessels moor with 2 mooring lines, length 220 m. each, to each buoy and 2 mooring lines from the port side to the bollard on Guaman Island.

When moored, the vessel is on a heading of 330°.

Vessels can only moor during daylight.

Both anchors required for mooring, each with 6 shackles out.

Hoses: Gas is discharged by 8 in. diameter flexible hoses.

FRESH WATER: Fresh water available at all berths at approximate rate of 25 t.p.h. Vessels at anchor and vessels at buoys can obtain small quantities of fresh water from tugs.

FUEL: Fuel oil and diesel oil, in small quantities, can be supplied at all berths by tank trucks. Large orders can be tendered through the oil terminal, rate of delivery for fuel oil 80 t.p.h. and for diesel oil 300 t.p.h.

CONSULS: Argentina, Belgium, Bolivia, Denmark, France, Germany, Greece, Italy, Jordan, Netherlands, Peru and Yugoslavia.

REPAIRS: There are 3 workshops for minor repairs:

Castro: Tel. 262215.
Ljubetic: Tel. 251547. Fax: 251443.
Corssen: Tel. 231880.

DRY DOCKS: None available.

SURVEYORS: Lloyd's Register, Societe Generale Sourveyance (S.G.S.), International Inspection Service (I.I.S.) and Centro de Estudios, Medicion y Certificacion de Calidad (CESMEC).

GANGWAY/DECK WATCHMEN: Supplied by Agent.

OPENING/CLOSING HATCHES: By ship's crew.

CERTIFICATES:

Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate.
Oil Record Book.
Light Dues.
Tonnage Register Certificate.
Oil Pollution Certificate.

CUSTOMS ALLOWANCES: Each crew member is allowed 400 cigarettes per week and 2.5 litres of wine or spirits per week.

REPATRIATION: Facilities available.

AIRPORT: The Cerro Moreno Airport, located 28 km. North of Antofagasta is available for all types of commercial aircraft. There is also another landing field in La Chimba, 11 km. North of the city.

TIME: GMT minus 4 hours. Clocks are advanced one hour on the second Saturday in October until the second Saturday in March.

HOLIDAYS: New Year's Day (January 1st), Holy week (April 1st and 2nd), Labour Day (May 1st), Iquique's Fleet Action (May 21st), Corpus Christi Day (September 11th), Saint Peter and Paul (June 29th), Ascension del Senor (August 15th), Freedom Day (September 11th), National Day (September 18th and 19th), Discovery of America (October 12th), All Saints Day (November 1st), Immaculate Concepcion (December 8th), Christmas Day (December 25th).

POLICE/AMBULANCE/FIRE: Police: Tel. 133. Ambulance: Tel. 222370. Fire Brigade: Tel. 221212.

EMERGENCY CO-ORDINATION CENTRE: Search and Rescue Service: Antofagasta Maritime Authority. Tel. 222294, 221908, 223587.

SERVICES: Compass adjusting, radar repair, radio repairs, gyro compass repairs and all other types of electronic repairs possible.

BANKS: Several banks, among them:

Banco Central de Chile, 2688 San Martin St., Tel: 221594.
Banco de Credito E Inversiones, 2683 Washington St., Tel: 225054.
Banco del Estado de Chile, 2578 San Martin St., Tel: 221617.
Banco Espanol Chile, 2600 San Martin St., Tel: 222537.

STORING: Trucks and railway carriages can proceed alongside.

Fork lift trucks and other storing machines can be used to handle stores.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: All crew are supplied with a shore pass. These passes are collected prior to sailing.

REGULATIONS: Inflammable explosives over 100 tons must be discharged in Mejillones. An Antofagasta Pilot goes to Mejillones by land, in order to take ships to be anchored.

GENERAL: Antofagasta is a transit port for Bolivia, Argentina and Paraguay cargo. It is one of the ports operated by Empresa Portuaria de Chile.

GARBAGE DISPOSAL: The port has available 12 handling buckets with capacity of 3 tons each.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: Seaman's Club "Hermandad de la Costa", Balmaceda 2709, Antofagasta. Tel: 223864.

CURRENCY: Foreign currency can only be changed at Banks (Bank Osborno, Internacional, O'Higgins, Chile, Sudamericano, Credito e Inversiones, etc.).

AUTHORITY: Empresa Portuaria de Chile, Av. Grecia S/N, P.O. Box 190, Antofagasta, Chile. *Tel:* 251800. *Telex:* 225232. *FAX:* 223171. *Contact:* Domingo Ormazabal Gonzalez, Port Manager.

AGENT: See "Valparaiso".

ARICA: 18.28 S. 70.20 W. (See Plan)

PORT LIMITS: Seaward limits are:
Lat. 18° 28.6' S., Long. 70° 19.9' W.
Lat. 18° 27.2' S., Long. 70° 20.5' W.
Lat. 18° 26.7' S., Long. 70° 19.6' W.
Lat. 18° 28.1' S., Long. 70° 18.9' W.

DOCUMENTS:

Port Captain:
1 copy General Declaration.
1 copy Last Port Clearance.
1 copy Passenger List for the port, and in-transit, (even if nil).
1 copy Crew List.
1 copy Dangerous Cargo List for the port, and/or in-transit.

Customs:
2 copies General Declaration.
6 copies Cargo Manifest for the port.
10 copies Cargo Manifest in-transit to Bolivia.
10 copies Cargo Manifest in-transit to Tacna, Peru.
2 copies Crew List.
2 copies Crew Effects List.
2 copies General Stores List.
2 copies Bazaar List.
2 copies Mail List.
2 copies Passenger List for the port, or in-transit.
1 copy General Chilean Cargo Manifest, which is stamped by Customs and returned on board.

Immigration:
1 copy General Declaration.
2 copies Passenger List for the port and/or in-transit.
1 copy Crew List.

Health Department:
1 copy Sanitary Declaration.
1 copy General Declaration.
1 copy Passenger List for the port and/or in-transit.
1 copy Crew List.

Agriculture Department:
1 copy General Declaration.
1 copy Cargo Manifest for the port.
1 copy Cargo Manifest in-transit to Peru and Bolivia.
1 copy General Stores List.

Agency:
10 copies Cargo Manifest for the port.
10 copies Cargo Manifest in-transit to Peru and Bolivia.
1 set of Bills of Lading for the cargo to Arica, Peru and Bolivia.
1 copy General Declaration.
3 copies Passenger List for the port, or in-transit.
3 copies Crew List.
1 copy Dangerous Cargo List for the port and/or in-transit.
1 copy General Stores List.
1 copy Bazaar List.
1 copy Mail List.

If the ship does not take cargo, passengers or mail for the port or in-transit to Peru and/or Bolivia, the Master must in all cases present the same "negative" documents.

PILOTAGE: Pilotage is compulsory for all vessels, except vessels of Chilean flag under 1,000 Gross Register Tons.

Ships approaching port should fly international signal flag "G" to request Pilot. Pilot boat is a small craft, painted red or white, with "H" flag on the mast.

Pilot boards incoming vessels within the following area:
(1) Lat. 18° 27.2' S., Long. 70° 20.5' W.
(2) Lat. 18° 26.7' S., Long. 70° 19.5' W.
(3) Lat. 18° 27.1' S., Long. 70° 19.3' W.
(4) Lat. 18° 27.7' S., Long. 70° 20.3' W.

Pilot Station maintains VHF watch on Channel 16. Telex No. 221084.

ANCHORAGE: Safe anchorage for vessels arriving after sunset can be found in a line bearing 194° Faro Isle Alecran distance 7 cables in depths varying from 9 to 10 fathoms.

RESTRICTIONS: Ships docked and undocked at any time, weather permitting, if application presented in advance to Port Captain.

MAX. SIZE: In the Port Area the maximum permissible draft is 34 ft. and max. length 700 ft.

Bolivian Export Buoy: Vessels up to 60,000 d.w.t. Max. draft 43 ft.

San Martin Cove Buoy: Vessels up to 54,000 d.w.t. Max. draft 45 ft.

HEALTH: In case of fever or suspected diseases on board, Master must send a telex or radio message to Port Captain advising the situation. Upon arrival, vessels will be anchored and inspected by Health Department according to international procedures and will be declared in quarantine if necessary. If arriving from another Chilean port, pratique is automatic.

RADIO: Use "Maritgob Arica", telex No. 221084. Coastal Radio Station CBA2, permanent listening watch on VHF Channel 16 and 2182 kHz and 421 kHz (HF) listening watch in daytime between 0800 hrs. and 1800 hrs.

VHF: Call "Arica Radio". Listening watch on Channel 16. Vessels approaching the port must advise Arica Pilot Station of the ETA. Arica Radio has radio telephone service on Channel 26 (duplex). Request this service by Channel 16.

When manoeuvring within the port area, the Pilot will advise which channel to use.

RADAR: No Port Radio Service.

TUGS: 1×550 h.p. and 1×850 h.p. Tugs normally join vessels at the end of the breakwater.

Tugs are compulsory for berthing/unberthing in the following cases: One tug for vessels over 90 m. length.

Two tugs for vessels over 140 m. length.

Not compulsory for vessels of 90 m. length or less.

BERTHING:

Berth No.	*Length (m.)*	*Max. Permissible Draft at LW (ft.)*
2	314	18.0
3		28.0
4	514	32.0
5		34.0
6		34.0

Loading and discharging normally by ship's gear.

CRANES: Berths No. 4, 5 and 6: 2×3 tons and 2×5 tons.

BULK CARGO FACILITIES: Four conveyor belts and loaders for bulk ores, grain, coal, etc., at approximate rate of 100 t.p.h. per conveyor.

SPECIALISED CARGO-HANDLING FACILITIES: Containers are handled with conventional gear, the port has a container yard of 115,936 sq.m., served by railroad and a bridge crane capable of lifting 40 tons. Service for containers includes 10 ton fork-lift trucks, mobile cranes with 12 tons' capacity, and specially designed wagons for their proper transportation.

BRIDGES: None.

STEVEDORES: The stevedores are nominated the day before ship arrives, according to ETA, by the Agent. Also nomination can be made during the day. Working in the port is in three shifts: 0800 hrs. – 1530 hrs., 1530 hrs. – 2300 hrs. and 2300 hrs. – 0630 hrs.

MEDICAL: Medical assistance can be obtained at any time without advance notice.

TANKERS: *Bolivian Export Buoy:* Belongs to Yacimientos Petroliferos Fiscales Bolivianos; position 039° True, 6 cables from breakwater light. Can handle vessels up to 60,000 d.w.t., 43 ft. maximum draft; 12 in. hose connection. Loading rate 9,000 bbls./hr. No deballasting facilities. Mooring in daylight. Vessels moor to 3 stern buoys.

San Martin Cove Buoy: Used for discharge of Bunker C and clean products for the city services. 45 ft. maximum draft, 54,000 d.w.t., 8 in. hose connection, vessels moor to 3 stern buoys. No wires may be used.

DENSITY: 1025.

FRESH WATER: Fresh water is available. Hoses to be provided by vessels. Rate of delivery about 10 t.p.h.

FUEL: Diesel oil available by tank truck, advanced notice to Agent required.

FIRE PRECAUTIONS: No special fire precautions at the tanker terminal, only those that are internationally required.

CONSULS: The following countries are represented in Arica:
Argentina
Belgium
Bolivia
Costa Rica
Denmark
El Salvador
Germany
Italy
Norway
Peru
Spain
United Kingdom

REPAIRS: Only small repairs can be performed in Arica, mechanical and electrical.

Immobilisation of Engines: Only granted if vessel has tug standing-by at U.S.$ 1,035.00/hour.

DRY DOCK: There are two dry docks intended for fishing boats, maximum capacity 800 tons and 45 m. length.

GANGWAY/DECK WATCHMEN: Port regulations call for a gangway watchman.

OPENING/CLOSING HATCHES: This service will be attended by the stevedores. Nomination is by number of hatches working.

CERTIFICATES:
Tonnage Certificate.
Lighthouse Dues (Chilean).
Safety Radio Certificate.

CUSTOMS ALLOWANCES: Two and a half cartons of cigarettes per man, two and a half bottles of wine/spirits per man.

REPATRIATION: Crew changes can be arranged through the local office of Immigration, if repatriated.

AIRPORT: Distance to airport 7 miles. One flight to Miami weekly, two flights to Bolivia weekly. Domestic flights are available at the rate of two per day, to Iquique, Antofagasta, Santiago; from Santiago to other cities in the South of Chile.

TIME: GMT minus 4 hours. Clocks advanced one hour from September to March.

HOLIDAYS: January 1st; First Friday and Saturday of April; May 1st and 21st.; June 2nd and 29th; August 15th; September 11th, 18th and 19th; October 12th; November 1st; December 8th and 25th. Cargo can be arranged at all holidays, except December 24th, from 1800 hrs. to December 25th, 1530 hrs. and December 31st from 1800 hrs. to January 1st, 1530 hrs.

POLICE/AMBULANCE/FIRE: Telephone 32315, 32242 and 32323 respectively.

EMERGENCY CO-ORDINATION CENTRE: Call Arica Radio: See "Radio" and "VHF".

TELEPHONES: Not available on board.

SERVICES: Supply of Chilean charts and nautical publications.

BANKS:

Name	*Address*	*Tel.*	*Telex*
Centrobanco	21 de Mayo 172	31021	221027
Banco de Chile	21 de Mayo 330	31746	221030
Banco de Santiago	21 de Mayo 212	31979	221117
Banco del Trabajo	21 de Mayo 345	32497	221034
Banco Espanol Chile	21 de Mayo 298	51648	221109
Banco Sudamericano	21 de Mayo 187	32685	221056
Banco Central de Chile	Colon 336	32116	221005
Banco de Credito e Inversiones	Bolognesi 221	32086	221004

SHIP SUPPLY SERVICE: All supplies can be obtained through the Agent.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Needed to leave and/or enter port area.

DELAYS: No delays under normal conditions. Port congestion causes ships to wait at anchorage 24 hours or more, depending on unusual factors such as heavy swell, or lack of room to bring vessels alongside when 5 ships are docked.

DEVELOPMENTS: Project to build a new mole in the Northern part of the port, with berthage for two ships of approximately 540 ft.

SHIPMASTER'S REPORT: April 1980.

Documents:

6 General Declarations.
6 Lists of Passengers for the Port.
6 Passengers Lists (even if nil).
6 Mail Lists (or no mail).
12 Crew Lists.
2 Crew Effects Lists.
6 Bond and Canteen Store Lists.
6 General Stores Lists.
Clearance from the Last Port and Health Declaration.

Pilotage: Compulsory. Pilot boards 0.5 miles N.W. of breakwater.

When within 200 miles of the coast of Chile, vessel to send cable to "Maritgob" at 0800 hrs. and 2000 hrs. daily. Cable to include position, speed, course and destination. The same cable is sent to the Port Captain at the port of destination, who also requires 24 hours' notice of arrival and draft. He then arranges for Authorities to board.

Anchorage: Vessels anchor 0.5 miles N.W. of breakwater. Depth 58 ft. at LW.

Max. Size: LOA 600 ft. Draft 32 ft.

Radio: Antofagasta (CBA4) and Valparaiso (CBV).

VHF: Pilot on Channel 16.

Tugs: One tug of 500 h.p. available. Tug use is not compulsory but advisable.

Berthing: Vessel berthed at Berth No. 4. Max. LOA: Over 600 ft. if adjacent berths vacant. Max. draft: 34 ft. (This allows for heavy swell during Winter time).

Cargo Handling Facilities: Two portable conveyors available for handling bulk cargoes. Rate 200 t.p.h. (approx.) There are no Ro/Ro facilities. There is ample mechanised equipment for handling palletised cargoes. Plenty of open quay space available for storage.

There are mobile cranes available and a bridge crane for loading rail cars, capacity 30 tons, however vessels must discharge with ship's gear.

Medical: Doctor and hospital available.

Fresh Water: Available. Rate 10 t.p.h.

Fuel: Bunker fuel oil and diesel oil not available.

Repairs: Minor repairs possible.

Airport: Airport for internal flights only available.

Services: Fresh provisions, laundry service, groceries and meats available.

AUTHORITY: Empresa Portuaria de Chile, P.O. Box 923, Arica. *Tel:* 32284. *Telex:* 221012. *Contact:* Domingo Ormazabal Gonzalez, Port Administrator.

AGENT: See "Valparaiso".

CALDERA: 27.03 S. 70.53 W. (See Plan)

PORT LIMITS: A line joining Punta Caldera with Punta Francisco.

DOCUMENTS:

Quarantine:	Completed Declaration of Health (Q.S.I.). Valid Derating Certificate. International Vaccination Certificates.
Customs:	Crew Declaration (Y.14). Ship's Stores (E.1), 3 copies. Inward Report (A.6). Complete copy of each Manifest for goods to be discharged in Caldera/Calderilla.
Port Captain:	Clearance from Last Port. Crew List, 3 copies. Copy of Manifest, Transit Cargo.
Immigration:	Crew List, 2 copies. Passenger Manifest for passengers not disembarking. Immigration Control Cards for each person.

PILOTAGE: Compulsory. The owner, Master or Agent of a vessel must report via any coast station, by R/T or W/T, the vessel's ETA, 24 hours and 12 hours in advance of ETA. ETAs must be confirmed or corrected not less than 3 hours prior to arrival. Time in ETA message must be GMT. The following information must be included in the message:

(1) Name and call sign of vessel.
(2) Nationality.
(3) Length, draft and G.R.T.

Pilot Boarding Station: All vessels must wait for the Pilot in position Lat. 27° 03' 00" S., Long. 70° 50' 13" W. between Point Fuerte and Pointe Caleta.

Caldera Radio on standby on VHF Channel 16. Tel: 315276. Fax: 315276 Caldera.

ANCHORAGE: Vessels anchor with the Iron Ore Quay bearing 220°, 5 shackles in the water is sufficient.

MAX. SIZE: Vessels up to 44 ft. draft with a max. length of 240 m. can moor at the Ore Quay.

HEALTH: Pratique given after official visit, and automatic for vessels from another Chilean port. In case of contagious disease on board, advance notice is required and vessel may need to be cleared first at Valparaiso.

RADIO: Radio Costera Valparaiso – CBV 20; working during even hours only between 0800–1200 hrs. and 1400–2200 hrs.

Radio Costera Caldera – CBA 5, receiving on 2182 kHz 1800 hrs. – 0800 hrs.; 421 kHz 0800 hrs. – 1800 hrs. and VHF Channel 16 throughout 24 hours.

TUGS: 1×1,860 h.p.

BERTHING: *Dicaser Pier* (Ex-Fiscal Mole): Small vessels with max. LOA 110 m. and max. draft 3.5 m. berth alongside.

Vessels of any length, and draft of less than 8.0 m. can berth with stern to the mole, using 4 lines to bollards at a distance of 80 m.

Vessels with a draft of 10.0 m. will moor 120 m. off the mole.

In both cases, 6 or 7 shackles of cable is required on the starboard anchor. Vessel's head will be 360° when moored.

This position is recommended for loading general cargo transferred from the pier by lighters to the ship.

Jorquera Pier: Built in 1991 at Pta. Caleta, as a fruit terminal and for general cargo. Vessels of any length and draft less than 11.9 m. can berth alongside.

BULK HANDLING FACILITIES: *Iron Ore Berth:* (Out of order since April 1981).

Max. length 240 m. Max. draft 44 ft. The loading arm is fixed, hence vessels must shift to position each hatch under the tower. All cranes or derricks must be swung out to starboard prior to mooring. Vessels berth port side to, using 7 mooring buoys for head and stern ropes, and 2 dolphins for springs. Loading rate 1,200 t.p.h.

STEVEDORES: In ETA to Agent indicate number of gangs required for loading/discharging. Also see "General" before first port.

MEDICAL: First-aid only at Caldera. If needed, advance notice necessary to prepare transport to Copiapo, nearest city 75 km. away. Fumigation carried out at ports of Arica, Valparaiso, or Punta Arenas.

TANKERS: *COPEC Terminal:* Tankers moor to 2 stern buoys, using both anchors. Water depth 39 ft. Max. length 200 m. Hose connection 12 in. Day time and night time berthing.

Leading lights are installed to assist with dropping of anchors.

DENSITY: 1025.3.

FRESH WATER: Available from tug.

FUEL: Not available.

CONSULS: None at Caldera.

GANGWAY/DECK WATCHMEN: Arranged by Agent.

OPENING/CLOSING HATCHES: Done by riggers.

CUSTOMS ALLOWANCES: Only amount needed while vessel in port.

REPATRIATION: Can be arranged provided that a Police Agent accompanies crew member to Santiago Airport.

AIRPORT: At Copiapo, 75 km. away, a daily flight to Santiago where international connections available.

TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before the first port for dates of local time changes.

HOLIDAYS: See "General" before first port.

TELEPHONES: No connection to vessels.

SHORE LEAVE: Allowed.

AUTHORITY: Captain of the Port, Gana 087, Caldera, Chile. *Tel:* 315276, 315551. *FAX:* 315276 Caldera.

CALDERILLA: 27.05 S. 70.52 W. (See Plan)

Vessels bound for Calderilla must first call at Caldera for pilot and official clearance.

DOCUMENTS: See "Caldera".

PILOTAGE: See "Caldera".

ANCHORAGE: Vessels less than 150 m. in length can await a berth 2 cables N.N.E. of the Mechanical Pier in 45 ft. of well sheltered water. Larger vessels must anchor in Caldera Bay.

MAX. SIZE: 60,000 d.w.t. Max. LOA 240 m. Max. draft 40 ft. Also see "Berthing".

BERTHING: *"Sademi" Mechanical Pier:* A mechanical loading belt has been built to the N.E. of the Peninsula. There are 2 loading arms each 50 m. long that can load at 1,000 t.p.h. The arms are fixed and vessels must shift to place each hatch under the tower. Vessels moor to 7 buoys, 3 forward and 4 aft. Entry can be made by day only.

Playa Blanca Terminal:

(a) A small pier for fishing boats, length 40 m., is installed on the N.W. side of the bay, for discharge operations and supply to the factory.
(b) Pontoon "URO", length 90 m., bearing 340° from the pier and anchored with 6 anchors and chains (3 forward and 3 aft). Vessels alongside the Pontoon head 215° or 035°. Max. draft: 30 ft. Max. length 200 m. Max. d.w.t. 35,000.
(c) 4 Mooring buoys for the ships berthing alongside (2 North side and 2 South side).

MEDICAL: First aid available in Caldera (5 km.). Hospital at Copiapo (80 km.).

FRESH WATER: Only available by tug.

FUEL: Not available.

REPAIRS: Only of a minor nature.

TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before the first port for dates of local time changes.

AUTHORITY: See "Caldera".

CALETA COLOSO: 23.45 S. 70.28 W. (See Plan)

LOCATION: Caleta Coloso is a dedicated port constructed to service domestic and international markets. It is owned and operated by Minera Escondida Limitada.

Located on the Northern coast of Chile, approximately 10 nautical miles South of Antofagasta, the geographic co-ordinates of the port are: Lat. 23° 45' S., Long. 70° 28' W.

It is built to handle 850,000 tonnes of concentrate per year, having storage facilities for approximately 60,000 tonnes of concentrate. Ships up to 45,000 d.w.t. will be able to load at a rate of 1,000 tonnes per hour.

Charts and Publications:

1. Chilean Charts:
   I.H.A. 200: Bahia Mejillones del Sur a Puerto de Caldera.
   I.H.A. 205: Caletas en la Costa de Chile.
2. British Admiralty Charts and Publications:
   B.A. 3071: Puerto Pan de Azucar to Bahia Algodonales.
   B.A. 3077: Plans on the coast of Chile, including Rada de Antofagasta, Puerto de Tocopilla, and a number of small non-commercial roadsteads.
3. South America Pilot: Volume III.

DOCUMENTS: The following documentation is required by Authorities to enter Chile. They may be presented on either Chilean Government forms, International forms or typed on blank white paper:

10 copies Inward Cargo Manifest.
6 copies Crew List.
4 copies Passenger List.
4 copies Crew Personal Effects List.
4 copies Bond Stores List.
3 copies Mail List ("Nil" return required).
3 copies Dangerous Cargo List.
5 copies General Declaration.
3 copies Arms and Ammunition List ("Nil" return required).

The following are required for inspection:

Last Port Clearance.
Crew Passports or Identity Documents.
Derat or Derat Exemption Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate.
International Oil Pollution Prevention Certificate.
Ship's Register.
Oil Record Book.
Articles of Agreement, or equivalent.
Chile Light Dues Receipt, if available.

PILOTAGE: Pilot service is compulsory for all ships.

General: Pilots servicing Caleta Coloso are duly authorised under Chilean law and are based at the Port of Antofagasta.

Boarding Ground: Pilots will board at the Antofagasta pilot ground which is 1.0 miles N.W. of the Antofagasta harbour entrance, in position Lat. 23° 38' S., Long. 70° 25' W.

Awaiting a Pilot: Masters of vessels required to anchor awaiting the Pilot should anchor as near as possible to the boarding ground location in about 40 m. of water. The sea bed is sand.

A vessel which anchors to await the Pilot should be under way when the Pilot boards or an extra charge will be applied if a Pilot supervises the weighing of the anchor.

Pilot Ladder: A pilot ladder complying with the SOLAS 74 requirements must be provided. The ship should be manoeuvred to provide a suitable lee for the boarding Pilot.

Other Officials: Officials from Port, Customs, Health, Immigration Authorities, etc., may board the vessel with Pilot.

ANCHORAGE: See "Pilotage".

RESTRICTIONS: Daylight berthing only.

MAX. SIZE: 45,000 d.w.t., 192 m. LOA, 31.0 m. beam and 11.25 m. max. draft.

Also see "Berthing Facilities".

NAVIGATION: *Navigation Aids:*

1. Section of Chart IHA 205 (See "Plan").
2. Lights: A landfall light showing GP. Fl. (4) 12 sec. 12 miles located in approximate position Lat. 23° 44' 44" S., Long. 70° 28' 15" W.
   A Racon beacon is located in the same position as the landfall light, and has the characteristic "0" in Morse Code.
   Two fixed yellow leading lights with vertical orange day marks on a white background on a bearing of 190° (T) at Punta Coloso.
   Two fixed green leading lights with vertical orange day marks on a green background on a bearing of 101° 41' (T) at Punta Paso Malo.

Berthing: Unless otherwise mutually agreed by all parties, vessels will normally berth in daylight only and in wind speeds of less than 14 knots.

Masters should have all normal ballast "in" and vessel in suitable trim for berthing. Engines should be tested with an astern movement before closing the port.

Port Communications: Communications will be via VHF on a channel to be advised by local authorities.

RADIO: *Communications:* Communication may be either by telex or telegram via Valparaiso Radio (call sign CBV), or Antofagasta Radio (call sign CBA3).

When in range, vessels should call Antofagasta Port Radio on VHF Channel 16 to confirm their ETA.

Advice of Arrival: Vessels bound for Caleta Coloso should advise the Charterer's Agent of their ETA at Caleta Coloso at the intervals as specified by the Charterer's instructions.

24 hours before arrival, Masters must advise the Antofagasta Port Captain of:

The name and flag of their ship.
ETA.
Number of passengers.
Quantity of hazardous cargo.
State of health.
Draft.

The telegraphic address is "Capuerto" Antofagasta.

Masters are advised that trawlers and small fishing vessels may be encountered in all Chilean coastal waters.

Before arriving at Caleta Coloso, Masters are requested to provide the Charterer's Agent in Antofagasta with a stowage plan and hatch loading sequence. Every endeavour should be made to limit the number of shift ships needed to load the vessel, whilst ensuring that all safety requirements are met.

Cargo holds must be swept clean with bilges clean, dry and burlap covered prior to vessel's arrival.

HEALTH: Radio Pratique is not available.

TUGS: Tugs from Antofagasta are available to assist with berthing and sailing, and lines launches are available to run and let go lines as required when berthing, sailing and shifting ship.

Launch: A launch is available to assist with reading of ship's drafts, and conveying personnel to and from the ship as required.

BERTHING FACILITIES: *Berth Facilities:* The berth facilities consist of a wharf head structure on which the shiploader is built and 2 dolphins, one on each side of the wharf head structure. The centre of the dolphins is 30 m. from the centre of the wharf head structure, thus the distance from the centre of one dolphin to the centre of the other dolphin is 60 m.

A minimum depth of 15.0 m. at low low water is available alongside the face of the wharf head structure and dolphins, and this depth extends to Buoys No. 1 and 3.

The wharf head structure and dolphins are adequately fendered, and weather permitting, a ship can lay against the fendering. There are mooring bollards on the dolphins.

The face of dolphins and wharf head structure lay in the direction 278° (T) to 098° (T).

Five mooring buoys are provided. The designations are:

Buoy No. 1: Head line.
Buoy No. 2: Starboard aft breast line.
Buoy No. 3: Stern line.
Buoy No. 4: Port aft breast line.
Buoy No. 5: Port forward breast line.

Principal Particulars:

Depth of water of low low water	15.00 m.
Height of underside of loader above LLW	15.50 m.
Maximum outreach of loader from fender line	25.50 m.
Height of wharf head structure above LLW	8.70 m.
Maximum LOA of vessel	192.00 m.
Maximum beam of vessel	31.00 m.
Maximum draft of vessel	11.25 m.
Maximum deadweight of vessel	45,000 tonnes
Maximum air draft	between 14.00 m. and 15.20 m.
Loading rate of ship loader	1,000 tonnes/hr.
Distance from centre of Eastern dolphin to centre of Western dolphin	60.00 m.
Distance from Buoy No. 1 to Buoy No. 3	380.00 m.
Distance from line of face of wharf head structure to Buoy No. 2	108.00 m.
Direction of line of face of wharf head structure	278° (T)/098° (T)

Shiploader: The shiploader is a fixed ship head loader which can slew left and right a total of 26°, that is 13° either side of centre, and luff down 24°. *Ship's loading must shift ship to load each hatch.*

MOORING: See "Plan Section".

Mooring Lines: Masters of ships are advised to consider in advance the positioning of their moorings whilst alongside.

Ships berth port side to. Normal moorings consist of 2 lines to each of the 5 buoys, 2 aft spring lines to the Eastern dolphin, and 2 forward spring lines to the Western dolphin.

For this reason, ships are required to have 14 full length mooring lines aboard on arrival. Wire ropes are not acceptable.

Mooring Procedure: During the berthing manoeuvre, the starboard anchor is let-go approaching the berth, and when alongside, 6 to 7 shackles of cable on the starboard anchor will remain laid out. When in position, the ship will normally be made fast with 14 lines.

Two head lines to Buoy No. 1.
Two port forward breast lines to Buoy No. 5.
Two starboard aft breast lines to Buoy No. 2.
Two stern lines to Buoy No. 3.
Two port aft breast lines to Buoy No. 4.
Two forward springs to the Western dolphin.
Two aft springs to the Eastern dolphin.

And 6 to 7 shackles out on the starboard anchor.

When berthed, ships should normally be positioned 1.0 m. clear of the fenders. During calm weather, a vessel may be positioned hard up to the fenders.

Tending Lines: Masters are advised to ensure that mooring lines are constantly tended and kept as tight as possible to minimise ship movement and reduce chafe on mooring lines. At Caleta Coloso, Masters will find that even when their ship is "in position", it will from time to time be necessary to adjust the mooring lines due to stretch of lines, tidal movements, and the movement of the ship in the berth. Sufficient crew should be maintained on board at all times to tend the moorings.

Shifting Ship: Ships loading are required to shift ship in order to load each hatch.

The ship's crew is required to perform these shifts. Under certain circumstances some extra labour from ashore can be made available to assist the ship's crew.

Masters should consider in advance their technique for carrying out these shifts and if necessary, the ship's engines should be available to assist. Shore labour and a line boat will be available during shift ships to shift lines on the dolphins and buoys as required.

Access: Whilst alongside, access to the ship will be provided by a launch service as no gangway to the wharf structure has yet been provided. During periods of calm weather, access to the wharf may be possible by pilot ladder.

Readiness of Main Engines: Under no circumstances should the ship's main engines be disabled whilst at Caleta Coloso, as weather may force the vessel to leave port at short notice.

Pollution: Ships responsible for oil discharges, dumping of waste, refuse, etc., in coastal waters, will be liable for all resulting fines and clean-up costs. All ships must have secure bilge systems while in the area. Accidental and deliberate oil or oily mixture discharge in the area must be reported to the Port Authority and Minera Escondida Limitada representatives immediately.

Disposal of Slops, Contaminated Ballast, Garbage and Solid Refuse: There are no shore facilities available at the terminal for receiving slops, and dirty or contaminated ballast. Masters are cautioned that discharging of anything other than uncontaminated ballast will incur penalties as prescribed by Chilean law.

Should concentrate spillage occur, ship crew members must collect and/or sweep material into the hold. Under no circumstances should the vessel's decks be washed down allowing concentrates to enter the water.

LOADING: *General:* Cargo is loaded 7 days a week. The rate of loading is approximately 1,000 tonnes per hour.

Responsibility: The sole responsibility for the correct and safe loading of the vessel rests with the Master.

During loading, ships are required to have a responsible officer on deck at all times.

Care must be taken when loading not to exceed the required sailing draft, nor to overload the ship under the International Load Line Regulations. Cargo cannot be discharged.

An Escondida wharf foreman is in charge of the shore loading operation. He will give every assistance possible to ship's officers.

Product Characteristics: Copper concentrate mined from Escondida is normally about 42% copper sulphide and will under high temperatures ignite to form a smouldering fire. It stows at approximately 0.50 cu.m. to the tonne, and contains approximately 8% moisture.

The Master will be provided with an Analysis Certificate stating the Transportable Moisture Limit of the cargo prior to loading.

Loader Operation: The shiploader is designed to shuttle in and out, and can slew 13° each side of centre, and can luff down 24°, thus with careful positioning of the ship's hatch under the loader, it should be possible to pour cargo evenly into most areas of the ship's hold. It is the responsibility of the ship's duty officer to direct the shiploader operator when it is required to alter the position in which the cargo is being poured into the hold.

Weightometer: Loaded quantities will be measured by a weightometer. However, this is to be treated as a guide to loading only, and the actual quantity loaded should be calculated by running draft checks. Final Bill of Lading weight will be determined by draft survey.

Trimming: A small bulldozer is available to trim the cargo.

Approximate weight is 10 tonnes. The ship's crew must rig the bulldozer and operate the ship's own crane to lift it onto and off the ship. Maximum care must be taken in doing so. The driver of the bulldozer must be a member of the shore staff.

Trimming of the cargo will be carried out to the Master's satisfaction.

Draft survey: Draft surveys are conducted by a qualified draft surveyor prior to commencement of loading and at completion of loading. It is recommended that ballast tanks be "pressed up" on arrival to facilitate the draft survey and ensure its accuracy. Draft marks must be clearly visible.

FRESH WATER: There is no facility to supply fresh water at the port. Water can be arranged through the Agent at Antofagasta.

FUEL: There is no facility to supply bunker or diesel fuel at the port. Limited fuelling is available through the Agent at Antofagasta.

REPAIRS: No engine repairs are to be carried out without Terminal Management authorisation. In an emergency, the port of Antofagasta can be used for minor repairs.

WEATHER: *General:* The climate is generally mild. The annual temperature ranges from 7°C to 27°C. Rainfall is virtually unknown, but occasional mist shrouds the coast line. It is a Tropical Seasonal Zone.

Winds: Four distinct wind patterns are experienced throughout the year:

50% light Southerly prevailing winds.
35% light winds from various directions.
13% calms experienced.
2% Southerly winds in excess of 20 knots.

Tides: The tidal range at Caleta Coloso is 1.6 m. at Springs and 0.7 m. at Neaps. Tidal predictions for Antofagasta are applicable for Caleta Coloso.

Currents: Currents run to the East at a rate of approximately 0.2 knots.

Sea/Swell: The prevailing swell is low from the S.S.W. It is rare for the swell to come from any other direction. Caleta Coloso is in the lee of Punta Coloso, providing calm to moderate conditions alongside the loading facility.

GENERAL: *Chilean Regulations:*

Food Stores and Freezers: Government officials will seal a vessel's food stores and freezers on arrival in Chile. Before food sources are sealed, a quantity of provisions for use whilst in port may be removed. If necessary, arrangements may be made through the ship's Agents to have a Government official attend the vessel to open the food stores and freezers to release further quantities of provisions.

Ballast Water: To prevent delay, Masters should ensure the vessel is ballasted with clean seawater on arrival in port, and make arrangements through an Agent to have a 250 ml. sample of ballast water drawn from one ballast tank. This should be collected in a clear container and submitted to the Port Authority at Antofagasta as soon as possible after arrival. A representative of the Port Authority may be present when the sample is drawn.

Watchman: Chilean law specifies a shore gangway watchman is required by all ships in port. A watchman will be provided by the ship's Agent.

SHIPMASTER'S REPORT: February 1992.

Max. Size: Draft limitation of 11.5 m., even when depth alongside is 15.0 m. at L.W. Maximum deadweight 45,000 tons, LOA 192 m. and beam 31 m.

Documents: The following documentation is required by Authorities on arrival. They may be presented on Chilean forms, international or typed on blank white paper.

10 copies Inward Cargo Manifest.
6 copies Crew List.
4 copies Passenger List.
4 copies Crew Personal Effects List.
4 copies Bonded Stores List.
3 copies Mail List ("Nil" return required).
3 copies Dangerous Cargo List.
5 copies General Declaration.
3 copies Arms and Ammunition List ("Nil" return required).

Documents for Inspection:
Last Port Clearance.
Crew Passports or Identity Documents.
Derat or Exemption Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate.
International Oil Pollution Prevention Certificate.
Ship's Register.
Oil Record Book.
Articles of Agreement, or equivalent.
Chile Light Dues Receipt, if available.

Pilotage: Pilot service is compulsory for all ships. Pilots will board at the Antofagasta Pilot Ground, which is 1.0 miles N.W. of the Antofagasta Harbour entrance, in position Lat. 23° 38' S., Long. 70° 25' W. A pilot ladder complying with the Solas 74 requirements must be provided.

Anchorage: Masters of vessels, required to anchor awaiting the pilot, should anchor as near as possible to the boarding ground, located in about 40 m. of water. The seabed is sand.

Tugs: Tugs from Antofagasta are available to assist with berthing and sailing, and line launches are available to run and let go lines as required when berthing, sailing and shifting ship.

Launch: A launch is available to assist reading ship's drafts, and for conveying personnel to and from the ship as required.

Radio: Antofagasta Radio (CBA). Telex: 225243 CBA CL and 325077 CBA CK.

Radio telegraphy: Working 8,461 kHz, listening Channel 1 – 8,368 kHz and Channel 4 – 8,369 kHz. Hours of watch 24 (permanent). Short range VHF Channel 16 call and contact, VHF Channels 25, 26, 27 working. Navigation information: 2,738 kHz at 1405 hrs. and 0205 hrs. UTC; VHF Channel 10 at 1415 hrs. and 0215 hrs. UTC; 8,461 kHz at 1430 hrs. and 0230 hrs. UTC.

Berthing: Ships berth port side to. Normal moorings consist of 2 lines to each of the 5 buoys, 2 after spring lines to the Eastern dolphin, and 2 forward spring lines to the Western dolphin. For this reason, ships are required to have 14 full length mooring lines (200 m. – 220 m. each) ready on arrival. Wire ropes are not acceptable. 2 tugs will assist docking approach, they make fast with their own lines at pilot's request. 2 motor boats will remain on stand-by fore and aft to receive buoy lines.

Shiftings Particulars: Ship's crew must remain ready for shifting. Shiftings for loading, according to stowage plan, will be performed by Antofagasta pilots or by Port Captain on board. Ships loading are required to shift in order to load each hatch.

Cranes: The shiploader is designed to shuttle in and out, and can slew 13° each side of centre, and can luff down 24°, thus with careful positioning of the ship's hatch under the loader, it should be possible to pour cargo evenly into most areas of the ship's hold.

Copper concentrate mined from Escondida is normally about 42% copper sulphide.

During loading, ships are required to have a responsible officer on deck at all times. It is the responsibility of the ship's Duty Officer to direct the shiploader operator, when it is required to alter the position in which the cargo is being poured into the hold. An Escondida wharf foreman will give assistance to ship's officers. A small bulldozer (approximate weight 10 tons) is available to trim the cargo.

Stevedores: Generally, stevedores are nominated the day the ship arrives, according to ETA, by charterer's Agent. Working hours are 0800 hrs. – 1530 hrs., 1530 hrs. – 2300 hrs. and 2300 hrs. – 0630 hrs. Cargo (copper concentrate) is loaded 7 days a week. The rate of loading is approximately 1,000 t.p.h.

Medical: Doctor and hospital available (See "Antofagasta"). Antofagasta Radio CBA provide a free service for ships requiring medical advice, using radio telegraphy or radio telephony. Languages are Spanish and English.

Ballast: To prevent delay, Masters should ensure that the vessel is ballasted with clean sea water on arrival in port and make arrangements, through an Agent, to have a 250 ml. sample of ballast water drawn from one ballast tank. This should be collected in a clear container and submitted to the Port Authority at Antofagasta as soon as possible after arrival. A representative of the Port Authority may be present when the sample is drawn. It is recommended that ballast tanks be "pressed up" on arrival to facilitate the draft survey.

Fresh Water/Fuel: There is no facility to supply fresh water or fuel at the port. Water and fuel can be arranged through the Agent at Antofagasta. Water and fuel may be obtained at anchorage at Antofagasta, but expensive.

Repairs: No engine repairs are to be carried out without Terminal Management authorisation. In an emergency, the port of Antofagasta can be used for minor repairs.

Watchman: Under Chilean law, a shore gangway watchman is required by all ships in port. A watchman will be supplied by the ship's Agent.

Shore Leave: Permitted.

Identification Cards: Shore passes and Seaman's Book sufficient.

General: Stores: Government officials will seal vessel's food stores and freezers on arrival in Chile. Before food stores are sealed, a quantity of provisions for use whilst in port may be removed.

Ship's stores and provisions are expensive (in Antofagasta). Should vessel require some urgent items, vessel is free to chose from what shipchandlers may offer, but payment for items acquired are to be made by the Agent.

SHIPMASTER'S REPORT: September 1992.
Documents: Clearance: Inward Clearance is carried out at Antofagasta Anchorage, where the Agent will board with Customs, Immigration and Port Captain, before the Pilot boards.

The Officials are friendly, and clearance can be completed with a minimum of fuss and delay in about 30 minutes.

The pilot ladder is acceptable for boarding, and Officials appreciate being met and escorted on and off the vessel by a uniformed officer.

Outward clearance is carried out on the berth on completion of loading. Immigration formalities may be carried out before this.
Notice of Readiness: Prepared by the Agent, and is presented on arrival at Antofagasta Anchorage.
Pour Plan: Pour Plan for loading is required by the Agents and Escondida representatives on arrival at Antofagasta.
Pilotage: Pilots board at Antofagasta Anchorage and take the vessel alongside. It is about 40 minutes from anchor aweigh to making fast the tugs. It is also required that Pilots are on board for shifting between holds, but minor adjustments of position at a hold can be carried out under the supervision of Escondida Marine Surveyor/Consultant.

On departure, Pilots leave when vessel is clear of the berth and anchor aweigh.
Restrictions: Berthing: Possible any time night or day.
Max. Size: Size of Vessel: The berth is designed to accommodate vessels up to 192 m. LOA with a maximum deadweight of 45,000 metric tonnes. It is reported that this vessel is the largest to use the facility to date (188.4 m. LOA and 31.0 m. beam).
Draft: The maximum draft permitted is 11.5 m., to allow for swell.
Radio: Communications are good through coast radio station.

On approaching Antofagasta, contact can be made through the Agents on VHF, working Channel 73, who will co-ordinate Port Authorities and Pilots.
Berth: Caleta Coloso is an ore loading berth, consisting of dolphins and mooring buoys, situated on the North side of Pta. Coloso, approximately 7 miles South of Antofagasta, and has been in use since 1990.

The port is operated by Minera Escondida Ltda. for the export of bulk copper concentrate.

The berth is exposed to the swell as there are no protecting breakwaters.

A fixed loader is situated on the centre of 3 dolphins, and it is necessary to shift the vessel for loading each hold.

Good Seibu fenders are fitted on the dolphins, and it is proposed to increase the number of fenders in the near future.

Depth alongside is reported to be maintained at 15.0 m., and this depth is available to the North and West of the berth with no obstruction reported.
Berthing/Mooring: The berth is approached on the green leading lights on the berth (bearing 190° T), and tugs join the vessel just before the anchor is let go, when the yellow leading lights on Pta. Paso Malo are in line from the bridge.

If the Pilot requires, the tugs make fast with tugs lines abreast Hatch No. 2, and the break of the bridge on the starboard side. The starboard anchor is let go initially to 5 shackles in the water and held on to check the forward motion, then slacked away as required during the mooring operation to get the vessel in position, ending with about 8 shackles in the water.

Mooring boats are in attendance fore and aft, and take lines in the following order:
Forward:
2 headlines to Buoy No. 1.
2 breast lines to Buoy No. 5.
1 or 2 springs to the dolphin.
The second spring is run to the dolphin when the vessel is in position, if only 1 spring is taken initially.

Aft:
2 stern lines to Buoy No. 3.
2 breast lines to Buoy No. 4.
1 or 2 springs to the dolphin.
2 breast lines to Buoy No. 2, and the second spring is run when the vessel is in position.

The idea is to end up holding the vessel in position, just clear of the fenders, with the mooring lines and anchor.

Head lines to Buoy No. 1 and stern lines to Buoy No. 3 should be on the windlass and mooring winch to facilitate shifting.

The mooring operation can take up to 2 hours.

The vessel is positioned with precision, with the loader at the centre of the hold to be worked by the loading overseer in VHF contact with the Pilot.
Moorings: 14 mooring lines, each of 220 m. length, in good condition, are required, 6 forward and 8 aft. Also at least 10 shackles of cable on the starboard anchor.

The Agent requires a declaration (See "Notice"), to be signed before requesting the Pilots to board. Notice of Readiness will not be accepted if the vessel does not comply with the mooring requirements.

It is reported that 4 mooring ropes are kept available at the berth for vessels which arrive with insufficient ropes. The costs of using these and whether for hire or purchase was not mentioned.

It is essential that all ropes are in good condition.

A length of 220 m. was found to be adequate, although, as a scale drawing using the 1:10,000 plan would indicate, the aft mooring winch is 280 m. from the marked position of Buoy No. 3 when working Hold No. 5, longer head lines and stern lines would be advisable.

Buoys No. 1 and 3 are reported to be 440 m. apart in their free position, but the plan shows them at 465 m. apart.

Windlass to aft mooring winch on this vessel is 171 m.

NOTICE: Issued by Agent to Master.
Quote:
I, the Master of the M/V ...., have been informed by my Owners, Operators, Charterers, Agents, that Caleta Coloso is a Loading Terminal where swell is frequent.

I have also been informed that to berth at Caleta Coloso, my ship is required to have 14 mooring ropes (combinations of rope/wire excluded) of 220 m. length, which are new or in very good conditions, without which it is impossible to berth, and therefore Notice of Readiness will not be accepted by shippers.

I hereby certify that my vessel complies with above and authorise my Agents, Messrs. ...., to call the Pilot on board for mooring purposes at Caleta Coloso.
Signature and stamp of Master.
Unquote.
Loading: The loading arm is able to move about 7.5° either side of the central position in the fore and aft direction, giving a distance of approximately 20 m. at the end, and can move in the athwartship direction, sufficient to reach the off-shore side of the holds.

The loading arm terminates in a flexible tube, suspended below the arm, with a rotatable chute at the end, which is positioned below the hatch coaming, and cargo can be spread over the hold without requiring additional trimming.

The belt and cargo areas are covered, so loading is relatively clean.
Loading Rate: Loading rate is quoted at 850 tonnes/hr. nett and 1,200 tonnes/hr. gross.
For this operation:
Actual pouring time – 39 hours 7 minutes.
Weight meter – 40,262 tonnes.
Actual rate – 1,029.28 tonnes/hr.
Time alongside berth – 61 hours 36 minutes.
Total port time E.O.P to F.A.O.P. – 68 hours.

Loading was slowed as some cargo was off-grade, having a higher than specified arsenic quantity for Germany.
Shifting: Shifting between holds is supervised by a Pilot who has to come from Antofagasta. On occasions, when there are a number of shipping movements in that port, some delays can be experienced waiting for a Pilot.

Pilots are ordered by Loading Supervisors and Agents, and the vessel advised accordingly.

The Pilots can authorise the Escondida Marine Surveyor and Consultant on board to shift the vessel, but rarely do.

The Marine Surveyor (Captain Oscar Quevedo) was a Pilot at Antofagasta for a number of years before retiring.

During shifts, a tug and line boat are in attendance, the tug usually pushing the vessel onto the dolphins.

Engines are required to be on stand-by and would probably be needed during bad swell conditions, but on this visit, all shifting was done by heaving on the lines and after spring or the stern lines and forward spring, the other lines being slacked as required.

Any lines becoming slack due to the movement of the vessel, are heaved up on completion of the shift.

It is necessary to heave up and slack the anchor cable during the shift.

Engines are required to be on stand-by throughout the vessel's stay alongside, and one tug and line boats are ready at all times for emergency use.
Draft Survey: Carried out by independent surveyors on arrival and on completion of loading.

Bill of Lading weight is the draft survey weight.

On this loading, weightmeter weight was 39 tonnes less than the survey weight.
Hold Survey: Also carried out by an independent surveyor on arrival.

Holds are required to be swept clean with no residue of previous cargo and with bilge covers secured and covered in burlap.

Cargo Certificates are presented on arrival giving the following information:
Flow Moisture Point – 11.3%.
Transportable Moisture Limit – 10.2%.
Moisture Content – 9.8%.
Angle of Repose – 37°.
Load Factor – 0.43 cu.m./tonne
15.4 cu.ft./ton.

A further certificate is given on completion, giving starting and completing times, draft survey and weightmeter weights and actual average moisture content of representative samples during loading.
Airdraft: 15.5 m. is quoted, but it would appear to be greater than this when working, although allowance must be made for swell and clearance for the chute when moving the loading arm over the vessel.
Ballast: Chilean regulations require that only clean ballast water may be pumped out and any ballast taken in foreign ports should be changed at sea and Log Book entries made.

It is not required to change ballast taken in Chilean ports unless it is in an infected port.

It is necessary to make a written request through the Agent to pump out ballast, stating the quantity and origin of ballast water.

A port official attends to sight the initial pumping to ensure that it is clean. This will be arranged by the Agent.

Minera Escondida are particularly concerned with the environment and will not tolerate pollution of any sort.

Declaration and request to pump out is also required by the Agent at Antofagasta.
Time: GMT minus 4 hours. GMT minus 3 hours from Sunday following 2nd Saturday in October to the 1st Saturday in March.
Identification Cards: Shore Passes are issued and have to be returned before departure.
Weather: Rain is unusual.

There is normally an onshore breeze from the S.W. from mid-morning until the evening, and an offshore breeze from the S.E. in the early mornings.

Cargo work is reported to be stopped when the wind is over 20 knots, and vessels are not berthed or shifted with a wind over 18 knots.

Swell is the main problem, as there is no protection at all. On this visit in September 1992, there was very little swell and no problems with moorings. However, on the vessel's previous visit, a number of mooring ropes carried away.

The most vulnerable ropes are the springs which are made fast to the dolphins, and are liable to shock tension when the vessel is surging.

General: Charts: B.A. Chart No. 3071 shows the position of Pta. Coloso, and B.A. Chart No. 3077 is required for Antofagasta.

The berth is not marked on the chart, and there is only a sketch plan available from the operators.

Accommodation: Accommodation on board is required for 3 persons, 2 from Minera Escondida and one from the agency, as an agency representative. Escondida Marine Surveyor/Consultant and an administrative foreman remain on board at all times. They board at the Antofagasta Anchorage with the Agent.

Meals: Meals are required for a total of 5 persons, two in addition to the 3 living on board.

Gangway: The ship's accommodation ladder is not required. There is a fitted swinging gangway on the West side of the loading dolphin with a watchman in attendance, which can be used when loading all holds, except No. 1. A good bulwark ladder is required for access to the gangway.

When loading No. 1, access to and from the shore is by launch from an offshore pilot ladder.

Stores: Stores and provisions are available, but the Agent advises that these are expensive, which is not surprising as this is a desert area, and all food stuffs have to be brought in from some distance. As in other Chilean ports, Chandlers cannot be paid in foreign currency direct, only through the Agent, due to Chilean Central Bank currency restrictions.

Agent: Ultramar Agencia Maritima Ltda., Copiapo 574, Casilla No.1210, Antofagasta, Chile. Tel: 264243, 263399, 263672. Telex: 225079 Ultra Cl. Fax: 227341. Cables: Ultramar Antofagasta. VHF: Channel 73.

CHANARAL (including Barquito): 26.21 S. 70.38 W.

DOCUMENTS:

Health:	Completed Declaration of Health (Q.S.I.). Valid Derating Certificate. International Vaccination Certificates.
Customs:	Crew Declaration (Y.14) 3 Ship's Stores (E.I.). Inward Report (A.6). Complete copy of each Manifest for goods to be discharged in Chanaral, and Transit Cargo. Clearance from Last Port.
Immigration:	2 Immigration Crew Lists (200). 3 Passenger Manifests for Passengers not disembarking. Immigration Control Cards or Passports for each person.

PILOTAGE: Compulsory. To avoid a delay in obtaining a Pilot, the owner, Master or Agent of a ship, must report via any coast station by R/T or W/T the vessel's ETA, 24 hours and 12 hours in advance of arrival. ETA must be confirmed or corrected not less than 3 hours prior to arrival. Time must be GMT.

The following information must be included in the ETA message:

(1) Name and call sign of vessel.
(2) Nationality.
(3) Length, draft and G.R.T.

Pilotage is compulsory for shifting and unberthing. Port Captain and tugs require 2 hours notice through the local agent.

Pilot Boarding Station: Lat. 26° 21' 18" S., Long. 70° 41' 20" W. Chanaral Radio stands by on VHF Channel 16 and 2182 kHz for giving information to the port authorities.

ANCHORAGE: In position Lat. 26° 20' S., Long. 70° 40' W., with Point Piedra Blanca bearing 118° – 1.5 miles. Depth of water 78 ft.

MAX. SIZE: LOA 250 m. Draft 40 ft.

Also see "Tankers".

RADIO:

Station call sign	*Category*	*Frequency*	*Type*	*Receives*	*Transmits*	*Schedule*
Chanaral CBH-2	(T)	2 MHz	A 3	2182	2182 2000	H30-45
		4 MHz	A 3	4091.6	4396.6 4396.6	H45-60

TUGS: There is one tug available in the Chanaral/Caldera area.

BERTHING: *Codelco Pier:* New structure at Chanaral for loading general cargo. Length 39 m., width 39 m. Depth alongside 40 ft. Vessels moor to 7 buoys as per Mechanised Quay.

Codelco Mechanised Quay: At Point Piedra Blanca there is a mechanised pier, property of Codelco, for loading bulk iron ores. 60 m. long by 10 m. wide, with 14.5 m. depth; sand and mud bottom. Ores transported by means of a conveyor belt to a loading tower from which it is loaded direct to ship's hatches. At present, loading tower is fixed so that vessels have to be moved to change hatches. Loading rate is 1,000 t.p.h. Vessels up to 250 m. length, 40 ft. draft have loaded. Vessels moor at head of quay, which has 7 buoys (3 forward and 4 aft). In addition the quay is provided with bitts to secure mooring ropes, fore and aft.

Barquito:

Buoy No. 4: Suitable for mooring large vessels for loading by lighters only (general cargo). Vessels moor stern onto the buoy and discharge into lighters, which in turn discharge at the Pier Head (Barquito Pier).

Position of Buoy: Barquito Pier bearing 046° – 850 m.

Lines: 2 lines × 150 m. each required.

CRANES: None available.

STEVEDORES: Work carried out in 3×8 hour shifts.

Also see "General" before first port.

MEDICAL: Facilities available.

TANKERS: Buoys No. 1, 2 and 3 at Barquito are for the Oil Terminal. The hose marker buoy is in position – Barquito Pier bearing 182° 400 m. Vessel's use starboard anchor to pivot onto the 2 stern buoys. The hose connection will then be made on the port side. Max. draft 50 ft. Max. length 250 m.

Lines: Forward: 2 lines × 150 m. length.
Aft: 4 lines × 200 m. length.

FRESH WATER: Available from tugs only, rate 30 t.p.h.

FUEL: Small amounts of diesel oil available by tug, rate 2.5 cu.m.p.h.

CONSULS: None at Chanaral, the nearest are at Antofagasta.

REPAIRS: No facilities for major repairs. Two shipyards to repair tugs and lighters only.

GANGWAY/DECK WATCHMEN: Usually ship's crew.

OPENING/CLOSING HATCHES: By ship's crew or stevedores, whichever to ship's advantage.

CERTIFICATES:

Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Lights and Beacons Certificate (Chilean coast).
Pollution Certificate.

CUSTOMS ALLOWANCES: No fixed limits.

REPATRIATION: Facilities exist.

AIRPORT: The airport for small planes is located 2 km. North of Chanaral. Commercial airport 150 km. away.

TIME: GMT minus 4 hours between March and October. From October to March GMT minus 3 hours.

POLICE/AMBULANCE/FIRE: Maritime police, Tel: 480047 or VHF Channel 16 or 2182 kHz.

SERVICES: None.

SHIP SUPPLY SERVICE: Offshore service available.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

AUTHORITY: Codelco Chile, P.O. Box No. 48, Chanaral, Chile. *Tel:* 480047, Ext. 517-520. *Cables:* Codelco Chile. *Contact:* Mario Trabucco Llanos, Maritime Agent, Codelco.

COQUIMBO: 29.57 S. 71.21 W. (See Plan)

PORT LIMITS: An area limited by parallel of Latitude 29° 56' S., meridium of Longitude 71° 20' W., and the shoreline of Peninsula Coquimbo.

DOCUMENTS: Documents required from a vessel are:

8 copies Crew List.
4 copies Pasenger List.
1 copy Vaccination List.
2 copies Personal Effects List.
1 copy General Manifest.
5 copies Manifests for the Port.
4 copies Dangerous Cargo List.
3 copies Stores List.
1 copy Sanitation Certificate.
3 copies General Information.
1 copy Clearance from Last Port.
Ship's Documents and Certificates.

PILOTAGE: Pilotage is compulsory for all vessels proceeding to quay. Service is requested through Agent. Pilot boarding point is about 1 mile East of Punta Tortuga Lighthouse. Pilot boat is a small commercial motor boat or launch. As vessels approach heading South, boarding is effected on the port side.

ANCHORAGES: Good anchorages can be found N.N.E. to E.N.E. from the quay at distances from 0.6 miles to 1.2 miles, with depths varying from 10 m. to 23 m. A forbidden zone, surrounding the quay, is shown on charts.

RESTRICTIONS: No night time or tidal restrictions for mooring. Vessels can berth and unberth 24 hours a day.

MAX. SIZE: No restriction on length or breadth, unless other vessel at the quay. Draft restrictions are 10.0 m. for Berth No. 1 and Berth No. 2. Some allowance may be permitted in special cases, according to tide height.

HEALTH: Vessels must obtain Pratique in every port of call in Chile. Pratique is requested and coordinated by the Agent. In case of anysuspected disease or fever onboard, proper and timely notice must be sent to the Port Captain and Agent.

RADIO: The main coastal station is Playa Ancha Radio, call sign CBV. The station is connected to the other coastal stations and is provided with atelex system for ships, No.01860. Vessels can also contact their Agent by satellite system, on the telex.

VHF: Ther is a local VHF station, operated by the Port Captain, call sign is "Coquimbo Radio". It can be contacted through Channel 16. It also broadcasts local weather reports.

RADAR: No Port Radar Service.

TUGS: There are 2 tugs for assisting with berthing. Assistance is compulsory under certain conditions, these are stated in the Port Regulations. Ship's or tug's lines may be used, no additional charge if tug's lines used.

BERTHING: There is one quay 378 m. long, having 2 berths of approximately 180 m. usable length each. Permitted drafts are 10.0 m. for Berth No. 1 and Berth No. 2, both in salt water.

Loading and discharging operations can be performed either with ship's gear or shore equipment, depending on conditions.

Grain cargoes are handled at Berth No. 2, while general cargo can be handled at any berth.

CRANES: There are 6 electrical, rail mounted cranes, with 5 tons lifting capacity and 17 m. reach, that can operate through both berths. There also exists a heavy lift truck crane, with 27 tons capacity at 3.5 m. reach and a 36 ton capacity crane.

BULK CARGO FACILITIES: Berth No. 2 and adjacent yards and warehouses are scheduled for bulk cargo handling. Max. permitted draft is 29 ft. 6 in., with some allowance in tidal height for special cases.

Shore equipment for bulk cargo handling consists of 2.0 cu.m. grabs, 3.0 cu.m. trays and 2 movable electrical conveyor belts with a max. airdraft of 8.5 m. on ship's side.

Handling rates are approximately 60 t.p.h. for grabs and trays, and 200 t.p.h. for conveyor belts. These rates vary according to nature of product being handled.

Bulk cargoes normally handled at this port are manganese, copper ore, copper concentrate, coal, fishmeal and wheat grain.

SPECIALISED CARGO HANDLING FACILITIES: No facilities. However, spacious yards are available for the storing of containers.

STEVEDORES: Stevedore services are arranged by Agent, based on customary ETA notice and ship's needs.

Labour time is 24 hours a day, with a 3-shift system, for general cargo as well as for bulk cargoes.

MEDICAL: Advance notice to obtain medical care is not normally required, unless some urgency arises. Medical and dental care is available, as well as hospital facilities, both in Coquimbo and La Serena, a city nearby.

Normal vaccination required is International Yellow Fever. Novaccinations available in Coquimbo.

TANKERS: No oil piers in Coquimbo.

DENSITY: Average density is 1025.5.

FRESH WATER: Fresh water is available for ships alongside from shore connections. Ship's hoses must be used. Approximate delivery rate is 7 t.p.h. at a cost of U.S.$0.25 per ton.

FUEL: Vessels alongside can take diesel oil only, from trucks. 72 hours notice to Agent is required.

FIRE PRECAUTIONS: Normal precautions to be taken.

CONSULS: Sweden, Spain, Italy, Peru.

REPAIRS: Minor mechanical and electrical repairs only. Diver services available.

DRY DOCKS: No dry docks for merchant vessels. A landing ramp for fishing and special craft is available.

SURVEYORS: Independent cargo surveyors available. No surveyors from classification societies, but they can be appointed from Valparaiso, with an advance notice.

GANGWAY WATCHMAN: Available, at Master's option and request.

HATCHES: Opening and closing by ship's crew.

CUSTOMS ALLOWANCES: Reasonable amounts of tobacco andspirits for personal use permitted out of bond.

CARGO GEAR: Loading and discharging operations can be performed by ship's gear or shore equipment.

REPATRIATION: Crew changes and repatriations can be effected through Santiago International Airport, 450 km. to the South.

AIRPORT: 20 km. from Coquimbo is located La Florida domestic airport, served by daily flights. In Santiago, the capital, international connections can be found to differant countries.

TIME: Official time zone is GMT minus 4 hours. Summertime (GMT minus 3 hours) is kept from October to April.

HOLIDAYS: January 1st; Holy Week (Friday, Saturday and Sunday, at the end of March or beginning of April); May 21st; June 29th; August 15th; September 18th and 19th; October 12th; November 1st; December 8th and 25th.

POLICE/AMBULANCE/FIRE: Telephone numbers are Police 133, Ambulance 311101, Fire 132

EMERGENCY COORDINATION CENTRE: TELEPHONES: No ship connections.

SERVICES: No special sevices or specialised nautical supplies. Some minor electronic repairs and compass adjusting available.

BANKS: A number of Chilean banks are available in Coquimbo.

STORING: Available. In small quantities, supplies can be delivered by motor boat. Mainly, storing is carried out by trucks alongside, shore personnel and fork lifts available to assist.

SHIP SUPPLY SERVICE: There are ship chandlers in Coquimbo. They can be appointed through Agents.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Every crew member going ashore must carry his shore pass, issued by Immigration.

DELAYS: Some delays can be expected during Summer season, as traffic is greatly increased by fruit exports. During the rest of the year there are no delays.

GENERAL: As a result of the increase in fruit exports, reefer warehouse capacity has been increased.

DEVELOPMENTS: No developments planned in the near future.

AUTHORITY: Empresa Portuaria de Chile, Administracion del Puerto Coquimbo, Cas 10-D, Melgarejo 676, Coquimbo. *Tel:* 313606. *Telex:* 220005. *FAX:* 326146. *Cables:* Coquimbo Port – Empor Cl. *Contact:* Danilo Astudillo Espinoza, Port Administrator.

CORONEL: 37.02 S. 73.10 W. (See Plan)

LOCATION: This port is located 25 km. South of Concepcion and has 3 piers, 2 mechanised piers (Puchoco Pier for loading woodchips and Jureles Pier for loading woodchips and unloading coal), and a new general cargo pier (operational mid-1996), belonging to Compania Puerto Coronel for general cargo with 2 berths.

PORT LIMITS: Seaward limit of the port is the line from Punta Puchoco Lighthouse to Bajo Playa Negra to the West.

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory. The Pilot should be requested at Talcahuano, or Port Captain at Coronel on VHF Channel 14. Pilot boards vessels in front of Punta Puchoco.

ANCHORAGES: Vessels anchoring place when awaiting Pilot boarding is between the following points:

(A)	Lat. 37° 01' 53" S.,	Long. 73° 10' 18" W.
(B)	Lat. 37° 01' 53" S.,	Long. 73° 09' 48" W.
(C)	Lat. 37° 02' 06" S.,	Long. 73° 10' 18" W.
(D)	Lat. 37° 02' 06" S.,	Long. 73° 09' 48" W.

RESTRICTIONS: Berthing/unberthing during daylight hours only.

MAX. SIZE: Jureles Pier: LOA 220 m., draft 40 ft.

Compania Puerto Coronel Pier: 60,000 d.w.t., LOA 228 m., draft 12.3 m.

Puchoco Pier: LOA 220 m., draft 12.6 m.

RADIO: The Coastal Radio Service is situated in the Port Captain's Office, call sign "Capuerto Coronel".

TUGS: The use of 2 tugs is compulsory. Tugs are ordered through the Agent.

BERTHING: *Jureles – Mechanical Pier:* Depth 40 ft. There are 3 mooring buoys, and the vessel berths starboard size alongside. Port anchor is used with up to 8 shackles. Loading rate 200 t.p.h. Vessel will be required to shift so that each hatch is under the loading arm. Vessel will berth alongside 4 dolphins and head lines and stern lines will be made fast to 2 pylons. The berth is exposed to Northwesterly winds and vessels should be ready to sail at short notice. Operator: Carbonifera Schwager S.A.

Compania Puerto Coronel Pier: Length 172 m. (one berth each side), depth 13.0 m. – 14.5 m.

Puchoco – Mechanised Pier: For loading woodchips. It consists of platforms with a mechanical loader. There are 4 bollards, 3 dolphins and a buoy. The berth accommodates vessels up to 71,000 d.w.t. The loading rate is 8,500 tons per day.

The U.K.C. must be increased when the wave height exceeds 0.60 m. and 1.40 m. when leaving.

A tug and a launch for the lines are obligatory for berthing/unberthing; mooring by daylight only, sailing at any time. Operator: Empresa Portuaria Puchoco S.A.

STEVEDORES: Gangs are to be requested 24 hours in advance.

MEDICAL: Full hospital facilities without prior notice: Hospital de Coronel, Tel: 711065. Clinica del Trabajador de Coronel, Tel: 711918.

FRESH WATER: Available by pipeline.

FUEL: Private firms with trucks. Prior arrangement through Agent.

CONSULS: Located in Concepcion.

Argentina, San Martin 472, dep.52. Tel: 230257.
Brazil, Chacabuco 591. Tel: 242687.
Denmark, 3 Poniente 3277. Tel: 340628.

REPAIRS: Astilleros Nacionales in Coronel. Tel: 711007.

Maestranza Boca Maule, Tel: 711922.

Docks ASMAR Talcahuano, Tel: (41) 545999.

SURVEYORS: Available in the area (Lloyd's, ABS, Bureau Veritas).

AIRPORTS: Carriel Sur Airport in Concepcion/Talcahuano (25 km. from Coronel). Flights to different Chilean destinations.

TIME: Local time GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before the first port for dates of local time changes.

HOLIDAYS: Same as other Chilean ports.

POLICE/AMBULANCE/FIRE: Police, Tel: 711133.

Fire, Tel: 132.
Ambulance, Tel: 711061.
Maritime Search and Rescue, Tel: 137.

BANKS: Banco del Estado de Chile, Coronel. Tel: 711453.

Banco O'Higgins, Coronel. Tel: 711119.
Banco Osorno y la Union, Coronel. Tel: 711057.

STORING: The vessel can be stored by truck alongside the pier.

CURRENCY: Chilean Peso, approximate rate U.S.$1.00 = 415 Peso.

DELAYS: Normally there is no delay in berthing, loading or discharging, provided 24 hours advance notice is given.

GENERAL: The port of Coronel can handle on request all types of cargo. Ships normally use their own gear.

AUTHORITY: Capitan de Puerto Coronel. *Tel:* (41) 711124.

Operator: Cia Puerto del Coronel S.A., Monsenor Sotero Sanz 27, Officina 51, Santiago, Chile. *Tel:* Santiago (562) 2333411, Coronel (41) 711432. *FAX:* Santiago (562) 2319038. *Contact:* Eduardo Alvayay, Marine Adviser.

EASTER ISLAND: 27.09 S. 109.26 W. (See Plan)

DOCUMENTS: *Navy Port Authority:*
Last Port Clearance.
Ship's Certificates.
1 Crew List.
1 Passenger List.
Immigration:
2 Crew Lists.
2 Passenger Lists.
Passport and Visas are required for all foreigners.
Quarantine:
Declaration of Health.
Derat Certificate.
International Vaccination Certificates.
Customs:
1 Crew Declaration List.
1 Ship's Store List.

PILOTAGE: The use of a pilot for anchoring is compulsory. The services must be requested from the Port Authority.

ANCHORAGE: The best anchorage is at Hanga Roa from October to April. Vessels should anchor outside the 16 fathom line. Anchorages in general are poor, and vessels should be prepared to sail at any time, with the onset of bad weather.

HEALTH: In order to obtain free pratique, cable name and nationality of ship, number of crew and passengers, port of destination and agent, condition of health of all on board with details of any sickness.

RADIO: Pascua Radio, call sign CBV-3, on duplex R/T 2182 kHz and VHF Channel 16 for telephone connections (listens throughout 24 hours).

VHF: Radio Station and Port Captain Authority. VHF service facilities through Channel 16.

BERTHING: Berths available for passenger ships at Hanga Piko and Hanga Roa.

MEDICAL: No advance notice except in case of serious illness, which should be included in the arrival cable. Restricted hospital facilities available.

TANKERS: Vinapu Terminal (Lat. 27° 10' 45" S., Long. 109° 24' 20" W.). Discharge line 6 in. No slop facilities.

DENSITY: 1025.

FRESH WATER: A small amount of fresh water can be supplied by barge, order through Agent.

FUEL: Diesel and kerosene available at Vinapu Terminal. Lubricants available from mainland.

CONSULS: None.

REPAIRS: No facilities available.

SURVEYORS: None available.

CERTIFICATES: Construction Certificate. Safety Equipment Certificate. Radio Safety Certificate. Load Line Certificate. Certificate for receipt of light dues.

CUSTOMS ALLOWANCES: Only normal allowances for crew.

REPATRIATION: Crew change and repatriation are possible.

AIRPORT: Distance 2 miles. Served by Lan Chile, 2 flights weekly, Santiago-Pascua/Tahiti and vice-versa.

TIME: Summertime: From the second Saturday of October to the second Saturday of March, GMT minus 5 hours.

Wintertime: From the second Saturday of March to the second Saturday of October, GMT minus 6 hours.

HOLIDAYS: New Year's Day; Easter Day; Labour Day; Christmas Day; Independence Day; Corpus Christi Day; America Discovery Day; All Saints Day.

POLICE/AMBULANCE/FIRE Police, Tel. 223219 or 133; Ambulance, Tel. 223215 or 131; Fire, Tel. 132.

EMERGENCY CO-ORDINATION CENTRE: Maritime Governor, Hanga Roa, Search and Rescue, Tel. 223222.

SERVICES: Radar repairs. R/T repairs. Divers available for surveys and limited underwater repairs.

BANKS: Banco del Estado de Chile, Tel. 223221.

SHIP SUPPLY SERVICE: Not available.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not required.

AUTHORITY: Gobernador Maritimo de Hanga Roa, Avda. Apina s/n, Isla de Pascua (Easter Island), Chile. *Tel:* 22322, 223567. *FAX:* 032-208020. *Contact:* Lt. Luis F. Gracia Tapia, Captain of the Port.

GUAYACAN: 29.58 S. 71.22 W. (See Plan)

PORT LIMITS: A line joining Punta Miedo on Northern side of entrance and Punta Herradura on Southern side.

DOCUMENTS: See "Coquimbo".

PILOTAGE: Compulsory. All foreign vessels must pick up Pilot in Coquimbo. Chilean vessels can proceed to Guayacan and pick up Pilot inside the port limits. Pilotage service is requested through Agent.

ANCHORAGES: The bay is well sheltered and has good holding ground. Best place to anchor can be found heading on the entrance leading marks (140° True) and dropping anchor in 33 m. depth. Nevertheless, vessels awaiting berth must proceed to Coquimbo for an anchorage.

RESTRICTIONS: No night-time or tidal restrictions. Vessels can moor 24 hours day.

MAX. SIZE: *Ore Pier:* LOA 315 m., beam 50 m., draft 16.20 m. and 200,000 d.w.t.
Oil Pier: LOA 190 m., draft 12.0 m. and 41,000 d.w.t.

HEALTH: See "Coquimbo".

RADIO: See "Coquimbo".

VHF: See "Coquimbo".

RADAR: No service available.

TUGS: Tugs available to assist with berthing, tug's lines normally used.

BERTHING: The ore pier, of steel construction with a concrete deck, is 700 ft. long and located at the N.E. part of the bay. A total of 10 mooring bitts are available on the main pier, with 2 each on mooring dolphins to the South and North of the pier. Two twin mooring buoys, 1 North and 1 South, a distance of 350 ft. and 410 ft. from each dolphin and slightly inshore of the pier, are also available. A twin buoy to assist in docking and undocking is located 460 ft. to the West of the North end of the pier. Depth of water at the pier is 55 ft. at MLW. Max. draft 16.2 m.

MOORING: Vessels dock port side to the pier. On approaching the pier, the starboard anchor is dropped at a position indicated by cross bearing on markers located on the shore to the N.E. and at the South end of the pier and the shore. Lights are located on the markers for night docking. 9 shackles of cable are laid. The mooring ropes for the buoys and dolphins should be 220 m. long, and the use of wires is not allowed.

Two motor launches assist in rope handling to the pier and buoys. Sufficient deck crew must be available at all times to shift the vessel if required and to adjust moorings during loading.

Engines must be available at short notice. Permission for any major repair to the engines at the dock must be obtained from Maritime Authorities.

LOADING: In the case of combination ore carrier/tanker type of vessel, the Master must present a Gas-Free Certificate before Notice of Readiness will be accepted. Such certificate may be obtained from a Coquimbo firm and request for same should be included in the 96 hours ETA message, reporting if there is or there is no tank gas detecting instrument on board.

The loading boom extends 51 ft. from the face of the pier and can be retracted 22 ft. It may be raised or lowered 12° from the horizontal when loading.

The tower is mobile with a run of 390 ft. Clear height (above HWL) is 18.0 m. Vessels may have to be shifted. Aft hatches should be loaded first, when possible, to facilitate efficient loading. When not loading the rig is parked at the centre of the pier with the boom in a vertical position inside the pier face. In the horizontal loading position the boom is 40 ft. from the water at LWL and vessels should be ballasted to ensure hatch coamings and other fixed structure at the hatches have a height less than 40 ft. above water at LWL. Booms and other tackle should be cleared from all hatches.

Rated loading capacity is 3,000 long tons per hour.

Emergency stops only are permitted on the conveyor system. Vessels on which cargo reaches coamings should note that 390 tons are on the belts between the stockpiles and the ship and this must be cleared before stopping the system.

Cargo is belt trimmed only. Hire of trimmers, if required, is for vessel's account.

On completion of loading, the vessel shall leave the pier. Delays of port operations including delays of other vessels awaiting berth, caused by a vessel which for any reason is not prepared and able to move from the pier when so ordered, are chargeable to the vessel which causes such delays, at the rate of $4,000 per day or at the demurrage rate of any other vessel that may be delayed – whichever is higher.

BALLAST: Vessels should be ballasted to meet the loading tower information given and to ensure safe handling. Wind condition can make docking of light vessels difficult. Ballast may be discharged at the pier while loading. Upper wing tanks emptied by gravity should have covers fitted over discharges. Vessels are liable to fines by Maritime Authority for any oil or other contaminate discharged in the bay either from tanks or from pumping bilges.

TANKERS: There is an oil terminal with 2 mooring buoys for the discharge of clean products. Max. permitted draft is 12.0 m. Discharge is performed with ship's pumps.

Hose connection to the oil terminal is 8 in. diameter and is connected on the starboard side. Max. working pressure is 80 p.s.i., which makes an approximaste average delivery rate of 450 cu.m./hr.

No slop or ballast storage capability. No special equipment for spill control.

Vessels use both anchors and 2 buoys on the port and starboard quarter.

MEDICAL: See "Coquimbo".

DENSITY: 1025.5.

FRESH WATER: Not available.

FUEL: Diesel oil available at the Ore Pier by truck. Agent required 72 hours' prior notice.

FIRE PRECAUTIONS: Usual precautions for tankers.

CONSULS: See "Coquimbo".

REPAIRS: See "Coquimbo".

DRY DOCKS: None.

SURVEYORS: See "Coquimbo".

GANGWAY/DECK WATCHMEN: Available, at Master's option.

HATCHES: Opening and closing by ship's crew.

CUSTOMS ALLOWANCES: See "Coquimbo".

CARGO GEAR: Shore gear used at Ore Pier.

REPATRIATION: See "Coquimbo".

AIRPORT: See "Coquimbo".

HOLIDAYS: See "Coquimbo".

POLICE/AMBULANCE/FIRE: See "Coquimbo".

EMERGENCY CO-ORDINATION CENTRE: See "Coquimbo".

TELEPHONES: No ship connecitons.

SERVICES: See "Coquimbo".

Mail for vessel and crew should be addressed care of ship's Agent at Coquimbo, all mail that is received for holding by the Agent will be delivered to the vessel upon arrival.

Do not have parcel post packages sent, as they must go through Customs in Santiago and are delayed from 2 weeks to a month for their despatch.

Spare or repair parts for the vessel should be sent via air express, addressed to the ship, care of ship's agent at Coquimbo, Chile and marked "Ship's Stores in Transit", so as to avoid paying Customs duties. Information regarding the shipment should be sent to the Company via air mail correspondence.

A limited supply of provisions is available, but requests should be sent by radio 48 hours prior to arrival.

BANKS: See "Coquimbo".

STORING: See "Coquimbo".

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Issued by Immigration.

DELAYS: Usually no delays.

AUTHORITY:

Ore Pier: Cia. Minera de Pacifico, Pedro Pablo Munoz 675, La Serena, Chile. *Tel:* 215505. *Telex:* 220022 CMP LS CL. *FAX:* (051) 213652, 213672. *Contact:* Jaime Acevedo Diaz, Port Manager. Juan Torrejon, Managing Vice-President.

Oil Terminal: Cia. de Petroleos de Chile, Camino La Herradura s/n, Coquimbo, Chile. *Tel:* 312424. *Telex:* 240048 COPEC CL.

HUASCO: 28.27 S. 71.14 W. (See Plan)

PORT LIMITS: Inside a line from mouth of Huasco River and "Blanco Small Barren Islands".

DOCUMENTS:

1 Clearance from last port.
12 Cargo Manifests, or 2 "Nil" Cargo Manifests.
6 Passenger Lists, or 3 "Nil" Passenger Lists.
7 Crew Lists.
4 Stores Lists.
3 Crew Personal Effects.
2 Stowage Plans.
3 Per Passenger Baggage Declarations.
1 Health Certificate.
2 Dangerous Cargo Manifests.

PILOTAGE: Compulsory for every vessel mooring at Guacolda I and at Guacolda II. Vessels over 220 m. LOA require 2 Pilots. Pilot ladder to be rigged on port side.

Vessels wait for Pilot within area below:

(1) Lat. 28° 27' 24" S., Long. 71° 15' 29" W.
(2) Lat. 28° 27' 24" S., Long. 71° 15' 05" W.
(3) Lat. 28° 27' 37" S., Long. 71° 15' 05" W.
(4) Lat. 28° 27' 37" S., Long. 71° 15' 29" W.

ANCHORAGES: Large vessels' anchoring ground is 2.0 cables N.N.E. of Cayo Isle in 24 m. – 26 m., sandy bottom. Small vessels can anchorage 2.0 cables 090° from Cayo Isle in 12 m. of water, sandy bottom.

Depth is generally moderate and level with a sand and shell bottom. While at the maritime terminals of Guacolda I and II it is quite deep, around 16 m. to 50 m., which has to be taken into account when anchoring. The bottom at these terminals is mud, offering good holding ground.

Vessels can anchor without Pilot in the "Pilot Waiting Area". Pilot is compulsory for anchoring in the anchorage.

Anchorage for vessels over 100 m. LOA:

(1) Lat. 28° 27' 06" S., Long. 71° 14' 04" W.
(2) Lat. 28° 26' 53" S., Long. 71° 14' 10" W.
(3) Lat. 28° 27' 05" S., Long. 71° 14' 52" W.
(4) Lat. 28° 27' 17" S., Long. 71° 14' 46" W.

MAX. SIZE: See "Berthing".

RADIO:

Station Call Sign	*Category*	*Frequency*	*Type*	*Receives*	*Transmits*	*Schedule*
Huasco CBH-24	(H3E)	2 MHz	A 3	2182	2182	H 24

VHF: Vessels can communicate with the Port Captain to advise their arrival and must call the Pilot Station 4 hours before arrival through Channel 16.

TUGS: 2×3,000 h.p. tugs available. Use of one tug is compulsory. At Huasco there are 3 motor launches for use of Pilot.

BERTHING: There are 2 cargo terminals in service, Guacolda I for general cargo and Guacolda II, the mechanised one, for loading iron ore and "pellets". Guacolda I is operated by Empresa Electrica Guacolda S.A., and Guacolda II by Compania Minera del Pacifico S.A. The particulars of these installations are:

	Guacolda I	*Guacolda II*
Max. LOA	240.0 m.	315.0 m.
Max. Draft	13.5 m.	25.0 m.
Max. Air Draft	—	23.6 m.
Max. Loading Rate	—	6,000 t.p.h.
Loading Arm Reach	—	42 m.

Guacolda I Terminal: Normally used to discharge coal and general cargo.

A new mechanised coal unloading system is being installed by its new owners, and is expected to become operational by 1995.

Guacolda II Terminal: Used for loading iron ore in "pellets", discharging fuels and supplying bunkers.

Warping the Vessels: Vessels docking at Guacolda I must have at least 8 lines of 220 m. forward and 7 lines of 220 m. aft. For docking at Guacolda II, vessels must have 12 lines, 8 lines of 220 m. and 4 lines of 240 m.

STEVEDORES: There are 86 stevedores for doing the work on board. Working hours are 0800 – 1530, 1530 – 2300 and 2300 – 0800.

MEDICAL: Hospital at Huasco. 2 dentists and 2 doctors also available. There is a more specialised hospital in Vallenar, about 50 km. from Huasco.

TANKERS: Tankers berth at Guacolda I and II, see "Berthing".

DENSITY: 1026.

FUEL: Diesel oil and heavy oil available at Guacolda II, average rates for diesel 100 cu.m./hr. and heavy oil 200 cu.m./hr. Connection of hoses by shore personnel.

CONSULS: None.

REPAIRS: Only for the repair of minor craft.

OPENING/CLOSING HATCHES: By crew or stevedores.

CERTIFICATES:

Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Load Line Certificate (1966).
Tonnage Certificate (1969).
Oil Record Book.
Responsibility for Pollution of Water Certificate.

Gas Free Certificate: Compulsory for OBO type vessels when the last cargo was fuel. The inspection must be requested from Port Captain, who sends an inspector and makes the certification.

CUSTOMS ALLOWANCES: Tobacco: Each man 500 cigarettes per week. Wine and spirits: Each man 2 bottles of wine or spirits per week.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Nearest commercial airport is at Serena, 241 km. away.

TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before first port for dates of local time changes.

EMERGENCY CO-ORDINATION CENTRE: Capitania de Puerto Huasco. VHF Channel 16; HF 2182 kHz. Telephone No. 531011.

HOLIDAYS: New Year's Day, Christmas, Hispano America's Day, Independence Day, Army Day, Navy Day, Saint Peter and Paul's Day, September 11th, Assumption Day, November 1st, Memorial Day, Corpus Christi and Immaculate Conception.

TELEPHONES: Local and outward service.

STORES: It is possible to obtain provisions in limited form. Requisition must be made in advance.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Passport or Seaman's Book.

GENERAL: Zone for ballast: it is prohibited to deballast in port except clean water from deep tanks. For any other kind of ballast authorisation should be requested first from the maritime authority who will indicate the appropriate place.

SHIPMASTER'S REPORT: September 1986.

Communications: Initial cables were sent via Portishead Radio but when in range Valparaiso Radio was used. There is no shore station at Huasco. On approach to the port contact was made by VHF on Channels 16 and 14.

Approaches: As per "Sailing Directions". The pilot boarding area is in position 090° – 1,200 m. from Guacolda light.

Pilot ladder to be rigged on the port side. As this vessel is over 200 m. 2 Pilots were used.

Berthing/Berth – Guacolda II: Off the berth the starboard anchor is let go to 8 shackles on deck and then held. The vessel is then manoeuvred in towards the loading dolphins, checked with the anchor and laid parallel to the loading arm dolphins about 8.0 m. off. When close enough lines are run to the buoys forward and aft. These together with the anchor hold the vessel in position off the dolphins. When moored the vessel is made fast to 3 buoys fore and aft. 1 buoy ahead and 2 to the landward, 1 buoy astern and 1 seaward and 1 landward. 2 lines are made fast to each buoy.

Berthing took just over an hour from the time the Pilots boarded till all fast.

Pilots advise that there is about 22m. of water at the berth.

Arrival Formalities:

Pratique: Radio Pratique was requested by radio via the Agents but this was not given as the necessary formalities are carried out on berthing. The standard Maritime Declaration of Health is required.

Agriculture Inspection: The galley, refrigerators and provision store rooms are inspected. No fruit or vegetables are to be landed from the vessel.

Customs: 3 copies of Crew Personal Effects were made up and completed prior to arrival and found acceptable. Only the bonded stores (Spirits, tobacco and cigarettes) were sealed.

Immigration: Shore passes for all personnel are required and these MUST be collected and returned prior to sailing. No restrictions on shore leave and no curfew. A launch service to Huasco (15 minutes away) is available.

Arrival Documents:

1 Maritime Declaration of Health.
3 Crew Personal Effects Lists.
8 Crew Lists.
4 Stores Lists (Deck and Engine).
4 Stores Lists (Provisions).
'Nil' Passenger List.
2 'Nil' Cargo Manifests.
Register, Derat, etc., required to be sighted.

Loading: The loading of the iron ore pellets commenced once Pratique had been granted and was, with the exception of shifts and shore breakdowns, continuous. The nett loading time was 44 hours and this gave an average loading rate of 2,679 tonnes/hr.

Shifting ship was necessary to reach the end holds and was carried out by ship's personnel. Rigging gangs are available to assist in shifting and they remain onboard throughout. Before arrival the Agents had inquired if these gangs were required but I advised that the ship's personnel would carry out the shifts. No difficulties were experienced shifting but long lines to the buoys ahead and astern are essential.

As the vessel is kept off the dolphins at all times there is no access to the shore except by launch which is kept alongside for draft checks. As the shore weigh-bridge is not reliable all tonnages are by drafts. The after accommodation ladder is used for access to the vessel.

The final Bill of Lading figure is by draft survey – carried out by ship's personnel.

Departure: Final documentation is completed onboard and takes about an hour after completion of loading with the Port Captain boarding to give a clearance.

All passes are checked and the Master signs a Declaration to the effect that all personnel are onboard.

The Pilot disembarks as soon as the vessel clears the moorings using the accommodation ladder.

General: Provisions/Supplies: No fresh water or fuels available but fresh provisions in season can be supplied and appear to be of reasonable quality and price – £0.45 for a kilo of tomatoes and £8.28 for a case of oranges for example.

Postage: Mail from the UK took about 7 days to reach Huasco. Deliveries are made at noon.

Telephone: Available from the Agent's office. Local line to Vallenar then International.

Repairs: Main Engine maintenance can be carried out but the vessel must be ready for sea within 3 hours at any time. A formal request is required should immobilisation be required.

Tugs: There are no tugs. 3 mooring boats are used and are in contact with the vessel by VHF.

Shore Contact: The loading foreman keeps in contact with his office every 3 hours using the ship's VHF.

SHIPMASTER'S REPORT: March 1988.

The vessel loaded 149,000 tonnes of iron ore pellets at Guacolda II. The vessel is a combination carrier built in 1986, 280 m. length, 45 m. beam and 152,300 tonnes d.w.t.

Berthing: The vessel is required to send out 2 mooring ropes to each buoy, wires are not acceptable. The buoy pattern is similar to that on the plan in "Guide to Port Entry". As the ropes are sent out long before the vessel is near the pier the ropes must be more than 330 m. long. As a normal mooring rope is 220 m. long, this could cause embarrassment and delay if the vessel is not sufficiently prepared.

Bulk cargo facilities: The loading arm at Guacolda II can serve a 110 m. long section of the vessel. For holds more than 110 m. away, the vessel has to be shifted.

Density: 1025.5.

Services: If the Master pays cash for the purchase of provisions worth more than U.S.$1,000, the amount must then be handed over to the Agent and the Agent will in turn arrange for the ship chandler to receive the money. This is required by local regulations.

Repatriation: Crew repatriation is by bus to Santiago. Local law requires relieving crew members to enter the country 48 hours prior to the arrival of the vessel.

SHIPMASTER'S REPORT: March 1992.

Vessel: Combination Carrier. LOA 280 m., beam 45 m. and 152,300 tons d.w.t.

General: As per latest Regulations, Maritime Authority of Chile requires all vessels, coming from foreign ports, to renew all ballast water on board before entering 12 miles zone off Chilean coast.

Times, dates and positions of starting and completing this deballasting and ballasting is to be recorded in Deck and Engine Log Books. A copy of this log book entry is to be handed over to Harbour Master upon berthing.

Position reports (SISNAV) are to be sent to "Directemar Valparaiso" when entering, transitting or leaving Chilean waters. Details are given in "Guide to Port Entry" and Admiralty Lists of Radio Signals.

Documents: Documents required are Cargo Manifests, Passenger List, Mail List, Crew List, Ship's Stores List, Crew Personal Effects List, Health Certificates/Vaccination List, Bonded Stores List and List of Ports called in the last 6 months.

Anchorage: Small vessels can anchor very close East of Cayo Island.

Large vessels can anchor in deep waters about 7 cables N.N.W. of Cayo Island.

Approaching/Anchoring: When approaching from South, it is best to come up to Lat. 28° 26' S. (i.e. to a parallel about 3 miles North of Guacolda Light) before turning to starboard and head on course 090°. Continue on 090° until intended anchor position is bearing about 130°. Turn to starboard and head on course 130° and approach anchoring position with as little headway as possible. At night, due to powerful background shore lights, Cayo Island Light is not visible until less than one mile off. As depth is more than 50 m., it is preferable to carry out whole anchoring under power. (Vessel anchored with Cayo Island Light bearing 163° (T) 7 cables off, with 11 shackles in water. When swung to flood stream and heading North, clearance from Cayo Island is about 4.5 cables.)

Caution is necessary if fixing by G.P.S. while approaching, as the Plan Chart of Huasco is out in Longitude by about 6 cables (i.e. if approaching by G.P.S., the Longitude obtained by G.P.S. must be increased by 0.70 minutes before plotting it on Chart). In other words, Cayo Island Light is charted in position Lat. 28° 27.5' S., Long. 71° 14.3' W., but its actual position as obtained by G.P.S. is Lat. 28° 27.5' S., Long. 71° 13.6' W.

Pilotage: Pilot is not required for anchoring off Cayo Island.

If berthing directly, Pilot boards 090° × 1,200 m. from Guacolda Light. If at anchorage off Cayo Island, Pilot boards at anchorage for berthing.

Free Pratique/Arrival Formalities: Radio Free Pratique is not granted. Vessel must enter port with "Q" flag flying. Combination ladder must be ready on port side on arrival. All authorities (Harbour Master, Customs Officer, Doctor, Agriculture Inspector and Agents) board vessel after anchoring. Ship's provision stores, refrigerated stores, galleys, mess rooms, etc., are inspected and Free Pratique is granted.

If vessel's Derat Exemption Certificate has expired, it can be granted here, but same is valid till next port or for one month only.

Permission for ship's side painting and immobilisation of engines, etc., is usually granted.

Berthing: (Guacolda II Terminal): Always port side alongside. Six lines (220 m.) are used forward and 6 lines (220 m.) are used aft. One tug and 2 mooring boats are used. If proceeding to berth from Cayo Island Anchorage, vessel heads in general direction and line provided by leading lights (223°), situated on the head of Guacolda II Terminal. Starboard anchor is lowered to 2 shackles in water in advance. When leading lights (131°) are in line, starboard anchor is dropped and cable allowed to run out to 4 shackles in water, thereafter, gradually paid out to 8 shackles as vessel moves forward towards berth until leading lights (143°) are in line. The depth, where anchor is dropped, is about 50 m. While tug is assisting forward vessel is manoeuvred, bringing bow close to forward dolphin. Two breast ropes are passed from port bow to the buoy, which is at that time almost right ahead, and in final position becomes 90° from bow. Once the 2 breast ropes are fast, the tug comes to the starboard quarter and pushes the stern in and 2 lines are passed from port quarter as breast ropes. At this time there is too much weight on forward breast ropes, so they should be good ropes and both must have equal weight. Other lines are passed once port bow and port quarter breast lines are fast and vessel is parallel to dolphins (on a heading of 310°).

Mooring sequence goes as follows:

Forward: 2 port breast lines, 2 head lines, 2 starboard bow lines.

Aft: 2 port quarter breast lines, 2 starboard breast lines and then 2 stern ropes.

The first 2 ropes forward and aft should be a minimum of 220 m. length or preferably made longer temporarily by joining 2 ropes together with a piece of line for initial passing to buoys by mooring boats.

Berthing operation is not carried out if wind speed is more than 7 m./sec.

Loading: Loading is by a conveyor loader, which can travel in a circular arc. Two dolphins are in line with it's forward and aft extremity. While berthed, head ropes and stern ropes are adjusted to bring vessel to best position for loader to cover all hatches. When mooring is taking place, loading arm operator tries out positioning of the loading arm over various hatches and advises Pilot regarding shifting, etc.

Vessel is kept about 5.0 m. clear from dolphins (Small vessels are kept about 10.0 m. from dolphins). Max. loading length of vessel that can be covered by loader is 110 m. For loading in holds beyond the reach of loader, vessel has to be warped. For shifting more than 50 m., Pilot has to be called.

Loading rate rarely exceeds 4,500 tonnes/hr.

Mischellaneous: "Campania Minera del Pacifico" (known as CMP) are the shippers for all consignments and own all loading instalments at Huasco. Due to some regulation of CMP, loading must begin within 8 hours of presenting N.O.R., otherwise fresh N.O.R. is to be tendered.

Nearest major town is Vallenar (50 km.), which has shopping centres and specialised medical facilities.

Bunkers are available at Huasco in limited quantities. Fresh water is only available by truck from Vallenar and is very expensive (about U.S.$ 16.00 per tonne).

Whilst alongside, a boat is required for access to the shore.

Usually Pilot acts as shipper's representative and signs Hold Inspection Certificates, Draft Survey Forms, etc. Final Bill of Lading figure is taken from ship's Draft Survey.

Harbour Master, Custom Officer, etc., board again before departure for Port Clearance.

All shore passes are to be returned.

Provisions procured are of good quality and are not expensive. As per Port Regulations, cash for provisions is to be handed over to vessel's Agent, who converts into local currency and pays Chandler.

Pilot disembarks as soon as all lines are cast off and anchor is aweigh, i.e. when vessel is just a few hundred feet from berth. Head on a course 000° until about 1 mile North of Guacolda Light., then turn to port and head on course 270°.

All Authorities, Agents, Pilots and loading supervisors, etc., were found to be very helpful and cooperative.

AUTHORITY: Capitania de Puerto Huasco, Calle Concheria 104, Huasco, 111 Region, Chile. *Tel:* 054-531011. *Contact:* Ricardo Bendal Vidal, Harbour Master.

IQUIQUE (including Patillos Cove): 20.12 S. 70.09 W. (See Plan)

PORT LIMITS: The area inside the following geographical points:

(1) Lat. 20° 11' 10" S., Long. 70° 09' 30" W.
(2) Lat. 20° 11' 10" S., Long. 70° 08' 09" W.
(3) Lat. 20° 12' 05" S., Long. 70° 09' 30" W.

DOCUMENTS:

For vessels coming from foreign countries:

Clearance from last foreign port.
Crew List.
Passenger List.
Manifest of hazardous cargo (when applicable).
Insurance policy against contamination (for tankers).
International Maritime Health Declaration.
Derat Certificate.
Tonnage Certificate.
Radio-telegraphy safety Certificate.
Certificate of equipment.
Lighthouses and buoys Certificate.
Freeboard Certificate.
Construction Certificate.

For vessels coming from another Chilean port:

Clearance from last port.
Crew List.
List of passengers.
Manifest of hazardous cargo (when applicable).

PILOTAGE: Compulsory. During the day, the Pilot cutter displays the "H" flag of the International Code, and at night the lights prescribed by the International Regulations.

There is a pilot boarding area between the following geographical points:

(1) Lat. 20° 11' 10" S., Long. 70° 09' 30" W.
(2) Lat. 20° 11' 10" S., Long. 70° 09' 11" W.
(3) Lat. 20° 11' 36" S., Long. 70° 09' 11" W.
(4) Lat. 20° 11' 36" S., Long. 70° 09' 30" W.

There is no restriction on berthing and unberthing. Manoeuvres take place 24 hours.

The telegraphic address for the Pilot is "Maritgob Iquique TLX 323156 IQQ CK". It is necessary to give prior notice of Pilot requirement 72 hours and 24 hours ahead of arrival, indicating maximum draft.

Channel for calling the Pilot is VHF Channel 16, working is on Channel 8. The Pilot Boarding Area is beyond the port limits.

ANCHORAGES: *Access:* Access to the bay is not difficult. The entrance and/or exit of the port has intense fishing boat traffic.

Anchorages: There are 3 established anchorages which can be used without a pilot onboard.

The anchorage locations are as follows (bearing and distance from lighthouse Molo de Abrigo).

Anchorage	*Demarcation*	*Distance* (cables)	*Depth* (m.)
A	290°	3.5	28
B	270°	5.8	35
C	265°	7.8	43

Note: Anchorage "C" has a draft limitation due to a near sounding line of 12.7 m.

To the West part of these anchorages, vessel may anchor freely, as the depth varies from 20 m. – 60 m.

RESTRICTIONS: Mist occurs with greater frequency from December to March, and is generally slight and low which produces a danger when making a landfall. The general direction of the current is from South to North at a rate of 0.5 to 3 knots. This current is strong at Punta Gruesa, Cavancha and Punta Piedras. Fierce winds frequently occur from May to September but their action is very much less within the area protected by the breakwater.

MAX. SIZE:

Berths No. 1 and 2: Max. draft 9.2 m.
Berths No. 4 and 5: Max. draft 9.3 m.
Berths No. 6 and 7: Max. draft 9.3 m.

Also see "Berthing" and "Tankers".

PRATIQUE: On arrival in port vessel will be received by the Health Authority, and if everything is in order, by the Maritime Authority and Customs. It will then be granted "Free Pratique". In the event of illness or fever on board, contact must be made with the local Agent who will inform the medical authorities.

RADIO: The best way for the vessel to pass ETA messages, both to Agents and to the Maritime Authority, is to "Maritgob Iquique" via Playa Ancha Radio – CBV.

VHF: "Iquique Radio" controls the maritime traffic and there is VHF equipment to facilitate communications between vessel and Pilot, calling up on Channel 16. The Pilot and tug use walkie talkies which have Channel 16 and Channel 8. The Port Authority operates on Channel 62.

TUGS: 1×1,200 h.p., 1×1,690 h.p. and 1×2,800 h.p.

BERTHING: Inside the breakwater are Berths No. 1, 2 and 3. No. 3 is permanently used by deepsea fishing vessels. On the mooring pier on the West side are Berths No. 4 and 5, and on the East side Berths No. 6 and 7.

Loading and discharging is by cranes and/or ship's derricks.

Berths No. 1 and 2: Length 360 m.
Berths No. 4 and 5: Length 330 m.
Berths No. 6 and 7: Length 270 m.

Patillos Cove: It is situated 33 miles South of Iquique. Vessels berth to 6 buoys, but must move to present each hatch to the port loader. Mooring and unmooring operations must be carried out during daylight hours.

The use of Pilot is compulsory.

The loading of salt is carried out by means of a mechanical, stationary conveyor with capacity of 550 t.p.h.

Max. Size:

Max. LOA:	250 m.
Max. beam:	41 m.
Max. draft:	14.3 m.
Max. d.w.t.:	100,000 tonnes

Port Limits: Comprise a limited area between a line joining Point Cotitira and Point Patillo.

Waiting Zone for Pilot:

Comprised of an area within the following geographical points:

(1) Lat. 20° 44' 18" S., Long. 70° 11' 56" W.
(2) Lat. 20° 44' 20" S., Long. 70° 11' 43" W.
(3) Lat. 20° 44' 38" S., Long. 70° 11' 46" W.
(4) Lat. 20° 44' 36" S., Long. 70° 11' 59" W.

CRANES: Berths not equipped with cranes for discharging operations.

MEDICAL: In the event of any serious case or an emergency it is necessary to advise the Agent, otherwise advice should be by VHF Channel 16. Iquique port has a modern hospital and clinics with sufficient medical resources where crew members can be treated.

STEVEDORES: Gangs of stevedores for ship and shore must be requested from the Port Authority who will give the final instructions.

The port works 3 shifts, in the following schedules:

1st shift: 0800 hrs. – 1530 hrs.
2nd shift: 1530 hrs. – 2300 hrs.
3rd shift: 2300 hrs. – 0630 hrs.

TANKERS: Loading and discharging is by submarine line. There are no deballasting facilities in the Port. In front of El Colorado Beach there are three groups of buoys, each with 3 buoys, for mooring tankers.

The North group is for the Esso Terminal, for loading or discharging clean or dirty products, and the South group is for the Copec Terminal for loading and discharging clean or dirty products.

Esso Buoy: Located to the North, and with the following limitations:

Max. draft allowed:	10.65 m.
Max. LOA:	170.0 m.
GRT:	15,000
DWT:	26,000

Copec Buoy: Located to the South part, and with the following limitations:

Max. draft allowed:	11.34 m.
Max. LOA:	228.0 m.
GRT:	40,000
DWT:	70,000

Vessels which moor at the tanker buoys, either Copec or Esso, must berth with the bow heading 270°. Mooring must be made in daylight, unmooring anytime.

FRESH WATER: Small quantities available by truck.

FUEL: Quantities of less than 300 tonnes can be delivered by truck. If greater quantities required, vessel should proceed to the Esso or Copec buoys (See "Tankers").

CONSULS:

Bolivia
Colombia
Denmark
Italy
Netherlands
Peru
Spain
Sweden

REPAIRS: Minor repairs can be effected at the Marco Shipyard.

DRY DOCKS: There is 1 dry dock for vessels up to 500 tons.

SURVEYORS: Lloyds, Bureau Veritas and A.B.S.

GANGWAY/DECK WATCHMEN: It is necessary and compulsory for all vessels to have secuirty guard at the gangway, and in case of hazardous cargo the Maritime Authority requires a second guard.

OPENING/CLOSING HATCHES: Crew or stevedores.

CUSTOMS ALLOWANCES: It is permitted to have all that is required for normal consumption from the ship's store.

REPATRIATION: There are no problems in repatriating crew, either for exchange purposes or for holidays, who have to travel back to their country of origin.

AIRPORT: The airport of Chucumata is 30 minutes away by car, and there are connections by Lan Chile (National Airline) and Ladeco (Linea Aerea del Cobre) with foreign airlines at the Airport in Santiago de Chile.

TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 during the Summer season. See "General" before the first port for dates of local time changes.

HOLIDAYS: 1st January (New Year's Day); 1st May (Labour Day); 21st May (Navy Day); 2nd June (Corpus Christi); 29th June (Saint Peter and Paul); 15th August (Assumption); 11th September (Liberation National Day); 18th September (Independence); 19th September (Army Day); 12th October (Race Day); 1st November (All Saints' Day); 8th December (Immaculate Conception) and 25th December (Christmas).

There is also Holy Week which is a movable holiday between end March and middle of April.

POLICE/AMBULANCE/FIRE: Police Tel: 133; Ambulance Tel: 131; Fire Brigade Tel: 132; Maritime Rescue Tel: 137.

TELEPHONES: There is no facility for connection on board. Telephones on the quay less than 100 m. from the vessel. Cellular telephones available.

SERVICES: It is possible to obtain gangs for tank and hold cleaning.

SHORE LEAVE: Permitted, no restrictions.

IDENTITY CARDS: Any crew member coming ashore is given an identity card by the International Police, card is returned when the vessel sails.

SHIPMASTER'S REPORT: September 1987.

Vessel loaded a cargo of salt in bulk at Caleta Patillos (Patillos Cove).

When 20 miles from the terminal the vessel should call "Caleta Patillos Radio" on VHF Channel 16 and confirm ETA and advise vessel's particulars, after which the radio station will advise a position for anchoring (Latitude and Longitude). Other vessels may already be anchored in the vicinity of the position allocated.

Patillos Cove is nearly semi-circular, with a diameter of approximately one mile. The best anchoring position is close to the centre of the Cove, about 5 cables N.W. of the shiploader. The bottom is sand, with some scattered small rocks and it proved to be a good holding ground with moderate wind and heavy swell. (The Cove is absolutely unprotected and open to the Pacific Ocean. This vessel stayed 4 days in the anchorage, always rolling heavily, due to a western swell).

Port Authorities and Agents board the vessel during regular working hours, either by the ship's gangway, or by the pilot ladder, depending on the state of the sea. At this time shore passes are issued to each crew member, and the ship's stores are checked by a Health officer, who may order some fruits and vegetables to be put under seal (before ship's sailing, he returns to check if the seals are still intact).

Port Restrictions: Max. LOA 250 m., Max. draft 12.0 m. There is no restriction regarding airdraft, however, the vessel should avoid arriving in a too light condition, as the pilots may refuse to manoeuvre if the wind is anything more than light.

Transport to and from the ship is undertaken by a launch called "Icaiza", any time day or night, and which can be contacted via VHF, Channels 01 and/or 16.

Fresh water is not available in Caleta Patillos, but stores and provisions, and also laundry service are available through ship chandlers from Iquique, who usually board the vessel on arrival. Bonded stores can also be obtained through the chandler, but in our case they failed to deliver them as there was no Customs Officer available to accompany and seal the stores.

Berthing and unberthing is only undertaken during daylight hours, and during the manoeuvre the ship is assisted by a Pilot (who comes from Iquique), a tugboat (Motor Tug "Albatros II" – 1,200 h.p.), and 2 line-handling boats.

The vessel must have at least 10 lines with a length of 250 m. each for mooring to 5 buoys. This is because the shiploader is of fixed type, and the vessel must shift every time it is necessary to change the loading from one hatch to another. The terminal can supply up to 3 lines with this length, and the remainder can be arranged by splicing the ship's ropes, if these are shorter than 250 m.

For berthing, the starboard anchor, 2 head lines, 2 forward breast lines (port), 2 stern lines and 4 after breast lines (2 on port side, 2 on starboard side) are used.

Shiftings from hatch to hatch are made any time day or night, but must be done with the assistance of a Pilot, tugboat and launches. (The Pilot is assisted by 3 men holding portable radios, one on the forecastle, one on main deck and one on the stern).

The salt is loaded at a daily average of 10,500 tonnes (stowage factor 32 cu.ft./ton) by a shiploader fitted with conveyor belt. Draft surveys are performed by a local surveyor upon berthing, before trimming and after conclusion of loading.

The launch ("Icaiza") must be used to go ashore even when the ship is moored to the buoys, since no direct access from ship to shore is available. The terminal ("Salinas de Punta de Lobos S.A.M.") provides a free bus service to and from Iquique, 3 times daily. In Iquique, major attraction is the "ZOFRI", the tax-free complex which is located in the northern part of that city. The salt is brought by trucks from a very interesting salt-mine located inland, and visits can be arranged through the Terminal's Manager.

If heavy swell is experienced in the Cove, loading operations are stopped, as the vessel rolls heavily in the berth. (In extreme cases the vessel must go out to the anchorage).

On completion of loading, Port Authorities board the vessel again to check documents, collect shore passes and to issue the Sailing Clearance. If another ship is waiting for the berth, the loaded vessel must clear the berth and wait for the Authorities in the anchorage (on this occasion, we waited 12 hours as they were busy with other vessels in Iquique Harbour).

AUTHORITY: Empresa Portuaria de Chile, Casilla No. 47-D, Iquique, Chile. *Tel:* (56-57) 422848. *FAX:* (56-57) 413176. *Contact:* Pedro Davila Pino, Port Manager. Zvonimir Adasme Alcota, Chief of Operations.

AGENT: See "Valparaiso".

LIRQUEN: 36.42 S. 72.59 W. (See Plan)

DOCUMENTS: See "Talcahuano".
PILOTAGE: Pilot boards off end of pier.
RESTRICTIONS: Night berthing is allowed.
MAX. SIZE: Limited by draft.

Berth	*Max. draft* (ft.)	*Max. LOA* (m.)
No. 1	39	220
No. 2	38	200
No. 3	31.5	200
No. 4	24.25	160

HEALTH: No restrictions, except when the vessel comes from Peru. Maritime Health request 5 days notice for authorisation for berthing.
VHF: Port maintains watch on Channel 16 throughout 24 hours.
TUGS: 2×1,340 h.p. and one launch.
BERTHING: See "Max. Size".
CRANES: Vessels use their own cranes and gear.
CARGO HANDLING FACILITIES: *Warehouses:* 13 warehouses covering an area of 59,400 sq.m.

Equipment:
(a) 41 forklifts with forks, clamps and/or press from 4,500 lb. to 22,000 lb. lifting capacity.
(b) 48 tractors.
(c) 7 front loaders (large) with shovels for bulk and/or grabs for logs.
(d) 1 decorticator with capacity to bark 800 cu.m. in one shift (7.5 hours).
(e) 1 trackmobile to drag railway wagons.
(f) 6 fertiliser bagging plants with capacity of 4,000 tons per day (24 hours).

Loading/Unloading Rates:
(a) Woodpulp (loading): 13,430 tons in 3 shifts (24 hours).
(b) Logs (loading): 12,250 cu.m. in 3 shifts (24 hours).
(c) Fertiliser (unloading): 9,297 tons in 3 shifts (24 hours).
(d) Pulp logs (loading): 18,522 pcm. in 3 shifts (24 hours).

Types of Cargo which were moved through the Port during 1993:
(a) 31.66% logs.
(b) 25.10% woodpulp and paper.
(c) 13.69% fertiliser.
(d) 19.51% lumber.
(e) 10.04% general cargo (including fish meal).

The port also gives the service of storage and consolidation of containers.

FRESH WATER: Available.
FUEL: Diesel oil available.
CONSULS: See "Talcahuano".
REPAIRS: Deck and engine repairs possible.
GANGWAY/DECK WATCHMEN: Shore watchman required.
SURVEYORS: Available.
REPATRIATION: Facilities exist for repatriation of crew.
AIRPORT: 16 km. to Carriel Sur Airport.
HOLIDAYS: Port works all year round.
SERVICES: Telephone, telex and fax.
SHORE LEAVE: Crew members are allowed ashore.
IDENTIFICATION CARDS: Shore pass is sufficient.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Pesos.
AUTHORITY: (Private Port) Puerto de Lirquen S.A., P.O.Box 173-D, Teatinos No. 220, Office No. 92, 9th Floor, Santiago de Chile, Chile. *Tel:* (56) 02-672941, (56) 02-671550. *Telex:* 240835 Pudel CL. *FAX:* (56) 02-6981698. *Contact:* Jaime Lea-Plaza or Juan Manuel Gutierrez.

LOTA: 37.06 S. 73.10 W.

DOCUMENTS: See "General" before first port.
PILOTAGE: Compulsory. The Pilot should be requested at Talcahuano, Port Captain Coronel on VHF Channel 14.
ANCHORAGE: N.W. of the Lutrin Light. The Pilot will board here.
RESTRICTIONS: Berthing/unberthing during daylight hours only.
TUGS: One tug required for berthing and to be requested at Talcahuano.
MAX. SIZE: Length 160 m. Max. draft 27 ft. Also see "Developments".
BERTHING: Mechanical Pier: Vessels moor to 3 buoys, using both anchors, and lie with their bows heading 190°. The pier is 277 m. long, depth varies from 29 ft. at the head to 23 ft. at the 92 m. mark.

Loading rate for coal 300 t.p.h. – 400 t.p.h.

FRESH WATER: Available at a rate of 65 tons per day.
FUEL: Not available.
CONSULS: At Conception.
TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before first port, for dates of local time changes.
DEVELOPMENTS: The pier is being extended by 37 m. and dredged to 30 ft.
AUTHORITY: See "Coronel".

MEJILLONES: 23.06 S. 70.28 W. (See Plan)

DOCUMENTS:
Vessels directly from foreign ports:
5 Crew Lists.
3 Passenger Lists.
3 Stores Lists.
5 Personal Effects Lists.
3 Narcotics Lists.
5 Import Cargo Manifests.
11 Manifests for cargo destined for Bolivia.
Vessels coming from another Chilean port:
1 Crew List.
1 List of Passengers.
1 Stores List.
5 Import Cargo Manifests.
13 Manifests for cargo destined for Bolivia.

PILOTAGE: Service carried out by the Pilot Corps of Antofagasta (65 km. from this port). Service is compulsory. Agent has to apply for the Pilot, and it is important to give arrival notice in good time.
ANCHORAGES: Open bay very well protected and with deep water.
MAX. SIZE: No restrictions. Vessels work cargo at anchor.
HEALTH: Pratique is automatic for vessels coming from another Chilean port, otherwise it will be granted after Sanitary visit.
RADIO: Antofagasta radio station CBA-3. Listens out between 0800 hrs. and 1200 hrs. and between 1400 hrs. and 1800 hrs.

Transmits 8,370 receives 8,354 Telegraphy H 00–30.
Transmits 4,396 receives 4,091 Speech H 30–45.
Transmits 8,780 receives 8,230 Speech H 45–60.

The station is active listening out every 2 hours, i.e. 0800, 1000, 1200, 1400, 1600 and 1800 hrs.

TUGS: There are none available locally but can be supplied from Antofagasta if needed.
BERTHING: There are no berths. Vessels work cargo at anchor.
Annaex or Proquim Terminal: 3 mooring buoys and a small platform for connection for ammonia discharge. Max. length 180 m. (15,000 d.w.t.). Flexible hose of 6 in., temperature – 32°C.

Also see "Shipmaster's Report" dated August 1988.

STEVEDORES: Agent to be informed before 1800 hrs. the day before arrival to order gangs.
MEDICAL: There is a doctor in the port but no hospitals are available and patients are transported to Antofagasta.
DENSITY: Sea water.
FRESH WATER: No fresh water available.
FUEL: Not available.
REPAIRS: There are no workshops. Vessel repairs done by the crew are allowed.
GANGWAY/DECK WATCHMEN: This service is recommended.
OPENING/CLOSING HATCHES: This work can be carried out by crew and/or stevedores. Derricks operated only by crew.

CERTIFICATES:
Register Certificate.
Tonnage Certificate.
Radio Certificate.
Safety Equipment Certificate.
Derat Certificate.

CUSTOMS ALLOWANCES: 200 cigarettes for each member of the crew besides the ones in the stores. One bottle wine/spirits per person. One customs official stays on board.

REPATRIATION: There are facilities for changing the crew.

AIRPORT: 25 km. from Mejillones is the airport Cerro Moreno. To travel to U.S.A. one must go via Santiago. There are daily flights from Antofagasta to Santiago, and from Santiago to U.S.A. with stops in various countries.

TIME: There are two official times:

Summertime: from the second Sunday in October to the second Saturday in March. Local time is GMT minus 3 hours.

Wintertime: from the second Saturday in March to the second Saturday in October. Local time is GMT minus 4 hours.

HOLIDAYS: It is possible to work on holidays with a surcharge of 100%. New Year's Day; Maunday Thursday; Good Friday; 1st May; 21st May; Ascension Day; 18th September; 19th September; 12th October; 1st November; 8th December; 25th December.

POLICE/AMBULANCE/FIRE: Police Tel: 7 Mejillones; Ambulance 222370 Antofagasta; Fire 41 Mejillones.

TELEPHONES: It is not possible to install lines on board.

SHORE LEAVE: Members of the crew are allowed ashore. Shore passes are provided by the port.

IDENTIFICATION CARDS: Not necessary, only passport and boarding card.

SHIPMASTER'S REPORT: August 1988.

Annaex Terminal: Jetty consists of small loading dolphin with 2 separate mooring dolphins, and 3 buoys (2 aft and 1 forward). Mooring arrangement is starboard anchor, 2 headlines forward, 2 springs forward and 4 sternlines and 2 springs aft (See Plan). Shore provides 6 in. hose. Ammonia to be at −33°C and discharge rate 400 t.p.h. Cargo Surveyor attends and samples taken. Max. length 180 m. Daylight berthing only and sometimes permission given for night sailing. Max. force 4 wind for berthing. Port side alongside, ship's head 254° T. Starboard accommodation ladder required.

AUTHORITY: Captain of the Port.

PUERTO CHACABUCO (Puerto Aisen):
45.28 S. 72.50 W. **(See Plan)**

PORT LIMITS: A line joining Punta Weste and Peninsula Fontaine (North West point).

DOCUMENTS:
1 Clearance.
1 Light Dues Certificate.
7 Port Cargo Manifests.
4 General Cargo Manifests.
7 Transhipment Cargo Manifests.
3 Passenger Lists for the Port.
3 Passenger Lists for in-transit passengers.
18 Crew Lists.
1 Personal Effects List.
Passenger Baggage Declaration (2 per passenger).
1 Fumigation Certificate.

APPROACHES: To enter the Bay of Chacabuco, this must be done by day for vessels exceeding 60 m. LOA, since weather conditions and coastal configuration do not make access easy, there being gusty winds blowing mainly from the South with some frequency.

PILOTAGE: Compulsory for foreign vessels. Pilotage can be done by the Channel Pilot who is on board the ship.

Not compulsory for Chilean vessels.

ANCHORAGES: Anchorage point is Lat. 45° 28' 45" S., Long. 72° 50' 10" W.

RESTRICTIONS: Vessels over 70 m. LOA berth in daylight hours only.

MAX. SIZE: *Muelle No. 2:* Max. LOA 165 m. Max. draft 25 ft. (forward), 32 ft. (aft). Max. displacement 15,000 tons.

HEALTH: If from a Chilean port, Free Pratique is granted by the local Chilean Coast Guard Captain of the Port.

If arriving from overseas, Free Pratique can be granted by the local Chilean Coast Guard Captain of the Port after the inspection of the Health Inspector, International Police, Customs and Agriculture Inspector.

RADIO: Naval radio station of Aisen Port. Call sign CBP-3. Station receives and transmits on 2182 kHz and VHF Channel 16.

VHF: Captain of the Port, call "Chacabuco Radio" on Channel 16.

Harbour Master, call "Base Emporchi" on Channel 16.

TUGS: A small tug "Alcatraz" of 360 h.p. is based in the bay and managed by S.A.A.M. Agency. Tug call sign is "CB 2559".

BERTHING: *Muelle No. 1:* Length 71.20 m., depth 10.0 m. Max. LOA 110 m. Fresh water and fuel available. One "Mann" mobile crane, lifting capacity of 3 tons at 22 m.

Muelle No. 2:

Berth	*Length*	*Depth*	*Max. Draft*	
No.	*(m.)*	*(m.)*	*Forward (m.)*	*Aft (m.)*
2	42	9.0	6.00	8.00
3	52	10.0	7.62	9.75
4	37	9.0	6.00	8.00

Fresh water and fuel available.

CRANES: *Port Authority:* 1 electric crane × 3 tons, 1 mobile crane × 27 tons, 1 mobile crane × 12.5 tons.
Private: 1 mobile crane × 5 tons.

BULK CARGO FACILITIES: 1 conveyor belt belonging to "Minera El Toqui".

SPECIALISED CARGO HANDLING FACILITIES: To the N.W. of the new quay, there is a Ro/Ro terminal for coastal car ferries.

STEVEDORES: Each agency attends ships with both proper and syndicated Stevedores.
Working Hours: Daily in 3 shifts.
1st shift: 0800 – 1530 hrs.
2nd shift: 1530 – 2300 hrs.
3rd shift: 2300 – 0630 hrs.

MEDICAL: There is a hospital at Puerto Aisen, a First Aid Station in the Port belonging to "I.S.T." and a Public First Aid Station outside the Port Area.

TANKERS: *Fuel Terminal:* Vessels of 10,000 tons displacement discharge fuel via a submarine pipeline. Pilotage compulsory for foreign vessels. Daylight berthing and unberthing.

Gas Terminal: Vessels in the range 750 – 1,000 tons displacement discharge liquid gas via submarine pipeline. Pilotage compulsory for foreign vessels. Daylight berthing and unberthing.

FRESH WATER: Available, no restriction on amount.

FUEL: Fuel is available from Copec S.A., Shell Chile and Esso.

CONSULS: There is a Vice-Consul for Spain in Puerto Aisen.

REPAIRS: No repair facilities available.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Available and required by law.

OPENING/CLOSING HATCHES: To be carried out by the stevedores.

CUSTOMS ALLOWANCE: No unusual restrictions.

REPATRIATION: Facilities available.

AIRPORT: Balmaceda National Airport is 120 km. from Chacabuco, national flights. Coyhaique Airport is 80 km. from Chacabuco, flights to Puerto Montt and Santiago.

TIME: Local time: October to March, GMT minus 3 hours and March to October, GMT minus 4 hours.

HOLIDAYS: See "General" before first port.

TELEPHONES: Telephone service to the whole country and abroad, together with post and telegraph office.

SERVICES: Charts can be obtained from The Maritime Governor's Headquarters at Puerto Aisen.

BANKS: Banco del Estado de Chile, Banco de Chile and Banco de Credito e Insersiones, located in Puerto Aisen, 15 km. away.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

PORT REGULATIONS: It is strictly prohibited to dismantle the main engine or effect repairs to the engines without previous notification and authorisation from the maritime authorities. Also, to deballast petroleum, pump bilges, throw overboard waste or refuse in the port.

GENERAL: At Puerto Chacabuco there is a Customs Office, police, a hospital, fire brigade and Coast Guard Captain of the Port.

To the N.W. of the quay, there is a Ro/Ro terminal for coastal car ferries.

SHIPMASTER'S REPORT: February 1993.
Vessel: LOA 160 m., 17,900 d.w.t.

The vessel was due to sail for Chacabuco to load 8,400 tonnes of zinc concentrate. At last port (Valparaiso), 2 Pilots boarded to stay until sailing from Chacabuco. As Chacabuco is a busy fishing port (main export is salmon to Japan from farms in the area), the berth was occupied on arrival by a reefer vessel.

Good holding anchor ground was found to the South with 50 m. of water.

A tug now is available (720 h.p.) to assist berthing.

According to Harbour Master, vessels with 165 m. length, forward draft 25 ft. and aft draft 32 ft. are permitted.

The loading under the fixed belt is rather slow, as the equipment is old and breakdowns are common. Working time is 24 hours, but no more than 100 tonnes/hr. can be expected.

Stevedores intended to work even during rain, but the rain tent failed to function due to age.

Long and good mooring ropes (at least 4) should be used, as sudden strong winds may occur and shifting the vessel requires good attention.

Deballasting of foreign water only in strict accordance with Navy Regulations (See "General" before first port).

During our 4.5 days overall stay, the Pilots went to the only hotel in town (100 m. from vessel) which offers good wines and excellent seafood dishes.

Dropping the Pilots at Ancud creates no difficulties, although strong current was observed near Cabo Coronado.

SHIPMASTER'S REPORT: April 1996.

Limits: Not defined on the chart, but all pilotage waters in this area for large ocean going vessels.

Documents:
Cargo Manifest.
Crew Lists.
General Declaration (also doubles as Clearance on Departure).
Passenger List.
Health Form.
Personal Declaration.

Pilotage: Vessels coming from the Atlantic take a Pilot in Punta Arenas, for Magellan Strait and approaches to Chacabuco.

On leaving, Pilots disembark at either Punta Arenas (Ancud Pilot Station near approaches to Puerto Montt) or Valparaiso. No Harbour Pilot as this is done by Sea Pilot.

Vessels entering from Pacific take Pilot at either Valparaiso or Ancud Pilot Station.

Approaches: During daylight hours and Chacabuco Bay is approached around 1100 hrs. local time. Strong winds from S/S.E. could make direct berthing difficult.

We anchored with 5 shackles on port anchor. As wind mainly from S/S.E., vessel lay in good position for the 5 days at anchor.

Any restrictions usually refer to small craft.

Health: Pratique applied for via agency and granted on arrival.

Anchorage: Situated in the S.W. corner of the bay and is exposed to strong gusts of wind coming mainly from the S.W., through a gap in the mountains. A good holding ground of mud in 30 m. – 40 m. of water was experienced.

Many fish hatcheries/farms are situated close to the Southeast, South and West coasts of the bay which may reduce the area of swing.

Vessel's Size: Reefer vessel – LOA 151 m., beam 22.0 m. and draft 8.8 m. (Sailing).

Communications/Radio: Used main Agent in Valparaiso for all messages whilst in Chilean waters. Also maintained usual "Chilean Reporting Systems".

Pilot used VHF once vessel was in range, to organise local Authorities, etc. Local Authorities use Channel 8 as working channel.

International telephone available close to port area.

Tugs: One medium powered tug available for berthing (Ship's lines used).

Radar: No radar service or communication with Port Captain prior to contact with Agent on VHF. Port Captain is Chilean Naval Officer.

Transport: Regular Ro-Ro service (3 times a week) connects Valparaiso, Puerto Montt, Puerto Chacabuco and Punta Arenas. Local bus service to Puerto Aisen throughout the day, finishing around 2100 hrs. Bus services from Puerto Aisen connect to major towns, cities in the area. There is an airport at Puerto Aisen connecting with local/international airports. Taxi services are available to Puerto Aisen, run on a share basis. Road between Chacabuco and Aisen in poor state of repair.

Trade: Ro-Ro services have brisk trade with road trailers. Timber and cattle are normal coastal trade. Main export cargo is frozen fish fillets/roe/fish products. Fish farming, stevedoring, reefer warehousing appear to be the main industry in Puerto Chacabuco.

Berths: (See "Plan").

Two berths plus a ramp arrangement for the Ro-Ro services are in constant use.

The two berths have depths alongside of 10.5 m. These depths increase rapidly to 14.0 m. and over at approximately 22 m. distant from the jetty.

Old original berth is of wooden construction with tyre fenders at various intervals along the length (Approx. 50 m.).

New berth is concrete and steel pile construction (Approx. 75 m. long) with a traversing crane 3 tonnes SWL. Yokohama fender on the North end of this jetty proved to be of great help, as vessel berthed with North jetty abreast No. 1 and No. 2 hatches and the South jetty abreast No. 4 hatch.

Berthing: There is a mooring buoy abreast North end of new berth which affects the approach of larger vessels. Vessel made a 90° approach with the North end of the old berth in line so as to clear the buoy. Port anchor was used and run out to 7 shackles. Mooring lines run out with aid of small boat and tug pushed stern round to assist with running lines to berth, being starboard side too. Line is run to the buoy on departure to assist clearing berth.

Same buoy is used by Ro-Ro vessels for similar manoeuvre.

All mooring bollards in good condition and conveniently situated throughout the length of the waterfront.

Stevedores: Appear to work all hours due to frequent rain during most of the year. All breaks appeared to be taken when rain stopped cargo work. This was a 24 hour operation. Hatches opened and closed by crew. Port pallet lifting equipment used.

Port Facilities: There is a crane situated on the Southern concrete jetty, capacity 3 tonnes SWL. Forklift trucks available of varying capacities. The port can handle 40 ft. containers.

Electric plug-in facilities for approximately 20×40 ft. reefer containers.

Density: 1008.

Fresh Water: Available on both jetties from shore connection. Good pressure (Approx. 60 t.p.h.).

Bonded Stores: Not available.

Customs Allowances: Declared usual 200 cigarettes, 1 bottle of spirits and 10 beers on Personal Customs Declaration.

Shore Leave: Shore passes issued on arrival. Not collected on departure.

Provisions/General Stores: Very limited supply. Fresh provisions are of medium/poor quality.

Medical Facilities: Small hospital in Puerto Aisen with limited facilities. No medical facilities in Puerto Chacabuco.

Banks: Located in Puerto Aisen: Banco del Estado de Chile and one other.

These banks able to change foreign currency (U.S.Dollars in my case). No transactions after 1400 hrs. for exchanging money. Rate of exchange was U.S.$. 1.00 = 400 Pesos.

Navy: Three gunboats berthed, on floating pontoon close South of commercial jetties.

AUTHORITY: *Port Authority:* Empresa Portuaria de Chile, Avendida B.O'Higgins S/No., (Casilla 20), Chacabuco, Chile. *Tel:* 351139, 351198. *Telex:* 277567 EMPOR CL. *FAX:* 351174. *Contact:* Walter Gomez Bernal, Administrator of the Port (Harbour Master).

Maritime Authority: Coast Guard Captain of the Port.

PUERTO CORRAL: 39.52 S. 73.25 W.

LOCATION: This port is located in the mouth of Valdivia River and is expected to handle over a million tons/year, including 500,000 tons of woodchips, sawn lumber, pulp logs, sawn logs, particle boards, plywood, general cargo and fertilisers from and to Valdivia general area.

The berth is located in position Lat. 39° 52' 25.7" S., Long. 73° 25' 14" W.

PORT LIMITS: Seaward limit of the port is the line from Roca del Conde to Morro Niebla.

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilotage is compulsory. Pilots board 1.5 – 2.0 cables East of Roca del Conde.

ETA should be sent to to Agent 72 hours in advance with confirmation 24 hours before arrival.

MAX. SIZE: 67,000 d.w.t., LOA 229 m. and max. draft 12.2 m.

RADIO: The Coastal Radio Service is situated in the Port Captain's Office, call sign "Capuerto Corral".

TUGS: Compania Portuaria Corral has one tug of 1,200 h.p. and 24 tons bollard pull. Compania Portuaria Talcahuano has one tug of 550 h.p. On request, tugs from other locations can be made available.

Vessels up to 180 m. LOA should use one tug of minimum 1,200 h.p. to go alongside. Vessels between 180 m. and 229 m. should use one tug of minimum 2,000 h.p., or 2 tugs with a combined minimum capacity of 2,000 h.p.

The use of tugs is not compulsory when leaving, if weather conditions are favourable.

BERTHING: One berth with length 146 m. and depth 14.0 m. Berth orientation 013° – 193°.

Fenders: 4 Seibu 1150 HX 1150 LK3 and 5 Seibu 800 HX 800 L.

Buoys: 2×150 tons and 1×70 tons.

Bollards: 4×100 tons and 5×50 tons.

BULK CARGO FACILITIES: One conveyor for loading woodchips at a rate of 600 t.p.h. The vessel has to shift position to load different cargo holds. For general cargo handling, vessels should use their own gear.

STEVEDORES: Gangs are to be requested 24 hours in advance. 3 shifts are worked.

MEDICAL: Small hospital in Corral, with ambulance. Tel: 56-63-471254. Larger hospitals in Valdivia, 8 miles away.

DENSITY: 1017.

FRESH WATER: Available in small quantities.

CONSULS:

Germany. Tel: 56-63-218821.
Netherlands. Tel: 56-21-213770.
Spain. Tel: 56-21-212421.

REPAIRS: Asenav. Tel: 56-63-216102.

AIRPORTS: Pichoy Airport in Valdivia, 1 hour from Corral. Ladeco, Lan and Alta Airlines flights daily.

HOLIDAYS: Same as other Chilean ports.

POLICE/AMBULANCE/FIRE:

Police: There is a police station in Corral, and the Port Captain is the Maritime Authority and acts as Coastguard.

Firemen: Corral has fire stations and some facilities, but not for ship's emergencies.

BANKS: Located in Valdivia.

Banco Concepcion. Tel: 56-63-212711.
Banco de A.Edwards. Tel: 56-63-226400.
Banco de Credito e Inversiones. Tel: 56-63-213444.
Banco de Chile. Tel: 56-63-213611.
Banco del Desarrollo. Tel: 56-63-211303.
Banco del Estado de Chile. Tel: 56-63-212611.
Banco de Santiago. Tel: 56-63-215111.
Banco O'Higgins. Tel: 56-63-213254.
Banco Santander. Tel: 56-63-219414.
Banco Sudamericano. Tel: 56-63-222901.

CURRENCY: Chilean Peso. U.S.$1.00 = 410 Peso (approximately). No exchange restrictions.

DELAYS: Normally there is no delay in berthing, loading or discharging, provided 24 hours advance notice is given.

GENERAL: The port of Corral can handle on request all types of cargo. 1,000 ton capacity barges are used to move cargo to and from Valdivia, located 8 miles inland by the Valdivia River.

River barges will transport the cargo to different Valdivia river ports, such as Las Mulatas and Railway Station, and other destinations.

Las Mulatas River Port: River port located just down-river of the city of Valdivia by Valdivia River, and consists of a 30,000 sq.m. yard for handling cargo, a 180 m. pier, for small vessels, and ramps for barges. The pier has a 10 m. draft, but is limited by the depth along Valdivia River (4.5 m.). This river port has direct connection to the National Highways.

Railway Station River Port: River port located just up-river of the city of Valdivia by Valdivia River, and consists of a 15,000 sq.m. yard for handling cargo, and ramps for barges. This river port has direct connection to National Highways and Railroad.

Valdivia: Located 8 miles up-river from Corral and connected by ferries and road to the port. In Valdivia, all kinds of facilities are available, such as major ship repairs, airport, hotels, banks, etc.

Storing: The vessel can be stored by truck or barge alongside the pier. Forklifts are used.

AUTHORITY: Capitan de Puerto de Corral. *Tel:* 56-63-471267. *Cables:* "Capuerto Corral".

Operator: Santiago Office: Portuaria Corral S.A., Monsenor Sotero Sanz 27, Oficina 51, Providencia, Santiago, Chile. *Tel:* 56-2-2341990. *FAX:* 56-2-2323456.

Valdivia Office: Portuaria Corral S.A., Guacamayo, Casilla 39-A, Valdivia, Chile. *Tel:* 56-63-211180. *FAX:* 56-63-211080. *Contact:* Eduardo Donoso V., Port Administrator.

PUERTO MONTT: 41.28 S. 72.57 W. (See Plan)

PORT LIMITS: Between the meridian that crosses the head of "Muelle del Frigorifico" to 72° 59' W. and from the parallel 41° 29' 42" S. to the North coast in Reloncavi Bay.

DOCUMENTS: The documents to be presented to the Authorites are:
- General Declaration.
- Crew List.
- Personal Effects Declaration.
- Cargo Manifest.
- IMO Goods Manifest.
- Safety Radio Certificate.
- Safety Equipment Certificate.

APPROACHES: The approach to Puerto Montt is made through the Channels, the most important of which is Canal Chacao, which requires careful navigation due to the existence of rocks and shallow areas, as well as tidal currents that reach up to 8 knots. Any type of vessel may pass this channel without problems with a Pilot aboard.

PILOTAGE: Pilotage is compulsory and must be ordered by Agent on receipt of vessels's ETA at least 24 hours in advance. Otherwise request directly to Port Captain, cable address "Capitania de Puerto de Puerto Montt". Vessels should anchor as indicated below and exhibit code flag "G". Pilot boards from a motor boat at the anchorage. Pilot boat equipped with VHF.

If vessel is arriving without a channel Pilot, then Pilot must be requested at least 48 hours in advance and Pilot boards from a motor boat at the Ancud Port Anchorage, Pilot boat equipped with VHF.

ANCHORAGE: Vessels of any size can anchor in the outer roads of the port. Recommended positions are at 4 cables 172° of the light on the head of "Muelle de Pasajeros" (Lat. 41° 28' 50" S., Long. 72° 56' 52" W.). and 7 cables 085° from point of Tenglo Island. (Lat. 41° 29' 42" S., Long. 72° 56' 45" W.). Anchorage is 35 m. deep and bottom is sand.

RESTRICTIONS/MAX. SIZE: Vessels must turn inside "Canal Tenglo" before leaving. Vessels less than 120 m. in length are not restricted. Vessels over 120 m., but less than 172 m. in length may turn inside "Canal Tenglo", during daylight hours only and with the flood tide. Vessels over 172 m. but less than 200 m. enter the port and leave during daylight hours only. Vessels over 200 m. can enter the port and leave, but during the flood tide in daylight hours only. All manoeuvring is effected in favourable weather. Max. draft permitted is 8.0 m. plus the minimum height of the low tide, during vessel's stay in port, keeping a clearance of 0.5 m. under-keel in any tide condition.

HEALTH: All ships are boarded by the Authorities on arrival, unless they are coming from another Chilean port.

RADIO: Puerto Montt Coastal Station operates 24 hours on HF (H3E/J3E0) and VHF channels.

Telex Address: VTR 370064 CBP/CK.
Tlxch: 270038 CBP/CL.

VHF: Port Captain VHF Station operates on VHF Channels 16 and 14 throughout 24 hours.

TUGS: 2×2,000 h.p. and 1×180 h.p.

BERTHING: The Commercial Pier, owned by Empresa Portuaria de Chile, has a total length of 320 m. Berths available: No. 1: 200 m. long, depth 8 m.; No. 2: 120 m. long, depth 7.5 m., both at LW.

Ro/Ro Terminal: 200 m. to the West of the commercial pier is the Ro/Ro Terminal with 4 ramps for vessels up to 120 m. LOA, the max. draft 4 m. The commercial pier as well as the Ro/Ro Terminal operate during day and night, in good weather conditions and taking tidal effects into consideration.

CRANES: 4×3 tons capacity.

STEVEDORES: Vessel should advise Agent before arrival the number of gangs required by hatch, and amount of cargo for discharge.

Working hours are 0800 – 1530 hrs., 1530 – 2300 hrs. and 2300 – 0630 hrs.

Also see "General" before first port.

MEDICAL: All facilities available, vaccination, inoculation can be arranged. Prior notice should be given if urgent assistance required on arrival.

TANKERS: *Esso Chile S.A. Terminal:* Tankers moor at buoys in the Eastern part of the bay, in daylight hours only, for vessels up to 15,000 g.r.t.

Copec Chile Terminal: Out of service for the moment.

Vessels moor using both anchors forward and 2 buoys aft. 10 in. submarine pipeline, 2×8 in. hoses connected. No slop facilities.

FRESH WATER: Available alongside Commercial Pier at 10 t.p.h.

FUEL: Only diesel oil available, supplied by trucks at Commercial Pier or Ro/Ro Terminal.

See "General" before first port.

CONSULS: Argentina, Germany, Spain, and Netherlands are represented locally.

REPAIRS: Minor engine repairs can be effected.

OPENING/CLOSING HATCHES: Ship's crew or stevedores.

CUSTOMS ALLOWANCES: Two cartons of cigarettes and 2 bottles of liquor for each man in his cabin, the rest to be declared with his personal effects.

REPATRIATION: Can be arranged.

AIRPORT: Situated 17 km. from the port. Daily flights (75 minutes) to Santiago where international connections can be made.

TIME: GMT minus 4 hours. In Summertime: GMT minus 3 hours.

Also see "General" before first port.

HOLIDAYS: Work may be arranged on most holidays. Also see "General" before first port.

POLICE/AMBULANCE/FIRE; Police Tel: 252240. Fire Tel: 252222. Ambulance Tel: 253991.

TELEPHONES: No facilities for placing telephones on board.

TRANSPORTATION: There are de-luxe bus services, with daily departures, between Puerto Montt, Santiago, Valparaiso, and intermediate points.

SHORE LEAVE: Allowed.

DEVELOPMENTS: Outer berths have been dredged to a depth of 8.50 m.

AUTHORITY: Gobernacion Maritima de Puerto Montt, Diego Portales Av. 2300, Puerto Montt, Chile. *Tel:* 252389-253051. *Telex:* 270007. *FAX:* 262224. *Contact:* Sergio Swett Soto, Maritime Governor.

PUERTO WILLIAMS: 54.56 S. 67.37 W.

PORT LIMITS: Inside a line which joins Banco Herradura Buoy (Lat. 54° 54' S., Long. 67° 36' W.) with Punta Trucco Anterior Lighthouse (Lat. 54° 55' S., Long. 67° 32' W.) and Punta Gusano Lighthouse (Lat. 54° 55' S., Long. 67° 37' W.) with Banco Herradura Buoy.

DOCUMENTS: The documents required for entering the port are:
- General Declaration.
- Passenger List.
- Crew List.
- Cargo Manifest.
- Dangerous Cargo Manifest.
- Health Certificate.

PILOTAGE: Pilotage compulsory. 48 hours notice to be sent to the Captain of the Port at Punta Arenas or the Pilot Office. Both offices are at Libertador O'Higgins No.1401, Punta Arenas. Respective telephone numbers are 221001 and 226650 and telex numbers 380014 CK VTR and 280079 CBM CL.

Pilot boarding zone is the area within the following limits:

(a) Lat. 54° 54' 14" S.	Long. 67° 35' 26" W.
(b) Lat. 54° 54' 22" S.	Long. 67° 34' 56" W.
(c) Lat. 54° 54' 38" S.	Long. 67° 35' 11" W.
(d) Lat. 54° 54' 30" S.	Long. 67° 35' 40" W.

Other local Pilot Stations are expected to be located in the following positions:

Cabo San Pio:	Lat. 55° 07' 30" S.	Long. 66° 34' 00" W.
	Lat. 55° 07' 30" S.	Long. 66° 32' 10" W.
	Lat. 55° 08' 30" S.	Long. 66° 32' 10" W.
	Lat. 55° 08' 30" S.	Long. 66° 34' 00" W.
Paso Richmond:	Lat. 55° 20' 30" S.	Long. 66° 41' 45" W.
	Lat. 55° 20' 30" S.	Long. 66° 40' 00" W.
	Lat. 55° 21' 30" S.	Long. 66° 40' 00" W.
	Lat. 55° 21' 30" S.	Long. 66° 41' 45" W.
Cabo de Hornos:	Lat. 56° 00' 15" S.	Long. 67° 17' 45" W.
	Lat. 56° 00' 15" S.	Long. 67° 15' 00" W.
	Lat. 56° 01' 15" S.	Long. 67° 15' 00" W.
	Lat. 56° 01' 15" S.	Long. 67° 16' 45" W.
Isla Hornos:	Lat. 55° 56' 44" S.	Long. 67° 12' 30" W.

ANCHORAGE: Vessels can anchor in the pilotage zone, in depths up to 38 m. Holding ground is good.

MAX.SIZE: 2,500 g.r.t., LOA 80 m. and draft 15 ft.

HEALTH: Pratique granted on arrival.

RADIO: Puerto Williams Radio. Call sign "CBW".

Type: A1A – A2A Telegraphy.
Calling Frequency: 500 kHz.
Working Frequency: 464.5 kHz.
Hours: 0130 – 0230, 0530 – 0630, 0830 – 0930, 1030 – 1130,1330 – 1430, 1630 – 1730, 1930 – 2030, 2230 – 2330 UTC.
Type: H3E – J3E Telephony.
Calling Frequency: 2182 kHz.
Working Frequency: 2738 kHz.
Hour: 24 hours.
Type: G3E VHF.
Call Frequency: 156.800 MHz. Channel 16.
Work Frequencies: 156.450 MHz. Channel 9
156.700 MHz. Channel 14.

VHF:

Calling Frequency:	156.800 Mhz	Channel 16
Working Frequencies:	156.450 MHz	Channel 9
	156.500 MHz	Channel 10
	156.550 MHz	Channel 11
	156.600 MHz	Channel 12
	156.375 MHz	Channel 67
	156.425 MHz	Channel 68
	156.475 MHz	Channel 69
	156.525 MHz	Channel 70
	156.575 MHz	Channel 71
	156.675 MHz	Channel 73
	156.725 MHz	Channel 74
	161.525 MHz	Channel 78

RADAR: There is no radar service for marine traffic control.

TUGS: None.

BERTHING:

Berth: Guardian Brito Wharf.
Owner: Chilean Navy.
Length: 282 ft. (86 m.).
Breadth: 26 ft. (4.57 m.).
Max.Size: 25,000 g.r.t.

CRANES: Chilean Navy operate a 3.5 ton mobile crane.

BULK CARGO FACILITIES: None.

BRIDGES: None.

STEVEDORES: None available.

MEDICAL: The Chilean Navy operate a hospital and dental clinic.

TANKERS: Tankers berth near Guardian Brito Wharf to buoys and also use anchors.

Owner: Chilean Navy.

Tank Capacity:	No.1	2,117,200 Litres.
	No.2	263,520 Litres.
	No.3	113,400 Litres.

Pipelines: Petroleum Terminal: 150 m. × 6 in. diameter and 60 m. × 6 in. diameter.

Guardia Brito Wharf: 200 m. × 2.5 in. diameter.

FRESH WATER: Available at Guardian Brito Wharf at a rate of 6 t.p.h.

FIRE PRECAUTIONS: Normal international precautions for handling dangerous cargoes.

CONSULS: None.

REPAIRS: Minor repairs such as carpentry and small engine repairs.

DRY DOCKS: None.

SURVEYORS: Available.

GANGWAY/DECK WATCHMEN: Not necessary as wharf is within Chilean Navy property.

CUSTOMS ALLOWANCES: Usual allowances.

CARGO GEAR: Ship's gear. Also see "Cranes".

REPATRIATION: No facilities available.

AIRPORT: Local airport is 4 miles N.W. of Puerto Williams. Two flights a week to Punta Arenas.

TIME: Local time from October to March is GMT minus 5 hours; and March to October GMT minus 4 hours.

HOLIDAYS:

New Year's Day	1st January.
Saints Week	First weekend in April
Labour Day	1st May.
Navy Honours Day	21st May.
Assumption of the Virgin Mary	15th August.
Independence Day	18th and 19th September.
Army Day	12th October.
All Saints Day	1st November.
Immaculate Conception	8th December.
Christmas Day	25th December.

EMERGENCY CO-ORDINATION CENTRE: Emergency Co-ordination and Maritime Search – SUBCOBREM – Puerto Williams. Also see "General" before first port.

TELEPHONES: ENTEL Chile have an office in Port Williams City. There are no facilities on the wharf.

SERVICES: Charts and Notice to Mariners available.

BANKS: Bank of Chile in the commerical area in Puerto Williams City.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Seaman's Book or Passport.

REGULATIONS: Photography prohibited as berth within naval installation.

GENERAL: Mail and telegraphy facilities, also a hotel and other public services.

AUTHORITY: Chilean Navy.

PUNTA ARENAS (including Lenadura, Cabo Negro, Clarence Cove, Gregorio, Pecket): 53.10 S. 70.54 W. (See Plan)

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory for foreign vessels. Vessels entering from Pacific will usually embark Pilots in Valparaiso or Ancud or Laitec. Vessels coming from the Atlantic embark Pilots in Bahia Possession, 30 miles to the West side of the Eastern entrance of Magellan Strait. Pilot boats have radio telephone frequencies of 2,182 kHz and 2,638 kHz and VHF Channel 16. Four hours before arrival of the vessel, the pilot boat keeps watch on Channel 16. Pilot boat carries International Pilot lights; ETA at Bahia Possession has to be given at least 24 hours in advance. In bad weather, vessel has to anchor and wait in a circular area of one mile of radius with the centre placed at 216° – 2.7 miles off Possession Lighthouse.

Pilots usually board and disembark off the lighthouse of Punta Delgada.

The Pilot for West-bound vessels travels to Bahia Possession by air from Valparaiso. It is therefore important to order the Pilot through Valparaiso Agent with as much advance notice as possible, and keep Agent closely advised of vessel's ETA.

For vessels transiting Magellan Straits Westbound, the Pilot will disembark at Valparaiso or Ancud or Laitec. Pilot's travelling expenses from and to Valparaiso are included in pilotage charges.

It is advisable to have accommodation ladder rigged as the Port Authorities will board prior to berthing if cargo work is to commence immediately.

Also see "General" – "Straits of Magellan" and "Shipmaster's Report" dated February 1993, at beginning of Chile section.

ANCHORAGE: Anchor berths A – G are situated East and Southeast of Muelle Prat. Anchorage is prohibited within 1,300 m. of the Fiscal Quay. Vessels should be ready to leave the anchorage on orders from the Port Captain, or in the event of bad weather from the East.

RESTRICTIONS: No tidal restrictions, vessels can come alongside day or night. Max. length 170 m.

MAX. SIZE: *Magellan Straits:* Max. draft 70 ft., no limit on d.w.t. tonnage for very large vessels. Vessels with a draft in excess of 70 ft. may be allowed to pass through but only after the authorities have studied the vessel's characteristics. As a safety measure, large vessels navigate the First Narrows in daylight only and with good visibility.

HEALTH: At first Chilean port, doctor will come aboard with Authorities. In other Chilean ports, there is no need to ask for Pratique or hoist the "Q" flag as Pratique is automatic.

RADIO: The Radio Station Magallanes Radio (CBM) keeps a permanent watch on 500 kHz (A1A, A2A), 2,182 kHz (H3E) and 156.8 MHz (Channel 16 VHF).

All the communication services are included in the List of Coast Stations and List of Radio determinations and special services of the ITU.

To the West of the Magellan Strait there are 2 Radio Stations:

Radio Station Evangelista (CBM-3) has permanent watch on 2,182 kHz (H3E) and 156.8 MHz (Channel 16 VHF).

Radio Station Felix (CBX) has permanent watch on 500 kHz (A1A, A2A), 2,182 kHz (H3E) and 156.8 MHz (Channel 16 VHF).

All ships must give identification on request of the Radio Stations, Chilean Warships or merchant vessels operating with Chilean Pilots.

To the East of the Magellan Strait exists Radio Station Punta Delgada which keeps permanent watch on 2,182 kHz (H3E) and 156.8 MHz (Channel 16 VHF).

It also has a Radar Control System which assists with safety of all ships operating from Dungenes to First Narrow.

TUGS: Used to go alongside in Punta Arenas tanker terminals, ship's lines used.

BERTHING: A berth should be requested 24 hours before arrival. The pier is 372 m. long with 27 ft. – 26 ft. on the North side and 22 ft. on the South side (depth at the seaward end). Depth reduces on both sides towards the land. Vessels berth bow first and care must be taken to avoid the shallow patches on both sides of the jetty about 120 ft. off. Normally, 4 head lines, 4 stern lines and 2 or 4 springs are used.

Berthing is usually at night or early morning as strong winds blow during the day, occasionally rising to Force 12 in the Summer. The port is often closed due to inclement weather.

Weather signals are shown at the North end of the pier.

Weather	*Signal Day*	*Signal Night*	*Meaning*
Variable	Black Ball	1 green light	Put out extra moorings
Bad weather	Flag M	1 red light	Put out extra moorings
Storm	Flag R	2 red lights	Port closed

Tankers: See below. No limits for vessels at anchor.

BULK HANDLING FACILITIES: *Pecket:* (Coal). Position Lat. 52° 56' S., Long. 71° 13' W. Max. length 220 m. Max. draft 14 m. Displacement 80,000 tonnes, final heading 260° T. There are 2 buoys; 4 lines sent to forward buoy and 3 lines to stern buoy. Starboard anchor will be used. Vessel port side alongside to the jetty and 2 lines to the Duke of Alba No.1; 2 lines to the Duke of Alba No. 2; 4 spring lines to the Duke of Alba No. 3 and 4 lines to the Duke of Alba No. 4. Tug assistance is compulsory for mooring and unmooring. Ship's loader rate is2,000 tonnes p.h.

STEVEDORES: Gangs to be requested 24 hours before arrival. Three shifts are worked from 0800-1530, 1530-2300 and 2300-0630 with 10-15 minutes "coffee break" in each shift.

Overtime is the third shift on a day before a Sunday or holiday or the first and second shifts on a Sunday or holiday.

MEDICAL: No advance notice to Agent required. There is a hospital with all facilities.

TANKERS: There are the following terminals for tankers:

Lenadura: Position Lat. 53° 12' S., Long. 70° 54' W. Max. length 175 m., draft 23 ft., 20,000 d.w.t. Vessels moor to 3 buoys, 1 astern and1 on each quarter, using both anchors. Ship's head bearing 090°T. Manifold connection 8 in.

Cabo Negro: Position Lat. 53° 01' S., Long. 70° 51' W. Max. length 200 m. Draft 42 ft. Vessels berth port side alongside, using the starboard anchor. The manifold hose is 10 in. Gas is loaded at 1,000 t.p.h. A tug is compulsory for berthing.

Cabo Negro Pier has been improved to handle ships up to 45,000 d.w.t.

Clarence Cove: Position Lat. 52° 55' S., Long. 70° 09' W. Max. length 250 m. Max. draft limited by the entrance to the cove to 36 ft. (10.97 m.). Vessels berth to 4 buoys, using both anchors. 4 headlines, 3 stern lines, 4 lines to the starboard quarter buoy, and 3 to the port quarter buoy are required. A tug is available. Ship's head 255°T. There are2 × 8 in. hoses for loading and deballasting facilities will be available shortly.

Forbidden Anchorage Zone: Area within a circle of 0.9 miles radius around the terminal buoys, and leaving entrance clear from 320° to 140°.

Gregorio: Position Lat. 52° 38' S., Long. 70° 11' W. Max. length 250 m. Max. draft 49 ft. (subject to tidal conditions), 75,000 tons displacement. Manoeuvres should be done with daylight and preferably with high and slack water. Vessels moor with ship's head 232°T, using both anchors to 8 or 9 shackles. 14 mooring lines are required to 4 buoys. There are two 10 in. and 8 in. floating hoses for loading crude oil. Loading rate 1,700 cu.m./hr. Deballasting facilities are installed.

Forbidden anchorage zone is the area limiting Lat. 52° 38' 30" S. and Long. 70° 11' 00" W., maintaining entrance heading of 331° on head of wharf.

DENSITY: 1025.

FRESH WATER: Only available at Punta Arenas Quay through hoses at a rate of 8 t.p.h. In case of emergency it can be delivered by vessel of the Chilean Army, if advance notice is given.

FUEL: Available ex-barge at Punta Arenas, capacity 300 tons (diesel). See "General" before first port.

FIRE PRECAUTIONS: Tankers are forbidden alongside at the quay.

CONSULS:

Argentine
Belgium
Brazil
Denmark
Germany
Netherlands
Sweden
United Kingdom
Yugoslavia

REPAIRS/DRY DOCKS: "Asmar" (Astilleros de la Armada) has a shipyard for small vessels up to 1,500 tons as well as a good workshop to effect floating repairs. Some marine spares can be obtained.

Asmar Ovalle Moore have a small dry dock, maximum capacity 4,000 short tons and 130 m. length.

GANGWAY/DECK WATCHMEN: Foreign vessels obliged to employ a watchman, except on Tanker Terminals.

OPENING/CLOSING HATCHES: Opening and closing of hatches and rigging of ship's gear undertaken by ship's crew.

CERTIFICATES: All International Certificates to be shown on arrival.
CUSTOMS ALLOWANCES: Quantity in possession of every member of the crew to be declared at the Customs.
REPATRIATION: Facilities for repatriation, subject permission of International Police (Extranjeria) and Maritime Authority.
AIRPORT: Distance to airport is 18 km. Daily flights from and to Santiago by two national airlines LAN and LADECO.
TIME: See "General" before first port.
HOLIDAYS: See "General" before first port.
POLICE/AMBULANCE/FIRE: Maritime Police Tel: 221001; Fire 221212; Ambulance 222432.
TELEPHONES: There is no connection on the quay. It is possible to make telephone calls from the ship by calling "Telco Radio" on VHF Channel 16 and changing to Channel 26. International calls may be made from public booths of the telephone company and Entel. Direct dialling possible to most countries.
SERVICES: Compass and gyro compass adjusting can be done.
SHORE LEAVE: Crew allowed to go ashore in all ports of the area. Crew must be in possession of provisional Identity Cards issued by police.
IDENTIFICATION CARDS: Chilean International Police (Extranjeria) provides a provisional card to stay in the country. It has to be held each time a member of the crew goes ashore.
DEVELOPMENTS: Berths No. 1 (North) and No. 1 (South) are being dredged to 33 ft.

SHIPMASTER'S REPORT: March 1985 (Research Ship) (Updated 1988).
Approaches and Pilotage: Report to Chilean Radio Station when 200 miles off.

Port and Strait Pilot compulsory. The Pilot, a Chilean Naval Officer, boards/leaves via a warship. The Pilot brings his own charts. We did not have a suitable chart of Bahia Cook. On a future visit one should be obtained for a safe approach.
Berths: Either side of a 380 m. long pier. There is a Berthing Pilot, and because of the prevailing very strong winds in the afternoon and evening it is customary to use a tug aft.

Punta Arenas is a busy port.
Officials: Extremely courteous. We were made to feel most welcome. The bond was not sealed. The Port Captain (Navy) visited the vessel on several occasions, and offered every assistance should any need arise.
Immigration: Shore passes are issued, and must be returned on sailing.
Fuel: Diesel was delivered by road wagon. This took most of the day, but saved having to shift the ship to the Oil Jetty – which would have taken all day.
Water: Laid on to the quay.
Provisions: 3 shipchandlers available.

Able to supply all our requirements, even to a medical oxygen bottle adaptor.

The quality of fresh fruit and vegetables was as good as U.K., in some cases better. Prices were similar. The chandler has a refrigerated store, thus items were delivered in prime condition. Even bananas lasted 2 weeks.
Prices: Unfortunately there is, at the moment, no Duty Free facility. In addition all items (and services) are subject to +20% VAT. This included fuel.
Laundry: Very good standard. Average price range (subject to the 20% VAT).
British Consul: Mr. Bill Matheson. Tel: 22325.
Repair Facilities: Not tried, but reported good.
Repatriation: No particular problems. There are flights daily. It is however a long haul back to the U.K., requiring a night stop over in Santiago.

The best hotel accommodation at Punta Arenas was very expensive. Alternative accommodation can be had at Mother Teresa's Home for Seamen at about £20 a night (but not usually single occupancy).

AUTHORITY: Maritime Governor of Punta Arenas.

AGENT: See "Valparaiso".

QUINTERO, including Puerto Ventanas:
32.47 S. 71.33 W. **(See Plan)**

PORT LIMITS: The seaward limit of the port is a line from Punta Liles to Punta Ventanilla.
DOCUMENTS:
1 Outwards Clearance Certificate from the last port of call.
5 Cargo Manifests for the port.
5 General Manifests for cargo.
5 Manifests for Cargo in transit.
4 Lists of Passengers for the port.
4 Lists of Passengers in transit.
10 Lists of Crew Members.
5 Lists of Personal Effects.
1 Fumigation Certificate.
1 Maritime Health Declaration.
1 Certificate of Dues in respect of lighthouses and buoys.

PILOTAGE: Pilotage is compulsory. Pilots and port officials board ships 2,450 m. off the R.P.C. Pier, bearing 290°, not far from the single Mooring Buoy, and 1,500 m. on 055° from the Los Molles Lighthouse.

The accommodation ladder should be rigged on the starboard side. Vessels can enter and moor during the day only, but it is possible to sail at night.

ETA should be sent to Agent 72 hours before arrival, with confirmation 24 hours before arrival. The message should state if any special service is required, and additionally Masters are requested to inform "Capuerto, Quintero".
ANCHORAGES: Vessels may anchor within port limits. The bay is well sheltered with ample room for manoeuvring. Vessels should keep clear of the S.W. portion of the bay, due to rocky nature of the bottom, and of the prohibited zone indicated on the charts. Larger vessels may anchor West of Punta Liles lighthouse, where there are depths greater than 20 m. with sand and mud bottom. An anchorage has been established at Lat. 32° 45.77' S., Long. 71° 30.5' W.

The anchorage at Ventanilla is an open roadstead, exposed to S.W. winds and swell, with the possibility of dragging anchors, especially in the Winter months.
RESTRICTIONS: Quintero Bay is entered between Point Ventanilla and Point Liles, entrance 2.5 miles wide, with a bight extending 1.5 miles towards the S.E. Point Liles is surrounded by submerged rocks and reefs for a distance of 2 cables.

Tankers discharging at the buoy terminals may be required to disconnect hoses in the event of bad weather, to avoid damage to the installation.

Also see "Pilotage".
MAX. SIZE: *S.B.M.:* Up to 120,000 g.r.t. (215,000 displacement tons).
Oil Multi-Buoy Terminal: Up to 50,000 g.r.t. (100,000 displacement tons).
Liquid Gas Multi-Buoy Terminal: Up to 30,000 g.r.t. (40,000 displacement tons).
Puerto Ventanas Quay: LOA 175 m., draft 32 ft.
Las Ventanas Chemical Terminal: Up to 40,000 g.r.t., max. draft 41 ft.
El Durazno Quay: LOA 96 m., draft 19 ft.
RADIO: The Naval Radio Station of Valparaiso also handles commercial traffic.

The Coastal Radio Service Station situated in the Port Captain's office, call sign "Capuerto Quintero".
TUGS: One tug available at Quintero, additional tugs can be requested from Valparaiso, or through Agent.
BULK HANDLING FACILITIES:
Puerto Ventanas (Private Port): See "Plan".
North Side:
Berth No. 1: Length 164 m.
Berth No. 3: Length 180 m.
Berth No. 5: Length 181 m.
South Side:
Berth No. 2: Length 364 m.
Operating Ship Features:

Berth No. 1:	
Length:	125.00 m.
Width:	20.00 m.
D.w.t.:	12,000 tons.
Draft:	8.00 m.
Deck to bow:	100.00 m.
Deck to stern:	25.00 m.
Berth No. 3:	
Length:	200.00 m.
Width:	31.00 m.
D.w.t.:	45,000 tons.
Draft:	11.50 m.
Deck to bow:	165.00 m.
Deck to stern:	35.00 m.
Berth No. 5:	
Length:	240.00 m.
Width:	35.00 m.
D.w.t.:	70,000 tons.
Draft:	14.00 m.
Deck to bow:	200.00 m.
Deck to stern:	40.00 m.
Berth No. 2:	
Length:	200.00 m.
Width:	32.00 m.
Maximum draft on Bollard 1:	6.40 m.
Maximum draft on Bollard 9:	9.30 m.
Maximum air draft on Bollard 11:	12.00 m.

Tugs: Vessels of less than 150 m. LOA require one tug for berthing and unberthing, and vessels over 150 m. LOA require 2 tugs (Port Regulations).
Mooring Buoys: Mooring buoys located 150 m. N.E. of Berth No. 1 for assisting with mooring and unmooring. Berth No. 2 also has a mooring buoy.
Mooring Lines: There must be at least 12 long lines available from the ship. The use of lines made entirely of wire is not acceptable.
Mooring Procedure: The following should be considered a minimum:

Berth No. 1:

Forward	4 long head lines 2 springs	Aft	4 long stern lines 2 springs 1 long line to buoy

The starboard anchor is used with 7.5 – 8 shackles in water.

Berth No. 3:

Forward	4 long head lines 2 springs	Aft	4 long stern lines 2 springs

The starboard anchor is used with 6.5 – 7 shackles in water.

Berth No. 5:

Forward	4 long head lines 2 springs	Aft	4 long stern lines 2 springs

The starboard anchor is used with 7.5 – 8 shackles in water.

Shifting Ship: On Berth No. 5, bulk carrier type ships may have to make some manoeuvres in order to adjust their holds to fixed type cranes when unloading. For this reason, the ship should berth according to a specific stowing plan as previously given by the Agent, with 2 or 3 hatchways available for each one of the two cranes to operate. In keeping with the above, he should reckon on a minimum number of moves or runs at any time during the operation, using his own deck equipment and moorings without the assistance of a Pilot or tug.

Due to the absence of mechanised unloading facilities on Berths No. 1 and 3, this type of operation is not called for.

On Berth No. 2, loading is carried out by means of a fixed mechanised system, requiring the ship to place each hold in front of the loading tower, changing its position every time to suit the previously established stowing plan.

Facilities: Puerto Ventanas has facilities such as water supply, electric power, compressed air, fuels and a stock of provisions. Lighterage and tugs services also available.

Reporting: The ship must report its position, course, speed, destination and ETA relative to the next port to "Directemar Valparaiso", via Playa Ancha Radio (CBV), at 0800 hrs. and 2000 hrs. on arrival in Chilean waters (Chile's territorial sea covers 200 miles as measured from the coast).

When ships are waiting, they must radio Port Quintero's Captaincy, by VHF Channel 16, in order to confirm their ETA.

Ballast: It should be remembered that according to recent regulations issued by the Maritime Authority, every ship from foreign ports is required to change its ballast water at least once before calling at Chilean ports, at a distance not less than 12 miles from the Chilean coast. This procedure should be recorded in the Engine Room Logbook, with indication of the latitude and longitude of the manoeuvre, amount of water replaced and total capacity of ballast tanks, as well as time and date when the operation was effected. This action is undertaken in view of the need to protect human lives from any risks relative to water ballast.

Notice of Arrival: Ships going to Puerto Ventanas must advise Ventanas Agent of their ETA at specified intervals, as instructed by the Charterer in the case of chartered ships.

24 hours prior to landfall, the Master must advise "Quintero Capuerto" of the following:

- Name and flag of ship.
- ETA.
- Number of passengers.
- Amount of dangerous cargo aboard.
- Sanitary status and draft.

The cable address is "Capuerto Quintero". All Masters are advised that fishing boats and other minor fishing vessels are usually found in Chilean waters.

Masters are required to give Puerto Ventanas Agent their Stowing Plans and estimated loading sequence. In the case of bulk ships, every effort must be made to restrict the number of manoeuvres of moored ships while unloading.

Mechanised Unloading System: Berth No. 5 operates a mechanised unloading system, while Berth No. 2 has a mechanised loading system.

Berth No. 5 System Features:

Unloading System:

Number of cranes:	2 units.
Lifting power:	30 tons.
Free digging bulk unloading capacity:	Over 750 ton/hr.
Maximum range from turning axle:	40.0 m.
Maximum range from dock's edge:	26.0 m.
Maximum lifting hook height over dock's level:	25.0 m.
Height of operator's cabin floor over dock's level:	23.2 m.
Maximum depth of bucket lower drop point below dock level:	18.0 m.
Total structure weight:	280 tons.
Total crane weight:	350 tons.
Accessories:	Spreaders for 20 ft. and 40 ft. containers. Double stock hook. 20 cu.m. and 8 cu.m. buckets.
Control system:	Automatic timing of motions at a variable pace, controlled by PLC.

Mechanised Transport System:

Transport load and direction:	Sea-to-land solids in bulk.
Designed capacity:	1,500 t.p.h.
Belt width:	42 in.
Belt velocity:	4.5 m./sec. and 2.2 m./sec.
Total length of transport system:	1,560 m. (approx.).
Stand-by equipment:	Magnetic separator roller sorter; two high precision scales on belt conveyor.
Control system:	Automatic control of start-up and fenders through PLC.

Sampling system features:

Designed capacity:	1,500 t.p.h.
Material:	Coal.
Humidity:	10%.
Size:	Less than 3 in.

Berth No. 2 Features:

Loading System:

Number:	1.
Type:	Fixed tower fitted with raising type derrick and telescopic chute.
Designed capacity:	1,000 t.p.h.

Mechanised Transport System:

Transport load and direction:	Land-to-sea, solids in bulk.
Total length:	572 m.
Belt width:	36 in.
Belt velocity:	2.36 m./sec.

Acid Loading System: There are sulfuric acid shipping facilities of 540 m. in length, operating on carbon steel pipes with a diameter of 16 in., permitting the shipment of 800 t.p.h. at Berths No. 1 and 2.

Pilotage: The Pilots based in Puerto Ventanas have powers granted by Chilean Law to operate at Bahia Quintero.

Prior to the Pilot's arrival, vessel must wait in the Waiting Zone, located 329°×1,800 m. from the Muelle ENAP Lighthouse, within a radius of 500 m. The vessel waiting for the Pilot to board must be on its course prior to his boarding.

The ship must have a ladder in compliance with SOLAS 74 Regulations. The ship is to be operated in such a way as to provide an adequate lee for the Pilot boarding.

The ship's Master or Agent must submit, well in advance, the reception application, by any means available. This application must include the ship's name, date, estimated time of arrival, as well as information on sanitary status and the presence or absence of sick persons aboard. Request for Pilot must also be included in this application, since its use is obligatory in the country's ports.

Ships of any nationality coming from abroad shall be received by the Maritime Authority and, if necessary, by Customs, International Police, Maritime Plant of Animal Sanitation authorities, as the case warrants.

Following reception formalities, the ship shall be granted Free Pratique, which is the permission given by the Maritime Authority for free access aboard for any persons, landing passengers or crew members, and loading or unloading work.

Approaching the Port: For the purpose of making landfall or setting sail from Bahia Quintero, there is a Maritime Traffic Separation Scheme (indicated on Charts No. 424 and 501, issued by the S.H.O.A.).

Port Limits: The port limit has been defined as a line connecting Punta Liles and Punta Ventanilla.

Documents: The following documentation is required in order to authorise a ship's arrival in Chile, to be submitted on forms provided by the Chilean Government or international type forms or typed on standard paper:

- 10 copies Cargo Manifest.
- 6 copies Crew List.
- 4 copies List of Passengers.
- 4 copies Crew Member's Personal Effects.
- 4 copies List of Supplies aboard.
- 3 copies General Delivery (mail).
- 3 copies List of Hazardous Goods aboard.
- 5 copies General Statement.
- 5 copies Arms and Ammunition.

The following will be inspected:

- Last Port Clearance.
- Crew Member's Passports or identification documents.
- Derat Certificate.
- Safety Construction Certificate.
- Safety Radio Certificate.
- Load Line Certificate.
- International Fumes Prevention Certificate.
- Ship Inspection.
- Fuel Record.
- Payment receipts for Lighthouse and Light Buoy Fees.

Watchman: As provided by Chilean Law, all ships must be assigned a watchman, who may be appointed by the ship's Agent on request.

Operator: Puerto Ventanas S.A.

Head Office: Casa Matriz, Isidora Goyenechea No. 2934, 7 Piso, Oficina 702, Las Condes, Santiago, Chile. Tel: 2320922. Fax: 2320923.

Port Office: Camino Costero s/n, Ventanas, Comuna de Puchuncavi V Region, Chile. Tel:(032) 930245, 930688, 932053. Fax: (032) 931189.

MEDICAL: There is a small local hospital,and there is an ambulance service to Valparaiso. (20 miles away).

TANKERS:

S.B.M. Quintero Terminal: The depth at the S.B.M. is 47 m. Max. size for berthing, length 342 m. draft 25.5 m. (83 ft.). Manifold connection is 16 in. Ship's derricks must be rigged to carry a 12 ton lift. Max. pressure 200 p.s.i. Average discharge rate 8,000 t.p.h. for 25 API crude.

Gas Berth: Max. size 15,000 tons or 40,000 displacement tons. Max. draft 39 ft. Vessels drop both anchors, and moor to 3 stern buoys. Ship's head should lie on 285°. Hose connection 6 in. Discharge rate 240 cu.m.p.h.

Vessels may moor or unmoor at any time at these terminals. Mooring warps must be more than 400 ft. in length.

R.P.C.: Max. draft 50 ft. Vessels berth to 3 stern buoys, using both anchors, ship's head on 305°. Manifold connection starboard side 10 in. Hose lift 6 tons. Normal pressure 100 p.s.i.

Also see "Shipmaster's Report".

FRESH WATER: Available by barge from Valparaiso. Fresh water available at Puerto Ventanas Quay by hose.

FUEL: Available at Puerto Ventanas Quay by truck. See "General" before first port.

CONSULS: Nearest at Valparaiso.

REPAIRS: Only minor repairs may be effected at workshops ashore.

REPATRIATION: Possible.

AIRPORT: Nearest commercial airports at Pudahuel and Cerrillos, near Santiago. Military airfield at Quintero may be used in emergencies, subject to necessary authorisation.

TIME: GMT minus 3 hours (October to March). GMT minus 4 hours (March to October).

SERVICES: Food, laundry, etc. can be supplied.

SHORE LEAVE: Curfew in operation. Crew must carry an Interpol Identity Card. See "General" before first port.

GENERAL: *Charts:* Chilean Charts: Issued by Servicio Hidrografico, Armada de Chile.

Chart No. 400: Coquimbo Harbour to Valparaiso Harbour.
Chart No. 501: Punta Pite to Punta Topocalma.
Chart No. 424: Quintero Harbour.
Publication No. 3001: Derrotero de las Costas de Chile.
Volume 1. From Arica to Canal de Chacao.

British Admiralty and U.S. Charts and Publications:

B.A. 1314: Ports and Anchorages on the Coast of Chile, including Puerto de Valparaiso, Bahia Conchali and Puerto de Los Vilos, Approaches to Valparaiso and Caleta Horcon and Bahia Quintero.

U.S. 22293: Publication South American Pilots.

SHIPMASTER'S REPORT: April 1988.

A tug was used to position the vessel when berthing. 2×8 in. hoses were connected on the port side. We were nominated to load fuel oil and had to accept a 500 cu.m. line plug of crude before loading. This was discharged after the loading was completed. Terminal would not accept any dirty ballast or slops.

The following moorings were used:
Starboard anchor – 8 shackles
Port anchor – 9 shackles
Port quarter buoy – 2 lines (90 m.)
Stern buoy – 2 lines (100 m.)
Starboard quarter buoy – 3 lines (90 m.)
Port bow – 1 shore wire
Starboard bow – 1 shore wire

Ship's head in berth 305°. The pilot comes in either a small blue launch or a larger orange boat, depending on which agency is used.

Cargo details: No. 6 F/O API 13.0 temperature 130°F. Loading rate about 900 cu.m.p.h.

Due to the swell a vessel may roll heavily on leaving the berth and when at anchor.

Port officials board with the pilot. The Oil Record Book is inspected. The Port Captain requires to know to what percent capacity is the vessel bunkered and the steaming range with that amount of fuel.

AUTHORITY: Quintero Port Captaincy.

Terminal Operator: Refineria de Petroleo Con Con (R.P.C.), Puerto Ventanas S.A., Andean Mineral Company (Andina), Las Ventanas Chemical Terminal.

AGENT: See "Valparaiso".

SAN ANTONIO: 33.35 S. 71.37 W. (See Plan)

DOCUMENTS:
1 Customs Clearance Document.
2 Light Dues Certificates.
9 Cargo Manifests.
2 Crew Lists.
2 Passenger Lists.
2 Lists of Stores.
1 Arms and Ammunition List.
1 List of Personal Effects.
2 Baggage Declarations per passenger.
1 Derat Certificate.
List of Equipment.
Lifesaving Equipment Certificate.
Tonnage Certificate.
Radio Certificate.
Crew Vaccination Certificates.

PILOTAGE: Compulsory. Pilots board vessels about 1 mile outside the port. Vessels should wait for Pilot with engines stopped in position bearing 060° and 1 mile from Panul Lighthouse.

ANCHORAGES: Vessels must anchor in position 090° and 1.3 miles from the edge of the South Breakwater in 28 m. of water. The bottom is sand and mud, permitting anchorage of vessels of any length or draft.

Mooring Buoys: In the North Basin is located Buoy No. 1, situated 85° and 180 m. from the head of the Maritime Control Quay, which can be used for vessels up to 210 m. LOA, draft 36 ft. and 55,000 d.w.tonnes.

There is also Buoy Location No. 2, which permits transfer of bulk liquids from vessels of 190 m. LOA, draft 33 ft. and 40,000 d.w.tonnes.

RESTRICTIONS: No restriction on vessels of less than 210 m. LOA.

From September to March the predominant winds are from S.W.Fog is most frequent in March and April.

MAX. SIZE:

Berth	*Max. Length* (m.)	*Depth* (ft.)
No. 4/5	341	33
No. 6/7	320	28/24
North Quay	200	35
Buoy No. 1	Max. displacement 55,000 tonnes	
Buoy No. 2	Max. displacement 50,000 tonnes	

Vessels intending to discharge are authorised 1 ft. more draft at all Berths, with the proviso that they must berth within 2 hours before high tide, up to 2 hours after high tide, and commence discharge immediately.

RADIO:

Station Call Sign: San Antonio CB2. *Category:* (S)

Frequency	*Type*	*Receives*	*Transmits*	*Schedule*
2 MHz	A 3	2182	2182	24 hours
		2738	2738	As required
4 MHz	A 3	4143.6	4143.6	As required

However, it is advisable to use Radio Playa Ancha, Valparaiso, which is connected by telex with San Antonio.

Port Control can be contacted by VHF on Channel 16, 24 hours a day.

TUGS: 3 modern tugs, 1,000 h.p., 1,250 h.p. and 2,450 h.p.

BERTHING: San Antonio has 4 operational piers, 1 private quay (North Quay) and 2 mooring buoys.

All the piers have double strong fenders.

Berth Usage: Berth Nos. 4 and 5 are used preferably for container vessels, bulk grain carriers and larger sized ships in general.

Buoy No. 2: For transfer of containers, there is a mobile crane type 'Demag MC900' of 50 tons lifting capacity available.

In the open area of Berths No. 4 and 5, it is possible to store 1,175 TEU simultaneously plus 486 TEU in pre-stacking, there being also a zone for reefer containers with a capacity of 96 TEU.

In the port there are 15,800 sq.m. of covered areas intended for cargo warehousing, and 120,395 sq.m. of open areas.

The private companies entrusted with stevedoring within the port have the necessary equipment for this work, there also being equipment owned by Port Administration which can provide a minimum service.

Note: Berths No. 2 and 3 damaged by earthquake.

Fumigation: When vessels are required to be fumigated due to Chilean health restrictions, they must be towed to Buoy No. 2 where the treatment is appropriately carried out. In general, this takes 72 hours, during which time only a security guard may remain on board. It is recommended that these vessels arrive equipped with high resistance ropes.

Policarpo Toro Quay: Length 70 m. For vessels of 200 ft. LOA and draft not exceeding 33 ft. discharging bulk liquids. Hoses and pipelines and 4 mooring bollards available.

Also see "Developments".

CRANES:
Berth No. 4: 1 × 5 ton, 2 × 7.5 ton.
Berth No. 5: 2 × 6 ton, 1 × 5 ton.
Berth No. 6: 2 × 5 ton.} can be used at
Berth No. 7: 2 × 5 ton.} Berths No. 6 or 7.

The North Quay has mechanical plant for discharge of bulk cargo.

STEVEDORES: There are various stevedoring contractors who between them have some 2,400 workers specialised in the various port and maritime operations (dockers, shipboard workers, watchmen, deckhands, tallymen, crane operators, etc.). The contractors have equipment for all kinds of work, including 2 fork lifts (Hyster & Taylor) with spreaders for 20 ft., 35 ft. and 40 ft. containers, industrial tractors, lorries, etc. The work timetable for the port is from 0800 hrs. to 0630 hrs. the next day (i.e. 22.5 hours a day).

Average cargo handling rates per gang:
Copper: 120 t.p.h. per shift.
Copper concentrate: 550 t.p.h. per shift.
Wheat pellets: 300 t.p.h. per shift.
General cargo: 30 – 40 t.p.h. per shift.
Containers: 14 – 16 TEU/hour per shift.
Bulk salt: 100 – 120 t.p.h. per shift.
Drums: 35 – 40 t.p.h. per shift.

MEDICAL: Hospital with 190 beds and necessary surgeons. 3 clinics with 40 beds for minor surgery.

TANKERS: Oil products can be transferred at North Quay, Berth Buoy No. 2 and Berths No. 5 and 6. From North Quay, cargo is transferred to the terminal owned by Liquidos a Granel who have tanks with a total capacity of 25,360 cu.m.

At Berth Buoy No. 2 liquids can be transferred to Terquim who have tanks with a storage capacity of 12,830 cu.m.

Berths No. 5 and 6, as with the above locations, have facilities for transfer of liquid products to the Esso terminals, where there is a maximum storage capacity of 19,780 cu.m.

FRESH WATER: All berths equipped with standpipes to supply fresh water direct to vessels at a rate of about 20 t.p.h.

FUEL: Marine diesel oil can be supplied to vessels, provided this is requested with sufficient advance notice.

Also see "General" before first port.

CONSULS: Italy.

REPAIRS: Three workshops for minor repairs. Major repairs in Valparaiso.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: Done by stevedores.

REPATRIATION: Facilities exist.

AIRPORT: At Arturo Merino Benitez Airport near Santiago only 2 hours away by road. National and foreign airline services to world-wide destinations.

TIME: Local time GMT minus 4 hours; October to March (Daylight Saving) GMT minus 3 hours.

SHORE LEAVE: Allowed. Also see "General" before first port.

IDENTIFICATION CARDS: Required.

DEVELOPMENTS: A new berth with depth alongside 33 ft. for handling solid bulk cargoes is under consideration.

AUTHORITY: Empresa Portuaria de Chile, Casilla 163-A, San Antonio, Chile. *Tel:* (035) 32159. *Telex:* 238505 Empor CL. *FAX:* (035) 32114.
Contact: Patricio Toro Ferrari, Port Director.

AGENT: See "Valapraiso".

SAN VICENTE: 36.44 S. 73.08 W. (See Plan)

Also see "General" before first port.

PORT LIMITS: East of meridian from Punta Pardo and South of parallel from Punta Gualpen.

DOCUMENTS: See "General" before first port and "Valparaiso – Documents".

PILOTAGE: Compulsory. Pilot boards inside the port limits. Pilot will designate anchorage. Accommodation ladder must be rigged if the vessel is at anchor awaiting berth as the Port Authorities will board. Pilots are arranged by Agent.

RESTRICTIONS: Berthing or unberthing from 0000 hrs. to 2400 hrs. weather permitting. For tankers, daylight only.

MAX. SIZE: Draft only restrictions, can berth ships greater than 200 m. LOA and 42 ft. draft.

HEALTH: Port Authorities give Pratique on arrival.

RADIO: Radio Estacion Naval Talcahuano. 500 kHz. A-1 H-24.
Costera Talcahuano 2182 A-3 H-24.
Radio Estacion Naval Valparaiso. A-1 and A-3 all frequencies H-24.

VHF: Channel 16 safety and calling.

TUGS: 4 privately owned tugs ranging from 2,800 h.p. – 4,200 h.p.

BERTHING: *CAP Pier:* North, length 240 m. draft 32 ft. 06 in. at any time; South, length 200 m. draft 26 ft. at any time.

San Vicente General Cargo Berth: Total length 603 m.

Berth No. 1: Draft 37 ft. at any time, ships' own gear.

Berth No. 2: Draft 37 ft. at any time, 1 crane and 1 unloading tower with a rate of 200 t.p.h. for bulk cargoes. Ship's own gear used for general cargo.

Berth No. 3: Draft 39 ft. at any time. For tankers loading bulk liquids and oil.

Comap Berth "A": Vessel moors with starboard anchor with 7 shackles and 3 lines to 2 buoys astern. Max. LOA 150 m. 1 hose with 8 in. connection on port side midships. Gasoline, kerosene, diesel oil and jet fuel handled. 1 tug and 1 mooring launch available.

ENAP Berth "B": Vessel moors with 2 anchors with 8 shackles on starboard, and 3 lines to 3 buoys astern. Max. LOA 250 m. or up 42 ft. draft. 1 tug and 2 mooring launches required. 1 hose with 18 in. connection for crude and fuel oil. Handling rate 1,500 cu.m.p.h.

ENAP Berth "C": Vessel moors with both anchors, using 8 shackles starboard side, and 3 lines to 3 buoys astern. Max. LOA 200 m. and 36 ft. draft. 1 tug and 1 mooring launch required. 2 hoses with 12 in. and 16 in. connections, 1 for fuel oil rate 900 cu.m.p.h. can also be used for crude. 1 hose for gasoline, kerosene, turbo, diesel and liquid gas.

STEVEDORES: Through Agents. Stevedores available 24 hours.

Working Hours:
1st shift: 0800 – 1530 hrs.
2nd shift: 1530 – 2300 hrs.
3rd shift: 2300 – 0630 hrs.

MEDICAL: Good hospitals, no special notice required.

DENSITY: Salt water.

FRESH WATER: Available at all piers.

FUEL: Diesel available by truck.

CONSULS:
Argentina
Belgium
Bolivia
Colombia
Ecuador
France
Germany
Italy
Netherlands
Norway
Paraguay
Peru
Spain
Sweden
United Kingdom.

REPAIRS: Deck and Engine workshops.

DRY DOCKS: ASMAR for large vessels.

SURVEYORS: Lloyds, N.V., B.V., N.K.K., A.B.S., G.L.

WATCHMEN: Gangway watchmen compulsory. Deck or Hatch watchmen optional.

HATCHES: Open and closed by riggers gangs.

CARGO GEAR: Ship's gear. 1 crane for bulk cargoes, rate 200 t.p.h. Heavy lift crane with 50 tons capacity.

REPATRIATION: There are facilities for crew changes.

AIRPORT: One airport for internal flights.

POLICE/AMBULANCE/FIRE: Available in the port.

IDENTIFICATION CARDS: Immigration provide identification cards.

SHIPMASTER'S REPORT: 1977 (Updated 1990).

Documents:

Customs:
- 2 copies List of Ammunition.
- 7 copies Cargo Manifest.
- 4 copies Stores List.
- 4 copies Personal Effects List.
- 4 copies Crew List.
- 4 copies Passenger List (or negative).

Port Captain:
- Clearance from Last Port.
- 2 copies Crew List.
- 2 copies Passenger List (or negative).
- International Certificates.

Police:
- 2 copies Crew List.
- 2 copies Passenger List (or negative).

Health Inspector:
- 1 copy Declaration of Health.
- 1 copy Vaccination List.
- 1 copy Passenger List (or negative).

Agent:
- 1 copy Crew List.
- 2 copies Passenger List (or negative).
- 2 copies Stores List.
- 2 copies Personal Effects List.

Navigation: Bay of San Vicente is entered between rock "Villa de Burdeos" and "Point Gualpen".

There is a traffic route for vessels leaving and entering Bay San Vicente. The separation zone bounded by lines connecting the following geographical positions: 73° 10.7' W., 73° 10.6' W. and 73° 09.7' W., 73° 09.8' W. Vessels inbound should keep close South of this separation zone and vessels outbound close North of the separation zone.

In the traffic route, Pilot boarding position and the anchorage, the depth is 36 ft. Maximum permissible draft is 38 ft.

The wreck in position Lat. 36° 44.3' S., Long. 73° 08.6' W. has been removed.

The present breakwater is under extension to 800 m.

Pilot: Pilotage is compulsory and the boarding position is about Lat. 36° 44.7' S., Long. 73° 09.8' W. in Bay San Vicente, or 1 mile S.W. of rock "Villa de Burdeos" Gp. Fl. (2) 10 secs.

Anchorage: The anchorage is about 900 m. East of rock "Villa de Burdeos". The Pilot anchors the vessel.

Radio: Advance notice: Vessels bound for San Vicente must advise Port Captain by radio 24 hours before arrival giving information about ETA, draft, if vessel carries passengers or mail, and state of health on board. Cable address: "Maritgob Talcahuano".

Also ETA to Pilot Station, VHF Channel 16, 1 hour prior to arrival. Pilot station's name is "Gobernacion Maritima Talcahuano" or Capitania de Puerto de San Vicente.

Tugs: At present there are 2 tugs (1,200 h.p.) in operation. Tugs use ship's lines.

Pilot is in VHF contact with the tug(s) which assists in mooring and unmooring vessels.

Mooring Method: Vessel approaches and enters the berth from South. Mooring and unmooring may take place also during hours of darkness, provided weather conditions are fair and visibility good.

When the vessel is near the berth, port anchor is usually let go and dragged or paid-out while a tug slowly pushes the vessel alongside.

The vessel is moored with 4 headlines and 2 springs forward and 4 sternlines and 2 springs aft.

Wharves: The pier is 435 m. long and is provided with rubber fenders. A new pier 110 m. long is under construction. Depth alongside the pier is 34 ft. to 36 ft.

There are 2 cranes on the pier for grain or other bulk cargoes. Each has a capacity of 240 m.t.p.h. (grain).

Behind the pier is 41,975 sq.m. for log storage. There are railway tracks on the pier and the log deposit area. Logs are brought in by railway wagons.

Stevedores: Stevedores work in 3 shifts of 8 hours each.

Logs are loaded with ship's gear and at present the capacity is max. 60 cu.m. per log-gang per hour. Stevedores working rather slowly but make very good stowage.

Medical: There is an ambulance station just outside the pier gate and good hospital facilities near the port.

Supply Service: Bunkers, provision, fresh water and laundry are available.

Shore Leave: All Crew members are issued with landing permit/identification card, which has to be returned before departure.

Time: Local time is GMT minus 4 hours but from second Saturday in October to second Saturday in March GMT minus 3 hours.

Weather and Tide: During Summer the prevailing wind is Southwesterly. In the Winter and specially in the months May to August, the winds are North and Northwesterly.

In general, the weather throughout the year is good, sometimes however, during Wintertime with a Northwesterly wind, weather may become too rough for cargo operations due to the swell and the vessel's heavy movements. In this case the Port Authorities may order the vessel to leave the pier and shift to the anchorage, however that is a rare occurrence.

Tidal difference is 1.80 m. in Syzygies.

Advice: All store rooms on deck and in the accommodation should be locked. Crew members should lock their doors, even if they are leaving their cabins for a short period.

Crew members should also take care not to walk alone during late night time near or around the harbour area.

SHIPMASTER'S REPORT: December 1991.

Vessel: LOA 265 m. 115,000 d.w.t.

Operation: STS Transfer.

Vessel anchored on arrival under pilotage in Concepcion Bay (Position Lat. 36° 40' S., Long. 73° 01' W.) with starboard anchor, 8 shackles in the water.

1st Lightering into "Cabo Pilar":

After clearance of vessel by Port Authorities, the first lightering vessel "Cabo Pilar" commenced approach under pilotage and with assistance of 2 tugs. One tug made fast centre forward and one centre aft.

Lightering vessel paralleled our vessel at approximately 100 m. distance. Lightering vessel equipped with 3 main fenders and moorings of fenders transferred to our vessel after completion of mooring operations.

Both tugs kept lightering vessel in position.

Lightering vessel alongside our vessel by means of heaving ropes (forward rope, aft rope and aft spring) and our vessel heading 195°.

Weather conditions were fine (no swell, wind Southwesterly, Force 2). First mooring lines: Forward rope, aft spring followed by aft rope. Lightering vessel finally secured with forward: 3 soft breast lines; 1 forward rope leading to aft and 1 soft spring. Aft: Double soft spring and 3 soft stern lines.

All mooring lines polypropylene and all except one stern line secured on bitts.

Two mooring launches (1 forward and 1 aft) used and only some spring lines by means of heaving lines.

Discharge hoses (2×8 in. diameter) connected by shore gang (4 men) using nuts and bolts and port derrick/crane of our vessel. Max. cargo transfer rate 5,000 cu.m./hr. permitted by "Cabo Pilar".

Prior to approach, 2 independent cargo surveyors and a Loading Master came on board our vessel. Hose connecting personnel on board during all cargo operations.

Good accommodation/meals required to satisfy shore personnel. The Loading Master advised Pilot on "Cabo Pilar" for final position alongside our vessel.

Lightering vessel only used common safety check list, however the rendered STS safety check list from our vessel signed and applied to.

Radio contact between vessels by means of handy talky.

VHF contact prior to and during mooring/unmooring operations via VHF with lightering vessel.

Usual time required for approach, mooring, unmooring, loading cargo surveys, connecting/disconnecting, etc.

Unmooring operations after cargo survey on board both vessels completed and cargo transferred figures compared as per Customs Regulations.

Unmooring of "Cabo Pilar" under pilotage and using one tug forward in centre. Singled up to spring aft, a stern line and the forward rope leading to aft. After which ropes let go in sequence as follows: Stern line, spring aft and forward line.

After completion of cargo transfer, cargo hoses left on board our vessel.

2nd Lightering into OBO "Makedonia Star":

Our vessel heading 240°, wind W.S.W.'ly, Force 4, no swell. "Makedonia Star" using pilots, tugs, approach similar to "Cabo Pilar".

Prior to approach, same shore personnel on board our vessel.

Sequence of mooring lines:

Forward:	Aft:
Forward Rope	Aft Spring
Forward Spring	Aft Rope

Ship heaved into final position alongside our vessel.

Total mooring lines, all soft and propylene and all secured on bits: Forward: 4 head lines and double spring, all from forecastle of "Makedonia Star".

Aft: 4 stern lines and double spring, all from poopdeck of "Makedonia Star".

During cargo transfer, moorings of fenders transferred to "Makedonia Star".

After completion, discharge hoses disconnected and transferred to "Makedonia Star".

Safety check list and cargo transfer of 2 different grades (1 by 1) as per "Cabo Pilar".

Max. allowed cargo transfer rate 4,000 cu.m./hr.

Cargo transfer, mooring/unmooring operations as per "Cabo Pilar".

Local information received from agency on arrival: "Cabo Pilar" (d.w.t. 68,932) length 250 m. and "Makedonia Star" length 238 m.

Local information from Loading Master: Usual lightering only by "Makedonia Star", and 3 transfers required.

Turnaround of this vessel for discharge at San Vicente approximately 24 hours.

Mooring, unmooring and lightering operations only in daylight.

At approximately 1600 hrs. daily, wind increased to Force 4 to 5, and during the night decreased to Force 2 (S.W.'ly).

General Port Information:

Shore leave by means of launch permitted (40 minutes).

Shore passes in use.

Same launches used for supply of all provisions, stores, etc.

Fresh and other provisions, stores/spares available locally and reasonable prices/good quality.

Bonded beer and bonded cigarettes very expensive.

Good laundry services available.

24 hour agency via VHF Channels 16 and 62.

Embarkation/disembarkation of ship's personnel permitted. Concepcion Airport approximately 1 hour from Talcahuano, with flight connections to Santiago Airport.

Ultramar Agency provided very good local services. Cash deliveries to be ordered in advance. Customs will seal bonded store on arrival. Dentist and doctor in Concepcion.

AUTHORITY: Armada de Chile, Dirrecion Del Litoral y M.M., Gobernacion Maritima, Blanco No. 475, Talcahuano. *Contact:* Captain Cesar Moreno Poblete, Maritime Governor.

Empresa Portuaria de Chile, Blanco Avda. No. 839, Valparaiso. *Tel:* (032) 257167. *Telex:* 230313. *FAX:* 259937. *Contact:* Raul Urzua Marambio, Director General.

TALCAHUANO (including Concepcion Bay):

36.41 S. 73.06 W. **(See Plan)**

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory. Pilot boards 3 cables off Belen Lighthouse.

ANCHORAGES:

Anchorage Positions:

(1) Lat. 36° 42' 00" S., Long. 73° 05' 14" W.
(2) Lat. 36° 42' 00" S., Long. 73° 04' 51" W.
(3) Lat. 36° 42' 18" S., Long. 73° 04' 51" W.
(4) Lat. 36° 42' 18" S., Long. 73° 05' 14" W.

Explosives Buoy: Lat. 36° 06' S., Long. 73° 05' 14" W.

Quarantine Anchorage: Vessels in quarantine must anchor 182° from Belen Lighthouse and 7 cables off.

Vessels that transport explosives are anchored in the same direction but 9 cables from Belen Lighthouse.

RESTRICTIONS: Port works 24 hours. Only 6 vessels can moor alongside quay at one time.

MAX. SIZE: Vessel that arrives with a draft of 29 ft. and length 180 m. can dock on the East side of the Government Pier.

RADIO: Talcahuano Radio, call sign CBT-4 (Category S).

Frequency MHz	*Type*	*Receives* kHz	*Transmits* kHz	*Remarks*
5	A-1	500	500	24 hours
5	A-1	512	512	Working frequency
2	A3J	2182	2182	24 hours
4	A3J	4043.6	4143.6	Vessel request
	A3J	4063.0	4357.4	
	A3J	4125.0	4419.4	
6	A3J	6218.6	6218.6	

TUGS: 3×1,580 h.p.

The shipyard (Asmar) has 3 tugs; 2×285 h.p. and 1×1,000 h.p.

BERTHING: *Talcahuano General Cargo Government Pier (Emporchi):* Berth No. 1 – Length 155 m. Berth No. 2 – Length 205 m.

Berth No. 1 – Max. draft 29 ft., Max. LOA 180 m. Berth No. 2 – Max. draft 22 ft. Max. LOA 100 m.

Mole 500: (Naval base) Max. length 230 m., max. draft 27 ft.

Vessels moor with 4 head lines, 4 stern lines and 2 springs. Loading and discharging by ship's gear.

Passenger Mole: At a distance of 80 m. from the Fiscal Quay and on the Blanco Encalada Mole is the Passenger Pier with concrete steps for passenger traffic.

Chacabuco Quay: Situated in the Inner Harbour for repairs. Vessels up to 21 ft. draft can moor. No railway line or cranes, therefore vessels must work with own derricks to vans. "Asmar" tugs are used for mooring.

Concepcion Bay: Penco Private Pier: The pier is 1700 m. long ending in a platform on which stands a fixed base rotary crane. Vessel's bows lie on 348°T, both anchors used to final shackle. There are 4 buoys, 1 on each bow, 1 astern, and 1 on the starboard quarter. Vessels also tie up to 3 dolphins on the East side of the pier. 12×600 ft. mooring lines are required and also 2 springs. A tug is required. The berth is exposed to strong Northerly winds, and vessels must be prepared to leave at short notice.

Max. draft 33 ft. There are 2 sea-going tugs for docking and undocking. Also see "Lirquen".

CRANES: 4 × 5 ton Portal crane on the Fiscal Pier. One floating crane 180 tons. One mobile crane 30 tons.

STEVEDORES: 12 gangs available. Loading: assorted goods 12 t.p.h./gang/hatch. Cereals 25 t.p.h./gang/hatch. Timber 100 t.p.h./gang/hatch. Newsprint 20 t.p.h./gang/hatch.

Discharge: assorted goods 12 t.p.h./gang/hatch. Bagged cargo 25 t.p.h./gang/hatch.

When loading is carried out by means of lighters, this is usually done from privately owned moles belonging to the principal commercial firms of the port from their warehouses situated inside the Morro Channel. Working hours are 0800 – 1530 hrs., 1530 – 2300 hrs. and 2300 – 0630 hrs. Also see "General" before first port.

MEDICAL: Public hospital with board and sanatorium for infectious/contagious diseases. In addition, private clinics and a naval hospital.

FRESH WATER: Available at Berths No. 1 and No. 2.

FUEL: Can be supplied only to vessels moored alongside quay and this in small quantities up to 100 tons, by means of cistern-truck or in drums.

A fuel line is laid to Berth No. 2, for supply to fishing vessels only, but commercial vessels in the future.

Fuel suppliers are Esso, Shell, Copec, Comar and Sunoco. Also see "General" before first port.

CONSULS: Brazilian and Norwegian consulates. At Concepcion the following:

Argentina
Belgium
Bolivia
Colombia
Denmark
Ecuador
El Salvador
Finland
France
Guatemala
Germany
Honduras
Italy
Mexico
Netherlands
Paraguay
Panama
Peru
Sweden
Switzerland
Spain
U.K.
Uruguay
Venezuela

REPAIRS: "Asmar" or the navy workshop has capable personnel and modern equipment to effect all kinds of repairs, not only to hull, but also to engines, boiler plates, welding, carpentry and electrical works. Chilean Navy has high-sea tugs to effect salvage and assist vessels in danger. 3 private-owned workshops, which can effect small repairs to vessels afloat. Several slipways for construction and repair of small craft.

DRY DOCKS: Naval shipyard and workshops have 2 dry docks, Dock number 1 is 180 m. long by 30 m. wide. Dock number 2 is 250 m. long by 40 m. wide.

Two floating docks: one 200 ft. long by 30 ft. wide for vessels up to 1,000 tons, and the other 333 ft. long by 50 ft. wide for vessels up to 3,500 tons. There is also a workshop for repairs to be effected afloat. There are 6 anchored mooring buoys used by vessels when entering Dry Dock 2.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: By stevedores.

REPATRIATION: Good facilities exist.

AIRPORT: Carriel-Sur is situated between Talcahuano and Concepcion, 7 km. N.W. of Concepcion. Lan-Chile has connections from this airport with all the towns of the country from Arica to Punta Arenas and abroad.

TIME: GMT minus 4 hours. Also see "General" before first port.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

GENERAL: South wind affects vessels only when moored outside the port zone. Weather signals are indicated on Signal Station of Port Authorities' Building.

Climate: Temperate.

Predominant Wind: South – West at 26 knots.

Rainfall: 736 mm. per year.

Temperature: Average maximum 16°C, average minimum 7° C.

AUTHORITY: Empresa Portuaria de Chile, Blanco Avda. No. 839, Valparaiso. *Tel:* (032) 257167. *Telex:* 230313. *FAX:* 259937. *Contact:* Raul Urzua Marambio, Director General.

Talcahuano/San Vicente Ports: Empresa Portuaria de Chile, Avda. Latorre No. 1590, Talcahuano. P.O. Box No. 265, Talcahuano. *Tel:* (041) 542249. *Telex:* 260095. *FAX:* (041) 541807. *Contact:* Alberto Arismendi Torres, Administrator.

AGENT: See "Valparaiso".

TALTAL: 25.24 S. 70.29 W. (See Plan)

DOCUMENTS: See "General" before first port.
PILOTAGE: No official Pilot Station at Taltal. If professional assistance required vessel should give ETA 24 hours in advance via Valparaiso Radio. Pilot boards at the anchorage. International code signals used. Harbour Master's Office can be contacted by radio-telephone on 2182 kHz.
ANCHORAGES: Sheltered deep-water anchorage suitable for any size vessels. Locations of designated areas marked on the chart.
RESTRICTIONS: Port closed in Summer from 2000 hrs. to 0600 hrs.; in Winter from 1900 hrs. to 0700 hrs.
MAX. SIZE: Limited only by depths in anchorage.
HEALTH: Vessel boarded on arrival by Health Inspector.
RADIO: Radio Naval Valparaiso or Radio Naval Arica. Use R/T on 2182 kHz. and 2738 kHz. A3 on the half hour from 0800 hrs. to 1800 hrs.
TUGS: One privately owned tug may be called on to assist if necessary.
BERTHING: No berths alongside shore. Vessels work cargo in open anchorage. One buoy berth for tankers. Mooring, unmooring in daylight only. 6 in. hoses for discharging fuel and diesel.
STEVEDORES: At least 24 hours advance notice of ETA required to arrange gangs. Also see "General" before first port.
MEDICAL: Doctors and hospital facilities available. Advance notice desirable.
TANKERS: *Caleta Ossa Mooring Berth:* Vessels berth to 2 stern buoys, using both anchors. Ship's head on approximately 225°T. Depth of water 47 ft. A Pilot is required and comes from Antofagasta.
FRESH WATER: Not available.
FUEL: Not available.
CONSULS: There are no local representatives.
REPATRIATION: No facilities for crew change or repatriation.
AIRPORT: There is no airport.
TIME: GMT minus 4 hours. Also see "General" before first port.
HOLIDAYS: See "General" before first port.
TELEPHONES: There is a telephone service.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required by all crew members.
AUTHORITY: Capitania de Puerto, Taltal, Chile. *Contact:* Luis Alegre Lepe, Capitan de Puerto.

TOCOPILLA: 22.05 S. 70.11 W. (See Plan)

PORT LIMITS: All vessels have to tender Notice of Readiness on arrival and during office hours. All port limits in accordance with Charter Party. Other considerations are Port Regulations Orders dated 7th November 1991 which state that all vessels proceeding from foreign countries to Tocopilla in full ballast must change ballast during navigation at a distance not less than 12 nautical miles from the coast. This situation must be registered in the logbook of the bridge and engine room, detailing place, date and volume. This will be required by the Port Authority.

The port limits are the area of meridian tangental to Algondonales Point, East of Latitude 22° 04' 30" S.

DOCUMENTS: All vessels have to tender to the Port Authority the following documents to ensure speedy Free Pratique:

5 copies Crew List.
3 copies Passenger List.
3 copies Stores List.
3 copies Personal Effects List.
3 copies Cargo Manifest.
Derat Certificate.
Health Certificate.
Tonnage Certificate (Convention 1969).
Safety Radio Certificate.
OIPP Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Certificate and Arrival conditions.

Also see "General" before first port.

PILOTAGE: Compulsory. Pilot will board between 0700 hrs. until dusk for mooring. For unmooring, any time of day and night for SIT Terminals only. For Central Termoelectrica "Tocopilla" Pier – mooring/unmooring at any time.

The Pilot calls on VHF Channel 16 or 6, when vessel is at the Pilot Anchorage Point, and Tocopilla Radio stands by on VHF Channel 16.

ANCHORAGE: See "Pilotage" and "Mooring".
MAX. SIZE: *SIT Terminals:* Buoy SIT 1: Max. length 200 m. Max. draft 45 m. Displacement 23,000 tons.
Buoy SIT 11: Max length 200 m. Max. draft 45 ft. Displacement 23,000 tons.
Mechanical Plant SIT: Max. length 200 m. Max. displacement 50,000 tons. Minimum airdraft 10.5 m., max. draft (depth) 11.0 m.
Central Termoelectrica Tocopilla S.A. Pier (Ex-Codelco): Max. length 234 m., max. draft 13.5 m., displacement 80,000 tons.
HEALTH: On arrival vessel boarded by Sanitary surgeon or Maritime Sanitary Inspector, who will grant the Sanitary Pratique valid for all Chilean ports of call in the present voyage.
RADIO: All calls should be directed via Arica, Iquique, Antofagasta or Playa Ancha (Valparaiso) Naval Radio Stations. According to Chilean Regulations all vessels in Chilean coastal waters (within 200 miles) must inform position, course, speed and previous and next port of call to Radio Naval Valparaiso to the nearest Coast Guard at 0800 hrs. and 2000 hrs. every day whilst at sea.

Valparaiso "CBU" listen on 4349 kHz or 8748 kHz or 12714 kHz.

Also see "General" before first port.

VHF: Tocopilla Radio (CBA-21) on VHF Channel 16.
TUGS: It is compulsory to use a tug for mooring and unmooring.
BERTHING: *Mooring at SIT Terminals:* The port has 2 buoys for mooring vessels of any tonnage and which are used exclusively by ships discharging or loading general cargo and bagged nitrate/fishmeal. The depth of these moorings is 15 m. – 30 m.

The Mechanical Plant Terminal for loading bulk/bagged cargo has a permissible airdraft of 10.5 m. and depth 11.0 m. The permissible length is 200 m. and max. displacement 50,000 tons.

Central Termoelectrica Tocopilla Pier (Ex-Codelco): For discharging bulk cargo, bunkers, containers, heavy pieces of machinery, any loading bagged cargoes and containers. Draft 13.5 m., length 234 m, breadth 32.4 m. and max. displacement 80,000 tons.

Also see "Bulk Cargo Facilities" and "Tankers".

CRANES: The Central Termoelectrica Tocopilla S.A. Pier has 2 cranes and a lifting capacity of 30 tons at a distance of 40 m. each. They are specially for bulk cargoes, containers and heavy pieces of machinery. Discharge rate is 750 t.p.h. each for bulk cargoes.

Pier No. 5 – SIT has 3 cranes for loading bagged nitrate, fishmeal, bulk cargoes and general cargo, with capacity of 5 tons for 2 cranes and 2 tons for the other crane. Rate is about 150 t.p.h. to loading barges.

BULK CARGO FACILITIES: This port is specially for discharge and loading of bulk cargo.

Mechanical Plant Terminal – Loading rate: Nitrate 1,000 t.p.h., fishmeal 800 t.p.h. Hidrororacita 300 t.p.h.

Central Termoelectrica Tocopilla Pier – Loading rate: Coal 1,500 t.p.h. (two cranes). Muriate Potash 5,000 t.p.h.

This port has a stockpile specially for bulk cargo.

SPECIALISED CARGO HANDLING FACILITIES: The Central Termoelectrica Tocopilla Pier has facilities for discharging cargo, bunkers and acid.
BRIDGES: None.
STEVEDORES: Number of gangs required for loading and/or unloading operations should be radioed 24 hours in advance to Agent.

Also see "General" before first port.

MEDICAL: In case of urgent need of a doctor on arrival the Master should request medical assistance by VHF to Agent and/or Port Captain. A modern hospital is available with adequate facilities. There are also 2 clinics.
TANKERS: *Central Termoelectrica Tocopilla S.A. (Ex-Codelco) Pier:* This Pier has 2×8 in. lines. There are 3 tanks for fuel oil (22,543 cu.m.), one tank for diesel oil (8,744 cu.m.) and one tank for sulphuric acid (7,850 cu.m.).
SIT Tankers: Two tanks for fuel oil (13,457 cu.m.) and 3 tanks for diesel oil (7,430 cu.m.).

Also see "Shipmaster's Report", dated July 1986.

FRESH WATER: Small quantities available at SIT and Codelco.
FUEL: Not available.
CONSULS: None.
REPAIRS: Facilities only for minor repairs.
GANGWAY/DECK WATCHMEN: Compulsory to employ services of a gangway watchman.
OPENING/CLOSING HATCHES: Ship's crew allowed to open or close hatches.
CERTIFICATES:

Safety equipment (radio, etc.).
Tonnage.
Derat.
Radio.
Chilean Light Dues Certificate.

CUSTOMS ALLOWANCES: No special restrictions.
CARGO GEAR: Gear that complies with standard Port Safety Regulations.
REPATRIATION: There are facilities.
AIRPORT: At Antofagasta (Cerro Moreno), 180 km. by good road.
TIME: GMT minus 4 hours. Also see "General" before first port.
HOLIDAYS: See "General" before first port.
POLICE/AMBULANCE/FIRE: Police Headquarters 811812; Hospital 811081; Fire Department 811842.
TELEPHONES: No facilities for placing telephone lines aboard.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required.
REGULATIONS: Not allowed to pump oil or dirty water from bilges or throw rubbish overboard while anchored.
DELAYS: Probable on surf days, mainly in June, July and August.
GENERAL: *Hold Cleanliness:* All vessels that arrive for loading nitrates as bulk cargo must have clean holds. The surveyor is very strict and will not accept holds with rust scale, loose paint or residue of last cargo.
Provisions: Available.

SHIPMASTER'S REPORT: July 1986 (Updated 1988).
Cargo: 36,400 tonnes of sodium nitrate in bulk.
Shipper: Sociedad Quimica y Minera de Chile (now S.I.T.)/Tocopilla.
Receivers: China National Chemical Import and Export Corporation, Peking.

Documents:
1 copy Last Port Clearance.
3 copies General Declaration.
5 copies Crew List.
3 copies Stores List.
2 copies Personal Effects List.
1 copy International Health Declaration.
Ship's Register.
Ship's Safety Equipment Certificate.

Anchorage: A good anchorage can be found 5 cables from shore, in depths of 50 m. The vessel rolled constantly in a S.S.W. swell.

Pilotage: Compulsory for berthing/unberthing. There is one Pilot (Captain Jerko Huerta Rochas), who is very good.

Mooring at Nitrate Plant: Mooring in daylight only; unmooring any time of day and night.

Clearing: Shortly after anchoring at 2230 hrs., Authorities and Soquimich Surveyors came on board, for which accommodation ladder was prepared.

Health: Applying for Radio Pratique not necessary.

Radio: Vessel, possessing Satcom/telex had no problems contacting Agent. Agent is reachable 24 hours a day on VHF Channel 16. ETA notice to Harbour Master will be given by Agent.

Note: When in 200 mile territorial waters of Chile, daily report to Radio Naval Valparaiso should be given, stating ship's movements.

Tugs: 1×1,500 h.p. and 1×300 h.p. For berthing/unberthing we used the larger tug.

Berthing: Without problems; port side to plant/70 m. from shore (See "Plan").

Sequence:
1. Drop starboard anchor and slack away.
2. 2 lines (not wires) to port forward buoy (all buoys have hooks).
3. 2 lines to starboard aft buoy.
4. 2 lines to port aft buoy.
5. Extra line to starboard buoy on recommendation of Pilot.

When above is completed, a mooring gang comes on board to pick up 2 polypropylene springs from shore, using ship's winches. They stay on board in 3 shifts, to shift vessel under rotating telescopic loading arm. Officers should ensure that vessel is kept within line of port buoys as there are a few rocks close by.

Warning: When loading No. 1 hold (our vessel's length being 186 m.) ship had to be heaved very close to the port aft buoy. Longer vessels could have problems. Problem was recognised by the Pilot, who in the past said to have applied for buoys being replaced to create room for larger vessels.

Maximum permissible draft 36 ft. Depth of water 42 ft. All during her loading vessel experienced a 4 ft. – 5 ft. swell, which kept her rolling constantly.

Medical: Hospital facilities available.

Provisions: Chandler very expensive; many products not available.

Shore Communications: Distance to shore is 70 m.; accommodation ladder found best on starboard side. Agent boats U.S.$12 – 18/two ways, but crew found out, that for a small amount there was always/any time transport available and Agents boat-service was abandoned.

Customs Allowances: No special restrictions; bonded store was not sealed.

Meatroom: Not sealed as in most other Chilean ports.

Identification Cards: Necessary. Will be issued by arrival boarding party. Have to be returned on sailing.

Time: Local time is GMT minus 4 hours (second Saturday in March to second Saturday in October), otherwise GMT minus 3 hours.

Delays: Vessel experienced no delays due to weather or swell. Apparently delays occur sometimes on surf days, mainly in June, July and August, when vessel has to leave berth.

Authority: Port Captain.

Watchmen: From shore 24 hours a day in 3 shifts. Found very co-operative; no pilferage.

Report Loading 36,400 tonnes Sodium Nitrate in Bulk:

1. Holds have to be extremely clean. Most vessels find themselves rejected on arrival and after agreeing about price of cleaning, will be cleaned by Soquimich (now S.I.T.) personnel with their water-pressure equipment. This being the only way to start loading. For taking the heavy compressor on board cargo gear at all holds is necessary. Some vessels were said to have been forced to have their holds/tanktops painted, before being passed.
2. The cargo is stowed in 6 silos and transported to the ship via a belt, which runs into a turnable arm, which can bridge a distance of 90 m., including the last 26 m., covered by a telescopic extension. The loading did not produce extensive dust and the vessel's decks and accommodation were easily cleaned after sailing.
3. Loading rate found to be max. 900 t.p.h., overall calculation (including minor delays) 600 t.p.h. (Max. rate 1,200 t.p.h., depending on type of product).
4. Stowage factor appeared to be slightly higher than stated (0.88 against 0.84/0.86).
5. Air draft as per Charter Party had to be max. 10.50 m. Found air draft loading arm-end to be approximately 12 m. But there has to be a safe allowance for the 4 ft. – 5 ft. swell. Vessel experienced no problems however, the air draft being the recommended 10.5 m.
6. When loading was completed, the cargo was covered with plastic sheets, before closing the holds.
7. The stevedores were found very co-operative.

SHIPMASTER'S REPORT: August 1994.

Vessel:
Type: Bulk carrier.
Summer d.w.t.: 27,476 tonnes.
Summer draft: 31 ft. 6 in.
Length of stay: 4 days.

Position Reporting System: To avoid heavy fines, when entering and within Chilean territorial waters, reporting system must be followed (See "General" before first port).

Documents: Last Port Clearance and normal inward papers.

Clearing: Undertaken upon arrival after anchoring.

Pilotage: Pilots board at anchorage area from 0700 hrs. to 2000 hrs. for berthing. Unberthing any time.

Anchorage: Good anchorage 7-10 cables from shore. Depths 30 m. – 70 m. Anchorage became unsafe when vessel rolled in bad weather (strong winds, heavy swell). When winds blowing from shore, brown dust is produced from the nearby mountains, and vessel covered, but dust washed away easily.

Draft: Max. permissible draft 37 ft. Max. air draft 10.5 m. – 11.0 m.

Tugs: Two powerful tugs assist with mooring/unmooring. In case of bad weather (emergency), while alongside, tugs can be contacted by VHF Channel 16.

Berthing: Vessel moored port side to. Firstly starboard anchor is dropped and kept slack (finally slacked to 8 shackles). Then 2 ropes secured to each buoy (No. 1 forward, No. 3 and No. 4 aft, No. 2 forward). Then 2 spring lines secured to shore hooks. Shore gang do not board for spring lines. All lines are transferred to buoys and shore by boat. Distance from shore 50 m. – 60 m.

At a distance of about 25 m. from the vessel's port side, there are a few hidden rocks which are uncovered at low tide.

Special attention must be given all the time to vessel's lines, especially those at Buoy No. 3.

Mooring Lines: At least 10 new or very good mooring lines of 220 m. length each are required, otherwise local lines can be rented at U.S.$300.00 per line per day.

Holds: Should be extremely clean with special care to higher and hidden parts of holds. Local surveyors are very strict, and many vessels are rejected.

Cargo: Loaded part cargo of bulk and bagged nitrates (19,846 tonnes).

Bulk cargo loaded with mechanical belt loader, and vessel shifted by Pilot and her own means as per rotation plan.

Steel bars and machines for trimming (7-8 tonnes) taken on board by stevedores and ship's cranes.

Loading rate 300 – 600 tonnes/hr. Bagged cargo of normal bags 50 kg. and maxi-bags of 1,000 kg. in slings of about 12 tonnes loaded over bulk with plastic separation between cargoes.

Watchmen: Compulsory. Good 24 hours service provided.

Fresh Water: Not available.

Fuel Oil: Not available.

Fresh Provisions: Available from local market, but expensive.

Shore Leave: Allowed from anchorage and mooring buoys. Boat service through Agent, costs U.S.$70.00 per round trip.

AGENCY: Servicios Integrales de Transitos y Transferencias Ltda. (S.I.T.), Arturo Prat No. 1060, (Castilla 2098), Tocopilla, Chile. *Tel:* 56-55-812139, 812239, 812163, 812815. *Telex:* 225628. *FAX:* 56-55-812650 *Contact:* Eduardo Villalon M.

AUTHORITY: Port Captain.

VALPARAISO: 33.02 S. 71.38 W. (See Plan)

PORT LIMITS: A line joining Roca la Baja and Punta Gruesa.

DOCUMENTS:
1 Clearance.
1 Light Dues Certificate.
7 Port Cargo Manifests.
4 General Cargo Manifests.
7 Transhipment Cargo Manifests.
3 Passenger Lists for the Port.
3 Passenger Lists for Transit.
18 Crew Lists.
1 Personal Effects List.
Passenger Baggage Declaration (2 per passenger).
1 Fumigation Certificate.

24 hours prior to vessel's arrival, the Port Authority require a Cargo Manifest, Stevedoring Plan, List of Cargo per hatch, List of Hazardous Goods in accordance with I.M.D.G. Code, tally books and List of Containers.

Also see "Ship's Officer's Report".

PILOTAGE: Compulsory. Vessels reception is made about 2.5 cables off the breakwater on a bearing of 009° from the breakwater head light.

ANCHORAGES: Outside the harbour and close by, vessels find good anchorage in 25 – 15 fathoms of water. it is always prudent to secure a good anchorage, owing to possible strong winds during all periods of the year which cause heavy swells.

In Winter, vessels anchor with one anchor with full chain and have another ready for emergencies. During Winter, it is not convenient to anchor near the coast due to the risk of dragging, during Summer the near to coast, the better.

The anchorge is marked on Chart No. 511, with Pier Baron bearing 168°, at a distance of not less than 600 m. Vessels under 100 m. LOA can anchor between Pier Baron and the breakwater head, position also indicated on chart.

RADIO/VHF: Maritime Radio Station of Valparaiso in Playa Ancha which attends the public maritime service. Coastal Radio Service (SRC) with its station situated in the Port Captaincy Building, attends the maritime service to receive information regarding arrival and departure and also provides information on safety of navigation, (call sign CBV-20).

Maritime Radio Station "Valparaiso Playa Ancha Radio/CBV" serves the Official Correspondence (OC) and Public Correspondence (PC) of the National and International Maritime Mobile Service (MMS).

Station Call Sign	Frequency	Type	Receives	Transmits	Schedule (UTC)

	156.80 MHz	F3	c.16 VHF	c.16 VHF	H24

The Pilot Station "Gobernacion Maritima Valparaiso Radio/CBV5", located in the same building, has a VHF Radio and communications are carried out directly with ships for the entrance and/or departure from port. Contact pilot boat on VHF Channel 6.

ETA: Port Authorities require 24 hour and 4 hour notice prior arrival.

TUGS: There are 8 privately owned tugs, ranging from 800 s.h.p. – 2,500 s.h.p. Use of tugs is compulsory.

BERTHING:

Berth No.	1	2	3	4	5	6	7	8	9	10
Quay No.	1	1	1	2	2	3	4	5	6	7
Length (m.)	617			366		245	112	245	225	225
Depth (m.)	8.79	9.49	9.79	9.27	8.69	8.09	6.19	8.49	9.10	7.47
Quay cranes	(1)		—	(1)	—	(2)	—	2	2	—
Telephone	—	—	1	1	—	1	—	—	1	—

(1) Private Crane.

Berthing 24 hours.

Facilities and Equipment: Lift on: Outside the Port of Valparaiso, there are Inland Terminals for full and empty containers, operated by private companies. The main operators are: Tesco, Transcontainer, Ultramar, Segetrans, Sitrans, Cosan, Sepsa.

STEVEDORES: The stevedoring syndicate has 397 registered members and 108 substitutes. Working hours are 0800 – 1530 hrs., 1530 – 2300 hrs. and 2300 – 0630 hrs.

MEDICAL: Several hospitals and clinics with qualified staff.

TANKERS: *Las Salinas Oil Terminal:* Depth 40 ft. Max. displacement 40,000 – 50,000 tons. Sailing anytime, day or night.

FRESH WATER: Delivered by hoses connected to the existing standpipes. The quality of the water is good and can be delivered at the rate of approximately 20 t.p.h. The couplings are 2.5 in.

FUEL: Copec, Shell Chile, or Esso Standard Oil deliver petroleum or diesel oil in any quantity needed by pipeline at Salinas, approximately 5 miles North of the port, mooring vessel in 7 fathoms water to special buoys and embarking a Pilot at Valparaiso Port. Delivery is at a rate of 180-200 t.p.h. Diesel can be delivered by truck and by pipe at the quay.

Report: 1988.

Vessel loaded 80 tonnes of fuel oil in 7 hours from tanker trucks. Ship's crew to stand-by with fire hose and fire extinguisher.

CONSULS:

Consulate Generals:

Argentina	Ecuador	Italy	Spain
Bolivia	Germany	Norway	Sweden
Brazil	Greece	Panama	Venezuela
Colombia	Guatemala	Peru	

Consulates:

Belgium	Finland	Netherlands	United States
Denmark	France	Nicaragua	Uruguay
Dominican Republic	Haiti	Paraguay	
	Honduras	Switzerland	
El Salvador	Monaco	United Kingdom	

REPAIRS: Several shipyards, workshops and foundries for repairs to hull, boilers, machinery and engines. The principal is Asmar belonging to the Navy. There are several other smaller shipyards for construction and repair of minor craft.

DRY DOCKS: Floating dock 10,000 tons lifting capacity with length 167.1 m. and inside width 26.1 m. Max. draft possible is 9.7 m. Max. displacement 30,000 tons. Max. d.w.t 24,000 tons. 2 × 15 ton cranes.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: Carried out by the stevedores or by ship's crew.

CUSTOMS ALLOWANCES: No unusual restrictions.

REPATRIATION: Facilities available.

AIRPORT: International airport at Pudahuel, 90 km. from Valparaiso. Los Cerrillos is the nearest airport. From Pudahuel, Lan-Chile maintain daily services to Arica to the North and to Punta Arenas with stops at all the principal towns.

TIME: Local time October to March, GMT minus 3 hours. March to October, GMT minus 4 hours.

HOLIDAYS: See "General" before first port.

SERVICES: Compasses, radars, meteorological instruments and other nautical equipment can be tested and fixed. Charts and maps can be obtained from the Chilean Navy Navigation and Hydrographic Department.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

GARBAGE DISPOSAL: Waste disposal services can be contracted by ship's Agent.

WASTE OIL DISPOSAL: No facilities.

SEAMAN'S CLUBS: None.

PORT REGULATIONS: It is strictly prohibited to dismantle the main engine or effect repairs to the engines without previous notification and authorisation from the Maritime Authorities. Also, to deballast petroleum, pump bilges, throw waste or refuse overboard in the artificial port.

WEATHER: A weather report showing the condition at various points off the coast of Chile can be obtained from Playa Ancha Radio twice a day. A general rule for the next day's forecast: the weather condition at Juan Fernandez Islands will be 24 hours later than the conditions at Valparaiso.

Climate: Temperate.

Average Amount of Cloud: 4.8 – 8 hours.

Predominant Winds: S.W. and N.W., speed 23 knots.

Rainfall: 360.2 mm. in one year.

Temperature: Average max. – 19°C.
Average min. – 11°C.

DEVELOPMENTS: Berths No. 1, 2 and 3 to be modernised by 1998. The continuous length will be 624 m. and depth 12.0 m.

SHIPMASTER'S REPORT: April 1980 (Updated 1990).

Documents:

6 General Declarations
12 Crew Lists
6 Passenger Lists for the Port
6 Passenger Lists (even if nil)
6 Mail Lists (or no Mail)
2 Crew Effects Lists
6 Bond and Canteen Lists
6 General Stores, Food Lists
Clearance from Last Port.

Pilotage: Compulsory. Pilot boards vessel 0.5 miles East of Dupret Light. 24 hours notice required to Port Captain (Maritgob).

Anchorage: Anywhere outside the "Prohibited Anchorage Area". The holding ground is moderate.

Restrictions: Port closed for all kinds of activities only in bad weather.

Max. Size: Max. LOA: 200 m. (depending on berth). Max. draft 10 m. (except Berths No. 9 and 10) after completion of dredging which is in progress. 2 ft. keel clearance required.

Health: Quarantine message should be sent 24 hours prior to arrival.

Radio: Playa Ancha Radio "CBV".

VHF: Port Captain on Channel 16. Pilot on Channel 6, vessel's Agent equipped with Private Channels, contact on Channel 16.

Tugs: 4 tugs available. Compulsory for large vessels.

Density: 1025.

Fresh Water: Available. Rate 15 to 20 t.p.h.

Fuel: Bunker fuel oil and diesel oil available, but expensive.

Airport: At Santiago.

Repairs: Very good services available.

Services Available: Fresh provisions, machine shop, Lloyd's Surveyor, Salvage surveyor, laundry service, lubricating oil, doctor, hospital, meats and groceries.

SHIP'S OFFICER'S REPORT: November 1990.

Documents:

Clearance from Last Port.
Light Dues Certificate.
1 copy Port Cargo Manifests (Manifiesto de carga para puerto).
Transit Cargo Manifests (Manifiesto de carga en transito), see Note (b).
Cargo Manifests, covering cargo shortshipped but manifested on previous vessels calling at Valparaiso (Manifiesto de carga de transbordo) – not required.
1 copy Dangerous Cargo List (Lista de carga peligrosa).
2 copies Passenger List (Pasajeros para puerto).
Transit Passengers List (Pasajeros en transito) – not required (See Note (a)).
5 copies Crew List (Rol de tripulacion).
2 copies Crew's Personal Effects Declaration (Declaracion de effectos de la tripulacion).
4 copies Stores List (Declaracion de suministoros del buque).
Mail Manifests (Guia de correos) – not required (See Note (a)).
Baggage Declaration (Equipajes acompanades) – not required.
Fumigation Certificate.

Notes:

(a) The vessel is a general cargo vessel, without passengers or mail on board.
(b) All cargo was discharged in Valparaiso, so no Transit Cargo Manifests were necessary.
(c) There was no transhipment cargo on board.
(d) It seemed preferable to prepare the documents in Spanish for the good reason that "everything ran smoother".

AUTHORITY: Empresa Portuaria de Chile, Casilla 133-V, Valparaiso, Chile. *Contact:* Gabriel Aldoney Vargas, Director, Calle Blanco 839, Valparaiso, Chile. *Tel:* (056) 32-257167, ext. 301.

AGENT: Ian Taylor - Chile, Prat 827, Of.301, Valparaiso, Chile. Tel: 56-2-259096. Telex: 230018, 330504. Fax: 56-2-214904.

People's Republic of China

GENERAL: (See Plan)

We have been advised by the Head Office of the China Ocean Shipping Agency in Beijing that Ship Masters of foreign vessels calling at Chinese Ports should contact the Branch Office at the Port concerned (cable address "Penavico") in order to be provided in due time with necessary information relating to port entry requirements.

DOCUMENTS: *Shipmaster's Report:* 1987.

First Port:

1 Maritime Declaration of Health.

2 Reports of Entry for foreign ships.

6 Crew Lists (names and addresses of Chinese and Hong Kong crews to be written in Chinese and others in English).

3 Lists of Specified Articles (money, gold and silver).

4 Passenger Lists (if carrying passengers).

1 Import Cargo Manifest. (If none on board then it is essential for the Master to make one. Suitable blank Chinese forms are available).

Note: All the above are to be made on Chinese forms.

Second and Subsequent Ports:

2 Report of Entry and 6 Crew Lists, Last Port Clearance and travelling documents in a sealed envelope.

Departure:

1 Report of Clearance form.

4 copies of a simple declaration of all crew changes.

All crew Identity cards and shore passes for checking.

Other Notes on Arrival:

Ship's Certificates are examined on board. If any taken ashore ensure a receipt is obtained.

Bond locker is usually not sealed, or the contents declared. However, some ports now reported to be sealing the Bond Locker.

Shore Leave: Shore leave is granted after inspection of documents. Chinese and Hong Kong seamen need only Identity card to go ashore. Non-Chinese need a shore pass in addition.

For Arrival or Departure Inspections a large room is needed, capable of seating 8 to 12 persons. Cigarettes, tea, soft drinks and occasionally beer are acceptable. Sometimes a meal will be requested. One cabin will be requested for the Guards (2 berth cabin such as hospital is suitable) for duration of stay in port. Sometimes another room is required for a Customs Officer.

PILOTAGE: *Regulations with Respect to Sea-port Pilotage issued by The Ministry of Communications:* These Regulations have been made with a view to safeguarding the sovereignty of the People's Republic of China and ensuring the safety of ports and vessels.

Article 1: For all foreign vessels which enter, leave, or navigate or shift berths within any port of the People's Republic of China, pilotage is compulsory. No foreign vessel shall enter, leave, or navigate or shift berths within a port without having on board a Pilot designated by the Harbour Superintendency Administration. In cases of emergency, such as a sudden change of weather, a vessel at anchor may, however, for the purpose of ensuring safety, shift from her original anchor position to any other position in its vicinity without a Pilot, provided the Harbour Superintendency Administration is notified of the same simultaneously.

Article 2: Incoming foreign vessels shall anchor in the designated anchorage or Pilot Station and await the Pilot. In case an outgoing foreign vessel requests the Pilot to conduct the vessel beyond the limits of the pilotage waters, the Pilot has the right to refuse such request.

Article 3: Prior to arrival at the pilot anchorage, incoming foreign vessels shall communicate with the Pilot Station (boat) or the port signal station by exhibiting appropriate signals prescribed by the Chinese Port Authorities and follow the instructions given by the Pilot Station (boat) or the port signal station.

Article 4: When the Pilot is boarding or leaving, it is the duty of the Master of the vessel piloted to take safety measures and furnish a pilot ladder complying with the requirements of the International Convention for the Safety of Life at Sea for embarking and disembarking the Pilot safely and quickly, with due regard being paid to the safety of the pilot boat.

Article 5: The Master of the vessel piloted shall give the Pilot a correct description of the vessel's navigability and steering qualities, and shall meet the Pilot's demands in piloting. Failing to do so, the Master shall be responsible for the consequences arising therefrom.

Article 6: While the vessel is under pilotage, the Master thereof shall in no way be relieved of his responsibility for management and operation of the vessel. The Master shall still give care to the safe navigation of the vessel and must co-operate closely with the Pilot. In the interests of safe navigation, the Master may put forward reasonable recommendations and requirements, but shall not interfere in the Pilot's work unreasonably. If the Master has to leave the bridge temporarily, he shall inform the Pilot of the same and designate an officer as his representative during his absence.

Article 7: In order to ensure the vessel's safety, the Pilot has the right to suspend pilotage when necessary until the circumstances are suitable for safe navigation again.

Article 8: For marine accidents occasioned by the fault of a Pilot in the course of piloting, the Pilot shall be duly punished, but shall hold no liability for loss or damage resulting therefrom.

Article 9: When sea conditions or other special circumstances make it impossible for the Pilot to board an incoming vessel at the designated place, the vessel shall first be guided by the pilot boat to a place at which the Pilot can safely embark and then be conducted by the Pilot into the port after his boarding.

In the case of an outgoing vessel, if the Pilot finds it difficult to disembark at the designated place for the same reasons as are stated above, he may disembark midway at a safe place and then guide the vessel out of the port with the pilot boat.

Article 10: The Pilot may be accompanied by apprentice Pilots who go on board for practice. The Master of the vessel piloted shall provide them with conveniences in regard to both work and life.

Article 11: The Master of the vessel piloted shall sign the Pilotage Bill and pay the pilotage or shifting charges according to the prescribed tariff. If the Pilot considers that the vessel should be assisted by a tug or tugs, the charges for the tugs actually employed shall also be for the account of the vessel.

Article 12: These Regulations shall come into force on the date of publication. The "Regulations Relating to Sea-Port Pilotage", promulgated by the Ministry of Communications of the People's Republic of China on 9th December 1959, shall at the same time be abrogated.

ANCHORAGES: Typhoon Shelters: Approaching the typhoon season, seriously affecting the safety of shipping along the Southern stretch of China's coast, we publish herewith a circular received from the Mapping Agency of the Navigation Guarantee Department of the Chinese Navy Headquarters.

In the text "Dao" means island, "Gang" port, "Shan" mountain and "Wan" bay. The chart numbers refer to those issued by the same authority.

Anchorages: The coast in this area is very indented and hence numerous good harbours and bays are found. The anchorages affording shelter from bad weather for foreign vessels are Dongshan Wan, Jiazi Gang and Hailingshan Gang. Guangzhou Gang, Huangpo Gang, Zhanjiang Gang and Shantou Gang also have good anchorages for shelter.

Section 1 – Dongshan Wan Anchorage: Charts 9111, 9314.

General Remarks: Dongshan Wan is situated near the boundary line of Fuijan and Guangdong Provinces. Xiamen Gang lies 68 miles to the N.E. It is considered to be one of the good harbours in South Fuijan.

Its entrance lies between Dongshan Dao and Gulei Bandao. Gulei Bandao is long and narrow, with several outstanding mounts 100 m. to 270 m. high on its Southern half.

Huyu Dao Southwestern Anchorage lies between Huyu Dao and Ta Yu (Dong-men Yu). It has a water area about 4 cables wide and about 10 m. deep, bottom is mud, sand-mud, shell and small rock. It is good for shelter from N.E.'ly gales. In this anchorage, tidal streams are strong and swell is rather heavy.

Meteorology and Hydrography:

Winds: Southerly to Southwesterly winds prevail from June until August, while Northeasterly winds prevail in the other months. The annual average wind force is 4. Wind is stronger from October to March, during which period the average wind force is 5 to 6. It may attain Force 9 to 10 during the onset of severe cold air wave. The number of gale days (wind Force 6 and above) is about 119 days in a year, and about 11 to 16 days per month during the period from October to March, and only 1 to 2 days in July, which is the minimum.

Typhoon: Occurs mostly in August and September. In September 1957, when the centre of a typhoon landed here, the wind velocity exceeded 44 metres per second, and high waves of 3 m. to 5 m. were experienced.

Fog: There are about 31 fog days in a year. The monthly average of fog days in March and April is about 7 to 8, and in January, February, May and June, about 2 to 4 days. It is the least in October and November.

Tides: Tide is of irregular semi-diurnal nature. The Spring rise is 3.52 m. and neap rise, 2.96 m., and mean sea level, 2.16 m.

Tidal streams: At Gulei Anchorage, flood sets Northward, and ebb Southward, at a rate of about 1.5 knots. Outside the entrance, flood sets Northeastward, at a rate of about 2.3 knots.

Aids-to-Navigation and Lankmarks:

Gulei Tou, lying at the Southern extremity of Gulei Bandao, is a steep cliff. At its Southern part, a light (U) is exhibited, at an elevation of 113 m., from a square stone column.

Gulei Shan, lying about 3.6 m. N × E of Gulei Tou Lightbeacon, has a conspicuous sharp peak. There is one more summit close to its Southeast, so that a comparatively deep saddle is formed.

Ta Yu (Dongmen Yu) lies about 2.3 miles Westward of Gulei Tou Lightbeacon, with the main summit lying at its Southwestern part. There is a stone tower on its top at an elevation of 91 m. (height of the tower is 10 m.).

Shuwei Yu lies at the outer extremity of a reef extending Southeastward from Ta Yu.

Huyu Dao lies about 1.4 miles N × E of Shuwei Yu. Its Eastern top, surmounted by a pile of stone, is high. Yousui Yan, 34 m. high, lies Southward of Huyu Dao.

Daping Yu, lying about 0.6 miles N.W. of Huyu Dao, is fringed with rocky ledges extending outwards.

Obstructions: Yunnan Yan, with a depth of 3.8 m. over it, lies about 3 miles S.W. of Gulei Tou Lightbeacon. Between this rock and Gulei Tou there is a shoal of less than 10 m. depth, with a least depth of 6.8 m. over it.

A shallow spot, with a depth of 8.4 m. over it, lies about 3.2 miles S.E. of Gulei Tou Lightbeacon.

At the Southern extremity of Yousui Yan, Southward of Huyu Dao, there is a rocky ledge and reefs extending Southward about 1.5 cables.

Directions for Navigation: Ships intending to enter Gulei anchorage should first sight Gulei Tou, and on reaching a position about 0.6 miles Southwestward of Gulei Tou Lightbeacon, alter course so as to make for the anchorage.

Section 2 – Jiazi Gang Anchorage: Charts 9113, 9423.

General Remarks: Jiazi Gang, lying between Shantou Gang and Shanwei Gang, is situated at the place where the river named Ying Jiang empties into the sea. The anchorage is situated with Jiazi Jiao Lighthouse bearing 104°, about 1.5 miles distant, having depths of 7 m. to 10 m., sand bottom. It can afford shelter from Easterly to Northeasterly winds. There is a mooring buoy at its Northeastern part. It is an anchorage generally used for shelter by vessels plying between Shantou Gang and Shanwei Gang.

Meteorology and Hydrography:

Tides: Tide of this harbour is diurnal. However, during the period of semi-diurnal tides, mean high water is 0.81 m. and mean low water, 0.57 m. During the period of diurnal tides, mean higher high water is 1.26 m., mean lower low water, 0.18 m. and mean sea level 0.89 m.

Tidal Streams: Flood sets Northeastward at a rate of 1 knot and ebb sets Southeastward at a rate of 1.5 knots.

Aids-to-Navigation and Landmarks: Jiazi Jiao is an outstanding cape. A lighthouse named Jiazi Jiao, exhibiting a light at an elevation of 78 m. from a white square brick tower, lies on Qilin Shan about 2.5 cables Northeastward of Jiazi Jiao.

Bie Yan, a rock 5.4 m. high, lies about 1.5 miles Southward of Jiazi Jiao Lighthouse. Haijia Shan, situated about 8.6 miles W × N of Jiazi Jiao Lighthouse, is a conspicuous summit in its vicinity.

Hudong Jiao, an outstanding cape, lies about 3.2 miles Southwestward of Jaijia Shan.

Obstructions: Wu Jiao, a rock 2 m. high, lies about 1.7 miles Northwestward of Jiazi Jiao Lighthouse.

A wreck lies about 13.6 miles Southeastward of Jiazi Jiao Lighthouse. An obstruction lies about 13.6 miles Southwestward of Jiazi Jiao.

Directions for Navigation: Ships from the West may use Jiazi Jiao Lighthouse as an aid, and steer to about 5 miles S.W. of Jiazi Jiao Lighthouse, and then alter course for the anchorage.

Ships from the East should steer to about 5 miles Southward of Jiazi Jiao Lighthouse, when it is in line with Bie Yan, bearing 000°, alter course for the anchorage.

Section 3 – Hailingshan Gang Anchorage: Charts 9316, 9426.

General Remarks: Hailingshan Gang, between Zhujiang Kou and Zhanjiang Gang, lies on the Western side of Hailingshan Dao, and is an anchorage affording shelter for vessels plying between Guangzhou Gang and Zhanjiang Gang.

This anchorage lies on the Western side of a line from about 1 mile Westward of Hudie Zhou to Huoyan Shan. It is about 4 miles long and about 0.5 miles wide, in depths of from 6 m. to 13 m., bottom sand and mud-sand. It is sheltered from Northeasterly, Easterly and Southeasterly winds. During Southwesterly, Northwesterly and Northerly winds, there is considerable swell.

Meteorology and Hydrography:

Winds: In Summer, S.W. wind is predominant and rainstorms are frequent. In Winter, N.E. wind is predominant and thick fog is frequent. Typhoons are most frequent from June to August. N.E. gales are mostly experienced here during the approach of a typhoon.

Tides: Tide in this harbour is irregular, diurnal. During the period of semi-diurnal tides, mean high water is 2.45 m., mean low water 0.95 m. During the period of diurnal tides, mean higher high water is 2.98 m., mean lower low water 0.52 m. and mean sea level 1.70 m.

Tidal Streams: Flood sets N × E at a rate of 1.3 knots and ebb sets S.W. at a rate of 2.5 knots.

Aids-to-Navigation and Landmarks: In this vicinity, there are numerous islands and islets, which are isolated and readily identifiable. Landmarks usually used are, Mawei Zhou Lightbeacon, Mawei Shan, Longgao Shan, Shuangshan Dao, Hudie Zhou, Paotai, Zui, Xizaizai Shan, Dier Shan, Huoyan Shan, etc.

Obstructions: There are many shoals on either side of the anchorage, some of them dry at low water.

Yamui Pai, a rock, lies about 1 mile Northward of Paotai Zui. At its Western side, there is a rock which dries.

Directions for Navigation: Ships, arriving S.W. of Mawei Zhou Lightbeacon and when Xizaizai Shan is in line with Huoyan Shan, should alter course so as to follow this leading line. When Mawei Zhou Lightbeacon comes abeam to starboard, alter course N×E for the anchorage. Traffic of fishing vessels in this harbour is very heavy. Ships should always be on the alert to take appropriate action to avoid collision.

TIME: GMT plus 8 hours.

REGULATIONS:

Regulations governing the passage of non military foreign vessels through the Chiungchow Straits.

Article 1. According to "The Declaration of the Government of the People's Republic of China on China's Territorial Seas, the Chiungchow Straits (the Hainan Straits) are Chinese inland waters, where all foreign military vessels are prohibited from passing through. Any non military foreign vessel in need of passing through the Straits must apply for permission in accordance with the present Regulations.

Article 2. For facilitating the control of the Chiungchow Straits, the Chinese Chiungchow Straits Authority of the People's Republic of China (hereinafter referred to as the Chinese Chiungchow Straits Authority) is hereby set up.

The present Regulations are to be carried out under the supervision of the Chiungchow Straits Authority.

Article 3. The water area which comes under the control of the Chiungchow Straits Authority (hereinafter referred to as the Control Area) is bounded temporarily as follows: West of the line connecting the Hainan Head Light Beacon (approx: Lat. 20° 09' 37" N., Long. 110° 41' 00" E.) and San Kao Lung Light Beacon (approx: Lat. 20° 26' 00" N., Long. 110° 30' 22" E.) (known as the East Line) and East of the line connecting Cape Kami Light Beacon (approx: Lat. 20° 13' 30" N., Long. 109° 55' 30" E.) and Cape Lin Kou Light Beacon (approx: Lat. 20° 00' 22" N., Long. 109° 42' 06" E.) (known as the West Line).

Article 4. Any non military foreign vessel passing through the Chiungchow Straits must comply with the following procedures:

1. Apply for passage permission by cable to the Chiungchow Straits Authority 48 hours before the vessel enters the control area, or before the vessel leaves the port of departure, giving detailed information on ship's name, nationality, gross tonnage, speed, hull colour, funnel marks, port of departure and destination as well as date and time of sailing.

2. After obtaining the passage permission, inform the Chiungchow Straits Authorities 24 hours before entering the control area or within 2 hours after vessel port of departure of the exact time of entering the control area.

All cables relating to the application and permission for the passage through the Straits are to be transmitted through the Haikou Branch of China Ocean Shipping Agency.

Article 5. Notification may be given by the Chiungchow Straits Authority, whenever it deems necessary, to cancel the permission already granted to those non military vessels for passing through the Straits.

Article 6. Passage through the control area by non military foreign vessels should be made in the day time only. They should enter the control area after sunrise and leave before sunset. On the basis of the ship's speed the Chiungchow Straits Authority shall fix the time for the non military foreign vessel concerned to enter or leave the Straits.

Article 7. Non military foreign vessels entering and leaving the Chiungchow Straits should pass through the middle channel, unless special permission has been granted by the Chiungchow Straits Authority.

Article 8. Non military foreign vessels passing through the control area should navigate within the following specified navigation area: North of the line connecting the point on the East line 4 nautical miles away from the Hainan Head Light Beacon to the point on the West line 4 nautical miles away from the Cape Lin Kou Light Beacon; and South of the line connecting the point on the East line 6 nautical miles away from the Hainan Head Light Beacon, the point 4 nautical miles due South of the Cape Paimi Light Beacon (approx: Lat. 20° 15' 00" N., Long. 100° 17' 00" E.) and the point on the West line 14 nautical miles away from the Cape Lin Kou Light Beacon.

Article 9. Non military foreign vessels passing through the Chiungchow Straits must punctually observe the time as reported and comply with the stipulations on the limit of the navigation area. All vessels entering and passing through the control area should immediately answer and unconditionally comply with the signals from the shore or patrol ships. The vessels in question shall be held responsible for all consequences arising from non observance of the above stipulations.

Article 10. Non military foreign vessels passing through the Chiungchow Straits are not allowed to use radar. If the vessels are under the conditions of restricted visibility caused by dense fog, torrential rains, etc., which necessitates the use of radar, they should make an application to the Chiungchow Straits Authority, giving their reasons as well as the ship's position, speed, etc., and they may set ship's radar in operation when permission is obtained. In the case of emergency which endangers safe navigation of the ships, they may use their radar while making their application simultaneously; after that, they should submit a detailed account (report) to the Chiungchow Straits Authorities giving a full account, together with a statement of facts of the time as to when the radar set in use and when ended for the archives.

Article 11. Non military foreign vessels passing through the Chiungchow Straits are not allowed to take photographs, soundings, or do any other things in violation of the laws and regulations of the People's Republic of China.

Article 12. Any non military foreign vessel violating the present Regulations shall be treated as follows:

1. Before entering the control area, the vessel may be ordered to stop proceeding and to round out by her original route, so as to sail around the Hainan Island; or, to wait until the necessary formalities are completed and the permission for passage granted.

2. In case the vessel has entered the control area, she may be ordered to stop and be escorted to Haikou for inspections; and she shall be treated according to the findings after inspection. After that, the vessel may, as circumstances require, be allowed to pass through the control area, or ordered to return out from the control area, or even be escorted out of the Straits.

Guide to foreign vessels calling at Shanghai

1. Regular channel in Chusan area: Foreign vessels may navigate in the regular channel between Chusan and Raffles Island which is open to navigation, but are not allowed to navigate in other channels between these islands. (By the regular channel is meant the channel from Tongting Island, Steep Island, Elgar Island, Bonham Island, Button Island, Gutzlaff Island to Chang Kiang Kou).

2. Pilotage Area:

(a) Pilotage on vessels entering/leaving port commences from/termination at the position Lat. 31° 05' N., Long. 122° 10' E. at Chang Kiang Kou.

(b) The Pilot vessel, when engaged on her pilotage duty, will anchor near 1 mile East of the entrance buoy No. 54 (Lat. 31° 04' 52" N., Long. 122° 10' 00" E.) at Chang Kiang Kou.

3. Anchorage awaiting for the tide:

(a) Foreign vessels may, when the draft at the time of entry is 25 ft. or less, proceed direct to the Pilot Station (Lat. 31° 05' N., Long. 122° 11' 30" E.).

(b) In the case of draft at time of entry is more than 25 ft. or it is impossible to arrive at the Pilot Station at the declared ETA or impossible to proceed direct to the Pilot Station for reasons of the tide, then the foreign vessels may anchor and wait for the tide near 1 mile N.E. of the Chang Kiang Kou Lightvessel. Such foreign vessels waiting there may telegraph to ask "Penavico" Shanghai for the time of arrival at Pilot Station and picking up the Pilot.

4. Notice to Mariners: Chang Kiang Kuo South Channel.

Also see "Shipmaster's Report", date July 1984 (after No. 7).

(a) The Chang Kiang Kuo Light vessel No. 50 is as described below:
Location Lat. 31° 01' 48" N., Long. 122° 25' 14" E.
Characteristic Flashing every 6 seconds.

(b) Vessels entering or leaving the port should keep Chang Kiang Kou Lt. Vessel on vessel's port side:
1. Fairway Buoy M.1:
Location Lat. 31° 02' 51" N., Long. 122° 19' 35" E.
Characteristic Group flashing (3) every 6 seconds.
Shape – can shape, red and white chequered.

(c) No vessel allowed to enter the dangerous areas bounded by lines connecting the following points:
1. Lat. 30° 47' 15" N., Long. 123° 03' 00" E.
2. Lat. 30° 47' 15" N., Long. 123° 05' 54" E.
3. Lat. 30° 44' 45" N., Long. 123° 03' 00" E.
4. Lat. 30° 44' 45" N., Long. 123° 05' 54" E.

5. Telegraphic Communication:
Foreign vessels at sea may despatch radiograms to "Penavico" Shanghai via Shanghai Coastal Radio Station, the particulars of which are as follows:

Call sign: XSG
Calling frequency: 500 kHz
Working frequency: 458 kHz
Working hours: 0000 – 2400

Answering frequency:		Listening frequency:	
8502 kHz	GMT 0000 – 2400	8364 kHz	GMT 0000 – 2400
6414.5 kHz	GMT 2200 – 1000	6273 kHz	GMT 2200 – 1000
12871 kHz	GMT 0000 – 1400	12546 kHz	GMT 1000 – 1400
4349 kHz	GMT 1000 – 2200	4182 kHz	GMT 1000 -- 2200

6. Large number of fishing vessels around areas 25-30 miles N.E. of North saddle and 20-25 miles East of East saddle, Barren Island and Lukon Island, please navigate with caution.

7. Anchorage for awaiting tide – Changkiang Kuo:

(a) The water area bounded by lines connecting the following points is the anchorage of Changkiang Kuo for vessels awaiting tide:
Lat. 31° 01' 00" N., Long. 122° 24' 42" E.
Lat. 31° 01' 00" N., Long. 122° 20' 00" E.
Lat. 30° 56' 00" N., Long. 122° 20' 00" E.
Lat. 30° 56' 00" N., Long. 122° 24' 42" E.

(b) All vessels are strictly prohibited to anchor at any place out of the said anchorage of Changkiang Kuo for waiting tides without obtaining permission (permits) from Shanghai Harbour Authority concerned.

Shipmaster's Report: July, 1984.

Regulations governing Supervision and Control of Vessels of Foreign Registry sailing in the Chanjiang (Yangtse River). (Dated April 1983).

Article 1. The Chanjiang (Yangtse River) is the inland waterway of the People's Republic of China. These Regulations have been formulated with a view to safeguarding the sovereignty of the People's Republic of China, to ensuring safety of vessels and to maintaining order of traffic in the Chanjiang (Yangtse River) Waterway and its Ports in accordance with the Regulations governing supervision and control of foreign vessels by the People's Republic of China.

Article 2. These Regulations and all relevant laws and administrative statutes issued by the Government of the People's Republic of China shall be complied with by all propelled and non-propelled vessels and other water-borne means of transport of foreign registry (hereinafter referred to as "vessels") sailing in the Chanjiang (Yangtse River) Waterway or berthing at its Ports.

Article 3. For the purpose of these Regulations, the "Chanjiang (Yangtse River) Waterway" shall mean the main waterway extending from the line joining Liuheiwu (Lat. 31° 30' 52" N., Long. 121° 18' 54" E.) at the lower reaches of the Estuary of the Liu River, and the signal post (Lat. 31° 37' 34" N., Long. 121° 22' 30" E.) at the lower reaches of the Estuary of the Shiqiao River, Congming Island, and upwards to the upper boundary of Zhangjiagang (a line joining point Lat. 31° 59' 35" N., Long. 120° 20' 00" E. and point Lat. 31° 57' 13" N., Long. 120° 20' 00" E.).

For the purpose of these Regulations, the term "Ports" shall mean Nantong and Zhangjiagang, being those open to vessels of foreign registry in the Chanjiang (Yangtse River) Waterway.

Article 4. These Regulations shall be enforced by the Harbour Superintendency Administration of the People's Republic of China, and all vessels shall be subject to their supervision and control.

Article 5. No vessels can enter the Chanjiang (Yangtse River) Waterway or its Ports without the Permission of the Harbour Superintendency Administration of the People's Republic of China. Those permitted to enter the Chanjiang (Yangtse River) Waterway shall be subject to inspection of the Quarantine Office, the Harbour Superintendency Administration, the Frontier Defence Office, the Customs and the Animal and Plant Inspection Office, and complete all relevant formalities. The above-mentioned authorities are entitled to exercise control on board if required.

Article 6. Vessels entering the Chanjiang (Yangtse River) Waterway shall not engage in shipping business between the ports along the Chanjiang (Yangtse River) and between the Ports and the Port of Shanghai, nor shall they engage in other unauthorised operations.

Article 7. Vessels entering the Chanjiang (Yangtse River) Waterway and its Ports shall:

(a) a week prior to its expected time of passing through the Port of Shanghai, apply to the Harbour Superintendency Administration at her expected port of arrival through the port Agent for completion of entry formalities;

(b) 24 hours in advance of her passing through the Port of Shanghai (or on her departure from the last port of call if the voyage takes less than 24 hours), report the vessel's expected time of passage and the vessel's ETA at her expected port of arrival along the Chanjiang (Yangtse River), the vessel's size, fore and aft drafts, the maximum height above the actual water line to the Harbour Superintendency Administration of Shanghai and of the expected port of arrival through the port Agents;

(c) give timely advice of any alteration in the ETA reported.

Article 8. Vessels sailing in the Chanjiang (Yangtse River) Waterway or berthing at its Ports shall apply to the Harbour Superintendency Administration at the port of arrival along the Chanjiang (Yangtse River) for pilotage and for passing through the Port of Shanghai, shall apply to the Shanghai Harbour Superintendency Administration for pilotage.

Article 9. Upon arrival at the port, vessels shall immediately submit the Entry Report and other relevant forms, ship's papers and relevant documents for examination and be subject to inspection. Before leaving the port, vessels shall report the time of departure and the port of destination to the Harbour Superintendency Administration and complete departure formalities through the port Agent and may only leave the port after port clearance has been obtained.

Article 10. Vessels sailing in the Chanjiang (Yangtse River) Waterway or berthing at its Ports shall by day hoist the national flag of the People's Republic of China at the top of the foremast and the national flag of state of registry at the stern; an "H" flag shall in addition be hoisted when there is a Pilot on board. On entering or leaving Ports or shifting berths, vessels shall moreover display signal-letters and other prescribed signals.

Article 11. Vessels making use of their VHF radio-telephone in the Chanjiang (Yangtse River) Waterway or its Ports shall comply with the provisional Regulations Governing the use of VHF Radio-telephone by foreign vessels issued by the Ministry of Communications of the People's Republic of China.

Article 12: In the Chanjiang (Yangtse River), vessel's radio-telegraph and radio-telephone transmitters can only be used to communicate with the river or coastal radio-stations of the People's Republic of China, and they can only be used in Ports in case of emergency, and reports shall be made to the Harbour Superintendency Administration immediately afterwards.

In the Chanjiang (Yangtse River) Waterway and its Ports, vessel's signal rockets, flare or gun signals can only be set off in case of emergency, and reports shall be made to the Harbour Superintendency Administration immediately afterwards.

Article 13. Vessels sailing in the Chanjiang (Yangtse River) Waterway or berthing at its Ports are prohibited from carrying out the following activities:

(a) having military installations and military ships photographed, drawn pictures of, videotaped or surveyed; or

(b) shooting, swimming, fishing, and setting off firecrackers or fireworks; or

(c) other activities threatening the national safety, interests and good order of the People's Republic of China.

Article 14. Vessels sailing in the Chanjiang (Yangtse River) Waterway shall anchor as near the outer limit of the fairway as is practicable under extraordinary circumstances such as bad weather, flood peaks, etc., which make temporary anchoring necessary, and shall not take the main fairway. Those vessels shall have the position and time of anchoring and the time of departure promptly reported to the nearest Harbour Superintendency Administration, and no one shall be allowed ashore without permission of the local public security authorities.

Article 15. Vessels sailing in the Chanjiang (Yangtse River) Waterway shall not proceed at a speed that would threaten the safety of other vessels and installations ashore.

Article 16. With respect to the regulations on navigation, berthing and prevention of collisions, vessels in the Chanjiang (Yangtse River) Waterway or berthing at its Ports shall comply with the Regulations governing prevention of collision in inland waterways promulgated by the Ministry of Communications of the People's Republic of China.

Article 17. While using signals, vessels shall comply with the Regulations governing prevention of collision in inland waterways and other relevant signal regulations; signals not being specified therein shall be displayed in accordance with the relevant international regulations.

Article 18. No vessel sailing in the Chanjiang (Yangtse River) Waterway or berthing at its Ports shall discharge or dispose of oils, oily mixtures or other harmful pollutants or refuse into water.

Article 19. Matters provided for in these Regulations shall be carried out in accordance therewith, while those not being set forth herein shall be dealt with in accordance with the Regulations governing supervision and control for foreign vessels by the People's Republic of China and other relevant laws and statutes.

Article 20. These Regulations shall become effective upon the date of promulgation.

Regulations for Merchant Ships passing through Lao Tie Shan (Liau-ti-shan) Channel.

Merchant vessels passing through the Lao Tie Shan Channel must observe the following regulations:

1. The water area with Lao Tie Shan Lighthouse as centre and a distance of 10 miles as radius, and the water area with North Huang Cheng Dao Light Beacon as centre and a distance of 7 miles as radius are prohibited areas.

The middle channel between these two prohibited areas is a navigable channel.

Note:

(a) Characteristics of Lao Tie Shan Lighthouse (Lat. 38° 43' 37" N., Long. 121° 08' 02" E.) Fl. (2) 30 sec. 25 miles.

(b) Characteristics of North Huang Cheng Dao Light Beacon (Lat. 38° 23' 40" N., Long. 120° 54' 33" E.) Fl. 3 sec. 15 miles.

2. Merchant vessels intending to pass through Lao Tie Shan Channel must send a radio message to "Harbour Master, Dalian" at least 8 hours prior to the passage reporting the following matters:

Ship's name, nationality, call sign, port of departure, port of destination, speed, colours of ship's hull, funnel mark and the accurate expected time to pass the line joining Lao Tie Shan Lighthouse and North Huang Cheng Dao Light Beacon.

Note:

(a) Dalian Coastal Radio Station:
Signal letters: XSZ; calling frequency 500 kHz;
Working frequency: 462 kHz; 8694 kHz; reserve frequency: 8678 kHz; working day and night.

(b) If weather conditions should cause any change in the expected time of passage, the facts must be immediately reported to "Harbour Master, Dalian".

3. Merchant vessels passing through the Lao Tie Shan Channel must show the lights or signals in accordance with the International regulations for Preventing Collisions at Sea, 1972.

4. Vessels are prohibited to pass through the area with Hai Mao Dao (Lat. 38° 52' N., Long. 121° 01' E.) as centre and a distance of 10 miles radius.

5. Any vessel violating any of the above mentioned regulations will be held responsible for all consequences.

Guide to Foreign Vessels Calling at Dalian (Dairen): Also see "Dalian". – Shipmaster's Report, dated April 1984.

(1) When entering or leaving Dalian Harbour please pass through the channel between Daisansantao and Hwangpotsui. You are not allowed to navigate within area 2.5 miles radius from Daisansantao Lighthouse Lat. 38° 51' 50" N., Long. 121° 49' 20" E. and 1 mile radius from Lighthouse Hwangpotsui Lat. 38° 54' 14" N., Long. 121° 42' 54" E.

(2) After entering joining line between Daisansantao and Hwangpotsui Lighthouses, radar, radio transmitter and other forbidden articles are prohibited from use, in case of danger or necessity for transmitting emergency message you must report to Harbour Superintendency Administration immediately after using.

(3) You are requested to wait for quarantine and Pilot within area bounded by lines connecting the following areas: Lat. 38° 57' 02" N., Long. 121° 45' 00" E., Lat. 38° 55' 30" N., Long. 121° 44' 28" E., Lat. 38° 57' 02" N., Long. 121° 41' 11" E., Lat. 38° 56' 19" N., Long. 121° 41' 11" E.

(4) All merchant vessels are informed that vessels passing through the Liau-ti-shan Channel entering or leaving the Port of Dalian, besides it ought to observe the regulations relating to the Liau-ti-shan Channel, must keep the way to navigate through the Southern water area beyond the tangent line joining from the Encounter Rock (Lat. 38° 34' 21" N., Long. 121° 38' 12" E.) to the outer verge of the Liau-ti-shan prohibited area and the Eastern water beyond Northward meridian line of the Encounter Rock to the continent.

(5) Dalian Coast Radio Station.
Call sign: XSZ
Calling frequency: 500 kHz
Working frequency: 462 kHz
Answering frequency: 8694 kHz
Listening frequency: 8364 kHz
Working day and night.

Guide to Foreign Vessels Calling at Huangpu (Whampoa).

(1) Foreign vessels are prohibited to sail in the water areas of the joint lines among Vanshan, Chaieng and Tankan Islands, except the route as designated hereunder:

(a) The vessels calling at Huangpu from ports other than Hong Kong, should proceed from seaward to Lat. 21° 40' 44" N., Long. 113° 56' 00" E. and set course to 318°T, or to Lat 21° 37' 30" N., Long. 113° 37' 45" E. and set course to 047°T; proceed to Lat. 21° 47' 45" N., Long. 113° 49' 32" E. then alter course to 013°T; proceed to Lat. 22° 00' 00" N., Long. 113° 52' 34" E., then alter course to 334°T; to Lat. 22° 05' 36" N., Long. 113° 49' 36" E., then straight to Lafsami Pilot Anchorage waiting for Pilot.
Vessels departing should sail along the opposite course and positions above mentioned, after disembarking Pilot at Lafsami Pilot Anchorage.

(b) The vessels calling at Huangpu from Hong Kong should proceed throught West Lamma Channel to Lat. 22° 08' 44" N., Long. 113° 55' 30"E. then alter course to 295°T; to Lat. 22° 12' 04" N., Long. 113° 47' 41" E. then alter course to 204°T to Lat. 22' 10' 36" N., Long. 113° 47' 00" E. then straight to Lafsami Pilot Anchorage waiting for Pilot.
The vessels departing for Hong Kong should sail along the opposite course and positions above mentioned, after Pilot disembarked at Lafsami Pilot Anchorage.

(2) The position of Lafsami Pilot Anchorage:
Lat. 22° 07' 20" to 22° 08' 30" N.
Long. 113° 45' 48" to 113° 47' 54" E.
3. Kwangchow (formerly Canton) Coastal Radio Station:
Call sign: XSQ
Calling frequency: 500 kHz
Working frequency: 445 kHz
Answering frequency: 8514 kHz
Listening frequency: 8364 kHz
Working day and night.

Guide to Foreign Vessels Calling at Qinhuangdao (Chinwangtao):

(1) When non-military foreign vessels call at Qinhuangdao, they may pass through Liau-Ti-Shan channel. For governing regulations, please refer to "Regulation for merchant vessels passing through Liau-Ti-Shan Channel". If a vessel violates the said regulations and enters the prohibited area, the Master of the vessel is to be held responsible for whatever consequence arising therefrom.

(2) All foreign vessels should anchor 3 miles off Qinhuangdao Lighthouse waiting for Pilot. In case vessels come from foreign ports, quarantine inspection will be carried out at anchorage. After all formalities completed vessels can enter the harbour with Pilot.

(3) In order to make necessary arrangements beforehand, when vessels calling at this port, the ship should send the following information to Penavico Qinhuangdao:

(a) Vessels ETA, the draft fore and aft, stowage plan (if loading export cargo), length overall and derricks' capacities (if first call this port).

(b) Further advice of accurate time of arrival will be required 24 hours before arrival.

(c) If any change in the arrival time owing to certain cause, it should be reported to the Agents immediately.

(4) If weather permits, vessels are requested to lift up all derricks before going alongside, thus enabling vessel to load cargo immediately after berthing.

(5) All telegrams to "Penavico Qinhuangdao" from the vessels at sea should be sent via Qinhuangdao Coastal Radio Station:
Call sign; XSE
Working frequency: 286, 8734 kHz
Calling frequency: 500, 8364 kHz
Working hours: 0600 – 2400

Guide to Foreign Vessels Calling at Taku Bar:
(Xiang Jiang, Tanggu and Tianjin)

(1) Foreign vessels entering Bohai (Pohai Gulf) are only allowed to pass through Changshan Channel and/or Liau-ti-Shan Channel. If the latter way is taken, the vessel must send a radio message to "Harbour Master, Dalian" for directions 8 hours prior to passage. It should be noted that no other channels are permitted for navigation.

(2) Vessels passing Liau-ti-Shan Channel for Dalian must take a detour along the East of "Encounter Rock".

(3) Position of sunken dredger "SE Ho" is at Lat. 38° 31' 00" N., Long. 119° 10' 05" E. Vessels should keep far away from the above mentioned area during navigation.

(4) Position of the Taku Bar Light Vessel is at Lat. 38° 56' 51" N., Long. 117° 55' 32" E. Vessels may anchor at N.E. direction of the Light Vessel, according to different condition of vessel's arrival draft, to wait for Pilot.

(5) Vessels are prohibited to enter into the area joining the following four buoys:

Lat.	Long.	
38° 56' 35" N.	117° 58' 33" E.	flash every 6 secs.
38° 56' 29" N.	117° 59' 11" E.	flash red (2) every 6 secs.
38° 55' 45" N.	117° 58' 59" E.	flash red every 6 secs.
38° 55' 51" N.	117° 58' 22" E.	flash (2) every 6 secs.

(6) Vessels may send radiogram to "Penavico Xiang Jiang" (via Xiang Jiang Coastal Radio Station, Call Sign XSV, calling frequency 500 kHz, working frequency 445 kHz, reserve frequency calling 8600 kHz, listening 8364 kHz, working hours 0000 – 2400) giving exact *ETA also fore and aft draft, before entering Bohai (Pohai Gulf).*

(7) The Pilot Station is at Tanggu. Any foreign vessel, according to harbour regulations, is required to have a Chinese Pilot when entering or leaving the port and among Taku Bar, Xiang Jiang, Tanggu and Tianjin. The Pilot will board the vessel at Taku Bar Anchorage after receipt of exact ETA given by the Master.

Guide to Foreign Vessels Calling at Qingdao (Tsingtao):

(1) Definite route must be taken when sailing in or out : From Lat. 35° 56' 24" N., Long. 121° 05' 00" E. to Lat. 35° 56' 24" N., Long. 120° 46' 42" E. course 270° (090°).
From Lat. 35° 43' 15" N., Long. 120° 53' 09" E. to Lat. 35° 56' 24" N., Long. 120° 46' 42" E. course 335° (155°).
Thence from Lat. 35° 56' 24" N., Long. 120° 46' 42" E. course 283° (103°) to Lat. 36° 02' 00" N., Long. 120° 15' 56" E. then alter course 000° (180°) proceed to Quarantine Anchorage within following 4 points: Lat. 36° 05' 18" N., Long. 120° 15' 34" E.; Lat. 36° 05' 18" N., Long. 120° 16' 50" E.; Lat. 36° 04' 00" N., Long.120° 16' 22" E.; Lat. 36° 04' 00" N., Long. 120° 15' 20" E.

(2) Pilot station is within the area: with the point Lat. 36° 02' 00" N., Long. 120° 18' 16" E. as its centre and 3 cables length as its radius (all called Outer Anchorage where vessels inward anchor for initial clearance from Authorities).

(3) Dropping and dragging anchor are strictly prohibited within the following areas:

(a) Within the 4 points: Lat. 36° 04' 00" N., Long. 120° 14' 00" E.; Lat. 36° 03' 12" N., Long. 120° 17' 00" E.; Lat. 36° 03' 27" N., Long. 120° 14' 00" E.; Lat. 36° 02' 40" N., Long. 120° 16' 56" E.

(b) Within the 4 points: Lat. 36° 02' 42" N., Long. 120° 20' 00" E.; Lat. 36° 00' 48" N., Long. 120° 18' 00" E.; Lat. 36° 03' 36" N., Long. 120° 23' 16" E.; Lat. 35° 59' 48" N., Long. 120° 18' 30" E.

(4) Must advise ETA Chalientao 24 hours before ship's arrival.

(5) When abeam Chalientao on ship's entry, should cable again immediately time abeam Chalientao and accurate time arriving Pilot Station and awaiting Authorities instructions attentively.

(6) Proceeding on above mentioned route following stipulations should be observed:

(a) Ship's national flag and code flags should be flown in daytime.

(b) Dumping rubbish and pumping out oil and oily substance are prohibited.

(c) If by some reasons the vessel needs to anchor, Master should report to Harbour Authorities first for permission.

(7) Within harbour limit the prohibited articles should not be used. In case the use of radar is required for navigation, Master should report to Harbour Authorities beforehand.

(8) Above mentioned Regulations should be strictly complied with. Otherwise the vessel is held responsible for all the consequences arising from the violation of the above.

(9) Qingdao Coastal Radio Station:
Call sign: XST
Calling frequency: 500 kHz
Working frequency: 435 kHz
Answering frequency: 8546 kHz
Listening frequency: 8364 kHz
Working day and night.

Guide to Foreign Vessels Calling at Lianyungang (Lienyunkang):

(1) Foreign vessels must anchor at Pilot Station to wait for Pilot.
Pilot anchorages:
(a) For vessels under 5,000 d.w.t.
Lat. 34° 45' 20" N., Long., 119° 31' 36" E. (about 3,000 m. East of Tunglientao Lighthouse).
(b) For vessels over 5,000 d.w.t.
Lat. 34° 46' 54" N., Long. 119° 34' 45" E. (about 4.5 miles off Tunglientao Lighthouse).

(2) Foreign vessels calling this port shall advise the Agents (Penavico Lianyungang) of her ETA via the Shanghai Coastal Radio Station.

Guide to Foreign Vessels Calling at Zhanjiang:

(1) Pilot station: North Anchorage of Nau Chow Island.
Lat. 20° 58' 21" N., Long. 110° 36' 42" E.

(2) Zhanjiang Coastal Radio Station:
Call Sign: XSJ
Calling frequency: 500 kHz
Working frequency: 462 kHz
Answering frequency: 8614 kHz
Listening frequency: 8364 kHz
Working day and night.

Guide to Foreign Vessels Calling at Basuo (Pasuo):

(1) Basuo Coastal Radio Station:
(a) Call Sign: XSH
(b) Working frequency: 452 kHz 0000 – 2400 (local time)
4278 kHz 1800 – 0900 (local time)
8634 kHz 0900 – 1800 (local time)
(c) Listening frequency: 500 kHz 0000 – 2400 (local time)
4182 kHz 1800 – 0900 (local time)
8364 kHz 0900 – 1800 (local time)
(d) Traffic list at 20 minutes pass every odd hour.

(2) Pilot station:
Lat. 19° 07' 09" N., Long. 108° 36' 02" E.
Bearing upon Telanchau 175° (T) distance 1 mile.

(3) Signal station:
The signal station is on top of Telanchau Hill (Lat. 19° 06' N., Long. 108° 37' E.) with light beacon of white light Gp. Fl. (2) 6 sec. 54 m. 12 M. at night.

(4) Radio report before ship's arrival:
Masters are requested to advise "Penavico Basuo" of the following particulars. 48 hours before ship's arrival or right after departure from last port:
(a) 48 and 16 hours ETA.
(b) Route taken (via Hainan Straits or Yulinkong).
(c) Cargo to be loaded in each hold and/or tweendeck.
(d) The ship's length overall (first call only).
(e) Ship's breadth (first call only).
(f) T.P.I. (laden) (first call only).
Remarks: All derricks up and beams off before arrival if and when weather permits.

Guide to Foreign Vessels Calling at Wenzhou (Wenchow):

(1) When arriving at or departing from the Port of Wenzhou, foreign vessels should pass through Whang Dan Sha Channel to enter or leave the Quarantine and Pilot Anchorages.

Before reaching Whang Dan Sha Channel, the vessels should navigate along the water areas 27° 46' N. – 27° 54' N. between Fu Tou You Light Beacon and Dong Yu, Dong Tou, Heng Zhi Shan Light Stations, but keep off the area within 27° 55' N. – 28° 05' N. and 121° 35' E. – 121° 55' E. a suspected minefield.

The vessels should not be allowed to enter into the water areas East of the joint line of Dong Yu and Heng Zhi Shan Light Stations, and also the water areas West of Fu Tou You Light Beacon and Dong Tou Light Station for navigation or anchorage.

(2) Quarantine Anchorage is in the water area with the point Lat. 28° 01' 10" N., Long. 121° 05' 20" E. as its centre and 0.6 nautical miles in length as its radius.

(3) The above Regulations should be effective as from 0000 hrs. 1st January, 1972, and observed by foreign vessels accordingly.

(4) Aids to navigation available for fixing ships position.
(a) Fu Tou You Light Beacon:
Lat. 27° 50' 08.7" N., Long. 121° 14' 48.8" E.
White light Gp. Fl. 6 sec. 99 m. 16 M. (U).
Fog signal sounded on foggy day.
(b) Dong You Light Station:
Lat. 27° 55' 56.8" N., Long. 121° 13' 24" E.
White light Gp. Fl. (3) 10 sec. 39 m. 9 M. (U).
(c) Dong Tou Light Station:
Lat. 27° 57' 43.5" N., Long. 121° 08' 46.7" E.
White light Gp. Fl. (2) 6 sec. 21 m. 7 M. (U).
(d) Heng Zhi Shan Light Station:
Lat. 28° 01' 03" N., Long. 121° 08' 34" E.
White light Gp. Fl. (3) 10 sec. 58 m. 7 M. (U).
(e) Quarantine Light Buoy:
Lat. 28° 01' 10" N., Long. 121° 05' 20" E.
Orange and yellow can buoy; orange and yellow light Gp. Fl. (2) 6 sec.
(f) Yuan Yi Shan and Lang Dang Light Stations should be suspended to navigate by the foreign vessels as from 0000 hrs. 1st January, 1972.

Other points for attention:

When it is necessary for the foreign vessels to call at Fuzhou, Xiamen, Shantou and Beihai, it is requested to contact Messrs. Penavico at relative port direct 48 hours before vessel's arrival at the port in order to know the position of Pilot Station and quarantine anchorage as well as directions to be observed for navigation.

Regulations Governing Supervision and Control of Foreign vessels by the People's Republic of China (ENGLISH TRANSLATION)
Dated: 1979

GENERAL PROVISIONS

Article 1

These Regulations have been formulated with a view to safeguarding the sovereignty of the People's Republic of China, to maintaining traffic order in port areas and coastal waters, to ensuring safety of navigation and to preventing pollution of waters.

Article 2

These Regulations as well as all relevant laws, statutes and rules issued by the Government of the People's Republic of China shall be complied with by all foreign vessels (hereinafter referred to as "vessels") navigating in port areas and coastal waters of the People's Republic of China. Vessels shall be subject to inspections by the Harbour Superintendency Administration set up in the port by the Government of the People's Republic of China where the latter deems such inspections necessary.

The term "coastal waters" mentioned in these Regulations means inland waters and territorial sea of the People's Republic of China as well as water areas officially defined as coming under the jurisdiction thereof.

Part 1 ENTRY, DEPARTURE AND NAVIGATION

Article 3

The Master or owner of a vessel shall, a week prior to its expected arrival at the port, submit the required forms to the Harbour Superintendency Administration through the vessel's port Agent for completion of entry formalities, and shall report, 24 hours in advance of her arrival (or on her departure from the last port of call if the voyage takes less than 24 hours), the vessel's ETA, fore and aft drafts on arrival to the Harbour Superintendency Administration through the port Agent. Should there be any change in the ETA, same shall be reported in time.

A report shall be submitted in advance to the Harbour Superintendency Administration in case of special circumstances, such as the vessel being in distress, the engines broken down or her crew or passengers suffering from acute disease, which necessitate the vessel to make an emergency entry into or to return to the port during the voyage.

Article 4

No vessel shall enter or leave the port, or navigate or shift berths therein without a Pilot being appointed by the Harbour Superintendency Administration. Matters regarding pilotage shall be dealt with according to the Regulations with respect to Sea-port Pilotage issued by the Ministry of Communications of the People's Republic of China.

Article 5

Upon arrival at the port, vessels shall immediately submit the Entry Report and other relevant forms for checking; besides, vessels shall submit ship's papers and relevant documents for examination and be subject to inspections. Prior to leaving, vessels shall submit the Departure Report and other relevant forms for clearance examination and may only leave the port after port clearance has been obtained.

Article 6

Upon arrival at the port, arms and ammunition on board are to be sealed up by the Harbour Superintendency Administration. Radio-telegraph transmitter, radio-telephone transmitter, signal rockets, flare signals and signal guns shall only be used in case of emergency, and a report shall be made to the Harbour Superintendency Administration immediately afterwards.

Article 7

Shooting, swimming, fishing, setting off of firecrackers or fireworks and other actions calculated to endanger the order and security of the port shall be prohibited.

Article 8

The Harbour Superintendency Administration is fully authorised to detain the vessel concerned, or to order the vessel to stop sailing, to change route or to return to the port under any of the following circumstances:
(a) unseaworthiness;
(b) violation of laws or regulations of the People's Republic of China;
(c) involvement in marine accident;
(d) non-payment of expenses to which the vessel is liable or failure to produce security required; or
(e) other cases prohibiting the vessel from sailing.

Article 9

Vessels navigating in Chinese port areas and coastal waters shall not be engaged in activities endangering the national safety, rights and interests of the People's Republic of China and shall comply with regulations governing straits, waterways, routes and areas closed to navigation.

Article 10

Vessels navigating within the port areas shall not proceed at a speed liable to endanger the safety of other vessels and port installations.

Article 11

Boats (rafts) attached to vessels shall not be manoeuvred within port areas except for life-saving purposes.

Article 12

No vessel shall have its boats, derricks and gangways, etc., rigged outboard while navigating or shifting berths within port areas.

Article 13

Vessels requiring to enter any of the Chinese ports open to foreign trade for shelter or temporary stay shall apply to the Harbour Superintendency Administration for permission. Such application shall state: name of the vessel, call-sign, vessel's nationality, name of the shipping company, port of sailing, port of destination , vessel's position, speed, drafts, colour of hull and colour and mark of funnel. Such vessels shall take shelter at places designated.

Vessels requiring to take shelter or to lie at anchor temporarily at places other than any of those Chinese ports open to foreign trade shall, in addition to the above formalities observe the following regulations:

(a) reporting promptly to the nearest Harbour Superintendency Administration the time and position of anchoring and the time of departure;
(b) fulfilling the requirements of local authorities concerned and submitting to their inspections, inquiries and instructions; and
(c) no one to be allowed ashore and no cargo loaded or discharged without permission of local authorities concerned.

Part 2 BERTHING

Article 14

While berthing in port, vessels shall have on board a sufficient number of men to ensure safe manoeuvring, and, in case of emergency such as typhoon warning, etc., all hands shall return immediately aboard to take necessary precautions and urgent measures.

Article 15

Gangways for access of crew members, passengers and other persons shall be properly secured and fitted with railings or manropes. Rope ladders shall be safe and strong. Sufficient illumination shall be available at night.

Article 16

Vessels requiring to turn propellers shall pay close attention to the surroundings at the stern, and shall only do so under the condition that the safety of other vessels and harbour installations has been ensured.

Article 17

While berthing in port, all exhaust valves and discharge openings of the vessel which may give trouble to other vessels, harbour craft, the wharf or the access of persons shall be properly covered.

Article 18

No light of any vessel shall be exhibited in such a manner as to impair the safe navigation of other vessels; strong lights directed at the fairway must be properly screened.

Article 19

All vessels should be in safe and good working condition for cargo operation as required. All cargo handling equipment should be maintained in good working order and certificate of fitness should be made available.

Article 20

Vessels shall apply in advance for and obtain permission from the Harbour Superintendency Administration before carrying out the following operations:

(a) overhauling of any boiler, main-engine, windlass, steering gear or radio-station;
(b) trial trip of engine-test;
(c) lowering boat (raft) for life-saving drill;
(d) welding (except for repairing in shipyard) or working with naked light on deck; or
(e) decorating with colourful lights.

Article 21

Vessels under fumigation shall take strict safety measures and exhibit appropriate signals prescribed by the Harbour Superintendency Administration.

Article 22

In order to ensure the safety of the port and vessels, when ordered to shift berth or to sail ahead of or behind the schedule, vessels shall observe such orders as given by the Harbour Superintendency Administration.

Part 3 SIGNALS AND COMMUNICATIONS

Article 23

Vessels navigating or berthing in Chinese port areas or coastal waters shall by day hoist the national flag of the country of registry. On entering or leaving port or shifting berths, vessels shall in addition display signal-letters and relevant signals prescribed by the Harbour Superintendency Administration.

Article 24

When entering or leaving port or at anchor, vessels shall pay close attention to the call and signals of the port signal-station. When visual signals are used, the Regulations with respect to Coastal Port Signals issued by the Government of the People's Republic of China shall be complied with. Where signals are not specified by Chinese coastal ports, the International Code of Signals shall be applicable.

Article 25

Vessels shall not make sound signals at will within the port except when necessitated by safety of navigation. Vessels requiring to test whistles shall make an advance report to the Harbour Superintendency Administration.

Article 26

Vessels making use of their VHF radio-telephone in port shall comply with the Provisional Regulations governing the Use of VHF Radio-telephone by Foreign Vessels issued by the Ministry of Communications of the People's Republic of China.

Part 4 DANGEROUS CARGOES

Article 27

Vessels carrying or handling dangerous cargoes shall exhibit the prescribed signals, comply with the regulations relating to the carriage of dangerous cargoes and take all necessary safety measures. Cargoes of contradictory nature, in particular, must be separately stowed. It is strictly forbidden to stow explosives with ignitable materials or inflammable cargoes in the same hold.

Article 28

Vessels carrying Grade 1 highly hazardous cargoes shall, 3 days prior to the ETA, apply to the Harbour Superintendency Administration through their port Agent for endorsement, with their descriptive names, properties, packing, quantity, place of stowage stated in detail and a booklet of Description of Dangerous Materials attached, and shall not enter the port, discharge the cargoes or make transit unless permission has been obtained. Such cargoes being: explosives, highly poisonous articles, radio-active substances, compressed gases, liquefied gases, oxidising agents, substances liable to spontaneous combustion, substances which, in contact with water, emit inflammable gases, inflammable liquids, inflammable solids, acidic corrosives, etc.

Vessels intending to carry the above-mentioned hazardous cargoes for export shall, 3 days prior to the loading thereof, apply for endorsement and shall not load until permission has been obtained.

Article 29

Vessels applying for Certificate of Safety Stowage of Export Dangerous Cargoes shall, 3 days prior to loading, submit a written application to the Harbour Superintendency Administration, stating, inter alia: descriptive names, properties, packing, quantity, place of stowage (accompanied by stowage plan), intermediate ports, port of destination, and shall load at the berths designated by the Harbour Superintendency Administration.

Part 5 FAIRWAY PROTECTION

Article 30

Vessels under way shall comply with the Rules of Navigation and maintain traffic order. In case of accidents involving the risk of sinking, a report shall immediately be made to the Harbour Superintendency Administration and all effective measures shall be taken to steer clear of the fairway to avoid impeding the traffic and endangering other vessels. If the vessel is sunk, a temporary signal shall promptly be marked by the parties involved at the place of the wreck.

Article 31

Salvage operations on shipwrecks or other objects in port areas or coastal waters shall be carried out in accordance with the Regulations Governing the Salvage of Shipwrecks or Sunken Objects issued by the Government of the People's Republic of China. The Harbour Superintendency Administration may, as it thinks fit, notify the owners thereof to carry out salvage and clear the fairway within a specified time, or to arrange an immediate salvage to refloat or demolish the sunken vessel or object and to clear the fairway, with all responsibilities and expenses incurred borne by the owners concerned.

Article 32

Where any sunken or floating object has been found by any vessel, a report thereon shall be made and the object salvaged handed over to the Harbour Superintendency Administration, whereupon, a reward may be given by the latter as appropriate.

Article 33

Where any vessel wishes to dispose of any refuse such as garbage in port, it shall exhibit signals prescribed by the Harbour Superintendency Administration to request ash boats (cars).

Article 34

Fairway installations and aids to navigation shall be well cared for. Vessels causing damages thereto or to harbour constructions or other facilities shall report immediately to the Harbour Superintendency Administration and shall be held responsible for the restoration made or the expenses incurred.

Part 6 PREVENTION OF POLLUTION

Article 35

No vessel shall discharge oils, oily mixtures or other harmful pollutants or refuse within port areas and coastal waters of the People's Republic of China.

Article 36

If any ballast water, tank washings or bilge water is to be discharged from any vessel, an application shall be made to the Harbour Superintendency Administration for approval. Where a vessel has arrived from a plague-infested port, necessary sanitary treatment should been given by the Quarantine Authorities. Dirty water and hold washings from holds where dangerous cargoes or harmful pollutants have been stowed shall only be discharged at the designated place after their having been tested by and to the satisfaction of the sanitation departments concerned.

Article 37

Oil tankers and vessels with oil as fuel shall carry the Oil Record Book on board and make appropriate entries as required.

Article 38

Where a pollution has occurred within the port area or coastal waters, the vessel at fault shall have all relative particulars entered in the Oil Record Book and the Deck Log, and shall have the matter immediately reported to the Harbour Superintendency Administration. Meanwhile, all effective measures shall be taken to prevent the oil from spreading. Where any chemicals should be applied, an application together with a description of their compositions and properties shall be sent to the Harbour Superintendency Administration for approval.

Article 39

Matters not provided for in this part shall be dealt with in accordance with the regulations relating to the prevention of pollution of marine environment issued by the Government of the People's Republic of China.

Part 7 FIRE FIGHTING AND SALVAGE

Article 40

Smoking or naked flames in the hold or elsewhere liable to cause fire hazard to the vessels is strictly prohibited.

Article 41

Vessels bunkering oil or oil/tankers handling cargo oil shall take strict fire prevention measures for safety.

Article 42

While welding in port, vessels shall clean up the surrounding area beforehand, take strict precautionary measures, be provided with fire-fighting apparatus and examine the work site before and after the operation. No welding can be done inside or near oil compartments, unless and until all the oil has been emptied, oil residues cleared out, the compartments sufficiently ventilated, the inflammable gases expelled, and a certificate of fitness obtained.

Article 43

Should any vessel be involved in a fire hazard or marine casualties, an immediate report shall be made to the Harbour Superintendency Administration. Such report must contain ship's position, tonnage, drafts, cargo on board, damages suffered and assistance required.

Article 44

Where necessary, the Harbour Superintendency Administration may order and direct any vessel in port or in coastal waters to rescue the vessel in distress. The vessel so ordered and directed is obliged to do its utmost to render every possible assistance as long as its own safety will not be endangered.

Article 45

As soon as the officers from the Harbour Superintendency Administration or the salvage departments concerned have arrived, the Master of the vessel in distress shall report the accident occurred and measures taken so far, provide all information and facilities required and make suggestions with regard to the salvage as appropriate. All decisions taken by the Harbour Superintendency Administration for maintaining safety and order shall be complied with by all parties concerned.

Part 8 MARINE ACCIDENTS

Article 46

Should any vessel be involved in marine accident, the Master shall give the Harbour Superintendency Administration a summarised report by telegram or radio-telephone soonest possible. In case the accident has occurred outside of port areas, the Master shall, within 48 hours of the vessel's arrival at the first port of call, submit a marine accident report to the Harbour Superintendency Administration. Such report shall be submitted within 24 hours of the accident if the same has happened in port.

Article 47

Should any vessel be involved in marine accident causing death of or injury to persons or damages to properties in port areas or coastal waters of the People's Republic of China, the Master of the vessel at fault shall render every possible assistance to the ship and persons in distress, make timely report to the Harbour Superintendency Administration and be prepared for investigation and settlement. Should the party at fault refrain from rendering any assistance in spite of the imminent danger or flee into hiding, severe punishment will be imposed.

Article 48

Should death happen to any person on board, an immediate report thereof shall be sent to the Harbour Superintendency Administration. Where any damage or death has caused to the port or its persons through the fault of the ship, or vice versa, the spot should be kept untouched and timely reports should be given to the Harbour Superintendency Administration by both parties. In case of dispute, either party may resort to the Harbour Superintendency Administration for investigation and settlement. Matters involving penal proceedings shall be dealt with by judicial organs of the People's Republic of China.

Article 49

Matters not provided for in this part shall be dealt with in accordance with the Regulations Governing Investigation and Settlement of Marine Accidents promulgated by the Ministry of Communications of the People's Republic of China.

Part 9 PENALTIES FOR VIOLATION OF REGULATIONS

Article 50

Vessels violating these Regulations and all relevant laws, statutes and rules issued by the Government of the People's Republic of China shall, according to the seriousness of the case, be warned or fined by the Harbour Superintendency Administration. All offences of vicious or serious nature shall be handed over to the judicial organs.

Article 51

Any offender not yielding to the conclusions made by the Harbour Superintendency Administration may, within 15 days of the receipt thereof, appeal to the Bureau of Harbour Superintendency of the People's Republic of China. The above said conclusions, however, shall remain valid before its being modified.

Part 10 SUPPLEMENTARY PROVISIONS

Article 52

Matters concerning prevention of collisions not provided for in these Regulations and relevant rules and regulations issued by the Government of the People's Republic of China shall be dealt with in accordance with the International Regulations for Preventing Collisions at Sea accepted by the Government of the People's Republic of China.

Article 53

These Regulations shall become effective upon the approval by the State Council of the People's Republic of China. The Regulations Governing Entry and Departure of Foreign Vessels Into and From Ports of the People's Republic of China promulgated by the Ministry of Communications of the People's Republic of China on the 12th March, 1957 shall at the same time repealed.

ANQING: 30.30 N. 117.02 E.

PILOTAGE: Pilot available day and night.
ANCHORAGE: There is a general cargo anchorage and a tanker anchorage for vessels up to 10,000 d.w.t. Depth of water 6.0 m. – 10.0 m. Bottom is sand and mud.
RESTRICTIONS: Vessels may enter and sail after sunset.
MAX. SIZE: *Draft Limitation in Channel:*
Wusong to Anqing: 4.5 m.
Anqing to Wuhan: 4.0 m.
TUGS: 1×300 h.p., 2×400 h.p., 1×600 h.p. and 1×800 h.p.

BERTHING:

Working District	*Berth No.*	*Length (m.)*	*Depth (m.)*	*Cargo Handled*
First	Xiao Nan Men Berth	50	2.0 – 5.0	General cargo.
	Pao Yingshan Berth	40	6.0	Sand, ore.
Second	6	40	3.0	Passenger ferry.
	7	65	3.2	Passenger.
	8	90	8.0	Passenger.
	9	76	8.0	Passenger.
	11	67	6.5	General cargo.
	13	36	4.8	Heavy cargo.
Third	14	36	4.0	Coal.
	17	36	4.0	Coal.
	18	50	4.0	Ore.
	20	65	4.0	Sand, ore.
	15 16	150	4.0 – 10.0	General cargo, heavy cargo.
Anqing Petroleum and Chemical Zone	2	66	6.0	Crude oil.
	3	90	6.0 – 10.0	Crude oil.
	4	66	6.0	Crude oil.
	5	90	6.0 – 10.0	Petroleum.
	6	66	7.0	Petroleum.
	7	65	6.0	Petroleum.

CRANES: 1×15 tons floating crane.
STEVEDORES: *Working hours:*

Weekday:	0630 – 1530. 1630 – 0030
Sunday:	0630 – 1600
Holidays:	0630 – 1530 1600 – 0030.

FRESH WATER: Not available.
FUEL: Not available.
AUTHORITY: Anqing Port Authority, 7 Yan Jiang R2, Central, Anqing, China 246030. *Tel:* 514810-7001.

BASUO: 19.06 N. 108.37 E. (See Plan)

PILOTAGE: Compulsory. Pilotage is undertaken day and night. Pilot boards in the Quarantine Anchorage.
RESTRICTIONS: Entry and sailing possible after sunset.
MAX. SIZE: Max. draft in channel and in berths is 9.0 m.
Range of tide: 0.03 m. – 3.28 m.
VHF: Call sign XSH. Station on Channel 16 throughout 24 hours.
TUGS: 1×1,960 h.p., 1×1,670 h.p and 1×980 h.p.
BERTHING:

District	*Berth No.*	*Length (m.)*	*Max. LOA (m.)*	*Max. Draft (m.)*	*Remarks*
No. 1	1 & 2	368	371	9.0	Ore
No. 2	3 & 4	320	360	9.0	General cargo

Warehouse and Open Store Space:

Warehouse	10,015 sq.m.
Open store space	60,000 sq.m.

Main Import and Export Cargo:
Imports: Fertiliser, cement, rice, equipment and coal.
Exports: Salt, cre, quartz, sand and local products.
STEVEDORES:
Working hours: 0730 – 1130 hrs. and 1430 – 1730 hrs.(Sundays and holidays included).
FRESH WATER: Available.
FUEL: Not available.
GENERAL: *Stores:* Provisions available from Basuo Ocean Shipping Supply Corporation.
Floating Cranes: None available.

BEI HAI: 21.29 N. 109.05 E. (See Plan)

LOCATION: The port is located at Beihai City in the Guangxi Zhuang Autonomous Region, known as the foot of Beihai Peninsula, and lies N.E. of the Beibu Bay of the South Sea. The port is 124 miles from Haikou City (Hainan Province), 255 miles from Zhanjiang City (Guangdong), 425 miles from Hong Kong, 157 miles from Haiphong (Vietnam) and 1,295 miles from Singapore.
PORT LIMITS: The North limit extends East from Lat. 21° 31' 00" N. to Long. 109° 08' 55" E.; the South limit is Lat. 21° 21' 20.8" N.; the East limit extends North from Long. 109° 05' 00" E. to the shore line; the West limit is Long. 108° 59' 36" E. The above mentioned limits comprise the port limits. Dockage charges (Mooring, unmooring, berthing, etc.) commence when vessel is made fast to wharf, and are on a 24 hour basis.
DOCUMENTS: Basic documents for entry:
5 copies General Declaration.
4 copies Cargo Declaration (enclosed with 2 copies of Cargo Manifest).

3 copies Stores List.
2 copies Crew's Effects Declaration.
4 copies Crew List.
4 copies Passenger List.
1 copy Maritime Declaration of Health.
1 copy Ship's Particulars.
1 copy Clearance from Last Port.
Valid original vessel documents.

All vessels shall, upon arrival, report via vessel's Agent to Port Director all cargo to be discharged/loaded. Such report shall be in form of copies of Ship's Manifest and Stowage Plan, and shall show number of units, commodity, weight, destination, consignee, and all other information which Port of Beihai deems necessary for compilation of commercial statistics, for reserving necessary warehouse or wharf space, or other purposes.

PILOTAGE: Compulsory. Provided by Pilot's Department of Beihai Port Authority, 75 Haijiao Road, Beihai, Guangxi, China 536000. Tel: (779) 3034011-435/249. Fax: (779) 3035423. Telex: 48748. Position of Pilot Station: Lat. 21° 21' 20.8" N., Long. 109° 00' 06.8" E.

Pilots communicate with vessel on VHF Channel 16. If no answer, contact Beihai Radio on VHF Channel 14 to call Pilots on land line. Notice of ETA and request for Pilot must be made to the Pilots at least 24 hours in advance.

APPROACHES: *Channel:* Both of the new and old districts of Beihai Ports are to the South and face Lianzhou Bay. Entrance to the harbour is by a dog-leg channel running due North and then turning N.E. to the new and old terminals.

The first part of the channel is 7 miles long, from Buoy No. 0 of the Pilot Station, with a depth of 12.0 m. to Buoy No. 6.

The second part of the channel is 2 miles long, running N.E. from Buoy No. 6 to Buoy No. 9.

The third part of the channel is 1 mile long.

The channel is in total 17.28 km. long, with depths 8.0 m. – 12.9 m. and width 100 m. – 130 m.

There are 18 navigation buoys.

ANCHORAGE: The port has two designated anchorages, the Pilot (Inspection) Anchorage and the Lightening Anchorage.

Pilot (Inspection) Anchorage: The area with centre Lat. 21° 21' 20.8" N., Long. 109° 00' 06.8" E. with a radius of 2,000 m. and depths 12.3 m. – 16.0 m.

Lightening Anchorage: Port has 3 lightening anchorages:

	Latitude	Longitude
No. 1:	21° 29' 14" N.	109° 04' 14" E.
(Depth 9.0 m.)	21° 29' 32" N.	109° 04' 14" E.
	21° 29' 20" N.	109° 04' 43" E.
	21° 29' 39" N.	109° 04' 43" E.
No. 2:	21° 29' 20" N.	109° 04' 43" E.
(Depth 7.0 m.)	21° 29' 39" N.	109° 04' 43" E.
	21° 29' 32" N.	109° 05' 16" E.
	21° 29' 49" N.	109° 05' 16" E.
No. 3:	21° 29' 32" N.	109° 05' 16" E.
(Depth 5.0 m.)	21° 29' 43" N.	109° 05' 16" E.
	21° 29' 43" N.	109° 05' 49" E.
	21° 29' 59" N.	109° 05' 49" E.

MAX. SIZE: Vessels up to 12.0 m. draft must be lightened in the Inspection Anchorage.

HEALTH: Before entering Beihai Port, all overseas vessels (foreign and domestic flag) must obtain Free Pratique from Beihai Quarantine Office via an inspection at the Inspection Anchorage or by telex.

RADIO: Port has radio station, VHF and ground satellite station. Vessels calling at Beihai Port may communicate with port radio station as per international methods, see table below.

When shifting or anchoring in the port, VHF can be used to contact the Harbour Master and Agents.

Telex and cables are also used to communicate with the Agent or receiver.

Name of Beihai Port's ground satellite station: The National Satellite Special Communication Net Beihai Terminal. Working channel: 3700-4200 MHz (receiving), 5,925-6,425 MHz (transmitting).

Beihai Radio: Position Lat. 21° 29' 39" N., Long. 109° 04' 48" E.

Call Sign	*Transmitting kHz*	*Receiving kHz*	*Type of Transmission*	*Working Hours*
"XSK"	500,486	500	A1A	24
	4,244		A1A	1800-0900
	8,530		A1A	0900-1800
	2,730	2,182	A3E	

VHF: Beihai Radio on Channels 14 and 16 throughout 24 hours.

TUGS: 5 tugs available to assist with berthing. Total power 3,984 kW and maximum power 1,706 kW. Service is provided by Port Shipping Co., arranged by Port General Dispatching Office and paid as per the regulation/tariff of the Ministry of Communications. Tel: (779) 3032129 and 3034011-343 (incl. nights and holidays).

BERTHING:

Port Area	*Berth*	*Length (m.)*	*Depth (m.)*	*Max. Size (d.w.t.)*	*Use*	*Shore Cranes*
1st	1	60	4.5	1,000	General Cargo	1×5 tons
	2	92	3.8	700	General Cargo	
	3	100	3.8	700	General Cargo	2×5 tons
	4	88	2.0		Tyre Cranes	10 tons, 20 tons, 25 tons, 50 tons.
	5	88	2.0	200	Bulk & General	
2nd	1	170	9.5	15,000	General Cargo	1×5, 1×27.5
	2	170	9.5	14,000	Bulk & General	1×10, 1×27.5
	3	200	10.5	25,000	General Cargo	2×10 tons
	4	200	12.0	30,000	Bulk Cargo	1×10, 1×16

The first port area has 5,124 sq.m. of warehouse and 18,000 sq.m. of open storage area.

The 2nd port area has 18,000 sq.m. of warehouse. Open storage areas consist of 97,531 sq.m.

Both of the warehouses in 1st and 2nd port areas are dry bulk storage.

STEVEDORES: *Working Hours:* Governmental working shifts: 0000 hrs. – 0800 hrs., 0800 hrs. – 1600 hrs., 1600 hrs. – 0000 hrs. Mondays to Fridays, holidays excepted.

MEDICAL: Port has a hospital. Full hospital facilities available in the city without prior notice. Dentists available during normal working hours.

FRESH WATER: Fresh water delivered to vessels at wharves or docks by pipeline. Water barge is available for supplying water at the anchorage. Cost U.S.$1.00/ton.

FUEL: Private and Governmental firms with trucks or barges available, by prior arrangement through vessel's Agent.

FIRE PRECAUTIONS: Smoking is strictly prohibited in transit sheds, warehouses, or on apron of wharves and on vessel, handling dangerous, hazardous or inflammable cargo. Smoking is also prohibited in any areas where gasoline or like materials are being handled or equipment serviced. The receiving, handling or storage of explosives and hazardous or highly inflammable commodities or materials shall be subject to relevant Chinese laws, rules and regulations. Insurance is requested for party concerned.

DRY DOCKS/REPAIRS: Port has one mechanical repair factory for mobile and electrical repairs. Others such as radio, radar and navigation repairs available.

SURVEYORS: Marine surveyors representing China Classification Societies are Zhanjiang Bureau, Beihai Office or Ship Survey Department of Beihai Harbour Master. Services are operated at the port or nearby ports. Tel: (779) 3037049. Fax: (779) 3033990.

GANGWAY/DECK WATCHMEN: No requirement, except for special vessel conditions or security reasons as determined by Port Authority.

OPENING/CLOSING HATCHES: Normally by ship's crew.

CUSTOMS ALLOWANCES: Customs Regulations of PRC.

REPATRIATION: Facilities exist for changes of crews and repatriation. Scheduled aircraft service from Beihai City daily to most big cities of the country. International flights are available. Airport is 20 km. from port.

POLICE/AMBULANCE/FIRE: Police Tel: 3032441 or 112; Fire Department Tel: 119; Ambulance Tel: 2022245; Hospital Tel: 3034011-403, 3032125 or via Agent.

CARGO GEAR: 16 cranes, 8 straddle carriers, 33 forklifts, 8 sets of automatic bulk bagging systems, mobile crane with lifting capacity of 50 tons.

HOLIDAYS: New Year's Day; Labour Day; Women's Day; Youth's Day; National Day; Lunar New Year. When any one of these falls on a Sunday, the next Monday is observed. When any one of these falls on a Saturday, the preceding Friday is observed, or subject to Governmental notice.

BANKS: Beihai banks all have foreign departments. The major one is Bank of China, Beihai Branch, Beihai Avenue. Tel: 3051013.

GARBAGE DISPOSAL: Beihai Harbour Master provides compulsory service. Tel: 3033492.

SEAMEN'S CLUBS: Available.

CURRENCY: Ren Min Bi (RMB).

GENERAL: The port is directly connected with important cities in the S.W. such as Kunming, Guizhou, Chengdu, Chongqing, etc.

DEVELOPMENTS: A series of berths are under preparation to begin construction. Container dock is also under design. Beihai Port will develop into a modernised port.

SHIPMASTER'S REPORT: January 1994.

Cargo: Discharged gas oil into barges.

Approaches: B.A. Chart No. 3892 and 41.

When approaching Beihai, the water depth has to be watched very closely. Also the Admiralty Tide Table has to be consulted and a tidal curve has to be made for reference. The position as given by the Agent for lightering was too shallow as it gives a depth of 9.6 m. and less, based on Chart Datum. The vessel's draft was 10.6 m., and when we arrived at low water, there was a rise of 0.8 m., so the depth was still insufficient. When we had a keel clearance of 2.8 m., we anchored in position Lat. 21° 21' N., Long. 109° 00' E. Position given by the Agent was 21° 23' 25" N., 109° 02' 25" E. The keel clearance of 2.8 m. was also based on a trim of 3.0 m. during discharge. During the swinging of the vessel, manual soundings were taken and compared with the echo sounder readings, which proved to be the same. During discharge, the minimum depth encountered was 0.8 m.

Holding ground good for anchoring.

Agency: The Agent and Customs, etc., came out the next day around noon. The visibility was quite poor in what seemed to be normal during this period of the year. The boat with the boarding party had no radar and was guided from Beihai to the vessel's anchor position by our ship's radar and by the Duty Officer's instructions. Customs, Immigration and Quarantine Officers boarded and formalities were done very smoothly and without any difficulties.

Discharge: Discharging was done by STS by means of 2 lightening vessels of 1,000 tonnes each. After loading, lightening vessel went back for discharge and after approximately 7 hours was back again for another lightening. Fendering was quite poor, only old car tyres were used. From our side, we had some old large car tyres for fendering. Connecting was done by stevedores from the shore who stayed on board during the lightening operation. No difficulties were encountered during the operation.

Discharging was completed on a Sunday evening. During the weekend, all official offices were closed and a Clearance could not be obtained by the Agent. On Monday morning, the Clearance was obtained at 0900 hrs. and put on board at 1200 hrs. at the anchorage.

The only person who spoke English was the Agent. All other people did not speak any English, so the communication was done by 'arm gestures'.

Communications: VHF Channel 16 for port and VHF Channel 14 for Agent.

SHIPMASTER'S REPORT: March 1994.

From departure Singapore, we were unable to make contact by telex with "Penavico Beihei". All messages were relayed by Agent in Hong Kong. They supplied me with a Fax number for Beihai, but again this number did not give us contact.

Vessel's arrival draft 11.2 m.

Several ships were already at anchor and we settled in position 21° 19' N., 109° 00' E. This gave us a minimum under-keel clearance of 5.0 m. with the expected tidal range. Holding ground was good.

Even with arrival on a Sunday, the Agent appeared 4 hours after our first VHF contact. Very little English was spoke, but all official paperwork was completed. The only point of note being that the Quarantine Officers demanded that all crew have Hepatitis injection. A compromise was reached in that the documents would be taken ashore and stamped as no shore leave would be allowed. About 10 persons boarded, and there was much passing of paperwork between the various officals.

The discharge was done by 2 coastal ships of 1,000 tonnes capacity. One of them did 5 cargoes and the other only one cargo.

The interval between trips varied, but 6 hours was the normal period.

Initially, the "Chang Da 2" tried to come alongside without any fenders at all, but we refused this. Luckily on our last visit to Singapore, we acquired a large number of old car tyres, and had made these into twin tyre fenders. Ten of these units plus 4 normal fenders were positioned by ourselves on the starboard side and the lightening then took place. The second vessel "Hua Qing" did have tyre fenders.

The surveyors arrived on the first vessel and departed on the same, leaving only a squad of 4 men for connecting and mooring operations. There was some confusion on the small vessels regarding the size and length of hose required, but with hand signals and the mooring squad supervisor, who spoke a little English, the operation was accomplished.

Loading of each small vessel took approximately 1 hour 10 minutes, using their hoses each time.

At the end of discharge, the supervisor inspected the tanks and signed the Dry Certificate, the gang then left on the last vessel.

The Agent informed us that he would arrive at the vessel approximately 4 hours after completion (daytime hours). After some 6-8 hours and after numerous attempts at VHF contact, he informed us that due to reduced visibility the boat was unable to find the vessel, and that no further attempts would be made that day, however he had secured clearance for us and all papers would be forwarded to the next port (Zhuhai) for our arrival.

Offers to guide their boat to the vessel by our radar were refused. As the weather conditions could remain with poor visibility for several days, we telephoned Owner and Agent in Hong Kong to inform them of the situation.

The Letter of Protest concerning delays was faxed to Hong Kong for retransmission to Beihai.

The vessel then departed with all parties aware of the situation, "Penavico Beihai" forwarding all outward papers and personal health papers to "Penavico Zhuhai" by the quickest method.

Communications by VHF Channels 14 and 16, but very limited.

AUTHORITY: Port of Beihai (Beihai Port Administration Bureau), 75 Haijiao Road, Beihai, Guangxi, China. *Tel:* (779) 3033481. *Contact:* Yue Zhiwei, Executive Port Director. Xu Bingzhong, Liu Xingjia, Deputy Port Directors.

BZ 34 TERMINAL: 38.07 N. 119.33 E. (See Plan)

LOCATION: The locations of the SPM and Well Head Platforms (WHP) are:

SPM:	Lat. 38° 06' 56.557" N., Long. 119° 33' 23.569" E.
2EP WHP:	Lat. 38° 07' 38.698" N., Long. 119° 33' 23.051" E.
2EW WHP:	Connected with 2EP WHP by Bridge.
4EP WHP:	Lat. 38° 05' 28.482" N., Long. 119° 32' 35.374" E.

The SPM and the three WHP are joined by submarine crude oil pipelines.

Masters of vessels are reminded that BZ 34 Terminal area is located in the People's Republic of China internal zone; moreover, they are requested to comply with any relevant laws and regulations.

BZ 34 Terminal consists of:

1. The three Well Head Platforms (WHP).
2. Fixed Tower (SPM – Single Point Mooring).
3. Floating Production and Storage Unit (FPSU) "Bohai Chang Qing Hao" is moored by one Mooring Yoke.

DOCUMENTS: *Customs and Inspection:* In accordance with normal practice, the vessel's national flag, the Chinese courtesy ensign, and following flags, must be displayed by all vessels approaching BZ 34 Terminal.

The principal signals are as follows:

1. Signal Flag "Q" in daytime : Request Quarantine.
2. Signal Light "Red over White" at night time : Request Quarantine.
3. Signal Flag "G" in daytime : Request Pilot.
4. Signal Flag "H" in daytime : Pilot on Board.
5. Signal Flag "B" in daytime : Hazardous Cargo on Board.
6. Signal Light "Red" at night-time : Hazardous Cargo on Board.
7. Vessel's Signal Letters : From before reaching the anchorage to mooring and from before unmooring to Pilot disembarking the Vessel.

The Joint Inspection Team (Representatives of Chinese Harbour Superintendency Administration, Customs, Frontier Defence Inspection Station, Quarantine Service, and Export and Import Commodity Inspection Bureau (E.I.C.I.B.) will board the vessel to grant clearance and inspect cargo.

Vaccination Certificates: Valid Yellow Fever Vaccination Certificates for all crew members and passengers, if the vessel comes from South America or Africa, shall be required by the Quarantine Service.

Furthermore, any possible medical trouble or illness on board the vessel must be indicated before the vessel's arrival, so that a representative of the Quarantine Service goes on board the vessel at mooring before any other person.

Certificates and Documents: The following documents shall be submitted for examination as soon as the Berthing Master and the Joint Inspection Team come on board the vessel:

1. Certificate of Nationality.
2. Certificate of Registry.
3. Safety Construction Certificate.
4. Safety Equipment Certificate.
5. Safety Radio/Telephone/Telegraph Certificates.
6. Cargo Gear Certificate.
7. Tonnage Certificate.
8. Navigation Certificate.
9. Passenger Certificate (if applicable).
10. International Load Line Certificate.
11. Deratting or Deratting Exemption Certificate (less than 6 months old).
12. Deck Log Book.
13. Engine Log Book.
14. Oil Record Book (machinery space operations and cargo/ballast operations).
15. Tonnage Dues Certificate.
16. Certificate of Financial Security in respect of Civil Liability for Oil Pollution Damage.

Berthing Master is allowed to reject any vessel, which is considered unseaworthy or not holding up-to-date official documents.

Declarations: The Joint Inspection Team shall require the following to be filled and delivered:

6 copies Crew List (Chinese form).
4 copies Passenger List (if any).
1 copy Cargo Manifest for import/transit cargo with a summary (ballast or cargo already on board).
1 copy List of Specified Articles (Money, gold and silver, transistors, tobacco, alcohol, cameras, tape recorders, T.V. sets, video tape recorders, motor cycles, watches, walkie-talkies, etc. (if any)).
1 copy Maritime Declaration of Health (Chinese form).
2 copies Ship's Stores List (inventory).
Clearance from the last Port of Call.
Valid Seaman's Certificate for all crew members.
1 copy Declaration of Arms and Ammunition.
2 copies Reports of Entry for Foreign Vessel (Chinese form).

Cigarettes, cigars, tobacco, matches, spirits, wine, beers, perfume, and possibly other items, have to be locked up under customs seal from time of arrival of vessel in port, until time of leaving territorial waters. Each person is allowed to bring in 2 bottles of spirits and 200 cigarettes, or the equivalent in grams of tobacco or cigars. Special allowances are made for the Master under special circumstances. The Customs Officer will seal the stores.

Documents of Loading Cargo: Crude oil shipping documents will be prepared at BZ 34 Terminal, and after the vessel has been loaded, the documents will be completed, and final clearance formalities will be carried out on board.

Protests: Any protests by the Master of the vessel concerning the quantity of cargo should be made before departure and any resulting investigation should be made before the vessel sails out.

Outward Clearance: A vessel will be considered clear to depart BZ 34 Terminal, when the crude oil shipping documents, the Release Certificate and the Port Clearance for a foreign-going ship have been delivered.

APPROACHES: *Charts and Sailing Directions:* Charts and Sailing Directions for the area are as follows:

Charts:

Japanese	383,	392,	1403,
Chinese	9303,	9304,	9701,
British Admiralty	1250,	1255,	1256,

Approach: Approaches to BZ 34 Terminal are safe and without navigational difficulties, but in some seasons special attention is drawn to the numerous fishing boats.

Chinese Regulations for Passing Through Bohai Gulf: Should the Master of a vessel decide to pass through the Bohai Gulf, he must apply for permission in accordance with the following Regulations:

(1) Vessels passing through the Bohai Gulf: No vessel is allowed to pass through any channel, except Laotiehshan Channel, Changshan Channel and Dengchou Channel (only vessels under 200 g.r.t. are allowed to sail).

(2) With Laotiehshan Lighthouse as centre and a distance of 10 miles as radius, and North Hwangchengtao Light Beacon as centre and a distance of 7 miles as radius, are to be two prohibited areas. Vessels are only allowed to pass through middle of these areas, namely Laotiehshan Channel.

(3) All vessels, passing through the Laotiehshan Channel, must send a message to the Harbour Master Dalian at least 8 hours prior to the estimated time of passing the line joining Laotiehshan Lighthouse and North Hwangchengtao Light Beacon's two points, or after departure from the port (her passage is less than 8 hours), reporting the following details:
Name of vessel, nationality, call sign, last port of call, port of destination, speed, colour of hull and funnel, and the exact time of passing through the line joining Laotiehshan Lighthouse and North Hwangchengtao Light Beacon's two points.
In case there is any alteration of time to pass through the line owing to bad weather, such vessels should immediately report to the Harbour Master Dalian.

(4) Dalian Coastal Radio Station:
Call sign : XSZ
Calling frequency : 500 kHz
Working frequencies : 462 kHz; 8,694 kHz
Reserve frequency : 8,678 kHz.
Working day and night.

(5) Vessels passing through the Laotiehshan Channel must display navigation lights in accordance with the Regulations for Preventing Collisions at Sea.

(6) Vessels are prohibited from navigating in the water area within a radius of 10 nautical miles from the Reef Island.

(7) Navigational aids are as follows:
- (a) Laotiehshan Lighthouse: 38° 43' 37" N., 121° 08' 02" E. Gp.Fl.(2)W., ev. 30.0 sec. 25 M.
- (b) Beihuang Cheng Island navigation: 38° 23' 40" N., 120° 54' 33" E. Fl.W., ev. 3.0 sec. 15 M.
- (c) Houji Lighthouse: 38° 03' 29" N., 120° 56' 27" E. Gp.Fl.(2)W., ev. 10.0 sec. 15 M.
- (d) Beichangshan navigation: 37° 59' 32" N., 120° 41' 37" E. Fl.R., ev. 2.5 sec. 8 M.
- (e) Xiaozhushan Light: 38° 01' 17" N., 120° 52' 09" E. Fl.W., ev. 5.0 sec. 14 M.

PILOTAGE:

(1) Pilotage is compulsory for any vessel arriving at BZ 34 Terminal for mooring, and unmooring.

(2) The Pilot will board the vessel, and will act as Pilot for approaching and mooring, when she reaches the Anchoring Area and BZ 34 Terminal is available.

(3) The Pilot will advise the vessel's officers and crew on the layout of the mooring equipment to be fitted on the forecastle head.

Pilot Ladder: The vessel is required to have a clean and efficient pilot ladder, fitted with spreaders and manropes, safely and securely rigged, ready for the Pilot to immediately embark and disembark on the side of the vessel, and of sufficient length to reach the Pilot's boat.

Life Buoy: A life buoy with safety line and self-igniting light, together with a rope messenger for the Pilot's bag, shall also be available at the pilot ladder head.

Good Weather Lee: Vessels shall afford a "good weather lee", and shall reduce speed as directed by the Pilot, in order to effect the safe embarking or disembarking of the Pilot.

ANCHORAGES: A "Prohibited Fishing" and "Restricted Navigation and Anchoring" area has been defined around BZ 34 Terminal.

Anchorage Area: If vessels are obliged, or instructed, to anchor, they should do so in the anchorage area which is indicated by the following four points. Water depth is about 24 m., and sea-bed mainly consists of mud. While at anchor, they should exercise vigilance at all times, and if necessary, make contact with BZ 34 Terminal by VHF on Channel 67, or Channel 16, at any time.

(1) Lat. 38° 16' N., Long. 119° 41' E.
(2) Lat. 38° 16' N., Long. 119° 44' E.
(3) Lat. 38° 13' N., Long. 119° 41' E.
(4) Lat. 38° 13' N., Long. 119° 44' E.

This anchorage area is also available for vessels arriving at BZ 28 Terminal, adjacent to BZ 34 Terminal, at about 23 km. distance.

NAVIGATION AIDS: *Well Head Platform (WHP):* Two main white lights (visible at 10 nautical miles, morse code letter "U" every 15 seconds) are installed on opposite corners of the 2EP and 4EP WHP.

Red lights (15 candelas, quick flashing) are installed on the crane head, crane operation cage and top of gas vent line.

Single Point Mooring (SPM): The SPM is equipped with a radar reflector and a fog horn (I.A.L.A. usual audible range of 2 nautical miles) sounding the morse code letter "U" every 30 seconds.

Floating Production and Storage Unit (FPSU): The navigation and signal lights are provided according to the international regulations. When gases are burning, the flare can be seen farther than above lights. This flare is about 38 m. height above the sea level.

RESTRICTIONS: Vessels are moored and unmoored in daylight only.

Draft Requirements: Vessels arriving at BZ 34 Terminal should have the minimum following drafts:

1. The moulded draft amidships (dm.) in metres (without taking into account any ship's deformation), shall not be less than:
   $dm. = 2.0 + 0.02 \times L$
2. The drafts at the forward and after perpendiculars shall correspond to those determined by the draft amidships (dm.), as specified in the preceding Paragraph 1, in association with the trim by the stern, of not greater than 0.015 L
3. In any case the draft at the after perpendicular shall not be less than that which is necessary to obtain full immersion of the propeller(s).

NOTE: "L", as measured in metres, mean 96% of the total length on a waterline at 85% of the least moulded depth, measured from the top of the keel, or the length from the foreside of the stem to the axis of the rudder stock on that waterline, if that be greater.

MAX. SIZE: Maximum 110,000 d.w.t., minimum 15,000 d.w.t.

RADIO/VHF:

PRE-ARRIVAL REQUIREMENTS AND COMMUNICATIONS:

Communications Before Arrival: The Owner (in case of a voyage chartered vessel) or the Charterer (for a long term chartered vessel) should, 1 week prior to vessel's arrival, telex to "Penavico Tanggu", Tokyo Office and Tianjin Office of Operator JCODC and Production and Transportation – Sales Department of Partner BOC, to attend the vessel at BZ 34 Terminal, advising of the following items in addition to the way for the disbursement remittance.

1. Name and address of the Owners or Charterers, with telex and telephone numbers.
2. Name of the vessel and international call sign.
3. Vessel's nationality.
4. Particulars of the vessel (Length, Breadth, g.r.t., n.r.t., Summer draft and Deadweight tonnage).
5. Last and next ports of call.
6. Master's name.
7. Destination(s) after loading.
8. ETA BZ 34 Terminal in local time. (UTC plus 8 hours or plus 9 hours, if daylight saving time (from the second Sunday of April to the second Sunday of September), is in force).
9. Cargo requirement.
10. Speed.
11. Colour of hull and colour mark of funnel.
12. Consignee.
13. Crew List.

Entry Formalities: The Master or Owner of the vessel shall, 1 week prior to its expected arrival at BZ 34 Terminal, submit the required forms to the Harbour Superintendency Administration through "Penavico Tanggu", for completion of entry formalities. In order to proceed with such entry formalities, it is compulsory that "Penavico Tanggu" receive the information, as specified in "Communications Before Arrival", 1 week prior to vessel's arrival.

Advice of Arrival: 72 hours prior to arrival at BZ 34 Terminal, vessels should advise Tianjin Office and Tokyo Office of Operator JCODC, Production and Transportation – Sales Department of Partner BOC and "Penavico Tanggu", of their ETA by telex (See "Authority" and "Agent"). They should also confirm or amend it when they are 48 hours, 24 hours and 6 hours distant from BZ 34 Terminal.

Details of message to be sent by the Master of the Vessel: The following information shall be included in the first message to be sent by the Master of the vessel:

1. Name of vessel and international call sign.
2. Vessel's nationality.
3. Owner's name.
4. Master's name.
5. ETA and date in local time (See "Communication Before Arrival – No. 8").
6. Last and next ports of call.
7. Destination(s) after loading and consignee.
8. Cargo requirement.
9. Possible cargo on board.
10. Ballast on board on arrival in Segregated Ballast Tanks and in Cargo Tanks.
11. Deballast time: Only clean ballast (as mentioned in the Marpol International Convention), may be discharged into the sea.
12. Estimated fore and aft draft on arrival and on sailing.
13. Particulars of the vessel (See "Communcation Before Arrival – No. 4").
14. Flange size of vessel's manifold connection.
15. Maximum loading rate.
16. Number of crew on board.
17. If there is any sickness aboard or clean Bill of Health.
18. Whether BZ 34 Terminal is first or second port.

Communications with Penavico (Agent) and BZ 34 Terminal:

PENAVICO:

(1) Penavico Radio communication hours are 0800 – 1700 local time on telex.

(2) Message to and from the vessels shall be transmitted by telex (See "Agent").

BZ 34 TERMINAL:

(1) BZ 34 Terminal keeps continuous dual watch on Channel 67 and Channel 16 throughout 24 hours.

(2) Vessels equipped with VHF radio telephone should call BZ 34 Terminal on Channel 67 and/or Channel 16 in the Bohai Bay.

(3) Other channel that can be used after a first call is Channel 73.

Report to the Harbour Master Dalian: All vessels passing through the Laotiehshan Channel must send a message to the Harbour Master Dalian (See "Approaches").

Language: The working language of BZ 34 Terminal is English.

BERTHING: *Main Particulars of FPSU "Bohai Chang Qing Hao":*

LOA : 215.62 m. (707 ft. 05 in.) (L.W.L.: 210.00 m.).
Breadth : 31.00 m. (101 ft. 08 in.).
Depth : 17.60 m. (57 ft. 08 in.).

Mooring:

(1) Equipment and tools for mooring and hose connection will be brought on board the vessel by the Berthing Master.

(2) When all preparations have been completed on the vessel and BZ 34 Terminal, the Pilot will approach the FPSU.

(3) The vessel will then come close enough to the free floating pick-up rope, so that the crew of the workboat can secure the messenger rope to the hawser pick-up rope.

(4) The messenger rope is then led through the centre Panama chock to the winch.

(5) When the chafe chain is in the fairlead and the special triangle plate on board, they must be connected to a triangle plate using the special fork and shaft.

(6) The shaft must be secured with the stopper provided.

NOTE: Special triangle's size is as follows. The size of Panama chock of the vessel should be larger than that of this special triangle.

Unmooring:

(1) Lead the pick-up rope of the mooring hawser to the mooring winch.
(2) Pilot will manoeuvre the vessel ahead to slacken the mooring.
(3) Take the weight off the mooring by heaving on the pick-up rope.
(4) Pay-out the pick-up rope while the vessel moves slowly dead astern, then let go the free end.

LOADING: *Derrick:* Vessels must be equipped with a hose lifting derrick at the port side manifold with a lifting capacity of more than 10 tons – SWL.

Flange Size of Loading Hose: The hose end connection is a 12 in. "Camlock" quick release coupling, and will fit standard 12 in. ANSI 150 flanges.

BZ 34 Terminal is equipped with flanged spools to connect with manifolds different from 12 in. diameter (10 in. – 12 in., 14 in. – 12 in. and 16 in. – 12 in.).

Vessel's manifolds should terminate in ANSI 150 flanges.

Hose Connection:

(1) After the vessel is securely berthed, the Berthing Master will instruct the workboat to tow the end of the floating hose to a position underneath the vessel's hose handling derrick.
(2) The connection of the hose is the responsibility of the vessel's crew, who should endeavour to complete this task as quickly as possible.

Loading:

(1) Maximum loading rate is about 3,000 kl./hr.
(2) Care should be taken not to overload as there is no possibility of pumping back into BZ 34 Terminal.

Closing Valves against Oil Flow: Warning is given of the danger of closing valves against an incoming oil stream. This will create excessive pressures which may result in damage to the loading hoses and BZ 34 Terminal facilities. Vessels will be held liable for any damage resulting from failure to observe this precaution.

Bad Weather Conditions: When the weather condition develops worse than the below-mentioned permissible criteria at BZ 34 Terminal, the Operator may suspend work. However, the final decision on implementing the work will be made by the Production Superintendent on the FPSU.

Kind of Work	*Permissible Criteria*
Mooring	Wind speed of 15 m./sec., or Visibility of 1,000 m.
Pumping	Wind speed of 18 m./sec., or 50 ton force of tension on mooring rope to the vessel.
Unmooring in case of emergency	Wind speed of 20 m./sec., or 75 ton force of tension on mooring rope to the vessel.

CARGO: *Crude Oil:* There is only one grade of crude oil available at BZ 34 Terminal. Its density is approximately 0.8445 at 15° C. or 0.8411 at 20° C. (API gravity 36.0), pour point 27.5° C. and the minimum loading temperature 45° C.

Notice to Masters of Vessels: Vessels loading Bohai Light Crude Oil No. 2 are required to be equipped with heating coils. It is recommended as from commencement of loading of Bohai Light Crude Oil No. 2, that the vessel should endeavour to heat the oil at a temperature of 40° C. minimum, until the time the vessel discharges her cargo at the unloading port.

As this crude oil has a high pour point and significant paraffin content, Masters of vessels are recommended to keep the COW (Crude Oil Washing) equipment in a very good operational condition. They shall carry out COW operations only when sure of the efficiency of the lines and machines, and after they have taken all precautions to prevent the washing oil from solidifying in the COW piping system. Their attention is therefore drawn to difficulties they may encounter when COW operations have not been prepared properly.

BALLAST/POLLUTION: *Adequate Ballast:* Vessels are required to carry sufficient ballast for safe handling, having due regard to existing weather and sea conditions. A vessel found by the Pilot or Berthing Master to be inadequately ballasted, will be rejected.

Clean Ballast: As there are no ballast reception facilities, vessels must arrive at BZ 34 Terminal with *clean ballast*, ensuring that all pipelines, pumps and strainers have been flushed out prior to arrival (See Marpol Convention 73/78: Regs. 9, 13 and 18).

The Berthing Master will inspect vessel's ballast on boarding, and has the power to reject any vessel that he deems would cause pollution of the sea area, in which case the vessel must proceed to sea and return only when ballast is completely free of oil. The rejection of any vessel, because of dirty ballast will automatically cause its Notice of Readiness to be nullified, and the rejected vessel will lose any priority of position for loading. Ballast discharge should not be commenced without the prior permission of the Berthing Master. At no time may the oil content of ballast discharged exceed 15 p.p.m., or produce a sheen on the surface of the water.

Inspection:

(1) At night the sea area around the vessel shall be adequately lighted, as frequent inspection by the Berthing Master will be made during the discharge of ballast. Any pollution, whatsoever, will be cause for rejection. Similarly, any hull leaks causing pollution during loading will be cause for rejection.
(2) Cargo hose connection should be inspected during loading, drip-pans should be placed under the manifold, all unused cargo connections blanked off, sea-valves closed and lashed upon completion of deballasting, and all scuppers must be securely plugged.

Segregated Ballast: When a vessel is fitted with segregated ballast tanks, the Master of the vessel will not discharge the ballast as long as a sufficient cargo has not been loaded. A vessel not so equipped, should examine the possibility of safe loading and deballasting simultaneously.

Pollution: Owners and Masters of vessels are responsible to observe International Convention (Marpol 73/78) and Chinese relevant regulations concerning pollution of the sea.

Bilges: Bilges must not be discharged while at BZ 34 Terminal.

Fines and Claims: Any fines imposed by any governmental Authority for pollution shall be for the vessel's account.

In the event that the Operator has to settle any third party claims as a result of damage to property, caused by pollution attributable in any way to the vessel, the Operator will have the right to demand reimbursement by those responsible for the vessel, for all expenses incurred.

In the event of oil spillage, or pollution of the waters, all labour and equipment costs for cleaning operations will be for the vessel's account.

FACILITIES: There are no facilities of any kind at BZ 34 Terminal.

No ballast reception facilities at BZ 34 Terminal area or in the vicinity.
No engineering repair shop.
No fresh water.
No bunkers available.
No provisions or stores.
No cranes or barge service.
No shore leave.
No crew changes.
No consulates available.
No clinic available.

CHIWAN, Including Shekou and Mawan: 22.28 N. 113.53 E. (See Plan)

LOCATION: Shekou Gang (port) is about 30 kilometres from Shenzhen Urban District and about 20 nautical miles from the centre of Hong Kong. The port is an important component of the expanding Shenzhen economic special zone (Sez).

The port area covers wharves in Shekou and Chiwan and is still under further development.

PILOTAGE: Pilotage available in daytime. Compulsory for foreign vessels entering and leaving the port. Pilot boards at Shekou Anchorage in position Lat. 22° 23' 42" N., Long. 113° 53' 42" E.

Port Entry Guidance:

AAA. Shekou/Chiwan/Mawan share same pilot station, where central point is 22° 23' 42" N., 113° 53' 42" E. with radius 0.5 miles and can be reached through Mawan Channel (Hong Kong waters).

BBB. Hong Kong Pilot is compulsory for non-tanker vessel whose g.r.t. is 5,000 or above and tanker g.r.t. is 1,000 or above for transit in Hong Kong waters.

CCC. Hong Kong Pilot to be arranged by your Agent in Hong Kong before entering Hong Kong waters, embarks at Green Island (22° 16' 00" N., 114° 06' 36" E.) and disembarks at Tap Shek Kok (22° 23' 30" N., 113° 53' 30" E.).

DDD. Before entering Hong Kong waters, Master should inform Mardep HK with details in Annex (see below), which must be made 4 hours in advance by VHF for transit of Hong Kong waters.

EEE. Navigation warning at anchorage – prohibition of dropping anchor area.

Centre 22° 27' 02" N., 113° 52' 44" E., radius 375 m.
Centre 22° 26' 32" N., 113° 52' 48" E., radius 375 m.
Centre 22° 26' 01" N., 113° 52' 48" E., radius 375 m.

CHANNELS: Shekou Port Channel is sub-divided into Shekou Port Area Channel and Chiwan Port Area Channel. The former comprises the outer one between light Buoys No. 1 to No. 5, and the inner one between light Buoys No. 5 to No. 9. The channel has a total length of 3.14 miles, a width of 60 m. and a minimum depth of 5.8 m.

Chiwan Port Area Channel, with a total length of 1,000 m., a width of 80 m. and a minimum depth of 9 m. is marked by the light buoys No. 1 to No. 3. Light buoy No. 1 is at the entrance of the Chiwan Port Area. Light buoys No. 2 and No. 3 are positioned at the junction of the basin and the channel.

RESTRICTIONS: Vessel may enter and sail after sunset. Tidal range: Max. 3.44 m. Average 1.36 m. Draft limitation of the Channel: 12.5 m.

VHF: Shekou Radio on Channels 16 and 25 throughout 24 hours. Penavico Shenzhen on Channels 11 and 8, Sinoagent on Channel 61, throughout 24 hours.

TUGS: 1×1,900 h.p., 1×1,600 h.p. and 2×400 h.p.

FRESH WATER: Available.
FUEL: Available.
REPAIRS: Facilities available.
TIME: GMT plus 8 hours.

SHIPMASTER'S REPORT: April 1984.

New port still under construction situated in Lat. 22° 28.5' N., Long. 113° 53' E. Pilot station is located in position Lat. 22° 25' N., Long. 113° 52.6' E. It is reached by passing through Hong Kong East Lamma Channel then passing North of Ma Wan Island. There is plenty of water until the Pilot Station. Anchorage is in very good holding ground. Density of water at any stage of the tide is 1020. Alongside the pier (only one working at the moment), the depth is 8.5 m. but the bottom is soft mud. At HW it varies from 9.5 m. to 10 m. according to the stage of the tides. Fresh water is available at a low rate alongside the pier. Chiwan Radio working on Channel 16 and 84. Discharging at about 1,000 tons per day with ship's gear and shore cranes. Only one crane is assembled at the moment. 3 cranes of 10 tons capacity will be available in the near future, 1 crane of 40 tons is already working.

Facilities to go to Hong Kong: (2 photographs must be available for the Immigration Visa) Hong Kong dollars are accepted as currency. U.S. dollars must be changed at the local Banks. Entering and leaving the port only during daylight hours.

SHIPMASTER'S REPORT: April 1990.
Port: Chiwan (Shekou).
Position: Lat. 22° 28.5' N., Long. 113° 53' E.
Chart: BA Charts No. 342 and 343.
Cargo: Vessel discharged a full cargo (18,000 tons) of rape seed oil.
Documents:
Last Port Clearance.
3 copies Cargo Manifest.
2 copies Crew Declaration (Chinese form).
4 copies Health Form (Chinese form).
6 copies Crew List.
All Crew Discharge Books and Passports checked.
Bonded Stores List (Ship's and Local Chinese form).

About 10 personnel board with agent by tug about 20 minutes after anchoring in position Lat. 22° 25.5' N., Long 113° 52.8' E. This position is just North of the boundary line between Hong Kong territory and Chinese territory in about 20 m. depth.

Pilotage: As vessel has to transit Hong Kong waters, it is mandatory to obtain a Hong Kong pilot for cargo ships over 10,000 g.r.t. and all tankers. Pilot arranged through liasing agents in Hong Kong who pass all communications, etc., to the Chinese state agency "Penavico", pilot boards at Green Island after passing East Lemma Channel.

Vessel must make arrival report to 'MARDEP Hong Kong' (see A.L.R.S. Volume 6) for permission to enter Hong Kong waters, this is usually granted 12 hours before arrival in Hong Kong waters.

Pilotage is via Mawan Channel, max. draft acceptable is 16.5 m., subject to tide, tide is not necessary for draft up to 9.0 m. and L.O.A. below 170 m. Pilot disembarks prior to entry into Chinese waters and thereafter Master must proceed to anchor, anchorage fairly congested, this vessel was carrying full load of 18,000 tons of crude rape seed oil at a draft of 8.5 m. maximum and used 7 shackles on the port anchor with Shekou approach buoy "A1" bearing 069° × 0.9 miles off, strong currents exist here but the holding ground is reasonably good.

VHF: Port maintains an excellent watch on Channel 16 and all telephone conversations with agent carried out on Channel 25. Vessels should listen for berthing orders on VHF between 0800 hrs. – 1730 hrs. local time.

Berthing: Vessel berthed port side alongside with 3 head/stern lines and 2 springs forward and aft.

Oil Tanker Discharge: Facility exists for discharge of 500 tonnes.p.h. to 600 tonnes.p.h. and usually vessel can expect to complete cargo of 20,000 tons of vegetable oil within 40 hours.

Vessel discharged through 2 × 10 in. hoses with a pressure limit of 6 kg./sq.m. at the ship's rail.

All liaison personnel are most co-operative but they are not very fluent in English.

Fresh Water: Available ex-jetty, but the meters are erratic.
Custom Allowances: No restrictions. Bond is sealed.
Time: GMT plus 8 hours in Summer (After April 16th).
Shore Leave: No restriction on crew going ashore, passes (returnable) are issued on arrival. Port is in an economic free zone and Hong Kong dollars are used freely ashore, as such no currency restrictions are in force. Cash advance can be obtained.
Stores: Bonded stores through the liasing agent in Hong Kong.

Provisions and stores are available through ship chandler on cash payment basis, bonded beer is available.

Departure: Departure Boarding Party boards one hour prior to departure and checks deck, engine room and accommodation for stowaways and also re-checks all crew Discharge Books and Passports before giving Sailing Clearance. After their departure no persons are permitted to board, until pilot comes on board.

Sailing: Departure was at night and vessel had to give Hong Kong pilots a minimum of 3 hours notice via telex as high hills obscure VHF communication. Hong Kong Pilot met vessel on schedule at Urmston Roads Pilot Station for outbound passage through Mawan Channel and Lemma Passage.

Agent: China Ocean Shipping Agency, Shekou Branch. Cables: Penavico Shekou. Telex: 420834 cosac cn. Tel: 695216. Fax: 692769.

Agency service was excellent and agent visits vessel every 6 hours for any liaison, provision arrangements. etc.

Charterers had also appointed agent in Hong Kong to liaise, but this was not really necessary.

SHIPMASTER'S REPORT: December 1993.

Entering: It is necessary to pass through Hong Kong waters to reach Chiwan, and for this Hong Kong Agents are appointed to liaise with the Pilots and Chiwan Agents. All advertised messages for Hong Kong Pilots are required, and a clearance will be issued by MARDEP before arrival.

Navigation Restrictions: Vessels over 180 m. length are only permitted to pass through the Ma Wan Channel in daylight and stemming the tide, and also require a tug standing-by off Laan Pai.

Prior to arrival, the Hong Kong Agents will advise the arrival time required at Green Island Pilot Station to comply with the passage requirements.

Pilotage: Two Hong Kong Pilots board at Green Island to take the vessel through Hong Kong waters and leave at the Pilot Station in Urmston Road.

The Hong Kong Pilots will contact Chiwan Pilots or Penavico on VHF Channel 11, and advise the vessel's ETA at Chiwan Pilot Station.

On this visit, the vessel went directly alongside after a short wait in the roads, but it is reported that it is more likely that arriving vessels will anchor for clearance.

Chiwan Pilots do not board before anchoring, so it is necessary to pick a suitable vacant spot.

Departure: Chiwan Agents will liaise with Hong Kong Agents and Pilots to arrange the time of boarding for the Hong Kong Pilot.

Chiwan Pilot will leave the vessel just after passing Buoy No. 1.

VHF contact with Hong Kong Pilots is difficult until almost at the Pilot Station.

Passage through Ma Wan Channel outward is again stemming the tide in daylight and a tug stands-by.

VHF: Agent maintains continuous watch on Channel 11.

Berthing: Two Pilots boarded in the roads from the tugs which are made fast on the bow and quarter with tug's lines before reaching the approach channel.

The Pilots used the tugs more than the engine and the vessel was pushed bodily alongside starboard side to on the Western end of the North side of the dock with a third tug pushing amidships.

Leading Lights: See "Plan".

There are three leading lights, two as charted are the rear and middle and a front light situated on the Eastern side of a building by the dock side (See "Plan").

The three marks are not exactly in line, and an exact explanation of their use could not be obtained. However, a satisfactory approach was made by the Pilots, apparently using the front and rear for the outer approach and rear and middle after passing Buoy No. 1 (Fl. G. 4 sec.).

These leading marks and lights would be conspicuous at night if a floodlight tower had not been positioned close West of the leading line between the front and middle marks, and by day if the front and middle marks are not obscured by dockside cranes.

There is an illuminated red cross on the hospital building, close East of the rear light.

Buoys: Buoys have been positioned just inside the harbour entrance, one on each side of the channel, with appropriate green and red flashing lights (See "Plan").

Chimney: A conspicuous chimney is situated to the South and West of Xiaonan Shan, and in good visibility, is a good mark for the approach to the anchorage.

There are red flashing lights on the chimney at night.

Clearance: Clearance Inward and Outward on this visit was carried out alongside as the vessel berthed on arrival without anchoring, friendly and efficient with 6 officials attending.

Shore passes are issued and have to be returned before departure. Bond stores were not sealed.

Coffee, soft drinks and biscuits and a carton of cigarettes for each official are appreciated.

No guards are posted on the vessel. Access to the dock area is through a gate manned by guards around the clock.

Depth: A least depth of 4.0 m. under-keel at a draft of 9.75 m. was recorded at approximately low water in the harbour entrance.

The vessel was advised the maximum draft for the port was 11.0 m. (brackish water).

Density: Density was found to be 1022 on arrival and 1023 on departure.

Berths: The Southern 100 m. of the West side of the harbour is used for small container vessels and is served by a container gantry crane. The remaining 200 m. of this side and the Western 400 m. of the Northern side are used for deep-sea vessels up to at least 40,000 d.w.t., and served by cranes for grab and hook discharge of bulk, steel and general cargoes.

There are 2 permanent bagging plants for bulk cargoes, one on the West and one on the North side of the harbour, as well as a number of portable bagging plants.

There were 4 cranes on the North side and 2 on the West side with a number of other cranes under construction.

Cargo Working: Discharged 35,353 tonnes of bulk fertiliser using 4 shore cranes, discharging into one permanent and 3 portable bagging plants, at a net rate of 114.4 tonnes/crane/hr., and gross rate of 87.7 tonnes/crane/hr.

Working hours are nominally 24 per day, but there is lost time for meal breaks and change of shift, also the period from 0400 hrs. to 0800 hrs. seems to be optional.

The cargo was loaded at Norsk Hydro in Heroya and received by Norsk Hydro, who have a large packing factory at Chiwan, the cargo going direct into Norsk Hydro bags for stockpiling in the dock area.

I suspect that the discharge rate of 7,400 tonnes per day for this visit is unusually high, and that a more usual rate would be around 6,000 tonnes per day for this cargo.

The decks, hatch covers and dock side are kept continuously swept clean throughout discharge and the decks swept clear on completion.

Fresh Water: Available from the quay at about U.S.$ 1.00 per tonne. A delivery rate of 14 tonnes per hour was noted on this visit.

Fresh water can also be supplied at the anchorage, but this is reported to be very expensive.

Provisions and Stores: Available at reasonable prices, although slightly more expensive than average for other ports.

Currency: Most prices are quoted in U.S. dollars for services on board, and this is an acceptable currency in most shops with a negotiable exchange rate of around 8.5 Yuan to U.S.$ 1.00.

Medical: Medical attention will be arranged by the Agents at Shekou.

Repatrition: Possible, provided sufficient notice is given. The Agent did not say how much notice was required.

Developments: The whole Chiwan/Shekou area is under development as an industrial complex.

At noon, daily, blasting takes place in quarries on Chiwan Shan, which at the present rate will soon disappear. A continuous stream of lorries are transporting quarry stone towards Mawan Shangjiao, so the area will change rapidly.

Ma Wan Channel: There is a bridge under construction over the channel. So far the suspension towers, reported to be 198 m. high, are almost completed in approximate positions Lat. 22° 21.5' N., Long. 114° 04.6' E. and Lat. 22° 21.2' N., Long. 114° 03.8' E.

It was not known what the intended height of the span will be, but the Pilot was sure that someone would have calculated that it would be high enough for shipping to pass underneath.

Agent: China Ocean Shipping Agency, Room 401, Chiwan Harbour Building, Shenzhen, China 518067. Tel: 6694340, 6694231. Fax: 6694231, 6692769. Telex: 420834 Cosas Cn, 420882 Cosas Cn. Cables: Penavico Sz.

SHIPMASTER'S REPORT: March 1994.

Lightering at Shekou Anchorage: Vessel had to discharge approximately 10,000 tonnes of gas oil into lightering vessels at Shekou anchorage.

Ship's max. arrival draft was 10.60 m.

Shekou Lightering Anchorage is situated just across the border with Hong Kong.

Shekou Anchorage is reached through Hong Kong waters.

Ship had to anchor at South Lamma Anchorage (Hong Kong) and wait for suitable tide.

When destination is China, one seems to anchor more than 2 miles from the Hong Kong coast.

The governing point is passing Ma Wan Channel at daylight and reaching Shekou Anchorage near slack tide high water.

After picking-up the anchor, ship proceeds through East Lamma Channel to Green Island Pilot Station for boarding of Hong Kong Pilot. Then under Hong Kong pilotage, ship proceeds through Ma Wan Channel to Tap Shek Kok Pilot Station (abreast of Tap Shek Kok).

This Pilot Station is not correctly drawn in B.A. Charts 343 and 1919, or in the Admiralty List of Radio Signals Vol. 6, Part 2, page 123.

The reason is unknown to me, but after discussions with Hong Kong Pilot, I understand that this was a delicate matter.

During passage at Ma Wan, an escorting tug is available and on stand-by. The purpose of the tug is to clear other traffic. In Ma Wan Channel, traffic is dense and current is strong. However, at full manoeuvring speed, this channel was passed without any difficulty.

At Tap Shek Kok, Hong Kong Pilot leaves ship and Master has to proceed without Pilot to position 22° 23' 12" N., 113° 53' 42" E. The distance from Tap Shek Kok to this position is only a few miles. This position is called Shekou Pilot Station by the mainland Chinese. However, the Hong Kong Pilot did not recognise this Pilot Station. The position is notified by Shekou Agency (Penavico Shenzhen) by telex directly to ship.

Looking at the British Admiralty Chart is confusing, as one may conclude, that it is still in Hong Kong waters. However, it must be in mainland China as the Pilot wanted to leave the ship before this position at any cost.

So if you feel confused about Pilot Stations in this part of the Pearl River, just stick to the position given by Penavico and mentioned before as 22° 23' 12" N., 113° 53' 42" E.

The only problem there is the dense traffic and current.

It appeared we were somewhat too early. The current was still flooding, but not strong. So we had to turn the ship round and anchored as close as possible to the Shekou Pilot Station (22° 23' 12" N., 113° 53' 42" E.).

Be aware of the pipeline and 15.5 wreck in the vicinity.

During passage to Shekou, I contacted the Master of a vessel who called at Shekou earlier. He gave me valuable information which I include in this report.

Before I left Singapore, I was supplied with faxed pages regarding Shekou and also mentioning in this fax was a vessel at 14.3 m. draft.

In this fax, the same position is mentioned as before (Shekou Pilot Station). However, the fact of mentioning this as lightering position is not correct.

At Shekou Anchorage, ship has to wait for the Chinese Authorities who come onboard by means of a tug. They will come at their convenience and can take as long as 4-6 hours before they board. Their estimated arrival is announced by "Penavico" Agent on VHF Channel 11. Channel 11 is the working channel of "Penavico Shenzhen" and has to be monitored continuously. It is also the Tap Shek Kok Pilot Station calling channel.

En route to Shekou from Green Island, communication with "Penavico" via Channel 11 is difficult and full of disruptions, probably due to the high hills, etc., obstructing the transmission signal. Once anchored at Shekou, transmission and reception works well.

Do not forget to hoist the Chinese national flag and lower the Hong Kong flag. When departing from Shekou, the reverse has to be carried out. Also do not forget the "Q" flag when arriving at Shekou.

The minimum of 12 hours notice to MARDEP also applies when en route from Shekou to outward as one has to cross Hong Kong waters.

Agent who boarded spoke good English, but the officials did not speak any English. They are kind but strict. They did appreciate an officer meeting them at the accommodation ladder. Paperwork was simple. They do check the certificates thoroughly. They also checked Passports and Seaman's Books. Later on, Port Authorities came on board to check the Oil Record Books.

A Loading Master stays on board for communication between ship and lightering vessels. He speaks good English.

After ship had been cleared, unexpectedly a Pilot boarded ship to move ship further up-river. He had with him a photo-copy of a Chinese edited nautical chart of the region. His English was good. He pointed out to me that he would move the ship to Anchorage No. 3 or 4, very near the place called Chiwan.

I informed him my draft of 10.6 m. and he said "no problem". I asked him to show me his copy chart and saw the depth at the intended lightering anchorage was 11.4 m. So I made him aware of the very small margin left under the keel. Again he said "no problem". So I told him that I had no intention of proceeding up-river as there was not enough water. His answer "no problem".

So we went to an anchor place on Urmston Anchorage with 9.0 m. left under the keel.

Pilot Book of this region clearly mentions the silting of the river near Chiwan and depths could be decreased by 2.0 m.

On both occasions, we anchored with starboard anchor, 7 shackles in the water. At Urmston Anchorage, current runs at 4 knots. Good holding ground.

More ships were anchored there, of which 2 were also tankers to be lightened. One tanker was about 100,000 d.w.t.

Charterer's Agent in Hong Kong will notify ship regarding arrival time at Green Island Pilot Station for boarding Hong Kong Pilot when inward bound. They will also organise the Hong Kong Pilot when departing from Shekou, as from Tap Shek Kok Pilot Station outward.

On departure from the lightering anchorage, a Chinese Pilot had boarded and a tug was pushing as the current was running strongly outward. Approximately 6 hours before departure, Authorities come on board and again check Passports and Seaman's Books. Normally they also carry out a search for stowaways, accompanied by ship's staff. However, on this occasion they did not, so we made our own stowaway search just before departure.

Ma Wan has again to be passed during daylight and with suitable tide. Charterer's Agent will monitor this. Escorting tug also again on the spot. Ship had to proceed to South Lamma Anchorage and await berthing for Tsing Yi – Shell Terminal.

Ship's Operator will supply telex/fax numbers of "Penavico Shenzhen". The telephone number of Penavico is 86-755-6691136. I called them on the telephone and was attended in good English. Charterer's Agent is very helpful if there are problems or questions.

The lightering itself did not produce any specific problems. No lightering vessels bigger than 2,000 tonnes came alongside. However, the fendering is still poor. Only car tyres are used on the lightering vessel and the amount is minimal (depending on the vessel coming alongside). No damage was caused.

For future trade to this port, I suggest vessel be supplied with some extra car tyres.

Following deficiencies were observed on the lightering vessels:
Coming alongside with tank lids open.
No firehoses or firefighting equipment ready near manifold.
The offside of the loading manifold not equipped with a blind flange, and only one valve separation on that side.
The rubber discharge hose (6 in.) looked in order.
We discharged with a back pressure of 5 bar.
The turnaround was swift.
Manoeuvring alongside very skilful.

There is no swell at the anchorage, however when the Hong Kong to Canton ferry passes, there is swell and the lightering barges do move for a short time.

Mooring ropes looked in order.

We experienced a 4 knot current and a wind of Force 4 Northerly.

The swinging of the ship takes a long time and is done slowly and smoothly.

AUTHORITY: Chiwan Wharf Holdings Ltd., Chiwan Building, Port of Chiwan, Shenzhen, China 518068. *Tel:* 6694888. *FAX:* 6699429.

DALIAN (Dairen): 38.55 N. 121.40 E. (See Plan)

Also see "General" before first port.

PORT LIMITS: The new harbour limits of the Port of Dalian are from the Huangbaizui Lighthouse (Lat. 38° 54' 14" N., Long. 121° 42' 54" E.), then it passes through Dasanshan Lighthouse (Lat. 38° 51' 50" N., Long. 121° 49' 29" E.) and then Xianjiao Light Beacon (Lat. 38° 57' 49" N., Long. 121° 59' 11" E.) and ends at Shayuzui (Lat. 39° 01' 51" N., Long. 121° 57' 42" E.).

Also see "Plan".

APPROACHES: From 1st June 1995, a reporting system for vessels' positions was implemented. The full instructions on traffic control is as follows:

Traffic Control of the Port of Dalian

There are 2 navigation traffic control stations equipped with radar and VH in the Port of Dalian. The Huangbaizui Station controls all vessels entering or leaving the Port of Dalian, and also controls the navigation traffic in the area of Dalian Wan and it's adjacent waters (West of Dasanshandao – 121° 49' 29" E.). The Dayaowan Station controls the navigation traffic in the area of Xingang and Dayaowan also their adjacent waters (East of 121° 49' 29" E.).

Reporting Systems: Vessels proceeding to/leaving Dalian Wan, report to the Port Control Huangbaizui Station by VHF Channel 6. Vessels proceeding to/leaving Xingang or Dayaowan, report to the Port Control Dayaowan Station by VHF Channel 9.

Following reports shall be made by the ship to the concerned port traffic control station:

(a) When vessel crosses over the border line of the Southern semi-circle with 12 miles as its radius and Dasanshandao Lighthouse (38° 51' 50" N., 121° 49' 29" E.) as its centre.

(b) When vessel passes through Buoys HO (38° 54' 12" N., 121° 46' 12" E.), Buoy H2 (38° 57' 21" N., 121° 46' 12" E.), Buoy 7 (38° 57' 17" N., 121° 38' 14" E.) and Buoy 2 (38° 55' 55" N., 121° 40' 47" E.), report the time of passing of the respective buoy.

(c) When vessel drops anchor, report the time and anchor position (bearing and distance from Huanbaizui Lighthouse or from Xianjiao Light Beacon).

(d) When vessel needs to heave up anchor for sailing, shifting or any other reason, vessel should report and give reason to the concerned station, 30 minutes before and request permission.

(e) When vessel has problems affecting safety of navigation, such as hull, machine and equipment damage or troubles, insufficient manning or vessel has marine accident such as fire, collision, pollution, etc., Master should immediately report to the concerned station.

One telegram from Agent to Master following up the above Reporting Systems:

Master /Dalianradio/XSZ
Please report to port control by VHF Channel 9 when you cross border line of Southern semi-circle centred by Dasanshandao Lighthouse 38° 51' 50" N., 121° 49' 09" E. with 12 miles as radius. Then you should report your anchor time and position. Please request permission 30 minutes in advance for any shifting.
Penavico.

Also see "Notice".

DOCUMENTS: *Port Facilities:* Joint inspection upon vessel's arrival ceased in 1995.

The Quarantine Officer and Boarding Agent will go onboard first. Free Pratique will be granted soon after their boarding. The Boarding Agent will collect all necessary documents and papers for Harbour Master, Customs and Immigration. The officers from "Animal and Plant Quarantine" will check the vessel at same time. The officers from Harbour Master will come onboard to check the Oil Record Book during ship's stay.

Before sailing, the Boarding Agent will collect necessary papers and obtain Clearance from Immigration, Customs and Harbour Master, and will give Master "Port Clearance" issued by Harbour Master.

Documents required on Arrival:
2 copies Report of Entry for Foreign Ships.
1 copy Maritime Declaration of Health.
5 copies Crew List.
1 copy Vaccination List.
5 copies Passenger List (if any).
1 copy Bonded Stores List.
1 copy Personal Effects List.
2 copies Provisions List.
1 copy Arms and Ammunition List (if any).
1 copy Narcotics List (Drugs List).
1 copy Import Manifest.
1 copy Bills of Lading.

The following Certificates will be taken by Agent for Harbour Master's inspection:
Nationality Certificate.
Classification Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Safety Radio Telegraphy Certificate.
Load Line Certificate.
IOPP Certificate.
The Register Book for Examination and Inspection of Cargo Handling Gear.

All crew's passports will be taken by Agent for Immigration to issue Shore Passes.

Documents required on Departure:
5 copies Crew List (if crew change occurs).
1 copy Maritime Declaration of Health for departure of ship.
2 copies Report of Clearance.
1 copy Export Cargo Manifest (if any cargo loaded).

All crew's passports with shore passes will be handed to Immigration for inspection.

PILOTAGE: Available day and night. Pilot boards at Dalian Anchorage.

ANCHORAGES: ANCHORAGE IN DALIAN WAN:

(A) *No. 1 Quarantine Anchorage for Cargo Ships:* No. 1 Quarantine Anchorage for Cargo Ships is assigned to those cargo vessels which call at Dalian Port (Old Port) for loading or discharging operations and/or for repairs, bunkering and other purposes. It is located within the area of following 4 geographical positions:

Lat. 38° 57' 00" N.,	Long. 121° 46' 00" E.
Lat. 38° 57' 00" N.,	Long. 121° 41' 00" E.
Lat. 38° 56' 18" N.,	Long. 121° 41' 00" E.
Lat. 38° 55' 00" N.,	Long. 121° 46' 00" E.

Depth (m.)	*Bottom*	*Capacity* (d.w.t.)	*Use of Anchorage*
7.0 – 18.0	Mud with good holding ground	over 10,000	Quarantine, shelter, provisions and fresh water supply, Pilot, Repairs

(B) *No. 2 Quarantine Anchorage for Cargo Ships:* No. 2 Quarantine Anchorage for Cargo Ships is also assigned to those cargo vessels which call at Dalian Port (Old Port) for discharging or loading operations and/or for repairs, bunkering and other purposes. It is located within the area of following 4 geographical positions:

Lat. 38° 59' 08" N.,	Long. 121° 46' 55" E.
Lat. 38° 59' 08" N.,	Long. 121° 42' 30" E.
Lat. 38° 57' 39" N.,	Long. 121° 42' 30" E.
Lat. 38° 57' 39" N.,	Long. 121° 46' 55" E.

Depth (m.)	*Bottom*	*Capacity* (d.w.t.)	*Use of Anchorage*
7.0 – 18.0	Mud and sand with good holding ground	over 10,000	Quarantine, shelter, provisions and fresh water supply, Pilot, Repairs

(C) *The Quarantine Anchorage for Tankers:* The Quarantine Anchorage for Tankers is specially assigned to those tanker vessels and chemical carriers which call at Dalian Port (Old Port) for loading or discharging different kinds of oil which include crude, petroleum products and chemicals in bulk, etc., and/or for repairs, bunkering and other purposes. It is located within the area of following 4 geographical positions:

Lat.	Long.
Lat. 38° 59' 08" N.	Long. 121° 42' 30" E.
Lat. 38° 59' 08" N.	Long. 121° 40' 30" E.
Lat. 38° 57' 39" N.	Long. 121° 40' 30" E.
Lat. 38° 57' 39" N.	Long. 121° 42' 30" E.

Depth (m.)	*Bottom*	*Capacity* (d.w.t.)	*Use of Anchorage*
7.0 – 18.0	Mud and sand with good holding ground	over 10,000	Quarantine, shelter, provisions and fresh water supply, Pilot, Repairs

(D) For vessels (cargo vessels or tankers) with deep draft (over 10.0 m.) which can not find a suitable place to anchor in the nominated inner anchorage, but by special reason needs to anchor and stay in Dalian Wan, an application should be given to the Harbour Master who may then assign a special anchor position in Dalian Wan to the vessel. If so, it will normally be the area of 0.15 miles away and East of the separation line (from 38° 55' 00" N., 121° 46' 12" E. to 38° 57' 00" N., 121° 46' 12" E.). Occasionally the application may be rejected, and vessel may be ordered to drop anchor in the outer anchorage.

OUTER ANCHORAGE AND ANCHORAGE FOR XINGANG:

(A) Outer Anchorage (also called Xingang Quarantine Anchorage for Cargo Ships) is a reserved anchorage for Dalian Port. When the port gets congested, the Harbour Master may decide to start control on the entering of the vessels into Dalian Wan. The Outer Anchorage shall then be assigned to those vessels having g.r.t. 5,000 or more. They shall shift to Inner Anchorage only when permission is granted by the Harbour Master. The anchorage is located within the area of following 4 geographical positions:

Lat.	Long.
Lat. 38° 55' 00" N.	Long. 121° 59' 00" E.
Lat. 38° 55' 00" N.	Long. 122° 02' 00" E.
Lat. 38° 53' 00" N.	Long. 122° 02' 00" E.
Lat. 38° 53' 00" N.	Long. 121° 59' 00" E.

(B) *Xingang Quarantine Anchorage for Tankers:* Xingang Quarantine Anchorage for Tankers is specially assigned for those tankers calling Xingang (Nianyuwan) Crude Oil Berth to load export crude oil. For easy operation and manoeuvring, by special arrangements, tankers may receive an order to drop anchor in "Xingang Anchorage Points" (See (C)) instead of dropping anchor in this anchorage. The position of the anchorage is within following points:

Lat.	Long.
Lat. 38° 55' 00" N.	Long. 121° 59' 00" E.
Lat. 38° 56' 48" N.	Long. 121° 59' 00" E.
Lat. 38° 56' 48" N.	Long. 122° 02' 00" E.
Lat. 38° 55' 00" N.	Long. 122° 02' 00" E.

(C) *Xingang Anchorage Points:* Xingang Anchorage Points are 7 anchor positions to be given to tankers which call "Xingang Crude Oil Berth". They are closer and more convenient. Orders must be obtained before using these points. Their positions are as follows:

No.	Lat.	Long.
No. 1	Lat. 38° 57' 50" N.	Long. 121° 56' 32" E.
No. 2	Lat. 38° 57' 42" N.	Long. 121° 57' 14" E.
No. 3	Lat. 38° 57' 15" N.	Long. 121° 56' 44" E.
No. 4	Lat. 38° 57' 03" N.	Long. 121° 55' 56" E.
No. 5	Lat. 38° 56' 34" N.	Long. 121° 55' 26" E.
No. 6	Lat. 38° 56' 28" N.	Long. 121° 56' 11" E.
No. 7	Lat. 38° 56' 00" N.	Long. 121° 55' 12" E.

Depth (m.)	*Bottom*	*Capacity* (d.w.t.)	*Use of Anchorage*
18.0	Mud and sand with good holding ground	over 10,000	Quarantine, shelter, provisions and fresh water supply, Pilot, Repairs

DAYAOWAN ANCHORAGE:

This anchorage is only used by vessels calling Dayaowan. It is the area which is within following 4 points:

Lat.	Long.
Lat. 38° 59' 27" N.	Long. 122° 00' 53" E.
Lat. 38° 59' 04" N.	Long. 122° 02' 52" E.
Lat. 38° 57' 44" N.	Long. 122° 02' 26" E.
Lat. 38° 58' 04" N.	Long. 122° 00' 26" E.

RESTRICTIONS: Vessels may enter and sail after sunset.
Maximum speed in harbour limits is 8 knots.

MAX. SIZE: *Max. Draft:*

Type of Cargo	*Summer* (m.)	*Winter* (m.)
General/Ore	10.05	10.66
Iron/Fertiliser	9.75	10.36
Crude	14.93	(Not available)
Others	8.83	9.44

Max. d.w.t.: 80,000 d.w.t. or crude oil tankers 100,000 d.w.t.

RADIO: *Information required by State Agents prior to Arrival:* Vessel's name/call sign/nationality/last port/next port/ETA/max. draft/LOA/g.r.t./n.r.t./type of vessel.

Also the following must be sent to Agent by Master:

(1) Calling purpose (including loading or discharging, repairs, delivery).
(2) Numbers of crew, passengers, health condition.
(3) Sanitary Certificate No., port and date issued.
(4) Derat or Derat Exemption Certificate, port and date issued.
(5) The ports of call and date of arrival/departure prior 10 days to calling this port.
(6) Provisions, drinking water and ballast water, place and date supplied.
(7) Type of cargo and quantity.

New Port Product Oil (Atlantic)	1	346.5	13.5	50,000	Petroleum Products	
New Port Product Oil (Atlantic)	2	334	13.5	10,000	Petroleum Products	

CRANES: Floating cranes with 100 tons and 200 tons capacity available. Also see "Berthing".

MEDICAL: Hospital available.

TANKERS: *Area 1:* For petroleum products with storage tanks and railway connection. Total berth length 847 m. with average depth 10 m., capable of accommodating 4 tankers of 10,000 d.w.t. each. Also 2 smaller berths for tankers of up to 3,000 d.w.t. This area is able to accept up to 10,000 tonnes of slops a day.

Area 5: The Nianyuwan Crude Oil Terminal can accept tankers up to 100,000 d.w.t. for loading and discharging. The export crude oil is sent by pipeline direct from the Daqing oil field, at a rate of 70,000 bbls/hr. The main berth (205 m.) has maximum depth 17.50 m., while two secondary berths on the other side have depth of 14 m., suitable for 50,000 d.w.t. tankers. Onshore storage capacity is about 350,000 tonnes and maximum slop receiving capacity is about 20,000 tonnes per day. Berths are equipped with fresh water supply, fire fighting equipment and tug services.

FRESH WATER/FUEL: Available.

AIRPORT: Dalian Airport, flights to Hong Kong and Japan.

TIME: GMT plus 8 hours. No alterations during the year.

DEVELOPMENTS: Container Berth: Length 270 m. under construction. 2 × 30.5 ton Paceco portainers and 2 × 30.5 ton transtainers will be provided.

Grain Terminal: To be built for vessels of 80,000 d.w.t. 2×750 t.p.h. shiploaders to be installed.

NOTICE: *Traffic Control of Dalian Port and its Reporting System*

With effect from 1st June 1995, the new rules concerning the Traffic Control and Navigation Reporting System were announced and enforced by the Dalian Harbour Superintendency Administration of the People's Republic of China. You are therefore kindly requested to observe the relevant rules listed below when you are entering, staying and leaving the Port of Dalian.

1. All vessels calling, staying or leaving Dalian Wan must make following reports to the Port Control Huangbaizui Station by VHF Channel 6:
   (A) When vessel crosses the border line of the Southern semi-circle with 12 miles as its radius and Dasanshandao Lighthouse (38° 51' 50" N., 121° 49' 29" E.) as its centre, whether entering or leaving, should report vessel's name, call sign, flag, time and position for crossing the border line.
   (B) At any time and for any reason, when vessel passes through the Buoy HO, Buoy H2, Buoy 7 or Buoy 2, vessel must immediately report the actual time of passing (abeam) of each buoy respectively and separately (both for entering and leaving).
   (C) When vessel drops anchor in inner or outer anchorage, vessel should report the time and position of the anchor (bearing and distance from Huangbaizui Lighthouse). Meanwhile, vessel should also report same to her Port Agent (by VHF Channel 25 to "Penavico").
   (D) For anchoring vessel, in any case and for any reason, vessel should request permission 30 minutes before any kind of shifting (berthing, leaving, shifting of position, etc.).
2. Vessel should immediately report to the Port Control if vessel has problem affecting safety, navigation, such as hull, machinery and equipment damage or trouble, insufficient manning, or vessel has marine accident such as fire, collision, pollution, etc.
3. Vessel loaded with dangerous cargo onboard (including transit cargo) should have permission to enter, to be granted by the Harbour Master 3 days before vessel's arrival. When necessary, for security, the Harbour Master may send escort boat sailing with the vessel which has dangerous cargo on board, and the escort charge to be for vessel's account.

SHIPMASTER'S REPORT: March 1980.

Berth: Oil Terminal No. 1 Berth (Lat. 38° 58' 30" N., Long. 121° 54' 10" E.).

Chart: B.A. 1798.

Draft: Departure draft, 38 ft. 4 in., fore and aft.

Approach: The approach to the Inspection/Pilot Boarding Anchorage is clear of obstructions but large concentrations of fishing vessels were encountered off Shantung Promontory.

Anchorage: S.E. of Hsien Chiao Light (Lat. 38° 57' 45" N., Long. 121° 59' 05" E.) and bounded by Positions:

Lat. 38° 55' 42" N.,	Long. 121° 59' 00" E.
Lat. 38° 56' 48" N.,	Long. 121° 59' 00" E.
Lat. 38° 56' 48" N.,	Long. 122° 02' 00" E.
Lat. 38° 55' 42" N.,	Long. 122° 02' 00" E.

Depth 15/18 fathoms.

Entry Inspection: Carried out at the Anchorage, during daylight hours, by 8 officials representing Customs, Immigration, Harbour Authority and Agency. The entry formalities were very easy and a Bonded Stores List was not required and the Bond was not sealed. The Immigration Officer checked all passports but a Crew muster was not required. After pratique has been granted and other entry formalities completed, 2 Immigration Guards stay on board until the vessel berths, and during this time they make out Crew Shore passes from Passports. After berthing, the Agent's representative lives on board during the vessel's stay and is very obliging and helpful.

Berth: A modern (1977) concrete dolphin structure with tower/elevator gangway and winches on all dolphins, 420 m. long, direction 149°/329°.

No. 1 (outside)	Max. size:	100,000 d.w.t.
	Depth:	17 m.
	Max. draft:	15 m.
	Max. length:	360 m. O.A.
	Loading arms:	4×12 in. Chicksans
	Max. load rate:	10,000 t.p.h.
No. 2 (inside)	Max. size:	50,000 d.w.t.
	Depth:	14 m.
	Max. draft:	12 m.
	Max. length:	230 m.

Fresh water is available on the berths but bunkers are supplied by barge from Dalian old port.

The berths are connected to the shore by a cantilever bridge 0.5 miles long approx. and vehicles are not permitted over the bridge.

There is a dirty ballast reception facility with a maximum rate of 3,000 t.p.h.

Berthing/Unberthing: Carried out at any time with 3 Pilots, 2 large and 1 medium tug for berthing and 2 Pilots and 2 large tugs for unberthing. Berthing at No. 1 Berth is always port side to and is straightforward with plenty of men for handling moorings. Starboard anchor is let go about 100 ft. off the berth. Pilots advise there can be moderate swell with E./S.E. winds.

On departure the vessel is swung to starboard off the berth by 2 tugs and the Pilots disembark shortly after the swing is completed. The Red Flashing Buoy in Lat. 38° 58' 20" N., Long. 121° 55' 00" E. is left to port when berthing and to starboard on sailing.

Communications: Agents: China Ocean Shipping Agency, Cable: Penavico, Dalian, require following message 7 days, or after sailing from previous port; name, call sign, nationality, ETA, draft fore and aft, cargo quantity to be loaded, crew's nationality and number, departure port and destination after Dalian.

72 hours: ETA, clean and dirty ballast to discharge, cash required.
48, 24 and 8 hours: ETA.

8/12 hours: ETA to Harbour Master Dalian.

8/12 hours: ETA, crew health condition to Port Health Dalian.

Dalian Port Radio can be contacted on VHF Channel 16 and will transfer call to Agents on Channel 9.

Agent: China Ocean Shipping Agency, will provide cash advance but any unused currency must be returned to Agent before departure. Foreign currency can be exchanged ashore. Agents will provide mini-bus/taxis for crew travel to Dalian Town which is about one hour's drive. After completion of loading there is a delay of 3 to 5 hours before documents are brought on board for signature. Immigration require all shore passes to be returned and Customs wish to sight Tonnage Dues Certificate provided on arrival. There is an armed guard stationed at the shore end of the gangway at all times, and he inspects shore passes and Passports when leaving and returning to the vessel.

Cargo: Taching Crude Oil. A.P.I.: 32 – 33, Pour Point: 28° – 33°C, Sulphur: 0.1%, Load Temp: 40° – 45°C.

Harbour Authority: As vessel's first call, authorities visited after arrival alongside and checked and inspected all safety and fire-fighting equipment, and required details of engine room bilge and sewage disposal whilst in port. Also checked Oil Record Book. They were a little concerned at direct mooring with wires and would perhaps be better to have rope pendants on mooring wires. Normal tanker port restrictions apply regarding pollution avoidance from oil, garbage and sewage, also no fishing is allowed either at anchorage or alongside. When alongside shore labour empty garbage receptacles once per day.

Chandler: Dalian Ocean Supply Corporation have a comprehensive range of catering supplies, and limited deck and engine stores. From the price list obtained the range and price of provisions was extremely competitive. As no stores were purchased quality cannot be commented upon although the Catering Officer did visit the store in Dalian and reported that most of the articles listed in their brochure seemed to be available and of reasonable quality. Our call being in Winter season, fresh vegetables, fruits, salads, etc., were in short supply.

Chandlers Cable Address: Supco, Dalian. Telephone 26820.

SHIPMASTER'S REPORT: September, 1980.

This is a brief report on port information obtained when vessel (42,764 g.r.t. 75,877 d.w.t.) called at Dalian in September, 1980 for loading Daqing Crude Oil.

Oil Terminal: Position Lat. 38° 59' N., Long. 121° 54' E.

Restrictions: Entering formalities, so-called "General Examination" made, as a general rule, during day time only by the Port Officials of Quarantine, Immigration, Customs and Harbour Superintendency Administration.

Berthing and sailing operations take place 24 hours a day with the exception that the vessel does not berth on Berth No. 2 during nighttime.

Documents:

To be submitted to the Port Officials:

(a)	Crew Lists (Chinese Form)	6 copies
	* Japanese crew members are required to fill in their names and address in Chinese characters	
(b)	Report of entry for foreign-going ship (Chinese Form)	2 copies
(c)	Maritime Declaration of Health	1 copy
(d)	Import Manifest (Free Form)	1 copy
(e)	List of specified articles, foreign currencies, gold, silver belonging to ship and/or member of crew (Chinese Form)	1 copy
	* Specified articles means watches, cameras, recorders and transistor radioes, etc.	
(f)	Vaccination List (Free Form)	1 copy
(g)	Application for discharge of dirty ballast water to shore facility (Chinese Form)	1 copy
(h)	Application for discharge of segregated ballast water into sea (Free Form)	1 copy

* Stores List is not required
* Chinese Forms are obtainable by the Agent

To be shown to the Port Officials:
(a) Ship's Register
(b) Last Port Clearance
(c) Derat Certificate
(d) Load Line Certificate
(e) Safety Equipment Certificate
(f) Safety Construction Certificate
(g) Safety Radiotelegraphy Certificate
(h) Oil Record Book
(i) Certificate of Financial Security in respect of Civil Liability for Oil Pollution Damage
(j) Discharge Books, Passports and Yellow Cards

Pilotage: Compulsory for berthing and unberthing at the oil jetty. Pilot boards about 5 miles E.S.E. of the jetty.

No pilot boat, tug used.

Anchorage: Quarantine Anchorage surrounded by the following four points is established:
(a) Lat. 38° 56' 48" N., Long. 121° 59' 00" E.
(b) Lat. 38° 56' 48" N., Long. 122° 02' 00" E.
(c) Lat. 38° 55' 42" N., Long. 122° 02' 00" E.
(d) Lat. 38° 55' 42" N., Long. 121° 59' 00" E.

Nature of bottom is mud, depth of water 27 m. to 35 m.

Berths: There are 2 tanker berths on the oil jetty with a length of about 400 m. and depth of 17 m. at Berth No. 1, 14 m. at Berth No. 2.

Max. Size:
Berth No. 1: 100,000 d.w.t., LOA approx. 260 m., max. draft 15 m.
Berth No. 2: 50,000 d.w.t., LOA about 230 m., max. draft 12 m.

Berth No. 1 is located on the offshore side of the jetty and Berth No. 2 on the inshore side.

Vessels generally berth portside alongside.

Health: Radio Pratique is not available. The Master has to show the yellow cards together with a vaccination list and submit a Declaration of Health.

Radio: The Master or owner of a vessel, shall 7 days prior to vessel's arrival, submit the required forms to the Harbour Superintendency Administration through the Agent (Penavico, Dalian) for completion of entry formalities. They require:
(a) Vessel's name
(b) Nationality
(c) ETA
(d) Arrival draft
(e) Quantity of cargo to be loaded at Dalian
(f) Nationality and the number of the ship's personnel
(g) Last port
(h) Destination

The Master has also to radio to the Agent her ETA and arrival draft, 24 hours in advance of her arrival, through Dalian Radio, who is to advise the Harbour Superintendency Administration.

Furthermore, the Master is also required to advise her Agent 2 or 3 days prior to her arrival, of the quantities of the segregated water ballast and other water ballast retained on board at the time of arrival.

VHF: Dalian VHF station keeps a 24 hour listening watch on Channel 16 and is available to communicate with Agent (Penavico).

Tugs: Available. Normally 3 tugs join the vessel for berthing and 2 for unberthing.

Fresh Water: Available either from the shore or barge.

Fuel: Fuel oil and marine diesel oil are both available from barge.

Ballast: No ballast water is allowed to be discharged into the sea, except segregated ballast water.

Shore reception facilities with a capacity of 30,000 tons can receive 3,000 tons of oily ballast water per hour at a cost of 0.8 Yuan per ton.

According to the Regulations, the Authorities will allow discharge of ballast water into the sea subject to the oil content of the ballast water being less than 10 p.p.m. However, as a matter of fact, any ballast water loaded in cargo tanks is not allowed to be discharged into sea for the reason that the Master cannot give them any evidence of the oil content of the ballast water.

Therefore, there is no necessity for cleaning cargo tanks for ballasting purpose.

Customs Allowances: Ship's bonded stores are not sealed. No limitation to cigarettes or wine/spirit for use on board.

Identification Cards: Shore leave is granted from sunrise to midnight.

Shore passes are issued by the Immigration Officer.

Crew members going ashore must carry the shore passes together with their Passports or Discharge Books.

There is a seamen's club with a Chinese restaurant and some souvenir shops. Bus service is also available between the terminal and the seamen's club.

Cargo: The crude oil shipped at this terminal is the Daqing Crude. The properties of Daqing Crude which the vessel loaded in September 1980 at this terminal were as follows:

(a) API	32.84
(b) Temperature of cargo loaded	41.0°C. (106.0°F)
(c) Pour point	24.0° – 25.0°C (77.0°F)

Cargo heating may be required.

Loading:

Berth	Size of arm flange	Number of arm
No. 1	12 in.	5
No. 2	12 in.	3

Max. loading rate is reported to be about 7,000 t.p.h. using 3 arms.

Notice of Readiness will be accepted at the time of completion of the general examination.

Agent: China Ocean Shipping Agency, Dalian Branch (Penavico Dalian).

Provisions: Available at a low price. Ship chandler will be arranged by the Agent.

SHIPMASTER'S REPORT: April, 1984.

I made a port call at Dalian in April 1984 and found after anchoring without Pilot that I had made a wrong passage in the channel, switching off radar, etc. in accordance with previous regulations.

There is now no restrictions or prohibitions on using navigational aids in the harbour.

When entering the Inner Harbour Anchorage without Pilot it is important for the Master, on the first visit, to know that there is a Traffic Separation Scheme and it is sometimes congested with vessels.

SHIPMASTER'S REPORT: October, 1984.

Master received following telex from Dalian Agent:

"When entering Dalian Harbour you must pass through Dasanshan Channel and navigate within Right Traffic Lane of Traffic Separation Scheme.

Separation Zone, 0.3 nautical miles wide, is centred upon following geographical positions:
Lat. 38° 51' 00" N., Long. 121° 46' 12" E.
Lat. 38° 54' 24" N., Long. 121° 46' 12" E.

Separation Lane is connecting following:
Lat. 38° 55' 00" N., Long. 121° 46' 12" E.
Lat. 38° 57' 00" N., Long. 121° 46' 12" E.

and turn into Ganjingzi Channel at Light Buoy H2 (Lat. 38° 57' 21" N., Long. 121° 46' 12" E.) then enter into Quarantine Anchorage:
Lat. 38° 59' 08" N., Long. 121° 42' 30" E.,
Lat. 38° 57' 39" N., Long. 121° 42' 30" E.,
Lat. 38° 57' 39" N., Long. 121° 45' 00" E.,
Lat. 38° 59' 08" N., Long. 121° 45' 00" E.

The East Boundary Line between the Separation Lane and the Inshore Traffic Zone is:
Lat. 38° 51' 00" N., Long. 121° 48' 30" E.,
Lat. 38° 54' 24" N., Long. 121° 48' 00" E."

SHIPMASTER'S REPORT: December 1986.

Documents: Only 1 copy of each document required except for Crew List (6 required). Refused to accept 'Marine Declaration of Health' as it was in English only. All documents had to be in Chinese/English – all available from Agent as well as 'application' forms (de-ballast, postage, etc.). Main papers were Customs Declaration (including Foreign Currency List) Vaccination List, and 'normal' ship's papers. (Register, Derat, etc.).

Officials: Boarded by 'Joint Inspection Team', which consists of 8 people (Immigration, Customs, Port Authority and Agent).

Bond sealed by Customs and unsealed prior to sailing, when the 'Joint Inspection Team' clears the vessel for sailing.

Anchorage: Instructed by Agent to anchor in 'Tanker Quarantine Anchorage' (North of fairway). No problems encountered in entering, buoys in position, but lights rather weak.

No. 1 General Cargo Anchorage very crowded with small vessels.

Unable to contact Port Radio (VHF) on entering and had to wait until following morning.

All vessels are visited at anchor; possibly in order of arrival.

Radio Station: Receives and transmits as per ALRS; but not very good at answering on H/F. Once within M/F range, Radio Officer reported the station as reasonable.

Berth: Vessel berthed starboard side to Pier No. 1, which has a maximum draft of 9.5 m. Pier No. 2, to the East, is believed to be restricted to 8.7 m.

Cargo: 18,000 tonnes of gas oil. Pumping rate: 750 t.p.h. – 800 t.p.h.

Shore Leave: No apparent restrictions, except that all crew have to be back onboard by midnight. Shore pass and Passport/CDC Book to be carried when going ashore.

Local Seaman's Club and Friendship Store will change any foreign currency.

Taxis to and from club or store apparently paid for by them; from elsewhere taxis appeared to be a little expensive.

SHIPMASTER'S REPORT: January 1987.

Vessel: 105,000 d.w.tonnes with segregated ballast tanks.

Berth: No. 1 Berth.

Max. Draft Allowed: 15.0 m.

Loading: The shore loading rate was given as 2,000 tonnes p.h./boom. This was an optimistic estimate as we received at a maximum rate of 5,200 tonnes p.h. with 4×12 in. booms connected. This decreased to about 4,000 tonnes p.h. when a vessel was loading at Berth No. 2.

Ballast: During entry formalities, the Harbour Master checked the Oil Record Book and the Deck Log Book to confirm where the ballast was shipped. Any ballast taken in Singapore or the Malacca area is considered 'infected' and must be discharged ashore.

Mooring Wires: Vessel is fitted with mooring wires and this caused a delay when sailing as there were not enough personnel to heave in sufficient slack to let go.

Shore Leave: A minibus is available to take personnel ashore to the International Seaman's Club and times are organised to suit ship's staff. For 8 round trips during the vessel's stay the charge was approximately £7 and the journey takes about 10 minutes. Local cash is available but almost any currency can be used at the Seaman's Club, where there is a bar/restaurant, shop and facilities for International telephone calls (£2.00 per minute to the U.K.)

Documents: Discharge Books only were checked by Immigration Officials on arrival, no passports or vaccination cards were required.

SHIPMASTER'S REPORT: September 1991.

Dalian is a very busy port, and is congested most of the time.

Navigation: Reference: B.A. Chart No. 3694 – Dalian Wan Approaches.

Traffic separation zones are marked on the chart and vessels are required to keep within the zones. Numerous fishing boats will be encountered in the separation zones.

North of Quarantine Anchorage No. 2 and the tanker anchorage, is used for seaweed cultivation, and many nets and stakes extend to the Northern areas of the above anchorages. Vessels should navigate with extreme caution in these areas. It is advisable to use Anchorage No. 1 when not congested.

When port is congested the Agent advises vessel to anchor in the outer anchorage.

Vessel should advise Port Control on VHF Channel 6 when entering Dasanshan Shuido (Entrance to the Bay – See B.A. Chart No. 3694).

Penavico (Agent) working channel is VHF Channel 25. Vessel should inform Penavico time of anchoring and position from Hungbai Zui Lighthouse, bunkers remaining and water onboard, and arrival draft.

Pilotage: Pilots board vessel at the quarantine anchorage.

Pilots will call vessel on VHF Channel 16, working channel is Channel 12.

Berthing prospects advised by Penavico on VHF Channel 25 at 1100 hrs. everyday. They also advise approximate time of berthing. Pilots will call VHF Channel 16 to advise boarding time.

Dalian Main Port: Port consists of 30 main berths. See "Plan" for berth lengths and depths. Depths shown are minimum depth.

Xiang Lu Jiao Area: This area has been in operation for at least 5 years, but the B.A. Charts have not been updated.

The main channel depth is 8.6 m., and this connects "Ganjingzi Fairway". Both channels are marked by buoys, but buoys are shifted frequently and may be out of position during winter months.

Berths No. 1 and 2 – Used mainly for timber exports.

Berths No. 3 and 4 – General, soya bean, maize, steel, pig iron, etc.

Berths No. 5 and 6 – Containers, fitted with 2 gantry cranes.

Berths No. 7 and 8 – General.

Our vessel berthed at Xiang Lu Jiao No. 3 for loading soya beans in bags, and when loaded upto 7.0 m. draft we shifted to Berth No. 7 to complete loading.

Due to the depth at the berth, the vessel had to be berthed with the stern overhanging, and with Northerly winds vessel was exposed to the weather.

Upon sailing at high tide, vessel had to be towed stern first towards Berth No. 6 for turning, due to insufficient depth near Berth No. 7.

Berths in the Xiang Lu Jiao area are not recommended for vessels over 150 m. in length.

Fresh Water: Due to uncertain berthing conditions, and due to the port being congested, it is advisable to arrive with maximum fresh water onboard. If water is required at anchorage, at least 4 days notice should be given to the Agent. The barge will not leave the harbour during strong winds.

Fresh water at Xiang Lu Jiao is supplied by barge from the main port.

SHIPMASTER'S REPORT: April 1992.

Berths: Vessel (50,000 d.w.t.) called at Dalian for loading unleaded Mogas.

Vessel used two berths during stay in Dalian

1st Berth: Ganjingzi Oil Berth No. 11. Hoses: 1×8 in. Loading rate: 700 cu.m./hr.

2nd Berth: Dalian Oil Berth No. 3. Hoses: 2×6 in. Loading rate: 800 cu.m./hr.

Berthing/Unberthing: 2 Pilots and 2 tugs.

Shifting: Shifting from one berth to another not allowed during night time, due to vessel partly loaded. Shifting from berth to anchorage allowed throughout 24 hours.

Entry Inspection: Carried out at anchorage during daylight hours, by "Joint Inspection Team" of 8 officials representing Customs, Immigration, Harbour Authorities and Quarantine Doctor.

Customs: Sealed the Bonded Stores.

Immigration: Checked all passports and issued shore passes.

Quarantine: Doctor issued Free Pratique.

After the Joint Inspection Team had left, Agent came on board. Prior to departure, the same Team came on board.

Harbour Authorities issued Port Clearance.

Quarantine Doctor issued Quarantine Certificate for departure of ship.

As vessel's next port was Ningbo, all Customs documents handed over to Master in a sealed envelope for Customs at Ningbo.

Shore passes also valid for Ningbo.

Tonnage Dues Certificate: 30 days was minimum length of issue.

Communications: Agents: China Ocean Shipping Agency, Dalian. Cables: Penavico Dalian. Telex: 86161 Cosad CN.

Agent required following information prior to arrival:

(a) Vessel's name.
(b) Nationality.
(c) ETA.
(d) Arrival draft.
(e) Quantity of cargo to be loaded at Dalian.
(f) Nationality and number of crew.
(g) Last port.
(h) Destination.

All messages sent to Agent via Satcom.

Agent tried to send messages to ship via Satcom, but did not succeed, so all messages from Agent received by cable through Dalian Radio/XSZ.

Following cable received from Agent before arrival:

Quote

Please advise the following by return cable or telex:

1. Last port of call.
2. Sailing draft from Dalian.
3. Quantity deballast ashore, if ballast contains dangerous chemicals, it is not acceptable.
4. Has vessel segregated ballast tanks, if not, please advise quantity and distribution of clean ballast which is to be pumped into the sea.
5. Name of last cargo.
6. Water/bunkers must be supplied before berthing. Please advise quantities, if required.
7. If blank Bill of Lading forms available on board.
8. Any transit IMO cargo on board, if any, please advise name and IMO class.
9. Amount of cash advance required.

Penavico Tlx 86161 cosad cn.

Unquote

VHF: Penavico listens on Channel 25 throughout 24 hours.

Every day at 1100 hrs. (local time), a berthing schedule is broadcasted on Channel 25 by Penavico.

Documents:

On arrival:

4 copies Crew List (IMO Form accepted).
2 copies Crew Effects Declaration (IMO Form accepted).
2 copies Currency List (Free form).
2 copies Gold and Silver List (Free form).
1 copy Vaccination List (Free form).
2 copies Ports of Call List (Free form).
1 copy Maritime Declaration of Health (Chinese form).
2 copies Report of Entry for foreign-going ships (Chinese form).
1 Application for discharge of segregated ballast water into sea (Free form).
1 copy Bonded Stores List (IMO form accepted).
6 copies Ship's Particulars (Free form).

On departure:

4 copies Crew List (only if crew changes).
1 copy Maritime Declaration of Health for departure of ship (Chinese form).
1 copy Report of Clearance (Chinese form).
1 copy Report on the Chinese Currency (Chinese form).

All Chinese forms supplied by Agent, and are easy to fill in.

On arrival, ship's certificates were shown to port officials together with Oil Record Books.

Shore Leave: Shore passes required together with passports.

Shore leave allowed from sunrise to midnight. One guard stationed at ship's gangway throughout 24 hours, and he inspected shore passes and passports when leaving and returning to vessel.

From Ganjingzi Oil Berth No.11, a minibus to Seamen's Club/town arranged via Loading Master. Transportation time is 40 minutes each way. Minibus to be paid for by crew members (approx. U.S.$15.00 each way).

Delays: Ship was delayed several hours due to no Cargo Surveyor being available.

AUTHORITY: Port of Dalian Authority, 1 Gangwan Street, Zhongshan District, Dalian, China. *Tel:* 237873, 222824. *Telex:* 86246 DHAB CN.
Contact: Shen Chun, Deputy Director.

AGENT: See "Shanghai".

DANDONG: 39.38 N. 124.09 E. (See Plan)

LOCATION: *Langtou Port District:* 40° 07' N., 124° 24' E.
Dandong Port District: 39° 38' N., 124° 09' E.

PILOTAGE: Pilotage is compulsory and is undertaken day and night. Pilot boards vessel at the mouth of River Anchorage in Lang Tou Port District, and at Quarantine Anchorage in Dadong Port District.

ANCHORAGES:

Name	*Location*	*Depth (m.)*	*Size of Vessel (d.w.t.)*	*Use of Anchorage*
River Anchorage	39° 41' N. 124° 08' E.	8.0 - 10.0	over 10,000	Shelter
Langtou	40° 12' N. 124° 21' E.	4.0 - 5.0	under 1,000	Shelter
Donggang	39° 47' N. 124° 09' E.	8.0 - 13.0	over 10,000	Lightering
Quarantine	39° 47' N. 124° 07' E.	8.9 - 9.1	over 10,000	Quarantine
Dandong Port	38° 41' N. 124° 09' E.	9.0 - 10.0	over 10,000	Quarantine

RESTRICTIONS: Vessels may enter port after dark, but may not sail.

Draft Limitation in the Channel:
Langtou Port District: 6.93 m.
Dadong Port District: 8.00 m.

Tidal Range:
Langtou Port District: Maximum 6.93 m., minimum 2.23 m.
Dadong Port District: Maximum 6.93 m., minimum 1.56 m.

VHF: Radio Station 'XSB 93' maintains a 24 hour service. Calling on Channel 16 and working on Channel 11.

TUGS: 1×400 h.p., 1×600 h.p. and 1×900 h.p.

BERTHING:

CRANES:

Berth No. 1: 3 × 10 tons.
2: 3 × 10 tons.
3: 2 × 10 tons.
4: 2 × 10 tons.
Berth No. 5: 1 × 16 ton.
6: 2 × 10 tons.
7: 1 × 16 tons.
8: 2 × 16 tons.

FRESH WATER: Available, contact China Marine Bunker Supply Co.

FUEL: Available, contact China Marine Bunker Supply Co.

REPAIRS: No facilities.

GARBAGE DISPOSAL: There is a company who can assist with garbage service to vessels in harbour. They have drums, skips and boats, and men to remove garbage on board every morning. Ring 822546 or 822071 (Ext. 2411, 2419) for service.

WASTE OIL DISPOSAL: Collection service, shore tanks, barges and tanker trucks available. Ring telephone numbers above for service. There are also some berths for waste oil disposal.

SEAMAN'S CLUBS: Fangcheng International Seamen's Club, Xinggan Street, Fangcheng Port, Guangxi, China. Tel: 822388. Facilities available: Guest rooms in different classes, restaurant serving both Chinese and Western food, shops, ballroom, reading room, theatres, recreation rooms and telecommunication service. Seamen's Club often organises recreational, sports and sightseeing tours for seamen from different countries.

CURRENCY: Chinese Yuan.

GENERAL: *Floating Cranes:* None available.

Provisions: Available. Contact China Shipping Supply Corporation.

Cargoes Handled: Sugar, coal, grain, fertiliser, cement, ore, timber, steel and general cargo.

Storage:

Warehouse: 4,500 sq.m.

Open storage space: 200,000 sq.m.

DEVELOPMENTS: Upon completion of the port modernisation program, 54 berths will be available for handling of vessels up to 50,000 d.w.t.

SHIPMASTER'S REPORT: March 1989.

Location: The port is located in position Lat. 21° 37' N., Long. 108° 20' E. It is a small port at the end of a dredged channel which is 7 miles long and 80 m. wide.

Formalities: Customs, Immigration and Health Officials board on arrival, together with the Agent. We prepared ships papers in advance of arrival and all were accepted, except for the Crew List which has to be made out on Chinese forms. The Agent will deliver Chinese clearance forms and assist with completing them.

Shore passes are issued for each crew member and are collected prior to departure. The port rules are also handed over to the Master and these again are collected prior to departure.

The bonded store was sealed by Customs but the beer store is left unsealed.

Pilotage: The Pilot boards the vessel from a tug, one mile South of the pilot buoy. There are 4 pilots available at the port.

On arrival the vessel should call Fangcheng Radio on VHF Channel 16, who will connect the vessel with the pilot office, after which the vessel may communicate with the Pilot Station on VHF Channel 16. The language of communication is English and no difficulties were encountered.

Pilot Ladder: No special requirements.

Approaches: The charts used on our visit were B.A. Chart No. 3990 and Chinese Chart Nos. 16791 and 16792.

No difficulties were encountered on our approach, Cape Pak Loung is a good radar target and the yellow pilot buoy is visible at 5 miles on the radar.

Channel: The Channel is marked by light buoys and leading lights and has a width of 80 m. Vessels with a draft of 7.0 m. may use the Channel at any time day or night.

Anchorage: Quarantine Anchorage: A Quarantine Anchorage has been established between parallels of 21° 21.5' N. and 21° 28' N., and the meridians of 108° 20' E. and 108° 26' E. This anchorage is not marked on B.A. Chart No. 3990.

We anchored on the Northern border of this anchorage, which was 2 miles to the South of the pilot buoy. The depth of water is approximately 16.0 m. and nature of the bottom is mud and sand.

Tide: Most arriving vessels have to anchor, due to the tidal situation. The tidal range is about 4.0 m.

Max. Size: The port can accommodate vessels up to LOA 185 m.

Vessels up to LOA 210 m. may be accepted if the Agent seeks Harbour Master's approval.

The maximum permissible draft on the highest tide is 11.0 m. If a vessel has a draft greater than 11.0 m. it may be lightened in the outer roads if advanced notice is given to the Agent.

Tugs: There are 4 tugs available, of which 2 are powerful tugs of international standard. When berthing alongside the tugs use their own lines and make fast fore and aft.

Berthing: The port of Fangcheng has 7 berths. Berths No. 1 and 2 have a depth of 8.0 m. and Berths No. 3 – 7 have a depth of 9.0 m. – 10.0 m. at lowest low water.

All berths are fitted with rubber spring fenders and at high water they are below the water surface.

Stevedores: Work is carried out throughout 24 hours in 3 shifts (0800 hrs. – 1600 hrs., 1600 hrs – 2400 hrs. and 2400 hrs. – 0800 hrs.). Meal hours are 0400 hrs. – 0500 hrs., 1130 hrs. – 1300 hrs. and 1930 hrs. – 2100 hrs. The gangs consist mainly of labourers from farms and mines.

Cranes: There are 10 cranes of 10 tons capacity which are available at all berths.

Medical: Medical facilities and doctors available locally.

Fresh Water: Fresh water is available. As the water is not frequently used by vessels, the first water in the line is very rusty and may take as long as one hour before clear water is running. Fresh water is also available by barge at the outer roads on request.

Fuel: Fuel is available by barge from other ports in an emergency but it is very expensive.

Watchmen: There are 2 watchmen (Immigration Officers) on board day and night.

Surveyors: No surveyors available locally. If required Lloyd's and ABS can provide surveyors from Hong Kong.

Local surveyors for bunkers or off-hire surveys can be ordered from nearby Chinese ports.

Repatriation: Possible. Information should be provided to the Agent when the vessel is alongside.

Airport: Nanning Airport is approximately 180 km. from the port by bus.
Time: GMT plus 8 hours. In Summertime from April 21st to September 22nd, clocks are advanced one hour.
Shore Leave: Possible. Shore passes and passports must be carried when going ashore.
General:
Seaman's Club: There is a Seaman's Club locally from which overseas telephone calls may be made.
Telephone/Telex: Available in the Agent's office. Connections to foreign countries are made through the operator, waiting time of 30 minutes or more can be expected. Within the next year or so a direct dialling system will be established.
Garbage: Form for garbage removal is signed by the Master on arrival. Garbage will be removed daily by the collector and should be in plastic bags.
Ship Chandler: The ship chandler boards on request with a price list and speaks good English.
Laundry: Laundry service is available and is handled by the ship chandler.
Currency: The currency is the Yuan. The official rate of exchange in March 1989 was 3.62 Yuan to U.S. $1.00.
Imports: Grain, fertiliser and raw sugar.
Exports: Manganese ore, coal, bauxite, cement and refined sugar.
Agent: PENAVICO (China Ocean Shipping Agency). The Agent speaks good English and was very helpful in every respect.

AUTHORITY: Fangcheng Harbour Superintendency Administration, Fangcheng Port Area, Guangxi, People's Republic of China.
Contact: Mr. Chen, Harbour Master.

FUZHOU (Foochow): 26.03 N. 119.18 E.

(See Plan)

PILOTAGE: Compulsory. Pilot available between 0400 hrs. and 2000 hrs. Pilot boards vessel in the anchorage (position: Lat. 26° 07' 44" N., Long. 119° 38' 44" E.).
ANCHORAGE: Tingjing Guantou Anchorage has a depth of 6.0 m. – 12.0 m. and accepts vessels up to 20,000 d.w.t.
MAX. SIZE: Max. draft in channel is 8.0 m. at LW and 8.5 m. at HW.
Tidal range: 6.0 m. maximum and 3.5 m. minimum.
VHF: Port radio on Channel 16 throughout 24 hours.
TUGS: 1×400 h.p., 1×980 h.p., 1×1,600 h.p., 1×2,200 h.p. and 2×3,200 h.p.

REPAIRS: Available, contact Penavico Agency.
GENERAL: *Provisions:* Contact China Ocean Shipping Supply Co.
Storage: Warehouse: 5,500 sq.m. Open storage: 5,700 sq.m. Container storage: 4,000 sq.m. – 30,000 sq.m.
Imports: Cement, fertiliser, rice, coal and general cargo.
Exports: General cargo and stone.

SHIPMASTER'S REPORT: July 1985 (Updated 1996).
Documents: Documents required are same as for other Chinese Ports. 7 copies of Notice of Readiness must be provided. Inspection party boards with Agents and all formalities are carried out promptly. Formalities include Port Health Inspection (granting of Quarantine) and Immigration and Customs clearance. 2 Police Officials remain on board throughout until vessel's departure.
Pilotage: At Quarantine Anchorage 2 Pilots board, and the vessel is taken 5 miles up river to either Guantou Anchorage or a few miles further up river to Minan Anchorage.
Approach: From 5 miles S.W. of Baiquan Liedo pass around its S.W. side and approach position Lat. 26° 06.22' N., Long. 119° 52' E. Then turn West to cross bar at HW (daytime only). Set course 265.5°T against Baiyun Shan leading lights. (These are visible clearly as white concrete structures on hills in daytime at least 15 miles off). On reaching Lat. 26° 05' 37" N., Long. 119° 41' 40" E. and 0.21 miles Southward of Buoy No. 3 in position Lat. 26° 05' 49" N., Long. 119° 41' 42" E. alter course to 308°T against Culudao leading lights. These leading lights are not marked on BA. Chart 2400. The forward light (white concrete structure) is on Xifengshi Point in approximate position Lat. 28° 08.2' N. Long. 119° 38.3' E. Thence approach Quarantine Anchorage centred on Lat. 26° 07' 42" N., Long. 119° 38' 44" E. Whilst awaiting daylight HW vessel can anchor in position Lat. 26° 06' 30" N., Long. 119° 50' 00" E. There is no restriction on use of Radar or echo sounder.
General: Vessel must cross bars and arrive at Quarantine Anchorage marked on BA. Chart 2400. Time of arriving at Quarantine Anchorage is time of Arrival at the Port. Pilots usually do not reply when called on VHF, however, Fuzhou Radio can be called on Channel 16 at any time and asked to convey message to Pilots. Fuzhou Radio will also make VHF contact with Penavico. Thus for any assistance Fuzhou Radio on VHF Channel 16 can be contacted at any time.

Authorities do not board at this anchorage, since it is far from Ma Wei. Agents main Office is situated in Fuzhou City but their full Operations Department is stationed in Ma Wei within the dock area. From Quarantine Anchorage vessel is Piloted to either Guantou or Minan waiting anchorage, about 12 miles and 6 miles respectively from Ma Wei. The Arrival formalities are carried out at these anchorages.
Restrictions: Navigation and all movements during daylight HW only. Max. draft 8.0 m. for going to Ma Wei. No navigation is possible beyond Ma Wei. If vessel is drawing more than 8.5 m. she can be lightened at anchorage, but this will be difficult and cause delays due to shortage of barges, etc. In any case maximum draft permissible is 8.5 m. However it is advisable not to load to more than 8.0 m. if complications are to be avoided. Vessels of more than 180 m. length may find difficulties at anchorages. Ideally vessels of 10,000 tons gross are suitable.
Note: If drawing more than 9.0 m. or length more than 180 m., vessel should contact "Penavico Fuzhou" before arrival.

There are 2 spring tides each month. A draft of less than 9.0 m. can be handled at spring tides.

Prohibited area for Navigation is bounded by Beipiao Peninsular Lat. 26° 21' N., Long. 119° 55' E.; Mazuleidao Lat. 26° 09' N., Long. 119° 55' E.; Baiquan Liedo Lat. 25° 57' N., Long. 119° 58' E. and Tongyindao Lat. 26° 22' N., Long. 120° 30' E.
Radio: 48 hours and 24 hours Notices of Arrival must be sent via Fuzhou Radio. Call sign "XSL". Frequencies: MF-430 kHz all day, and HF-4343 kHz (1800 hrs. – 0600 hrs. local time) or 8598 kHz (0600 hrs. – 1800 hrs. local time) to "PENAVICO Fuzhou". All foreign vessels are handled by Penavico. They will reply with radio message giving tide times and arrival instructions which are similar to those found in BA. Pilot.
Berthing: Four ships can be berthed at Ma Wei Wharf and 5 ships can be berthed at Qing Zhou Wharf. At Ma Wei Wharf, Berths No. 1 and No. 2 are suitable for ships drawing 8.5 m. and Berths No. 3 and No. 4 are suitable for ships drawing 7.5 m. At Qing Zhou Wharf, Berth No. 1 is a passenger wharf, Berths No. 2 and No. 3 are suitable for ships drawing 11.0 m. Berths No. 4 and No. 5 are container wharves, suitable for ships drawing 11.0 m.
Discharge Rate: About 2,400 tons per day (bags/4 gangs) and 3,500 – 5,000 tons per day for bulk cargo.
Cargo Gear: There are 4 cranes of about 5 tons capacity, one for each berth. Cargo work is mostly carried out with ship's derricks. There are several new mobile cranes, and new fork lifts capable of handling 20 ton containers. Cargo is discharged on to trailers and taken to storage sites or directly to railway wagons.
Stevedores: State controlled. Work is continuous in three shifts daily.
Medical: Hospitals situated very close to dock area with full facilities. Inoculations can be carried out.
Fresh Water: Laid on at wharf. Rate 50 t.p.h. Due to waiting period vessels must arrive with tanks full, and water must be rationed during waiting period. With difficulty water is supplied at anchorages by barge (capacity 60 tons.)
Fuel: All grades available.
Density: 1000 at LW. 1015 at HW.
Time: GMT plus 8 hours.
Delays: Sometimes 3 to 4 days.
Developments: Large areas are being reclaimed and long term plans exist to increase berthing facilities. Extensive dredging is also in progress.
General: Provisions: Reasonable amounts of fresh provisions are available at very good prices. However dairy products like butter and frozen provisions not available. Vegetables in limited variety. Fresh meat, poultry and fish are plentiful.
Laundry: Local Seamen's Club handles laundry. Delivery after about 4 days.
Agents: China Ocean Shipping Agency Fuzhou, No. 9 Guang An, Guohuo Road (West), Fuzhou, China. Tel: (0591) 3682405, 3687070, 3363053. Fax: (0591) 3683354, 3363076. Telex: 924086 PENFZ CN.

AUTHORITY: Fuzhou Port Authority, No. 3 Harbour Road, Fuzhou, Ma Wei District, China. *Tel:* (0591) 582132.

GAOGANG 32.07 N. 119.51 E.

PILOTAGE: Compulsory. Pilot service is available during daytime. Pilot boards vessel at the Liuhe Pilot Anchorage.
ANCHORAGE: Port Anchorage: Located inside of Port Shoal. Depth 10.0 m. Bottom is mud and sand with good holding ground. Max. size 25,000 d.w.t.

Luochengzhou Anchorage: Inside of No. 2 Red Buoy. Depth 10 m. Bottom is mud and sand with good holding ground. Max. size 15,000 d.w.t.
RESTRICTIONS: Vessel cannot enter and sail after sunset.
Tidal range: Max. 2.5 m. Average 1.19 m.
Draft limitation of the channel: Mouth of Yangzi River Channel 9.7 m. (fresh water).
VHF: Gaogang Port on Channel 14 throughout 24 hours.

TUGS: 1×800 h.p. and 1×2,640 h.p.

SHIPMASTER'S REPORT: July 1981 and October 1984.
Item Nos. 6 – 9 amended by report received in October 1984.
Southern Approaches to Huangpu:

1. Vessels approaching from the South, bound for Canton and Whampoa should steer a course of 005°, so as to arrive approximately 5 miles West of Wen-Wei Chou (Gap Rock). An occasional light is exhibited from Gap Rock Lighthouse, but more often this light does not function and therefore should not be relied upon.

2. On approaching Gap Rock the first land mark that appeared on the horizon was the group of Great Ladrone Islands at a distance of approximately 20 miles on a clear afternoon. On closing Great Ladrone to a distance of about 10 miles, the group of islets to the East of Gap Rock were seen. Closing further to a range of 8 miles only, the Gap Rock was seen and identified.

3. The Gap Rock Islet is rugged in appearance and devoid of any vegetation. The lighthouse is located at the centre of the islet and differs slightly from the illustration in the Pilot, in that the dome-like structure is non-existent. The structure is slightly inclined and looks neglected.

4. The light on the Chuk Wan Shan Island is prominent and was visible at a distance of approximately 15 miles and is located at the summit. It is whitish and dome-like in appearance.

5. On identifying Gap Rock, vessel should proceed on the recommended course of 013°, keeping clear of the wreck marked 3 miles (approximately) West of Gap Rock and follow the recommended track so as to arrive at the Quarantine Anchorage demarcated West of La Sa Wei Island. It was observed that most ships prefer to anchor closer to the Ma Wan Light due to deeper waters. The anchorage off La Sa Wei affords good holding ground and shelter from all types of weather.

6. Vessels remain at this Quarantine Anchorage for a considerable length of time and all ships requirements, Pilot, berthing instructions, movements, etc., will have to be sought from the Agents "Penavico" through Guangzhou Radio on 8490 MHz.

7. Loaded vessels may have to anchor at the Bar before entering the Chuen Pi Channel at Lat. 22° 45' N., Long. 113° 39' E. (B.A. 1741) to await the next tide. Once ready for heaving anchor and swinging the vessel's bow into port direction, Pilots ask for the lights "Red" over "White" to be switched on for turning and to switch them off again after completing the turning manoeuvre.

Pilots listen on VHF Channels 9 and 16 and vessels can try to contact them once approaching La-Sa-Wei Quarantine Anchorage but vessels have to be patient as not many of shore personnel appear to understand English and they will not reply unless there is a Pilot standing by to attend.

8. The usual muster of crew is not carried out. However, a very thorough inspection is carried out by Immigration at Pratt Point, about 3.5 miles downstream (B.A. 1742). At that position the vessel drops anchor and awaits Immigration, who once on board order all the crew into one messroom, leaving wardrobes, lockers and cabin doors open. Then 4 men of the crew will be chosen, 1 to go with 1 soldier through the accommodation, 1 to go with another through the engine room and 2 others to accompany 2 other soldiers through the cargo holds. This procedure takes about 1 hour. Only after this inspection does Master obtain his clearance and is able to sail.

9. Huangpu Port (Whampoa) has been extended enormously. There are pier facilities for at least 6 medium size general cargo ships and at approx. position Lat. 23° 03.25' N., Long. 113° 28.5' E. near Shuang Kang (B.A. 1742) there exists a new container and Ro/Ro pier for 3 ships.

The cargo of my vessel (ST 14 of 11,363 tonnes) of bagged urea was discharged in 62 hours after working with up to 9 gangs (5 hatches) day and night.

10. The Seaman's Club Representatives board the vessel soon after arrival and will arrange any sight seeing tours at nominal cost. Seaman's Club provides good meals and club facilities. Seaman's Store and the Friendship Stores afford good shopping at reduced prices. Ship provisions and fresh vegetables are available in abundance.

11. Vessels leaving Whampoa, Northbound will have to follow the same route unless prior approval is sought from the Agents to go through the Lema Channel.

AGENT: Jardine Shipping Agencies, Guangzhou Representative Office, Room 903, T.P.Plaza, 9/109 Liu Hua Road, Guangzhou 510010, People's Republic of China. Tel: 86-20-86675529. Fax: 86-20-86692796. Telex: 44407 JMCGZ CN.

(Initial correspondence to be made through Jardine Shipping Agencies, Hong Kong).

HAIKOU (including Macun): 20.01 N. 110.16 E. (See Plan)

PILOTAGE: Compulsory. Pilotage is undertaken day and night. Pilot boards vessel at quarantine anchorage.

Also see "Anchorage".

ANCHORAGE: Depth 4.0 m. – 18.0 m. Can accommodate vessels 20,000 d.w.t. – 25,000 d.w.t.

Pilotage Anchorage: Between Lat. 20° 05' 14" N. and Lat. 20° 05' 36" N. and Long. 110° 16' 08" E. and Long. 110° 16' 51" E.

Depth 15 m. – 18 m. Bottom: Mud and sand.

RESTRICTIONS: Entry and sailing after sunset is possible.

MAX. SIZE: Max. draft in channel 6.0 m.

Tidal range: 0.5 m. – 2.4 m. at Spring tides. 1.1 m. – 2.0 m. at Neap tides.

Also see "Berthing".

VHF: Haikou Radio on Channel 16 (24 hours). Penavico on Channel 9 (24 hours).

TUGS: 1×1,440 h.p., 1×1,320 h.p., 1×900 h.p. and 1×600 h.p.

BERTHING: For ocean-going vessels.

District	*Berth No.*	*Length (m.)*	*Max. LOA (m.)*	*Max. Draft (m.)*	*Remarks*
2nd District	9 – 11	340	120	6.0	General cargo
	14 – 18	440	150	8.0	Bulk
	15 – 16	230	50	4.0	General

Vessels arriving with a draft of over 6.2 m. are normally required to lighter at anchorage or await a suitable tide.

Warehouse and Open Store Space:

Warehouse	29,000 sq.m.
Open store space	86,000 sq.m.

Main Import and Export Cargoes:

Ore, local products and general cargo.

STEVEDORES: Work throughout 24 hours, 7 days a week.

TANKERS: See "Shipmaster's Report".

FRESH WATER: Supplied by Haikou branch of China Marine Bunker Supply Company.

FUEL: Supplied by Haikou branch of China Marine Bunker Supply Company.

GENERAL: *Stores:* Supplied by Haikou Ocean Shipping Supply Company.

Floating Cranes: Not available.

SHIPMASTER'S REPORT: June 1993.

Vessel (LOA 170 m.) discharged fuel oil/gas oil at Macun Coal Terminal. Depth alongside 10.2 m.

1. Passing through Hainan Straits from the East can be performed normally. Master should be aware that Fairway is only 1 mile wide (see B.A.Chart No. 3892). However, route is well buoyed and agrees with Chart/GPS. Racon on lightvessel (Buoy No. 1) inoperative. Tidal streams are strong and variable. See Admiralty Tide Tables and sailing directions covering area.
2. Route that leads to Haikou is a controlled area, and permission must be obtained from Hainan Straits Authorities. See "Guide to Tanker Ports" and China Sailing Directions – NP 30. Protecting agent in Hong Kong is able to arrange this permission.
3. In general, communication by telex with "Penavico Haikou" is difficult.
4. Vessel proceeds to Haikou Anchorage, where authorities embark. Agent also boards vessel, and he informs Master when pilot will arrive.
5. Route from Haikou to Macun is under pilotage and is covered by numerous fishing nets which are stretched between Yokohama Fender Style Buoys.

   Moving West from Haikou Anchorage, towards Macun, cannot be recommended during the hours of darkness or times of restricted visibility.

   Distance from Haikou to Macun is approximately 25 miles.
6. In spite of several attempts, no chart of Macun Port could be obtained. According to Agent, a chart of Macun does not exist.
7. Last part of route: Distance is approximately 5 miles and is buoyed. Water depth is 20 m. – 30 m., be aware of fishing nets. Course to be steered to Buoy No. 4 is 180° (approx.).
8. Harbour Pilot embarks at Buoy No. 4. Pilot is experienced, but English is poor.
9. No berth movements take place during hours of darkness.
10. At Macun, ship/shore communications only possible with "Penavico Haikou" by VHF.

    Note: Limit of VHF range.
11. On departure, Harbour Pilot disembarks at Buoy No. 4, and vessel proceeds to Haikou Anchorage without pilot, and awaits port clearance. Route not to be recommended during hours of darkness and at times of restricted visibility.
12. Please see plans and drawings for additional remarks.

HAIMEN: 28.41 N. 121.27 E.

PILOTAGE: Pilot is compulsory, provided by pilot station of Taizhou Harbour. Notice of ETA and request for Pilot must be made to the Pilots at least 24 hours in advance.

Address: 38 Jiang Bin Road, Jiaojiang, Taizhou City. Tel: 8883722, 8224571 (Ext. 287 or 286).

	15	61	3.5	3.0	Steel

CRANES: 1×25 tons, 1×15 tons, 2×10 tons, 4×5 tons, 5×3 tons.

FRESH WATER: Available.

FUEL: Available.

REPAIRS: No facilities.

HUIZHOU: 22.42 N. 114.34 E. (See Plan)

LOCATION: N.W. of Daya Bay and North of Ya-ling Wan (Dambell Bay), in position Lat. 22° 41.8' N., Long. 114° 33.5' E.

The port opened in October 1992.

DOCUMENTS: The following are to be submitted by vessel upon arrival:

5 copies Crew List.
5 copies General Declaration.
5 copies Cargo Declaration.
3 copies Crew's Declaration of Personal Effects.
4 coies Ship's Stores Declaration.
1 copy Ship's Particulars.
7 copies Cargo Manifest.
1 copy Maritime Declaration of Health.
1 copy Declaration of Animals and Plant Quarantine for ships.

Departing Vessels:

5 copies General Declaration.
5 copies Cargo Declaration.
1 copy Crew List.

PILOTAGE: Compulsory. Pilotage is undertaken from sunrise to sunset.

ANCHORAGE: Pilot and Quarantine Anchorage:

Depth: 10.0 m.
Ground: Mud.
Holding: Good holding capacity.
Size for mooring vessels: 10,000 d.w.t.
Location: Lat. 22° 38' 42" N., Long. 114° 36' 30" E.
Lat. 22° 38' 42" N., Long. 114° 37' 27" E.
Lat. 22° 37' 42" N., Long. 114° 36' 30" E.
Lat. 22° 32' 42" N., Long. 114° 37' 27" E.

RESTRICTIONS: Vessels may enter and sail from sunrise to sunset. Draft limitation in the channel 8.5 m., inner port 9.0 m.

Tidal Range: Maximum 2.7 m.
Minimum 1.5 m.

RADIO/VHF: Huizhou Harbour Master on VHF Channel 16 throughout 24 hours.

TUGS: 1×1,900 h.p.

BERTHING: Total length of wharf is about 450 m., including East side dolphin jetty.

CRANES: 3×10 ton and 1×40 ton shore cranes available.

STEVEDORES: General cargo working hours:

0800 – 1200 hrs.
1300 – 1800 hrs.
1800 – 2300 hrs.
0000 – 0400 hrs.

Port performance 800 – 1,000 tons/gang/day.

FRESH WATER: Available.

FUEL: Not available.

REPAIRS: No facilities.

SHIPMASTER'S REPORT: August 1994.

Location: The port opened in October 1992. Port area under reclamation in May 1994.

Pilotage: Compulsory. Undertaken from sunrise to sunset. 3 Pilots and an Assistant Pilot work with 1×1,900 h.p. tug. Also used as pilot boat.

Approaches: Pilot boarding position: Lat. 22° 36.24' N., Long. 114° 36.35' E.

After passing Fisherman Rk. Beacon 1.3 cables off on starboard side with course 325°, Fairway Entrance Buoys No. 1 (G) and No. 2 (R) are seen. Channel course is 320°(T) until wharf. Channel width 80 m. Depth is 8.5 m. in L.W.

		Lat.	Long.
Fairway buoy locations (approx.)	No. 1 (G)	22° 39.90' N.	114° 35.38' E.
	No. 2 (R)	22° 39.84' N.	114° 35.32' E.
	No. 3 (G)	22° 40.70' N.	114° 34.62' E.
	No. 4 (R)	22° 40.69' N.	114° 34.57' E.
Port Basin starboard buoy (G)	No mark	22° 45.52' N.	114° 33.92' E.
Port Basin port buoy (R)	No mark	22° 41.61' N.	114° 33.52' E.

Restrictions: LOA less than 150 m. and max. draft 8.5 m.

Radio/VHF: Vessel must advise ETA at Huizhou Port 24 hours prior to the ship's arrival. Huizhou Harbour Master on VHF Channel 16, but signal is very weak and English poor.

Tugs: Only one small tug available.

Berth: Total length of wharf is about 350 m., not including East side dolphin jetty.

Cranes: 2×10 ton shore cranes available.

AUTHORITY: Huizhou Harbour Master. *Tel:* (0752) 5571282, 5577866. *FAX:* (0752) 5577877.

AGENT: China Ocean Shipping Agency Guangahou Huizhou Company. Tel: 0752-5577971. Fax: 5577970.

HUIZHOU TERMINAL: 21.22 N. 115.25 E. (See Plan)

LOCATION: Huizhou Terminal is located in the South China Sea within the continental waters of the People's Republic of China.

Its geographical coordinates as follows:

Latitude:	21° 21' 39.3" N.
Longitude:	115° 24' 38.4" E.

Publications: Nautical references can be found in the following publications:

British Admiralty Sailing Direction No. 30 – South China Sea.

United States Hydrographic Office Sailing Direction No. 93 – Western Shores of South China Sea.

British Admiralty Charts No. 2161B and 1968.

Chinese Nautical Charts and Sailing Directions relating to the area.

DOCUMENTS: The following are to be prepared by an export tanker upon arrival:

6 copies Crew List.
6 copies Passenger List (if any).
Valid Passports or Seaman's Books for all crew members.
1 copy Maritime Declaration of Health (Chinese form).
1 copy Clearance from last port.
4 copies Vaccination List.
2 copies Ship's Stores List.
2 copies Crew's Declaration of Personal Effects.
2 copies Arms and Ammunition Declaration.
1 copy Cargo Manifest for transit cargo with a summary (ballast and/or cargo already on board).
2 copies Report of Entry for Foreign Ships (Chinese forms).

PILOTAGE: See "Berthing" – "Mooring".

Vessels must comply with Regulation 17, Chapter V, of Solas 74/83 Convention (Pilot Boarding Facilities).

APPROACHES: *Navigation Aids/Obstructions and Dangers:*

The FPSO is equipped with the following navigation aids:

Racon System: Responds one dash and one dot (morse code letter "N"), range about 20 miles. Services "X" band and "S" band radars.

Nautophone: Emitting in fog 2 short and 1 long blast (morse code letter "U"). Range about 2 miles. There are 2 fog signals, one on the bow and one on the poop, synchronized.

Position lights: One on the bow and one on the poop, synchronized. Emitting white light morse code letter "U", range 5 miles.

The Buoyant Turret Mooring (BTM) system extends for a distance of 1,200 m. all around the FPSO bow. The system consists of 8 anchors laid down on the sea bottom holding 8 mooring chains. The chain ends are connected to a floating buoy secured to the FPSO bow bottom by clamps.

The FPSO has a 16 in. loading hose string, approximately 273 m. in length, floating on the stern, port side. It consists of 23 hose lengths.

It is emphasised that great care must be taken while in areas around the pipelines between the "HZ 21 – 1" and "HZ 26 – 1" platforms and FPSO, and telecommunications cables in the area. These areas have to be avoided.

An area within 2 miles from the platforms and FPSO is a prohibited area. Masters are warned that it is strictly forbidden to enter this area. Furthermore Masters are warned to keep a good lookout due to the numerous fishing vessels in the area.

ANCHORAGES:

Waiting Area: A waiting area is located 2.65 miles N.W. of the FPSO (bearing 135° to the FPSO) having the following coordinates:

Latitude: 21° 23' 20" N. Longitude: 115° 22' 50" E.

If the export tanker Master prefers to anchor, the anchorage area is a one mile radius from the position located by the following coordinates:

Latitude: 21° 23' 00" N. Longitude: 115° 21' 30" E.

Sea bottom is silty sand, having good holding power for anchors. Water depth is about 120 m.

Before anchoring, the export tanker Master has to inform the Terminal about his intention. He has to keep in mind good seamanship when deciding to anchor due to the depth of water.

The export tanker can anchor only in the anchoring area. Dropping anchor outside the assigned area is strictly forbidden because of the risk of damaging pipelines or fouling the anchors with the FPSO mooring lines sitting on the bottom.

RESTRICTIONS/MAX. SIZE:

Terminal Requirements and Limitations:

Tanker Size: The minimum tanker size acceptable at the Terminal is 40,000 tonnes S.D.W.T.

The ship has to maintain a safe freeboard during her stay.

The maximum size tanker acceptable at the Terminal is 160,000 tonnes S.D.W.T. – Tandem mooring only.

The S.D.W.T. is the maximum scantling S.D.W.T., i.e. the D.W.T. referred to the physical size of the vessel at the maximum design draft, not to any lower remeasured tonnage occasionally used by shipowners.

No exception to these requirements shall be allowed. Vessels unable to comply will be rejected.

Environmental Limitations:

(a) For an export tanker mooring:

Tandem Mooring System:

Significant wave height	3.0 m. (head on)
Safe mean period	6.5 seconds
Wind speed (10.0 m. 1 minute average)	25 knots (head on)
Current speed at surface	1 knot (head on)

(b) For an export tanker while loading:

Tandem mooring system for tankers up to 140,000 S.D.W.T.:

Significant wave height	4.0 m. (head on)
Wave mean period	6.5 seconds
Wind speed (10.0 m. 1 minute average)	35 knots (head on)
Current speed at surface	1 knot (head on)

(The tension on the hawser should never exceed 200 tons)

Tandem mooring system for tankers above 140,000 S.D.W.T. to 160,000 S.D.W.T.:

Significant wave height	3.5 m. (head on)
Wave mean period	6.5 seconds
Wind speed (10.0 m. 1 minute average)	25 knots
Current speed at surface	1 knot

(The hawser tension has to be carefully monitored as sea states exceed 3.0 m. The tension should never exceed 200 tonnes)

RADIO/VHF:

ETA Messages: The export tanker's Master shall provide ETA message to the Terminal 96 hours before the anticipated time of arrival. The ETA message shall be repeated 72 hours, 48 hours and 24 hours before arrival. If the transit time from the last port is less than 96 hours, the Master shall send the first ETA message on departure from such port.

After the 24 hour ETA message has been sent, the Master shall send amended ETA messages to the Terminal if the ETA changes 3 hours or more.

Information Required by the Terminal: The following information shall be included in the first ETA message sent by the Master:

Name of vessel.
Nationality.
Owner.
Port of Registry.
Call sign.
Master's Name.
Last port of call.
Next port of call.
Last two cargoes.
Quantity of cargo required.
If ballast clean or SBT.
Deballasting time.

Additional information may be required by the Terminal at a later time.

Message Routing: Messages from the export tanker can be transmitted to:

FPSO "Nan Hai Fa Xian".
Call sign 'ELJB 4'.
Marine identification No. 000-4835-036.

or

ACT (Operators Group of Huizhou Terminal).
Telex 44242 ACT CN or 44254 ACT CN.

The FPSO can be contacted on telephone via Inmarsat through No. 00872/00873 - 1241575.

The FPSO can be telexed via Inmarsat through No. 00582/00583 - 1241575.

The FPSO transmits and receives on 4434.9 kHz during daytime hours and on 2502.5 kHz during night hours.

Use of VHF: When the vessel is within VHF range, the Master of the export tanker shall contact the FPSO by VHF Channels 16 or 13. The FPSO keeps 24 hours VHF watch on Channel 13. The call sign is "Nan Hai Fa Xian".

TUGS: 1×6,000 b.h.p. fire fighting tug and 1×8,000 b.h.p. tug/supply vessel.

BERTHING: *Terminal Description:* The Terminal comprises 4 production platforms and a moored Floating Production Storage Offtaking Unit (FPSO), which is a converted VLCC. The Terminal is operated by ACT – Operators' Group.

Geographical co-ordinates are:

Production Platform HZ 21-1:
Lat. 21° 20.9' N. Long. 115° 25.4' E.
Production Platform HZ 26-1:
Lat. 21° 10.6' N. Long. 115° 15.9' E.
Production Platform HZ 32-2: Installed June 1995.
Lat. 21° 09.7 ' N., Long. 115° 10.2 ' E.
Production Platform HZ 32-3: Installed June 1995.
Lat. 21° 09.7' N., Long. 115° 13.1' E.
FPSO "Nan Hai Fa Xian": (Bow)
Lat. 21° 21.6' N., Long. 115° 24.6' E.
FPSO "Nan Hai Fa Xian" principle dimensions are:
LOA 348.9 m., beam 51.8 m., depth 25.6 m.

The 2 platforms (HZ 21-1 and HZ 26-1) are connected to the FPSO by crude oil subsea pipelines (8 in. diameter from "HZ 21-1" and 12 in. from "HZ 26-1").

The water depth at the FPSO site is 116 m. (380 ft. – 63.2 fathoms).

The export tanker will be moored as follows:

Tandem Mooring: Export tanker is moored with her bow to the stern of the FPSO. For this mooring, suitable equipment, i.e. hawser with chafing chains and 16 in. loading hose is available.

The decision on which system to be used will be a Terminal option, depending on operating situations as well as weather conditions. The export tanker Master will be informed about the mooring system to be used prior to his arrival.

A Lightering Advisor (Mooring Master) is in charge of mooring operations. He will remain onboard the export vessel during her stay at the Terminal and will liase with FPSO personnel.

Mooring: Mooring operations are usually performed during daylight.

The Lightering Advisor (Mooring Master), CCIB Inspector and Chinese interpreter/Mooring Assistants will board in the waiting area. The team may board either by boat or helicopter. The export tanker is not allowed to approach the FPSO without advice from the Lightering Advisor.

Mooring Terminal operating procedures will be given to the export tanker Master by Lightering Advisor with all appropriate port documents.

Two assisting tugs of approximately 6,000 b.h.p. each will be available for mooring.

No anchor must be used during manoeuvring. Anchors must be secured in such a way to avoid accidental release.

Export tanker mooring equipment:

Bow check 600 mm. × 450 mm. in line with chain stopper.
Chain stopper, 200 tonnes S.W.L. minimum, able to handle 76 mm. diameter link chain.
Winch drum to store 200 m. × 10 in. messenger.
Roller lead in line with winch storage drum.
Winch capacity 15 tonnes S.W.L.

In case of tandem mooring, a polypropylene rope coil should be kept ready on the forecastle deck to enable the assisting tug to secure it to the messenger rope of the mooring hawser. Furthermore the crew should be ready to lift on board equipment and tools for mooring and hose connection from the assisting tug.

VHF sets should be switched to a mutually agreed working channel, tested and confirmed as being in satisfactory working order. The usual working channel is Channel 69.

In case an emergency occurs, it should immediately be indicated by sounding the emergency signal consisting of a series of short rapid blasts on the ship's whistle or siren.

Unmooring: On completion of cargo transfer operations and when the hose(s) have been flushed to the satisfaction of the Lightering Advisor, the hose(s) may be disconnected.

The unmooring operations can start as per the advice of the Lightering Advisor.

Departure: While the export tanker is moved to a safe area clear from the FPSO and platform, the cargo documentation should be completed and brought aboard by the assisting tug, unless Early Departure Procedure (EDP) has been previously agreed. The export tanker can depart as soon as documents are signed, and Lightering Adviser will give authorisation for departure. Any protest regarding the cargo quantities shall be made before departure.

LOADING:

Crude Oil Specification: The "Nan Hai Light" crude oil has the following specifications:

API	39°
Pour Point	28.5° – 35°C 85° – 96°F
Loading temperature	(approx.) 50°C

The oil has a tendency to form a tight emulsion in water and a tendency to gel below 29.5°C when shut-in.

Cargo Heating: To avoid waxing due to the high pour point of Huizhou Crude, cargo has to be maintained at the loading temperature of 52°C (125°F).

Tankers calling at Huizhou Terminal must be fitted with heating coils suitable to maintain the loading temperature of 50°C.

Discharging procedures must be carefully reviewed in order to assure COW operations and good tank drainage at discharging port.

Manifold Size: The cargo transfer is performed through 1×16 in. floating hose.

Hose flanges are 150 ANSI standard. The hoses are connected to the export tanker's port side cargo manifold amidship.

The manifold arrangement should comply with OCIMF recommendations as per "Standards for Tanker Manifolds and Associated Equipment" booklet. It is emphasised that only one reducer is allowed between distance piece and the hose flange. All manifolds shall be clearly marked with the loads they have been designed to withstand.

The export tanker must have 1×16 in. connection ready at her port side cargo manifold.

Ships not meeting the above hose connection requirements will be rejected.

Cargo Hose Lifting Equipment: The export tanker should be equipped at her port side cargo manifold with cargo hose lifting equipment (crane or derrick) with the minimum safe working load (SWL) of 10 tonnes as per Chapter 12 of the OCIMF recommendations "Standards for Tanker Manifolds and Associated Equipment". The safe working load has to be clearly marked on the boom.

Deballasting and Loading: The Lightering Advisor shall inspect ballast prior to starting deballasting operations.

All cargo tanks are inspected by CCIB Inspector before loading starts for OBQ.

The export tanker must arrive with, and be able to maintain during berthing and loading operations, at least 30% of its S.D.W.T. to keep a safe draft and trim at all times while in the berth. This should be achieved (a) by loading cargo and discharging ballast simultaneously or, (b) if that cannot be done, by loading part cargo first, then discharging the ballast, and then loading the balance of the cargo. Masters are warned to carefully check the loading and deballasting procedures to avoid any pollution.

Hoses should be connected by the export tanker crew.

When a vessel is moored in tandem, her load is continuously monitored by a load monitoring system on the FPSO which is equipped with warning and danger alarms. Also, an assisting tug should take up station at the stern of the export tanker keeping her in tandem with the FPSO.

On tandem mooring, the export vessel should accept the loading hose displacement water which will be recovered in the slop tanks. The quantity of the water to be flushed is 70 cu.m. before the loading starts and 210 cu.m. at the end of loading operations.

Due to the metering system on board the FPSO, the max. loading rate is 5,400 cu.m./hr. (34,000 barrels per hour).

Continuous VHF monitoring must be maintained during cargo transfer operations.

All cargo tanks are inspected by a CCIB Inspector after loading completed for ullages report.

BALLAST/POLLUTION:

Pollution Prevention: There are no facilities for receiving clean or dirty ballast at the Terminal. Only clean ballast can be discharged to sea. The following rules shall apply:

No oil pollution is allowed in the Terminal area.
No dirty ballast can be discharged at sea.
No bilges can be pumped overboard.
No waste can be discharged at sea.
Vessels have to comply with MARPOL 73/78 Rules.

Owners of vessels calling at the Terminal must be members of the TOVALOP agreement. Master must have on board the TOVALOP Certificate.

Arrival: For the purpose of manoeuvring, vessels are requested to maintain a reasonable ballasted condition, complying with Regulation 13.3 of Annex 1 of MARPOL 73/78 Convention. This means that:

(a) The moulded draft amidships (DM) in metres shall be not less than DM = 2.0 + 0.022 L.
It corresponds roughly to ballast on board of minimum 30% of S.D.W.T.
(b) A trim by the stern not greater than 0.015 L.
(c) The propeller fully immersed by at least 3 ft.

Also see "Loading".

MEDICAL: Medical assistance is not available except in case of emergencies. Medical evacuation of injured persons will be by helicopter to Shekou Hospital for PRC nationals and expatriates, or to Hong Kong hospital for expatriates only. The injured expatriates have to be provided with individual Seaman's Book or Passport. In this case the Master of export tanker has to inform immediately his agent in Hong Kong. All expenses incurred will be on owner's account.

FRESH WATER: Not available at the Terminal.

FUEL: Not available.

REPAIRS: No repairs are permitted when moored at the Terminal.

REPATRIATION: No repatriation is permitted at the Terminal. Only the cases of injured persons can be considered.

SHORE LEAVE: No shore leave is permitted at the Terminal.
No persons are allowed to visit the FPSO.

MAIL: No mail can be sent from the Terminal.

WEATHER:
General Climate of the Area: The climate of the South China Sea is mainly dominated by seasonal winds. These monsoons are related to fairly regular seasonal fluctuations of the atmospheric pressure over the Asiatic continent.

During the Winter, from October to March, a high pressure area settles over Southern Siberia and China because the North Asian land mass cools as a result of the decreased solar heating. The "Siberian High" in conjunction with the semi-permanent high pressure area of the subtropical North Pacific Ocean, centred approximately along latitudes 25° N. to 30° N., causes predominantly N.E.ly winds, the N.E. monsoon, over the South China Sea.

The development of the "Siberian High pressure" starts in September and from October the N.E.ly wind regime is established.

During late April and May, the "Siberian High" weakens and displaces Northward because the Asian land mass warms up as a result of the increased solar heating. More or less simultaneously, a low pressure area begins to develop over North India and S.E. Asia.

As a result, the N.E.ly winds decrease and a flow of South-S.W. winds, the S.W. monsoon, progressively settles over the South China Sea. This is a period of transition from the N.E. monsoon season to the S.W. monsoon season. The S.W. monsoon season lasts from June to August. It is characterised by the extension of the "heat low pressure" area over North India and South China.

In September the "heat low pressure" weakens and progressively dissipates due to the decreasing solar heating, while the "Siberian High pressure" is intensified and moves Southward. The S.W. monsoon weakens and is gradually substituted by the N.E. monsoon.

By October the S.W. monsoon has virtually ceased and the N.E. monsoon dominates over the Northern area of the South China Sea.

Climate analysis influenced by monsoon leads to sub-divide the year into five periods:
Winter (December to March – N.E. monsoon season).
Spring (April to May – transitional period).
Summer (June to August – S.W. monsoon season).
(September – transitional period).
Autumn (October to November – N.E. monsoon season).

These periods can be considered as "normal conditions".

Exceptional conditions sometimes exist due to low pressure depressions rising close to the equator which move towards temperate zones following routes at different speed and covering different distances and reaching forces up to cyclone (in this area called "typhoons"). The periods in which these phenomenon occur most are in the Summer time up to September.

GENERAL: All vessels calling at Huizhou Terminal must fly the People's Republic of China flag, and the International code quarantine signal must be displayed upon the Authorities visit.

Masters and operating personnel of tankers calling at the Terminal must be aware of the information contained herein and in the OCIMF "International Safety Guide for Oil Tankers and Terminals – Edition in Force".

SAFETY: The following OCIMF guidelines will be enforced at the Terminal as applicable:
International Safety Guide for Oil Tankers and Terminals.
Ship-to-Ship Transfer Guide (Petroleum), 2nd edition.
Guide to Helicopter/Ship Operations.

Smoking, Lighters and Matches: Smoking is prohibited on board during loading operations, except in those areas in the accommodation jointly agreed between the Master and the Terminal Representative. Personnel must not carry lighters or matches other than in the accepted areas.

Portable Equipment: Any electrical equipment which is not wholly within an approved explosion proof container, an approved air pressured container or any equipment which is not intrisically safe, must be disconnected from the power supply.

Hand Torches: Only those hand torches provided with a certificate of approval delivered by a recognised authority are allowed.

Satellite Communication Equipment: Consultation between Master and Lightering Adviser is advisable in order to ascertain that there is no risk due to the presence of flammable gas before a satellite terminal is operated.

Main Engine: While moored at the FPSO the main engine must remain on instant readiness. No engine repairs are permitted. In the tandem mooring system, it may be necessary for the vessel to use the engines while moored. Use of main engine shall be made with the advice of the Lightering Adviser only.

Helicopter Operations: No helicopter operations on the export tanker can take place during ballast and/or cargo operations. Helicopter operations may take place only after such operations have been stopped and the integrity of the IGS system has been verified.

A helicopter landing or winching area must be painted on the tanker deck and must be in accordance with the requirements of the "Guide to Helicopter/Ship Operations" published by the International Chamber of Shipping. All helicopter operations shall be in accordance with said Guide. The helicopter pilot and export tanker crew shall be familiar with its content.

AGENCY: Operator does not have a local appointed agent.
Available for owner's agent are Penavico – China Ocean Shipping Agency, located in Shekou, Shenzhen. Tel: 86-755-669-5216/2746. Telex: 420834 Cosas CN. Fax: 86-755-669-2769.

OPERATOR: ACT Operators Group, 10-16 Floor, Offshore Petroleum Building, No. 1 Industry Road 2, Shekou Special Industrial Zone, Shenzhen, Guangdong Province, People's Republic of China 518069. *Tel:* 669-1608 (Public Line). *Telex:* 44242, 44254 ACT CN. *FAX:* 669-1606. *Contact:* Captain G. Harrison, Huizhou Terminal Supervisor.

JIANGYIN: 31.55 N. 120.11 E.

ANCHORAGE: Jiangyin Port Anchorage is located 6.5 km. from the South bank of the upper reaches of the Chang Jiang River at Huang Tian Port. Depth of water 13.0 m. – 21.0 m. Nature of bottom is medium fine sand. Anchorage is suitable for vessels up to 25,000 d.w.t.
RESTRICTIONS: Vessels may enter and sail after sunset.
Draft is restricted to 9.5 m. as vessels have to cross a bar at the mouth of the Chang Jiang River.
MAX. SIZE: Draft limitation in channel is 15.0 m.
Tidal range 0.0 m. – 3.15 m.
VHF: Call sign: Jiangyin Radio. Channels available 16, 21 and 71. Channel 21 is usual working channel. Station operates 24 hours.
TUGS: 1×150 h.p., 1×428 h.p. and 1×980 h.p.
BERTHING:

Cargo Handling Department	*Wharf*	*Max.Size* (d.w.t.)	*Length* (m.)	*Depth* (m.)	*Cargo Handled*	*Shore Cranes*

RESTRICTIONS: Vessel cannot enter and sail after sunset.
Tidal range: Max. 4.06 m. Average 2.05 m.
Draft Limitation in the Channel: 7.90 m.
VHF: "Jinzhou Radio" on Channel 16 throughout 24 hours.
TUGS: 1×1,380 h.p., 1×2,000 h.p. and 1×3,700 h.p.
BERTHING:

Stevedore Company	*Berth Name*	*Length* (m.)	*Depth* (m.)	*Max. Size* (d.w.t.)	*Cargo Handled*	*Shore Cranes*
Jinzhou	General Cargo	217	9.9	10,000	General Cargo	2×5 tons
Jinzhou	Product Oil	241	10.4	10,000	Oil	
Jinzhou	No. 2	193	9.7	10,000	General Cargo	2×10 tons

Warehouse and Open Storage Space: Warehouse: 3,600 sq.m.
Open Storage Space: 60,000 sq.m.
Main Import and Export Cargo: Crude oil, oil products, general cargo, grain, ore and cement.
FRESH WATER: Available at berths.
FUEL: Available (except fuel oil) at berths.
REPAIRS: Facilities available.
GENERAL: *Agency:* Penavico Jinzhou, Port Building, Economic Development District, Jinzhou, China. Tel: 86-416-3127123. Fax: 86-416-3123663. Telex: 813061 Jzgwj Cn.
Sinoagent Jinzhou, 11-2 Sec. 2, Zhongyang Street, Jinzhou, Liaoning, China. Tel: 86-416-3120189, 3122557. Fax: 86-416-3121817. Telex: 813068 Jzagt Cn.
Provisions: Available.

JIUJIANG: 29.38 N. 115.56 E.

PILOTAGE: Compulsory. Pilotage is undertaken day and night. Pilots board vessels at River Jiujiang.
ANCHORAGE: Guang Pai Jiao Anchorage: Depth 3.0 m. – 15.0 m. Ground of anchorage: Mud and sand. Size of vessel: 50,000 d.w.t.
RESTRICTIONS: Only passenger vessels may enter between sunset and sunrise.
Range of Tide: 7.0 m. – 21.0 m.
Draft Limitation in Channel: 4.5 m. (during dry season).
VHF: Jiujiang Radio on Channels 12, 16 and 21 throughout 24 hours.
TUGS: 1×800 h.p., 2×428 h.p. and 1×300 h.p.
CRANES: Floating cranes: 1×3 tons, 1×10 tons and 1×15 tons.
STEVEDORES: *Working Hours:*
Heavy and bulk cargo: 0700 hrs. – 1600 hrs., 1800 hrs. – 0700 hrs.
Bagged cargo: 0700 hrs. – 1600 hrs., 1600 hrs. – 2400 hrs.
FRESH WATER: Available.
FUEL: Available.
REPAIRS: No facilities.

JIUZHOU: 22.14 N. 113.35 E.

PILOTAGE: Compulsory. Pilot service available from 0830 hrs. – 1730 hrs. Pilot boards vessel at Datouzhou, Touzhou or Jiuzhou (See "Anchorages").
ANCHORAGES:

Name	*Location*	*Depth (m.)*	*Use*
Datouzhou	Lat. 22° 03' 37" N. Long. 113° 44' 00" E.	12.0	Pilot
Touzhou	Lat. 22° 07' 00" N. Long. 113° 44' 36" E.	6.0	Pilot
Jiuzhou	Lat. 22° 13' 37" N. Long. 113° 37' 00" E.	4.0	Pilot

The bottom is mud and the holding ground is good in all anchorages.
RESTRICTIONS: Vessel cannot enter or sail after sunset.
Tidal range: Max. 2.84 m. Average 1.07 m.
Draft Limitation in the Channel: 6.0 m.
VHF: "Zhouhai Radio" on Channel 16 throughout 24 hours.
TUGS: Available.
BERTHING:

Stevedore Company	*Berth Name*	*Length (m.)*	*Depth (m.)*	*Max. Size (d.w.t.)*	*Cargo Handled*	*Shore Cranes*

Provisions: Available.

LAN SHUI TERMINAL: 20.50 N. 115.42 E.

LOCATION: The converted tanker "Lan Shui" (F.S.P.U.) is moored in position Lat. 20° 50' 04.3" N., Long. 115° 41' 47.1" E.

The offtaking tanker is to be rigged in accordance with OCIMF Requirements for bow loading.

Vessels will be moored by the bow, to the stern of the F.S.P.U. by a 14 in. hawser.
LOADING: Crude oil only handled.
GENERAL: China Ocean Shipping Agency (COSA) is the only Agent available for this port. The vessel or her owner should contact COSA approximately 6 days prior to the vessel's expected arrival into Chinese waters and appoint COSA as the vessel's Agent. COSA will normally require full payment before clearing the vessel, so it is important for the vessel/owner to establish contact with COSA as early as possible. COSA can be contacted at the following address:
China Ocean Shipping Agency,
2/F, Skiz Building,
Shekou, Shenzen,
The People's Republic of China.
Telephone: Shekou 691136.
Telex: 420834 COSAS CN.
Cable: Penavico Shekou.

LANSHAN: 35.06 N. 119.22 E.

LOCATION: Lanshan is located at the Northern part of Haizhou Bay of Shandong Province. Distance by sea is about 81 miles South of Qingdao, and about 384 miles North of Shanghai.
APPROACHES: The approaches to Lanshan are open sea without any outlying dangers. The coast lines are generally well defined, with conspicuous mountains for terrestrial fixes.

The fairway leading to the berth is buoyed. The buoys are unlit and night navigation is difficult. The depth in the fairway is 12.0 m. – 15.0 m.
PILOTAGE: Compulsory for all berthing movements. The pilot boarding ground is approximately 3 miles S.E. of the berth. Ample advance notice must be given to "Penavico" Lanshan Branch for booking a Pilot.
ANCHORAGE: The sea anchorage is located approximately 3 miles S.E. of the port. The anchorage is about 1,852 m. in radius. Maximum draft limitation for anchoring is 14.0 m. The nature of bottom is mainly sand/mud. The holding ground is reported to be good.
RESTRICTIONS: Large loaded vessels can only berth/unberth during high water. This is due to a shoal patch of 6.20 m. approximately 30 m. off the berth.
MAX. SIZE: See "Berthing".
VHF: "Penavico" Shijiu Branch and "Penavico" Lanshan Branch maintain 24 hour watch on Channel 16.
TUGS: 2×1,080 h.p. There are also 4×3,200 h.p. tugs available from Shijiu.
BERTHING: There are 2 berths open for foreign vessels. One for vessels up to 5,000 tons displacement, length 180 m. and depth 8.5 m., and the other for vessels up to 25,000 tonnes d.w.t., length 210 m. and depth 10.20 m. The berths are solid concrete type, and can handle dry cargo and edible oils. 2×10 ton cranes available.
Berth Facilities:

Pipeline connection:	1×6 in. diameter.
Max. back pressure:	6 kg.
Rate:	Average about 120 tonnes/hour. Max. 150 tonnes/hour.

Note: The shore tank farm is located on elevated hills. Total shore tank capacity is 14,000 tonnes.

Distance between shore manifold to ship's side is about 61 m. Short lengths of pipeline are connected between the ship's side and shore manifolds.
FRESH WATER: Available.
FUEL: Not available.
TANKERS: See "Berthing".
No slop facilities available.
REPAIRS: No facilities available.
GARBAGE DISPOSAL: No facilities available.
WASTE OIL DISPOSAL: No facilities available.
SEAMAN'S CLUBS: None.
CURRENCY: Chinese Ren Min Bi (RMB).
GENERAL: *Weather Conditions:*

Wind:	The prevailing wind is from the North. Average wind speed 3.4 m./sec. Max. wind speed 20 m./sec.
Rain:	The annual average rainfall is 915.7 mm.
Fog:	Fog generally between March – July. Average 26.7 days per year.
Temperature:	The annual average temperature is 12.6° C. Maximum temperature recorded was 38.3° C. and minimum was −14.5° C.

Tidal Conditions: The tidal conditions for Lanshan are similar to the pattern at Lianyungang, the nearest standard port for tidal prediction. The tidal stream runs in an anti-clockwise direction, max. rate during flood tide is 88 cm./sec., and max. rate during ebb tide is 69 cm./sec. The average tidal range is about 2.5 m.
Charts: Presently, there is no British Admiralty Chart available for the port of Lanshan. Vessels proceeding to Lanshan can only use B.A. Chart No. 1253 (Sheyanghe Kou to Qingdao Gang) to approach the port.

Navigation charts for the port of Lanshan will be published by the Chinese Authority in late 1990 or early 1991.
Stores: Not available.
Agency: China Ocean Shipping Agency, Shijiu Branch, Nuanghai 1 Road, Rizhao, Shandong Province, People's Republic of China. Tel: (05400) 441089. Telex: 320021. Fax: (05400) 441086.
DEVELOPMENTS: *Under Construction:* Berth No. 3: Length 130 m., depth 7.5 m. Max. size 5,000 d.w.t.
Berth No. 4: Length 180 m., depth 8.5 m. Max. size 10,000 d.w.t.

SHIPMASTER'S REPORT: December 1989 (Updated July 1992).
Documents:
Maritime Declaration of Health (a Chinese form is presented on arrival).
Report of Entry for Foreign Vessels (Chinese form).
6 copies Crew List.
Customs Declaration (Chinese forms brought on board on arrival by the Agent).

Additional forms are provided for next Chinese port of call.
Formalities: Officials board for Port Health Inspection (quarantine) and Immigration and Customs Clearance.
Pilotage: Two pilots boarded the vessel from a large new tug. The boarding position is Lat. 35° 02.24' N., Long. 119° 25.18' E.

The distance from the boarding position to the berth is 4.5 miles.
Approaches: BA. Chart No. 1253 is the only available chart. No larger scale charts exist. Approach is clear from the East with good radar targets.

There is a black buoy at the pilot boarding position but it is not marked on the chart. The buoy is unlit and was sighted at 3.5 miles with a wind of Force 3 – 4.
Anchorage: The anchorage is located one mile South of the Pilot Station. The bottom is mud.
Restrictions: All movements are during daylight only.

After the Pilot boarded we sighted 2 more small black buoys which were unlit. The first buoy is left on the port side and the second buoy is left on the starboard side. In the near future, this will be the position of the fairway buoys.

Pilotage is suspended when the wind reaches Force 4 – 5 as the tug has to come from Shijiu, also there are draft restrictions at low water.

Max. Size: Maximum draft 10.2 m., but preferably below 10.0 m.

Vessels with an LOA of 175 m. can be berthed. Vessels over 175 m. LOA can only berth and unberth at high water as the range of the tide is about 4.0 m. The time of high water is based on mean high water Shinjiu plus 30 minutes (tide times will be given by Agent).

Radio/VHF: Notice of Arrival should be sent to "Penavico Shijiu" 48 hours and 24 hours prior to arrival. This notice should be confirmed 3 hours prior to arrival by VHF on Channels 16 and 11.

Penavico handle all foreign vessels and it is important to contact them as soon as possible in order that they may arrange pilotage and clearance.

Tugs: 3 tugs available for mooring.

Berthing: There is only one berth available for the discharge of oil cargoes. The length of the pier is 180 m. and Pilot advised that the maximum depth alongside was 10.2 m., the actual depth alongside is no more than 9.78 m. at low water. Nature of the bottom is sand.

The vessel moored starboard side alongside and ship arranged mooring ropes to own requirements. Port anchor also used.

Cargo Operations: There is 1 × 6 in. hose available. The vessel provided 2 lengths of rubber hose. The hose was connected to the ship's starboard manifold by the ship's crew.

The storage tanks are about one mile from the berth and are at an elevation of 40 m. There are several sharp bends in the pipe so the back pressure was considerable (about 5 bars).

We achieved a pumping rate of approximately 120 cu.m.p.h. The pumping arrangement is not fixed and was removed after completion of discharge as this berth is also used for the export of sea sand for which 2 movable cranes are available.

Stevedores: The stevedores are state controlled and work is continuous in 3 shifts.

Medical: Facilities are available in a village nearby.

Time: GMT plus 8 hours.

Shore Leave: Possible. Shore passes are issued on arrival. Crew going ashore must show the Immigration Officer at the gangway their shore passes and passports.

General: The number of English speaking personnel was very limited and the Agent was required on occasions for translation purposes.

Prior to departure a strict search is made for stowaways and all shore passes are collected before clearance papers are issued.

SHIPMASTER'S REPORT: August 1992.

Location: Position: 35° 05.5' N., 119° 22' E. The port is near Point Lanshantuo (B.A. Chart No. 1253). The port has been in operation for 2 years.

Port Limits: Approximately 6 miles radius off the end of the breakwater.

Documents: On arrival:

6 Crew Lists.
1 Customs List (Chinese Form).
1 Health Declaration (Chinese Form).
1 Vaccination List (free form).
1 List of Arms and Ammunition (free form).
2 Reports of Entry for Foreign-Going Ships (Chinese Form).
1 Animal and Plant Quarantine Declaration Form for repairing vessel (Chinese Form).
1 List of Specified Articles, foreign currency, gold, silver, belonging to ship and/or members of crew (Chinese Form mandatory).
1 List of Articles to be sealed, cigarettes and liquor belonging to ship and/or members of crew (Chinese Form mandatory).

To be shown to the Port Officials:

Ship's Register.
Tonnage Dues (Chinese Form mandatory, issued by the Port Office at the first Chinese Port of Call).
Tonnage Certificate.
Load Line Certificate.
Safety Construction, Equipment, Radiotelegraphy Certificates.
Certificate of Financial Security in respect of Civil Liability for Oil Pollution Damage.
Certificate of Insurance.
Tovalop Certificate.
Derat Certificate.
Health Books and Yellow Cards of the crew members.
Seamen's Books (Passports).

On Departure:

2 Sailing Reports (Chinese Form).
1 Customs List (Chinese Form).

Collect and return all Shore Passes issued on arrival.

Tonnage Dues (Chinese Form) must be shown to the Port Officials before sailing.

Pilotage: Compulsory. Pilotage for large vessels performed between sunrise and sunset.

The Pilot boards at anchorage from a tug. The entrance channel (315° – 135°) has a depth of 13.0 m., is about 3.5 miles in length, and about 1.2 miles in width, and is marked by two black buoys with white irregular flashes in the following positions:

(a) Lat. 35° 03.9' N., Long. 119° 25.2' E.
(b) Lat. 35° 03.0' N., Long. 119° 24.0' E.

The Pilot listens on VHF Channel 16, working on Channel 13, but there was no answer. Berthing information comes from the local Agents only.

Anchorage: The anchorage is situated about 5.5 miles S.E. of Lanshantuo Point (B.A. Chart No. 1253) and is marked by 4 black buoys, as follows:

(a) Lat. 35° 02.0' N., Long. 119° 28.0' E.
(b) Lat. 35° 02.2' N., Long. 119° 23.6' E.
(c) Lat. 35° 04.0' N., Long. 119° 26.0' E.
(d) Lat. 35° 00.4' N., Long. 119° 25.8' E.

Depths range from 10.0 m. – 15.0 m., and the nature of the bottom is sand and mud, normal holding ground. Vessel anchored with 6 shackles in the water. Tidal streams of about 2 knots were experienced.

Restrictions: Entry and departure not permitted after sunset for large vessels.

Max. Size: Vessel of 185 m. length with draft 9.2 m. can moor.

Health: Ship cleared by Health Officials on arrival. Quarantine and Veterinary Officials carried out the inspection of the crew mess, galley, dry and freezing stores. Pay strict attention to the Health Books and Yellow Cards of the crew members, especially anti-cholera injections.

Radio: Telegraphic communciations: ETA cables via Qingdao Coastal Radio Station (Call sign XST). Calling frequency 500 kHz, working 425 kHz, answering 435 kHz. Working day and night.

VHF: Pilot and local Agents keep watch on Channel 16.

Pilot works on Channel 13.
Local Agent "Penavico", working on Channel 16.
Local Agent "Sinoagent", working on Channels 74 and 73.

Radar: There is no radar station in the port.

Tugs: The port has 2 tugs: 1×2,500 h.p. and 1×800 h.p.

Berthing: Two concrete berths.

First Berth: Length 180 m., depth alongside 7.5 m.
Second Berth: Length 210 m., depth alongside 10.2 m.

Vessels can only berth starboard side alongside, port anchor used with 4 – 5 shackles in the water. Fendering is insufficient.

Cranes: 4×25 ton luffing cranes.

Bulk Cargo Facilities: The port is equipped with 4 multi-purpose portable cranes for handling bulk.

Cargoes: Coal, ores and cement.

Specialised Cargo Handling Facilities: On the first berth, another vessel loaded frozen fish, garlic in cases and peaches. She used her own equipment. She was berthed starboard side to, cargo was delivered alongside my lorries.

Tankers: On the Second Berth (210 m. length), we unloaded 3,800 tonnes of soya bean oil.

Connection: 1×6 in. hose to underground pipelines. Collector has 4×6 in. pipelines, discharging rate about 200 tons per hour.

Density: Salt water.

Fresh Water: Available.

Fuel: Available, but preliminary (7 days minimum) notice required.

Consuls: None.

Repairs: Small repairs only.

Dry Docks: No information.

Gangway/Deck Watchmen: One gangway guard for inspecting crew members passes.

Customs Allowances: Crew allowed 200 cigarettes on arrival. The bond is sealed.

Repatriation: Possible, arranged by local Agents. It takes 3 – 4 days to arrange visas.

Airport: Airport at Qingdao (180 km.).

Time: GMT plus 8 hours, no change.

Police/Ambulance/Fire: It is sufficient to ask guard to advise the desired department.

Shore Leave: Allowed. Passes issued on arrival by Immigration (must be returned before departure).

Identification Cards: Shore Passes issued on arrival by Immigration. Must be kept with Seamen's Books.

Delays: We had to wait 6 days for a berth.

Agent: China Ocean Shipping Agency, Ocean Hotel, Zhong Shan C.W.J.Road, Lanshan. Tel: 0518-312393. Fax: 311842. Telex: 36902. Cables: Penavico.

Another Agency is Sinoagent (Telex: 320034 Lsbrz-Cn. Cables: Sinoagent Lanshan).

AUTHORITY: Lanshan Harbour Bureau, Lanshan Port, Rizhao City, Shandong Province, People's Republic of China. *Tel:* (05400) 441046, 441047. *Telex:* 320036. *FAX:* (05400) 221397. *Contact:* Mr. Mu Naishan, Port Director.

LIANYUNGANG: 34.45 N. 119.27 E. (See Plan)

DOCUMENTS: See "Dalian".

PILOTAGE: Compulsory. Pilotage undertaken day and night. Pilot boards at Pilot Anchorage.

ANCHORAGE: No. 1 Quarantine, Pilot Anchorage: Lat. 34° 49' 10" N., Long. 119° 42' 02" E. as centre with 1.5 nautical miles radius. Depth 13.0 m. – 15.0 m., mud and sand bottom with good holding ground.

No. 2 Quarantine, Pilot Anchorage: Lat. 34° 45' 58" N., Long. 119° 33' 47" E., as centre with 1 nautical mile as radius. Depth 6.0 m. – 8.0 m., mud bottom with good holding ground.

RESTRICTIONS: Draft limitation in the channel: 8.6 m.

Possibility of entry or sailing after sunset: Possible.

Tidal range: 6.48 m., average 3.39 m.

If vessel anchors in Lianyungang Road for a long time, the anchor chains will become twisted, due to ships' irregular turning. The Master should heave up anchor to one or two shackles in water and then slack to his requirements at least once a week.

VHF: Lianyungang Radio on Channel 16 throughout 24 hours.

TUGS: 1×428 h.p., 1×660 h.p., 1×980 h.p., 2×1,200 h.p., 2×1,670 h.p. and 2×3,200 h.p.

BERTHING:
Berths No. 1, 2, 3, 4, 5 and 6 are operated by No. 1 Stevedoring Company of the Port.

Berths No. 8, 9, 10, 11, 12 and 14 are operated by No. 2 Stevedoring Company of the Port.

Berths No. 33, 34, 35 and 36 are operated by No. 3 Stevedoring Company of the Port.

Berths No. 31 and 32 are operated by the Container Company of the Port.

Berths No. 38 and 39 are operated by the Coal Stevedoring Company of the Port.

Berth No.	*Length* (m.)	*Depth* (m.)	*Max. Size* (d.w.t.)	*Cargo handled*	*Equipment*
1	153	9.0	10,000	General Cargo, Bulk Cargo	Shore Cranes 3× 10 tons

CRANES: 1×200 ton crane.
Also see "Berthing".
FRESH WATER: Available.
FUEL: Contact China Marine Bunker Supply Co., Lianyungang Branch.
REPAIRS: Facilities available.
GENERAL: *Provisions:* Contact Lianyungang Foreign Vessel Supply Corporation.
Imports: Steel, timber, fertiliser, sugar.
Exports: Coal, agricultural products and general cargo.
DEVELOPMENTS: *Xugou Port Area:* 10 general cargo berths will be built, 2 berths × 5,000 tons and 6 berths × 10,000 tons. In the first phase, 6 general cargo berths will be constructed along the 1,100 m. quay on reclaimed land of 0.5 million sq.m. This project commenced in 1994, and will be completed late 1997.
Miaoling Port Area: 6 deep-water berths will be built. There will be 2 container berths (35,000 tons and 25,000 tons) and 4 general berths (50,000 tons, 30,000 tons, 20,000 tons and 15,000 tons). The period of construction is 5 years, starting from the beginning of 1996.
AUTHORITY: Lianyungang Harbour Administration Bureau, 99 Zhongshan Road, Lianyungang, China. *Tel:* 86-518-2383374, 2383835. *Telex:* 369032 Lygha Cn. *FAX:* 86-518-2331261.

LONGKOU: 37.29 N. 120.20 E. (See Plan)

DOCUMENTS: Documents as required by the Joint-Inspection Party and/or as international practice. These documents are supplied by ship's Agent.
PILOTAGE: Pilotage is compulsory in the Port of Longkou and is available 24 hours.

It is necessary for all vessels to give notice of ETA 72 hours, 48 hours and 24 hours prior to arrival to their Agent by cable, or telex, or VHF. Pilot boats available. Pilot may be contacted by VHF Channel 16, and can board the vessel in the anchorage. Vessel should make all the necessary arrangements beforehand.
ANCHORAGES: Present anchorage is bounded by the co-ordinates below, in depth of 9.50 m. with area of 9 sq.km. It will hopefully be enlarged to 30 sq/km. with depth from 10.0 m. – 20.0 m. in the future.

The Quarantine Anchorage is the same as the Pilot Anchorage, and is bounded by the following co-ordinates:

(a) Lat. 37° 37' 48" N., Long. 120° 12' 30" E.
(b) Lat. 37° 37' 00" N., Long. 120° 12' 30" E.
(c) Lat. 37° 37' 48" N., Long. 120° 13' 52" E.
(d) Lat. 37° 37' 00" N., Long. 120° 13' 52" E.

MAX. SIZE: Limited by draft. Vessels not over 200 m. in length and 10.0 m. draft can be accepted.
HEALTH: No restriction except quarantine. Pratique procedure and action undertaken by the Quarantine Service. "Q" flag must be hoisted upon vessel's arrival. Masters should tender Maritime Declaration of Health and Deratting or Deratting Exemption Certificate.
RADIO: "Longkou Radio". Call sign: XSS. Telex: 32575 PENLK CN.
VHF: The radio station is manned throughout 24 hours by the Port Authority, keeping watch principally on Channel 16. Three other channels are also available, Channel 9 or 13 for contact via the station to get through to any departments required and Channel 10 for Inner Port contact.
TUGS: Three tugs available up to 3,500 h.p. Vessels usually use tug's line and 2 tugs are usually used for berthing and unberthing.
BERTHING: 12 berths available which can accept vessels with maximum draft 10.50 m. (SW) at low water.

Berth (No.)	*Length* (m.)	*Depth* (m.)	*Usage*
1	180	10.50	General cargo
2	120	7.50	General cargo
3	104	6.50	General cargo
4	104	6.50	General cargo
5-6	200	6.50	Bulk cargo and Ro/Ro
7-10	350	4.50 - 7.00	General and bulk cargo
11-12	355	10.30	Specialised Quay for coal and ore

Also see "Developments".
CRANES: 4 gantry cranes with capacity of 10 – 16 tons at Berths No. 1 – 2. 4 gantry cranes with capacity of 10 tons at Berths No. 7 – 10. 5 gantry cranes with capacity of 10 – 16 tons at Berths No. 11 – 12. Movable electric shore cranes and truck cranes up to 7 tons and 50 tons capacity respectively are available at other berths. All cranes are optional.
BULK CARGO FACILITIES: Bulk cargoes handled at Berths No. 5 – 6 for sand, No. 9 – 10 for salt, and are equipped with belt conveyors. Berth No. 11 is specially for handling coal.
SPECIAL CARGO-HANDLING FACILITIES: A Roll-on/Roll-off ramp is available at Berth No. 6.
Also see "Developments".
STEVEDORES: Arranged by the Port Authority. ETA notice to include particulars of cargo, showing heavy lifts, dangerous or hazardous cargoes, hatch stowage and gangs required, etc. Stevedores work 24 hours.
MEDICAL: Notice not necessary but advisable to Agents if treatment required. Full hospital facilities available. Vaccination essential if ship comes from affected area, inspection carried out by the Quarantine Service. International certificates must be current.
DENSITY: 1025 generally at all tides (salt).
FRESH WATER: Available throughout 24 hours and delivered by shore hoses at a rate of 50 t.p.h. Cost is $ 1.00 per ton and handling charge $ 3.5 per ton should be added per time.
FUEL: Available, delivered by trucks. Advance notice required. If bunkers are supplied by barge, minimum quantity is 100 tons.
FIRE PRECAUTIONS: Ship's watchman to be on duty. Fire-engine equipped for tankers loading/discharging on stand-by. Smoking prohibited in inner port area.
REPAIRS: Minor repairs possible.
DRY DOCKS: None.
SURVEYORS: Cargo inspectors available. Marine surveyors available, e.g. China Classification Society carry out co-ordinated survey on behalf of international societies.
HATCHES: Hatch operation optional. Stevedores can render assistance.
CUSTOMS ALLOWANCES: According to local Customs Department allowances.
REPATRIATION: Facilities exist for crew repatriation, arranged by ship's Agents.
AIRPORT: 120 km. from the port.
TIME: G.M.T. plus 8 hours.
HOLIDAYS: Ordinary holidays: New Year's Day (1st January), Spring Festival, May Day, National Day (1st and 2nd October).
POLICE/AMBULANCE/FIRE: Police: (05456) 211641. Ambulance: 212001-245/212870. Fire: 119.
SERVICES: Port service to ship for garbage removal, etc.
SEAMAN'S CLUBS: Seaman's Club, 17 Longhai Road, Longkou. Tel: (05456) 212311.
BANKS: Bank of China for currency exchange.
SHIP SUPPLY SERVICE: Ship chandler available. Tel: (05456) 212539. Address: 53 Zhenxing Road, Longkou.
IDENTIFICATION CARDS: Crew need Seaman's Book.
REGULATIONS: According to Port Authority and Harbour Master.
DEVELOPMENTS: A 10,000 d.w.t. berth for handling dangerous/liquid chemicals is under construction (Designed draft 10.00 m., 350 m. in length) with pipes connection system underground.

A special berth for handling containers is under construction.
AUTHORITY: Longkou Harbour Administration Bureau, 24 Huanhai Road, Longkou City, Shandong Province, P.R. of China. *Tel:* (05456) 212091. *Telex:* 32575 Penlk Cn. *FAX:* (05456) 211137. *Cables:* 3203. *Contact:* Mr. Wang Shu-bo, Port Director.

FRESH WATER: Not available at the Terminal.

FUEL: Not available.

REPAIRS: No repairs are permitted when moored at the Terminal.

REPATRIATION: No repatriation is permitted at the Terminal. Only the cases of injured persons can be considered.

SHORE LEAVE: No shore leave is permitted at the Terminal.
No persons are allowed to visit the FPSO.

MAIL: No mail can be sent from the Terminal.

WEATHER:
General Climate of the Area: The climate of the South China Sea is mainly dominated by seasonal winds. These monsoons are related to fairly regular seasonal fluctuations of the atmospheric pressure over the Asiatic continent.

During the Winter, from October to March, a high pressure area settles over Southern Siberia and China because the North Asian land mass cools as a result of the decreased solar heating. The "Siberian High" in conjunction with the semi-permanent high pressure area of the sub-tropical North Pacific Ocean, centred approximately along latitudes 25° N. to 30° N., causes predominantly N.E.ly winds, the N.E. monsoon, over the South China Sea.

The development of the "Siberian High pressure" starts in September and from October the N.E.ly wind regime is established.

During late April and May, the "Siberian High" weakens and displaces Northward because the Asian land mass warms up as a result of the increased solar heating. More or less simultaneously, a low pressure area begins to develop over North India and S.E. Asia.

As a result, the N.E.ly winds decrease and a flow of South-S.W. winds, the S.W. monsoon, progressively settles over the South China Sea. This is a period of transition from the N.E. monsoon season to the S.W. monsoon season. The S.W. monsoon season lasts from June to August. It is characterised by the extension of the "heat low pressure" area over North India and South China.

In September the "heat low pressure" weakens and progressively dissipates due to the decreasing solar heating, while the "Siberian High pressure" is intensified and moves Southward. The S.W. monsoon weakens and is gradually substituted by the N.E. monsoon.

By October the S.W. monsoon has virtually ceased and the N.E. monsoon dominates over the Northern area of the South China Sea.

Climate analysis influenced by monsoon leads to sub-divide the year into five periods:

Winter (December to March – N.E. monsoon season).
Spring (April to May – transitional period).
Summer (June to August – S.W. monsoon season).
(September – transitional period).
Autumn (October to November – N.E. monsoon season).

These periods can be considered as "normal conditions".

Exceptional conditions sometimes exist due to low pressure depressions rising close to the equator which move towards temperate zones following routes at different speed and covering different distances and reaching forces up to cyclone (in this area called "typhoons"). The periods in which these phenomenon occur most are in the Summer time up to September.

GENERAL: All vessels calling at Huizhou Terminal must fly the People's Republic of China flag, and the International code quarantine signal must be displayed upon the Authorities visit.

Masters and operating personnel of tankers calling at the Terminal must be aware of the information contained herein and in the OCIMF "International Safety Guide for Oil Tankers and Terminals – Edition in Force".

SAFETY: The following OCIMF guidelines will be enforced at the Terminal as applicable:
International Safety Guide for Oil Tankers and Terminals.
Ship-to-Ship Transfer Guide (Petroleum), 2nd edition.
Guide to Helicopter/Ship Operations.

Smoking, Lighters and Matches: Smoking is prohibited on board during loading operations, except in those areas in the accommodation jointly agreed between the Master and the Terminal Representative. Personnel must not carry lighters or matches other than in the accepted areas.

Portable Equipment: Any electrical equipment which is not wholly within an approved explosion proof container, an approved air pressured container or any equipment which is not intrisically safe, must be disconnected from the power supply.

Hand Torches: Only those hand torches provided with a certificate of approval delivered by a recognised authority are allowed.

Satellite Communication Equipment: Consultation between Master and Lightering Adviser is advisable in order to ascertain that there is no risk due to the presence of flammable gas before a satellite terminal is operated.

Main Engine: While moored at the FPSO the main engine must remain on instant readiness. No engine repairs are permitted. In the tandem mooring system, it may be necessary for the vessel to use the engines while moored. Use of main engine shall be made with the advice of the Lightering Adviser only.

Helicopter Operations: No helicopter operations on the export tanker can take place during ballast and/or cargo operations. Helicopter operations may take place only after such operations have been stopped and the integrity of the IGS system has been verified.

A helicopter landing or winching area must be painted on the tanker deck and must be in accordance with the requirements of the "Guide to Helicopter/Ship Operations" published by the International Chamber of Shipping. All helicopter operations shall be in accordance with said Guide. The helicopter pilot and export tanker crew shall be familiar with its content.

AGENCY: Operator does not have a local appointed agent.

Available for owner's agent are Penavico – China Ocean Shipping Agency, located in Shekou, Shenzhen. Tel: 86-755-669-5216/2746. Telex: 420834 Cosas CN. Fax: 86-755-669-2769.

OPERATOR: ACT Operators Group, 10-16 Floor, Offshore Petroleum Building, No. 1 Industry Road 2, Shekou Special Industrial Zone, Shenzhen, Guangdong Province, People's Republic of China 518069. *Tel:* 669-1608 (Public Line). *Telex:* 44242, 44254 ACT CN. *FAX:* 669-1606. *Contact:* Captain G. Harrison, Huizhou Terminal Supervisor.

JIANGYIN: 31.55 N. 120.11 E.

ANCHORAGE: Jiangyin Port Anchorage is located 6.5 km. from the South bank of the upper reaches of the Chang Jiang River at Huang Tian Port. Depth of water 13.0 m. – 21.0 m. Nature of bottom is medium fine sand. Anchorage is suitable for vessels up to 25,000 d.w.t.

RESTRICTIONS: Vessels may enter and sail after sunset.
Draft is restricted to 9.5 m. as vessels have to cross a bar at the mouth of the Chang Jiang River.

MAX. SIZE: Draft limitation in channel is 15.0 m.
Tidal range 0.0 m. – 3.15 m.

VHF: Call sign: Jiangyin Radio. Channels available 16, 21 and 71. Channel 21 is usual working channel. Station operates 24 hours.

TUGS: 1×150 h.p., 1×428 h.p. and 1×980 h.p.

BERTHING:

Cargo Handling Department	*Wharf*	*Max.Size* (d.w.t.)	*Length* (m.)	*Depth* (m.)	*Cargo Handled*	*Shore Cranes*
Jiangyin Port	No.2	1× 5,000	100	12.0	General Cargo	2×10 tons

FUEL: Not available.

REPAIRS: Facilities available for vessels up to 30,000 d.w.t.

GENERAL: *Storage Areas:*
Warehouse 3,300 sq.m.
Open storage area 2,000 sq.m.
Cargo Handled: General cargo, steel, grain and cotton.

JINZHOU: 40.48 N. 121.04 E.

PILOTAGE: Compulsory. Pilot service is available throughout 24 hours (in Summer), and daytime (in Winter). Pilot boards vessel at Lat. 40° 42.4' N., Long. 121° 06.5' E.

ANCHORAGE:

Anchorage No.	*Location*	*Depth* (m.)	*Bottom*	*Use*
1	Lat. 40° 42' 24" N. Long. 121° 06' 30" E.	9.5	Mud with good holding ground.	Quarantine, waiting, Pilot.
2	Lat. 40° 33' 00" N. Long. 121° 26' 30" E.	11.0	Mud with good holding ground.	Waiting.

RESTRICTIONS: Vessel cannot enter and sail after sunset.
Tidal range: Max. 4.06 m. Average 2.05 m.
Draft Limitation in the Channel: 7.90 m.

VHF: "Jinzhou Radio" on Channel 16 throughout 24 hours.

TUGS: 1×1,380 h.p., 1×2,000 h.p. and 1×3,700 h.p.

BERTHING:

Stevedore Company	*Berth Name*	*Length* (m.)	*Depth* (m.)	*Max. Size* (d.w.t.)	*Cargo Handled*	*Shore Cranes*
Jinzhou	General Cargo	217	9.9	10,000	General Cargo	2×5 tons
Jinzhou	Product Oil	241	10.4	10,000	Oil

Warehouse and Open Storage Space: Warehouse: 3,600 sq.m.
Open Storage Space: 60,000 sq.m.

Main Import and Export Cargo: Crude oil, oil products, general cargo, grain, ore and cement.

FRESH WATER: Available at berths.

FUEL: Available (except fuel oil) at berths.

REPAIRS: Facilities available.

GENERAL: *Agency:* Penavico Jinzhou, Port Building, Economic Development District, Jinzhou, China. Tel: 86-416-3127123. Fax: 86-416-3123663. Telex: 813061 Jzgwj Cn.

Sinoagent Jinzhou, 11-2 Sec. 2, Zhongyang Street, Jinzhou, Liaoning, China. Tel: 86-416-3120189, 3122557. Fax: 86-416-3121817. Telex: 813068 Jzagt Cn.

Provisions: Available.

JIUJIANG: 29.38 N. 115.56 E.

PILOTAGE: Compulsory. Pilotage is undertaken day and night. Pilots board vessels at River Jiujiang.
ANCHORAGE: Guang Pai Jiao Anchorage: Depth 3.0 m. – 15.0 m. Ground of anchorage: Mud and sand. Size of vessel: 50,000 d.w.t.
RESTRICTIONS: Only passenger vessels may enter between sunset and sunrise.
Range of Tide: 7.0 m. – 21.0 m.
Draft Limitation in Channel: 4.5 m. (during dry season).
VHF: Jiujiang Radio on Channels 12, 16 and 21 throughout 24 hours.
TUGS: 1×800 h.p., 2×428 h.p. and 1×300 h.p.
CRANES: Floating cranes: 1×3 tons, 1×10 tons and 1×15 tons.
STEVEDORES: *Working Hours:*
Heavy and bulk cargo: 0700 hrs. – 1600 hrs., 1800 hrs. – 0700 hrs.
Bagged cargo: 0700 hrs. – 1600 hrs., 1600 hrs. – 2400 hrs.
FRESH WATER: Available.
FUEL: Available.
REPAIRS: No facilities.

JIUZHOU: 22.14 N. 113.35 E.

PILOTAGE: Compulsory. Pilot service available from 0830 hrs. – 1730 hrs. Pilot boards vessel at Datouzhou, Touzhou or Jiuzhou (See "Anchorages").
ANCHORAGES:

Name	*Location*	*Depth (m.)*	*Use*
Datouzhou	Lat. 22° 03' 37" N. Long. 113° 44' 00" E.	12.0	Pilot
Touzhou	Lat. 22° 07' 00" N. Long. 113° 44' 36" E.	6.0	Pilot
Jiuzhou	Lat. 22° 13' 37" N. Long. 113° 37' 00" E.	4.0	Pilot

The bottom is mud and the holding ground is good in all anchorages.
RESTRICTIONS: Vessel cannot enter or sail after sunset.
Tidal range: Max. 2.84 m. Average 1.07 m.
Draft Limitation in the Channel: 6.0 m.
VHF: "Zhouhai Radio" on Channel 16 throughout 24 hours.
TUGS: Available.
BERTHING:

Stevedore Company	*Berth Name*	*Length (m.)*	*Depth (m.)*	*Max. Size (d.w.t.)*	*Cargo Handled*	*Shore Cranes*
International Container	5,000 ton	230	6.0	5,000	Bulk, General Cargo	–

Warehouse and Open Storage Space: Warehouse: 14,200 sq.m.
Container Yard: 70,000 sq.m.
Main Import and Export Cargo: Oil products, steel, containers, general cargo and chemical products.
FRESH WATER: Available at berths and at anchorage.
FUEL: Available at berths and at anchorage.
REPAIRS: Facilities available.
GENERAL: *Agency:* Penavico Zhuhai, Freight Centre Building, Jiuzhou, Zhuhai, Guangdong, China. Tel: 86-756-3336431. Fax: 86-756-3333187. Telex: 456291 Penaj Cn.

Sinoagent Jinzhou, 5/F New Lian Jian Building, Shihua East Road, Jiuzhou, Zhuhai, China. Tel: 86-756-3353040. Fax: 86-756-3339694. Telex: 456205 Shazh Cn.
Provisions: Available.

LAN SHUI TERMINAL: 20.50 N. 115.42 E.

LOCATION: The converted tanker "Lan Shui" (F.S.P.U.) is moored in position Lat. 20° 50' 04.3" N., Long. 115° 41' 47.1" E.

The offtaking tanker is to be rigged in accordance with OCIMF Requirements for bow loading.

Vessels will be moored by the bow, to the stern of the F.S.P.U. by a 14 in. hawser.
LOADING: Crude oil only handled.
GENERAL: China Ocean Shipping Agency (COSA) is the only Agent available for this port. The vessel or her owner should contact COSA approximately 6 days prior to the vessel's expected arrival into Chinese waters and appoint COSA as the vessel's Agent. COSA will normally require full payment before clearing the vessel, so it is important for the vessel/owner to establish contact with COSA as early as possible.
COSA can be contacted at the following address:

China Ocean Shipping Agency,
2/F, Skiz Building,
Shekou, Shenzen,
The People's Republic of China.

Telephone:	Shekou 691136.
Telex:	420834 COSAS CN.
Cable:	Penavico Shekou.

LANSHAN: 35.06 N. 119.22 E.

LOCATION: Lanshan is located at the Northern part of Haizhou Bay of Shandong Province. Distance by sea is about 81 miles South of Qingdao, and about 384 miles North of Shanghai.
APPROACHES: The approaches to Lanshan are open sea without any outlying dangers. The coast lines are generally well defined, with conspicuous mountains for terrestrial fixes.

The fairway leading to the berth is buoyed. The buoys are unlit and night navigation is difficult. The depth in the fairway is 12.0 m. – 15.0 m.
PILOTAGE: Compulsory for all berthing movements. The pilot boarding ground is approximately 3 miles S.E. of the berth. Ample advance notice must be given to "Penavico" Lanshan Branch for booking a Pilot.
ANCHORAGE: The sea anchorage is located approximately 3 miles S.E. of the port. The anchorage is about 1,852 m. in radius. Maximum draft limitation for anchoring is 14.0 m. The nature of bottom is mainly sand/mud. The holding ground is reported to be good.
RESTRICTIONS: Large loaded vessels can only berth/unberth during high water. This is due to a shoal patch of 6.20 m. approximately 30 m. off the berth.
MAX. SIZE: See "Berthing".
VHF: "Penavico" Shijiu Branch and "Penavico" Lanshan Branch maintain 24 hour watch on Channel 16.
TUGS: 2×1,080 h.p. There are also 4×3,200 h.p. tugs available from Shijiu.
BERTHING: There are 2 berths open for foreign vessels. One for vessels up to 5,000 tons displacement, length 180 m. and depth 8.5 m., and the other for vessels up to 25,000 tonnes d.w.t., length 210 m. and depth 10.20 m. The berths are solid concrete type, and can handle dry cargo and edible oils. 2×10 ton cranes available.
Berth Facilities:

Pipeline connection:	1×6 in. diameter.
Max. back pressure:	6 kg.
Rate:	Average about 120 tonnes/hour. Max. 150 tonnes/hour.

Note: The shore tank farm is located on elevated hills. Total shore tank capacity is 14,000 tonnes.

Distance between shore manifold to ship's side is about 61 m. Short lengths of pipeline are connected between the ship's side and shore manifolds.
FRESH WATER: Available.
FUEL: Not available.
TANKERS: See "Berthing".
No slop facilities available.
REPAIRS: No facilities available.
GARBAGE DISPOSAL: No facilities available.
WASTE OIL DISPOSAL: No facilities available.
SEAMAN'S CLUBS: None.
CURRENCY: Chinese Ren Min Bi (RMB).
GENERAL: *Weather Conditions:*

Wind:	The prevailing wind is from the North. Average wind speed 3.4 m./sec. Max. wind speed 20 m./sec.
Rain:	The annual average rainfall is 915.7 mm.
Fog:	Fog generally between March – July. Average 26.7 days per year.
Temperature:	The annual average temperature is 12.6° C. Maximum temperature recorded was 38.3° C. and minimum was −14.5° C.

Tidal Conditions: The tidal conditions for Lanshan are similar to the pattern at Lianyungang, the nearest standard port for tidal prediction. The tidal stream runs in an anti-clockwise direction, max. rate during flood tide is 88 cm./sec., and max. rate during ebb tide is 69 cm./sec. The average tidal range is about 2.5 m.
Charts: Presently, there is no British Admiralty Chart available for the port of Lanshan. Vessels proceeding to Lanshan can only use B.A. Chart No. 1253 (Sheyanghe Kou to Qingdao Gang) to approach the port.

Navigation charts for the port of Lanshan will be published by the Chinese Authority in late 1990 or early 1991.
Stores: Not available.
Agency: China Ocean Shipping Agency, Shijiu Branch, Nuanghai 1 Road, Rizhao, Shandong Province, People's Republic of China. Tel: (05400) 441089. Telex: 320021. Fax: (05400) 441086.
DEVELOPMENTS: *Under Construction:* Berth No. 3: Length 130 m., depth 7.5 m. Max. size 5,000 d.w.t.
Berth No. 4: Length 180 m., depth 8.5 m. Max. size 10,000 d.w.t.

SHIPMASTER'S REPORT: December 1989 (Updated July 1992).
Documents:
Maritime Declaration of Health (a Chinese form is presented on arrival).
Report of Entry for Foreign Vessels (Chinese form).
6 copies Crew List.
Customs Declaration (Chinese forms brought on board on arrival by the Agent).

Additional forms are provided for next Chinese port of call.
Formalities: Officials board for Port Health Inspection (quarantine) and Immigration and Customs Clearance.
Pilotage: Two pilots boarded the vessel from a large new tug. The boarding position is Lat. 35° 02.24' N., Long. 119° 25.18' E.

The distance from the boarding position to the berth is 4.5 miles.
Approaches: BA. Chart No. 1253 is the only available chart. No larger scale charts exist. Approach is clear from the East with good radar targets.

There is a black buoy at the pilot boarding position but it is not marked on the chart. The buoy is unlit and was sighted at 3.5 miles with a wind of Force 3 – 4.
Anchorage: The anchorage is located one mile South of the Pilot Station. The bottom is mud.
Restrictions: All movements are during daylight only.

After the Pilot boarded we sighted 2 more small black buoys which were unlit. The first buoy is left on the port side and the second buoy is left on the starboard side. In the near future, this will be the position of the fairway buoys.

Pilotage is suspended when the wind reaches Force 4 – 5 as the tug has to come from Shijiu, also there are draft restrictions at low water.

Max. Size: Maximum draft 10.2 m., but preferably below 10.0 m.

Vessels with an LOA of 175 m. can be berthed. Vessels over 175 m. LOA can only berth and unberth at high water as the range of the tide is about 4.0 m. The time of high water is based on mean high water Shinjiu plus 30 minutes (tide times will be given by Agent).

Radio/VHF: Notice of Arrival should be sent to "Penavico Shijiu" 48 hours and 24 hours prior to arrival. This notice should be confirmed 3 hours prior to arrival by VHF on Channels 16 and 11.

Penavico handle all foreign vessels and it is important to contact them as soon as possible in order that they may arrange pilotage and clearance.

Tugs: 3 tugs available for mooring.

Berthing: There is only one berth available for the discharge of oil cargoes. The length of the pier is 180 m. and Pilot advised that the maximum depth alongside was 10.2 m., the actual depth alongside is no more than 9.78 m. at low water. Nature of the bottom is sand.

The vessel moored starboard side alongside and ship arranged mooring ropes to own requirements. Port anchor also used.

Cargo Operations: There is 1 × 6 in. hose available. The vessel provided 2 lengths of rubber hose. The hose was connected to the ship's starboard manifold by the ship's crew.

The storage tanks are about one mile from the berth and are at an elevation of 40 m. There are several sharp bends in the pipe so the back pressure was considerable (about 5 bars).

We achieved a pumping rate of approximately 120 cu.m.p.h. The pumping arrangement is not fixed and was removed after completion of discharge as this berth is also used for the export of sea sand for which 2 movable cranes are available.

Stevedores: The stevedores are state controlled and work is continuous in 3 shifts.

Medical: Facilities are available in a village nearby.

Time: GMT plus 8 hours.

Shore Leave: Possible. Shore passes are issued on arrival. Crew going ashore must show the Immigration Officer at the gangway their shore passes and passports.

General: The number of English speaking personnel was very limited and the Agent was required on occasions for translation purposes.

Prior to departure a strict search is made for stowaways and all shore passes are collected before clearance papers are issued.

SHIPMASTER'S REPORT: August 1992.

Location: Position: 35° 05.5' N., 119° 22' E. The port is near Point Lanshantuo (B.A. Chart No. 1253). The port has been in operation for 2 years.

Port Limits: Approximately 6 miles radius off the end of the breakwater.

Documents: On arrival:

6 Crew Lists.
1 Customs List (Chinese Form).
1 Health Declaration (Chinese Form).
1 Vaccination List (free form).
1 List of Arms and Ammunition (free form).
2 Reports of Entry for Foreign-Going Ships (Chinese Form).
1 Animal and Plant Quarantine Declaration Form for repairing vessel (Chinese Form).
1 List of Specified Articles, foreign currency, gold, silver, belonging to ship and/or members of crew (Chinese Form mandatory).
1 List of Articles to be sealed, cigarettes and liquor belonging to ship and/or members of crew (Chinese Form mandatory).

To be shown to the Port Officials:

Ship's Register.
Tonnage Dues (Chinese Form mandatory, issued by the Port Office at the first Chinese Port of Call).
Tonnage Certificate.
Load Line Certificate.
Safety Construction, Equipment, Radiotelegraphy Certificates.
Certificate of Financial Security in respect of Civil Liability for Oil Pollution Damage.
Certificate of Insurance.
Tovalop Certificate.
Derat Certificate.
Health Books and Yellow Cards of the crew members.
Seamen's Books (Passports).

On Departure:

2 Sailing Reports (Chinese Form).
1 Customs List (Chinese Form).

Collect and return all Shore Passes issued on arrival.

Tonnage Dues (Chinese Form) must be shown to the Port Officials before sailing.

Pilotage: Compulsory. Pilotage for large vessels performed between sunrise and sunset.

The Pilot boards at anchorage from a tug. The entrance channel (315° – 135°) has a depth of 13.0 m., is about 3.5 miles in length, and about 1.2 miles in width, and is marked by two black buoys with white irregular flashes in the following positions:

(a) Lat. 35° 03.9' N., Long. 119° 25.2' E.
(b) Lat. 35° 03.0' N., Long. 119° 24.0' E.

The Pilot listens on VHF Channel 16, working on Channel 13, but there was no answer. Berthing information comes from the local Agents only.

Anchorage: The anchorage is situated about 5.5 miles S.E. of Lanshantuo Point (B.A. Chart No. 1253) and is marked by 4 black buoys, as follows:

(a) Lat. 35° 02.0' N., Long. 119° 28.0' E.
(b) Lat. 35° 02.2' N., Long. 119° 23.6' E.
(c) Lat. 35° 04.0' N., Long. 119° 26.0' E.
(d) Lat. 35° 00.4' N., Long. 119° 25.8' E.

Depths range from 10.0 m. – 15.0 m., and the nature of the bottom is sand and mud, normal holding ground. Vessel anchored with 6 shackles in the water. Tidal streams of about 2 knots were experienced.

Restrictions: Entry and departure not permitted after sunset for large vessels.

Max. Size: Vessel of 185 m. length with draft 9.2 m. can moor.

Health: Ship cleared by Health Officials on arrival. Quarantine and Veterinary Officials carried out the inspection of the crew mess, galley, dry and freezing stores. Pay strict attention to the Health Books and Yellow Cards of the crew members, especially anti-cholera injections.

Radio: Telegraphic communciations: ETA cables via Qingdao Coastal Radio Station (Call sign XST). Calling frequency 500 kHz, working 425 kHz, answering 435 kHz. Working day and night.

VHF: Pilot and local Agents keep watch on Channel 16.

Pilot works on Channel 13.
Local Agent "Penavico", working on Channel 16.
Local Agent "Sinoagent", working on Channels 74 and 73.

Radar: There is no radar station in the port.

Tugs: The port has 2 tugs: 1×2,500 h.p. and 1×800 h.p.

Berthing: Two concrete berths.

First Berth: Length 180 m., depth alongside 7.5 m.
Second Berth: Length 210 m., depth alongside 10.2 m.

Vessels can only berth starboard side alongside, port anchor used with 4 – 5 shackles in the water. Fendering is insufficient.

Cranes: 4×25 ton luffing cranes.

Bulk Cargo Facilities: The port is equipped with 4 multi-purpose portable cranes for handling bulk.

Cargoes: Coal, ores and cement.

Specialised Cargo Handling Facilities: On the first berth, another vessel loaded frozen fish, garlic in cases and peaches. She used her own equipment. She was berthed starboard side to, cargo was delivered alongside my lorries.

Tankers: On the Second Berth (210 m. length), we unloaded 3,800 tonnes of soya bean oil.

Connection: 1×6 in. hose to underground pipelines. Collector has 4×6 in. pipelines, discharging rate about 200 tons per hour.

Density: Salt water.

Fresh Water: Available.

Fuel: Available, but preliminary (7 days minimum) notice required.

Consuls: None.

Repairs: Small repairs only.

Dry Docks: No information.

Gangway/Deck Watchmen: One gangway guard for inspecting crew members passes.

Customs Allowances: Crew allowed 200 cigarettes on arrival. The bond is sealed.

Repatriation: Possible, arranged by local Agents. It takes 3 – 4 days to arrange visas.

Airport: Airport at Qingdao (180 km.).

Time: GMT plus 8 hours, no change.

Police/Ambulance/Fire: It is sufficient to ask guard to advise the desired department.

Shore Leave: Allowed. Passes issued on arrival by Immigration (must be returned before departure).

Identification Cards: Shore Passes issued on arrival by Immigration. Must be kept with Seamen's Books.

Delays: We had to wait 6 days for a berth.

Agent: China Ocean Shipping Agency, Ocean Hotel, Zhong Shan C.W.J.Road, Lanshan. Tel: 0518-312393. Fax: 311842. Telex: 36902. Cables: Penavico.

Another Agency is Sinoagent (Telex: 320034 Lsbrz-Cn. Cables: Sinoagent Lanshan).

AUTHORITY: Lanshan Harbour Bureau, Lanshan Port, Rizhao City, Shandong Province, People's Republic of China. *Tel:* (05400) 441046, 441047. *Telex:* 320036. *FAX:* (05400) 221397. *Contact:* Mr. Mu Naishan, Port Director.

LIANYUNGANG: 34.45 N. 119.27 E. (See Plan)

DOCUMENTS: See "Dalian".

PILOTAGE: Compulsory. Pilotage undertaken day and night. Pilot boards at Pilot Anchorage.

ANCHORAGE: No. 1 Quarantine, Pilot Anchorage: Lat. 34° 49' 10" N., Long. 119° 42' 02" E. as centre with 1.5 nautical miles radius. Depth 13.0 m. – 15.0 m., mud and sand bottom with good holding ground.

No. 2 Quarantine, Pilot Anchorage: Lat. 34° 45' 58" N., Long. 119° 33' 47" E., as centre with 1 nautical mile as radius. Depth 6.0 m. – 8.0 m., mud bottom with good holding ground.

RESTRICTIONS: Draft limitation in the channel: 8.6 m.

Possibility of entry or sailing after sunset: Possible.

Tidal range: 6.48 m., average 3.39 m.

If vessel anchors in Lianyungang Road for a long time, the anchor chains will become twisted, due to ships' irregular turning. The Master should heave up anchor to one or two shackles in water and then slack to his requirements at least once a week.

VHF: Lianyungang Radio on Channel 16 throughout 24 hours.

TUGS: 1×428 h.p., 1×660 h.p., 1×980 h.p., 2×1,200 h.p., 2×1,670 h.p. and 2×3,200 h.p.

BERTHING:

Berths No. 1, 2, 3, 4, 5 and 6 are operated by No. 1 Stevedoring Company of the Port.

Berths No. 8, 9, 10, 11, 12 and 14 are operated by No. 2 Stevedoring Company of the Port.

Berths No. 33, 34, 35 and 36 are operated by No. 3 Stevedoring Company of the Port.

Berths No. 31 and 32 are operated by the Container Company of the Port.

Berths No. 38 and 39 are operated by the Coal Stevedoring Company of the Port.

Berth No.	*Length (m.)*	*Depth (m.)*	*Max. Size (d.w.t.)*	*Cargo handled*	*Equipment*
1	153	9.0	10,000	General Cargo, Bulk Cargo	Shore Cranes 3× 10 tons
2	156	7.0	5,000	General Cargo, Bulk Cargo	Shore Cranes 3×10 tons
3	142	7.0	5,000	General Cargo, Bulk Cargo	Shore Cranes 3×10 tons
4	180	9.0	10,000	General Cargo, Bulk Cargo	Shore Cranes 2×10 tons
5	188	9.0	10,000	General Cargo	Shore Cranes 3×10 tons
6	190	9.0	10,000	General Cargo	Shore Cranes 3×10-16 tons
8	160	9.0	10,000	General Cargo	Shore Cranes 2×10 tons
9	210	11.0	25,000	General Cargo, Bulk Cargo	Shore Cranes 2×10 tons
10	200	10.0	25,000	General Cargo	
11	210	10.0	25,000	General Cargo	Shore Cranes 3×10 tons
12	160	9.0	10,000	General Cargo	Shore Cranes 3×10 tons
14	162	9.0	10,000	Coal	Shiploader 1×1,000 t.p.h.
31	270	11.0	25,000	Containers	Bridge Cranes 2×30 tons
32	270	11.0	25,000	Containers	Bridge Cranes 2×30 tons
33	280	10.0	35,000	Grain	
34	269	10.0	10,000	General Cargo	
35	215	11.0	25,000	Timber	Shore Cranes 2×16 tons
36	205	11.0	25,000	Timber	Shore Cranes 2×16 tons
38	236	11.0	16,000	Coal	Shiploader 1×3,000 t.p.h.
39	240	11.0	35,000	Coal	Shiploader 1×3,000 t.p.h.

CRANES: 1×200 ton crane.

Also see "Berthing".

FRESH WATER: Available.

FUEL: Contact China Marine Bunker Supply Co., Lianyungang Branch.

REPAIRS: Facilities available.

GENERAL: *Provisions:* Contact Lianyungang Foreign Vessel Supply Corporation.

Imports: Steel, timber, fertiliser, sugar.

Exports: Coal, agricultural products and general cargo.

DEVELOPMENTS: *Xugou Port Area:* 10 general cargo berths will be built, 2 berths × 5,000 tons and 6 berths × 10,000 tons. In the first phase, 6 general cargo berths will be constructed along the 1,100 m. quay on reclaimed land of 0.5 million sq.m. This project commenced in 1994, and will be completed late 1997.

Miaoling Port Area: 6 deep-water berths will be built. There will be 2 container berths (35,000 tons and 25,000 tons) and 4 general berths (50,000 tons, 30,000 tons, 20,000 tons and 15,000 tons). The period of construction is 5 years, starting from the beginning of 1996.

AUTHORITY: Lianyungang Harbour Administration Bureau, 99 Zhongshan Road, Lianyungang, China. *Tel:* 86-518-2383374, 2383835. *Telex:* 369032 Lygha Cn. *FAX:* 86-518-2331261.

LONGKOU: 37.29 N. 120.20 E. (See Plan)

DOCUMENTS: Documents as required by the Joint-Inspection Party and/or as international practice. These documents are supplied by ship's Agent.

PILOTAGE: Pilotage is compulsory in the Port of Longkou and is available 24 hours.

It is necessary for all vessels to give notice of ETA 72 hours, 48 hours and 24 hours prior to arrival to their Agent by cable, or telex, or VHF. Pilot boats available. Pilot may be contacted by VHF Channel 16, and can board the vessel in the anchorage. Vessel should make all the necessary arrangements beforehand.

ANCHORAGES: Present anchorage is bounded by the co-ordinates below, in depth of 9.50 m. with area of 9 sq.km. It will hopefully be enlarged to 30 sq/km. with depth from 10.0 m. – 20.0 m. in the future.

The Quarantine Anchorage is the same as the Pilot Anchorage, and is bounded by the following co-ordinates:

(a) Lat. 37° 37' 48" N., Long. 120° 12' 30" E.
(b) Lat. 37° 37' 00" N., Long. 120° 12' 30" E.
(c) Lat. 37° 37' 48" N., Long. 120° 13' 52" E.
(d) Lat. 37° 37' 00" N., Long. 120° 13' 52" E.

MAX. SIZE: Limited by draft. Vessels not over 200 m. in length and 10.0 m. draft can be accepted.

HEALTH: No restriction except quarantine. Pratique procedure and action undertaken by the Quarantine Service. "Q" flag must be hoisted upon vessel's arrival. Masters should tender Maritime Declaration of Health and Deratting or Deratting Exemption Certificate.

RADIO: "Longkou Radio". Call sign: XSS. Telex: 32575 PENLK CN.

VHF: The radio station is manned throughout 24 hours by the Port Authority, keeping watch principally on Channel 16. Three other channels are also available, Channel 9 or 13 for contact via the station to get through to any departments required and Channel 10 for Inner Port contact.

TUGS: Three tugs available up to 3,500 h.p. Vessels usually use tug's line and 2 tugs are usually used for berthing and unberthing.

BERTHING: 12 berths available which can accept vessels with maximum draft 10.50 m. (SW) at low water.

Berth (No.)	*Length (m.)*	*Depth (m.)*	*Usage*
1	180	10.50	General cargo
2	120	7.50	General cargo
3	104	6.50	General cargo
4	104	6.50	General cargo
5-6	200	6.50	Bulk cargo and Ro/Ro
7-10	350	4.50 - 7.00	General and bulk cargo
11-12	355	10.30	Specialised Quay for coal and ore

Also see "Developments".

CRANES: 4 gantry cranes with capacity of 10 – 16 tons at Berths No. 1 – 2. 4 gantry cranes with capacity of 10 tons at Berths No. 7 – 10. 5 gantry cranes with capacity of 10 – 16 tons at Berths No. 11 – 12. Movable electric shore cranes and truck cranes up to 7 tons and 50 tons capacity respectively are available at other berths. All cranes are optional.

BULK CARGO FACILITIES: Bulk cargoes handled at Berths No. 5 – 6 for sand, No. 9 – 10 for salt, and are equipped with belt conveyors. Berth No. 11 is specially for handling coal.

SPECIAL CARGO-HANDLING FACILITIES: A Roll-on/Roll-off ramp is available at Berth No. 6.

Also see "Developments".

STEVEDORES: Arranged by the Port Authority. ETA notice to include particulars of cargo, showing heavy lifts, dangerous or hazardous cargoes, hatch stowage and gangs required, etc. Stevedores work 24 hours.

MEDICAL: Notice not necessary but advisable to Agents if treatment required. Full hospital facilities available. Vaccination essential if ship comes from affected area, inspection carried out by the Quarantine Service. International certificates must be current.

DENSITY: 1025 generally at all tides (salt).

FRESH WATER: Available throughout 24 hours and delivered by shore hoses at a rate of 50 t.p.h. Cost is $ 1.00 per ton and handling charge $ 3.5 per ton should be added per time.

FUEL: Available, delivered by trucks. Advance notice required. If bunkers are supplied by barge, minimum quantity is 100 tons.

FIRE PRECAUTIONS: Ship's watchman to be on duty. Fire-engine equipped for tankers loading/discharging on stand-by. Smoking prohibited in inner port area.

REPAIRS: Minor repairs possible.

DRY DOCKS: None.

SURVEYORS: Cargo inspectors available. Marine surveyors available, e.g. China Classification Society carry out co-ordinated survey on behalf of international societies.

HATCHES: Hatch operation optional. Stevedores can render assistance.

CUSTOMS ALLOWANCES: According to local Customs Department allowances.

REPATRIATION: Facilities exist for crew repatriation, arranged by ship's Agents.

AIRPORT: 120 km. from the port.

TIME: G.M.T. plus 8 hours.

HOLIDAYS: Ordinary holidays: New Year's Day (1st January), Spring Festival, May Day, National Day (1st and 2nd October).

POLICE/AMBULANCE/FIRE: Police: (05456) 211641. Ambulance: 212001-245/212870. Fire: 119.

SERVICES: Port service to ship for garbage removal, etc.

SEAMAN'S CLUBS: Seaman's Club, 17 Longhai Road, Longkou. Tel: (05456) 212311.

BANKS: Bank of China for currency exchange.

SHIP SUPPLY SERVICE: Ship chandler available. Tel: (05456) 212539. Address: 53 Zhenxing Road, Longkou.

IDENTIFICATION CARDS: Crew need Seaman's Book.

REGULATIONS: According to Port Authority and Harbour Master.

DEVELOPMENTS: A 10,000 d.w.t. berth for handling dangerous/liquid chemicals is under construction (Designed draft 10.00 m., 350 m. in length) with pipes connection system underground.

A special berth for handling containers is under construction.

AUTHORITY: Longkou Harbour Administration Bureau, 24 Huanhai Road, Longkou City, Shandong Province, P.R. of China. *Tel:* (05456) 212091. *Telex:* 32575 Penlk Cn. *FAX:* (05456) 211137. *Cables:* 3203. *Contact:* Mr. Wang Shu-bo, Port Director.

LUFENG TERMINAL: 21.36 N. 116.09 E. (See Plan)

LOCATION: Lufeng Terminal is located in the South China Sea, approximately 115 miles E.S.E. of Waglan Island Lighthouse, in the People's Republic of China continental waters.

Its geographical coordinates are as follows:
Lat. 21° 36' 05.8" N., Long. 116° 08' 52.3" E.

Nautical reference can be found in the following publications:
British Admiralty Sailing Direction No. 30 – South China Sea, Volume 1.
United States Hydrographic Office Sailing Direction No. 93 – Western Shores of South China Sea.
British Admiralty Charts No. 1968 and 2161B.
Chinese Nautical Charts and Sailing Direction relating to the area.

DOCUMENTS: To be submitted by export tanker upon arrival:
6 copies Crew List.
6 copies Passenger List (if any).
Valid Passports or Seaman's Books for all crew members.
1 copy Maritime Declaration of Health (Chinese Form).
1 copy Last Port Clearance.
4 copies Vaccination List.
2 copies Ship's Stores List.
2 copies Crew's Declaration of Personal Belongings.
2 copies Arms and Ammunition Declaration.
1 copy Cargo Manifest for Transit Cargo with a summary (Ballast and/or cargo already on board).
2 copies Report of Entry for Foreign Ships (Chinese Form).

PILOTAGE: See "Mooring".

APPROACHES: *Boarding Area:* A Boarding Area is located 3 miles N.W. of the FSO, having the following coordinates:
Lat. 21° 38' 00" N., Long. 116° 06' 00" E.

Waiting Area: The Master of the export tanker is requested to note the following, in case he has to wait for the berth.

(A) There is no suitable area for anchoring in the vicinity of the FSO since the sea depth is too deep.
(B) Anchoring within the 5 miles radius of the FSO is strictly prohibited, due to many pipelines and fixing chains located on the seabed in the area.

Therefore, the Master may judge the waiting point himself, except the area in (B) above, but he is advised to consider the following for safety reasons.

(A) In the vicinity, the strong N.E.'ly seasonal wind is expected in the Winter season.
(B) Also, strong tidal current can be expected.

Navigation Aids – Obstructions and Dangers: The FSO is equipped with the following navigation aids:

Nautophone:	Emitting in fog 2 short and 1 long blast (morse code letter "U"). Range about 2 miles. There is a fog signal on the compass bridge deck.
Position Lights:	One on the bow and one on the poop synchronised. Emitting white light (morse code letter "U"), range 5 miles.

The BTM mooring system extends for a distance of approximately 1,200 m. all around the FSO turret centre. The system consists of 8 anchors laid down on the sea bottom, holding 8 mooring lines (3.75 in., 4 in. and 5 in. chains mixed with 4 in. cables). The chain ends are connected to a floating buoy secured to the FSO bow bottom by fingers.

The FSO has a 16 in. loading hose with 12 in. end hose string, 242 m. in length, floating on the stern, port side. It consists of 23 hoses.

It is emphasised that great care must be taken while in area around the pipelines between the "LF 13-1" Platform and FSO. These areas have to be avoided (See "Plan").

An area within 2 miles from the "LF 13-1" Platform and FSO is a prohibited area. Masters are warned that it is strictly forbidden to enter into this area.

Furthermore, Masters are warned to keep a good lookout due to the numerous fishing vessels in the area.

JHN has been informed by Hong Kong Telecom International that there are 2 submarine cable routes near the "LF 13-1" Platform, approximately 10 km. and 30 km. North from the Platform. Masters have to be careful not to damage them.

RESTRICTIONS/MAX. SIZE: *Arrival:* For the purpose of manoeuvring, vessels are requested to maintain a reasonable ballasted condition complying with Regulation 13.2 of Annex 1 of MARPOL 73/78 Convention.

This means that:
(a) The moulded draft amidship (DM) in metres shall be not less than DM = 2.0 + 0.022 L.
It corresponds roughly to ballast onboard of minimum 30% of S.d.w.t.
(b) A trim by the stern not greater than 0.015 L.
(c) The propeller fully immersed at least 3 ft.
(d) Vessels must comply with Regulation 17, Chapter V of SOLAS 74/83 Convention (Pilot Boarding Facilities).

Terminal Requirements and Limitations: The minimum tanker size acceptable at the Terminal is 35,000 S.d.w.t. tonnes.

The maximum tanker size acceptable at the Terminal is 100,000 S.d.w.t. tonnes.

The above tankers can be moored in tandem only. Information for maximum freeboard expected have to be given by Masters to allow Terminal to check that the offloading hose string is long enough.

The Summer deadweight is the maximum scantling S.d.w.t., i.e. the d.w.t. referred to the physical size of the vessel at the maximum design draft, not to any lower remeasured tonnage occasionally used by shipowners.

No exception to these requirements shall be allowed. Vessels unable to comply will be rejected.

Environmental Limitations:

For an export tanker mooring by tandem mooring system:

Significant Wave Height:	3.0 m. (head on).
Mean Wave Period:	6.5 seconds.
Wind Speed (10 m./min. average):	25 knots (head on).
Current Speed at Surface:	1 knot (head on).

For an export tanker while offloading by tandem mooring system:

Significant Wave Height:	4.0 m. (head on).
Mean Wave Period:	6.5 seconds.
Wind Speed (10 m./min. average):	35 knots (head on).
Current Speed at Surface:	1 knot (head on).

RADIO/VHF: *ETA Messages:* The export tanker's Master shall provide ETA message in local time (Beijing Time, i.e. GMT plus 8 hours) to the Terminal, 96 hours before the anticipated time of arrival. The ETA message shall be repeated 72 hours, 48 hours and 24 hours before arrival. If the transit time from the last port is less than 96 hours, the Master shall send the first ETA message on departure from such port.

After the 24 hours ETA message has been sent, the Master shall send amended ETA messages to the Terminal if the ETA changes 3 hours or more.

Information required by the Terminal: The following information shall be included in the first ETA message sent by the Master:
Name of Vessel.
Nationality.
Owner.
Port of Registry.
Call Sign.
Master's name.
Last Port of Call.
Next Port of Call (if known).
Last two cargoes.
Quantity of cargo required.
If ballast clean or SBT.
Deballasting time (hours).

Additional information may be required by the Terminal later on.

Message Routing: Message from the export tanker can be transmitted to: "FSO NANHAI SHENGKAI"
Call sign A8IV
Marine Identification No. 4989
or
JHN Oil Operating Company for Lufeng Terminal.
Telex 44255 JHN CN or 44250 JHNAD CN.

FSO can be contacted on telephone via Inmarsat through No. 1250266.

FSO can be telexed via Inmarsat through No. 1250266.

FSO transmits and receives on 4434.9 kHz. during day hours and on 2502.5 kHz during night hours.

Use of VHF: Once in VHF range, the Master of the export tanker shall contact the FSO by VHF Channel 16 or Channel 12. The FSO maintains a 24 hours VHF watch on Channel 12. The VHF call sign is "NANHAI SHENGKAI".

TUGS: 2 tugs available (See "Mooring").

BERTHING: *Terminal Description:* Lufeng Terminal consists of:

Centre of production platform (PP) named "LF 13-1" located at the following geographical position:
Lat. 21° 35' 16.0" N., Long. 116° 09' 25.1" E.

Floating Storage Offloading (FSO) tanker named "Nanhai Shengkai" which is moored forward by a Buoyant Turret Mooring (BTM) system. The FSO is a 120,000 S.d.w.t. tonnes converted tanker with the following main specifications:

LOA	259.1 m.	(about 850.00 ft.)
Breadth	40.6 m.	(about 133.20 ft.)
Depth	22.3 m.	(about 73.16 ft.)

The geographical position of the BTM is as follows:
Lat. 21° 36' 03.0" N., Long. 116° 08' 54.0" E.

The platform is connected to the FSO by crude oil subsea pipelines (6 in. diameter from the "LF 13-1" Platform).

The water depth at the FSO site is 141.7 m. (464.89 ft.) (78.7 fathoms).

The export tanker can be moored using "Tandem Mooring" system only.

Tandem Mooring, i.e. with her bow to the stern of the FSO. For this purpose, suitable equipment , i.e. hawser with chafe chains and 16 in. loading hose (with 12 in. ends) is available.

Mooring Master (Lightering Advisor) is in charge of mooring operations. He will remain on board the export vessel during her stay at the Terminal and will liaise with the FSO personnel.

Mooring: Mooring operations are usually carried out during daylight.

The Mooring Master, CCIB Inspector and Chinese interpreter will board in the boarding area. The team may board either by boat or by helicopter (See "Safety" for helicopter operations). The export tanker is not allowed to approach the FSO without instruction from the Mooring Master.

Terminal mooring procedures will be given to the export tanker Master by the Mooring Master with all appropriate port documents.

Two assisting tugs of approximately 8,600 b.h.p. each are available for mooring. Vessels have to be ready to give suitable good towing lines to the assisting tugs, as per the Mooring Master's instructions.

No anchor may be used during manoeuvring. Anchors must be secured in such a way to avoid accidental release.

The FSO can provide fore and aft wire lines (44 mm. diameter) with soft nylon tails of 10 in. circumference whose end eyes have to be made fast to bitts on the export tanker.

For tandem mooring, a polypropylene rope coil should be kept ready on the forecastle deck to enable the assisting tug to secure it to the messenger rope of the mooring hawser. Furthermore, the crew should be ready to heave on board equipment and tools for mooring and hose connection from the assisting tug.

VHF sets should be switched to a mutually agreed working channel, tested and confirmed as being in satisfactory working order. The usual working channel is Channel 69.

In case an emergency occurs during mooring operations, it should immediately be indicated by sounding the emergency signal, consisting of a series of short rapid blasts on the ship's whistle or siren.

LOADING: *Deballasting and Loading:* Mooring Master shall inspect ballast prior to starting deballasting operations.

All cargo tanks are inspected by CCIB Inspector before loading starts for OBQ.

The export tanker must arrive with, and be able to maintain during berthing and loading operations, at least 30% of its S.d.w.t. to keep a safe draft and trim at all times while in the berth.

This should be achieved

(a) by loading cargo and discharging ballast simultaneously or,

(b) if that cannot be done by loading part cargo first, then discharging the ballast, and then loading the balance of cargo.

Masters are warned to carefully check the loading and deballasting procedures to avoid any pollution.

Hose should be connected by the export tanker crew.

When a vessel is "tandem moored", her load is continuously monitored by a load monitoring system on the FSO, which is equipped with warning and danger alarms. Also, an assisting tug should take up station at the stern of the export tanker, keeping her in tandem with the FSO.

On tandem mooring, the export vessel should accept the loading hose displacement diesel oil which will be loaded in the final topping-off tank. The quantity of the diesel oil to be flushed is 70 cu.m. at the end of loading operations.

Due to the metering system on board the FSO, the maximum loading rate is 4,000 cu.m./hr. (925,000 barrels per hour).

Continuous VHF monitoring must be maintained during cargo transfer operations.

All cargo tanks are inspected by CCIB Inspector after loading completed for ullage report.

Cargo Heating: To avoid waxing, due to the high pour point of Lufeng Crude, cargo has to be maintained at the loading temperature of 60°C (140°F).

Tankers calling at Lufeng Terminal must be fitted with heating coils suitable to maintain the loading temperature of 60°C (140°F).

Cargo has to be heated at the commencement of loading operations.

Discharging procedures must be carefully reviewed, in order to assure C.O.W. operations and good tanks drainage at discharging port.

Manifold Size: In the tandem mooring system, the cargo transfer is carried out through one end string of floating hose of 12 in. diameter.

In this case, the hose flanges are 150 ANSI standard. The hose is connected to the export tanker port side cargo manifold amidship in the mooring systems.

The manifold arrangement should comply with OCIMF recommendations as per "Standards for Tanker Manifolds and Associated Equipment" booklet. It is emphasised that only one reducer is allowed between the distance piece and the hose flange. All manifolds shall be clearly marked with the loads they have been designed to withstand.

The export tanker must have 1×12 in. connection ready at her port side cargo manifold. Ships not meeting the above requirements will be rejected.

Cargo Hose Lifting Equipment: The export tanker should be equipped at her port side cargo manifold with cargo hose lifting equipment (crane or derrick) with a minimum safe working load of 10 tonnes, as per Chapter 12 of the OCIMF recommendations "Standards for Tanker Manifolds and Associated Equipment". The SWL is to be clearly marked on the boom.

Crude Oil Specifications: The "Nan Hai Medium" Crude oil has the following specifications:

API can range from:	27.1 – 32.1
Viscosity at 40°C:	CP 39
at 50°C:	CP18
at 60°C:	CP12
Pour Point:	38°C 100.4°F
Cloud Point:	55°C 131°F

The oil has a tendency to form a tight emulsion with water, and a tendency to get below 38°C (100.4°F) when shut in.

DEPARTURE: *Unmooring:* On completion of the cargo transfer operations, and when the hose has been flushed to the satisfaction of the Mooring Master, the hose may be disconnected.

The unmooring operations can start as per the instructions of the Mooring Master.

Departure: While the export tanker is moved to a safe area clear from the FSO and the platform, the cargo documentation should be completed and brought aboard by the assisting tug, unless EDP (Early Departure Procedure) has been previously agreed. The export tanker can depart as documents are signed and Mooring Master will give authorisation for departure. Any protest regarding the cargo quantities shall be made before departure.

Early Departure Procedure (EDP): EDP avoids departure delays waiting for cargo documentation. EDP is not compulsory, but is strongly encouraged because it permits faster vessel turnaround. Vessels using EDP normally sail immediately after unberthing, unless there is a large ship/shore cargo figure difference. In such a case, the vessel must wait in the area until reconciliation of cargo figures is completed and the vessel is released by the Terminal.

If the EDP is used, the Master will receive the following documents:

(a) Master's request for EDP – one copy.

(b) Complete set of Bills of Lading that the Master will be required to sign, leaving blank only the cargo quantities. He will retain only the "Non-Negotiable" Master's copies. All originals and copies will be returned to the Mooring Master.

(c) Complete set of "Receipt for Documents and Samples". He will retain 2 copies only (one for himself and one for the Receiver).

(d) 2 copies of "Quantity and Quality Report" only, blanked with all cargo figures (one for himself and one for the Receiver).

(e) 2 copies of "Cargo Manifest" only, blanked with all cargo figures (one for himself and one for the Receiver).

(f) Complete set of "OBQ Certificates". He will retain 2 copies only (one for himself and one for the Receiver).

(g) Complete set of "Ullage Report After Loading". He will retain 2 copies only (one for himself and one for the Receiver).

(h) Complete set of "Time and Loading Report". He will retain 2 copies only (one for himself and one for the Receiver).

(i) Samples.

All documents shall be filled in with all data (Consigner, Consignee, Master's name, vessel's name, destination, etc.), except for the cargo quantities. After departure, the Terminal will send the Bill of Lading cargo quantities to the Master by radio. The Master will insert these figures in his copy(s) of the Bill of Lading, Quantity and Quality Report and Cargo Manifest, and will send a message back to the Terminal, repeating the cargo figures and authorising the Terminal to fill in the figures in all other Bills of Lading, including the "Originals" and the other documents (Quantity and Quality Report and Cargo Manifest). If the figures are disputed, the Master will state so in his message to the Terminal and can request that the Bill of Lading be annotated "under protest".

Two copies of "CCIB Certificate of Origin", "CCIB Inspection Certificate of Quality", "CCIB Inspection Certificate – Weight by Flowmeter" and "CCIB Inspection Certificate – on Tank" will be sent by mail to the destination port.

MEDICAL: Medical assistance is not available, except in case of emergencies. Medical evacuation of injured persons will be by helicopter to Shekou Hospital for PRC nationals and expatriates, or to Hong Kong hospital for expatriates only. The injured expatriates have to be provided with individual Seaman's Book or Passport. In this case, the Master of the export tanker has to inform immediately his Agent in Hong Kong. All expenses occurred will be on Owner's account.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No repairs are permitted when moored at the Terminal.

REPATRIATION: No repatriation is permitted at the Terminal. Only the case of injured persons can be considered (See "Medical").

SHORE LEAVE: No shore leave is permitted at the Terminal. No persons are allowed to visit the FSO.

SAFETY: The following OCIMF/ICS guidelines will be enforced at the Terminal as applicable:

International Safety Guide for Oil Tankers & Terminal (Edition in force).

Ship-to-ship Transfer Guide (Petroleum) (Edition in force).

Guide to Helicopter/Ship Operations (Edition in force).

Satellite Communication Equipment: Consultation between Master and Mooring Master is advisable, in order to ascertain that there is no risk due to the presence of flammable gas before a satellite terminal is operated.

HVAC: Central air conditioning is allowed, but air intakes must be shut off and internal circulation must be adopted. All window type coolers must be disconnected. To avoid flammable gases entrance, a positive pressure should be maintained inside accommodation.

Main Engine: While moored at the FSO, the main engine must remain on instant readiness. No engine repairs are permitted. In the tandem mooring system, it may be necessary for the vessel to use the engines while moored. Use of main engine shall be made with the advice of the Mooring Master only.

Firefighting: The Master of the vessel must keep continuous fire watch during loading operations. All fire equipment must remain ready for immediate use.

Impressed Current: It can stay on if working properly while berthed in tandem.

Helicopter Operations: No helicopter operations on the export tanker can take place during ballast and/or cargo operations. Helicopter operations may take place only after such operations have been stopped, and the integrity of the IGS system has been verified.

A helicopter landing or winching area must be painted on the tanker deck, and must be in accordance with the requirements of the "Guide to Helicopter/Ship Operations", published by the International Chamber of Shipping. All helicopter operations shall be in accordance with said Guide. The helicopter pilot and export tanker crew shall be familiar with its content.

WEATHER: *General Climate of the Area:* The climate of the South China Sea is mainly dominated by seasonal winds. These monsoons are related to fairly regular seasonal fluctuations of the atmospheric pressure over the Asiatic continent.

During Winter, from October to March, a high pressure area settles over Southern Siberia and China, because the North Asian land mass cools as a result of the decreased solar heating. The "Siberian High" in conjunction with the semi-permanent high pressure area of the subtropical North Pacific Ocean, centred approximately along latitudes 25° N. to 30° N., caused predominately N.E.'ly winds, the N.E. Monsoon, over the South China Sea.

The development of the "Siberian High Pressure" starts in September, and from October, the N.E.'ly wind regime is established.

During late April and May, the "Siberian High" weakens and displaces Northward, because the Asian land mass warms up as a result of the increased solar heating. More or less simultaneously, a low pressure area begins to develop over North India and Southeast Asia.

As a result, the N.E.'ly winds decrease and a flow of S.S.W. winds, the S.W. Monsoon, progressively settles over the South China Sea. This is a period of transition from the N.W. Monsoon season to the S.W. Monsoon season. The S.W. Monsoon season lasts from June to August. It is characterised by the extension of the "heat low pressure" area over North India and South China.

In September, the "heat low pressure" weakens and progressively dissipates due to the decreasing solar heating, while the "Siberian High Pressure" is intensified and moves Southward. The S.W. Monsoon weakens and is gradually substituted by the N.E. Monsoon.

By October, the S.W. Monsoon has virtually ceased and the N.E. Monsoon dominates over the Northern area of the South China Sea.

Winter (December-March / N.E. Monsoon season).
Spring (April-May / transitional period).
Summer (June-August / S.W. Monsoon season).
(September / transitional period).
Autumn (October-November / N.E. Monsoon season).

These periods can be considered as "Normal Conditions".

Exceptional conditions sometimes exist due to low pressure depressions, rising close to the Equator which move towards temperate zones following routes at different speed, covering different distances, and reaching forces up to cyclone (in this area called "Typhoons"). The periods, in which these phenomena occur most, are in the Summer time up to September.

GENERAL: All vessels calling at the Lufeng Terminal must fly the People's Republic of China flag and the international code Quarantine signal must be displayed upon the Authorities' visit.

Masters and operating personnel of tankers calling at the Terminal must be aware of the content of the Terminal Manual and of the OCIMF "International Safety Guide for Oil Tankers and Terminals – Edition in Force".

Mail: No mail can be sent from the Terminal.

Pollution Prevention: There are no facilities for receiving clean or dirty ballast at the Terminal. Only clean ballast can be discharged at sea. The following rules shall apply:

No oil pollution is allowed in the Terminal area.
No dirty ballast can be discharged at sea.
No bilges can be pumped overboard.
No waste can be discharged at sea.
Vessels have to comply with MARPOL 73/78 Rules.

Owners of vessels calling at the Terminal must be members of the TOVALOP agreement. Master must have on board the TOVALOP Certificate.

AUTHORITY: *Operator:* JHN Oil Operating Co., 13th Floor, Finance Center, Tai Zi Roads, Shekou Industrial Zone, Shenzhen/Bao'an, Guangdong Province, China. *Tel:* 693174, 693177. *Telex:* 44255 JHN. *FAX:* 695364.

NANJING (Nanking): 32.03 N. 118.47 E. (See Plan)

PORT LIMITS: A vessel is considered to be an "arrived ship" only when she reaches Nanjing Port, or at the Nanjing Waiting Anchorage or Quarantine Anchorage, located in position Lat. 32° 14.5' N., Long. 119° 10' E., about 165 miles upriver from the Changjiang Entrance, or 15 miles before Nanjing Oil Port.

DOCUMENTS: For Joint Inspection on arrival:

6 copies Crew List.
2 copies Report of Entry.
1 copy Maritime Health Declaration.
1 copy Crew Effects Declaration.
1 copy Ship's Equipment List.
1 copy Bonded Stores List.

For Joint Inspection on departure:

1 copy Maritime Health Declaration.
4 copies Report of Clearance.

Note: Chinese forms must be used for Report of Entry, Report of Clearance and Maritime Health Declaration. Ship's own forms can be used for the other documents, if it is the vessel's first call. On arrival obtain blank forms for Report of Clearance and have them filled out prior to departure.

PILOTAGE: Compulsory. Pilotage upriver is in two stages. The first stage is from the mouth of the Yangtze River to Baoshan, which is by Shanghai Pilots. The second stage is from Baoshan to Nanjing, which is by Nanjing Pilots. The pilotage up to Baoshan is arranged by "Penavico Shanghai". Changjiang Entrance is the customary waiting anchorage for vessels for Shanghai or proceeding upriver.

Application for Pilot should be made to Shanghai Agent "Penavico Shanghai" by cable or telex, prior to arrival. When the arrangements are made, they will reply by cable or telex and the Pilot boards at South Channel, Buoy No. 5, as indicated on B.A. Chart No. 1602. The distance from Changjiang Entrance to Baoshan is 53 miles. Baoshan is located 3 miles upriver. The vessel may have to anchor here for Nanjing Pilots, they board on arrival and the Shanghai Pilot disembarks. The vessel continues without stopping, which is a distance of 177 miles up to Nanjing. When the vessel anchors at the Nanjing Waiting or Quarantine Anchorage, the Pilots leave and the Berthing Pilot boards.

Note: At least 2 day's notice of application for pilotage.

Telex No:

Penavico Shanghai: 33052 Penav C Cn.
Penavico Nanjing: 34059 Nipen Cn.
Sinochem Nanjing: 34109 Cienj Cn.(Shippers).
Nanjing Port Authority: 34034 NJPACN.

ANCHORAGE: Nanjing Waiting Anchorage: Lat. 32° 14.5' N., Long. 119° 19' E. with good holding ground, depth of water 13.0 m. – 16.0 m. It can accept vessels up to 30,000 d.w.t.

RESTRICTIONS: Size: Up to 30,000 d.w.t. Draft limitation: 9.5 m.

MAX. SIZE: The draft limitation in the channel which is fresh water is 9.5 m.

HEALTH: No Radio Pratique available. On arrival at Quarantine Anchorage, the Quarantine Officer boards and grants Pratique.

RADIO: Communications are by Inmarsat telex.

VHF: Port Authority Signal Station manned 24 hours. Contact Agents "Penavico Shanghai" on Channel 11 and Shanghai Pilot on Channel 16. At Nanjing, contact Agents "Penavico Nanjing" on Channel 8 and Pilots on Channel 6. Contact Nanjing Port on Channel 25 throughout 24 hours.

RADAR: No port radar service.

TUGS: 1×1,940 kW., 2×1,764 kW., 4×1,440 kW., 3×1,227 kW. and 6×720 kW.

BERTHING:

Terminal No.	*Berth* No.	*Length* (m.)	*Permissible Draft LOA* (m.) (m.)	*Use*	*Cranes* (tons)
1	15	90	6.0/130	General Bulk	2×5
2	22-24	180	7.0/150	General Steel	2×10
	28	120	7.0/150	Bulk	3×5
3	35	101	6.0/130		2,500 t.p.h.
	37	99.4	6.0/130	Coal	Shiploader
4	400	186	9.5/180		4×10
	401-403	180	9.5/180	Multi-use	
	406-407	224	9.5/200		6×5
5	51	75	9.0/180	Oil	3×8
6	65	65	5.0/120	Oil Chemical Liquid Material	1,000 t.p.h. Shiploader & unloader
7	701-702	274	9.5/180	Steel	
	703-705	360	9.5/200	Ore	5×10
	706-707	310	9.5/200	Coal	2×16 grab
Container Terminal	404	186	9.5/200	Portainer	1×25
	405	224	9.5/200	Portainer	1×35

CRANES: Floating cranes of 63 tonne, 50 tonne and 5×10 tonne, also gantry cranes of 10 tonne, 8 tonne and 5 tonne. See "Berthing".

Bulk Cargo Equipment: No. 7 Terminal: 16 tonne gantry crane.

No. 3 Terminal: Rotary car dumper system and shiploader system.

Specialised Cargo Handling Equipment: 2 portainer cranes of 35 tonne and 25 tonne.

BRIDGES: No bridges prevent vessels up to 30,000 d.w.t. from entering the port.

STEVEDORES: Main cargoes include general cargo, coal, oil, ore, cotton, steel, construction material, agricultural and chemical products, container, dangerous or hazardous cargoes, etc. Loading or unloading rate changes regarding different cargoes.

MEDICAL: Full medical and dental facilities available. Agent must make all the necessary arrangements. At Nanjing, usually the treatment is made in Worker's Hospital.

TANKERS: One berth for tankers up to 180 m. LOA, draft limitation 9.0 m., depth of water 14 m. One berth for tankers up to 120 m. LOA, draft limitation 5 m., depth of water 12 m. Max. size for tankers 70,000 d.w.t.

Also see "Shipmaster's Report".

FRESH WATER: Contact China Marine Bunker Supply Company, Nanjing Branch. Available 24 hours a day. Cost is 1.5 RMB per ton.

FUEL: Advise "Penavico Shanghai" and "Penavico Nanjing" of requirements by telex or cable before arrival. Contact China Marine Bunker Supply Company, Nanjing Branch. Fuel and diesel available through 24 hours. Tel: (025) 806316.

FIRE PRECAUTIONS: Ship's watchmen to be on duty. The Port No. 1 fire fighting ship of 1,000 h.p. on duty and two special tugs also equipped as fire tenders.

CONSULS: No consuls in Nanjing.

REPAIRS: All types of deck and engine repairs possible. Repair services available through Nanjing Jinling Shipyard, Xinhua Shipyard or Nanjing Port Repairing Station.

SURVEYORS: Cargo tank inspection prior to loading, and cargo calculations on completion of loading are carried out by CCIB (China Commodity Inspection Bureau). China Register Surveyor available on behalf of other classification societies.

GANGWAY/DECK WATCHMEN: Watchmen required (Member of crew, or shore-based watchmen available). The Frontier Inspection Station also have guards on duty at the gangway.

OPENING/CLOSING HATCHES: By arrangement between ship's Agent and stevedore.

CUSTOMS ALLOWANCES: According to local Customs Department.

REPATRIATION: Facilities exist for repatriation of crews.

AIRPORT: Nanjing Airport (26 km.). Daily 737 airline service to Hong Kong.

HOLIDAYS: New Year's Day (January 1st); Labour Day (May 1st); National Celebration Day (October 1st). The port is available for foreign vessels all year round, no restrictions.

POLICE/AMBULANCE/FIRE: Police: Tel. 110. Ambulance: Tel. 633898. Fire: Tel. 119. Port Security: VHF Channel 25 throughout 24 hours.

EMERGENCY CO-ORDINATION CENTRE: Contact Nanjing Port on VHF Channel 25 in case of emergency.

TELEPHONES: Telephones can be supplied to any vessel.

SERVICES: Many special services available.

BANKS: China Bank, Nanjing Branch is located in Xinchenwei Foreign Trade Port Area. Exchange of money, etc., can be arranged.

STORING: Provisions and bonded stores available. They are inexpensive and of average quality. Fresh vegetables are seasonal. The Nanjing Foreign Shipping Supply Corporation should be contacted for service. Tel: (025) 633780/304734.

SHIP SUPPLY SERVICE: Contact: Nanjing Foreign Shipping Supply Corporation (Tel: (025) 633780). Agents "Penavico Nanjing" (Tel: (025) 804056).

SHORE LEAVE: Permitted. Nanjing town is located about 15 miles away and takes about 50 minutes by car. Transport must be arranged by the Agent or Seaman's Club (taxis, etc.). A round trip by minibus costs about 80 RMB. Nanjing is a pleasant town with modern hotels like Jinling Hotel and famous sights such as Dr.Sun Yat-Sen's Mausoleum.

IDENTIFICATION CARDS: Seamen's Book is sufficient.

GARBAGE DISPOSAL: Use 5 ton "QY" truck crane and one "OG400" garbage furnace.

WASTE OIL DISPOSAL: A cleaning ship of LOA 40.6 m. is used to dispose of waste oil. It has two sets of waste oil disposal equipment, and two sets of sewage disposal equipment.
SEAMAN'S CLUBS: Nanjing International Seamen's Club is located in Xinshenwei Foreign Trade Port Area. It provides excellent accommodation and all kinds of entertainment services. Overseas calls can be made here. Tel: (025) 561798.
REGULATIONS: Normal Port Regulations.
DELAYS: The date for loading or unloading is decided according to the contract signed between the Ship's Agent and the Port.
GENERAL: The Agent stays on board throughout the vessel's stay in Port. He is of great assistance in all matters.
Tidal Range: Maximum 1.47 m. Minimum 0.02 m.
Storage: Warehouse 54,731 sq.m. Open storage space 391,481 sq.m.
DEVELOPMENTS: In the second phase of the Xinshenwei Project with a total investment of RMB 358.8 million, 13 berths for 25,000 d.w.t. vessels have been completed. The total length of the wharf is 2,500 m. The project of Rong Tan Foreign Trade Area is being planned.

SHIPMASTER'S REPORT: June 1995.
Berth: No. 611 at Yizheng.
Type of Berth: Pontoon (See "Plan").
Operations: Discharging.
Cargo: Condensate.
Connection: Hard arm.
General: This vessel (41,000 d.w.t. and LOA 176 m.) is too large for the berth. All ship's lines forward act as springs and all ship's lines from poop deck act as springs. Aft maindeck winch ropes may be sent as breast lines. One shore line taken each end as head line and stern line, rigged from ashore (all ship's lines taken to pontoon). Shore head line parted during mooring operations. When not in use, the shore lines lie in the water/mud.

Note/s of Protest issued by Ship: Yes.

One Pilot from sea to Liuhe. 3 Pilots from Liuhe to Nanjing, they also berth the ship. Daytime passage only for river section above Liuhe. Strong 2 knots – 3 knots current running at all times.
Accident Report: Breaking of mooring lines:

The incident occurred whilst the vessel was mooring. This is a pontoon berth situated on the North bank of the Yangtze River at Yizheng. The vessel berths starboard side to the berth heading upstream. There is a continuous current flow of between 2 knots to 3 knots at the berth, flowing downstream from forward to aft.

Prior to arrival at the berth, the vessel had been advised that the mooring plan was to use 3 head lines/stern lines and 2 springs fore and aft from the vessel, and to take onboard 1 shore head line/stern line. On arrival at the berth, it was apparent that all ship's lines from forward would act as springs, there being no facilities ashore to utilise to send out head lines or breast lines. Similarly aft most lines would act as springs. All ship's lines had to be sent to the pontoon. The shore mooring lines had one end permanently secured ashore, and the eye of the other end made fast to the pontoon when not in use. These lines therefore lay submerged on the river bed when not in use. The length of the lead for the shore lines to the vessel was approximately 200 m. Refer to "Plan Section" for final mooring plan.

AUTHORITY: Nanjing Port Authority, Jiangbian Road 19, Xia Guan District, Nanjing, P.R.C. (Postcode: 210011). *Tel:* (025) 633898. *Telex:* 34034 NJPACN. *FAX:* 802803-688. *Cables:* 9876 NANJIN. *Contact:* Wu Min, Foreign Affairs Office.

NANTONG: 32.01 N. 120.49 E. (See Plan)

LOCATION: The port is situated on the North bank on the lower reaches of the Changjiang (Yangtse River), Nantong port is in Nantong City which is about 51 miles East of Wusong Kou. The position of the port is Lat. 32° 00' 45" N., Long. 120° 48' 45" E.
APPROACHES: Foreign vessels proceeding upstream from Baoshan Anchorage are required to be well informed of the water depth along Baimaosha Nan Shuidao, the South Channel, so that they may safely pass with the tide. Before approaching light buoy No. 12A a close watch should be paid to see if any ship is steaming down the river. If a vessel is outward bound it is advisable to reduce speed and wait until it is clear of the channel, in order to avoid meeting at the shallow part of the channel.

All foreign vessels entering or leaving the port are requested to observe the following regulations:

1. "The Regulations on Supervision and Control of Foreign Vessels by the People's Republic of China".
2. "The Regulations on Supervision and Control of Vessels Flying Foreign Flags Sailing in the Changjiang by the People's Republic of China".
3. "Regulations for Prevention of Collision at Inland Waters".

Foreign vessels are requested to take great care, as the buoyage system of the coastal waters and the river are different.
PILOTAGE: Compulsory. Pilot available from sunrise to sunset from Baoshan Anchorage.

Pilot for Nantong boards at Baoshan Anchorage.
ANCHORAGE: Baoshan Anchorage 31° 28' N., 121° 28' E.
Joint Inspection Anchorage: The anchorage is situated at Dong Shuidao on the lower reaches of the Changjiang (Yangtse River). This is within the harbour limits and has an area of 2,500 m.×600 m., depths range from 7.0 m. – 25.0 m. and the nature of the bottom is sand and mud.
RESTRICTIONS: Entry and departure not permitted after sunset.

Draft is restricted to 9.5 m. as vessels have to cross a bar at the mouth of the Chang Jiang River.
MAX. SIZE: See "Berthing".
VHF: Pilots: Channels 16 and 6.

Penavico: Channels 16 and 27.

Oil Terminal: Agent on Channel 11.
Pilot on Channels 11 and 20.
Port on Channel 20.
TUGS: 1×2,400 h.p., 1×1,670 h.p., 2×980 h.p. and 2×480 h.p.
BERTHING:

Name of District	*No. of Berth*	*Length* (m.)	*Depth* (m.)	*Max. Draft* (m.)	*Max. LOA* (m.)	*Use*
Langshan	No. 1	180	(D) 10.0 (F) 16.0	9.5	180	Coal/Containers/Ore
	No. 2	180		9.5	180	Feed/Sugar/Containers
	No. 3	187		9.5	180	Timber/Pig iron/Fertiliser
Nangtong	No. 3	74.0	(D) 5.5 (F) 10.8	5.0	70	General Cargo
	No. 4 No. 5 No. 7	–	–	–	–	Passengers
Tian Sheng Gang	No. 1	65	(D) 4.8	–	–	Coal
	No. 2	65	(F) 4.8	–	–	Coal

Note: (D) Dry Season.
(F) Flood Season.

With prior agreement vessels can also load/discharge certain types of cargoes at buoys.
CRANES:

Langshan: 2×5 tons and 3×10 tons.

Nantong: 3×5 tons.

One floating crane of 10 tons capacity available.
FRESH WATER: Available.
FUEL: Available.
REPAIRS: Facilities available.
GENERAL: *Imports:* Timber, ore, bulk sugar, fertiliser and pig iron.
Exports: General cargo and cotton.
Meteorology and Hydrography: The tide at this port is irregular semi-diurnal, with Spring rise of 3.4 m., Neap rise of 2.7 m. and mean sea level of 2.1 m.

The direction of the stream, either floor or ebb, is approximately parallel to the bank of the river. The rate of flood is 0.8 knots, while that of the ebb may reach 4.3 knots.

The wind is variable in direction and force, due to the effect of the monsoons. The average wind force is 3.1 m. per second. Gales may arise suddenly, but mostly occur in Winter. The annual average of "gale days" is 12.8. This port may be threatened by typhoons from July to September with wind forces ranging from Force 6 to Force 8. In August a wind Force 11 is sometimes experienced.
Aids to Navigation: The aids mainly consist of light buoys. The lateral port hand buoys are black in colour with spherical shaped top-marks. Starboard hand buoys are painted red in colour.

SHIPMASTER'S REPORT: August 1991.
Location: Nantong Harbour is situated on the North bank of Chianjiang Kou River, about 60 nautical miles upstream of Wusong Kou (Shanghai Harbour entrance).

This harbour has been developed in recent years and now offers 14 general cargo berths for vessels up to 25,000 d.w.t., one modern coal wharf and 10 buoys for the mooring of ships of less than 10,000 d.w.t., one floating platform of 35,000 tons storage capacity, one oil berth and one oil storage tanker "Gero".

During our stay, it was very difficult to obtain precise information from our associates as their English is generally very poor. Furthermore, harbour installations are spread all along the bank over a distance of about 26 km.
Port Limits: It was understood that a vessel is considered to be within port limits when arriving at Nantong Quarantine Anchorage (2 miles downstream from first berths) and that Notice of Readiness should not be tendered before.
Documents: Joint inspection takes place once alongside. Customs, Immigration and Health officers appeared to be very helpful and courteous and formalities were promptly carried out in 30 minutes.

They requested the following documents:

5 copies Crew List.
1 copy Cargo Manifest.
1 copy Health Declaration (Chinese form).
3 copies Inward Declaration (Chinese forms).
2 copies Crew Personnel Effects List (detailed).
1 copy Ship's Provisions and Stores List.

All ship's documents were briefly inspected (first call of a French flag vessel), but none were taken ashore.

All passports were seen by Immigration officers who issued shore passes which were collected prior to departure.
Pilotage: Shanghai pilots should be called on VHF Channel 16. ETA must be given at least 3 hours prior to arrival. Pilot usually boards 1.5 hours before high tide (Luashan H.W. time). Boarding will be cancelled in cases of bad weather (i.e. strong Easterly winds) and vessels will have to wait at CJK anchorage. Pilot vessel is a white hulled stationary vessel, pilot joins ship from a small dinghy.

Inbound vessels should pass to the North of CJK light vessel and then proceed to Buoy No. 1 near which the pilot vessel waits.

Outbound vessels will be attended to between Buoy No. 4 and Buoy No. 5.

Shanghai pilot leaves the ship at Baoshan anchorage where Nantong pilots take over (two or three persons).

During hours of darkness there is no navigation or berthing, vessel remains at anchor and food and accommodation for pilots should be arranged accordingly.

Pilots all Refused Combination Ladder – Only Pilot Ladder is Used.
Navigation: It takes 4 hours to proceed from CJK to Baoshan and another 4 hours from Baoshan to Nantong. It is usually made in two stages as there is a time limit for passing the bar at Bai Mao Sha and as berthing

in Nantong must take place at slack water. Chinese charts from the river above Baoshan exist but are not delivered to foreign vessels.

In Nantong harbour, ebb current is predominant and the period of slack water is very short.

Anchorages: CJK anchorage is located E.S.E. of CJK light vessel as shown on B.A. Chart No. 1602. Maximum depths of 15.0 m. are found in the Eastern half, which is more suitable for deep draft vessels.

As tide currents are strong (up to 5 knots), at least 6 shackles should be used.

Baoshan Anchorage (31° 28' N., 120° 27' E.) is used at night and for awaiting relief pilot. Depth is 15.0 m.. but ebb current is very strong (5 knots), at least 8 shackles should be used.

Nantong Quarantine Anchorage is situated 3 miles down river from Nantong Harbour and offers depths of 18.0 m. Same precautions as above should be taken.

Restrictions: No navigation or berthing at night up river from Shanghai.

Maximum draft permitted is 9.50 m. (F.W.), extended to 10.0 m. during Spring tides.

Deep water fairway Beicao Hangdao is dredged to 7.00 m. with maximum depths of 8.5 m. near the entrance. Thus with rough seas, it is not possible for deep draft vessels to proceed inwards.

There is also a bar with minimum depth of 7.10 m. at Bai Mao Sha, about 30 miles up river from Wusong Kou. It is the only difficult part of the waterway before Nantong, fairway being only 200 m. wide and speed must be reduced to minimum.

Max. Size: No information could be obtained, the only restriction for docking at oil berth is 9.50 m.

Health: No Free Pratique by radio. Pratique is granted by Quarantine Officer when vessel alongside.

Radio: Shanghai Radio may be contacted by W/T or via Inmarsat (Telex No. 30305).

Government Shipping agencies (Penavico or Sinoagent) can be telexed or telephoned directly via Inmarsat but they never acknowledge and they never request any information prior to arrival.

VHF: Penavico keeps watch on Channel 11 and Sinoagent Shanghai on Channel 74. They must be contacted when arriving at CJK.

Sinoagent Nantong maintains watch on Channel 73.

Pilots keep watch on Channel 16 and work on Channels 6 and 71.

Tugs: 1×2,000 h.p. and 2×980 h.p. Tugs are often busy and delays may be experienced.

Berthing: Our vessel went alongside storage tanker "Gero", LOA 237 m. which is anchored 200 m. off the North bank in a depth of 35.0 m. This vessel is held by 6 anchors and mooring was made heading up stream with 4 headlines, 1 breast and 1 spring forward and 3 springs and 4 sternlines aft, due to very strong ebb current (over 6 knots).

Medical: Hospital and dental facilities available. There are no special requirements about vaccinations.

Tankers: Receivers (Nantong Fuel Corp.) provided 2 hoses of 6 in. diameter and requested maximum working pressure of 5 kg. at ship's rail.

Jiangsu Petroleum operates an oil jetty for ships up to 25,000 d.w.t. No slop discharge facilities are available. This jetty also receives chemical tankers (benzene and alcohol).

Density: 1000 (fresh water).

Fresh Water: Available by barge.

Fuel: Common grades said to be available as well as Lub. oil.

Provisions: Available. There are several ship chandlers.

Consuls: None at Nantong. Major countries have consulates in Shanghai.

Dry Docks/Repairs: 30 miles up river from Shanghai is Nantong Shipyard which is able to carry out major repairs with a 100,000 d.w.t. floating dock.

Surveyors: Cargo inspections are made by C.C.I.B. (Government Co.).

Customs Allowances: 1 bottle of spirits and 200 cigarettes for each crew member. Special allowance for Master; 5 bottles and 3,000 cigarettes. NOTE: If sailing from one Chinese port to another, even if going into international waters and for more than 24 hours, seals must not be broken. Vessel can be fined U.S.$5,000 for none compliance.

Repatriation: Possible via Shanghai and Hong Kong. There is a regular service of hydrofoil shuttles, trip takes about 2.5 hours. Immigration request 2 photographs of members signing off. In our case it worked very well.

Airport: Major airlines operate international flights. Numerous flights to Hong Kong.

Time: GMT plus 8 hours (GMT plus 9 hours from May to August).

Shore Leave: Permitted until midnight.

Identification Cards: Shore passes must be accompanied by Passport or Seaman's Book.

General: Two Immigration Officers remain on board during ship's stay. Accommodation and food must be provided.

Launch service for going ashore must be arranged through agent.

There is no Loading Master and no one understood English among the storage tanker staff.

SHIPMASTER'S REPORT: October 1994.

Pilotage: The Pilot cannot be arranged by the Agent to take vessel from Nantong to Liuhe Anchorage if loading is completed after 1500 hrs. local time. Sometimes vessel can be shifted from the berth to Langshan Anchorage.

General: Sailing through shallow waters of the Yangtze River has a harmful effect on the condition of the sea chest and stern tube. The level of water contamination is very high in the Yangtze River.

AUTHORITY: Nantong Port Authority, 120 Remin Road West, Nantong, China. *Tel:* (0513) 513135. *Telex:* 3651 Ntpad CN.

Nantong Harbour Superintendent, 104 Remin Road West, Nantong, China. *Tel:* (0513) 518292.

AGENT: Penavico. Tel: 6500. Telex: 36501. Cables: Penavico Nantong.

NINGBO (Ningpo), Including Beilun: 29.52 N. 121.31 E. (See Plan)

LOCATION: Ningbo Port District: 29° 52' 54" N., 121° 33' 24" E.
Zhenhai Port District: 29° 57' 00" N., 121° 43' 05" E.
Beilun Port District: 29° 56' 8.6" N., 121° 51' 05" E.

PILOTAGE: Compulsory. Pilotage is undertaken day and night at Qi Li Yu Anchorage and Jin Tang Anchorage, but only in daytime at Xin Qi Anchorage.

ANCHORAGES:

Anchorage	*Location*	*Nature*	*Depth* (m.)	*Bottom*	*Size for Vessels* (d.w.t.)
Qi Li Yu	29° 59' 18" N. 121° 46' 30" E. 30° 00' 18" N. 121° 47' 30" E.	Pilotage	8.0	Mud	3,000–5,000
Jin Tang	30° 00' 00" N. 121° 48' 12" E. 30° 02' 30" N. 121° 50' 00" E.	Pilotage	15.0	Mud & Sand	10,000
Xia Qi	29° 43' 30" N. 122° 20' 30" E. 29° 46' 00" E. 122° 21' 30" E.	Pilotage	17.0	Mud	10,000–100,000
Bei Lun		Operating	20.0	Mud	Lightening for over 10,000

RESTRICTIONS: Day and night entry and departure possible at Ningbo and Zhenhai Port Districts but not at Beilun Port District.

Tidal Range: Ningbo: Maximum 3.62 m. Minimum 0.92 m.
Zhenhai: Maximum 3.51 m. Minimum 0.02 m.
Beilun: Maximum 3.36 m. Minimum 0.40 m.

MAX. SIZE: *Draft Limitation in the Channel:*
Ningbo 5.5 m.
Zhenhai 9.0 m.
Beilun 18.0 m.
Also see "Berthing".

TUGS: 2×370 h.p., 1×428 h.p., 2×600 h.p., 4×980 h.p., 1×1,670 h.p. and 3×3,200 h.p.

VHF: Pilot on Channels 16 and 9. Agent on Channel 12, contact through Ningbo Harbour Radio on Channel 16.

BERTHING:

Working District	*Berth* No.	*Length* (m.)	*Depth* (m.)	*Permissible Draft/Length* (m.)/d.w.t.	*Remarks*
Beilun	1	351	18.2	17/300 100,000	Bulk cargo

	5	92	5.5	3,000	"

CRANES: 16 ton crane at Zhenhai Berth No. 7.
3 ton crane at Zhenhai Berth No. 8.

CONTAINER FACILITIES: New berth with length 200 m. and depth 12.0 m. Two cranes available.

BULK HANDLING FACILITIES: 2 unloaders × 2,100 t.p.h. each. 2 loaders × 4,200 t.p.h. each.

TANKERS: The VLCC "Beilun" is anchored a mile or so off Beilun, storing crude oil and other products delivered by smaller tankers from the onshore fields. Depth of water 23.0 m.

The petroleum berth is operated by Sinochem, Ningbo branch, and accepts at one end loading product tankers and at the other discharging crude oil tankers.

Also see "Berthing".

STEVEDORES:
Weekdays: 0730 hrs. – 1130 hrs.
1200 hrs. 1600 hrs.

FRESH WATER: Available.

FUEL: Available.

REPAIRS: Facilities available.

TIME: GMT plus 8 hours.

GENERAL:
Storage: Warehouse: 46,900 sq.m.
Open Storage: 260,000 sq.m.

Exports/Imports: Oil, ore, coal, fertiliser, timber, steel, cement and containers.

DEVELOPMENTS: A new project, to build a berth capable of handling 200,000 ton vessels in Beilun Harbour, was recently approved by China's Government.

Beilun Harbour is one of the 3 harbour areas of Ningbo Port, which serves as one of the four international ocean shipping hubs along the coast of Mainland China.

Presently, Ningbo Port operates 19 berths, of which a 150,000 ton berth, a 100,000 ton berth and several 50,000 ton berths are in Beilun Harbour.

The new 200,000 ton berth will be one of the major steps to make full use of the deep-water coast line of Beilun Harbour. It will be the largest of its kind in China.

Construction of this new 200,000 ton berth is expected to begin in 1992, if the detailed plan is well-implemented. The new berth may begin to handle ships at the end of 1994.

Beilun Harbour is about 100 km. away from China's biggest city, Shanghai, and one of China's most productive areas, the Yangtze River Delta.

The channel of Beilun Harbour is generally deeper than 20 m. The shallowest point of the channel is 17.6 m., which means that a vessel of 200,000 tons can be accepted in the harbour.

According to an initial survey, the harbour has 13 km. of deep-water coastline for construction of berths for vessels of 100,000–200,000 tons. Harbour officials have indicated that they could build 30 more berths to raise the harbour's capacity to handle over 100 million tons of cargo per year.

Much of the imported iron ore, China buys from Australia and Brazil, are carried by 100,000 ton ships. When these ships reach Beilun Harbour, half of the cargo is unloaded, in order to reduce the draft of the ships, for eventual discharge at Shanghai's Baoshan Steel Mill's private berth.

SHIPMASTER'S REPORT: May, 1983.
Beilun

Port Limits: The port is part of Ningbo Port Complex and situated at approx. Lat. 29° 55.7' N., Long. 121° 52.6' E. Port consists of a pier accommodating 1 ship of 100,000 d.w.t. and a pier accommodating 2 ships of 25,000 d.w.t. – See B.A. Chart 1429.

Documents:
12 copies Crew List (preferably Chinese forms).
1 copy Customs List (Chinese form mandatory).
2 copies Health Declaration (Chinese forms mandatory).
4 copies List of Narcotics (free form).
2 copies Master's Report (Chinese forms mandatory).
12 copies Passenger List (free form).
4 copies Arms and Munitions List (free form).

Regarding Customs List: Following to be declared: tobacco, spirits, watches, cameras, radios, tape-recorders, T.V. sets, video recorders. Gold, silver jewels, foreign currency. All electronic equipment and cameras to be named with brand, number, etc.

Pilotage: Following received by cable from agents before arrival: "From outer sea steer to position Lat. 30° 10' 15" N., Long. 123° 03' 20" E. Then, course 218° to reach position Lat. 29° 45' 00" N., Long. 122° 40' 36" E. at 8.3 miles from Tung Ting Tae L/H bearing 326°. Then course 270° steering directly to Pilot Station between Lat. 29° 44' 30" N., – 29° 46' 00" N. – Long. 122° 20' 30" E. – 122° 22' 30" E. Use of other channels is forbidden. Please contact Pilots through VHF Channel 16 one hour before arrival Pilot Station."

Call: Ningbo Pilot VHF Channel 16. Pilot boards from pilot vessel which comes from Ningbo. Pilot vessel is same size as a large harbour-tug, white hull and long white superstructure. Funnel placed aft-part of superstructure, and painted in chinese colours – red band with yellow stars. Equipped with radar and VHF. Difficulties experienced in contacting Pilot on arrival and the difficulties are believed to be because of distance from the pilot vessels stationed in Ningbo and the ship waiting on the above Pilot Station.

3 Pilots boarded the ship, and the ship continued via the narrow but deep strait of Shih-Peng-Chiang.

Anchorages: Above designated pilotage area considered to be a good anchorage for large vessels. Minimum depths of 10 fathoms. Current setting NW and SE with rates up to 4 knots.

Restrictions: No information on restrictions upon entry. The Strait of Shih-Peng-Chiang and inwards to the port was found to be well equipped with lighthouses and other navigational aids (not shown on the chart). Shore based Decca-radars cover the area and give instructions to Pilots during navigation in these waters. The outermost of the radar station is situated in approx. position Lat. 29° 44.4' N., Long. 122° 18.3' E. Our vessel arrived at Pilot Station on LW. Echo-sounder was used and there was not found to be less water than charted.

Max. Size: The port is designed to accommodate 1 ship of 100,000 d.w.t. and 2 ships of 25,000 d.w.t. Minimum depth on the outer-pier said to be not less than 18 m. on LLW.

During ship's stay in Beilun at Outer Pier the LLW depth alongside the pier was found to be 22.30 m. Only measured by echo-sounder.

Health: No special requirements. Ship cleared by Health Authorities after arrival.

Radio: No special instructions. During voyage cables regarding ETA and arrival-conditions were sent to Penavico Beijing and Penavico Ningbo via Shanghai Radio XSG. When within range Ningbo Radio was used (XSN).

VHF: See "Pilotage".

Radar: See "Restrictions".

Tugs: 2 tugs of 3,200 h.p. stationed in port. Very efficient. Meet ships off the pier using tug's lines. They handle vessels "Japanese style" in making fast on ship's sides.

Berthing: The port consists of 2 piers built out into the sea, parallel to the coast. The piers are connected to the coast by a long bridge, estimated 3 km. long. The density of water was measured to be 1019 but varies.

The outermost pier is used for large vessels. It is equipped with a sonar docking system, which shows the distance between the pier and the ship's bow and stern, and the vessel's approach speed in cm. per second. This pier is for bulk cargo discharge only. It is well protected with large rubber fenders. The pier is high and fenders keep ship so far from the pier that most ships unable to use normal accommodation ladder. Necessary to use gangway at right angles to the ship. No gangway supplied from shore.

Cranes: The outermost pier is equipped with 2 large gantry cranes with grabs. They are Japanese built Hitachi-cranes 30 ton SWL. Grabs used are 9.5 cu.m. The cranes discharge from ship to a belt conveyor leading to storage facilities on shore. Estimated length of conveyor belt 3.5 km. During our stay the cranes did not work in wind force exceeding 10.8 m./sec., or in dense fog. Also not working during periods of rain.

The innermost pier is equipped with 2 plants designed for loading bags into ships. The plants are fed with bags from 2 belt conveyors coming from the storage/packing area on shore. The bags slide from the top of the plant to the ship's hold via a "snail".

None of the piers are designed for anything other than discharging bulk or loading bags. Maximum discharge rate unknown. Our ship, which was unloading potash was guaranteed 1,500 tons per day but more than 5,000 tons per day was experienced. Only one crane was used, and it was only working slowly, because of delays in the packing area. All cargo from the ship was bagged immediately after discharge.

Stevedores: Labour arranged by Agent. Working day and night without any stops, weather permitting.

Medical: Seaman's hospital in Ningbo about 45 km. from the port.

Density: Varying with tide but average 1019. Water discoloured by mud.

Fresh Water: Available from pipes on the pier. Delivery rate 18 t.p.h. Approximate cost 1.5 Yuan/Tons.

Fuel: No fuel on the pier. Not known if any bunker supply in the area.

Consuls: None.

Hatches: Operated by ship's crew.

Customs Allowances: On arrival each man had max. 1 bottle of spirits and 200 cigarettes. No objections was made to this. No cabins were searched. Neither were the Chief Steward's lockers with spirits, beer and slop chest checked. Chief Steward was allowed to take out any of the above mentioned goods for use during stay in port.

Cargo Gear: All cargo work carried out with shore gear.

Repatriation: Arrangements can be made. Crew members are transported to Shanghai by ship or train.

Time: GMT plus 8 hours.

Holidays: None.

Shore Leave: Crew members not allowed to go outside the gate situated on the shore end of the bridge connecting pier to shore. Distance from pier to gate about 3 km. There is a seaman's club in Ningbo. On request the club will arrange tours and sightseeing. The cost for a tour to Ningbo and return to the ship is 7.5 Yuan per man.

Identification Cards: Shore passes are issued on arrival. Each time a crew member steps ashore or comes aboard the ship, the shore pass and national passport should be shown to the Emigration Officer.

Watchman: An Emigration Officer is constantly on board checking passports each time people leave or come to the ship.

Telephones: Telephone placed on board for convenience of Agents, Stevedores, etc.

Regulations: Following received by cable from Agent before arrival: "Not permitted to use radio transmitters at anchorage or in port unless emergency. Must keep main engine, steering gear, rudder indicator, telegraph communication equipment, whistle/siren, gyro compass repeaters, radars and echo sounder in good condition, but not permitted to use any of them unless allowed by Pilot. Photographing and survey are not allowed in Chinese territorial waters, stay at anchorage or in port. The above regulations must be observed strictly."

Delays: No delays observed.

General: A ship's chandler from Ningbo is able to deliver all usual kinds of provisions.

Agent will arrange for laundry.

During the stay I was invited to see the packing area. The potash goes from the belt conveyor to 8 spouts, which weigh out the cargo and fill it into bags. Each spout capable of average 45 t.p.h. I was told that more equipment would be installed this year thereby doubling the packing capacity. Behind the packing house, there was a large area where ore of various kinds, which was discharged from large bulk-carriers at the outer pier, could be stored. The ore is reloaded into smaller ships at the inner pier using the same plants as when loading bags. These plants are designed for both bags and bulk. The loading rate of ore is said to be up to 4,000 t.p.h.

Agent: China Ocean Shipping Agency, Ningbo Branch. No agent's port office at Beilun. No telex available from Ningbo. Cables from ship to Owners/Charterers and vice versa are taken by car to/from Ningbo which makes communication slow and expensive.

SHIPMASTER'S REPORT: December 1985

Location: Beilun Oil Terminal in position 29° 57.4' N., 121° 48.7' E., about 45 km. by road from the town of Ningbo.

Chart: B.A. Chart No. 1429.

Documents:
Required on arrival:
*5 Crew Lists.
*1 Personal Effects List (see 'note' below).
*1 Health Declaration.
1 Vaccination List.
2 Cargo Manifests ('Nil' return if in ballast).
1 Drugs List.
*1 List of Arms and Ammunition.
*3 Copies of Application for Entry and Inspection.
*Indicates a Chinese form, others not acceptable.

On Personal Effects List individual crew members must declare radios, cassette players, cameras, watches, jewellery and currency.

No Stores Lists of any kind required. Bond is not sealed and crew issues may be made without restriction.

Formalities: All Officials board in Quarantine anchorage (believe occasionally in Ching Tang Yang). Pratique granted first and then vessel berths, remainder of formalities completed alongside.

Formalities are minimal and consist mainly of checking arrival papers, Register and Statutory certificates. No searches, crew inspections, etc. 2 Immigration Officers (Frontier Police) remain on board throughout vessel's stay and require accommodation.

Approaches/Pilotage: Telex from Agents prior to arrival with information as to approach track to follow and position of Pilot Station Anchorage – see "copy of telex" below. Communications with Pilot on VHF Channel 16.

Difficult from outer anchorage due distance involved. Pilot establishes contact from pilot vessel or an outward bound ship about 1 hour to 2 hours before boarding. Pilot boards within Shih Peng Chiang which is well sheltered. It should be noted that this approach to Ningbo Gang is the only one permitted to foreign vessels and passage is in daylight only.

Thereafter navigation to anchorages/berth is straightforward. No objections raised to use of any of the vessel's navigational equipment or charts. Pilot brought his own charts of certain sections which could be referred to but not copied.

From entrance to Shih Peng Chiang inwards there are a considerable number of navigation marks and lights not marked on B.A. chart.

There is a Harbour Radar System with a chain of stations which would appear to give complete coverage from outer approaches to Ningbo; this was not in operation on either our inward or outward passage. Pilot stated that radar itself was excellent (Decca) but standard of operators poor and information received on VHF link unreliable.

Copy of Telex: Ningbo approaching guidance as follows please steer from high-seas to position 28° 53' 00" N., 122° 26' 45" E. 10 miles East of Beiyushan lighthouse (disused), therefrom take course of 013 degrees to reach position 29° 45' 00" N., 122° 40' 36" E. at 8.3 miles from Dongtingshan lighthouse (bearing 326 degrees) stop Then A/C 270 degrees and steer directly to p/anchorage (situated between 29° 44' 30" N.-29° 46' 00" N., 122° 20' 30" E.-122° 22' 30" E.) and must await Pilot there stop Other channels forbidden stop Photographing and survey are not allowed after entering China's territorial waters stop Please contact Pilot through VHF Channel 16 one hour before arrival at p/anchorage and keep on listening VHF Channel 16 until Pilot aboard stop Not allowed to use radio transmitter at anchorage unless emergency stop Must keep main-engine steering-gear rudder-indicator telegraph communication equipment whistle/siren gyro-compass repeaters radar and echo-sounders in good condition but not allowed to use any of them after arrival at anchorage unless permitted by Pilot stop Above regulations must be observed strictly stop Please confirm upon receiving.

PENAVICO

Anchorages:

1. Outer (Pilot Station) Anchorage as given in pre-arrival telex (See "Approaches/Pilotage").

2. 'Mashi' Anchorage, to North and N.W. of Tieng-fing Shan (29° 52.5' N., 122° 13.6' E.), which is used for bad weather and typhoon shelter.

3. Quarantine Anchorage in area between Latitudes 30° 00.3' N. and 30° 02.4' N. and Longitudes 121° 48.0' E. and 121° 49.7' E. (approximate position).

Note: Quarantine Anchorage already marked on chart, centred on approximate position 29° 59.8' N., 121° 46.9' E. is used for small vessels only.

4. There were a number of vessels anchored in Ching Tang Yang between the Ore and Oil terminals, apparently awaiting cargo.

Also a crude oil storage tanker of approximately 220,000 d.w.t. on a permanent mooring here. Good holding ground reported at all anchorages.

Radio: Agents: China Ocean Shipping Agency, Ningbo Branch, 20 Xi Cao Ma Road, Ningbo, China. Telephone: 55375, 56449, 55744-573. Cable address: PENAVICO. Telex: 37028, 35289 NBPEN CN.

All communications prior to arrival by sat/comm telex without problem.

W/T traffic lists copied from Ningbo Radio (M/F only) and Shanghai Radio; both stations appeared to handle traffic efficiently. Good weather forecasts in English from Shanghai Radio. As mentioned initial VHF contact with Pilot difficult. Within the port, Agents may be contacted on VHF through 'Ningbo Harbour Radio'; call on Channel 16 and then switch to working Channel 12. Agents listen on Channel 12 but this is the preferred method of contact. Use of main transmitter prohibited after arrival at Pilot Station, as is use of sat/comm.

When in port all cables and telex messages are required to be routed through Agents; these can be passed by VHF. If Agent has to collect/deliver messages it can take some time due to distances involved – all port offices and telex facilities are at Ningbo town.

All Chinese personnel dealing with vessel, i.e. Pilot, Agents and Port Officials spoke excellent English.

Tugs: 4 tugs available of 3,200 h.p. 2 tugs used when berthing and unberthing, tugs' lines used. Tugs well handled to Pilot's instructions. It was noted that Chinese tankers of about 20,000 d.w.t. berthed/unberthed without tugs.

Berthing: Vessel moored to Berth No.2. Conventional berth (See "Plan") with good mooring points and fendering. Ship's gangway used.

Berthing and unberthing daylight only at any state of the tide; berthing in wind up to Force 5/6, unberthing up to Force 8 (Pilot's estimate).

No mooring boats; all lines passed by messenger with winches adjacent to each shore bollard (except for springs). Offshore anchor used.

Shore based berthing approach aid on Berths No. 1 and No. 2. Visual display on top of jetty house gives speed of approach (cm./sec.) and distance off (metres) of each end of vessel. No details available.

Strong tidal streams (probably up to 5 knots) but run along line of berth, i.e. 134° – 314° and did not cause any difficulties.

Berth exposed to North and N.W.; a Northwesterly gale gave rise to some swell movement.

Maximum permitted draft on berth given variously as 9.0 m. and 12.0 m. Echo sounder indicated a minimum depth of approximately 15.0 m. at LW but not permitted to sound round the vessel.

Cargo Facilities: Cargo hoses on Berth No. 2 all of 6 in. diameter and handled by ship's equipment and small (mobile) shore crane.

An English speaking interpreter on duty at jetty head throughout vessel's stay alongside.

Communication between jetty head and pump station/tank farm appeared to be slow and difficult.

Berth No. 1 (of similar construction to No. 2 – See "Plan") is understood to handle only crude oil imports from North China; apparently all by Chinese tankers.

Berth No. 2 handles all export products. Understand only products available are gas oil, gasoline, naphtha and fuel oil. A cargo of approximately 20,000 tonnes of gas oil is exported each month. No information on other grades.

Berth No. 3 is for LPG. No information available.

The previously mentioned 220,000 d.w.t. storage tanker (Chinese) (See "Anchorages") moored in Ching Tang Yang is understood to be for transhipment of crude oil (from North China) for export. Equipped with Yokohama type fenders on starboard side. No other information available.

Ballast Facilities: No ballast may be discharged overboard without Harbour Master's permission. This is virtually automatic in case of segregated/permanent ballast.

Permission to discharge clean cargo tank ballast must be requested in writing and ballast water is subjected to analysis before permission is granted. Analysis takes about 6 hours.

Dirty ballast or ballast which fails analysis, may be discharged ashore. Receiving rate approximately 250 cu.m.p.h., maximum capacity unknown. There is a charge for this, understood to be 1.5 Yuan/ton.

Medical Facilities: Hospital at Ningbo. Transport provided by Seamen's Club.

Fresh Water: Available on jetty at cost of U.S.$1.00/ton. Rate and quantity unknown. Also available by barge at Quarantine and Ching Tang Yang anchorages but 3 days' notice required. Cost unknown.

Fuel: Agents advise that marine diesel and also fuel oil bunkers are available but minimum of 7 days' notice required.

Repairs: No information on facilities available. Harbour Master's permission required for immobilisation of main engines.

Cargo Surveyors: Zhejiang Import & Export Commodity Inspection Bureau who attended for final ullaging and sampling were efficient.

Repatriation: No difficulties with repatriation of sick crew members or arranging routine changes. It takes 1 to 2 days to arrange visas and Agents will only arrange flights as far as Hong Kong. Airline Prepaid Ticket Advice accepted.

Shore Leave: Allowed. Passes issued on arrival by Immigration (must be returned). Transport provided by Seamen's Club at Ningbo and arranged through Agent.

General: Chandler: Not used. Understand meat/fish available at any time. Vegetables and salad seasonal.

Laundry: Available. Not used. Reputed to be good quality service and fast.

SHIPMASTER'S REPORT: April 1992.

Berth: Vessel (50,000 d.w.t.) called for loading unleaded Mogas, after call at Dalian.

Vessel anchored at Xia Qi Pilot Anchorage to await Pilot and berth. Berth: Shunsan No.3. Hose: 1×10 in. Loading rate: 2,000 cu.m./hr.

Documents: On Arrival:

6 copies Crew List (IMO form accepted).

4 copies Ship's Particulars (free form).

1 copy List of Narcotics (free form).

4 copies Application for Discharge of segregated ballast water into sea (free form).

As Ningbo was 2nd port in China, all Customs documents were handed over to Customs in a sealed envelope.

On departure:

4 copies Crew List (only if crew changes).

1 copy Maritime Declaration of Health for departure of ship (Chinese form).

1 copy Report of Clearance (Chinese form).

1 copy Report of Chinese Currency (Chinese form).

All Chinese forms supplied by Agent.

Entry Inspection: Carried out while vessel was anchored off berth by "Joint Inspection Team". 10 officials representing Customs, Immigration, Harbour Authorities, Quarantine Doctor and Agency. They cleared vessel before berthing.

Agents stayed on board while vessel was alongside.

On departure, same "Team" came on board for clearance.

Communications: Agent: China Ocean Shipping Agency, Ningbo. Cables: Penavico, Ningbo. Telex: 37028 nbpen CN.

All communications to and from Agent via Satcom without problems.

Following telex received from Agent before arrival:

Quote

Ningbo approaching guidance as follows: Please steer from high-seas to position Lat. 28° 53' 00" N., Long 122° 26' 45" E., 10 miles East of Beiyushan Lighthouse (disused), from there take course of 013° to reach position Lat. 29° 45' 00" N., Long. 122° 40' 36" E., 8.3 miles from Dongtingshan Lighthouse (bearing 326°). Alter course to 270° and steer directly to Pilot Anchorage (situated between 29° 44' 30" N. and 29° 46' 00" N., and 122° 20' 30" E. and 122° 22' 30" E.) and must await Pilot there. Other channels are forbidden. Photographing and surveys are not allowed after entering China's territorial waters. Please contact Pilot through VHF Channel 16 one hour before arrival at Pilot Anchorage, and keep listening on VHF Channel 16 until Pilot boards. Vessel not

allowed to use radio transmitter at anchorage, unless emergency. Vessel must keep main engine, steering gear, rudder indicator, telegraph communication equipment, whistle/siren, gyro compass repeaters, radar and echo-sounding in good condition, but not allowed to use any of them after arrival at Pilot Anchorage, unless permitted by Pilot. The above regulations must be observed strictly.
Unquote
(Radar: Inward and outgoing ships seem to use radar. We switched on the radar when inbound, due to rain and fog. Radar was switched on when vessel left berth.)
Shore Leave: 2 immigration guards stayed on board during stay. Shore leave allowed from sunset to midnight. Shore passes were returned before sailing.
Delays: The number of cargo surveyors, pilots and tugs are not sufficient, which can delay the vessel.

Joint Inspection Team only works from 0800 hrs. – 1700 hrs. If the Joint Inspection Team has been told by Agent that vessel will be ready for inspection at i.e. 1600 hrs., and ship is delayed more than 30 minutes, they will leave for inspection on another ship.

QINGDAO (Tsingtao): 36.04 N. 120.19 E. (See Plan)

Also see "General" before first port.
DOCUMENTS: See "Dalian".
PILOTAGE: Available 24 hours. Pilots will board at the Pilot Station.
ANCHORAGE: No. 1 Quarantine Anchorage (Former No. 21 Anchorage):
Lat. 36° 00' 46" N., Long. 120° 20' 41" E.
Lat. 36° 00' 40" N., Long. 120° 21' 58" E.
Lat. 36° 00' 12" N., Long. 120° 20' 51" E.
Lat. 36° 00' 12" N., Long. 120° 21' 42" E.
Depth: 31 m. – 44 m.
Bottom: Mud and sand with good holding ground.
Oil Tanker Anchorage (Former No. 23 Anchorage):
Lat. 36° 05' 42" N., Long. 120° 13' 06" E.
Lat. 36° 05' 42" N., Long. 120° 14' 00" E.
Lat. 36° 04' 51" N., Long. 120° 13' 06" E.
Lat. 36° 04' 51" N., Long. 120° 14' 00" E.
Depth: 10 m. – 37 m.
Bottom: Mud with good holding ground.
Inner Anchorage (Former No. 22 Anchorage):
Lat. 36° 06' 00" N., Long. 120° 14' 30" E.
Lat. 36° 06' 00" N., Long. 120° 16' 50" E.
Lat. 36° 04' 18" N., Long. 120° 14' 30" E.
Lat. 36° 04' 18" N., Long. 120° 16' 50" E.
Depth: 5 m. – 38 m.
Bottom: Mud and sand with good holding ground.
RESTRICTIONS: Harbour manoeuvring speed: 10 knots.
Tidal range: Max. 4.75 m., average 2.78 m.
Possibility of entry or sailing after sunset: Possible.
Masters are strongly recommended to delay vessel's movements (Entry or sailing) if the visibility is poor.
MAX. SIZE: LOA 265 m., beam 39 m. and draft 14.0 m.
Max. draft for oil tankers 20.5 m.
VHF: Qingdao Radio on Channel 16 throughout 24 hours. Pilot on Channel 9. Port Operations on Channel 11.
Report System: When vessel is approaching Chaolian Dao (35° 53' 36" N., 120° 52' 48" E.), Master should call the Harbour Master through Qingdao Radio (VHF Channel 16). The following is to be reported: Vessel's name, call sign, flag, ETA, draft fore and aft, if any dangerous cargo onboard and quantity, request of Pilot, permission for anchoring area, etc.

When vessel passes Dagong Dao (35° 57' 36" N., 120° 29' 30" E.), Master should report to Harbour Master for further information.

Master should also contact the Traffic Control Centre of Qingdao Port, reporting present ship's position, asking for sailing guidance. If he fails to do so, there might be a penalty.

After anchoring, the anchor position should be reported to the Agent and the Harbour Master.
TUGS: 2 × 1,000 h.p., 2 × 1,670 h.p. and 5 × 3,200 h.p.

Qianwan District: Only Berths No. 63, 64, 65, 66, 67 and 68 have been completed and are in operation.

Qianwan is to some extent an unopened area for foreign vessels. Extra charges will be levied by Immigration, Customs, Harbour Master and Quarantine. The party who appoints the berth will bear all extra charges.
CRANES: 1×500 ton floating crane.
Also see "Berthing".
TANKERS:
Huangdao Eastern/Western Oil Wharf – Lat. 36° 04' 00" N., Long. 120° 13' 30" E.
Huangdao Oil Storage Area Oil Wharf – Lat. 36° 03' 00" N., Long. 120° 14' 20" E.
See "Berthing".
FRESH WATER: Available at berths and at anchorage.
FUEL: Available at berths and at anchorage.
REPAIRS: Facilities available.
AIRPORT: Qingdao airport.
GENERAL:
Stores: Contact Qingdao Foreign Supply Corporation.
Storage: Warehouse: 57,574 sq.m.
Open Storage: 340,253 sq.m.
Imports: Steel, ore, fertiliser, timber and other general cargoes.
Exports: Crude oil, peanut oil, groundnut cake, corn, cotton, hardware and other general cargoes.

SHIPMASTER'S REPORT: September 1979.
Documents: On arrival: 1 Report on Entry, 4 Crew Lists, 1 Import Cargo Manifest, 1 List of specified Articles, Currency, gold, etc. and all ship's certificates.
Navigation: BA Chart 876. On passing Cha Lien Tao Island, call "Qingdao Radio" for entry instructions. The outer quarantine anchorage for which Pilot is not compulsory is in position Lat. 36° 02' N., Long. 120° 18.3' E. The approach is straightforward and the lighthouses are in good working order. The authorities board at the outer anchorage via pilot ladder from a tug. The use of radar in the harbour area must be sanctioned by Pilot or Harbour Authorities. All other navigational gear may be used as required.
Communications: Both Agents and Harbour Authorities have VHF with most Channels. When vessel is at Inner anchorage, Agency contact vessel twice daily for berthing times, etc.
Currency: Local Yuan available.
Draft: Up to 35 ft. alongside at discharging berth – in approach entrance off Horseshoe Reef up to 34 ft. depending on tide.
Agents: China Ocean Shipping Agency are sole Agents. They visit vessels twice daily and are also in VHF contact from their office. Communications with other countries from Qingdao is by cable only, telex is due to be installed next year.
Medical: Hospital and doctors available.
Laundry: Excellent and not expensive.
Provisions: Not expensive but very limited in both content and availability. Not to be relied on, especially if in port for short stay.

Fresh Water: Alongside from quay – 35 t.p.h. Also available at anchorage from water barge.
Time: GMT plus 8 hours.
Immobilisation: Permitted by arrangement with Harbour Authorities.
Opening/Closing Hatches: Either ship's crew or stevedores. In the case of the latter, a charge is payable.
Garbage: Removed when requested by small barge.
Repatriation: Difficult at present as no regular air passenger flights from Qingdao. Only way would be overnight train journey to Beijing then flight to Europe.
Repairs: Possible, large repair shops and naval yards in port area.
Bunkers: Available to Chinese vessels. Gas oil also available if adequate notice given.
Cargo Working: Discharged 24,000 m/tons sulphur in 6.75 working days, using shore cranes and grabs. Discharged into railway wagons on twin rail tracks also into large "silo" adjacent to the berth. Good standard of crane operation. Cargo tonnage discharged determined by draft surveys performed by Government surveyors and ship's staff. Statement of facts drawn up by Agents.
Watchmen: One gangway guard for inspecting Crew members' passes.
Tugs: Four large tugs – one of 3,000 h.p.
Pilots: Usually three on each vessel – reasonable English.
Density: Varies between 1020 and 1025.
Tours, etc.: Tours are arrangeable via the Seaman's Club and are good value. There are no shore leave restrictions and cameras may be used. Inter ship visiting is allowed also film and book exchanges between ships.

Shore leave is possible from the Inner anchorage by tug.
Mail: From Europe by air freight via Tokyo and Beijing takes 7 days.
Bond, etc.: Not sealed or inspected by Authorities. Stores Lists NOT required.
Floating Crane: Available, lifts estimated 150 tons.
General: Stevedore labour appeared plentiful – delays are occurring due to large increase in foreign trade. New berths are being planned and dredging is taking place continuously. Officials, Agents, etc. most pleasant and helpful and very eager to learn English. It is advisable to make a 'sea protest' to the Harbour Authorities if any bad weather experienced on voyage.

SHIPMASTER'S REPORT: June 1981.
Berth: Huang Dao Oil Terminal. 36° 04' N., 120° 13.5' E.
Departure Draft: Forward 11.7 m. Aft 12.1 m.
Charts: BA 1255, 876, 857. Chinese (up to date) 9106, 9408, 9432.
Approach: Only by 'defined routes':

from: 35° 56' 24" N., 121° 05' 00" E. or 35° 43' 15" N., 120° 53' 09" E.
Course 270°T Course 338°T
to 35° 56' 24" N., 120° 46' 42" E.
then Course 283°T
to 36° 02' 00" N., 120° 18' 16" E. (Pilot boarding/Arrival Inspection Anchorage)

and reverse courses to same positions outward.
Entry: Arrival inspection formalities carried out at above anchorage, by boarding party of 8 persons from Agents, Customs, Immigration and Harbour Authority. We arrived at 1700 hrs, and inspection party boarded at 0930 hrs. next morning. China Ocean Shipping Agents, representatives spoke very good English and most helpful. Chinese documents required, including crew declaration form but Bonded Stores list not required and Bond not sealed. After inspection, about 30 minutes, shifted to Inner Tanker Anchorage with 2 Pilots.
Agents: China Ocean Shipping Agents, Cable: Penavico 2213 Qingdao.
VHF: Channel 16 to Qingdao Radio who will give you a channel to Agents, usually Channel 11.
Anchorage: Inner Tanker Anchorage is 1 mile North of Oil terminal with varying depths from 11 m. to 30 m.
Berths: Concrete dolphin structure, adequately fendered. West berth max. draft 12 m., berth port side to, approach from North. East berth max. draft 13 m., approach from South rounding No. 23 buoy to starboard when coming from Inner anchorage, Port side to. No shore gangway. Connection with flexible hoses so derrick required. Usual moorings. Head and stern line dolphins have small winches on them but out of order so mooring gang reluctant to handle wires.
Berthing/Unberthing: Competently carried out by 3 Pilots and 2 tugs. Tugs, Nos. 10 and 11 are 3,200 h.p. Gather vessels of our size (55,000 d.w.t.), and above only depart during daylight and on HW.
Cargo: Loaded Shengli Crude API. 23.3, loading temperature 40°C. Terminal state maximum loading rate 2,500 tonnes per hour. We achieved 1,980 t.p.h. Connection is by 2×10 in. 'Y' connectors at manifold connected to flexible hoses. After completion documents take 3/5 hours to prepare and bring on board.
Ballast: As first cargo after dry dock we received permission from Harbour Authority to deballast to sea although pumped tank bottoms ashore just in case. I gather that it is normal to deballast to shore reception at maximum rate of 600 t.p.h. and believe charge per ton is quite high so it is prudent to arrive with minimum dirty ballast.
Repairs: Appear to be quite readily available. We had some boiler tubes welded and Chief Engineer reported that the work was competently carried out. Chinese surveyors also act on behalf of Lloyd's.
Fresh Water: Available at anchor from powered barge at 50 t.p.h. and also available on terminal but pressure is unreliable.
Shore Leave: Allowed from anchorage and terminal. Request for launch to be passed to Agents by VHF before 1100 hrs. and launch alongside around 1230/1300 hrs. and returns from shore between 1700/1900 hrs. There is a Seamen's Club with a new hotel attached which was opened during our stay. Seamen's Club will arrange football matches, and various tours. International telephone calls can be made from Agents' office.
Garbage: A garbage collection boat calls every other day whilst at anchor.
General: During our 16 day stay in June there was fog during some part of nearly every day, occasionally dense.

SHIPMASTER'S REPORT: May 1989.
Vessel: 35,000 g.r.t., 64,440 d.w.t. Vessel discharged 47,250 tonnes of bulk wheat. Length of stay 38 days.

Vessel arrived with a draft of 12.0 m. and proceeded to Pier No. 8 – Berth No. 49 and lightened to a draft of 9.6 m. She then proceeded to Pier No. 1 – Berth No. 3.

Self-sustaining vessels may lighten into barges at the anchorage.
Documents: Officers from Harbour Master's office, Quarantine Department, Customs, Immigration and Agent's office board the vessel upon arrival at the Inner Quarantine Anchorage.

The following documents are required on arrival:
2 Reports of Entry for Foreign Going Vessels.
2 Reports of Articles Restricted for use in port.
5 copies Crew List (IMO Form accepted).
4 copies Passenger List (Not required if no passengers on board).
2 Lists of specified articles (Foreign currencies, gold, silver belonging to ship or members of crew).
1 copy Maritime Declaration of Health.
1 copy Ammunition List (Not required if no ammunition on board.)
1 copy Bonded Stores List.
3 copies Ship's Particulars.
1 copy Vaccination List (required if the vessel coming from a suspected country).
2 copies Ports of Call within last 6 months.
1 copy Import Manifest.
1 copy Bills of Lading.

Last Port Clearance and all ship's certificates submitted for examination on board.

After inspection, Harbour Master's officers issue 30 days, 60 days, or 90 days optional Tonnage Dues Certificate as requested by the Master.
Pilotage: Compulsory. Pilotage available throughout 24 hours. Master should send ETA at Chaolien Dao to Harbour Master through Qingdao Radio 24 hours in advance, any change of ETA must be advised. VHF Channel 16 may be used to contact Pilot Station after passing Chaolien Dao. Within pilot area limited with a circle 3 cables radius centered on position Lat. 36° 02' N., Long. 120° 18.02' E., 1 senior Pilot and 1 junior Pilot board the vessel from a tug boat, which displays pilot signal while on duty.
Anchorage: Vessels may anchor South of pilot area, according to Pilot's instructions, without a Pilot, otherwise Inner Quarantine Anchorage is used. In case of congestion, West of Inner Quarantine Anchorage may be used. Good holding ground.
Health: Vessels should hoist 'Q' flag on arrival. Pratique is obtained at the Inner Quarantine Anchorage on arrival.
Radio: Qingdao Radio (XST).
VHF: Qingdao Radio on Channel 16, Pilot on Channels 16 and 14, Sinoagent on Channel 74 and Penavico on Channel 11.
Tugs: 7 × 3,200 b.h.p. tugs operating in the port. Tug's lines are used for berthing and ship's lines for unberthing. Tugs join the vessel before entering breakwater. Number of tugs to be used depends on Pilot's advice and Master's demand. Generally, 2 tugs used for large vessels.

Berthing:

Pier No.	*Berth* No.	*Cranes & Use*
1	1, 2	8 × 10 tons and 1 × 15 tons. Coal cargoes.
	3	5 × 10 tons. Grain cargoes.
	4, 5, 6, 7,	No cranes. Bulk and general cargo.
2	8, 9, 10, 11, 12, 13, 14	Equipped with cranes. General cargo and ore cargoes.
3, 4, 5		For naval vessels.
6	36, 37, 38	4 × 10 ton. General cargo and No. 38 generally for bulk sand.
7		Coal loading terminal for small size vessels.
8	45	Clean bulk cargo.
	46	Bulk ore.
	47	Bulk ore and logs.
	48	Logs and large foreign passenger vessels.
	49, 50	Lightening deep draft vessels.
	50, 51	Sugar and occasionally foreign passenger vessels.
		Berths No. 45, 46 and 47 equipped with 13 × 10 ton cranes.
		Berths No. 49, 50 and 51 equipped with 11 × 10 ton cranes.

Berth No. 52 (between Piers No. 5 and 8) and Berth No. 53 (at the East end of Pier No. 5) are used by container vessels. Also the berth between Piers No. 6 and No. 1 is used by Chinese passenger liners. The berth between Piers No. 1 and No. 2 is for tugs and passenger catamarans. The berths between Piers No. 2 and No. 3 and Piers No. 3 and No. 4 are for naval use.

All shore cranes are on rails and all cargo piers except Berths No. 4 and No. 48, are rail-served. Cargo can be handled direct between ship and train.

Stevedores: Gangs are arranged by the Agent. Crane operators are competent. Hold sweeping is done by stevedores. Generally a few of the foremen can speak English.
Medical: 24 hours' advance notice is required for medical attention. Arranged by Seamen's Club through Agent. All hospital facilities available. Dental facilities available.
Density: 1022.5 at low water and 1024 at high water observed by ship but draft surveys at 1024 all the time.
Fresh Water: Good quality water available by pipeline at Piers No. 1, 2 and 6 and by barge at all berths at the other piers and at the anchorage. Rate 50 tonnes/hr. Cost U.S.$ 1.0 per ton by pipeline and U.S.$ 3.0 per ton if supplied by barge.
Fuel: Fuel comes from Dairen and all grades are not available at all times. Appropriate advance notice is required. Minimum supply quantity for fuel oil and diesel oil is 100 tonnes. MDO is not available, only LDO and HDO available at Qingdao.

Consuls: No consuls locally. Nearest at Beijing.
Dry Docks/Repairs: One dry dock for vessels up to 30,000 d.w.t. at Fushansuo Bay. All kinds of temporary repairs can be undertaken to foreign vessels.
Surveyors: Only Z.C. China Classification Society acts on behalf of other classification societies when authorised.
Gangway/Deck Watchman: Gangway watchman compulsory. Maintained by ship's crew.
Hatches: Opening/closing hatches is optional. If by ship's crew, Master has to sign a formal paper on arrival.
Customs Allowances: For the first 10 days, 2 cartons of cigarettes and 1 bottle spirits for each crewman. 15 cartons of cigarettes and 5 bottles spirits for the Master. Seal can be opened on request after 10 days.
Repatriation: Possible.
Airport: Located at about 37 km. N.W. of Qingdao. It only has international connections with Hong Kong. Regular flights once a day on Monday, Wednesday and Saturday, sometimes there is an extra flight on Sunday by China Airlines only.
Time: GMT plus 8 hours. Summertime is kept from first Sunday after April 10th until September.
Communications: Cable, telex, direct telephone and Fax available for all over the world from the agent's office. Direct trunk calls also available from large hotels.
Shore Leave: Permitted from 0700 hrs. – 2400 hrs. with I.D. and shore passes which are issued by Immigration Officer on arrival. The shore passes are valid for all Chinese ports to be called at consecutively. Shore leave is also possible from the Inner Quarantine Anchorage by launch on request.
Regulations: If shifting more than 100 m. or from berth to berth, use of Pilot is compulsory.

Approval must be obtained from the Harbour Superintendency Administration in advance through Ship's Agent, if the following are to be undertaken whilst in port.

1. Hull painting
2. Deck cleaning and washing
3. Discharging of ballast water and bilge water (including tail shaft water).
4. Discharging of hold washings (including crude oil tanker washing).
5. Use of oily water separating equipment to dispose of any sewage containing oil.
6. Using any type of dispersants.
7. Discharging sewage and waste oil into reception facilities.
8. Funnel cleaning and boiler water discharging.
9. Discharging of any harmful or corrosive substances into the harbour.
10. Whistle testing.

Approval is generally received from the Agent orally.
Provisions & Supplies: Limited kinds and amounts available at low prices through ship's Agent (ships supply branch). Chinese charts also available.
Garbage: Collecting service is available by barge at anchorage and by truck at berth if requested.
Agents: There are 2 governmental agents at Qingdao.

1. China Ocean Shipping Agency Co. Cables: Penavico–Qingdao.
2. China Marine Shipping Agency Co. Cables: Sinoagent – Qingdao. Telex 32132 TRSQ DCN.

Both Agents have VHF.

AUTHORITY: Qingdao Harbour Administration Bureau, 4 Dai Gang Yan Road, Shi Nan District, Qingdao, People's Republic of China. *Tel:* 86-532-2982024. *FAX:* 86-532-2823053. *Contact:* Bai Wen-Xuan, Deputy Director.

QINHUANGDAO (Chinwangtao), including Shanhaiguan: 40.00 N. 119.30 E. (See Plan)

Also see "General" before first port.
NOTICE: Chinese Notice June 1984.

Anchorages with bearings and distances from Nanshan Tou light (Lat. 39° 54.6′ N., Long. 119° 36.9′ E. approx.):

(a) Oil tanker anchorage. Sector between bearings 100° and 110° and distances 3.0 miles and 7.0 miles.

(b) East Anchorage. Sector between bearings 110° and 135° and distances 3.0 miles and 7.0 miles.

(c) West Anchorage. Sector between bearings 165° and 190° and distances 3.0 miles and 5.0 miles.

PILOTAGE: Compulsory. Pilotage is undertaken day and night. Pilot boards at the Pilotage Quarantine Anchorages.
ANCHORAGES: There are 3 anchorages in the Port of Qinhuangdao.

1. Eastern Pilotage Quarantine Anchorage:
Location: A sector area with Nanshantou Lighthouse as its centre, lying between the true bearings of 119° and 135° and between two arcs of 3 miles and 7 miles in radius.
Depth: 14.0 m.
Bottom: Mud and sand.
Vessel size: 50,000 d.w.t.

2. Western Pilotage Quarantine Anchorage:
Location: A sector area with Nanshantou Lighthouse as its centre, lying between the true bearings of 165° and 190° and between two arcs of 3 miles and 5 miles in radius.
Depth: 12.0 m.
Bottom: Mud and sand.
Vessel size: 35,000 d.w.t.

3. Anchorage for Tankers:
Location: A sector area with Nanshantou Lighthouse as its centre, lying between the true bearings of 110° and 119° and between two arcs of 3 miles and 7 miles in radius.
Depth: 14.0 m.
Bottom: Mud and sand.
Vessel size: 50,000 d.w.t.

RESTRICTIONS: Entry and departure possible after sunset.
Draft limitation in channel is 13.5 m.
MAX. SIZE: General Cargo: LOA 200 m. and draft 11.5 m.
Coal and Oil: LOA 230 m., beam 22.5 m. and draft 12.5 m.
VHF: Qinhuangdao Radio on Channel 16 throughout 24 hours.
TUGS: 7 × 3,500 h.p. and 3 × 167 h.p.
BERTHING:

	12.0	3×35,000 d.w.t.
Crude Oil Terminal (3rd phase)		1×100,000 d.w.t.
	13.5	2×35,000 d.w.t.

SHIPMASTER'S REPORT: March 1981.
Lat. 39° 54.6′ N., Long.: 119° 36.7′ E.
Chart: BA No. 3378.
Documents:
5 copies Crew Lists.
1 copy Import Manifest.
1 copy List of Specified Articles belonging to Ship and/or Members of Crew.
1 copy Maritime Declaration of Health.
Anchorage: In case there is ice at anchorage in Winter it is advisable to anchor further off and not pay out too long scope of chain.
Also see "Notice".
Pilotage: Pilotage is compulsory for foreign vessels entering and leaving the port. Pilots board ships at pilotage/quarantine anchorage. Pilotage is undertaken day and night. Pilot boat (tugboat) displays the International Pilot Signal when on pilotage duty. There are about 12 Pilots available. Pilots can speak and understand English sufficiently.
Channels: In port there are three channels. Original channel, new channel and oil pier channel.

Original channel is about 1.7 miles in length, 100 m. in width and 9 m. to 10.4 m. depth. It is used bys berthing and leaving the large pier and the small pier.

New channel about 0.9 miles in length, 100 m. in width and 9.4 m. to 10.4 m. in depth. It is a branch of the original channel and is used by ships berthing and leaving the new pier.

Oil pier channel is about 2 miles in length, 100 m. in width and 10.7 m. in depth. It is used by ships berthing and leaving the oil pier.

Berthing:

Name			Capacity
Small pier	Berth No. 2		1 × 5,000 ton
Large pier	Berth No. 4		1 × 7,000 ton
Large pier	Berth No. 5		1 × 10,000 ton
Large pier	Berth No. 6		1 × 10,000 ton
Large pier	Berth No, 7		1 × 10,000 ton
New pier	Berth No. 8	Pier B	1 × 10,000 ton
New pier	Berth No. 9		1 × 10,000 ton
New pier	Berth No. 14	Pier A	1 × 10,000 ton
New pier	Berth No. 15		1 × 10,000 ton
Oil pier	East Berth		1 × 10,000 ton
Oil pier	West Berth		1 × 10,000 ton

Radio: Foreign ships calling at this port may according to International Radio Regulations communicate with Qinhuangdao Coastal Radio Station.

Name	Qinhuangdao Radio
Call sign	XSE
Medium frequency (kHz)	486
Hours of service	0000 – 2400
High frequency (kHz)	8484
Hours of service	0600 – 2400
Time of traffic list	At H + 10 each given hour.

There is VHF Channel 16 at port control and Channel 11 at 'Penavico' Agents. To call Agents first call port control and then change to Channel 11 after informing the vessel's intention to use VHF.

General: The port is equipped with lifting machinery, tippers, universal lifting machines, belt conveyors. Cargo is unloaded directly into railway wagons. Coal loading is done by conveyor belts. Hatches are opened by ship's crew. Stevedores are not competent in derrick work. Stevedores work in three shifts of eight hours each commencing at 0600 hours. Discharging rate is fully dependent on availability of wagons. There are 11 tugs available. Fresh water and fuel are available by boats. Limited provisions are available.

There is a Seaman's club in the city, well equipped with recreation facilities. A trip to Great Wall of China can be arranged through the club.

SHIPMASTER'S REPORT: June 1990.

Port: Sub-Port of Shanhaiguan.

Location: 10 miles E.N.E. of Qinhuangdao.

Exports: The Port is now a major exporter of coal and oil. China exported 15.29 million tons of coal during 1989, and a majority passed through this Port.

The Port also exports soyabean meal, maize and pig iron, in small geared vessels up to a maximum draft of about 6.5 m., mostly working cargo at Berth No. 1.

Radio: ETA to be sent to "Penavico Qinhuangdao".

Pilotage: Pilot boards at Qinhuangdao.

After passing Joint Inspection, vessel is piloted to an anchorage off the Port of Shanhaiguan, pilot then returns to Qinhuangdao.

Dockyard pilot, with the assistance of Dockyard and/or Qinhuangdao tugs, berths the ship.

Health: Formalities take place at Qinhuangdao Quarantine Anchorage. Standard Chinese forms used.

Berthing:

Berths No. 1 – 4: Length 450 m. Max. draft 6.5 m.

Berths No. 5 – 6: Length 300 m. Max. draft 6.5 m.

Cranes:

Berths No. 1 – 4: One crane for repair work.

Berths No. 5 – 6: Two cranes for repair work.

Mobile cranes available.

Fuel: Available from Qinhuangdao by barge.

Dry Docks:

1 dry dock 240 m. × 38 m. × 6.0 m. over sill. 2 cranes available.

1 dry dock 170 m. × 28 m. × 6.0 m. over sill. 2 cranes available.

1 × 63 tonne crane and 6 × 25 tonne cranes available.

Shan Hai Guan Shipyard, Tel: 551131. Telex: 27131 QH SHG CN. Fax: 0335-551350. The Shipyard also monitors VHF Channel 12.

General: Telephone, Fax and Telex facilities available.

Agency and ship chandler services are from Qinhuangdao, about 45 minutes drive.

The Port is an hour's walk from the seaward end of the Great Wall of China, described as "The Old Dragon's Head".

On sailing, a Qinhuangdao pilot is required to take the vessel to the Joint Inspection Anchorage. Only after Outward Clearance has been completed, can the vessel sail, which may cause delay.

AUTHORITY: Qinhuangdao Port Adminstration, 6 Haibin Road, Qinhuangdao, The People's Republic of China. *Tel:* 34812-3522. *Telex:* 271051 QH PEN CN. *Cables:* 2156 Qinhuangdao. *Contact:* Huang Guo-sheng, Port Director.

QINZHOU: 21.43 N. 108.35 E.

LOCATION: Lat. 21° 43' 30" N., Long. 108° 35' 12" E.

DOCUMENTS: See "Documents" before first China port.

PILOTAGE: Compulsory. Provided by Qinzhou Port Pilot Station. Pilots communicate with vessel on VHF Channel 16, if no answer, contact Qinzhou Radio by VHF Channel 16. Notice of ETA and request for Pilot must be made to the Pilots at least 24 hours in advance.

APPROACHES: *Channel:* The channel is 14.2 miles long, 6.6 m. depth, the minimum width is 110 m., vessels with draft up to 9.5 m. can pass on high tide.

ANCHORAGE: The anchorage is 1,600 m. × 1,600 m. square, centre point is Lat. 21° 29' 28" N., Long. 108° 31' 51" E.

VHF: Port only has a VHF station at present, vessels must contact Qinzhou Port Radio by VHF before arrival at the anchorage.

TUGS: 1×2,600 h.p. tug available at present.

BERTHING: The jetty is 360 m. long and 9.4 m. depth. It can accommodate 2×10,000 ton vessels at one time.

CRANES: There are 5 cargo cranes on the jetty with a maximum capacity of 16 tons.

FRESH WATER: Available. Contact Qinzhou Port Shipping and Cargo Agency for supply.

FUEL: Available. Contact Qinzhou Port Shipping and Cargo Agency for supply.

DEVELOPMENTS: There are 7 jetties (2,000 ton to 10,000 ton class) under construction. Two container terminals and 2 oil terminals are planned.

AGENCY: Qinzhou Port Shipping and Cargo Agency, 1st Wen Feng Six Road, Qinzhou City, Guang Xi, China. Tel: (0777) 2830819, 2822485. Fax: (0777) 2830819. Telex: 482081 QZPSA CN. Cables: 8307 Qinzhou.

SHIPMASTER'S REPORT: July 1994.

Location: The port opened in February 1994 and is located in position Lat. 21° 49' 30" N., Long. 108° 35' 12" E.

Anchorage: Vessel was unable to enter port due to draft restriction (vessel's draft 9.32 m.), so anchored in position Lat. 21° 28' 42" N., Long. 108° 31' 54" E. in depth 10.5 m. There is a yellow buoy close to this position, in position Lat. 21° 29' 28" N., Long. 108° 35' 51" E.

VHF: There is a port radio station, but vessel requires a Chinese speaking person on board as no English spoken.

Cargo Operations: Vessel discharged into barges with ship's cranes.

Report: Charterer's Information sent to Master:

The anchorage outside the port is 1,600 m. × 1,600 m. square. A maximum of 4 vessels can anchor.

Centre point of anchorage is Lat. 21° 29' 28" N., Long. 108° 31' 51" E.

10,000 ton Wharf:

(1) 180 m. long.

(2) Depth of pool port 9.4 m.

Feature of tide level:

(1) Average several years high tide level	+3.66 m.
(2) Average several years low tide level	+1.15 m.
(3) Average tide differences	+2.51 m.
(4) Highest tide differences	+5.52 m.
(5) Highest tide level of recent years	+5.83 m.
(6) Lowest tide level of recent years	–0.59 m.

AUTHORITY: Qinzhou Port Authority, Qinzhou Port, Qinzhou City, Guang Xi, China. *Tel:* (0777) 3888361, 3888330. *FAX:* (0777) 3888330.

QUANZHOU: 24.53 N. 118.41 E.

PILOTAGE: Compulsory. Pilotage undertaken during daylight hours only.

ANCHORAGES:

Name of Anchorage	*Depth* (m.)	*Bottom*	*Size of Mooring Vessels* (d.w.t.)
Bai Oi	5.0	Mud and sand	3 × 2,000
Xiu Tu	7.0	Mud and sand	2 × 5,000
Bei Wu Jiao	8.0	Mud and sand	2 × 5,000
Shi Hu	11.0	Mud and sand	2 × 10,000
Seven Star	12.0	Mud and sand	2 × 15,000

RESTRICTIONS: Entry and sailing at night is prohibited.

MAX. SIZE: Draft limitation in channel is 9.5 m. at H.W.

Tide: Regular semi-diurnal tide.

Tidal Range: Maximum 6.3 m. Minimum 5.1 m. Maximum tidal difference 6.93 m. Average tidal difference 4.52 m.

RADIO: Radio Quanzhou – Call Sign XSM 4.

High frequency communication: Hours: 0800 hrs. – 1800 hrs.
  Sending frequency 8525 kHz.
  Receiving frequency 8368 kHz.
Medium frequency communication: Hours: 0000 hrs. – 2400 hrs.
  Sending frequency 470 kHz.
  Receiving frequency 500 kHz.

VHF: Channel 16 and Channel 12 for Pilot Station and Penavico Quanzhou (Agency).

Quanzhou Radio on Channel 16 throughout 24 hours.

TUGS: 2×600 h.p.

BERTHING: Capacity: 2×500 tons, 1×1,000 tons, 1×3,000 tons, 2×5,000 tons and 1×3,500 tons (oil tankers only).

CRANES: 2×5 tons, 1×8 tons, 2×10 tons, 2×16 tons and 1×36 tons.

STEVEDORES: *Working Hours:* 0700 – 1600 and 1600 – 0100.

TANKERS: *Xiaocuo Terminal:* The Terminal accepts tankers of 100,000 d.w.t. with draft 16.0 m. for discharge of crude oil.
FRESH WATER: A fresh water barge with 200 tons capacity is always available.
FUEL: Contact Penavico Quanzhou.
REPAIRS: No facilities available.
GENERAL: *Provisions:* Contact Penavico Quanzhou.
Storage:
Warehouse: 8,448 sq.m.
Open Storage: 43,800 sq.m.
Imports/Exports: Stone and its products, salt, grain, coal, building materials and petroleum.

AGENT: China Quanzhou Ocean Shipping Agency – Penavico. Tel: (0595) 253106, 250941-3. Fax: (0595) 258709.

RIZHAO (Shijiusuo): 35.22 N. 119.17 E. (See Plan)

PILOTAGE: Compulsory. Pilot boards vessel at Quarantine Anchorage, day and night.
ANCHORAGE: Depth 17.0 m. – 19.0 m. Bottom is mud and sand. Vessels up to 200,000 d.w.t. may use anchorages.

The anchorages are within the following areas.

Anchorage No. 1:	35° 20' 29" N., 119° 37' 23" E.
	35° 20' 29" N., 119° 39' 53.5" E.
	35° 16' 29" N., 119° 37' 23" E.
	35° 18' 29" N., 119° 39' 53.5" E.
Anchorage No. 2:	35° 20' 29" N., 119° 39' 53.5" E.
	35° 20' 29" N., 119° 42' 24" E.
	35° 18' 29" N., 119° 39' 53.5" E.
	35° 18' 29" N., 119° 42' 24" E.
Anchorage No. 3:	35° 18' 29" N., 119° 37' 23" E.
	35° 18' 29" N., 119° 39' 53.5" E.
	35° 18' 29" N., 119° 37' 23" E.
	35° 16' 29" N., 119° 39' 53.5" E.
Anchorage No. 4:	35° 18' 29" N., 119° 39' 53.5" E.
	35° 18' 29" N., 119° 42' 24" E.
	35° 16' 29" N., 119° 39' 53.5" E.
	35° 16' 29" N., 119° 42' 24" E.

RESTRICTIONS: Vessels may enter and sail after sunset.
MAX. SIZE: Max. draft in Channel to Coal Wharf is 15.0 m. and to General Cargo Wharf is 7.1 m. Maximum tidal range 4.9 m.
VHF: Rizhao Radio operates throughout 24 hours on Channel 16, working on Channels 1, 10, 23 and 26.
TUGS: 1×1,600 h.p. and 4×3,200 h.p.

Provisions: Available.

SHIPMASTER'S REPORT: July 1989.
Pilotage: 2 Pilots boarded the vessel from a tug. The approach to the general cargo quay was through a channel and was carried out confidently.

The distance from the Pilot Station to the berth is 1.5 miles.
Anchorage: Port Control advised the vessel to anchor in position Lat. 35° 19' 30" N., Long. 119° 35' 30" E., which is South East of the Fairway Buoy. The bottom is heavy mud and the holding ground good. The tidal stream is strong in this area.
Documents: The following are to be completed on Chinese Forms:
1 copy Crew Declaration (should include currency, gold items, cameras, watches, etc.).
1 copy Report of Articles restricted for use in port.
1 copy detailed Ship Information Sheet.
1 copy Quarantine Declaration.
Ship's forms may be used for the following:
1 copy Crew Declaration.
1 copy Vaccination List (Cholera vaccinations to be up to date).
4 copies Crew List.
2 copies Bills of Lading.
2 copies Cargo Manifest.
2 copies Cargo Plans.
Formalities: The authorities require the "Q" flag to be flown until Pratique has been granted. The Agent and 12 Port Control Officials come on board at the anchorage by tug and require a large room for completing formalities. The Port Control party consists of 2 Port Health Officials, 2 Immigration Officials, 2 Officials from the Harbour Master's Department, 4 Customs Officials and 2 other persons. The documentation listed above is dealt with at this time. Pratique is granted prior to all other business, after which papers are processed and the Customs seal the bond locker. The formalities take 1.5 – 2 hours. A routine search is made of the accommodation.
Restrictions: The controlling depth in the approaches is 20 m. The depth in the dredged channel is 9.5 m. No night time berthing or unberthing at present.
Max. Size: Maximum permissible draft alongside 6.5 m., plus height of tide (maximum 4.0 m.), less 0.5 m. for keel clearance. There is no restriction on length.
VHF: The Agent's office may be contacted during the working day on Channel 16, working on Channel 11.
Tugs: Large powerful tugs available. Use of 2 tugs is compulsory.

The tugs were secured when the vessel was East of the quay. One tug forward and one tug aft, tugs lines used.
Berthing: There is only one general cargo berth in operation. If a tanker wishes to berth and a general cargo ship is alongside at the time, the general cargo vessel will have to vacate the berth.

Vessel berthed starboard side alongside on a heading of 045°. Moorings consisted of 2 head/stern lines, 2 breast lines and 2 springs at each end. All lines had a good drift. The anchor may be used for berthing but only in an emergency.
Bulk Handling Facilities: There is a very efficient coal berth in the South East part of the port. The berth is operated by Japanese interests and coal is brought from inland mines by train. The coal berth will accept 2 bulk carriers and is capable of loading 4,000 t.p.h.
Cargo Operations: If a vessel is to discharge oil, 10 officials representing the Port Public Health Board come on board to take tank samples and ullages and calculate cargo quantity. Analysis of samples takes about 2 hours, after which permission is given to pump cargo ashore.

The distance from the manifold to the shore line is about 20 m.
Hoses: Ship's hose is used as no shore hoses available. Reducers also supplied by the ship. 5 sections of ship's 6 in. hose used for connecting to the 6 in. shore line. The distance to the 2 shore tanks is approximately 1,000 m. The maximum pressure allowed on the line is 7 kg./sq.cm. – 8 kg./sq.m. There are no facilities for ship's slops.
Tank Dry Certificate: If a Tank Dry Certificate is required on completion of operations a formal written application must be made through the Agent for such inspection.
Cranes: There are 3 modern luffing cranes with limited travel along the quay.
Ballast: Discharge of any clean ballast is not permitted unless a written application has been made to the Harbour Master's office. This application should indicate the amount to be discharged and the time required. Officers from the Harbour Master's office make frequent visits to the ship to check that all port regulations are being complied with, especially anti-pollution regulations. If any scuppers are found unplugged or uncemented or if any discolouration of the water is found in the vicinity of the ship, an explanation is required.
Bridges: None.
Density: 1025.
Fresh Water: Available. Rate of delivery 15 t.p.h.
Fuel: Gas oil is available with notice from Qingdao.
Surveyors: No surveyors locally, nearest are at Qingdao which is approximately 140 km. to the North.
Customs Allowances: On arrival, Customs allow 15 cartons of cigarettes and 5 bottles of spirits to be kept out of the bond.
Airport: Qindao Airport is 140 km. by road. There are flights to Hong Kong, Osaka and Chinese cities.
Repairs: Minor repairs can be undertaken.
Shore Leave: An Immigration guard is on duty at the foot of the gangway at all times while the ship is in port. All crew members must produce a pass and identity card when going ashore.
General:
Stores: Fresh stores can be obtained from the State Shipchandler.
Chart: BA. Chart No. 1253.
Developments: Extensive expansion of the port is currently being undertaken. An area adjacent to the general cargo quay is being filled in to make a large container area.

SHIPMASTER'S REPORT: April 1995.

On arrival, the visiblity was poor, maximum 2 miles.

There are many fishing vessels in the area.

The approach was undertaken carefully.

Due to the non-existance of a detailed chart/map, we more or less navigated on the sketch as received by Fax.

Details of the shore on the radar showed that this map is quite accurate.

The coal wharf in the outer harbour was very conspicuous.

Communications were as expected and as experienced on earlier visits.

Approached Buoy No. 1 and No. 2 (start of the entrance of dredged channel, to the general cargo jetty in inner harbour), to board Pilot. Water depth well over 15.0 m.

When the Pilot did not show up at the time agreed, I made a round-turn. Watch out for numerous fishing boats.

Pilots communication via the VHF on the tug, which is always used as the pilot boat.

I had the impression that the Pilot(s) tried to get the vessel into the harbour as far as possible verbally, before they joined the vessel. But as the U.K.C. was still acceptable, I went close to the breakwater, passed Buoy No. 3, where they came on board. A sharp starboard turn and the vessel was in the inner harbour (We noticed a lot of drifting/floating fishing nets).

Pilotage was very good and cooperative. Pilot reacted immediately when I suggested slowing down.

We berthed at the general cargo jetty and received 2×8 in. rubber hoses, which came from a "built-in" manifold below the jetty surface.

At first sight, condition of the hoses appeared good, but on closer inspection, I am not sure if they could handle 10 bar.

We discharged with an (initial) pressure of 6.5 bar at the vessel's manifold and that went fine, until the shore changed tanks without warning the vessel. One of the hoses could not handle the sudden increased pressure of 10 bar. It was changed and from that time the discharge continued with max. 4 bar at the ship's manifold.

Formerly being a small fishing harbour, but with a big advantage, no need to dredge extensively to expand the jetties.

In the inner harbour over 10.0 m. water depth.

Large export coal wharf and outside harbour, with over 15.0 m. water depth.

Starboard side too and after leaving the berth turned in the basin with the aid of 2 powerful tugs (in the inner harbour).

Normally only daylight berthing and sailing, but we sailed at 2200 hrs.

Penavico (local Agent) was there when we needed him and gave good service.

Local Chinese chart available.

SANYA: 18.14 N. 109.30 E. (See Plan)

PILOTAGE: Compulsory. Pilot boards in Quarantine/Pilot anchorage.
ANCHORAGE: *Quarantine/Pilot Anchorage:* Depth 20 m. – 28 m. Bottom: Mud. Max. Size: 50,000 d.w.t.
Sheltered Anchorage: Depth: 5.0 m. –16.0 m. Bottom: Mud and sand. Max. size: 50,000 d.w.t.
Loading/Discharging Anchorage: Depth 8.0 m. – 16.0 m. Bottom: Mud. Max. size: 50,000 d.w.t.
RESTRICTIONS: Entry and departure possible day and night. Depth in channel 7.0 m.

Tidal Range: 0.06 m. – 2.26 m.

VHF: Sanya Radio on Channel 16 (24 hours).
TUGS: 2×248 h.p., 1×400 h.p. and 1×300 h.p.
GENERAL: *Floating Cranes:* Available if notified in advance.
Supply Services: Arranged by Hainan Autonomous Prefective Sanya Ocean Shipping Supply Corporation.
Stevedores Working Hours: As per advanced arrangement with Haikou.
Warehouse and Open Store Space:

Warehouse:	9,034 sq.m.
Store Space:	51,000 sq.m.

Main Imports and Exports:

Imports: Grain, cement, chemical, fertilisers, coal and steel.

Exports: Salt, sugar, rubber and local products.

SHANGHAI, including Luhuashan Anchorage: 31.14 N. 121.28 E. (See Plan)

Also see "General" before first port.

DOCUMENTS: China Ocean Shipping, Shanghai Branch, as ship's Agent, must submit to Shanghai Customs one complete set of the cargo manifests covering all the cargoes to be discharged at Shanghai (including the transit cargoes via Shanghai) for the declaration and the clearance within 24 hours after the completion of the joint inspection. If there is any shortage of the cargo manifests such as the incomplete cargo manifest or the missing/omitting of some bills of lading, the Agent is forced to bear the penalty (maximum RMB 30,000.00), in accordance with the Customs Law in order to improve the quality of the cargo manifest and other relevant documents from abroad.

In consideration of the above, principals are kindly requested to pay special attention to this matter and ensure that all the documents, especially the cargo manifest, made and sent by principals should be perfectly correct. Otherwise, the Agent will transfer all the fines imposed upon them by Shanghai Customs to the ship owner or the agents at the loading ports.

Also see "General" before first port.

PILOTAGE: Compulsory. Pilot available 24 hours. Working VHF Channels 16 and 6.

Pilot boards in position Lat. 31° 03' 34" N., Long. 122° 08' 14" E.

Send ETA at the outer roundabout, when at least 4 nautical miles from it, on Channels 6 or 16. Vessels making for North Passage should make a safety broadcast 3 nautical miles before entering it and on entry, broadcast their name and the time. Vessels intending to navigate in Yawosha Channel should be equipped with VHF Channel 6.

RESTRICTIONS: Vessels may enter and sail day and night.
MAX. SIZE: Maximum fresh water draft in channel is 9.5 m.
Tidal Range: Maximum 3.45 m., minimum 2.60 m.
VHF:

Station	*Hours*	*Channels*
Penavico	24	11 or 27
Sinoagent	24	73 or 74

TUGS: 7 × 980 h.p., 5 × 1,670 h.p., 1 × 1,900 h.p., 1 × 2,200 h.p., 3 × 2,600 h.p., 5 × 3,200 h.p. and 1 × 3,500 h.p.
BERTHING:

Cargo Handling District	*Length* (m.)	*Total No. of Berths*	*No. of Deep Water Berths*	*Draft* (m.)	*Cargo Handled*	*No. of Shore Cranes*
Dongchang	813	7	4	8.0 – 10.0	General	2

Huishan	1,121	8	—	8.0 – 8.5	General, Passengers	9
Timber Handling Co.	758	5	4	9.0 – 10.0	Timber, General	10
Gaoyang	1,114	7	5	8.5 – 10.0	General, Passengers	6
Kaiping	308	2	2	10.0	General	6
Coal Handling Co.	2,199	15	8	9.5 – 10.0	Coal	35
Xinhua	1,584	9	9	10.0	Iron Ores, Fertiliser	19
Zhanghuaban	1,324	7	7	10.0	Containers, General	14
Jungonglu	1,600	9	6	8.0 – 10.0	Containers, Hazard cargoes	9
Gongqing	993	10	—	3.0 – 5.0	Construction Materials	11
Fuxing	560	6	—	4.0 – 4.5	Coal, General	—
Baoshan	1,330	8	6	8.0	Containers, General	5
Wujing	2,422	28	8	8.5	General	3
Passenger Terminal	1,060	10	—	5.0	Passengers	—

Lightening is requested for the vessels over 9.5 m. draft by floating platform of Shuangfenghai at Luhuashan before entering the port.

CRANES: *Floating Cranes:* 1 × 32 tons, 1 × 63 tons, 1 × 200 tons, 1 × 500 tons, 1 × 2,500 tons.

Also see "Berthing".

SPECIALISED CARGO HANDLING FACILITIES:
Chemicals/Fertilisers: The special berths for handling bulk chemical fertiliser have a quay length of 149 m. able to accommodate one 20,000 d.w.t. vessel. The berth are equipped with screw-type continuous ship-unloaders, portal cranes and an enclosed horizontal conveyor system. Modern bagging facilities are available in the port.
Bulk Grain: With a quay length of 384 m., the mechanised bulk grain handling wharf can accommodate a 25,000 d.w.t. ocean-going vessel and a smaller coastal vessel simultaneously. 6 pneumatic ship-unloaders are available alongside with capacity of 150 – 250 tonnes per hour each. The bulk material discharged from ship is transported to the silo of 51,000 cu.m. via an enclosed horizontal conveyor.
Timber: Handling of timber takes place at 4 specialised berths with a total quay length of 689 m. for 10,000 d.w.t. ocean-going vessels as well as at mooring buoys. The terminal has a stacking yard of 40,000 sq.m. and a river basin of over 10,000 cu.m. for timber storage. Timber is handled with 6 portal gantry cranes of 10 tonnes capacity and other specialised equipment.
Containers: 7 container berths capable of accommodating Second Generation container vessels are equipped with container cranes alongside. A 380,000 sq.m. container yard is served by 20 transtainers for box stacking operations and 264 electrical plugs for reefer box storage. The 2 container handling districts are served by railway for easy access to trunk railway system across the country.
MEDICAL: Hospitalisation possible at the Seaman's Hospital, 505 Dongchan Zilu, Shanghai. Tel: (86-21) 5414600.
TANKERS: See "Shipmaster's Reports".
FRESH WATER: Available by barge and alongside.
FUEL: Available
REPAIRS: Facilities available. Contact Shanghai Foreign Vessel Repairs, 6 Pudong Xiao Nanmatou, Shanghai. Tel: (86-21) 8849912.
AIRPORT: Shanghai International Airport is 30 km. from the port. Duty free shops and hotels available.
GARBAGE DISPOSAL: Available by contacting Shanghai Ocean Shipping Agency (Penavico), 13 Zhongshan Road (E.1). Tel: 3290088. Plastic bags are provided on board by Fuxing Shipping Service Co., at 60 Yuan (RMB) per time. Collection time between 0800 hrs. and 1600 hrs. every Monday, Wednesday and Friday.
WASTE OIL DISPOSAL: Available by contacting Penavico. The service is undertaken by a designated environmental team using tankers. Charges are imposed according to amount of waste oil.
SEAMAN'S CLUBS: Shanghai International Seaman's Club, 60 Huangpu Road, Shanghai. Tel: 3251500, 3245265. Shanghai Seaman's Club is an entertainment company for international and domestic seamen. There is an area of 12,000 sq.m. in the new building containing 105 suites with modern facilities; all kinds of souvenirs, wines, arts, ceramics, antiques, wares, precious drugs, food, embroiders, seal engravings are available in the shopping centre. In addition, a billiard

room, table tennis, video, chess, mah-jong and reading room, electric games, post office, barber, restaurant, bar and a multi-functional hall for 200 members will open to seamen.

CURRENCY: Renminbi (RMB), Foreign Exchange Certificate (FEC). Currency exchange is available through Bank of China and other designated agencies.

DEVELOPMENTS: The 1990's have witnessed a rapid progress in port development. Anticipated cargo traffic through the port will be up to 200 million tonnes by the end of the century, embracing 1.20 million TEU of international containerised cargoes. Both rehabilitation and new marine facilities build-up (Waigaoqiao, Luojing and Jingshanzui) are under upmost prior consideration. 4 marginal berths of Waigaoqiao Marine Facility (Phase I) will be on stream by year 1994, followed by inland basin facilities of Phase II.

Located at South bank of Changjiang River, 17 km. West to Wusong Kou, is Luojing Marine Facility, specialised for coal and iron ore handling. First phase comprising 2 coal-offloading berths is to commence construction in 8th 5 Year Plan period (1991 – 1995) and more facilities to be constructed in the following 5 years, this will result in eventual removal of bulk handling facilities out of densely residential areas.

Jingshanzui Marine Facility has a geographically advantageous position on the North bank in Hangzhou Bay with deep water alongside for accommodation of third generation container vessels (two berths) before the end of the century.

Two deep water berths and an 80,000 ton silo system are under construction in Minshen District. The facilities for coastal passenger traffic is to be constructed while some container handling gear is being delivered to the port which will eventually bring about improved performance.

SHIPMASTER'S REPORT: October 1980.

Shanghai pilot vessel will now give orders about proceeding inwards to pilot vessel or remaining outside at designated anchorage. Pilot checked to make sure we had anchored in the correct anchorage. Channel buoys as per "Guide to Port Entry". See "Circulars – Guide to foreign vessels calling at Shanghai – Para 3(c)". These buoy positions and descriptions were transmitted to vessel but only 4 hours before arrival at channel entrance. Pilot vessel tends to be between Buoy Nos. 14 and 18. All other information in the Shipmaster's reports appears to be still valid.

Since about July 1980 foreigners changing money ashore are issued with Bank of China foreign exchange certificates, likewise if drawing cash from Agent. Denominations of 50, 10, 5, 1, 0.50, 0.10 yuans. The certificates (like banknotes) are printed with the following:

"The yaun expressed in this certificate is equivalent in value to the Renminbi yuan. This certificate can only be used within China at designated places. No request to register its loss will be accepted by the Bank".

The Renminbi Yuan is the official currency unit. Designated places are Seaman's Club, Seaman's Store and Friendship Store. The two former have cheaper prices for seamen. Other designated places are the tourist hotels.

For tankers, authorities require a Cargo Manifest of nil cargo, no special form required.

For entry papers the official Chinese forms must now be used for 'Report of Entry for Foreign-Going Ship, Crew List and List of Specified Articles, Foreign Currencies, Gold, Silver belonging to Ship and/or Members of Crew'. If not available on board before arrival then vessel must now transfer the information to the Chinese forms.

If vessel coming from what they describe as a cholera infected port then the following are required. A statement of ballast quantities and disposition (required from clean port also) and where the ballast came from, i.e. open sea or which river. They are most concerned that no ballast is imported from a cholera infected port. Ballast is inspected by quarantine officials and the slightest "rainbow" on top means the top one third of that tank will have to be pumped into a barge. They will not give statement to say they consider any tank is not suitable to pump overboard into river. A statement of where you last took fresh water, amounts taken and amounts remaining on board. They analysed our water from Bangkok and declared it was not very good and chlorinated the drinking water tank and also the wash water tanks but again they would not give a statement to say what was wrong with it, although they do not give a certificate to say the tanks have been chlorinated. A list of stores taken at any 'cholera infected port'. If any fresh stores were taken then samples are taken ashore for analysis. Obviously, it is best to endeavour to ascertain beforehand whether they consider your last port cholera infected.

Other papers required are crew declaration (to include makers names for items like watches, radios, etc.). Ten copies of Notice of Readiness. They do not consider a vessel ready until all ballast has been discharged. They did not require lists of bridge navigational equipment or lists of pyrotechnics or lists of radio equipment.

Light dues are payable for 3 months or 30 days. For 30 days, dues are calculated at Yuan 0.90 per nett registered ton. For 3 months it is more expensive.

At Quarantine Anchorage, accommodation required for 2 guards. At berth same required plus accommodation for 2 Customs Officials, 1 Agent and possibly 1 cargo surveyor.

Inspection is carried out on arrival at the Quarantine Anchorage and prior to departure berth. This was just the entry and departure formalities. No search was made and there was no crew assembly. Passes issued to everyone and collected prior to sailing.

Apparently fresh water and bunkers are available. There appeared to be no restrictions on use of radar, echo sounder, binoculars, etc.

Gasoline cargo loaded was about average S.G. with a loading temperature of 23.5°C. Cargo papers on sailing are manifests and Bills of Lading only.

SHIPMASTER'S REPORT: July, 1984.

Shanghai Entrance. Buoys as follows:

AAA Changkiangkou Lightvessel Lat. 31° 03' 30" N., Long. 122° 23' 1" E.

BBB Changkiangkou Lightbuoys M1 H11-H20 replaced by Buoys 44 – 49.

Buoy 44	Lat. 31° 03' 22" N.,	Long. 122° 19' 52" E.	Fl. 3/10 secs.
Buoy 45	Lat. 31° 03' 14" N.,	Long. 122° 16' 58" E.	Fl. 3/6 secs.
Buoy 46	Lat. 31° 03' 06" N.,	Long. 122° 14' 02" E.	Fl. 3/10 secs.
Buoy 47	Lat. 31° 03' 00" N.,	Long. 122° 11' 06" E.	Fl. 3/6 secs.
Buoy 48	Lat. 31° 03' 34" N.,	Long. 122° 08' 14" E.	Fl. 3/10 secs.
Buoy 49	Lat. 31° 04' 11" N.,	Long. 122° 05' 26" E.	Fl. 3/6 secs.

Pilot vessel moving in/area Buoys 47 – 49 serving/as Pilot Station.

SHIPMASTER'S REPORT: January 1986

Documents: The following papers are required by the Port Authorities:

1 copy Maritime Declaration of Health.
2 copies Report of Entry for Foreign Going Vessels.
4 copies Crew List.
1 copy List of Specified Articles, Foreign Currency, Gold, Silver belonging to the ship or crew members.
1 Import Manifest.

The following certificates and papers are to be submitted for examination by the Port Authorities:

Registry Certificate.
Tonnage Certificate.
International Load Line Certificate.
Derat Certificate.
Deck and Engine Log Books.
Tonnage Dues Certificate.
Manifest of Cargo for Discharging and Transit Cargo.
Oil Record Books.

Clearance: Clearance of the vessel usually takes place at the Shanghai Quarantine Anchorage located in the following position between the buoys:

Buoy No. 25	Lat. 31° 20.8' N.,	Long. 121° 39.7' E.
Buoy No. Q1	Lat. 31° 21.9' N.,	Long. 121° 37.8' E.
Buoy No. 29	Lat. 31° 23.0' N.,	Long. 121° 35.9' E.
Buoy No. Q4	Lat. 31° 23.5' N.,	Long. 121° 36.3' E.
Buoy No. Q3	Lat. 31° 22.6' N.,	Long. 121° 38.4' E.
Buoy No. Q2	Lat. 31° 21.8' N.,	Long. 121° 40.4' E.

After clearance vessel proceeds for berthing/mooring. Occasionally Port Authorities instruct Pilots to proceed direct for berthing/mooring and Entry Clearance of the vessel carried out after berthing or mooring.

Navigation: B.A. Charts No. 1601 and No. 1602 proved most useful when entering the South Channel in order to receive Pilots.

The positions and new numbers of the buoys are indicated below:

Changjiang Kou Lightvessel	Lat. 31° 03.4' N.,	Long. 122° 23.2' E.
Buoy No. 1 (ex-Buoy No. 44)	Lat. 31° 03.4' N.,	Long. 122° 19.8' E.
Buoy No. 2 (ex-Buoy No. 45)	Lat. 31° 03.2' N.,	Long. 122° 17.0' E.
Buoy No. 3 (ex-Buoy No. 46)	Lat. 31° 03.1' N.,	Long. 122° 14.0' E.
Buoy No. 4 (ex-Buoy No. 47)	Lat. 31° 03.0' N.,	Long. 122° 11.1' E.
Buoy No. 5 (ex-Buoy No. 48)	Lat. 31° 03.6' N.,	Long. 122° 08.2' E.
Buoy No. 6 (ex-Buoy No. 49)	Lat. 31° 04.2' N.,	Long. 122° 05.4' E.
Buoy No. 7 (ex-Buoy No. 50)	Lat. 31° 05.4' N.,	Long. 122° 02.8' E.
Buoy No. 8 (ex-Buoy No. 51)	Lat. 31° 06.6' N.,	Long. 122° 00.2' E.
Buoy No. 9 (ex-Buoy No. 52)	Lat. 31° 07.6' N.,	Long. 121° 57.7' E.

The characteristics of all the above buoys of the South Channel are Red/White with radar reflector on top.

The South Channel is used for vessels in light condition or vessels with a draft up to 7.5 m. (FW).

The North Channel is used for large vessels or vessels with a draft over 7.5 m.

The numbering of the buoys of the North Channel is still the same as indicated on B.A. Chart No. 1602 but in the near future this channel will also be re-numbered.

Pilotage: During good weather the pilot vessel is anchored in position Lat. 31° 03.8' N., Long. 122° 07.2' E. and Pilots board vessels between Buoys Nos. 5 and 6 in the South Channel.

For vessels using the North Channel, boarding area is between Changjiang Kou Lightvessel and Buoy No. 1 of South Channel.

During bad weather or strong winds Pilots board between Buoys No. 6 and No. 7 of South Channel and occasionally near Buoy No. 8.

For entry or departure through the South Channel all ships navigate anti-clockwise within a radius of 1.3 miles of the Changjiang Kou Lightvessel but clear of an inner radius of 0.3 miles centred on Changjiang Kou Lightvessel and then entering South Channel within 500 m. North of the line joining mid-channel Buoys No. 1 – 9 or 500 m. South of the line joining mid-channel Buoys No. 1 – 9 on leaving.

Pilots listen on VHF Channel 16, and give instructions to vessels entering or berthing at Shanghai. They also give instructions as to the Pilots' boarding position. Foreign vessels contact the Pilot Station at 0845 hrs., 1115 hrs., 1515 hrs. and 1915 hrs. to enquire if they are on the daily list for entering.

Local Agents "Penavico Shanghai" also inform vessels by cable via Shanghai Radio of berthing prospects and Pilots' boarding time. Two Pilots board vessel and they stay on board until vessel is berthed or moored.

Anchorage: Vessels anchor in the area indicated to the S.E. of Changjiang Kou Lightvessel (between 30° 35' N. and 31° 00' N. and between 122° 25' E. and 122° 32' E.).

Due to strong current and tide at least 6 – 7 shackles are recommended when anchoring in the above anchorage.

Radio: All telexes transmitted to Agents via Singapore Radio and Shanghai. Agents "Penavico" relay cables via Shanghai Radio only.

The following information is required by the Agents:

Forward and aft arrival draft (Salt Water).
Crew/Passengers on board and if all healthy.
Ports of call from Loading Port with dates of arrival/departure each port.

Quantity of main provisions, drinking water, ballast water on board and when and where taken.

Derat or Derat Exemption Certificate, port and date of issue.

"Penavico" use VHF Channel 11 for all ships when giving any information required by the vessels.

Berthing: All berthing information received from the Agent via VHF. Berthing or shifting carried out day and night.

For discharging of soyabean oil, vessel moored to Buoys No. 81 – 82 located on the ninth section of the river. The actual berth for soyabean oil is a small wooden pier used only by small coasters and barges. During mooring 1 tug used only for pushing. 4 headlines and 1 slip wire used forward and only 4 stern lines used aft.

No ballast water can be discharged into the river without the permission of the Harbour Master.

For a short period (6 – 8 hours) the Port Authorities (through the Agent) give permission for engine inspection and overhauling of pistons.

Discharging: Notice of Readiness tendered on vessel's arrival at the Outer Anchorage but accepted by "Penavico" after berthing and only during office hours.

Cargo Surveyors (3 persons), board vessel and check the quality of the cargo, taking ullages and samples. The Surveyors company is the national firm China Commodity Inspection Bureau.

After cargo inspection and test, and if they find cargo in good order, they give permission for discharge to commence. No ship's papers or cargo calculations signed by them.

Cargo discharged into barges at a maximum rate of 350 tonnes/p.h. through a flexible 6 in. hose. Each barge has a capacity of about 350 – 500 tonnes. There is always a shortage of barges. For a quantity of 10,000 tonnes the discharging time is usually 4 – 7 days.

The daily quantity discharged was:

Day 1 – 350 tonnes (1 barge).
Day 2 – 685 tonnes (2 barges).
Day 3 – No discharging. No barges available.
Day 4 – 1,250 tonnes (3 barges).
Day 5 – 1,745 tonnes (4 barges).
Day 6 – 2,200 tonnes (5 barges).
Day 7 – 3,515 tonnes (9 barges) maximum.
Day 8 – 485 tonnes (1 barge).

The daily maximum quantity which they can receive is approximately 3,500 tonnes.

After discharging and squeezing of the cargo the Surveyors inspected all the tanks carefully and gave their own Dry Certificate. If there is a difference between the ship's figures and shore figures, vessel's departure is postponed until a final settlement is reached.

Unberthing: 2 tugs are used for unmooring, one each end, using tugs' lines.

Large vessels always use 2 Pilots and they speak good English. The Pilots use the ship's whistle a lot in order to keep the main channel clear as no safety regulations followed by small craft, barges, ferries, etc.

Both anchors to be ready for use at all times when berthing/unberthing.

Facilities: Free transportation by a small ferry is available from the ship to the ferry station.

Two guards and 1 Customs Officer stay on board from arrival until sailing.

Provisions, stores, bunkers and water are available with 2 – 3 days' notice. The water is not very good quality so should be avoided if possible. Bonded stores are not sealed. Port Authorities and Agents are very pleasant and polite. The vessel did not face any problems during entering, stay alongside or when leaving Shanghai.

SHIPMASTER'S REPORT: March 1986.

Vessel anchored with 6 shackles in the water; Changjiang Kou Lightvessel bearing 277°×9.5 miles. Strong winds (Force 6) were experienced and vessel rolled 20°. Ebb tide is stronger than the flood. All messages were passed on to the Agents via W/T, who keep watch 24 hours on VHF Channel 11, but there was no answer. Entry and departure is through the South Channel (Nancao Hangdoa). Changjiang Kou Lightvessel and the buoys are in position as marked on Chart No. 1602; but no racon was observed on any of the lightvessels. Light Buoy Nos. 44 onwards are re-numbered as Nos. 1 onwards; and are red and white can buoys with spherical topmarks. The lightvessel and all the buoys are to be passed on the port side. 2 pilot vessels were cruising between Buoys No. 5 and 6 and Pilot boards from a small boat coming alongside.

Vessel had to anchor for Free Pratique at Woosung Quarantine Anchorage, which was granted in 30 minutes. After the vessel was tied up at berth between Buoys No. 44 and 45, Customs and Immigration boarded the vessel (4 people). The following documents were required: 6 Crew Lists; 1 Private Property List including currency; List of Provisions and where purchased; quantity of fresh water, ballast and where and when taken; List of Ports of Call during last 30 days.

All passports and health books to be collected. Bonded Stores not sealed. No separate List of Foreign Currency on Board required. Foreign currency can only be changed at "Friendship Stores", Seamen's Club or big hotels in exchange for specially made notes for use of foreigners – but can also be used in any other stores or hotels. No restrictions on the use of VHF, radar, echo sounder or any other navigational equipment. Cargo Manifest was sighted.

Two officials from Customs and Immigration stay on board and a cabin has to be made available. Everyone has to show shore passes before going ashore. There is a launch every hour – last one at 2330 hrs. Charges U.S.$10.0 per day for every ship on the buoys.

SHIPMASTER'S REPORT: July 1993.

Chimbusco Terminal:

1. On route to Changjiang Kou Anchorage numerous fishing nets are encountered.
   At anchorage, contact Shanghai Pilots on VHF Channel 16.
2. Depending on draft, vessel enters/leaves via North or South Channel.
3. Essential to calculate tidal predictions. – Beware of squat.
4. Ordered and received new B.A.Chart No. 1603. B.A.Charts No. 1601 and 1602 were updated to latest Notice to Mariners received.
   In spite of this, it is necessary to obtain updated Chinese charts regarding Shanghai area, because when comparing B.A. No. 1603 and the local chart, some differences regarding the channel were noticed.
   Several changing depths "Notes" regarding channel on B.A.Charts as well as on the local charts.
5. Although visibility between 150 m. and 3 miles on route to Pilot Station (and during transit), South Channel pilot services were not suspended.
6. Pilot boarded between Buoy No. 4 and No. 5 South Channel.
   Pilot not in possession of charts.
   Outward bound pilot disembarks between Buoy No. 3 and No. 4 in the South Channel.
7. Vessel proceeds to Anchorage No. 1 and anchored 1 mile E.N.E. off Chimbusco Terminal.
8. At this anchorage, Immigration authorities board vessel.
   Documentations required:
   All Certificates.
   4 copies Crew List.
   Personal Effect List.
   Firearms "Nil" Declaration.
   Passengers "Nil" Declaration.
   Chinese Customs forms to be completed by Master, including Chinese forms Maritime Declaration of Health and Animal/Plant Declaration form.
9. When documentation completed, vessel proceeded to jetty where berthing was carried out by same pilot who boarded at South Channel.
10. Vessel moored 4 hours before low water.
    Due to many ship movements at that time, only 1 tug (estimated 1,400/1,500 h.p.) available.
    Although wind Force 1 – 2 (BF) during mooring, pilot showed concern.
    According to pilot, current is 2 – 4 knots.
    No mooring launches and mooring winches available.
    Moorings:

Forward:	First:	Starboard anchor (1 shackle).
	Secondly:	5 head lines.
	Thirdly:	Breast rope.
	Last:	Spring.
Aft:	First:	Spring (leading forward).
	Secondly:	Spring (leading aft).
	Last:	5 stern lines.

    Note: Only one bollard available for 5 head lines forward, and one bollard for 5 stern lines aft (See "Plan").
11. When alongside plotted GPS position on Chinese Chart No. 9504.
    As can be seen on chart (See "Plan"), there is a deviation in position.
    (1) As GPS position obtained from satellite, navigation systems are normally referred to the World Geodetic System (WGS), adjustments for plotting such positions are not known, but it should not be assumed that they are negligible.
    (2) Due to the fact that GPS type on board is a 2 D fix type, accuracy (95%) approximately 100 m.
12. Ship's draft 7.20 m. even keel (fresh water).
    Low water 07/07/93: 2200 hrs. LT.
    Transducer of echo sounder situated in fore peak tank.
    At low water calculated depth forward 11.00 m.
    Remarks:
    See Note 11: Looking at Chart No. 9504, where ship's position is plotted, you may expect the vessel on the port and aft side to be within the 10 m. sounding line.
    According to information given by Penavico Shanghai Agency, Terminal restrictions are LOA 180 m. draft in F.W. 9.5 m.
    On July 9th at 0830 hrs. (LT), soundings on the port side of the vessel were taken.
    See tidal predictions (See "Plan").
    Draft of vessel at 0830 hrs.: Forward 1.00 m., aft 7.15 m.
    Density: 1005.

Results:	Calculated Depth
In way of No. 1 Port C.O.T.	11.10 m.
In way of No. 3 Port C.O.T.	10.95 m.
In way of Manifold Port	10.50 m.
In way of No. 6 Port C.O.T.	10.30 m.
In way of Pump Room	10.40 m.
In way of Aftship Port	10.25 m.

13. Vessel discharged light diesel. Average rate 600 cu.m./hr. with 1×6 in. discharge hose. Maximum back pressure 5 Bar.
14. According to Loading Master, this berth is normally used by bunker barges.

Safety:

1. No Safety Check List by shore – supplied by ship.
2. On all manifolds (shown on sketch), hoses are connected, none of them are blanked.
3. No fixed fire or foam installation on jetty.
4. No international ship/shore connection on jetty.
5. Portable fire extinguishers on jetty: Three (1× P50 and 2× P9).
6. Only one bollard available forward for 5 head lines, and one bollard aft for 5 stern lines.
7. Jetty illumination is poor.
8. Small electric hose crane on jetty in way of middle manifold. Intrinsically safe: Unknown.
9. On all hoses on jetty is mentioned (with paint) 91/09/07. Probably test date (test pressure not found). External damage to discharge hose.
10. Telephone No./VHF channel in case of emergency not supplied.
11. Non-smoking area indication limited and almost unreadable.

12. Some fenders missing/damaged. Concrete edges of jetty badly damaged in a few places.

SHIPMASTER'S REPORT: November 1993.

1. Approach to Changjiang Anchorage: Good radar targets are the islands of Maan Liedao. Anchorage heavily crowded. Vessels are anchoring anywhere. A lot of small craft and fishing vessels passing. On arrival anchorage, we had strong Westerly winds and a good Easterly current running. We anchored with 7 shackles in water. Arrival draft at anchorage 7.50 m. (even-keel) = 7.75 m. (FW). Vessels have to anchor on arrival awaiting entry arrangements for Shanghai.

2. Pilot Information: VHF contact with "Shanghai Pilot" on Channel 16. Pilots will pass boarding time and position. Same information also passed by "Penavico Agency" via telex.

Care has to be taken with the Pilot boarding position. We were ordered to pick-up Pilot at Buoy No. 5 at South Channel. This information was wrong, vessel would have been aground in this position.

3. Approach to Pilot Boarding Position: We approached from Changjiang Kou Anchorage to Changjiang Kou Light Buoy, turning into the "roundabout" heading for Buoy No. 1 of South Channel. The light buoy was a replacement buoy (no Racon) and a very poor target, and was difficult to locate between all the small craft. Visibility at that time was about 3 miles. A strong Easterly current was running and we stopped between Buoys No. 1 and No. 2, with an under-keel clearance of 1.0 m.

The pilot vessel was heading towards Changjiang Kou Light Buoy as about 6 vessels were queueing up at the "roundabout" for the passage via South Channel.

The Pilot boarded at 0730 hrs. from a small pilot cutter (speed 3-4 knots) and we turned to starboard heading for the North Channel.

4. Approach North Channel: All other vessels were redirected to the North Channel. Due to Pilot information, the water depth in the South Channel was only 5.0 m. Depth shown in B.A. Charts No. 1602 and 1603 are not reliable and are changing. We picked up speed and were the only vessel in the "convoy" turning into the North Channel. The passage was done with "Pitch 7" and rising tide.

The pilot boarding area at "Beicao Hangdao" is cancelled due to strong tidal streams. Care has to be taken when entering the Beicao Channel (dredged to 7.0 m.), and a good helmsman is required as the bottom width of the channel is only 250 m. – 300 m. and a strong current was setting to the Northwest.

The bar at Yuanyuasha Hangcao is dredged to 9.0 m.

Three hours after Pilot boarded, we anchored at the "Large Vessel Anchorage No. 2". Care to be taken for slowing down ship's speed in time, as the current was setting from the stern and with rudder hard-to-starboard, vessel was swinging into the crowded anchorage with starboard anchor 1 shackle in water and engine astern dragging into a suitable position.

5. Approach to the Huangpu Jiang: Vessel had to anchor for about 2 hours, until the ebb tide starts running, before the approach is done to Wusong Kou.

When entering the Huangpu Jiang, the call sign and berth number (advised by Pilot) have to be hoisted. Two crew (officer and bosun) required on fo'csle to stand-by both anchors until moored. The Huangpu Jiang is heavily crowded with all kinds of craft and vessels. Pilot uses the whistle continuously to make his way through the traffic. There is no discipline on this waterway. There were 10 "near misses" before reaching the berth. Another dangerous situation occurred when vessels ahead stop in the river. With the help of 2 tugs, we were kept in position until the transit commenced. Both tugs (new) of 3,200 h.p. each, well equipped, also used for mooring alongside Quing Ning Shi Wharf. It was difficult to come alongside as small craft always passed between ship and berth.

6. Quing Ning Shi Wharf: Once in position, the mooring operation was quite smooth. Sufficient line handlers and 1 mooring boat available. Mooring with "Atlas ropes" is a great advantage. Both tugs stayed alongside for pushing until vessel moored. For moorings see "Plan Section".

The tank inspection and the discharge can be called a normal and smooth operation. Discharge with 2 pumps into 2×6 in. flexible hoses, connected to an 8 in. shore line. There was no interruption during discharge. Signals to be hoisted advised by Harbour Master. To shore side flag "B" or 1 red light, to riverside flags "R" above "Y" or green above red light (pass tanker slowly).

Discharge rate 1,000 cu.m./hr.

7. Departure Shanghai: Departure condition – Total ballast onboard 8,300 tonnes. Draft forward 4.20 m., aft 6.80 m. (fresh water).

On departure, Pilot requested vessel to minimise the draft aft to maximum 6.40 m., due to transit via South Channel. Ballast was run internally to reach the required draft (F: 4.6 m. A: 6.4 m. (F.W.)). Unmooring during slack water (low water) at 1020 hrs. with 2 tugs. Forward tug required ship's rope.

Vessel proceeded to turning position upstream between mooring Buoys No. 38 and 40, passing newly built bridge which said to have 50 m. clearance. Vessel's air draft was 42 m. Vessel was turned by 2 tugs without any tug lines. The passage downstream the Huangpu Jiang was similar to arrival. Once Wusong Kou passed, the passage via the South Channel can be called a normal transit. Passing South Channel from Buoy No. 77-1 – Juidan Light Vessel to Buoy No. 2, the under-keel clearance was not more than 1.0 m. Pilot disembarked between Buoy No. 7 and No. 8 at 1610 hrs. Changjiang Kou Light Buoy was unlit, water depth slowly increasing. A strong S.E.'ly current was observed while passing the South Channel.

At 1730 hrs., Changjiang Kou Light Buoy was passed and vessel proceeded on voyage.

Documents: The following documents required by Customs and Immigration in order to complete the necessary port formalities:

1. Port Clearance from Last Port.
2. Load Line Certificate.
3. Safety Radio Certificate.
4. Safety Equipment Certificate.
5. Safety Construction Certificate.
6. Certificate of Registry.
7. Civil Liability Certificate.
8. I.O.P.P. Certificate.
9. International Tonnage Certificate.
10. Derat Exemption Certificate.
11. Tonnage Dues Certificate of China (Valid for 1 month).
12. Certificates of Competancy.

Documents to be prepared before arrival Shanghai:

7 copies Crew List (Ship's Form).
1 copy Crew Personal Effects List (Ship's Form).
1 copy Foreign Currency List (Ship's Form), not required this voyage.
1 copy Maritime Health Declaration (Chinese Form).
1 copy Ship's Stores List (Ship's Form).
2 copies Reports of Entry for Foreign-Going Ships (Chinese Form).
1 copy Passenger List (Plain Form).
1 copy Arms List (Plain Form).
2 copies Report of Clearance (Chinese Form).
1 copy Vaccination List (Ship's Form).
1 copy Port of Call List (Ship's Form).
4 copies Cargo Manifest – Copies from Cargo Documents.

Chinese Forms will be received on arrival if no spare forms on board.

Customs and Immigration on arrival: Ship's documents and forms as per above list.

Harbour Master:

Ship's Documents.
Liferaft Certificates.
CO-2 Certificate.
Oil Record Books (Deck and Engine).

Quarantine for animals and plants: Checking provision rooms and issue certificate.

Bonded Stores are not sealed by Customs (should not be opened during stay in Shanghai).

No documents taken ashore.

Customs check bonded stores before sailing.

Immigration collect shore passes before sailing.

Port Clearance and Quarantine Certificate delivered on board by Port Authorities.

Passports and shore passes required for shore leave.

Agent: Penavico Shanghai. Telex: 33052 Penav Cn. VHF Channel 11 (Call for information: 1115 hrs. – 1130 hrs. and 1515 hrs. – 1530 hrs.). Tel: 3234603, 3231352.

Agent prepares a Notice of Readiness on arrival. Timesheet is also prepared by Agent. He will sign Ship's Notice of Readiness, Port Activity Report and Cargo Report Handling Log. Cargo documents (copies only) handed to Agent.

Any crew members for doctor (not on short notice), only emergency cases.

Care has to be taken for arranging tank inspectors for tank inspection after discharging. It was not quite clear who will do the arrangements, Agent or Cargo Receiver, as they arrived 6 hours after completion of discharging, and vessel had to wait for ballasting cargo tanks.

The sailing time was arranged by the Agency via VHF Channel 11 on the previous day. The Agency is open 24 hours, but after office hours it is not possible to make any arrangements.

One Immigration officer will stay on board during port call. One cabin is required.

SHIPMASTER'S REPORT: November 1994.

Location: Luhuashan Anchorage.

Chart: B.A. Chart No. 1199.

Approach: Open, apart from fishing fleets. From the South, there are shoals Wai Baimtian Jiao giving 3.5 miles passage – 3 miles South of Luhuashan.

Lookout tower (Lat. 30° 49.5' N., Long. 122° 37.2' E.) on Luhuashan Island at the rear of Fangang village is conspicuous.

Anchorage: See plan inset on B.A. Chart No. 1199, situated South of Luhuashan Island. It is sheltered from all winds, except Southerlies.

Depth around 30 m., except North end where depth is 12.0 m. – 16.0 m. in lee of islands.

Parts of the anchorage, particularly the centre section, are subject to strong tidal currents. The strongest tide was found to be on the ebb.

Anchorage is under the jurisdiction of Fangang Harbour Master. We firstly anchored in position Lat. 30° 47.4' N., Long. 122° 37.5' E., which was found to be very susceptible to strong currents, vessel swinging/shearing strongly around 25°, 2 hours before and until LW.

Our second anchorage position was Lat. 30° 46.6' N., Long. 122° 37.0' E., and was somewhat calmer.

On ebb, tidal current runs for about 2 hours after LW.

The flood tide is not as strong, possibly because it is broken up by islands.

Sometimes the Northerly wind overcame the flood tide with the vessel not completely swinging. Vessel always swung through North.

The Northern end of the anchorage, about 0.8 miles South of the Luhuashan Islands, is occupied by 2 anchored transhipment vessels, a bulk carrier to the West and a crude carrier to the East. Positions are Lat. 30° 48.05' N., Long. 122° 37.3' E., and Lat. 30° 48.00' N., Long. 122° 37.7' E. respectively.

Anchorage is mainly used for bulk, crude and LPG transhipments and as shelter for small vessels under the lee of Luhuashan.

LPG vessels are not allowed to anchor within 1.1 miles from the transhipment bulk carrier which has continuous operations.

Holding ground was found to be good, bottom mud/sand.

In strong Southerly winds, local information advises to anchor to North of Luhuashan Islands.

VHF: Channel 9 for tugs and Pilot call "Shauangfenghai CPT Tong".

Channel 14 for fresh water and supplies, call "Luhua".

Weather Forecast: Shanghai on Navtex twice daily. Good synopsis. Tokyo Fax charts as per ALRS.

Services: Fresh water obtainable from 150 tonne capacity barge (an old inter-island coaster) from Fangang. Initially order through state Agent "Penavico". Cost U.S.$ 6.00 per tonne (Compares with Shanghai at U.S.$ 0.50 per tonne).

Provisions obtainable from water suppliers "Luhua". Standard list given. If vessel lightening, can obtain from Shanghai via "Shanghai Development Company" Chandlers (Fax: 86 21 3069614).

Communications: Communication with Shanghai is by means of coast guard tug at U.S.$1,500. Journey takes 6/7 hours, depending on tide/weather.

Medical: Difficult, via Shanghai by tug or lightening ship.

Formalities: Shore leave allowed. Landing cards given by Immigration. Shore leave only via Shanghai. Tug cost and night in hotel would probably make shore leave prohibitive.

If vessel working cargo, Authorities from Shanghai board vessel by coast guard tug.

Officials: About 10 persons (Customs, Immigration, Harbour Master, Agent) board and require meals. Bond not sealed.

Documents:
8 copies Crew List.
3 copies Crew Manifest.
3 copies Stores List.
1 copy Health Declaration (Chinese Form).
1 copy Vaccination List.
2 copies Ports of Call List.
2 copies Arms/Ammunition List, or "Nil" Declaration.
2 copies Passenger Status.
6 copies Cargo Manifest (Chinese Form).

AUTHORITY: Port of Shanghai Authority, 5th Floor, Shanghai Customs House, 13 Zhongshan Road (E.1), Shanghai 200002, People's Republic of China. *Tel:* 3290660. *Telex:* 33023 Shaco Cn. *FAX:* 3290202. *Contact:* Mr. Tu Deming, Port Director.

Initial correspondence to be made through Jardine Shipping Agencies, Hong Kong.

SHANTOU: 23.21 N. 116.40 E. (See Plan)

PILOTAGE: Compulsory. The Pilot Station is located in position Lat. 23° 17' N., Long. 116° 48' E.

ANCHORAGES: There are 11 anchorages which are numbered 1, 2, 3, 4, 5, 6, 7, 11, 12, 13 and 14. The depths vary from 4.8 m. to 12.0 m. The nature of the bottom is mud and the holding ground is good. Vessels up to 40,000 d.w.t. may use the anchorages.

MAX. SIZE: The draft limitation in the channel is 6.0 m.

Tidal Range: Maximum 2.1 m., minimum 0.54 m.

VHF: The port radio station is on Channel 16 throughout 24 hours. Penavico are on Channel 11 from 0800 hrs. to 1800 hrs.

TUGS: 1 × 428 h.p. and 1 × 980 h.p.

BERTHING:

District	*Berth No.*	*Length (m.)*	*Max. Draft (m.)*	*Max. Size (d.w.t.)*	*Type of Cargo*	*Crane Capacity (tons)*

SHIPMASTER'S REPORT: November 1994.

Vessel:

G.T.: 7,150 tons.
N.T.: 4,051 tons.
Summer d.w.t.: 12,784 tons.
LOA: 123.3 m.
Beam: 20.0 m.
Draft: 8.79 m.

Shuidong is a new port still under major construction and facilities are limited.

Vessel loaded 1,900 tonnes Linear Alkyl Benzene in Japan for discharge at this port. No information is available in any publications on board. Agents in Hong Kong were asked to obtain as much information as possible from Agents in Shuidong. Despite their efforts, no reliable guidance could be obtained.

The only chart covering the area is B.A. Chart No. 3892 and Sailing Directions NP 30 (4th Edition, Chapter 10, Parts 10.48 to 10.55). The port is not shown or mentioned. I was advised that this is a new port and no information has been published yet.

Port is located on the left bank of river, in position Lat. 21° 28.30' N., Long. 111° 07.30' E. The Pilot Station is located in position Lat. 21° 23.07' N., Long. 111° 07.46' E. The port is approached via a buoyed channel, with leading marks on shore.

Approach to the port is not difficult. A storage tanker (250,000 tonnes) is moored in approx. position Lat. 21° 21' N., Long. 111° 25' E. It is not operational, but is expected to start in the near future. It has a Racon type mark, but no distinct letters to identify it. Agent could not give me name of vessel.

The island of Dafangij Dao, shows well on radar at 12 miles and gives good guidance to Pilot Station and buoyed channel. The only difficulty is the large concentration of fishing vessels. It is a case of picking your way through them. They are nearly always stopped and respond to whistle signals.

Vessel anchored 0.5 miles South of Buoys No. 1 and No. 2. These are in position Lat. 21° 23.4' N., Long. 111° 07.4' E. and Lat. 21° 23.5' N., Long. 111° 08.1' E. respectively. Our draft was forward 4.7 m. and aft 5.65 m. Echo sounder showed 7.0 m. of water under-keel at this point.

No communication directly with Pilots or port. Contact is made via Shuidong Radio on Channel 16, shifting to Channel 83. All information is passed to vessel via this station. Agent will be on VHF Channel 68 in near future.

Pilot boat came out to vessel at anchorage and guided the vessel to berth. Three Pilots boarded, only one of which spoke limited English. The leading marks give a course up the first part of the channel of 349°, this is followed up to Buoys No. 7 and No. 8. The depth under the keel was never less than 4.0 m., this at Buoys No. 5 and No. 6, most of the time 6.0 m. was normal. At Buoy No. 8, course is altered to 335°. At Buoy No. 10, course altered to 316°. This takes vessel to Buoy No. 14, where the wharves for the port start.

Major construction works are taking place, especially further up the river, where conventional wharves and terminals are being built. First jetties in the river are the tanker berths. Both brand new with modern facilities. Good fenders. No tugs used for berthing. Vessel berthed on the ebb tide, port side too Berth No. 2. Starboard anchor is used as a brake. It is important to get a head line and aft back spring out as soon as possible. Current is strong on the berth and frequent use of engine must be used to hold vessel against current. Final moorings were 3 head and 3 stern lines and 2 springs either end. Starboard anchor finally ending up with 4 shackles in water. Depth of water alongside at low water 2.0 m.

Accommodation ladder was used on the jetty in our particular position, but if Chicksan arms are to be used, then portable gangway would have to be used.

As normal in Chinese ports, many officials board. All documents and certificates are checked closely. No difficulties with any officials. Quarantine do not allow any ballast water to be discharged into river, unless it is disinfected first. They also checked all stores and toilets/bathrooms, if any signs of cockroaches, they disinfect and spray these areas. As some Cholera Certificates had expired, all persons requiring injections were done.

Terminal is new and tank farm is close. It would appear that more building will take place close to jetty. Plans are to open up the port even more, mainly coastal traffic at present. We discharged using a 6 in. flexible hose. No difficulties with rate or pressure. Total discharge time was 18 hours.

Agent was asked to supply a chart of the port area, but none is available at this time. None have been published. They intend to issue one soon. As it is also difficult to communicate with any officials or surveyors, information was hard to come by.

Shuidong town is about 14 km., and can be reached by local motorcycle taxi. There are some small roadside restaurants outside the gate and a hotel. Food is cheap and reasonable.

Vessel leaves berth near the end of slack water/beginning of ebb tide. This is straight forward. Weight is taken on anchor and all lines let go aft. Single up to a forward spring. Effect of current pushes stern off jetty. Anchor is heaved and with use of engine and rudder, vessel is moved of jetty. When well clear, forward spring is let go and anchor heaved home. It is best to leave anchor ready as it may be required to turn vessel round in river. After turning, vessel proceeds outwards. Pilot leaves vessel in vicinity of Buoys No. 5 and No. 6. The only problem outwards can be the fishing craft in the channel.

SHIPMASTER'S REPORT: September 1995.

General:
Port: Shuidong SPM.
Vessel: 138,000 d.w.t. crude carrier.
Cargo: Crude oil – 135,000 tonnes.
Draft: 17.0 m.

Port Limits: Single Point Mooring. Buoy position Lat. 21° 20.09' N., Long. 111° 24.06' E.

No facilities nearby the SPM. Vessel "arrived" when 5 nautical miles South of SPM (Anchorage). SPM is a crude oil discharge port for the Maoming Refinery, located in Guangdong Province, via Beishaling crude oil tank storage farm.

Documents: Standard Chinese regulations. Agent requires most documents to be faxed before arrival, if possible.

Pilotage: Pilot boards in good time, usually at anchorage when anchor aweight. The mooring gang/gear arrives on the same boat. Only one Pilot assigned for the SPM, employed by the Port of Shuidong. He stays onboard during the entire discharge.

Anchorage: Customary anchorage in position Lat. 21° 14' N., Long. 111° 24' E. Water depth 28.0 m. Holding ground is very good, despite strong prevailing Easterly currents of about 2 knots, setting to West.

Restrictions: Normally no berthing or unberthing during hours of darkness. Weather limits for berthing: Maximum wind 15 m./sec., seas 1.83 m. and visibility 1,000 m.

Max. Size: 270,000 tons d.w.t. or max. draft 19.20 m.

Health: No Radio Free Pratique possible. Straight forward operations once Agent and officials onboard. Clearance can be done during vessel's approach to the buoy.

Radio: Shuidong Port Radio on VHF Channel 16 for contact with Agent.

VHF: Pilot and port on Channel 13, but no answer if Pilot not onboard.

Radar: No Vessel Traffic Service or similar services in the area.

Tugs: Two tugs and one large service boat designated for the SPM operations and Zhanjiang port operations as required. Normally one tug stays on location during whole of port stay and connected to vessel's stern. Tugs always use ship's mooring ropes. Tug operation appeared to be quite inexperienced and small problems may be expected.

Berthing: Berthing only during daylight hours. Normally SPM approached from S.W. against the current. Tidal conditions are to be noted for the correct time of mooring.

One tug is connected astern and one on starboard side main deck forward. Floating cargo hoses left to port side of vessel. Depth at SPM varies between 23 m. and 27 m., depending on tide and currents. Location is very vulnerable to Easterly swell and down time is always expected. Two chafe chains of 76 mm. diameter from the SPM as a minimum requirement, due to location and weather conditions. Condition of the mooring gear offered from the SPM to be monitored closely on arrival. Two 16 in. floating hoses supplied by the terminal. These will be connected by the terminal crew of approximately 15 persons. Derricks of 15 tonnes minimum SWL required.

Medical: Patients may be sent ashore by launch arranged by Agent, but distances are great, and it takes several hours to reach the nearest doctor or hospital (Maoming).

Tankers: Two 16 in. discharge hoses supplied by terminal. Normally port manifolds to be used. Long pipelines to tank farm/refinery and no booster pumps ashore, so the discharge back pressure is high. Loading Master stays onboard for the whole discharge with numerous assistants keeping a watch in the vessel's cargo control room, monitoring the vessel discharge rate/performance. No real oil spill combat facilities available in the area. Engines to be on stand-by during the whole SPM stay (5 minutes notice is acceptable).

Density: 1025.

Fresh Water: Not available.

Repairs: Not available. No engine repairs allowed at SPM.

Surveyors: Local Chinese surveyor, employed by the receiver.

Repatriation: Possible without any significant problems.

Airport: Nearest airport at Zhanjiang, with domestic connections to Guangzhou, and from there to Hong Kong.

Time: GMT plus 8 hours throughout the year.

Telephones: Most of the shore party personnel staying onboard have local mobile telephones for easy contact with the shore.

Services: Shipchandler can be arranged by the Agent.

Shore Leave: Not possible.

Garbage/Waste Oil: No services available for disposal.

Authority: MMPC Shuidong Port Co. – SINOPEC Maoming.

SPM Operator: Maoming King Ming Petroleum Co.Ltd. Tel: 86-668-2680321. FAX: 86-668-2680573.

Agent: Penavico, Maoming. Telex: 453048. Fax: 86-668-2280038.

TAKU BAR: 38.56 N. 117.53 E.

Also see "General" before first port and "Tianjin".

Guide to foreign vessels calling at Taku Bar (Xiang Jiang, Tanggu and Tianjin): Issued by the Harbour Master at Tianjin.

1. Foreign vessels entering Bohai (Pohai Gulf) are only allowed to pass through Changshan Channel and/or Laotiehshan Channel. If the latter way is taken, the vessel must send a wireless message to "Harbour Master, Dalian" for directory 8 hours prior to passage. It should be noted that no other Channels are permitted for navigation. (Also see "Dalian").

2. Vessels passing Laotiehshan Channel for Dalian must make a detour along the East of "Encounter Rock".

3. Position of sunken dredger "Se Ho" is at Lat. 38° 31' N., Long. 119° 10.5' E. Vessels should keep far away from the above-mentioned area during navigation.

4. Vessel may anchor to wait for Pilot.

5. Vessel may send radiogram to "Penavico Xingang" (via Xingang Coastal Radio Station XSV, calling frequency 500 kHz, working frequency 445 kHz, reserve frequency calling 8630 kHz. Listening 8364 kHz, working hours 0000 – 2400), giving exact ETA also fore and aft draft, before entering Bohai (Pohai Gulf).

6. The Pilot Station is at Tanggu. All vessels are required to have a Pilot when entering or leaving the Ports of Tanggu and Xingang. The Pilot will board the vessel at the anchorage after receipt of exact ETA given by the Master.

Regulations Issued by the Harbour Superintendent's Office:

1. All foreign vessels (hereafter referred to as vessels) entering or leaving the Port of Tianjin (hereafter referred to as this port) are required to observe strictly the provisions of the Regulations Governing the Entry and Departure of Foreign Vessels into and from Ports of the People's Republic of China (hereafter referred to as Regulations Governing Foreign Vessels) and of the Port Regulations of Tianjin.

2. On arrival at this port, vessels are prohibited to use the articles enumerated in Article VII of the Regulations Governing Foreign Vessels. Should it be necessary to repair any of the articles enumerated in Item 2 of the same article, permission to do so must be obtained beforehand from the Harbour Superintendent's Office.

3. Articles placed under seal shall not be used and the seals shall not be removed without permission. Should any of the paper seals be found falling off, the fact shall be reported to the Harbour Superintendent's Office immediately.

4. Whilst in port, vessels are not allowed to dress ship or hoist flag at half mast without the permission from the Harbour Superintendent's Office.

5. Vessels in port desiring to undertake any of the following work must first apply in writing to the Harbour Superintendent's Office. After permission is obtained the work can then be carried out at the appointed place.

(a) Lifeboat practice;
(b) Overhauling boiler, main engine, steering engine or windlass;
(c) Engaging in welding work or burning anything on board;
(d) Pumping out ballast water regardless of whether the water is contaminated with oil or not.

6. After a vessel's arrival at this port, sounding, survey sketching, photo-taking, fishing and swimming are strictly prohibited.

7. After arrival at this port, vessels are strictly prohibited to dump ballast materials, coal ashes, garbage, rubbish and mud, or to discharge dirty oil or oily bilge water into the harbour. It is also prohibited to wash double bottom oil tanks or oil deep tanks inside the harbour.

8. Vessels in port must provide secure gangways or gang planks with rails or manropes for passengers, crew and all workers to embark or disembark. All gangways or gang planks are to be provided with lights at night.

9. Vessels lying alongside the pier should properly cover up all their exhaust valves and discharge openings on the ship's side facing the pier. 10. Garbage bins or drums with tight covers must be provided on board. The bins or drums should not be filled to overflow. When the garbage-collecting cart comes daily to the ship to collect the garbage and rings the bell on its arrival, the ship should arrange to deliver the ship's garbage into the cart.

11. If, owing to some special reasons, a vessel desires to return to this port after departure, the Master should first telegraph to the Harbour Superintendent for permission and must act according to the instructions given.

Frontier Inspection Station:

1. All the officers and crew of a foreign vessel and the passengers on board should produce their passports or other certificates to the Frontier Inspection Station and submit to the inspection of the Station.

2. When the ship's crew or passengers in transit desire to go ashore, the Master is to apply to the Frontier Inspection Station and the passport endorsing authorities, respectively, for landing permits.

3. A landing permit is valid only at the port where it is issued. On the ship's departure, all landing permits for the crew should be returned to the Frontier Inspection Station for cancellation.

4. The time limit for going ashore is from sunrise to midnight. When any Crew member wishes to stay overnight on shore, the Master should apply for permission on his behalf. Staying overnight ashore without permission is not allowed.

5. All laws and regulations of the People's Republic of China must be observed.

Quarantine Office:

1. During a vessel's stay in port, if any person on board is found to be in high fever or to be feverish continuously for several days (or with the swelling of the lymphatic gland), or to suffer from acute rash on the skin with or without fever, or to suffer from acute diarrhoea and in a state of collapse, or to suffer from jaundice with fever, the matter should first be reported to the Quarantine Office. The patient can go ashore for medical treatment only when he has been examined and allowed to do so by the Quarantine Officer.

2. Effective rat-guards or other rat-preventing devices should be fixed on all mooring ropes.

3. Gangways and gangplanks are not allowed to be put on to the wharf when not required. Should they be used at night, strong electric lights should be provided.

4. Should any dead rats or mice be found or any rats or mice caught on board a vessel, the fact should be reported to the Quarantine Office for the necessary inspection to be made.

The above regulations are in force at most Chinese ports.

Berthing: In the fairway and on the West side of the first pier vessels may pass on 34 ft. draft. Length of pier about 1,500 ft.

Another pier is under construction, and when ready will have berths for 5 vessels of about 600 ft. length. The depth alongside will be 34 ft.

On the first pier 7 cranes with a capacity of about 10 tons. It was not possible to obtain information on the older berths. Four tugs with up to 1,000 h.p.

All bunkers to be brought in from Dalian.

SHIPMASTER'S REPORT: June 1990.

Tientsin is closed for navigation.

Tungku for small vessel above lock and not likely to be used by foreign ocean going vessels.

SHIPMASTER'S REPORT: July 1990.

Taku Bar is not a port but the shallow bar at the entrance to the channel, where a light vessel was stationed in earlier years and which was removed at least 4 to 5 years ago.

All references now taken from Dagu Lighthouse which also fitted with a Racon.

TIANJIN/XINGANG, including Tanggu: 39.06 N. 117.10 E. (See Plan)

Also see "General" before first port.
Also see "Taku Bar".

PILOTAGE: Compulsory. Pilotage undertaken day and night.

APPROACHES: *Tianjin:* The channel to Tianjin is dredged to allow vessels with max. draft 4.0 m. to be handled. The distance from Dagukou Maodi (anchorage) to the city is 54 miles.

Tianjin New Port: The new port is situated in position Lat. 38° 59' N., Long. 117° 45' E. in Bohai Bay at the mouth of the Haihe River. The main channel has a depth of 11.0 m. at H.W. and is 150 m. wide.

ANCHORAGE: Da Gu Kou anchorage has a depth of 10 m. – 13 m. and can accept vessels up to 50,000 g.r.t. The anchorage is unprotected and provides no shelter from wind, sea or swell. With a North Westerly or Westerly wind the sea is slight but when the wind is strong the tide is greatly reduced. Ships should take great care in selecting a suitable anchorage position.

RESTRICTIONS: Vessels may enter and sail throughout 24 hours.

MAX. SIZE: Draft limitation in channel is 10.0 m.

The general draft restrictions are as follows:

Vessels loaded with bulk grain (Winter)	10.1 m.
Vessels loaded with bulk grain (Summer)	10.4 m.
Vessels loaded with steel products and general cargo for import	8.5 m.
export	8.2 m.

Tidal Range: Maximum 3.5 m., minimum 2.0 m.

VHF: Penavico on Channel 11 throughout 24 hours. Sinoagent on Channels 73 and 74 throughout 24 hours.

TUGS: 5 × 980 h.p., 6 × 1,670 h.p., 1 × 1,900 h.p., 1 × 1,960 h.p., 3 × 2,600 h.p. and 2 × 3,200 h.p.

BERTHING: *Tianjin:* The Tianjin area for smaller ships and barges further upstream is situated along the right bank of the river within the Urban district of Tianjin.

Tianjin New Port: The new port lies on the North side of the river and is a man-made harbour. Between two breakwaters, constructed on the South and North sides of the work area is the entrance to this harbour with a width of 1,300 m. 5,000 ton vessels can pass through the 13 mile long, two-way channel of the port at high water. The channel is being dredged to 16 m. (now 13 m.) and will enable 10,000 ton general cargo vessels to pass through.

Area	*Berth* No.	*Water Depth* (m.)	*LOA* (m.)	*Capacity* (tons)	*Cargo Handled*
	1-4	7.5	175 × 4	7,000	General

Passenger Terminal	River Port	4.5	250	3,000	Passenger
	Sea Port	8.1	311	7,000	Passenger

Tanggu: Also see Area No. 3 above.

There is a lock at the Western end of the New Port, connecting it with the Tanggu area on the left bank of the river. The river from the lock is narrow and winding and its water level varies greatly with the seasons. The lock is 180 m. long×21 m. wide and 5,000 ton vessels in a laden condition can pass at high water.

Tanggu has 7 berths – five for general cargo and two for passenger vessels. Berths No. 5 and No. 6 have a total length of 230 m. for 1×3,000 ton and 1×5,000 ton vessel. Berths No. 10 and No. 11 have a combined length of 355 m. for 5,000 ton vessels. Connection with railway system.

CRANES: 4 × 40.5 tonne cranes at container terminal.

1 × 200 tonne and 1 × 120 tonne floating cranes.

MEDICAL: Facilities available.

FRESH WATER: Contact China Marine Bunker Supply Co., Tianjin Branch.

FUEL: Contact China Marine Bunker Supply Co., Tianjin Branch.

REPAIRS: There are ship repair facilities at Tianjin and at the New Port.

AIRPORT: Tianjin Airport. Flights to Shanghai and other major cities.

GENERAL:

Storage:

Warehouse: 188,832 sq.m.

Open Storage: 840,596 sq.m.

Imports: Grain, steel and machinery, etc.

Exports: General cargo and maize, etc.

Provisions: Contact Tianjin Ocean Shipping Supply Co.

SHIPMASTER'S REPORT: June 1990.

Xiang Jiang is the primary port for ocean-going shipping delivering cargo for Tientsin and Beijing and is under ongoing development. About 28 berths are in use, and the number will increase. A number of portainer cranes are available on the container berths and there are heavy lift cranes on some of the general cargo berths, also 10 ton cranes. Berths No. 1-5 have no cranes. General draft is 9.0 m., but channel has 11.0 m. at low water. Dredging dues are levied on excess draft over 9.0 m. One berth for grain, with 2 "siporters" and grab cranes, but it is necessary to turn round to complete discharge. Coal and minerals are exported.

SHIPMASTER'S REPORT: July 1990.

Tianjin: Tianjin is the city situated about 54 miles to West of the port of "Tianjin Xingang". Tianjin was previously called "Tientsin" and with the policy of changing all names into a national language, i.e. Mandarin, all the port names were changed (Peking became Beijing). Vessels cannot navigate to Tianjin, except small barges.

For guidance: New name Tianjin Xingang, old name Hsingkang. New name: Tianjin (City), old name Tientsin.

Name of Port: Tianjin Xingang or commonly called "Xingang" (old English name Hsingkang).

Position: Latitude 38° 59' N., Longitude 117° 45' E.

Information: One of the busiest ports in The People's Republic of China and believed to be second only to Shanghai with regard to cargo handled. Being the closest port to Beijing and to the economic zone of Tianjin, the port has become the most important port for North China.

Navigation: Reference B.A. Chart No. 2653 – Tianjin Xingang approaches.

Vessels bound for Xingang should advise Harbour Master "Dalian", 8 hours prior to passing Laotieshen Shuidao via Dalian Radio (XSZ), the following information:

(1) Name.
(2) Nationality.
(3) Port of departure and destination.
(4) Call Sign.
(5) Speed.
(6) Colour of hull and funnel.
(7) ETA at line joining 38° 43.5' N., 121° 08.0' E. and 38° 23.8' N., 120° 54.6' E. (Please also see Admiralty List of Radio Signals Vol. 2, part 6).

When approaching the port, it is advisable to be a minimum of 8 miles – 10 miles South of the "Caofeidian" Lighthouse (38° 56.1' N., 118° 30.4' E.) (fitted with a Racon "C"), to avoid numerous fishing boats and nets.

Pilotage: Pilot boards at anchorage or 2 miles East of the Dagu Light. Pilotage provided for Xingang and Tanggu.

Vessels should send their ETA's to "Penavico Xingang" as required with all relevant information.

As a general rule the pilots do not instruct vessels when approaching, and vessels should call "Penavico" on Channel 11 (VHF) for information and instructions.

Penavico requires following information after anchoring:

(1) Time of anchoring.
(2) Position – bearing and distance from Dagu Lighthouse.
(3) Fuel, diesel and water remaining on board and arrival drafts.

Vessels should keep listening watch on Channel 11 throughout the stay at anchorage.

Berthing information announced daily by Penavico at 1100 hrs. and 1600 hrs. local time.

At times agents do not give sufficient notice for vessels berthing and vessel's main engine should be kept prepared.

Vessels under "Sino Chart" should advise their ETA's as required.

Port Facilities: Large passenger terminal available West of Berth No. 1, draft up to 8.0 m. Regular local passenger service to Dalian. Many foreign passenger vessels call at this port.

Berths No. 1-5: Used for general cargo up to 7.0 m.
6: Used for general cargo up to 8.5 m.
7: Used for general cargo up to 9.0 m.
8: Used for discharging bulk sugar up to 9.0 m.
9: Used for loading bulk coke, drafts allowed 9.0 m. Loading by shore cranes with grabs.
12-13: For bulk grain discharging. Main berth is No. 13, discharged by evacuators. Draft allowed up to 11.0 m., but may allow deeper drafts depending on tide.

Prior to completion vessels are shifted to Berth No. 12.

Large vessels up to 60,000 d.w.t. can berth.

Average discharging time for 40,000 tonnes of grain at this berth is about 5 days.

Due to only one proper grain berth, and due to large amounts of grain imported via Xingang, grain vessels may be delayed by 3-4 weeks when 2 or 3 grain vessels are at anchor.

14, 15, 16: Used for general cargo up to 9.0 m. or more.
17, 18: Used for discharging bulk fertiliser. Draft allowed up to 10.5 m. Discharging done by shore cranes and cargo bagged automatically at the pier.
19, 20: For loading coal in bulk. Draft up to 10.5 m. to 11.0 m.
21: Containers – regular container service to Hong Kong.

All depths are given only as guide and believe depths allowed at some berths are more than indicated.

Port charges extra for vessels berthing with deeper drafts and for quick discharging, when discharging with a falling tide.

Masters are warned regarding signing invoices for quick discharging and deeper drafts, as charges may be exorbitant.

Port Developments: Extensive dredging and land reclamation taking place at present, including extending the present breakwater.

Fresh Water: Fresh water supplied by barge, even alongside, as not many hydrants available at the berths.

Water can be supplied at the anchorage at approximately U.S.$4.50 per metric tonne, but 3 to 4 days notice required to agents. Due to uncertain berthing prospects, vessels should arrive with maximum water on board.

Repairs: Xingang Shipyard can provide all services required. If required, shipyard can board at the anchorage, but prior permission should be obtained by agents from Immigration.

Large dry dock available, vessel of length 200 m. and beam 26 m. can enter.

Shipyard has new building yard, where vessels of 30,000 d.w.t. are built.

Draft at shipyard berths up to 6.0 m.

Shipyard can be contacted on VHF. Vessel must first call "Tianjin Radio" on Channel 16, who will allocate a channel for communication.

Medical: Special medical facilities available for foreigners at Tanggu Hospital and arranged by agents, about 20 minutes by taxi.

Airport: Situated at the city of Tianjin, about 54 miles to the West of the port of Xingang, about one hour by car.

Daily flights to and from Hong Kong, and to many other Chinese cities.

Cranes: Many heavy lift floating cranes available.

Mail Service: Speedpost parcel service available to Hong Kong. Parcels arrive within 4 days from Hong Kong. Believe courier service will be available in the very near future.

Provisions: Available, but during the Winter months fresh provisions may be difficult to obtain.

Bonded stores available at moderate prices.

Port of Tanggu: All regulations and arrival information to be sent to "Penavico Xingang" for vessels bound for Tanggu.

Lock gates situated South of the Xingang shipyard area.

Mainly used by coastal vessels of 3,000 d.w.t. tonnes, 5 berths are available for general cargo and small tankers.

AGENT: See "Shanghai".

WEI HAI: 37.31 N. 122.08 E. (See Plan)

PILOTAGE: Compulsory. Pilot boards in the Quarantine Anchorage and pilotage only undertaken during day time.

ANCHORAGE: *Lightering Anchorage:* A lightering anchorage is located in Lat. 37° 29' 44" N., Long. 122° 09' 41" E. The depth of water is 7.8 m. – 16.40 m. The nature of the bottom is mud and vessels up to 10,000 d.w.t. may use the anchorage.

RESTRICTIONS: Vessels may only enter and sail during daylight hours.

MAX. SIZE: Draft limitation in the channel is 6.5 m.

VHF: Radio Station "Qing 234" on Channel 16 throughout 24 hours.

TUGS: 1 × 1,200 h.p.

BERTHING:

WUHU: 31.22 N. 118.22 E.

PILOTAGE: Pilotage is undertaken from 0800 hrs. – 1700 hrs., and Pilot boards vessel at Pilot Station.
ANCHORAGE: Anchorage No. 1 at Wuhu Port has a depth of 8.0 m. – 12.0 m. The bottom is mud and sand. The anchorage can accept vessels of 10,000 d.w.t. – 15,000 d.w.t.
RESTRICTIONS: Entry and departure throughout 24 hours.
Draft limitation in the channel in dry season is 6.1 m.
Tidal Range: Maximum 4.36 m. Minimum 0.10 m.
VHF: Port on Channel 6 throughout 24 hours.
TUGS: 7 tugs up to 980 h.p.
BERTHING:

Handling Dept.	*Berth* (No.)	*Max. Size* *Draft* (m.)	*LOA* (m.)	*Cargo Handled*	*Shore Cranes*
Wuhu	5	8.0	120	General	
	6	7.0	100	General	1×3 tons
	8	10.0	140	Passenger	
	11	7.0	100	General	1×3 tons
Fu	12	9.0	120	General	
	13	7.0	100	Heavy Cargo	1×15 tons
	15	6.0	100	Bulk	2×3 tons
	16	6.0	100	Bulk	
	17	8.0	402	General	4×5 tons 1×16 tons 1×30 tons
	29	5.0	100	various	2×5 tons 2×10 tons
	32	6.0	120	Coal	2 Quay Cranes

CRANES: Floating crane with capacity 15 tons.
Also see "Berthing".
STEVEDORES: *Working Hours:* 24 hours.
FRESH WATER: Available.
REPAIRS: Possible.
GENERAL: *Storage:* Warehouse: 28,179 sq.m. Open storage space: 109,129 sq.m.
Cargo Handled: Coal, metal ore, timber, fertiliser, grain and general cargo.
AUTHORITY: Wuhu Port Authority, Wuhu, Anhui Province, People's Republic of China.

XIAMEN (Amoy): 24.30 N. 118.04 E. (See Plan)

PILOTAGE: Pilotage is compulsory and is undertaken in day time only. The pilot boards the vessel in the Pilot/Quarantine Anchorage.
ANCHORAGE: *Pilot/Quarantine Anchorage:* The anchorage is located in position Lat. 24° 25' N., Long. 118° 03' E. The depth of water in the anchorage is 12.0 m. and the bottom is sand and mud. Vessels up to 100,000 d.w.t. may use the anchorage and larger size vessels may use the anchorage for shelter only.
MAX. SIZE: The draft limitation in the Channel up to the Pilot/Quarantine Anchorage is 12.0 m. and the limitation in the Channel from the Pilot/Quarantine Anchorage to Dong Du Wharf is 8.0 m.
Tidal Range: Maximum: 6.0 m., minimum 4.5 m.
VHF: Xiamen Radio on Channels 16, 12 and 25. A 24 hour service is maintained.
TUGS: 1 × 600 h.p., 2 × 800 h.p., 2 × 1,670 h.p. and 1 salvage tug of 2,640 h.p.
BERTHING:

District	*Berth* No.	*Length* (m.)	*Depth* (m.)	*Max. Size* (d.w.t.)	*Cargo Handled*	*Cranes* (tons)
Ha Ping	No. 1 Floating Berth	64	7.0	Below 3,000	General	2×1.5
	No. 2 Floating Berth	100	8.0	Below 5,000	General and Passengers	2×1.5
Dong Du	1	142	9.9	Below 15,000	Grain	1×30.5
	2	228	12.6	Below 80,000	Bulk	2×10
	3	165	12.6	Below 80,000	General	2×10
	4	142	9.9	Below 15,000	General	2×10

FRESH WATER: If vessel requires fresh water alongside, she should contact Xiamen Waterboat Bureau. If vessel is at the anchorage, she should contact Xiamen Tug Water Company.
FUEL: Contact China Marine Bunkers Supply Co., Xiamen Branch.
REPAIRS: Repair facilities available.
GENERAL:
Storage: Warehouse: 41,000 sq.m. Open Storage Space: 354,000 sq.m.
Imports: Wheat, fertiliser, cement, steel, coal and sugar.
Exports: Salt, tea and graphite powder.
Provisions: Contact China Ocean Shipping Supply Corporation.

SHIPMASTER'S REPORT: February 1986.
Documents: Standard Chinese Forms.
Pilots: Pilots ordered by Agents only if the vessel shifting from working anchorage to alongside after clearance.

Approaches: As per sailing directions and charts. The swept channel is very narrow, and the ship must pass 3 cables off a rock awash to port soon after an alteration. Then 3 cables off another rock to starboard. The channel is not marked for night navigation, and navigation should only be attempted with good radars and very careful planning. Navigation lights are weak and extinguished. Pilotage is not available from sea to Quarantine/Working Anchorage and vice versa. (Quemoy and Matsu lie close to starboard of channel).

Anchorage: Quarantine and cargo working anchorages are to the South and West of Gulang Yu Island. Cable crossing area to Eastward, some dangers as shown on chart. Good shelter from monsoon.

Health: Standard Chinese Health Declaration and Vaccination Lists required.

Radio: Xiamen Radio Station used when within range and if the operator is on watch. Otherwise vessel should use Guangzhou or Shanghai Radio.

VHF: Xiamen Radio. Call on Channel 16, ask for 'Penavico' and the station will patch through, normally on Channel 12.

Tugs: For berthing 2 tugs pushing, for sailing 1 tug pushing.

Berthing: The Inner Harbour or Neigang is only suitable for small coastal vessels. Ocean-going vessels may berth at Dong Du (24° 30' N., 118° 04' E.) at new wharf for 5 vessels. Large range and fall of tide, loaded vessel's bulwarks drop below wharf level. Said to be capable of berthing two 50,000 ton vessels, and others of 10,000 tons.

Cranes: At Dong Du, one standard container crane on rails at No. 1 Berth. A number of standard Chinese two wire grabbing/general cranes. Ship's gear also used which may work ashore or overside.

Bulk Cargo Facilities: At Dong Du, 2 berths equipped for bagging bulk cargo discharged by grabs. Artificial fertilisers are worked at wharf and anchorage.

Specialised Cargo Handling Facilities: Full container terminal behind container crane.

Density: About 1022 at Dong Du.

Fresh Water: By barge at anchorage or by low pressure shore hose at Dong Du.

Fuel: Fuel oil and diesel oil said to be available but details not known.

Repairs: A small local shipyard, and several boatyards but details not known.

Repatriation: Possible. Local airfield with flights to major cities in China and some times to Hong Kong. Twice weekly overnight ferry to Hong Kong.

Time: GMT plus 8 hours.

Telephones: Telephones/Telexes: Recently modernised as part of the Special Economic Zone centred on the nearby Huli Industrial Estate. Direct dialling to Hong Kong. Quick operator service to the U.K.

Mail service was erratic, 7-20 days from Hong Kong, one despatch went missing.

Storing: Provisions supplied by light truck to foot of gangway at Dong Du.

Shore Leave: Allowed. Shore passes issued for non-Chinese personnel.

Developments: 4 berths to be built. One berth for container vessels and 3 berths for general cargo and bulk (3×25,000 d.w.t. vessels). The port is likely to have a Free-port within the next few years.

Agent: China Ocean Shipping Agency. Cables: "Penavico".

XIJIANG TERMINAL: 21.18 N. 114.57 E. (See Plan)

LOCATION: The 152,404 tonnes deadweight tanker "Nan Hai Kai Tuo" was converted to a Floating Storage Production and Offloading (FPSO) unit, and is moored with a disconnection system in the Pearl River Mouth Basic Oil Field, approximately 80 miles S.E. of Hong Kong.

Geographical Position – Platform: Platform "24-3" is in position Lat. 21° 22' 45" N., Long. 114° 58' 40" E.

Platform "30-2" is in position Lat. 21° 18' 19" N., Long. 114° 58' 33" E.

Geographic Position – FPSO: The FPSO is moored in position Lat. 21° 18' 19" N., Long. 114° 57' 12" E.

This position is on a straight line connecting the position of the two platforms (See "Plan").

Designated Waiting Area: Tankers arriving to load must not approach within 10 miles of the undersea pipelines connecting the platforms to the FPSO, until directed to do so by the Mooring Master.

DOCUMENTS: *Customs Clearance:* Non-Chinese flag tankers scheduled to loading Xijiang Crude will be required to obtain Port Clearance through the ship's Agent.

Available in Shekou is Penavico China Ocean Shipping Agency. Tel: 86-755-6695216, 6692746 or 6685692. Fax: 86-755-6692769, 6689946. Telex: 420833 Cosas Cn, 420882 Cosas Cn.

In order to obtain clearance without delay, the shipowner should submit, by fax, the following information or documents to the shipping agency well in advance:

1. Name of vessel.
2. Nationality/Flag.
3. LOA, beam, Summer draft of the vessel.
4. Name of Owner/Manager.
5. Contact person, telephone, telex number.
6. Vessel's ETA.
7. International Certificate of Registry.
8. Load Line Certificate.
9. Crew List.
10. Last Port Clearance.
11. Safety Construction Certificate.
12. Safety Equipment Certificate.
13. Safety Radio Certificate.
14. IOPP Certificate.
15. Vessel's GRT/NRT/DWT.
16. Vessel's last/next discharge port.

Export Permit: Cargo destined for discharge outside China must be scheduled at least one month in advance to enable the necessary export permit and Customs documents to be obtained.

NAVIGATION: *Navigational Signals:*

Day Signal:

(a) One black ball – black diamond – black ball in vertical line on the signal mast.

(b) One black ball on the bow.

Night Signal:

(a) Three vertical lights (Red – White – Red) on the signal mast.

(b) One red light (Dangerous Cargo light) on the signal mast.

(c) One white light (anchor light) on the bow.

(d) One white light (Anchor light) on the stern.

MAX. SIZE: *Size Limitations for Offtaking Vessel:* The Terminal is designed to load vessels between 35,000 d.w.t. and 120,000 d.w.t.

RADIO/VHF:

1. FPSO Radio Station: The FPSO is equipped with HF radio call sign "5LUG" (five-lima-uniform-golf). FPSO Inmarsat telex number is 1243253 Javax.

2. Office Telex and Telephone: The Terminal Operator, Philips Petroleum International Corporation Asia (PPICA), can be contacted at their office in Shekou.

Telephone: 755-6691786.
Telex: 44245.
Fax: 755-6691162.

3. Marine VHF Equipment: The FPSO and the support vessels are equipped with marine VHF. The preferred channels are 6 (Ship-to-ship) and 12 (Port Operations).

The VHF call sign for the FPSO is "Nanhai Kai Tuo".

4. Walkie-Talkie Sets: Hand held VHF radios are available for communication between the Mooring Master, FPSO and support vessels during mooring, loading and unmooring procedures.

5. Long Range Communications – FPSO: All long range communications should be conducted by telex whenever possible, otherwise by HF radio.

Information regarding tanker ETA's, arrival or departure from the loading terminal should also be directed to the PPICA office in Shekou.

The tanker's Master should advise his ETA 96 hours, 72 hours, 48 hours and 24 hours prior to arrival at the NOR position. If the transit time from the previous port is less than 96 hours, the ETA should be sent if the ETA changes by more than 3 hours.

6. Contact with FPSO: When within range, the tanker's Master should contact the FPSO on VHF Channel 16 and agree on another channel for further communications.

Good communications between the tanker and the FPSO is an essential feature of the loading operation. Primary and secondary methods of communication must be established and agreed on to allow for possible equipment failure.

7. Contact with Support Vessels: After boarding the tanker, the Mooring Master will establish primary and secondary communications with the support vessels using the taker's VHF or hand held sets.

8. Emergency Communications: In the event of an emergency when at the FPSO or near approaches, the first line of communication will normally be on VHF radio on the channel currently used. VHF traffic may be heavy and the words "emergency" and "priority" should be emphasised.

9. Failure of Radio Communication: In the event of such failure on the tanker when moored or in close proximity to the FPSO, the vessel shall sound a series of short horn blasts on the whistle and make a series of short flashes on the signal lamp to attract the attention of the FPSO and the support vessels.

On receipt of such signals, the FPSO will immediately stop all pumps, should loading be in progress. The support vessels will proceed to the tanker and relay communication as required.

TUGS: *Support Vessels:* Two support vessels are available to assist a tanker mooring, loading and unmooring.

One of these tugs (8,000 b.h.p.) will act as a stern tug throughout the loading operation, while the tanker is moored to the FPSO.

BERTHING: *General Description of the FPSO:* The FPSO is moored by a Buoy Turret Mooring (BTM), connected to a submerged mooring buoy. In the event of an imminent typhoon, the FPSO may disconnect from the mooring and sail to safety. When the FPSO is disconnected, the mooring buoy sinks to its free float depth of 31 m. below sea level and supports the anchor lines awaiting reconnection.

A tanker loading Xijiang Crude will be berthed by a single bow mooring hawser connected to the stern of the FPSO.

Crude is loaded through a floating hose string from the stern of the FPSO to the loading tanker's midship manifold. 1×16 in. connection may be made on the port side.

Requirements for Offtaking Vessels:

(a) A bow centre fairlead with minimum dimensions 600 mm. × 450 mm.

(b) A chain stopper fitted at the bow and conforming to the OCIMF Recommendations for Equipment for Mooring at Single Point Moorings.

(c) The distance from bow to midship manifold connection not to exceed 450 ft.

(d) A midship hose lifting capacity of 10 tons SWL.

(e) An empty winch drum with capacity for 150 m. of 10 in. messenger line.

(f) Midship hose connections conforming to the OCIMF recommendations for oil tanker manifolds.

(g) Fully segregated clean water ballast.

(h) The Terminal will refuse to accept a vessel with deficient inert gas system, or any deficiency which may constitute a safety or oil pollution risk.

(i) Capacity required to receive at least 200 tons hose flushing in slop tank on arrival.

LOADING: *Storage Capacity:* The FPSO has a total storage capacity of about 1,000,000 barrels of crude oil. In practice, the maximum cargo to be loaded is unlikely to exceed 800,000 barrels.

Cargo Heating: Xijiang Crude has a high pour point and will be loaded at a temperature around 135°F. Loading tankers must be capable of maintaining the cargo temperature throughout loading, carriage and discharge.

Floating Hoses: Loading is effected through a floating hose string comprising 20×40 ft. length hoses of 20 in. diameter and 7×30 ft. hoses of 16 in. diameter.

The capacity of the floating hose string is approximately 297 barrels (47.5 cu.m.).

Cargo: Approximate data for Xijiang Crude Oil:

	Platform 24-3	Platform 30-2
API at 60°F	33.1	28.3
Loading Temperature	135°F	135°F
Vapour Pressure	13 psia at 135°F	12 psia at 135°F
Viscosity	8.3 cp	16 cp
BS & W	less than 0.5%	less than 0.5%
Pour Point	105°F	100°F

Initially, oil will be received from Platform "24-3" only. When Platform "30-2" commences production, the loaded oil will be a blend from both sources.

MEDICAL: No medical attention is available at the Terminal. In emergency, only evacuation by helicopter can be considered. For non-PRC nationals, this must be arranged by Owner's Agent in Hong Kong.

PORT SERVICES/SUPPLIERS, REPAIRS: No bunkers or fresh water can be provided at the Terminal.

No mail or supplies can be received or sent.

No repairs to the tanker are permitted while moored at the FPSO.

SHORE LEAVE/REPATRIATION: No shore leave or repatriation can be considered from the offshore Terminal.

GENERAL: The chart datum depth in the FPSO location is 100 m. (328 ft.).

The tidal range is less than 1.7 m.

The average surface current is approximately 1.0 knots to 1.5 knots in a prevailing Westerly direction.

The average sea water density in the area is 1026.

SHIPMASTER'S REPORT: February 1995.

Location: The Xijiang Terminal is located in the South China Sea in the Pearl River Mouth Basic Oil Field, approximately 80 nautical miles S.E. of Hong Kong (25 nautical miles East of Huizhou Terminal), in the People's Republic of China continental waters.

(a) Production Platforms:
No. 24-3 in position Lat. 21° 24' N.
Long. 114° 55' E.
No. 30-2 in position Lat. 21° 17' N.
Long. 114° 58' E.

At the time of loading (February 1995), only Platform 24-3 was producing, while Platform 30-2 was under construction.

(b) Floating Storage Production and Offloading (FPSO), the 152,404 d.w.t. tanker "Nan Hai Kai Tuo" moored by a Buoy Turret Mooring (BTM) connected to a submerged mooring buoy in position Lat. 21° 18.3' N., Long. 114° 57.2' E.

Positions of platforms and FPSO were observed by ship's GPS during loading at the Terminal.

Publications: Nautical references of the area can be found in the following publications:

British Admiralty Sailing Directions No. 30 – South China Sea.
U.S. Hydrographic Office Sailing Direction No. 93 – Western Shores of South China Sea.
British Admiralty Charts No. 1968 and 2661B.
Chinese Nautical Charts and Sailing Directions relating to the area.

Documents: Port Authorities or Agent did not board vessel on arrival, during loading or on departure. This seams to be routine.

Prior to arrival, the following documents should be faxed to the local Agent in Shenzhen:

Last Port Clearance.
Crew List.
Certificate of Registry.
Load Line Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
IOPP Certificate (No need for Form "B" to be faxed).

Cargo documents were issued by Chief Officer of "Nan Hai Kai Tuo", and departure clearance issued by Shekou Harbour Superintendency Administration handed over by Mooring Master, who will do most of the paper work.

Approaches: Approaching from the West, it would be recommended to keep oil fields well clear on the port side. Position can be obtained by charted platform at position Lat. 21° 30' N., Long. 116° 09' E., and Huizhou FPSO at position Lat. 21° 21.5' N., Long. 115° 24.6' E., later being equipped with Racon System on "X" and "S" band, emitting Morse code sign "N" at range of more than 35 nautical miles. Xijiang FPSO gives a good echo on the radar, as well as the Platform "24-3", but due to numerous fishing boats in the vicinity, this target is not easily recognisable, especially during restricted visibility.

According to the Terminal instructions, tankers arriving to load must not approach within 10 miles of the undersea pipelines connecting the platforms to the FPSO, until directed to do so by the Mooring Master.

Anchorage: There is no designated anchorage area in the vicinity. Echo sounder recorded depths slightly slopped for last 30 miles of approach from 100 m. to 90 m. contour. Even though there is a chartered depth of 57 m., the spot could not be found and with 9 shackles on deck, ship rested quietly at anchor during the night with Force 5-6 N.E.'ly Monsoon. Sea bottom 12 miles North of Xijiang FPSO was silty sand and provided good holding for the anchor. Great care must be taken while choosing anchorage, as this area is crowded with submerged pipelines, telecommunication and power cables. Good seamanship has to be kept in mind when anchoring, due to the depth of water. According to the local information, ships waiting for a longer period (a few days) anchor 30-35 nautical miles off Chinese mainland. During the N.E. Monsoon, good and well sheltered anchorage in 30 m. – 35 m. of water could be found. As we were first foreign ship to call at Xijiang Terminal (4th in total), this may apply for Chinese ships only, but in case of need could be verified with local Agent. Ship will need 5 to 6 hours steaming time from such anchorage to the Terminal.

Restrictions/Max. Size/Requirements: The Terminal is designed to load vessel between 35,000 d.w.t. and 120,000 d.w.t.

Berthing is restricted to daylight operations only. There are no restrictions for unberthing.

In the event of an imminent typhoon, ships may be disconnected and sent for shelter. When the FPSO is disconnected, the mooring buoy sinks to its free float depth of 31 m. below sea level, and supports the anchor lines awaiting reconnection, while FPSO sails to safety. According to the local information, ships stayed moored and continued loading in up to 40 knots winds. The hawser tension is monitored at all times during the operation and the tension should never exceed 200 tons.

Terminal requirements for tankers loading at Xijiang are:

(a) A bow centre fairlead with minimum dimensions 600 mm. × 450 mm.
(b) A chainstopper fitted at the bow and conforming to the OCIMF Recommendations for Equipment for Mooring at Single Point Moorings.
(c) An empty winch drum with capacity for 150 m. of 10 in. messenger line.
(d) The distance from bow to midship manifold connection not to exceed 450 ft.
(e) Helicopter winching area on port side forward.
(f) A midship hose lifting capacity of 10 tons SWL.
(g) A midship hose connection conforming to the OCIMF recommendations for oil tanker manifolds.
(h) Fully segregated clean water ballast.
(i) Capacity required to receive at least 200 tons hose flushing in slop tank on arrival.
(j) The Terminal will refuse to accept a vessel with deficient inert gas system or any deficiency which may constitute a safety or oil pollution risk.

Radio/VHF: The FPSO (Call sign "5 LUG") is equipped with:

HF radio.

Inmarsat telex number 1243253 answerback JAVAX operating in P.O.R.

VHF marine equipment, preferred Channels are 6 and 12, but would answer on 16 as well.

Hand-held VHF sets for communication between FPSO and Loading Master. A spare set could be obtained from FPSO on loading tanker request, for communication between two CCR;.

Both support vessels are equipped with VHF radios, long range and portable sets.

Communications: According to Terminal regulations:

"All long range communications should be conducted by telex whenever possible, otherwise by HF radio. The tanker's Master should advise his ETA 96 hours, 72 hours, 48 hours and 24 hours prior to arrival at the N.O.R. position. If the transit time from the previous port is less than 96 hours, ETA should be sent as soon after departure as possible. Amendments should be sent if the ETA changes by more than 3 hours. When within range, the Master should contact the FPSO on VHF Channel 16 and agree on another channel for further communications".

After several unfruitful attempts to contact FPSO, both by telex and HF radio, this practice was abandoned and ETA messages sent via Agent (Penavico located in Shekou, Shenzhen, P.R.C.) without any problem. Before arrival and after anchoring, communication with FPSO could not be established. It was 1 hour after ship had anchored that we received call from Loading Master on Channel 16 with instructions.

Pilotage: Mooring Master joins by helicopter whenever possible. It is a large helicopter, and landing on deck was never in question. Terminal operators insist on winching only. Helicopter is not equipped for night operation, and in case ship has to unberth during the night, Mooring Master and his party will disembark by pilot ladder. There is a brand new personnel basket on board the FPSO, and if requested, Mooring Master will make necessary arrangement and disembark by basket. Although this method is not routine practice at this Terminal, due to high swell it is much safer. Mooring Masters (3 Italians) are stationed ashore and not on the FPSO. They are contracted for job and could service any Terminal in the area. I found them highly professional.

Tugs and Support Vessels: Two support vessels are available to assist mooring, loading and unmooring operations. Tug "Hua Hai" of 8,000 b.h.p. is equipped with firefighting equipment, and acts as a stern tug throughout the loading operation while ship is moored to the FPSO. Tug "Hua Da" of approximately 3,000 b.h.p. is used for handling cargo hoses during mooring. Both tugs have orange hull with white house and company logo on the white funnel. It appeared that craft were manned by European Masters and Chinese crew. They performed all operations satisfactorily.

Berthing: The "Nan Hai Kai Tuo" is a converted (adapted) 152,404 d.w.t. tanker built in the 70's. It has a huge black hull, and unusual white structure, in addition to normal accommodation with twin black and blue funnels, heading in to the wind or current.

Mooring Master boarded ship by helicopter about 3 nautical miles off FPSO port quarter, this gives ship sufficient room for manoeuvring at slow ahead to swing to the wind for helicopter operation party of 3 men to be winched down on main deck (Mooring Master, Assistant Mooring Master and Surveyor). Ship proceeded on dead slow ahead at speed of approximately 4 knots to about 1,000 m. off FPSO stern. With engine stopped, and due to wind and current, ship was gradually loosing speed, and when 300 m. off FPSO stern, vessel stopped and 3 in. lead line connected. No line throwing equipment was used. Rope led through starboard "centre" fairlead and chainstopper to the ready and empty starboard windlass drum. After 150 m. of lead line was coiled on winch drum, 10 in. messenger appeared. Ship's engine was used to give minimum head movement and provide steering. Heaving of 150 m. of 10 in. messenger and coiling it on winch drum took 15 minutes, and final 3 in. chafing chain was secured on ship's chainstopper. Complete operation (from lead line to chain) took 18 minutes. Ship was safely moored to the FPSO with combined 45 m. hawser and 8 m. of chafing chain on each side of hawser. After hose was connected, supply tug "Hua Hai" took line from ship's stern.

Connection: Loading is effected through a floating hose string comprising 20×40 ft. lengths of 20 in. diameter hose and 7×30 ft. lengths of 16 in. diameter hose. Total length of 1,010 ft. with capacity of approximately 297 U.S. barrels. One 16 in. manifold connection is required with standard 150 ANSI flange. Equipment to secure hose during loading is supplied by Terminal. Connection is made by ship's crew under the supervision of Loading Master. The method of hose connection conforms with OCIMF recommendations, at least in general. Floating hose is full of sea weeds, and marking lights on the hose itself are all out of order, making identification during dark hours impossible. During our loading, floating hose was not fitted with stop valve, making connecting and disconnecting very difficult and filling up manifold drip tray.

Loading: Approximate data for Xijiang Crude Oil supplied by Terminal are:

	Platform 24-3	Platform 30-2	Loaded by vessel
API at 60°F	33.1	28.3	38.4
Load Temperature	135°F	135°F	142°F
Vapour Pressure	13 psia at 135°F	12 psia at 135°F	unknown
Viscosity	8.3 cp	16 cp	unknown
BS & W	less than 0.5%	less than 0.5%	0.17
Pour Point	105°F	105°F	unknown

At the time of loading, only Platform "24-3" was in exploitation. API changed frequently, and even after loading was completed, Terminal changed API 3 times in less than 1 hour. When Platform "30-2" commences production, the loaded oil will be blend from both sources. The FPSO has a total storage capacity of about 1,000,000 U.S. barrels of crude oil. In practice, the maximum cargo to be loaded is unlikely to extend 800,000 barrels.

Maximum loading rate offered by Terminal was 45,000 U.S. barrels per hour. As ship is limited by "only" 19,895 U.S. barrels flow rate through one connection, loading rate was agreed at maximum 20,000 U.S. barrels. Terminal could or would not keep such low rate, and at the end of loading, average loading rate came to 23,520 U.S. barrels per hour, resulting in protests from both sides.

Loading tanker must accept the loading hose displacement water (very common practice in this area), and keep it segregated in slop tank. The quantity of the water to be flushed is 70 cu.m. before the loading starts, and 400 cu.m. at the end of loading operations. Ship's tanks are inspected by Terminal surveyor prior to loading and after final flushing has been completed. Surveyor issues flushing water report. Samples of cargo from all ship's tanks are taken and sent to FPSO. After initial flushing, it is good practice to start loading in only one tank, and collect all eventual remaining water in that tank. Due to high pour point, cargo has to be heated at the commencement of loading operations. On completion of loading, all deck lines drained, and if possible blown through by inert gas to insure good drainage of the cargo that could not be heated during passage.

Unmooring: With loading hose flushed (operation takes 12 minutes) and disconnected (45 minutes), hose remains attached to the ship's manifold and is released only after chafing chain is off the ship. On the bow, crew starts heaving on the messenger rope and releases chafing chain from chainstopper. Aft tug starts pulling the ship away from FPSO and messenger and lead rope are slacked away, and finally handed over to supply boat. With stern movement, and as the rope on loading hose starts picking-up weight, same is realised. Next the tug is dismissed aft and this tug then tows hose away. With deck lights on, hose was still visible.

Cargo documents are normally ready in 1 to 2 hours. We were not so lucky, and when Terminal finally proclaimed final API, complete set of documents fell in the water and were lost. A new set of documents had to be made, and 5 litres of cargo samples had to be delivered to the ship. After 3.5 hours waiting and drifting, Mooring Master and his party departed and ship was ready to sail.

Safety: In general, OCIMF publications, such as International Safety Guide for Oil Tankers and Terminals, Ship to Ship Transfer Guide (Petroleum) and Guide to Helicopter/Ship Operation are used at the Terminal.

FPSO has a permanent helicopter service connecting it with the shore, occasionally several times a day. We were never warned of such operations going on, or that loading was not interrupted due to helicopter operations.

During loading, on several occasions, slight oil film was noticed in the area, and I suspected it came either from the FPSO or loading hose. Loading Master was advised on each such occasion, and internal investigation made.

According to Ship to Ship Transfer Guide, maximum allowed loading rate per 16 in. connection should not exceed 31,050 U.S. barrels per hour. It would be prudent to clarify this.

Operator: Phillips Petroleum International Corporation Asia operates the Terminal. FPSO is fully manned with European (Italian) Officers and Filipino crew. Additional production crew is a mixture of mostly Europeans and Americans. Assistant Mooring Master and Surveyor are Chinese, and as with rest of the personnel on FPSO, fluent in English language.

Phillips has office in Shekou, P.R.C., and could be contacted by:
Tel: 755 669 1786.
Fax: 755 669 1162.
Telex: 44245.

Agent: For this voyage, 2 Agents were contracted by Charterer.
Protecting Agent:
Pertamina Shipping JKR
Jardine Shipping Hong Kong
Tel: 2579 3557.
Fax: 2856 9951.
Telex: 63454.
Load Port Agent:
Penavico – China Ocean Shipping Agency, Shekou, Shenzhen, P.R.C.
Tel: 755 669 5216.
Fax: 755 699 2769.
Telex: 420834.

OPERATOR: Phillips Petroleum International Corp. Asia, 9th Floor, Finance Center, P.O.Box 166, Shekou, Guangdong Province, 518066 China. Also see "Radio".

XIUYU (Meizhou): 25.13 N. 118.59 E. (See Plan)

PILOTAGE: Compulsory. Pilot service is available during 12 hours. Pilot boards vessel at Lat. 24° 59' 06" N., Long. 119° 05' 01" E.

ANCHORAGE:

Name	*Location*	*Depth (m.)*	*Max.Size (d.w.t.)*	*Use*
Joint Inspection Anchorage	A circle with radius 550 m. centred on Lat. 25° 02' 10" N., Long. 119° 03' 14.6" E.	20.00	100,000	Quarantine
Joint Inspection Anchorage	A circle with radius 550 m. centred on Lat. 25° 02' 34.5" N., Long. 119° 02' 17.5" E.	20.00	100,000	Quarantine
No. 1 Buoy Anchorage	Lat. 25° 12' 52" N. Long. 118° 58' 41" E.	9.45	20,000	Lightening
No. 2 Buoy Anchorage	Lat. 25° 12' 34" N. Long. 118° 58' 52" E.	11.70	50,000	Lightening
No. 3 Buoy Anchorage	Lat. 25° 12' 46" N. Long. 118° 58' 22" E.	8.80	10,000	Lightening

The bottom is mud and sand in all anchorages, and the holding ground is good.

RESTRICTIONS: Vessels cannot enter and sail after sunset.
Tidal range: Max. 7.59 m. Average 5.12 m.
Draft Limitation in the Channel: 13.0 m.

VHF: "Meizhouwan Radio" on Channel 16 throughout 24 hours.

TUGS: 1×400 h.p., 3×600 h.p., 1×900 h.p. and 1×3,200 h.p.

BERTHING:

Stevedore Company	*Berth Name*	*Length (m.)*	*Depth (m.)*	*Max. Size (d.w.t.)*	*Cargo Handled*	*Shore Cranes*
Meizhouwan	1,000 ton	64	4.5	1,000	General and coal	2×8 ton
Meizhouwan	1,000 ton	149	5.5	3,000	General and Containers	1×30 ton, 2×8 ton
Meizhouwan	10,000 ton	213	9.6	10,000	General	4×10 ton, 2×16 ton

Warehouse and Open Storage Space: Warehouse: 8,640 sq.m.
Open Storage Space: 98,000 sq.m.
Container Yard: 1,500 sq.m.

Main Import and Export Cargo: General cargo, coal, cement and grain.

CRANES: 1×30 ton floating crane.
Also see "Berthing".

FRESH WATER: Available at berths and anchorages.

FUEL: Available at berths and anchorages.

REPAIRS: No facilities.

GENERAL: *Agency:* Penavico Meizhouwan, Xuenyuanbei Road, Chengxiang District, Putian, Fujian, China. Tel: 86-594-2696290. Fax: 86-594-2696690. Telex: 925009 Penpt Cn.

Sinoagent Meizhouwan, 4 Gongye Road, Hanjing District, Putian Fujian, China. Tel: 86-594-3597637. Fax: 86-594-3598734.

Provisions: Available.

SHIPMASTER'S REPORT: September 1995.

Location: Fujian Refinery Terminal is located at Lat. 25° 10' N., Long. 118° 58.5' E.

Note: The information below is based on information received from the vessel's Owner and conversations with the Pilot and Agent.

Port Limits: We did not find any boundaries drawn on local chart for the port limits.

Documents:
(a) Health:
1 copy Vaccination List.
1 copy Maritime Declaration.
(b) Arrival:
6 copies Crew List.
3 copies Currency List.
3 copies Passenger List.
4 copies Ports of Call List.
5 copies Cargo Manifest.
(c) 2 copies Report of Entry (Chinese Form).

(d) Port Clearance.
To be shown to Port Officials:
(a) Ship's Register.
(b) Tonnage Certificate.
(c) Derat Certificate.
(d) Load Line Certificate.
(e) Safety Equipment Certificate.
(f) Safety Construction Certificate.
(g) Safety Radio Telegraphy Certificate.
(h) Oil Record Book.
(i) CLC Certificates.
(j) Discharge Books, Passports and Yellow Cards.
(k) Tonnage Dues Certificate (Chinese tonnage).
(l) Manifest of Cargo destined for other Chinese port(s).
(m) Manifest of Cargo for foreign port(s).

Pilotage: Send ETA via Guangzhou Radio (XSQ) for 72 hours, 48 hours, 24 hours and 12 hours notice. Compulsory pilotage. Pilot station located at Lat. 25° 02.5' N., Long. 119° 03' E. The approaches were busy with coasters and fishing boats who will not give way to large vessels. Port entry and pilotage only during daylight. Leading marks available but not well built. They are painted with black arrows up/down on concrete structures. We detected the Racon "N" on Dazhu Dao on 3 cm. radar at 15 nautical miles during approaches. Very useful during restricted visibility.

Anchorage: There are two Joint Inspection/Quarantine Anchorages:
(1) With centre at Lat. 25° 02' 10" N., Long. 119° 03' E. and radius of 550 m. with depth 20 m. The bottom is sand and the holding is good. Max. size 100,000 d.w.t.
(2) With centre at Lat. 25° 02' 24.5" N., Long. 119° 02' 17.5" E. and radius of 550 m. with depth 20 m. The bottom is mud and sand. This anchorage was not recommended by our Pilot.

Initial contact with Quanzhou Radio. VHF Channels 16/12 for telephone call to Agent "Penavico Quanzhou". Due to non-availability of large scale B.A. Chart for this area (only B.A. No. 1761), I was reluctant to go to pilot station, which in my opinion was not safe for our size (86,000 d.w.t.), therefore anchored at position Lat. 24° 57' N., Long. 119° 05.5' E. and waited for Pilot. Agent instructed Pilot who waited at pilot station to come to our location. Pilot boarded from a tug (No pilot boat). The Pilot was able to speak English, but only marine/navigational vocabulary. He brought me a local Chinese chart (photocopy), which I had requested before arrival.

Restrictions: Tankers up to 100,000 d.w.t. Depth in the channel is 13 m. maximum. Vessel's draft was 12.0 m. even-keel. Minimum under-keel clearance recorded was 2.0 m. at about LW.

Tugs: 1×3,200 h.p., 2×1,800 h.p., 1×900 h.p., 3×600 h.p. and 2×400 h.p.

Berthing: We anchored on arrival at berth and awaited shore berthing arrangements, about 9 cables East of the jetty. 3 tugs used, forward tug ship's line, aft and midship tugs used tugs' lines. Vessel berthed starboard to at the terminal with port anchor used during berthing.

Depth at berth 16.0 m.

Tidal range was 7.5 m. maximum, but average was 4.5 m.

Discharge via 2×12 in. Chicksans. The Chicksans can go a maximum of 14.0 m. over the wharf. Shore gangway used. Discharging rate was restricted to 3,600 cu.m./hr. (Vessel discharged Sumatran Light Crude Oil). The berth can only accommodate one foreign-going vessel at a time. Two small coastal tankers (of about 5,000 tonnes d.w.t.) berthed on opposite side of the jetty.

Fresh Water: Available at the terminal. Average rate 17 tonnes/hr.

Time: GMT plus 8 hours.

Agency: China Ocean Shipping Agency Quanzhou, 5/F, Harbour Building, Quanzhou Fujian. Tel: 2584750, 2582954. Telex: 928001 OSAQZ CN. Fax: 0595-2588709. Cables: Penavico Quanzhou.

Operator: Fujian Refinery. Fax: 86-595-7789164. Contact: Mr. Chen Fei Shan.

YANGJIANG: 21.52 N. 111.52 E. (See Plan)

SHIPMASTER'S REPORT: December 1995.

VESSEL: This vessel (capacity 5,280 cu.m.) called at Yangjiang for discharging a part cargo of LPG-Mix. The vessel was the first to discharge at the newly built LPG Terminal.

DOCUMENTS: The following documents (minimum) are required for clearance (IMO Forms to be used where possible):
6 copies Crew List.
4 copies Ship's Stores Declaration.
4 copies Crew Effects Declaration.
1 copy Health Declaration.
4 copies Report of Ship's Particulars.

Additional documents have to be signed when the vessel is cleared and others have to be prepared for sailing.

Many officials board the vessel for arrival and departure clearance. The ship's office is too small to accommodate them all. At least one Customs Officer will remain on board during discharge.

APPROACHES/PILOTAGE: The entrance to this port is at Hailingshan Gang. Pilot boarding area is at Lat. 21° 33' N., Long. 111° 46' E. There is no usual pilot cutter available. A Chinese built sampan is used and is difficult to identify. The boat does not fly the international pilot flag.

Communication with the pilot station on VHF Channel 16 during hours of darkness is difficult. There is no piloting during night-time, as far as I could determine.

The average depth of the deep water channel is said to be 9.00 m. and alongside berth 9.50 m.

Berthing in strong N.E.'ly winds could mean a problem to get alongside, but a medium strong insetting tide assists the berthing. A typical Chinese sampan acts as a line boat.

The position of channel buoys seemed to be correct. Only Buoy No. 1 has been moved further inside.

ANCHORAGE: Vessel anchored approximately 1 mile S.S.W. of pilot boarding area, and the anchorage is quite good with excellent holding ground. Anchoring further inside is only permitted with Port Captain's approval.

RESTRICTIONS: Berthing and unberthing only during daytime.

TUGS: Not available.

BERTHING/CARGO OPERATIONS: The jetty is of concrete construction, but durable with sufficient fenders and bollards. There is 1×16 in. line for liquid and 1×4 in. line for vapour to discharge the cargo. Connection to vessel is made by flexible hoses. The hose connections vary a little from international ASA types, but fit to the ship's manifold. The jetty has reducers which are fitted.

Maximum pressure for shore line is 25 bar, but shore limit this to 12 bar. Discharge temperature was requested between +5° and +10° Centigrade. Experience from shore personnel in handling liquid gas cargoes is very poor at the moment. This might improve after several vessels have discharged.

The tankfarm contains 4 spherical tanks, each of 900 cu.m. capacity, but these are not the only ones. There are also tanks for oil products as well as pipelines and connections on the jetty for fuel oil, diesel, gasoline, etc.

YANGZHOU: 32.16 N. 119.26 E.

PILOTAGE: Compulsory. Pilot service is available during daytime. Pilot boards vessel at the Liuhe Pilot Anchorage.

ANCHORAGE:
Port Anchorage: Inside of port shoal, depth is 10.0 m. Bottom is mud and sand with good holding ground. Max. size 25,000 d.t.w.
Luochengzhou Anchorage: Inside of No. 2 Red Buoy, depth is 10.0 m. Bottom is mud and sand with good holding ground. Max. size 15,000 d.w.t.

RESTRICTIONS: Vessels cannot enter and sail after sunset.

Tidal range: Max. 2.10 m.

Draft Limitation in the Channel: Mouth of Yangzi River Channel 9.70 m. (fresh water).

VHF: "Yangzhou Port" on Channels 16 and 13 throughout 24 hours.

TUGS: 2×500 h.p. and 2×1,360 h.p.

BERTHING:

Stevedore Company	*Berth Name*	*Length (m.)*	*Depth (m.)*	*Max. Size (d.w.t.)*	*Cargo Handled*	*Shore Cranes*

Provisions: Available.

YANTAI (Yentai): 37.33 N. 121.24 E. (See Plan)

LOCATION: The Port of Yantai is situated on the Northern shore of the Shandong Peninsula, facing the Huang Hai. The harbour is embraced by the Northern Chefoo Island and other islands providing natural shelter for it, and is an ice-free port owing to its moderate climate.

PILOTAGE: Compulsory. Pilot service is available throughout 24 hours. Pilot boards vessel at the No. 1 or No. 2 Pilot and Quarantine Anchorage.

ANCHORAGES: Boundaries:

No. 1 Pilotage and Quarantine Anchorage:
Lat. 37° 34' 54" N. Long. 121° 24' 44" E.
Lat. 37° 34' 54" N. Long. 121° 26' 44" E.
Lat. 37° 33' 54" N. Long. 121° 26' 44" E.
Lat. 37° 33' 54" N. Long. 121° 24' 44" E.

Vessels with draft less than 10.0 m. and LOA less than 200 m. shall anchor in this anchorage.

No. 2 Pilotage and Quarantine Anchorage:
Lat. 37° 40' 30" N. Long. 121° 29' 15" E.
Lat. 37° 40' 30" N. Long. 121° 31' 45" E.
Lat. 37° 39' 00" N. Long. 121° 31' 45" E.
Lat. 37° 39' 00" N. Long. 121° 29' 15" E.

Vessels with draft of more than 10.0 m. or those in length of 200 m. or over shall anchor in this anchorage.

Tanker Cargo-Oil Transferring Anchorage:
Lat. 37° 38' 50" N. Long. 121° 24' 00" E.
Lat. 37° 38' 50" N. Long. 121° 25' 30" E.
Lat. 37° 38' 00" N. Long. 121° 25' 30" E.
Lat. 37° 38' 00" N. Long. 121° 24' 00" E.

Anchorage for Shelter:
Lat. 37° 34' 32" N. Long. 121° 27' 30" E.
Lat. 37° 33' 42" N. Long. 121° 28' 36" E.
Lat. 37° 33' 08" N. Long. 121° 30' 10" E.
Lat. 37° 32' 29" N. Long. 121° 27' 30" E.

RESTRICTIONS: Vessels may enter and sail after sunset.

MAX. SIZE: Draft limitation in Channel: Eastern Channel 8.5 m., Western Channel 10.1 m.

VHF: Station "XSU" on Channel 16 throughout 24 hours.

TUGS: 10×3,200 h.p.

CARGO HANDLING FACILITIES: The port is equipped with modern cranes, conveyors, loaders, tractors and carriers. The maximum lifting capacity of the shore cranes is 36.5 tons and that of a floating crane 63 tons. The coal wharf has 3 unloaders.

Packing and Transhipment Services: Automatic bagging machines available. The production lines of the bagging machines for bulk fertiliser and bulk aluminium are completely automated.

FRESH WATER: Available.

REPAIRS: Facilities available.

REGULATIONS:

Regulations Relating to Port Administration:

1. While entering or leaving the port of Yantai, all foreign vessels and domestic ocean-going vessels are required to observe, in addition to the Regulations Governing Supervision and Control of Foreign Vessels by the People's Republic of China and these Regulations, all the relevant laws, decrees, rules and regulations promulgated by the People's Republic of China.

2. Port boundaries and anchorages
   (1) Port Boundaries.
   The port boundaries are the lines connecting the Eastern point of Zhifudao and Northern extremity of Kongtongdao, the Southeastern point of Kongtongdao and Yutaizui of Yudaishan.
   (2) Anchorages.
   See "Anchorages".

3. Vessels entering or leaving this port shall pass through the North Channel between Xiaoshanzi and Dajiaoshi. No foreign vessels are allowed to navigate within the East Channel between Kongtongdao and Yudaishan.

4. Vessels with a draft of more than 10.0 m. or those with length of 200 m. or over shall anchor in the No. 2 Pilotage and Quarantine Anchorage. Foreign vessels must not enter or leave the Tanker Cargo-Oil Transferring Anchorage without a pilot appointed by the Harbour Superintendency Administration.

5. Vessels intending to enter this port (or No. 2 Pilotage and Quarantine Anchorage) by day shall, prior to approaching the port boundary (or No. 2 Pilotage and Quarantine Anchorage), hoist such flags as nationality, signal letters as well as those flags as have to be hoisted. On leaving the port, vessels shall keep flying those flags until they get out of the port boundary (or No. 2 Pilotage and Quarantine Anchorage).

6. Vessels navigating within the port area shall keep radio watch on VHF Channel 6, in case of emergencies, such as typhoon warning, vessels at anchor shall, by day and night, keep radio watch on VHF Channel 16.

7. Vessels handling or carrying dangerous cargoes shall comply strictly with the Regulations Governing Supervision and Control of Vessels Carrying Dangerous Goods issued by the Ministry of Communications of the People's Republic of China.

Vessels intending to work with naked fire shall, 24 hours in advance, submit a written application to the Harbour Superintendency Administration and the work can only be done after being verified and granted.

8. If any ballast water, tank washings or bilges are to be discharged from any vessel which stays in this port, a written application shall be made 12 hours in advance to Harbour Superintendency Administration. No such discharging operation can be carried out unless permission has been obtained.

9. Judging from the extent of the violation of these Regulations, the Harbour Superintendency Administration may impose such penalties as warning, suspension or withdrawal of Certificate of Competency, fine and/or other penalties.

Rules to be Observed by Crew Members and Passengers of Foreign Ships:

1. Foreign ships, crew members and passengers shall be subject to the inspection of the Frontier Defence Inspection Station, and observe all laws and regulations of the Chinese Government.

2. When a foreign ship is entering or leaving port, crew members and passengers on board should present their passports or other identity certificates to the Frontier Defence Inspection Station for inspection.

3. When entering or leaving China, everybody should present their luggage and articles to the Frontier Defence Inspection Station for inspection.

4. Foreign crew members and their dependants intending to go ashore must apply, through the Master, to the Frontier Defence Inspection Station for the "landing permits", with which and their passports or other identity certificates they are permitted to land, while the Chinese crew members and their dependants may go ashore on producing their valid identity certificates with photos, which sufficiently certify their Chinese nationality.

5. Foreign passengers without valid transit visas for China intending to go ashore should apply, through the Master, to the local visa-issuing authorities for landing formalities, with which they are permitted to land.

6. On embarking or disembarking, crew members and passengers must produce the landing permits and their valid certificates to the inspectors of the Frontier Defence Inspection Station.

7. Crew members go on board each others vessels in the same port by their valid passports or other identity certificates and the landing permits, while the Chinese crew members only by their valid identity certificates.

8. The time-limit for landing is from sunrise to 2400 hrs. (local time) of the same day.

9. The crew members going ashore are only permitted within the area confined by the local administration.

10. Any crew having the need to stay ashore must apply, through the Master, to the Frontier Defence Inspection Station for lodging certificates, with which he is permitted to stay ashore.

11. Crew members travelling beyond the port city or leaving China, the Master shall report the circumstances to the Frontier Defence Inspection Station, and the crew member himself should go through with all necessary formalities in compliance with the regulations concerned. Only after the certificates and visas have been granted and submitted to the Frontier Defence Inspection Station for inspection, can he be permitted to leave the ship.

12. If Chinese crews wives or children intend to go onboard the ship, the Master should make a written application to the Frontier Defence Inspection Station. With the issued embarking permits they may go on board the ship on presentation of their permits. The Master should also make a written application for permission when they intend to go to other ports in China by the ship, or else they are not allowed. But with them on board, the ship must not deviate from her set course and go abroad.

Parents or wives and children of Chinese crew who have been sent by China to work on the foreign ships intending to go on board the ship, the Master should also apply for the embarking permits for them. But generally they are not allowed to stay on board.

13. If there are any arms and ammunition on board the ship, the Master must declare to the Frontier Defence Inspection Station when the foreign ship is entering the port. The arms and ammunition should be sealed up by the Frontier Defence Officers. The sealing labels are not allowed to be unsealed by the ship during the ship's stay in port. Air guns and toy guns projecting metallic pellets are not allowed to be used or taken ashore.

14. If there is any stowaway on board the ship, the Master must report the fact to the Frontier Defence Inspection Station immediately. The stowaway should be watched carefully on the ship side, waiting for the decision.

15. Those (crew members and passengers) who break the above mentioned rules shall be given punishment, varying from warning, fining, signing a statement of repentance, to prohibiting going ashore, according to the seriousness of their case. Those who violate the criminal law of

China shall be brought to justice by the Public Security Organs according to Chinese law.

Customs Notice to Shipmasters and Seamen:

1. It is prohibited to carry the national currency of the People's Republic of China into or out of the country.
2. After exchange of foreign currencies, gold or silver for Chinese national currency, shipmaster's and seamen shall carefully keep the bank's exchange memo for Customs inspection.
3. Bringing ashore or taking on board of any articles must be reported to the Customs Officer on duty for permission. Selling of articles thus brought ashore is strictly prohibited.
4. The seals affixed by the Customs to any place on board shall not be tampered with.
5. Shipmasters shall declare to the Customs all un-manifested cargo or parcels on board while performing formalities for ship's entry.
6. Ships sailing between Chinese ports shall not deviate from the set course and go abroad without Customs approval. Previous permission must be obtained for such deviation if these is such a need.

The Importation of the Following Articles is Prohibited:

Arms, ammunition and explosives of all kinds; radio transmitter receivers and principal parts, Renminbi (with the exception of those in compliance with an agreement or protocol on the exchange of national currency notes).

Manuscripts, printed matter, films, photographs, gramophone records, cinematographic films, loaded recording tapes and video-tapes, etc., detrimental to Chinese political, economical, cultural and moral interests.

Poisonous drugs, habit-forming drugs, opium, morphine, heroin, etc.

Animals, plants, and products thereof, infected with or carrying disease germs and insect pests.

Unsanitary foodstuffs and germ-carrying foodstuffs from infected areas.

Other articles the importation of which is prohibited by state regulations.

The Exportation of the Following Articles is Prohibited:

Arms, ammunition and explosives of all kinds.

Radio transmitter-receivers and principal parts.

Renminbi and securities, etc., in Renminbi.

Foreign currencies, bills and securities in foreign currencies (with the exception of those allowed to be taken out).

Manuscripts, printed matter, films, photographs, gramophone records, cinematographic films, loaded recording tapes and video-tapes, etc., which contain state secrets or otherwise prohibited exports.

Valuable cultural relics and rare books relating to Chinese revolution, history, culture and art.

Rare animals, rare plants and their seeds.

Precious metals and articles made thereof, jewellery, diamonds and ornaments made thereof (with the exception of those within the quantity allowed to be taken out by outgoing passengers).

Other articles the exportation of which is prohibited by state regulations.

The Sanitary Measures to be taken by Vessels while in Port:

1. If a case or a suspected case of any quarantinable disease or any death not from an accident trauma is found on board, the responsible person on duty shall at once report to the quarantine service for temporary quarantine.
2. When rats are found dead or rodents are caught on board, the Master (or responsible person on duty) shall report to the quarantine service for examination.
3. Efficient rat guards or other means against rats shall be properly put on all mooring ropes.
4. When a gangway or gangplank is used in the night it is to be illuminated by a strong electric light.
5. When flies, mosquitoes, cockroaches or other disease-spreading insects are found aboard, necessary measures should be taken immediately to destroy them.
6. Waste and garbage on board shall not be thrown overboard or discharged into the port waters.
7. The sanitary measures put down on the Pratique Form must be continued as long as the vessel is in the harbour.

SHIPMASTER'S REPORT: March 1987.

Documents: See "General" before first port.

Pilotage: Refer to BA. Charts 1255 & 1260. Pilot usually boards at Inner Quarantine Anchorage in position Lat. 37° 34.5' N., Long. 121° 25.7' E. For deep draft vessels, Pilot will board on request at Quarantine Anchorage No. 2 in position Lat. 37° 39' N., Long. 121° 29.5' E. Yantai Gang is a large sheltered bay and may only be entered by the Bei Shuidao. Passage through Dong Shuidao is prohibited.

Navigation: Vessels may enter Yantai Gang without a Pilot and proceed to the Quarantine Anchorage. Entry presents no problems, except for deeper draft vessels which have little choice of anchorages. Most navigation lights are low powered and Diliuxing and Dajiaoshi are fishing lights and will probably not be seen. The bay is exposed to Northerly gales which are frequent in Winter and heavy swell will develop inside the bay. The bottom is soft mud and poor holding ground. During gales both anchors will be needed with a large amount of cable.

Restrictions: Despite occasional ice in Winter the port is always open. Maximum depths in the Quarantine Anchorage, where ships are lightened, is 13 m. to 15 m. The inner harbour has been dredged to give 10 m. at a number of berths. Largest ship berthed 225 m. LOA.

Tugs: 2 large tugs of 3,200 h.p. and 7 smaller tugs are available.

Berthing: Depth alongside berths is 10.0 m.

Cranes: 9 large grab cranes are available on the main quay. There are 2 floating cranes, one with a lifting capacity of 60 tons and a larger one of unknown capacity.

Lightening operations are carried out at the anchorage, weather permitting.

Fresh Water: Water can be supplied alongside the quay at a rate of 5 t.p.h. Water barges of 200 tons and 400 tons capacity are also available.

Fuel: IFO and MDO available by barge from Dalian.

Consuls: None locally.

Repairs: Minor repair facilities available. Repair squads can be brought in from Qingdao.

Repatriation: Partial crew change of some 20 crew members undertaken with difficulty.

Airport: Adjacent to the city. Services available to Shanghai, Nanking, Beijing, etc.

General:

Trade & Developments: Yantai had a population in 1987 of about 380,000. It has little export trade, but is a large importer of logs and fertiliser. Some steel is also imported. A ship breaking yard is also in operation. The port area and the Western shore of the bay are under development.

Communications: Yantai is connected, by road and rail and has regular passenger ship services to Dalian and other coastal cities on daily basis.

Agent: China Ocean Shipping Agency, 23 Hai Gang Road, Yantai. Cables: "PENAVICO YANTAI". Telephone: (0535) 223181, 243181. Telex: 32562 OSAYT CN.

SHIPMASTER'S REPORT: August 1989.

Vessel:

Type:	Log/bulk carrier
Summer draft:	9.54 m.
LOA:	167 m.
Beam:	26 m.
DWT:	26,500 tonnes
Holds:	5
Cranes:	4

Navigation:

1. Advance Notices: The usual 7 days/4 days/2 days and 1 days ETA notice despatched to "Penavico Yantai" agents. Four days prior to arrival, Penavico responded by advising the vessel's port schedule.
2. Radio pratique not available.
3. Pilotage compulsory for foreign vessels. Pilots, consisting of one senior pilot with two assistant pilots who board at the anchorage. Pilots monitors VHF Channel 11. Services available 24 hours with prior arrangement through Agents. Same number of pilots board on departure.
4. Anchorage area as shown in Chart No. 1260. The depth of Quarantine Anchorage No. 1 was reportedly dredged to 12.0 m. The bottom consists mainly of mud. Good shelter is afforded from the South side.
5. Approaches to port: From a position South of Quarantine Anchorage No. 2, a SW'ly course was steered to enter the North Channel (Bei Shuidao) between Xiaoshanzi and Dajiaoshi, after which vessel steered direct to the anchorage/Pilot Station.
6. On berthing, with starboard anchor on stand-by, the vessel was moored with 4 head/stern lines and 2 springs. Shore bollards are spaced every 10 m.
7. No special entry/sailing restrictions at the new wharf, except in the old berths (Nei Gang) where local passenger liners' movements are given priority by the Harbour Master.
8. Communications: Two hours prior to arrival (about 30 miles from the port), Yantai Port Radio was raised on VHF Channel 16.

While at anchorage, vessels are advised to keep watch on Channel 16 for port movements and berthing instructions, which are announced in good English. The agent could be reached at any time during office hours on Channel 14, through Yantai Port Radio.

Tugs: On shifting to berth from anchor position, one tug was secured at the bow (tug lines used) as vessel manoeuvres through the channel. Another tug meets the vessel by the jetty. Two tugs also used on sailing.

Facilities: The new wharf has an alongside depth of 11.5 m. at low tide and can accommodate 6 Panamax size vessels.

Four shore mobile cranes were used to discharge the log cargoes. Exact maximum capacity of the cranes was not available at the time, but they were prone to breakdowns. Vessel's cranes were used simultaneously to shift deck cargoes.

Cargo Operations: Shore labour works 24 hours (including Sundays) in 3 shifts from 0700 – 1500, 1500 – 2300 and 2300 – 0700. Except for occasional shore crane breakdowns, discharging was fast. Crane operators are good and a minimum of damage was reported.

Repairs/Dock Yards: Not available. Minor repairs possible. Welding repairs, due to stevedores damage, carried out prior to ship's departure.

Supplies/Services: Provisions available through the government ship suppliers at prices remarkably higher than local retail shops.

Fresh water available by barge only.

Fuel not available in Yantai.

Time: GMT plus 9 hours in Summer.

General:

1. During vessel's stay in port, the weather has been generally fair. Northerly/Southerly shifts of tidal current (about 1 knot) was experienced whilst at Anchorage No. 1. The tidal range whilst alongside was observed as about 1.0 m.
2. No size limitations at the new wharf. Construction of transit sheds, rails and roads are in progress. Bottom soundings of berth indicates average depths of 11.5 m. alongside. The buoyed channel that leads to the wharf is, according to the Pilots, dredged to 12.0 m. (Echo sounder readings shows approx. 11.5 m. along the length of the channel).
3. Chart used: B.A. Chart No. 1260.
4. If vessel wishes to undertake welding on deck, either by shore labour or by ship's crew, Harbour Police will first board the vessel to inspect the work area to see if safety precautions have been complied with. They will then give the final approval to start the repairs. No welding work should be started unless the Harbour Police are at hand, otherwise the vessel will incur a fine.

Authority: Port formalities are carried out at the anchorage on arrival. Chinese forms should be used for papers. However, they also accept vessel's forms and will transfer the information to their Chinese forms themselves. They will hand out blank Chinese forms if vessel has none. Boarding officials are courteous and direct. They speak little but understandable English. With agent's assistance, entry formalities were carried out in a quick and efficient manner.

SHIPMASTER'S REPORT: September 1991.
Lightening Operations:
Message to Master from Agent:

Discharging operations will be carried out at lightering anchorage by barges (about 15,000 tonnes d.w.t.).

There are no restrictions on vessel, such as length, draft, etc. Depth at the anchorage is 18.0 m.

Fresh water will be supplied by barge and bunkers can be supplied through Chimbusco Yantai.

No dirty ballast facilities.

Slops can be accepted by barge.

Tug company owns 4 tugs with 3,200 h.p. and 5 tugs with over 1,200 h.p.

Pilots will board at No. 2 Anchorage within the following area:

Lat. 37° 40' 30" N., Long. 121° 29' 15" E.
Lat. 37° 40' 30" N., Long. 121° 31' 45" E.
Lat. 37° 39' 00" N., Long. 121° 31' 45" E.
Lat. 37° 39' 00" N., Long. 121° 29' 15" E.

Then will shift the vessel to lightering anchorage.

Statement of Facts concerning Fine: The barge was moored alongside the vessel to transfer a parcel of export crude oil.

Safety Check List was jointly completed with the Sinochem Loading Master before commencement of transfer.

On a number of points the barge did not comply and corrective action was requested.

Our vessel complied with all safety and operational requirements.

The crew was carrying out painting on the poop deck. At approximate 1100 hrs. we were notified by the attending Port Authority representative that crew members were chipping on the deck in violation of port regulations. It appeared that a crew member was just removing a rough spot. Corrective action was taken immediately.

After having discussed the matter with this Port Officer in the presence of the Boarding Agent, who acted as translator, and after apologising for this occurance, the matter seemed settled.

At 1530 hrs. the next day, however, the same Port Officers boarded the vessel and presented us with a letter (Note of Fine) in the Chinese language. A free translation was given, and this made it clear that the vessel was being fined for chipping rust during cargo operations with a fine of 10,000 Yuan Renmimbi. Allegations were made that electrical equipment was used for chipping, which is not true. As we do not have that kind of equipment on board (a hand hammer was used at the time), this was repudiated.

Further allegation was made that the vessel was operating the radar, this was true, although intermittently used for regularly checking the vessel's position. This was necessary because the Yantai Oil Transfer Anchorage is situated in an open roadstead, only one and a half miles offshore and has poor holding ground.

A Letter of Protest was made up and presented to the Port Officer who refused to sign anything.

Note of Fine was signed under protest and for receiving only.

Port Officers left vessel after 90 minutes.

SHIPMASTER'S REPORT: August 1993.
Lightening Operation:

The vessel arrived at Yantai Tanker Anchorage at 0845 hrs.

Communications with the Pilot Station was established at 0830 hrs. after several attempts. Vessel was ordered to anchor and wait for further instructions.

Notice of Readiness was telexed to several addresses, as no telex number was available for Yantai. Jardine Shipping Hong Kong caught the message and sent the telex number of "Penavico Yantai".

The Notice of Readiness was sent to them again and instructions and details about the port were requested. No information was passed by this Agent, except their confirmation that my provisions ordered via Qingdao had been received.

My request for a nautical chart of Yantai Port was not honoured. At that moment it was completely unknown where the discharge would take place, as no details were mentioned in sailing directions.

The following day, the vessel made contact with Pilots. Instructions received that at 1100 hrs. Pilot would embark to bring vessel to "the other tanker anchorage".

At 1115 hrs. a party of 7 officials, 3 Pilots and one Agent embarked.

Then it became clear that the discharge would take place by lightening at the most Eastern anchorage off Yantai Port.

The vessel was cleared at 1200 hrs. Meanwhile the anchor was weighed.

Under pilotage of 3 Pilots, vessel shifted to the other anchorage. I noticed that the Pilots were not used to handling this size of vessel (83,000 d.w.t.). With the co-operation of the Pilots, I anchored the vessel by myself. The Pilots used our "own home-made nautical chart" of the Yantai Port vicinity.

After anchoring, a tug embarked a gang of labour to secure the Yokohama fenders (3 middle sized fenders in good condition) on board the vessel. Also chemist, surveyor and other cargo interested people embarked.

The lightening vessel was already anchored near anchor position. It has to be said, that the preparations for the lightening operation were well organised. Ship's crew assistance was only required for the hose crane. Mooring lines of the lightening vessel were handled by the Chinese mooring gang on board our vessel. They also connected the hoses (4×6 in. connected on ship's connections).

The "Penavico" Agent was of great help with the cargo discharge planning. The Chief Officer of the lightening vessel was present during this meeting. The "Ship-to-Ship Transfer Guide" Safety Check List was discussed and understood by the lightening vessel's mate. However, it was noticed from our side that this Check List is not yet common on Chinese vessels.

The discharge to the lightening vessel caused no problems. The bulk discharge rate was approximate 2,000 cu.m./hr. at 3.5 bar at the vessel's manifold.

A Lightening Bill of Lading was made by myself. The Agent has signed this Bill of Lading "as Agent only" for the Master of the lightening vessel. No figures available from lightening vessel on completion of lightening operations.

Hoses and fenders remained connected/secured on our vessel for the next operation.

The total time of this "unexpected" operation can be in a range of one week up to one month.

SHIPMASTER'S REPORT: October 1994 (Received 1995).
Vessel: 30,000 d.w.t.
Draft: 11.0 m.
Cargo: Soya Bean Oil.
Time: GMT plus 8 hours.
Documents:
6 copies Crew List.
1 copy Stores List.
1 copy Crew Effects and Currency Declaration.
4 copies Passengers List (if any).
1 copy Health Declaration.

Shore Leave: Crew's shore passes to be returned before sailing (shore leave ends at midnight).

General: The vessel arrived at Quarantine Anchorage No. 2 at 0000 hrs., where we were ordered by Penavico to anchor and await free berth.

Communications with Penavico were on VHF Channel 11 and Yantai Radio on Channel 16. Contact was established about 1 hour before arrival.

N.O.R. was tendered by telex to Penavico, but no answer with regard to berthing prospects was given.

Next afternoon at short notice, 2 Pilots boarded by tug for shifting the vessel to Inner Anchorage No. 1. When anchored, a party of 7 Officials and one Agent boarded the vessel for Free Pratique and Inward Clearance formalities. Dinner was provided.

Imperative, when entering harbour limits, to hoist Call Sign and Quarantine flags.

After a wait of 5 days, Cargo Surveyors boarded to take cargo ullages and samples, after which vessel was called to berth, proceeding under pilotage during H.W. by a buoyed channel and moored to Berth No. 25/26, using 2 tugs.

The berth was protected by 2 large Yokohama fenders to maintain the vessel well away from the quay, due to the draft.

Shore gang connected 2×6 in. hoses, and discharge started immediately as ebb tide running. At L.W., the draft was 10.65 m. and the vessel floated freely. Max. pressure allowed 6.5 Bar, rate 200 tonnes/hr.

The discharge was completed during the night, but the surveyors came on board to inspect the cargo tanks at 0830 hrs. next morning. A Tank Dry Certificate was issued (application has to be submitted to Agent in advance) and hoses disconnected. When all cargo operations were completed, the Official Party boarded to clear the ship, and Outward Clearance was granted. Pilots were then called by the Agent and the ship sailed, using 2 tugs for unmooring.

All manoeuvers were carried out by 2 Pilots who seemed to be most cautious, proceeding at slow speed and using the whistle a lot. Good assistance given by tugs. Receiver's representatives never made an appearance.

Agent: China Ocean Shipping (Penavico), 155 Baima Road, Yantai, P.R.China. Tel: 535-243181. Telex: 32562. Fax: 535-247872.

When at berth, the Agent visited the vessel daily.

AUTHORITY: Port of Yantai Authority, 155 Beima Road, Yantai, China. *Telex:* 32521 Habyt Cn.

YANTIAN: 22.35 N. 114.15 E.

ANCHORAGE: Lat. 22° 34' 02" N., Long. 114° 15' 21" E.
RESTRICTIONS: Depth in channel 15.0 m.
BERTHING: July 1992.

Warehouses and Open Store Space:

	Warehouse	Open Store Space
Yingkou	270,000 sq.m.	240,000 sq.m.
Ba Yu Quan	77,000 sq.m.	—

Main Imports and Exports:
Exports: Maize, steel, wood, magnesium and containers.
Imports: Ores, fertiliser, cars, general cargo and containers.

FUEL: Not available.

GENERAL: *Barges:* 3×1,000 tons (self propelled), 7×2,000 tons and 2×1,000 tons.
Floating Crane: Not available.
Supplies: Available from Foreign Shipping Supply Corporation.

SHIPMASTER'S REPORT: October 1994 (Updated 1996).
Berth: Bayuquan.
Documents: Prepare the following prior to arrival:
1 copy Maritime Declaration of Health.
10 copies Crew List.
2 copies Personal Effects List.
2 copies Bonded Stores List.
2 copies Dangerous Cargo List.
2 copies Currency List.
2 copies Ports of Call List.
Agent gives Report of Entry Form to be filled-in.
Departure:
All Crew Shore Passes will be collected for Immigration checking.
Pilotage: Compulsory for all vessels.
VHF: Prior to approaching Pilot Station, vessel must call Bayuquan Port Control through Channel 8. At Xingang, call Xingang Port Control on Channel 10 and report vessel's name, max. draft, last port of call, your intention to load or discharge, and name of your Agent.
Tugs: Tugs and mooring assistance available, 2 tugs used.
Stevedores: To be arranged by Agent.
Fresh Water: Available.
Fuel: Fuel oil available.
Customs Allowance: 200 cigarettes and 1 bottle of spirits.
Repatriation: Possible.
Time: GMT plus 8 hours.
Shore Leave: Every crew member going ashore must carry a Shore Pass and Seaman's Book.

ZHANGJIAGANG: 31.58 N. 120.24 E. (See Plan)

LOCATION: Zhangjiagang is situated at the South bank of the Changjiang, about 114 km. East of Wusong Kou (anchorage for Shanghai).

The port is almost land-locked, with Changshan on the West; Wushan and Xiangshan on the South and Fujiangsha on the North; all of which shelter the port from strong winds and heavy seas. The port is a natural harbour having deep water, able to accommodate vessels of 10,000 tons which can enter or leave whenever necessary.

The port is under the administration of the Shanghai Harbour Bureau.

APPROACHES: *Tidal Stream:* During the dry period, the tidal stream is multi-directional, while during the flood period it changes between multi and single directions. The rate of ebb is greater than that of flood. The direction of flood or ebb stream is somewhat parallel to the river bank and the direction of the deep channel, with the exception of a few places.
Wind: Year round the prevailing wind is S.S.E. and E.S.E. or E.N.E. and S.E. The strong wind is from E.S.E. and S.E. The annual average wind force is 3.8 m. per second. Typhoons may threaten the port in the period from July to September, especially in August, with a force up to Force 10.
Aids to Navigation: The harbour is provided with 16 light buoys numbered Funan No. 1 to 14, beginning from the lower entrance. There are two No. 7 and two No. 8 light buoys. No. 14 light buoy stands as a Fairway Buoy, navigable on both sides. Port hand buoys are painted black with a black spherical topmark, starboard hand buoys are painted red.
Obstructions: At the West side of the lower entrance along the channel, there is a large shoal patch, extending Eastward with a depth of less than 5 m. over it.

PILOTAGE: Pilotage is compulsory for vessels flying foreign flags on entering or leaving. The Pilot Station is off Baoshan, within the area bounded by a line connecting Buoys No. 67, 69, 15 and 14, where the depth of water varies from 8 m. – 17 m., mud bottom.

ANCHORAGE: Quarantine Anchorage is situated in the area North of the line connecting No. 30 light buoy and No. 30B light buoy. Water depth is 10 m. – 13 m., bottom sand and mud, capacity of four to five vessels. This anchorage is also for Joint Inspection.

RESTRICTIONS: Draft is restricted to 9.5 m. as vessels have to cross a bar at the mouth of the Chang Jiang River.

TUGS: 2 × 960 h.p.

BERTHING: There are 2 groups of floating wharves consisting of 4 berths each, of which two are for taking vessels of 10,000 tons. No. 1 and No. 2 floating wharves are each composed of 3 pontoons and 2 joint bridges and connected to the shore by 6 steel bridges.

There are also floating piers for harbour tugs, and temporary floating piers.

There are 7 mooring buoys numbered from No. 1 to No. 7, beginning from the lower entrance.
Warehouses: There are warehouses and storage ground along the wharves for cargo stowage.

SHIPMASTER'S REPORT: January 1992.
Chang Jiang River:
B.A. Charts No. 1602 and 1603.

Navigation aids were found to be as charted, positions were checked against the pilot's chart, except for the following:
(1) Niupi Jiao lightfloat has been replaced by a red and white pillar buoy.
(2) Buoy No. 251 has been removed and is not in either the deleted or un-deleted positions.
(3) Beicao Zhong lightfloat is in the charted position but is a mid-channel mark. The Southern boundary line of the channel starts at Buoy No. 262 and runs 115° to join the existing line at Buoy No. 258.

The pilot's chart showed some depths of 6.9 m. in the Biecao Hangdao Channel.

Beicao Hangcao Channel is reported to be maintained at 7.0 m.
Pilotage Inwards:
Chang Jiang Kou to Baoshan Anchorage: (Distance 49 miles, time 4.5 hours).

On 12th December 1991 inward vessels were called to take pilots at Buoy No. 257 at 1230 hrs. with a published high water time at Wusong Kou of 1532 hrs. and 3.2 m. (3 hours before H.W. Wusong).

This vessel experience no difficulty with a maximum draft on arrival at the anchorage of 5.89 m. aft.

On occasions the pilot took the vessel outside the buoyed channel to pass deep draft vessels.

Vessel anchored in position Lat. 31° 25.2' N., Long. 121° 32.3' E. (1 hour after H.W. Wusong) with 6 shackles on starboard anchor, to await river pilots to Zhangjiagang at daylight next morning.

The anchorage was outside the designated anchorage areas on the chart.

There is no night navigation above Wusong.
Baoshan Anchorage to Zhangjiagang: (Distance 77 miles, time 7 hours).
B.A. Chart No. 2946.

On 13th December 1991 vessel left Baoshan Anchorage at first light (0630 hrs.), and arrived at Zhangjiagang at 1315 hrs.

There were no draft restrictions with a draft of 5.88 m. aft on arrival.

Above Wusong the channel is marked with black and red buoys, mostly fitted with lights and radar reflectors.

Generally these are passed black to starboard and red to port inward bound, but in some places are passed on the wrong side or ignored completely.

There are a considerable number of barges on the river, individually or in groups secured fore and aft and abreast in trains secured fore and aft with one towing barge ahead and a steering barge aft. Most navigate as one vessel and swing to whichever side of the channel offers the most favourable current, without warning and with little regard for collision regulations.

There are also a number of ferries and log booms moving in the river.

Instant manoeuvring speed is required, also plenty of air for the whistle, which is in use constantly.

The river banks are protected for most of the way on both sides by levees with mud flats extending some distance out.

Considerable industrial development is in progress for the full distance especially in the region of Nantong, where on the North bank there are a number of cargo berths and repair facilities for seagoing vessels, including a floating dock.

South of the channel in this area is used for cargo work at anchor or at buoys.

The pilots used no charts and it is reported that only Naval charts exist, which are not available to foreign shipping.

Pilotage Outwards:

Zhangjiagang to Beimou Bar: (Distance 44 miles, time 4 hours).

Beimou Bar to Liu He Anchorage: (Distnce 17 miles, time 1.75 hours).

Departure time is arranged in order to cross Biemou Bar at high water when at deep draft.

Vessel cleared the buoys at 0930 hrs. on 2nd January 1992 and crossed the bar between 1338 hrs. and 1359 hrs. (15 and 36 minutes after predicted H.W. at Xuliujing).

Visibility was poor on departure but improved later.

There appeared to be less barge traffic than on the inward passage, possibly due to the poor visibility.

A survey vessel preceeded the vessel out of the harbour area. Some soundings of 3.0 m. underkeel at 8.82 m. draft were obtained shortly after leaving the buoys, otherwise there was good water to Beimou Bar.

The channel is marked throughout by buoys, but, as for inwards, they were not always passed according to colour.

The pilots kept mainly to the South bank to Nantong where the North bank was followed to Dongzhou Cao then the South bank to Liu He Anchorage.

Hengsha Anchorage to Chang Jiang Xou: (Distance 35 miles, time 4 hours).

The vessel cleared Hengsha Anchorage at approximately 0830 hrs. on 4th January 1992.

There was a predicted H.W. at Wusong Kou of 3.3 m. at 1218 hrs. Soundings obtained were as follows:

Time (Hrs.)	*Position*	*Sounding* (m.)	*Depth* (m.)	*H.W. Wusong* (Hr./Min.)
0808	Hengsha Anchorage 31° 18' N., 121° 47.7' E.	7.8	16.6	−4.10
0826	Anchor aweigh	6.4	15.2	−3.52
0857	Zhongsha lightfloat	3.1	11.9	−3.21
0915	Buoy 274	1.2	10.0	−3.03
0924	Buoy 272	0.9	9.7	−2.53

Zhongsha to Niupi Jiao: (Distance 26.3 miles, time 2 hours 56 mins., speed 8.97 knots).

The vessel was generally close to mid-channel and then close to the mid-channel buoys.

The first inward deep draft vessel passed at 0915 hrs. and the last at 1010 hrs. inward.

At an estimate from the buoy indications, high water for the vessel was at 1037 hrs.

Port Information:

Zhangjiagang is on the Chiang Jiang River in position Lat. 31° 58' N., Long. 120° 26' E.

Time zone is G.M.T. plus 8 hours, Summertime from mid-April to mid-September is G.M.T. plus 9 hours.

Agents:

China Ocean Shipping Agency, Zhangjiagang Branch, Guang Qu Zhen, Zhangjiagang, Jiang Su. Tel: 05222 – 332535. Telex: 363821 ZGPEN CN. Fax: 05222 – 323928. Cables: Penavico, Zhangjiagang. VHF: Channel 11 during office hours. Contact: Zhao Hou-zing, Senior Economist, Shipping Department. Office hours: 0730 hrs. – 1130 hrs., 1330 hrs. – 1700 hrs.

Agents are generally very helpful and can be contacted outside office hours on VHF by arrangement.

The practical office hours can be cut short by a half hour at the end of each day but important items can usually be arranged.

Shanghai Pilots – Inwards: Pilots are arranged by "Penavico, Shanghai", who will advise the boarding time and position by cable prior to arrival. It is therefore essential to keep these agents advised of any change in ETA. On this occasion the agents advised that the pilots would board at 1200 hrs. at Buoy No. 5 but the pilots changed this to 1230 hrs. at Buoy No. 257, so it is also essential to contact the pilots as soon as possible on VHF.

Pilot boarding area is arranged somewhere between Chang Jiang Kou and either Buoy No. 5, for shallow draft, and Buoy No. 257, for deep-draft vessels.

There is apparently one pilot vessel serving both areas and it would appear that they choose the most appropriate area for all vessels on a particular tide.

The pilots board from a small boat launched from a large white vessel, pilot ladder to be 0.5 m. above the water, a boat rope is not required.

All vessels taking a pilot on a particular tide are called in at the same time for boarding and no particular advantage will be gained from jumping the queue.

The Shanghai pilot will take the vessel to Wusong Anchorage where vessels will anchor to await Chang Jiang pilots.

On this occasion the vessel arrived at Wusong at 1624 hrs. and the Shanghai pilot left shortly afterwards. He was unable to advise the boarding time of the river pilots and the vessel was unable to make intelligible contact with Penavico for information.

Zhangjiagang Pilots: Pilots are arranged by local agents who are in contact with Shanghai agents, for the vessels arrival at Wusong.

The pilots are employed for the various river ports, there are 10 pilots employed for Zhangjiagang and 2 pilots board for all services for that port. The various river pilots have their own launches or use an independent launch service.

The two river pilots boarded at 1800 hrs. and required meals and accommodation for the night.

There is no night navigation above Wusong, pilotage above Wusong commencing at first light.

Two pilots are employed for all movements in the port, arrangements being made by the agents.

For outward pilotage, the river pilots go as far as Lu He Anchorage and anchor the vessel to await the Shanghai outward pilot.

Shanghai Pilots – Outward: Pilots are arranged by Shanghai agents on advice from local agents. Lu He Anchorage is about 15 miles above Wusong and pilots board at a time suitable to pass the shallow water at the entrance on the tide for the day.

On this occasion he boarded at 0718 hrs. to make a tide at about 1030 hrs. which was not possible for a vessel with a manoeuvring speed of under 11 knots against a strong tide all the way and at the last minute it was necessary to anchor at Heng Sha Anchorage where the following morning the anchor was weighed at 0800 hrs. to make a tide about 30 minutes later than the previous day.

The pilot remains on board at anchorage if the vessel cannot make a tide.

General Information: The port of Zhangjiagang was started in May 1983 and is still under construction.

It was originally administered from Shanghai but has been under independent administration, under the control of the Transport Ministry since 1987.

The port electricity is reportedly supplied by 2 power stations whose capacity is insufficient to keep up local demand and cuts are frequent in domestic and office premises with occasional cuts affecting the port installation.

Penavico frequently have no power to run VHF, telex or fax machines.

There is deep water in the port although it is shallower from Buoy No. 9 to the Northern tip of Fujiangsha island.

Main Berth – General Cargo Berth: This was too far distant to get an accurate impression but has been completed for some time and has 7 cranes of about 10 tonnes capacity.

Container Berth: Completed but not yet in use as the container storage area behind it is still being paved.

It has a container gantry crane and a 10 tonne crane, neither of which has yet been rigged.

Liang You Berth (Grain/Oil berth): Still under construction.

The Western 180 m. has been completed and is in use.

The construction is on concrete piles, the face of the berth is some 100 m. from the shore with a 20 m. wide working apron served by access bridges for the completed section.

Floating wooden fenders are fitted along the face of the berth.

In December 1991 the top of the berth was approximately 4.0 m. from the water at high water and 5.5 m. at low water.

Depth alongside was 17.0 m. at low water.

Bollard spacing is approximately 25 m.

There are 2 cranes with no S.W.L. marked but they are reported to be able to lift 10 tonnes and also to lift 12 tonne bulldozers into bulk vessels.

A large number of small mobile cranes of approximately 5 tonnes capacity are in use and there is also a quantity of grain handling and bagging equipment.

There are a number of large warehouses, mostly empty. Bagged rice and other bagged commodities are stored in the open and covered with tarpaulins.

This berth is used for the import and export of cereals, cereal products and vegetable oils.

The tanker connection is approximately at the mid-length of the completed section and is a flexible hose connected to a pipeline ending at the inshore side of the working apron.

Cargo Working: Loading bagged rice.

Work is continuous round the clock in three shifts.

1st Shift 0700 hrs. – 1500 hrs. (meal break 1100 hrs. – 1200 hrs.).
2nd Shift 1500 hrs. – 2300 hrs. (meal break 1800 hrs. – 1900 hrs.).
3rd Shift 2300 hrs. – 0700 hrs. (meal break 0200 hrs. – 0300 hrs.).

The meal breaks are supposed to be 45 minutes but in practice extend to an hour and occasionally longer.

The shifts may also start and finish up to half an hour late.

It is usual that all cargo for a vessel is on the shore prior to the vessel berthing and it is reported that a loading rate of up to 6,000 tonnes per day can be reached with 5 gangs.

On this occasion about half the cargo was loaded direct from barges alongside onto the ship direct, or on to the pier and transferred to the ship, a net loading rate for 415,000 bags or 794.6 bags per gang hour was achieved or about 4,250 tonnes per day gross.

Cargo loaded direct from the barges to the ship was by ship's cranes and from barges alongside at any convenient point on the berth either direct into the ship by shore crane or transferred to the dock by mobile crane and into the ship by shore crane.

The average net weight of a bag of rice is 50 kg., gross weight 50.6 kg. On earlier tally sheets the gross weight of 53 kg. was used. Sample bags are weighed, reportedly 1 bag per thousand, during loading and a final weight is given to the shippers by the surveyors.

Cargo stored on the dock is raised on pallet boards and well covered by tarpaulins against the weather and no wet bags were noted from these consignments.

Cargo in the barges is not so well protected and some wet bags were noted, these were sorted before loading and not brought on board. There were no difficulties experienced in having to reject wet bags.

No hooks were used for handling the bags during loading either on board or ashore and the few torn bags in loading were sewn up on the spot or rejected by the survey/tally clerks.

The bags are loaded in rope net slings of 40 bags and lifted on board by chain hooks. Some damage was noted due to the hooks fouling the bags but again minor damage was sewn up and major damage rejected.

The storage on the dock would appear to be an ideal breeding ground for rats, however few were noticed.

Dunnage and paper were laid by stevedores prior to loading whilst the vessel was at the buoys awaiting the berth. Dunnage and paper were supplied by barge from Shanghai, arranged by the protecting agents in Hong Kong.

Cargo is loaded with two fore and aft and two athwartships ventilation channels throughout the whole stow, these are tied with bags every 5 tiers, no additional dunnage is required for this purpose.

Stevedores at this berth are experienced in the loading procedure.

A stowage factor of 53 (1.48) is given but this is more appropriate for tweendeck vessels. In this vessel, bulk carrier with hopper tanks top and bottom, 49 (1.37) was achieved.

Cargo working from 14th to 29th December 1991 was delayed due to fog, mist, rain, snow and high winds with sub zero temperatures, and awaiting the previous vessel to complete loading. Time lost due to weather was about half the total loading time.

De-Ballasting: The Harbour Master requires a written request to pump ballast and harbour officials attend on board at the start of pumping to ensure that no contaminated ballast is being pumped.

The officials do not remain on board throughout the operation but the gangway guards usually keep a close watch on proceedings. It is recommended that any officials coming on board are entertained with coffee, soft drinks and cigarettes.

Cargo Hold Survey: Survey is carried out by CCIB, Import and Export Commodity Inspection Bureau of the People's Republic of China, prior to loading. Their initial certificate is added to the letter of request for survey. This was carried out at the buoys whilst awaiting the berth and is required before Notice of Readiness is accepted.

Port Clearance Inwards: Although there is a designated anchorage in the approach to Zhangjiagang, this is only used for dangerous cargo vessels and the normal practice for vessels awaiting berth is to moor to buoys on arrival.

Port side accommodation ladder is required for boarding.

'Q' flag must be flown and the pilots usually check that this is being complied with.

The correct P.R.C. papers are required but if these are not available prior to arrival the officials are prepared to wait while the information is transferred from the vessel's forms.

A supply of tea, coffee and soft drinks is appreciated and a gift of a couple of packets of cigarettes per man is standard, these will be distributed by the agent.

About 10 officials and 2 guards board.

The formalities are amicable and Penavico local agent ensures a smooth clearance.

Shore passes are issued to all crew members and must be shown to the gangway guards when going ashore, together with Passports or Seamen's Books, whichever have been used for the Crew List.

Port Clearance Outward: Six officials board and require a health form and Clearance Request/Information form which the agent should have put on board previously.

The port officials only work between 0800 hrs. and 1700 hrs. so if it is required to depart earlier than 0800 hrs., clearance can be arranged for the previous afternoon.

The guards leave the vessel after clearance has been granted.

Guards: Two guards join with the port officials and remain with the vessel whilst at the buoys.

The only accommodation available was the hospital and this was accepted.

The guards are officers and it is as well to ensure that they receive the same treatment as officers onboard, particularly with food.

When alongside the guards remain on the dock and do not require food and accommodation.

Liberty Boat Service: Available at the buoys and is arranged by agent.

On this occasion, on the first night the crew were landed at one jetty and not advised that the return boat would leave from a different jetty. On the second night the last boat left the shore early, on both occasions crew members paid cash to the operators for an unscheduled launch. The operators expected however an additional launch to be signed for, but were disappointed.

Fresh Water: Fresh water is available from the berth and is cheap and not metered. An agreement is reached with the port official who acts as shipchandler and general supplier.

Fresh water is also available at the buoys but is expensive.

Provisions and Stores: Local provisions are available, fresh fruit and vegetables in season and judging by the items on sale ashore would be quite good quality.

Other items are available from Shanghai and delivery charges are reported to be high.

Medical: Medical attention and vaccinations are available and can be arranged very quickly.

Movements in the Port of Zhangjiagang: Two pilots board for all movements.

Two tugs are normally used and secure at the break of the forecastle and break of the bridge on the appropriate side using tugs lines.

If the tugs are not available for any reason movement of vessel is subject to the direction of the tide and it may be necessary to wait for the tide to turn to a favourable direction.

Most vessels are berthed heading West but occasionally some in the other direction.

The anchor is used for coming alongside and for mooring to the buoys.

When mooring to buoys the line boat will take all lines from forward (five) in one pass and then go aft and take all lines (four). Lines are secured to the buoys with wire strops and shackles provided by the mooring boat, lashings are not required.

Cargo Fumigation: The suppliers of the cargo, China National Cereals, Oils and Foodstuffs Import and Export Corp., require that the cargo is fumigated after completion of loading.

Instructions from the fumigation contractors will be supplied.

Equipment for fumigation is put on board prior to leaving the berth and the fumigation team of 6 men commence work as soon as hatches are closed.

A government inspection party of 2 Port Health officials also board to supervise, together with 2 guards.

The guards require food and accommodation in the normal manner but the Port Health officials only require accommodation as they eat with the fumigation team.

The fumigation team bring their own bedding and food and only require a messroom for sleeping and use of the galley for cooking.

A skeleton crew are allowed to remain on board, about 6 men (Chief Officer, 2nd Engineer, Bosun, Cook and 2 oilers), to maintain services. The remaining personnel leave the vessel by launch and are accommodated ashore in an hotel.

Communication is maintained by VHF and if required changes of personnel are permitted.

The fumigation guidelines were not strictly complied with, as the vessel was delayed leaving the berth awaiting the change of tide, the gas was released into the holds before leaving the berth, this was done without prior notice to the ship's personnel. Also the gas was not released at the buoys due to weather conditions.

Normal schedule would be:

4 – 5 hours sealing and setting up equipment.

36 – 48 hours with gas in holds.

4 – 5 hours releasing the gas and testing that the vessel is safe.

Fumigation started without informing any ship's personnel while the deck crew were still at mooring stations and working on deck. Although it was ensured that there was no chance of gas leaking from the holds, it was found that some of the drainage holes of the coamings were not properly covered.

Port Health officials made occasional rounds on deck and inside the accommodation with a gas detector to check for presence of gas outside the holds.

Persons staying on board during fumigation were advised to keep their cabin doors unlocked at all times for random testing.

The occupied cabins were tested only three times during the fumigation period.

The fumigants were injected from gas cylinders through a small diameter rubber hose led through the access hatches with the gaps sealed with tape. When the hoses were removed the small holes remaining were not sealed.

Fumigation personnel and Port Health officials leave the vessel with the equipment on the launch used to return the ship's staff. The guards remain with the vessel until outward clearance.

Warning: In Winter the hotel is very cold and personnel must take Winter coats even if they intend to remain inside. Hotel accommodation is fairly basic but friendly and the food is good.

Repair Work: Permission is required from the Port Authorities for immobilisation of the main engines and also for hot work.

Permission is not always granted, particularly for hot work whilst alongside.

ZHANGZHOU: 24.25 N. 118.02 E.

PILOTAGE: Compulsory. Pilot service is available during 10 hours. Pilot boards vessel at Lat. 24° 44' 30" N., Long. 118° 05' 24" E.

ANCHORAGE: Pilot Anchorage (See above) has a depth of 13.0 m. The bottom is mud and the holding ground is good.

RESTRICTIONS: Vessels cannot enter and sail after sunset.

Tidal range: Max. 5.80 m. Average: 3.98 m.

Draft Limitation in the Channel: 13.0 m.

VHF: "Penavico Zhangzhou" and "Sinoagent Zhangzhou" on Channel 16 throughout 24 hours.

TUGS: Available.

BERTHING: One berth with length 260 m. and depth 12.5 m. Max. size 35,000 d.w.t. 2×10 ton cranes. General cargo and containers handled.

CRANES: Floating crane available from Xiamen.

FRESH WATER: Available at berth and at anchorage.

FUEL: Available at berth and at anchorages.

REPAIRS: Facilities available.

GENERAL: *Agency:* Penavico Zhangzhou, 2nd Floor, Port Building, Zhangzhou, Fujian, China. Tel: 86-596-2028623. Fax: 86-594-2028622. Telex: 929009 Penfz Cn.

Sinoagent Dongshan, Port Building, Dongshan, Fujian, China. Tel: 86-596-5620474, 5623474. Fax: 86-596-5623516. Telex: 929017 Agent Cn.

Provisions: Available.

ZHANJIANG (Tsamkong): 21.11 N. 110.24 E.

(See Plan)

Also see 'General' before first port.

PILOTAGE: Pilotage is compulsory and is undertaken day and night.

ANCHORAGE: The anchorage is located between the following positions, Lat. 21° 11' 36" N., Long. 110° 25' 17" E. and Lat. 21° 04' 55" N., Long. 110° 33' 20" E. The depth in the anchorage is 15 m. – 35 m. and the bottom is sand and mud. Vessels up to 100,000 d.w.t. may use the anchorage.

RESTRICTIONS: Vessels may enter and sail after sunset.

MAX. SIZE: The draft limitation in the Channel is 9.5 m.

Tidal Range: Maximum 4.51 m., minimum 0.70 m.

VHF: Zhanjiang Radio is on Channel 16 throughout 24 hours.

TUGS: 1×1,000 h.p., 1×1,200 h.p., 1×2,300 h.p., 2×1,960 h.p. and 4×3,200 h.p.

BERTHING:

Working District	*No. of Berths*	*Length (m.)*	*Depth (m.)*	*Cargo Handled*	*Shore Cranes*
No. 1	7	906	9.0	General	18
No. 2	3	336	12.5	Oil	
No. 3	6	1,166	12.0	Ore and General	24
No. 4	11	1,352	12.0	Grain	20
				Coal	2
No. 5	1	141	7.4	General	2

CRANES: There is a floating crane with lifting capacity of 50 tons. Also see "Berthing".

FUEL: Contact China Marine Bunker Supply Company, Zhanjiang Branch.

REPAIRS: Facilities available.

GENERAL:

Storage: Warehouse: 155,000 sq.m. Open space: 410,000 sq.m.

Imports: Steel, fertiliser and grain.

Exports: Bauxite and general cargo.

Provisions: Contact Zhanjiang Ocean Shipping Supply Corporation.

SHIPMASTER'S REPORT: December 1987 (Updated 1994).

Port Limits: Port Limits extend to Longitude 110° 38' E.

Notes: Vessel not normally 'Arrived' until cleared.

Notice of Readines may not be accepted until the vessel has berthed.

Documents: Standard Chinese Forms used.

6 copies Arrival Crew List required.

Anchorages: There are about 18 anchorages designated by the Harbour Master. In addition there are 12 mooring buoys that may be used by vessels of 10,000 tons during a typhoon.

Pilotage: Total distance about 22 miles. Vessels over 9.5 m. draft and vessels of irregular dimensions embark the Pilot at the Outer Pilot Station from a large tug.

Regular size vessels and vessels of light draft embark the Pilot at the Inner Pilot Station.

There is a heavy concentration of fishing vessels between the dredged channel and the Inner Pilot Station.

Restrictions: Channel said to be 9.5 m. (Datum) and Inner Basin Channel 9.5 m. (Datum).

Max.Size: Tankers up to 11.73 m. and cargo vessels up to 11.4 m. draft. It is however necessary to confirm this on each visit.

Health: Standard Chinese Arrival Inspection Procedure carried out at anchorage, preferably as near to the port as is accessible at the time. The Inspection Party consists of 8 or more persons.

Pratique is only required at the first port of entry.

Radio: Radio Station 'XSJ' on W/T MF and HF and VHF Channels 16, 11 and 13. No public telephone correspondence available.

VHF: Call Radio Station on Channel 16 and change to Channel 13 to speak to Harbour Master, Stevedores, Agents, etc.

Radar: The Harbour Master's Office is equipped with radar. However, we do not believe it is used to assist vessels in harbour.

Tugs: There are 5 'Duck-Peller' tugs equipped with VHF and fire fighting equipment. Normally 2 tugs are used, with ship's lines. There is a dedicated fire float and 2 large and older tugs used as pilot boats.

Berthing: The harbour operates in 5 sections (length 5,260 m., depths up to 12.5 m.).

Section One: There are 11 berths and an 'end-on' berth for Ro-Ro operations of local ferries.

Section Two: Located at the South end of the harbour. All oil operations are carried out at this section.

Section Three: Located upstream from the port.

Section Four: Newly built on reclaimed land. Six berths, including a silo at the end of the quay, with depths of 11.0 m. or more.

Cranes:

Section One: 18 Portal grabbing cranes on the newest berths.

Section Three: 24 cranes available.

Section Four: There are cranes available at all berths, suitable for grabbing.

Bulk Handling Facilities:

Imports: Wheat is handled by pneumatic elevators or crane and grab. Other cargoes handled by crane and grab into mobile hoppers. All bulk cargoes are bagged for onward carriage into hinterland.

Exports: Barytes, talc lumps, fluorspar, etc. Cargo is tipped by lorries onto the quay and loaded by grab and crane. Phosphate and coal also handled.

Bridges: None.

Stevedores: Cargo worked throughout 24 hours in 3 shifts.

Medical: Facilities available. Foreign seamen handled by ship chandler at the request of the agency.

Tankers: Mostly domestic Chinese vessels observed. No details of berths obtained.

Density: 1018 – 1020.

Fresh Water: Available ex-wharf and by barge.

Fuel: Standard Chinese Grades available. Vessels should be aware of the wax content and high pour points. Bunkers available by barge, normally in daylight. Also available at anchorage.

Repairs: Minor repairs possible.

Surveyors: The Chinese Classification Society 'ZC' acts on behalf of most major Societies for survey work. Cargo Surveyors and Draft Surveyors available from Chinese National Organisations.

Gangway/Deck Watchmen: Immigration Police act as gangway guards on all foreign vessels.

Customs Allowances: Crew allowed 200 cigarettes on arrival. The bond is sealed. Weekly issues are allowed upon written application.

Cargo Gear: All berths are equipped with railway lines and have standard Chinese two wire portal cranes of possibly 10 tons SWL, but unmarked. Various designs of grabs available according to normal commodities handled.

One four wire crane observed handling 20 ft. containers. Floating crane observed. Some mobile cranes also available. In the main, ship's gear is used as a last resort.

There are a number of mechanical handling units such as front end loaders, tipping lorries, tractors and trailers. Some fork lifts with tines or hook gantries. Mobile conveyors, bagging plants, hoppers, etc.

Repatriation: Possible via Kwangchow and/or Hong Kong. Land communication is mostly by overnight bus. Occasional ferry to Hong Kong.

Airport: Domestic flights, but recently 3 charter flights per week to Hong Kong direct.

Telephones: Section 4: Some berths have telephones whose installation is compulsory. Foreign ships are charged 200 F.E.C. for connection.

Storing: Permitted alongside but usually in limited quantities, delivery is by trishaw or minivan.

Shore Leave: Permitted until midnight only. Foreign seamen are logged out and back at the Dock gate by Immigration Officials.

Identification: Seamen's I.D. or Passports to be carried at all times. Foreigners also require 'Landing Permit'.

Regulations: Standard uniform Port Regulations for China.

Delays: Possible due to congestion or for operational reasons. Port is also in the typhoon area, which may require ship's to clear the wharves.

Supercargo's can sometimes arrange despatch agreements.

Developments: Nine berths newly built and in use, five berths under reconstruction on the old quay.

Authority: Harbour Superintendancy Administration.

Agent: China Ocean Shipping Agency, No. 7 Ren Min Road, E.1. Xia Shan, Zhanjiang, Guangdong, China. Telephones: 24936, 24255. Telex: 45234 PNVCZ CN. Cables: PENAVICO, Zhanjiang.

SHIPMASTER'S REPORT: January 1991.

Vessel: 40,000 d.w.t. product carrier.

General: The city of Zhanjiang is located on Leizhou peninsula and was formerly known as Guangzhou Bay. It has 3 wharves with 15 berths for general cargo and an oil pier. A new jetty was commissioned in late 1990 where vessels upto 5,000 d.w.t. can be berthed. The draft restriction is 11.73 m. for tankers and 11.40 m. for general cargo vessels, subject to confirmation.

Documents: Forms in English that were prepared by the vessel were accepted but Chinese/English forms were supplied for future use.

7 copies of Crew List showing names in full and home address of each crew member.

1 copy of Maritime Declaration of Health.

The following documents are prepared on the spot by the respective authorities: Dangerous Drugs List; Arms and Ammunition List; Stowaways List; Passengers List; Bonded Stores List; Ship's Stores List.

Last Port Clearance not requested.

Communications: No problem with telex communication for a vessel fitted with telex/Satcom.

Health: Pratique granted after inspection by officials.

Pilotage: Pilots prefer to board vessels at Pilot Boarding Station No. 2. A Pilot and a Berthing Master board the vessel on each occasion.

Standard of pilotage found to be very good.

Entrance Channel/Berth Approach: Due caution to be exercised against fishing boats, stakes, junk traffic, etc.

Berthing: Vessel berthed at the Oil Pier Dolphin Jetty, Berth No. 202, port side to. Only two medium sized vessels can berth on the Eastern side of the pier. Smaller local tankers were observed berthing on the Western side.

Two tugs in attendance use ship's lines. Mooring boats used for passing lines to dolphins.

The jetties lie in an approximate North/South direction and the prevailing wind (in January) was predominently from the Northeast.

Medical: Assistance organised promptly. Patients taken care of by the ship chandler.

There are 8 well equipped hospitals in the city.

Tankers: Various products are exported from Zhanjiang. Vessel loaded gasoil and Jet A1 from shore tanks which are supplied from an oil refinery at Mamoming, 100 km. Northeast of Zhanjiang. The supplies are irregular and the vessel may have to load product as it becomes available. The exact density and temperature of the cargo could not be ascertained until loading was almost complete.

There are no loading arms on the jetty. Hoses are used with 6 in. reducers.

The Loading Master never boarded the vessel throughout the stay and the vessel was not supplied with a walkie talkie to communicate with the shore. An Agent's interpreter remained on board throughout the loading operations at the insistence of the Master.

Actual loading took 38 hours through 2 connections, one for each grade being loaded. A combined loading rate of 380 t.p.h. was achieved.

Vessel has to provide own gangway.

Slop reception facilities exist ashore but a written application has to be submitted through the Agent immediately upon arrival. Despite this rule it is advisable to telex this requirement in advance so as to enable the Agent to cater for it.

No telephones provided at the tanker jetties.

Ballast: Clean ballast cannot be discharged without prior written application and without prior inspection by the Harbour Authorities. The Authorities would normally encourage the Master to discharge ballast to the shore reception facility on payment. Vessel was able to obtain permission to discharge ballast overboard but it is worth remembering that Authority Inspectors board the vessel for this purpose only during working hours (0830 hrs. – 1700 hrs.). The vessel has to wait until the next day if written application is submitted out of hours.

Protest: Agents are reluctant to accept Protests, even for receipt only, hence these may have to be sent by telex.

Supplies: Adequate supplies of quality fresh provisions, including poultry products, pork, seafood, etc. are available as are fresh fruit and vegetables, especially in season. Bonded imported and local liquor are available at prices much less than Singapore and Hong Kong.

Banks: The following banks have branches in the city: The People's Bank of China, The Bank of China, The Industrial and Commercial Bank of China and The Chinese People's Construction Bank.

SHIPMASTER'S REPORT: July 1992.

Vessel: 96,000 tonnes d.w.t., 243 m. LOA, 38 m. beam, 57,082 g.r.t., 12.0 m. arrival draft (even keel S.W.).

Cargo: Crude oil.

Approach to the Pilot Anchorage No. 1 is easy if visibility is good and the leading lights can be seen. If draft is over 9.0 m., then Pilot boards at Pilot Anchorage No. 1 from an old tug which can keep up with the vessel at speeds of less than 5.0 knots.

Vessel was anchored at Pilot Anchorage No. 2 (0.4 nautical miles from Buoy No. 10). All leading lights and buoys were found to be in position.

If vessel arrives before high water, then it is advisable to attempt an approach to Pilot Anchorage No. 1 at high water, depending upon vessel's draft. While awaiting high water, good anchorage can be found about 8 nautical miles due East of Naozhou Dao Lighthouse, in a depth to about 21 m. We sounded a depth of 3.0 m. below keel near Buoys No. 2 and 3, when the tide height was 4.0 m.

The vessel was boarded by 8 officials and the Agent at Pilot Anchorage No. 2 for "General Examination". There is no provision for issuing Radio Free Pratique.

Despite tendering Notice of Readiness upon arrival, the N.O.R. was accepted only after the vessel was given Free Pratique at the Pilot Anchorage No. 2 by the Port Health Officials.

Vessel always berths at the oil jetty portside alongside. Berthing is assisted by 2 tugs and is carried out at high water. There are only 2 Chicksan arms of 10 in. size, and the discharge pressure requested is 5.0 kg./sq.m. at the ship's manifold, which achieves a rate of approximately 2,300 cu.m./hr.

Except for the Agent, the other officials and Terminal Operators do not speak English, and communication can pose a problem. Hence it is advisable to request the Agent to stay onboard to act as an interpreter.

At least a week's notice is required if any of the crew has to see a doctor, unless in an emergency case. The visit to the doctor is arranged by the shipchandler.

Bonded Stores, dry and fresh provision are very reasonably priced. However, there is not much choice of Bonded Stores.

Crew members are not allowed to go ashore directly along the jetty. The Agent has to be requested to arrange for a launch, which takes about 15 minutes to drop the crew ashore near the port main gate. The charge for each launch trip is U.S.$ 15.00.

A Government surveyor carries out a joint survey with the Chief Officer prior to commencing discharge. The surveyor's figures always vary from the ship's figures, as they use a different method of calculations, using density at 20°C for obtaining net volume.

Crude Oil Washing cannot be started unless written permission has been obtained from the Harbour Master. Officials from the Harbour Master's Office come onboard and witness one Crude Oil Washing sequence, check oxygen content and the Oil Record Book, before granting this permission.

Crew can go ashore using shore passes issued by the Immigration, but have to be back onboard by midnight.

The Bonded Stores are sealed upon arrival by the Custom Officials.

Notice: From Agent (Penavico) to Master:

Quote:

You are welcome to the port of Zhanjiang.

During your stay at this port, please kindly comply with the following rules and regulations of the Port Authorities concerned:

1. Please kindly apply to the Harbour Master in writing for permission for the following items. *Do not* start the below until the permission is granted from the parties concerned.
   (a) Open-fire repair/operation, e.g. welding, fire cutting.
   (b) Deballasting.
   (c) Discharge of slops/sludge or oily water to shore tank.
   (d) Overhauling of piston or main engine. Please indicate in your application form how long the immobilisation takes, and how many hours are needed for refitting the engine for emergency use.
   (e) Painting the hull and draft marks.
   (f) Put down working rafts or boats to sea as assistance to work.
   (g) Echo sounding for the depth of the port area.
2. It is banned to operate radio transmitter, single-side band radio (SSB) and radar.
3. To discharge crude oil, if C.O.W. is to be made, please inform Harbour Master directly or via the Agent by cable/telex your application for C.O.W., 7 days before arrival. Upon arrival, please apply to Harbour Master in written forms:
   (a) Application paper for C.O.W.
   (b) C.O.W. Plan.
   (c) Photocopies of C.O.W. Certificates for ship's Master or Officer.
   (d) Item List for information checking for C.O.W.
   (e) Information for facilities of the ship required for C.O.W.

   When receiving the above information, Harbour Master Officers will attend your vessel to give written permission and detailed instruction. *Do not, do not* start a C.O.W. until you receive the permission letter from Harbour Master.
4. According to the Frontier Defence Officials, crew members are allowed to stay ashore not later than midnight (2400 hrs.). Please kindly note and inform the crew members to come back to the ship before midnight.
5. To apply for Free Pratique when arriving from other countries, please hoist quarantine (yellow) flag at day time, and open three red lights at night.
6. Regarding Pilot and tug hire, please ascertain how long it takes and how many tugs are hired and write down in the Bills.
7. If any problems, plase do not hesitate to consult the Agent.

Please pay kind attention to the above and act accordingly. Thank you very much for your cooperation.

Unquote.

SHIPMASTER'S REPORT: October 1993.

Vessel: 30,000 d.w.t. product carrier.

Max. Draft: 10.90 m., even keel.

Cargo: Part cargo of gas oil, 7,200 tonnes.

Pilots: If draft exceeds 9.0 m., Pilot boards the vessel at Pilot Anchorage No. 1 from a tug.

VHF: "Penavico" Agents can be received 10 miles off the bar.

It was noted that Zhinjang Radio relayed messages to "Penavico" Agents and to the Pilot Station if vessel's transmitter lost contact.

Approach: If vessels arriving before high water, then it is advisable to attempt an approach to Pilot Anchorage No. 1 at high water, depending upon vessel's draft and weather.

However, when arriving with deepest draft of 10.90 m., no problems should occur when approaching Anchorage No. 1 at low water.

All leading lights and buoys were found to be in position, and were showing the charted characteristics.

We sounded a depth of 3.50 m. below keel near the Buoys No. 2/3, and 1.00 m. near Buoys No. 4/5 when the tide height was 4.0 m.

All soundings in the channel showing the same depths as stated in the sea charts.

Due caution to be exercised against heavy concentration of fishing boats and junk traffic.

Pratique: Vessel did not anchor in the Pilot Anchorage No. 2, where the authorities normally board for general examination.

Due to tidal reasons, vessel proceeded direct to the berth where authorities agreed to clear the vessel.

Documents: Documents that were prepared by the vessel in English were accepted, but Chinese/English forms were supplied for further calls.

The following documents were prepared by the vessel:

7 copies Crew List (without addresses).
1 copy Maritime Declaration of Health.
1 copy Declaration of Personal Effects.
1 copy Declaration of Currencies. *
1 copy Declaration of Bonded Stores.
1 copy Declaration of Ship's Stores.

* Apparently nobody was interested to check foreign currencies.

The following documents were prepared on the spot by the respective authorities:

Arms and Ammunitions List.
Bonded Stores List.
Ship's Stores List.
Report of Clearance.
Report of Entry for Foreign-Going Ships.

Notice of Readiness was accepted after the vessel was given Free Pratique.

Pratique is only required at the first port of entry.

Berthing: 2 tugs of 3,500 h.p. were in attendance, using ship's lines.

One mooring boat used for passing the lines to the dolphins.

Vessel berthed at the Oil Pier Dolphin Jetty starboard side to.

Berth: An old reinforced concrete berth, fairly well maintained, but without any facilities to handle their hoses or equipments. The ship's gangway was not landed due to inadequate space on shore.

The existence of a Ship Shore Safety List was unknown, and a walkie-talkie was not supplied to communicate with the shore side.

Vessel discharged via 1×6 in. hose. With an allowed back pressure of 5 bars, we achieved an average discharging rate of 350 cu.m./hr.

An Agent's interpreter remained on board throughout the stay because neither the jetty personnel nor the authorities spoke English.

Shore Leave: Crew members are not allowed to go ashore directly along the jetty. The Agent has to arrange a boat service, which takes about 10 minutes to drop the crew ashore near to the port main gate.

Private transports (motor cycles/taxis) are an adequate possibility to reach a shopping area, where a variety of daily goods are offered.

It is worth remembering to exchange foreign currencies in Exchange Offices/Banks only.

Shore leave is permitted until midnight only, and passports and the Landing Permits are to be carried at all times.

REGULATIONS: *Guidelines for Oil Handling Operation of Ships at Zhoushan:* In order to keep the Harbour Waters from being polluted, the concerned parties shall abide by the following when vessels are involved in oil handling operations at the port.

1. Before Operations:
   (1) Working procedures for oil handling shall be pre-planned and tank capacities, pipelines (including sounding pipes and air-pipes) and valves (including valves for fuel oil filling main on both sides) shall be carefully checked. The balance of the ship shall be kept. All deck scuppers shall be plugged tightly.
   (2) Drip trays shall be placed in position where oil spillage and leakage are likely to occur.
   (3) Pumping rate and signals of communication shall be agreed upon, which shall be understood by both sides.
2. During Operations:
   (1) A sufficient number of duty men shall be assigned to check the operations constantly. A warning shall be given in time if the pump needs relieving pressure or stopping.
   (2) Adequate ullage shall be left in receiving tanks. The valves of next receiving tanks shall be opened before the valves of full tanks can be closed when shifting of tanks is to be performed.
3. Upon Completion of Operations:
   (1) Pressure shall be properly controlled in stripping pipelines.
   (2) Relevant valves shall be correctly closed and hoses are to be sealed with blank-flanges as soon as they are disconnected.
   (3) "Oil Record Book" shall be carefully filled out.
4. Emergency Measures:
   In case of oil spillage, effective measures shall be taken immediately by both sides to control, and eliminate pollution (if using dispersants, approval from the Harbour Authorities must be obtained), meanwhile such pollution shall be reported to the Harbour Authorities at once. A written report of accident shall be submitted and be subject to investigation and settlement.
   The guidelines also apply to all vessels and terminals between which oil handling and operations of noxious liquid substances in bulk are to be carried out.

Issued by: Zhoushan Harbour Superintendency Administration of the People's Republic of China.

Appendix: List of Articles Prohibited by the People's Republic of China from Entering or Leaving the Territory:

1. Articles prohibited from entering the territory:
   (1) Arms, ammunition and explosives of all kinds.
   (2) Counterfeit currencies and counterfeit negotiable securities.
   (3) Printed matter, films, photographs, gramophone records, cinematographic films, loaded recording tapes and video-tapes, compact discs (video and audio), storage medium for the computer and other articles which are detrimental to the political, economic, cultural and moral interests of China.
   (4) Deadly poisons of all kinds.
   (5) Opium, morphia, heroin, marijuana and other addiction-inducing drugs and psychedelics.
   (6) Animals, plants and products infected with or carrying disease germs, insect pests and other harmful organisms.
   (7) Foodstuff, medicines and other articles coming from epidemic-striken areas and harmful to man and livestock or those capable of spreading diseases.
   (8) Renminbi (with the exception of Renminbi dealt with and carried in compliance with an agreement of protocol on the exchange of national currencies in the case of Foreign Exchange Certificates, relevant regulations shall be applied).

2. Articles prohibited from leaving the territory:
   (1) All articles enumerated as articles prohibited from importation.
   (2) Manuscripts, printed matter, films, photographs, gramophone records, cinematographic films, loaded recording tapes and video-tapes, compact discs (video and audio), storage medium for the computer and other articles which involve state secrets.
   (3) Valuable cultural relics and other relics prohibited from exportation.
   (4) Endangered and rare animals and plants (including their specimens) and their seeds or reproducing materials.

Notice to Master and Crews of Vessels Entering or Leaving China:

1. Masters and crews of vessels entering or leaving Chinese territory are required to comply fully with the "Customs Law of the People's Republic of China", "Procedures of the P.R.C. for the Supervision of Inward and Outward International Sailing Vessels and Goods on Board", and other relevant regulations.
2. Such a vessel shall enter or leave the territory only at the place where there is a Customs establishment and be there berthed, either for loading or unloading cargo or for embarking or disembarking passengers.
3. Either the Master or his Agent shall report beforehand to the Customs, through the Harbour Authority, the time of arrival or departure of his vessel, its location and movements, as well as the time required for loading or unloading its cargo.
4. Upon arrival of vessel, either the Master or his Agent shall present to the Customs the following documents:
   (a) An Arrival Report.
   (b) A Manifest, in duplicate, of all the cargo carried on board, or a "Nil" report in case none is carried.
   (c) A list of Inward Passengers (including those booked as "Through Passengers", "Nil" being required when there is no passenger).
   (d) A Crew List.
   (e) A list of Ship's Stores, articles belonging to the crew, currencies and gold and silver bullion.
   (f) A statement of rolled tobacco and alcoholic beverages kept under seal fo use by ship or crew.
   (g) A Customs Control Register of inward and outward vessels, "Nil" being required for vessels in countries other than P.R.C.).
   (h) Any other document required by the Customs.
5. At the time of the vessel's departure, the Master or his Agent shall present to the Customs the following documents:
   (a) An Export Manifest or a "Nil" report, if no cargo is loaded.
   (b) A list of Outward Passengers (not required when no change has taken place in the original list, and no new passengers have been taken on board).
   (c) A Crew List (not required when there has been no change).
   (d) A Customs Control Register of inward and outward vessels (not required for vessels registered in countries other than P.R.C.).
   (e) Any other document required by the Customs.
6. Inward or outward goods and articles carried by vessels (including those consigned for shipment on someone's behalf) shall be truthfully declared by the Master to the Customs, and be subject to the Customs control and supervision. On no account shall any goods be taken either ashore or on board without Customs permission.
7. Before taking any action with respect to the discharge, replenishment, transfer or abandonment of fuel for ship's use or ship stores, application for so doing shall be submitted to the Customs for approval.
8. Rolled tobacco and alcoholic beverages carried on board for use by ship or crew shall be truthfully declared to the Customs, except for the limited portion allowed by regulations on a voyage with a view to meeting the needs of ship and crew during the vessel's stay in port, they shall be sealed up by the Customs. As long as the vessel remains in Chinese territorial waters, this seal cannot be removed without Customs permission.
9. Any crew member intending to take things on board or ashore shall declare them to the Customs for examination. Articles that are on the Import or Export Prohibitive List of P.R.C. (see Appendix) must on no account be taken into or out of the territory, either for his own or on behalf of others.
10. On leaving or boarding a vessel application must be made by the crew member to the Customs for completion of the necessary formalities beforehand.
11. Violation on the part of a Master or crew member of the "Customs Law of P.R.C.", or of the "Procedure of the Customs of P.R.C. Governing the Control and Supervision of Inward and Outward International Sailing Vessels and Goods on Board", etc., shall be dealt with by the Customs in accordance with the Customs Law, Implementation Rules concerning Infliction of Administrative Penalties by the Customs of P.R.C.

SHIPMASTER'S REPORT: February 1993.

Ao Shan:

Vessel arrived at the anchorage to the S.E. of Tao Hua Dao having received the following instructions from the Agents 'Penavico Zhoushan' "Proceed from the high seas to 29° 35' N., 122° 38' 09" E., then alter course to 301° and approach the pilot anchorage. The channel depth is 17.2 metres. When the tide rises, proceed to the Pilot Anchorage at a maximum speed of 8 knots, you must be below 8 knots for the last 10 miles. No photography is allowed. Your radio transmitter must be off. The pilot will listen on VHF Channel 16."

The anchorage is centred around 29° 44' N., 122° 41' E., and had about 6 ships waiting there to make the passage through the Shih-Peng Chiang. The anchorage depths are in the range 19 m. – 25 m., about 8.0 m. deeper than the immediate approaches. We did, however, find approximately 4.00 m. of water more than we had expected. There was a clear line of demarkation on the sea surface as we entered the waters coming from the Shih-Peng Chiang, which have much silt in suspension. Our vessel was drawing about 15.2 m. in a part-loaded condition, but is the biggest ship ever (318,000 d.w.t.) to have visited China. We were blessed with the senior pilot of the Zhoushan District plus 2 assistants, both fairly senior men themselves, for the passage from the outer anchorage to the berth. The arrangement was that we would berth in daylight and at high tide, we therefore sailed up the Shih-Peng Chiang at first light, which we assumed to be the norm as none of the lights and racons in this channel were working.

Immigration formalities must be carried out before berthing, so we anchored in about 100 m. of water, 2.5 miles to the West of Ta-ma I Dao. About 10 Immigration and Customs officials, accompanied by the Agent's boarding clerk, were shown into the vessel's conference room. Proceedings got off to a good start by offering these officials coffee and biscuits, and by having the appropriate documents to hand. They want to see all Discharge Books (or passports for supernumeraries), all ship's documents and most of the documentation listed in "Guide to Tanker Ports". Contrary to advice contained therein, they do not insist on information being on PRC forms, Company's standard forms were happily accepted.

Forms requested were:
- 3 copies Bills of Lading.
- 6 copies Crew List.
- 3 copies Cargo Manifest.
- 1 copy Personal Effects List.
- 1 copy Arrival Condition (drafts, deadweight, cargo details).
- 1 copy Voyage Memo, to include details of ports of call during the voyage.
- 1 copy Provisions List.

On the completion of formalities, which was a friendly and easy process, most of the officials left the ship, but accommodation and food must be provided for 4 men throughout the vessel's stay at the berth. A gangway watch is maintained at all times. Shoregoers must take their Discharge Books and Shore Passes with them, and are allowed ashore between sunrise and midnight. Foreign Exchange Certificates with a value against the Reminimbi Yuan of one to one are issued to "Aliens".

The approach to the new terminal at Ao Shan was made from the West at high tide. Five "tugs" were employed to assist in berthing, but it appeared that of the 5 vessels, only 2 were real tugs with the other 3 being old minesweepers. It must be said that none of them was really man enough for the job. A Force 6 N.W.'ly came up at about midday and effectively held the vessel off the berth. The berthing operation then became difficult and protracted on a falling tide, and was not helped by the reluctance of the mooring boat crew and mooring gangs ashore to handle our mooring wires. It had to be slowly explained that it was impossible for us to provide all fibre ropes, and once the message was understood, the operation continued relatively smoothly. The final tie-up configuration was 5, 2 and 2, with the starboard anchor out to 7 shackles on deck, the impression given was that the anchor would not be used in normal circumstances. The senior pilot carried out his duties in a calm and unruffled manner, and maintained his demeanour at all times.

This new terminal has a jetty and berth capable of handling vessels up to a maximum of 230,000 d.w.t. The jetty is well found with 3 mooring dolphins either side of the main jetty. There are permanent firefighting towers either side of the 3×16 in. Chicksans, the maximum allowed airdraft is 22.5 m., sea to Chicksans. There is a gantry-type gangway supplied from shore, complete with permanently attached armed guard to check the documentation of visitors and shoregoers alike. The tank capacity is currently 2×100,000 cu.m. and 2×50,000 cu.m., with 4 more tanks, doubling the capacity, to be on stream later this year. There is a fresh water connection which will be in use later this year. The jetty and the ship are surrounded by an oil boom during all discharge operations.

Once alongside this new terminal, it became apparent that the terminal personnel had a very limited experience of normal tanker practice. There was no Tanker Safety Check List, and they had not heard of ISGOTT. The "Surveyor" did not check the empty ballast tanks or the bunkers, and did not issue an Ullage Report. No one ashore understood the basics of Crude Oil Washing, they all had assumed that COW was tank cleaning with water, until explanations were given to the Terminal Manager and his staff by the writer, the attending Operations Superintendent and the Chief Officer. Once the message had been passed by the Manager to the Harbour Master, we were told that we had to apply in writing to the Harbour Master's office for permission to COW, we were well into our COW programme by this time, but a simple note on company headed paper was sufficient to appease him.

The initial stages of discharge progressed quickly as all lines, valves and tanks ashore were proved. Once they were happy, we were asked to pump at a maximum rate of 3,000 cu.m./hr. per Chicksan and a maximum of 13 Bar to 4 empty reception tanks ashore. They could not understand why we did not achieve the maximum permissible line back pressure, and so we explained that we would find it almost impossible to achieve anything like 13 Bar when pumping to 4 empty tanks which were effectively lower than the ship at the end of two 700 mm. × 1.0 km. lines. The discharge operation progressed smoothly for the most part, with the one major fault being the lack of communication between ship and shore. We were told we could contact the shore via VHF Channel 16 at any time, but this was not the case. Very often there was no reply to our call, and when a reply was forthcoming, the language barrier proved formidable. The Agents and Terminal Manager spoke good English, but a majority of the people with whom we dealt had little knowledge of English.

Incoming stores and mail from Europe came via Beijing, Shanghai and Ningbo to the local town of Ding Hai, and then by ferry to the terminal. It takes time for them to reach the ship. Outgoing mail was accepted by the Agent, who said that it would take about a week for it to reach Europe. We called in a chandler and found the quality of local fresh produce to be high and at a cheap price. Rubbish disposal is available, but it has to be landed from amidships to the jetty. Before it goes ashore, it is inspected by a Customs Officer, and then it has to be sealed in non-breakable bags. We did not make use of any laundry service but, as you would expect in this part of the world, an allegedly good service is available with a prompt turnround time.

On completion of discharge, a very cursory inspection of tanks, during which there was no inspection of any of the permanent or sailing ballast, was carried out. Immigration formalities have to be taken before the vessel can sail. All shore passes must be returned, and they must be in good condition to avoid the wrath of the Immigration Officer, who will not work before 0800 hrs. As the vessel must sail on high tide and in daylight, we had an overnight stay alongside. For sailing, only 2 tugs were used by the same senior pilot and 1 assistant.

Overall, the level of operation was fairly low , but the jetty is well found and manned by operators who were more than happy to learn and to listen to the advice we were pleased to give them.

ZHUHAI: 22.18 N. 113.35 E. (See Plan)

SHIPMASTER'S REPORT: April 1994.

Discharge of two parcels of gas oil:

This operation was the second discharge port in China. At the initial port (Beihai), 5,400 tonnes of gas oil was discharged into barges. Due to poor weather, no officials visited the vessel prior to departure, but all paperwork was forwarded by State Agents "Penavico" to Zhuhai.

Communications by telex and fax prior to arrival gave an indication that operations would be relatively well organised.

The vessel updated ETA's as per normal and arrived at night.

Anchoring position being in the Southern end of the waiting and unloading area (approx. 22° 04' N., 113° 44' E.). As the maximum arrival draft was 11.2 m., great care was taken with tidal information. Minimum under-keel clearance was noted at 2.0 m. during stay.

The area is very busy with naval traffic and numerous fishing craft, although the anchorage area is not particularly well used.

After arrival, very little information was obtainable from "Penavico", and the services of the Agent in Hong Kong were invaluable. All messages were copied to them and numerous telephone calls were the norm to try and gain information regarding the discharge.

It was 3 days before there was any discharge operation, and this was a combined 2 Bill of Lading parcel into small tankers. We discharged to tankers on either side, after the usual meeting about using fenders/proper hoses, etc., as is the standard for Chinese ports.

This parcel was completed after 2 days (approx. 11,000 tonnes discharged into 13 vessels). The remaining parcel of 4,000 tonnes proved more difficult. As it had been sold on from the original consignee to a company not in the region of Zhuhai, there appeared to be difficulties ashore with numerous points.

We were informed that it would be lifted in one tanker of 4,800 d.w.t. size. "Penavico" were informed that the proper fendering and hoses would be required by a vessel of this size, as up until then the largest barge had been 1,700 tonnes.

As there was so much confusion ashore, Mabanaft sent a representative from Singapore to help out with matters in Zhuhai. It was 8 days before discharge was commenced into tanker "Daqing 212", a rather large looking 4,800 d.w.t. vessel. She was equipped with 2 × 3.0 m. × 1.5 m. diameter pneumatic fenders. We had rigged all available twin tyre fenders (9 units). 3 lengths of 6 in. hose were used for the transfer. This was assembled on board our vessel and returned to the "Daqing 212" at the end of discharge. Discharge was completed the same evening and the "Daqing 212" sailed.

We awaited final Clearance before sailing for Hong Kong to discharge the final parcel of 10,184 tons of diesel.

Nobody was available on the next day, but we were assured that by the following afternoon all would be fixed, and Clearance given. The Agent and officials boarded at 1645 hrs. This was the first visit by any proper shore representative of Penavico/Customs/etc., since the vessel had arrived some 15 days earlier.

Customs officials were not happy with papers received from Beihai and refused to clear ship outward. They said things had to be confirmed with Beihai area, and that it would be cleared by the next day. The Penavico Agent was of no assistance in the matter, and it appeared that there was no intention of giving us Clearance in the first place.

They left the vessel at 1730 hrs. Owner and Hong Kong Agent were both informed of the situation.

We were later informed by Hong Kong Agent that Clearance would be granted next day.

The next day we were informed by Hong Kong that the Agent and Customs were on their way to the vessel, to give Clearance. Later, I was asked by Penavico to clarify the cargo carried from Beihai, as there appeared to be a discrepancy in the Beihai Customs papers. Having done this, I was asked to check the Entry Report form, but as I had already informed them, I did not have any Customs papers from Beihai at all. This was stated on telex, and Zhuhai Customs were given copies of all Bills of Lading relating to the cargo.

At 1700 hrs., Hong Kong informed the vessel that Customs would not now be attending the vessel, and we would have to wait another 2 days. We received message from Penavico stating that Customs wished me to make out new Entry Report form with the figure 25,114 tonnes as through-cargo from Beihai, after which all would be in order, and Clearance Inspection undertaken. I was told that the original figure was incorrect.

We were asked to supply a statement absolving Zhuhai Customs from any financial responsibility. I was told by Hong Kong Agent that this was in case if later there followed a claim for the difference in the through-cargo figures. If I did not supply this statement, the delay would perhaps run to several more days.

At 1600 hrs., the Agent in Hong Kong called and informed me that the Customs were on their way to the vessel. Officials boarded at 1715 hrs., 10 persons in total, the Report of Entry from Beihai was presented. There was an error in the onward cargo column. I changed the figure from 26,113 tonnes to 25,113 tonnes and initialled it. That was Clearance completed.

I fail to understand why this could not have been done in the first place, but as already stated, there was more behind this than just a simple error in figures.

At 1750 hrs. Clearance was given.

At 1800 hrs. commenced heaving anchor to leave area, after 18 days in port.

Agents in Hong Kong must be thanked for their assistance throughout the period, as they were our main line of communication. The representative of Mabanaft Singapore worked very hard on arrival at Zhuhai to smooth the operation along.

SHIPMASTER'S REPORT: April 1995.

The report was compiled when this LPG Carrier discharged a cargo of LPG-Mix at the port.

The vessel arrived at Zhuhai Pilot on April 20th, at 1712 hrs. It was not possible to establish any contact with Pilot or Agent on VHF, Telex or Fax. The best communication arrangement was by telephone via our Agent in Hong Kong, as vessel called there beforehand. On arrival at Zhuhai Pilot (Lat. 22° 04' N., Long. 113° 44' E.), we dropped the anchor and tendered N.O.R.

Later I was able to send N.O.R. by fax directly to Zhuhai Gas Co.

At 1730 hrs., I received a fax message from Sinoagent Zhuhai, to self-pilot the vessel to Tangija Inner Anchorage. The information that vessel had arrived at the pilot station must have come from the Hong Kong Agent.

The anchor was home at 1748 hrs. We set course to a position close to the chartered Racon Buoy. The buoy was unlit and no Racon signals were received. A second buoy was detected close to the Fairway Buoy, marking the beginning of the buoyed channel to Macao.

From position Lat. 22° 05.8' N., Long. 113° 40.9' E., we set course of 359°. Vessel was able to maintain near full speed with a max. draft of 5.30 m. aft. We passed the buoy marking the ferry speedway between Hong Kong and Macao, which was detectable on the radar, but was unlit and looked more like a drifting empty drum.

Close to the next buoy, we altered course to 342° (in position Lat. 22° 15.2' N., Long. 113° 40.7' E.) and headed directly for Zhuhai. The chartered buoy close to this position was unlit, but gave a good echo on the radar. Approximately 1.5 miles after course alteration, it was no longer possible to maintain full speed, although I reduced to half speed approximately 1 mile earlier.

The critical passage is approximately 1.5 miles after passing the buoy and approximately 3 miles long. We reduced speed to slow. Great care was observed to maintain the planned course, as there is not much water to port or starboard.

As chartered, we found deeper water when approaching the Zhuhai jetty. Three buoys have been placed, which we marked on the chart ourselves. We anchored in position Lat. 22° 21.7' N., Long. 113° 38.5' E., as we found our berth occupied by another vessel.

On April 22nd, vessel received a VHF call from Sinoagent to come closer to the jetty, in order to receive the "Joint Inspection" on board. In the meantime, we made our first contact with the Agent on April 21st, on VHF Channel 3. Our next anchor position was Lat. 22° 22.8' N., Long. 113° 37.7' E., approximately 0.3 miles from the jetty.

The vessel was notified that Pilot would board the vessel on April 22nd in the afternoon. Pilot boarded without further notice. At the time of berthing, the tide was setting Northerly. No tugs were used, as vessel was equipped with bow thruster. The port anchor was used, and vessel berthed starboard side alongside with 3 head lines, 2 springs fore and aft and 3 stern lines.

The Joint Inspection was the usual Immigration and Customs Clearance. At this time, only 9 Officials came onboard at the anchorage, but there can be many more. The Officials were very polite. I arranged the Officer's Messroom for the clearance, and had tea and coffee with biscuits ready for them. Most of the clearance papers are required to be on Chinese Forms, which vessel should carry onboard.

The use of a tug is up to the Pilot. The Agent tries to have a tug bill signed in advance.

The jetty is equipped with fenders and bollards.

Cargo hoses are of flexible type, vapour and liquid line have 6 in. 300 ASA connections.

Vessel stopped discharge twice on "shore request", the reason could not be established. It seems to be the limited capacity of the shore tanks. The vessel was able to maintain a discharge rate of approximately 150 t.p.h., once discharging commences.

It is almost impossible to communicate with the watchman on shore, as he was not able to speak English.

I established communication with Sinoagent through VHF Channel 3, twice a day at 0830 hrs. and 1500 hrs.

No crew members are allowed to go ashore. It was said that the surrounding area is a military zone.

Christmas Island

CHRISTMAS ISLAND, Indian Ocean:
10.25 S. 105.43 E. **(See Plan)**

PORT LIMITS: The area of sea in and adjacent to Flying Fish Cove in the Territory of Christmas Island enclosed by a line commencing at a point where a line bearing 270° True from the flagstaff at Government House intersects the coastline of Christmas Island at MHW thence bearing 270° True for a distance of 2 km. thence bearing 360° True for a distance of 2 km. thence S.E. by a straight line to Rocky Point thence generally S.W. along the coastline of Christmas Island at MHW to the point of commencement.

DOCUMENTS:

Port Clearance.
2 Crew Lists.
2 Passenger Lists.
2 Manifests.
Health Certificate.
Certificate of Registry.
Load Line Certificate.

On arrival at the Island, all usual customs formalities must be observed.

Immigration Officers will board to clear vessel inward. Until the vessel has been cleared, crew members and passengers must not go ashore.

PILOTAGE: Vessels must not close the moorings nearer than one mile until such time as the Harbour Master, or his Assistant, boards to supervise securing to the mooring system. All Harbour Masters are qualified Master Mariners and will render pilotage assistance.

ANCHORAGE: No sea anchorage is available at Christmas Island, the depth of water being too great. Vessels unable to moor due to adverse weather, berth occupancy or late arrival, usually drift off the port and return by daylight next morning, or when advised to do so by the Harbour Master.

RESTRICTIONS: It is not normal practice to moor vessels at night, but unmooring is carried out at all hours.

MAX. SIZE: LOA 192 m. Beam 28 m. Summer d.w.t. 35,000 tons.

HEALTH: Health procedures are basically as those set out by the World Health Organisation in their International Sanitary Regulations. Vessel whose last port of call was in Australia, do not need Pratique clearance.

All other vessels should request Free Pratique by radio when less than 48 hours from the Island.

The Pratique cable should state:

Last port of call and date of departure.

Number of persons on board and number of passengers for the Island.

Any suspected or confirmed infectious diseases on board.

The Port Health Officer may board to inspect passengers, crew, medical papers and/or cargo.

Also see "Regulations".

RADIO: *ETA Advice:* The telegraphic address is "CIPHOS, Christmas Island", and through Perth, Western Australia, or Singapore Radio. On sailing from the previous port, an ETA should be radioed to the Harbour Master. 48 hours before arrival, a confirmation of the ETA should be sent.

Also, the Island should be advised of:

the passengers on board,
number of bags of mail,
total quantity of inward cargo, and
the hatch disposition of the inward cargo.

Ships in Port: In conformity with international regulations, no radio transmissions are allowed by vessels whilst berthed at Christmas Island. Any telegrams requiring despatch must be lodged at the Post Office for transmission. Post Office hours are 0800-1200 and 1300-1500, Monday to Friday only.

VHF: The Marine Office is equipped with VHF and may be called on Channel 16 from 0000-0900 hrs. (G.M.T.), Monday to Friday, weekends by arrangement only.

Call sign is "Christmas Island Marine".

TUGS: None.

BERTHING: On receipt of radioed advice, arrangements should be made to arrive at the boarding position, i.e. one mile West of Smith Point, at the appointed time. On arrival, the way should be taken off the ship and the engines stopped, as, when the weather permits, the mooring gear is also loaded at this position. Six 52 mm. mooring lines will be placed on board. Shore labour carry out this operation and also moor the vessel.

Main Engines and Deck Machinery: It is imperative for the vessel's safety that the main engines are ready for proceeding to sea at all times, as occasionally sharp squalls set in which make it necessary for the ship to proceed offshore at very short notice.

When the vessel is moored, the engines must not be used except for proceeding to sea. This also applies to moving engines for testing, for which the prior permission of the Harbour Master must be obtained.

Power, whether steam, electric or hydraulic, must be kept on the windlass and all winches the whole time the vessel is in port. It is particularly important that the windlass and aft mooring winch are in first class order.

BULK CARGO HANDLING: Vessels Loading Bulk Phosphate:

Loading Plant: Bulk phosphate is loaded by 2 cantilever arms. When the ship is moored in the loading position, the arms are swung over the appropriate hatches and the cargo poured directly into the holds. The capacity of each arm is 1,500 tonnes per hour; i.e. 3,000 tonnes per hour overall loading rate.

Ballast: Vessels should arrive with sufficient ballast to allow them to be handled without tugs in a strong breeze. However, on ships loading bulk phosphate the amount of ballast should be restricted to the amount which can be discharged comfortably whilst loading. The bottom of the loading chute, when fully raised, is 16 m. above MHWS.

The Loading Berth: The bulk loading plant is served by a system of outer and inner buoys. Initially, a vessel is secured to the outer buoys, which are anchored in very deep water and then breasted to an inner buoy system (Inner Berth).

Preparation Before Arrival:

(i) The forecastle head should be left as clear as possible of chain, lashings, etc., so that all pipes, fairleads and bitts are available for use.

(ii) The derricks or cranes at No. 1 and at the aftermost hatch should be ready for loading cantilever mooring gear. At the other hatches, all derricks should be hoisted and swung over to the port side so that derricks, guys, preventers and runners are well clear of the hatchway. Hatches should be open before the Pilot boards ready for immediate loading once the ship is secured in the berth. It is essential that all lower holds are clean and free of dunnage on arrival. Hatch beams need not be removed.

(iii) If general cargo is to be discharged, a good boat rope should be rigged on the both sides for the full length of the vessel going well forward and well aft with "stirrups" abreast of the ends of each hatchway.

(iv) Any jumper stay, mast stay, or wireless aerial which obstructs a hatch should be free and ready for releasing.

(v) The ship is required to have ready 3 mooring ropes forward and 3 mooring ropes aft. These ropes should be at least 52 mm. in diameter and in good condition. One rope forward and one rope aft should be at least 200 m. in length.

If there is doubt about the condition, size or length of ship's ropes, the Harbour Master should be requested, by telegram, 24 hours before arrival, to supply extra shore ropes.

(vi) The pilot ladder should be rigged on the starboard side sufficiently far forward to be on the flat side of the vessel clear of the overhang of the hull aft. The bottom rung should be one metre above the water. Manropes must be fitted.

(vii) All discharges or scuppers in the vicinity of cargo boats, pilot ladders or gangways, must be effectively screened or blocked off.

(viii) As the loading rate is high (approximately 3,000 tonnes per hour) vessels should endeavour to arrange the discharge of water ballast so that loading can be completed without interruption. However, the vessel should not arrive trimmed excessively by the stern as this could make her extremely difficult to handle in the prevailing fresh South East breeze.

(ix) All derricks, hatch boards, and beams will be handled by ship's crew only.

(x) Mooring winches aft and windlass forward should have power on ready for shore labour to handle mooring ropes.

Stowage Factor: The free pour stowage factor of Christmas Island phosphate is 0.75-0.84 cu.m./tonne in bulk carriers. The angle of repose is about 35°.

Weighing Machine: A weighing machine is installed at the loading plant *but it must only be used as a guide to the quantity loaded and scale figures should be checked against the vessel's draft.*

Loading will be stopped at any quantity desired short of the final figure to allow the draft to be determined and alterations made to end hatch figures for adjusting the vessel's trim.

Loading Distribution Plan: A loading distribution plan should be made up, to be presented to the Loading Master on arrival.

Fastest overall loading time will be achieved if amounts can be more or less evenly distributed between the two loading arms.

Draft gauges are supplied from shore and fitted to ship's side to assist with draft readings.

It is recommended that planned loading allows a balance of 500/1,000 tonnes for trimming after draft survey. No draft surveys are carried out by shore personnel. The ship must carry out is own draft survey and call for additional cargo required to make up Bill of Lading or Manifest quantity as per charter party.

Vessels Loading Bagged Phosphate Dust:

The Loading Plant: Bagged phosphate dust is loaded by ship's gear. The bags, stowed on cloverleaf slings, are brought alongside by powered barges, hoisted inboard and block stowed in the hold. The net weight on each sling is 2 tonnes.

Ballast: Ships loading bagged dust should, to expedite loading, retain all their ballast until approximately half the cargo is on board.

The Loading Berth: Bagged phosphate is usually loaded at 'B2' mooring. Here the vessel is moored between two buoys, the bow to the main mooring and the stern to a buoy further inshore.

Preparation Before Arrival:

(i) The derricks should be raised and ready to work. Weather permitting, 2 hatches should be open and ready to commence loading with 2 gangs immediately upon arrival.

(ii) A good boat rope should be rigged on both sides of the vessel going well forward and well aft with supporting "stirrups" abreast of the ends of each hatchway.

(iii) Two heavy mooring ropes should be ready forward to run from either bow to the buoy. In addition to the head mooring lines, 2 good mooring ropes should be available aft. These ropes should be positioned so that they can be run from either quarter.

(iv) All ropes should be at least 200 m. long. If there is doubt about the condition or length of the ship's ropes, the Harbour Master should be requested by telegram 24 hours before arrival to supply extra shore ropes.

(v) The pilot ladder should be rigged on the starboard side sufficiently far forward to be on the flat side of the vessel clear of the overhang of the hull aft. The bottom rung should be one metre above the water. Manropes must be fitted.

(vi) All discharges or scuppers in the vicinity of cargo boats, pilot ladders or gangways must be effectively screened or blocked off.

(vii) All derricks, hatch boards and beams will be handled by ship's crew only.

Stowage Factor: Bagged dust stows at approximately 45 cu.ft. per ton (1.25 cu.m./tonne).

Bill of Lading Tonnage: Loading will be stopped at any quantity desired short of the final figure to allow the draft to be determined and alterations made to end hatch figures for adjusting the vessel's trim.

CRANES: On wharf, 1 Favco 20 tonne S.W.L. and 1 Babcock & Wilcox 4 tonne S.W.L.

STEVEDORES: Supplied by Agents.

MEDICAL: The Medical Superintendent may be consulted on payment of the usual fees. Members of the ship's company requiring treatment should be provided with a letter from the Master stating the nature of their ailments. This letter will also be an undertaking from the Master that the Doctor's fees will be paid.

If Hospital accommodation is desired, please apply to the Medical Superintendent beforehand, regarding fees, etc.

TANKERS: Furnace and diesel oils pumped ashore simultaneously through floating pipelines, 8 in. and 6 in. diameter respectively.

DENSITY: 1023 constant.

FRESH WATER: In an emergency, a limited quantity of fresh water may be obtained. Requirements should be advised by radio the day prior to arrival and confirmed with the Harbour Master when he boards.

Sufficient water should be carried to allow for a prolonged period of drifting off the Island in unfavourable weather conditions.

FUEL: No facilities are available for the provision of fuel oil, other than very small quantities of diesel oil for boats or visiting yachts.

CONSULS: Administrator's Office performs some consular functions.

REPAIRS: No facilities exist.

SURVEYORS: Cargo Surveyors: The Harbour Master or his assistant in his capacity as Lloyd's Agent. There are no authorised hull surveyors.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: All beams and hatches to be handled by ship's crew.

CERTIFICATES: Register of Cargo Gear and Test Certificates.

CARGO GEAR: To comply with requirements of the Australian Navigation Act, 1912-58.

REPATRIATION: Only for medical emergencies.

AIRPORT: Weekly flights from Perth and Singapore.

TIME: GMT plus 7 hours throughout the year.

HOLIDAYS: New Year's Day; Australia Day (26th January); Hari Raya Haji; Chinese New Year – two days; Good Friday; Easter Monday; Queen's Birthday; Territory Day (1st October); Hari Raya Puasa; Christmas Day; Boxing Day.

No work performed on New Year's Day, Hari Raya Puasa, Good Friday, 1st day of Chinese New Year and Christmas Day.

POLICE/AMBULANCE/FIRE: Police Tel: 444. Ambulance Tel: 333. Fire Tel: 222.

EMERGENCY CO-ORDINATION CENTRE: The nearest Co-ordination Centre is the Coastal Surveillance Centre, Canberra. Tel: Canberra 476666. Cables: "Marineops" Canberra.

TELEPHONES: Placed aboard when required by Port Authorities. No charge.

BANKS: The Bank of New South Wales, Christmas Island, Indian Ocean. Telex linked direct to head office of the Bank of New South Wales in Perth, Australia.

STORING: See "Prelims".

1. The Island is stored purely for local needs with limited quantities and range of supplies. It would therefore only be in cases of extreme emergency that stores would be supplied to ships.
2. In such cases vessels would be stored by barge, and this would take place at any convenient time prior to or during loading.
3. Not applicable as moorings are off shore.
4. Fork lifts are available to assist in loading stores.
5. There are no Customs regulations or requirements pertaining to the loading of ship's stores.
6. Local labour is available to load stores onto ships.

SHORE LEAVE: See "Regulations."

IDENTIFICATION CARDS: Not required.

REGULATIONS: The importation of animals and poultry into Christmas Island is subject to strict control. No animals or poultry may be imported into Christmas Island without a permit from the Administrator; therefore animals or poultry must not be accepted on board a ship for carriage to the Island unless the following documents are produced:–

(a) A Permit from the Administrator..
(b) A Certificate of Health and Declaration by Owners on Form B301 signed by a Government Veterinary Surgeon and Quarantine Officer (Animal).
(c) A Certificate of Stock signed by an Inspector of Stock.
(d) A permit to embark animals on Overseas vessels signed by a Quarantine Officer (Animal).

Shore leave is, in normal weather, at the discretion of the Master and shall *expire at 1700 hours local time.* When the weather is doubtful the Harbour Master may prohibit shore leave altogether.

We must ask the Master to take action to prevent the Steward and other members of the crew selling or supplying liquors or other goods to any person on the Island. Breaches of the Liquor and Trading Laws render offenders liable to heavy penalties.

Whilst the vessel is in port the disposal of garbage overboard is prohibited.

The port of Christmas Island is a gazetted port regulated by the Australian Navigation Act and the Merchant Shipping Ordinance of the former Colony of Singapore. The Mining Corporation's Harbour Master and Assistant Harbour Masters are appointed by the Government as Deputy Harbour Masters responsible for enforcing these regulations. Your co-operation with them is earnestly requested.

WEATHER: The barometer is not a reliable guide in these latitudes. While the wind is steady from the Eastward with a clear sky, fine weather may be expected; but if the wind falls light or if clouds bank up in any quarter, squalls blowing onshore can be expected. Also, lightning in any quarter is usually followed by unsettled weather.

Whilst shore labour is on board, a Harbour Master is on duty. He will advise if the weather conditions necessitate taking the vessel to sea and will supervise the unmooring operations. However, when the ship is moored, but idle, sea watches must be kept. Should the wind blow onshore at Force 3 or more, or the vessel's movements place undue strain on the moorings, the ship must be taken to sea at once.

QUESTIONNAIRE: To facilitate loading the vessel, the questionnaire should be completed and forwarded to the Corporation's General Manager on arrival.

M.V. ______
S.S. ______
Off. ______

The General Manager,
Phosphate Mining Corporation of Christmas Island,
CHRISTMAS ISLAND,
INDIAN OCEAN.

Dear Sir,

I acknowledge receipt of your brochure giving information in connection with mooring and loading at Christmas Island which I have carefully noted.

The following are the particulars of this ship:-

Call Sign ______
Tonnage – Gross ______ Net ______
Tonnage Summer Displacement ______
Length ______ Breadth ______ Depth ______
Size of Panama Lead – if fitted ______
Size of Chain Cable ______
Weight of Anchors ______
Last Port of Departure ______
Date of Sailing ______
Quantity of Phosphate required for full cargo this voyage ______ tonnes
Number of hatches into which Phosphate will be loaded ______
Quantity to be loaded into each Hatch : No. 1 ______ No. 2 ______
No. 3 ______ No. 4 ______ No. 5 ______ No. 6 ______
Spare cabins available ______
Additional cabins which can be made available if required ______
Number of berths in additional cabins ______
Total number of passengers who can be taken ______
Quantity of fuel on board on arrival ______
Service Speed ______
Daily Fuel Consumption – Steaming ______ Drifting ______

______
( ) MASTER

AUTHORITY: Phosphate Mining Corporation of Christmas Island, Christmas Island 6798, Indian Ocean. *Tel:* 8264. *Telex:* Indian Ocean 766 78005. *Cables:* Ciphos, Christmas Island. *Contact:* Captain A. G. Turner, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Colombia

GENERAL:

DOCUMENTS:

Consular Documents:

In foreign ports where cargo for Colombia is loaded, the Colombian Consulate must receive two copies of the Cargo Manifest, on a special form (Colombian Freight List), one of which is returned to the vessel and the other is filed at the Consulate.

Prior to Arrival:

Notice of arrival:

The agency must prepare the standard Colombian document for confirmation of vessel arrival, giving the characteristics of vessel and indicating the services requested: pilotage, towing, anchorage, berthing, cargo to be loaded and unloaded, as well as water, electric power, telephone, fuel and lubricants.

This form is addressed to the Director of Operations of the Marine Terminal of the Colombian Port Authority (COLPUERTOS) and is submitted in seven copies (original and three copies for the Marine Terminal and a copy each to the Port Captain, the Customs Security Office, and the Port Public Health Officer). If passengers disembark, an additional copy must be submitted to Migration.

Information on cargo for the port:

At least 24 hours in advance of the vessel's arrival, the agency must receive the following documents by airmail, for distribution as indicated:

Documents	*Customs*	*Marine Terminal*	*Agency*	*Total*
Freighted Manifest (Freight List)	–	–	1	1
Freighted Bills of Lading	1(a)	3	1	5
List of Cargo by Hatch	–	1	1	2
List of Dangerous Cargo in Transit	–	1	1	2
Stowage Plans	–	1	1	2

(a) Stamped.

Request for Port Services:

The agency must submit to COLPUERTOS, 8 hours in advance of the vessel's arrival, the following documents, in original and two copies: request for berthing crew, cranes, terminal crew, motorised equipment and storage; request for inward pilotage and towing.

On Arrival:

On the entrance of a vessel, the following documents must be submitted, either on the model forms established by LAFTA Resolution 254 (IX), or on similar forms, except the Cargo Manifest, which will be made out on the Colombia Freight List form.

Type of Documents	*Number and Distribution of Documents*						
Basic Forms	*Port Capt.*	*Cust. Sec.*	*Marine Term.*	*Port Pub. Health*	*Migr.*	*Agency*	*Total*

13. "No Mail" Declaration (c)	–	2(b)	–	–	–	1	3
14. List of Passengers' Baggage (a)	–	3	–	–	–	–	3

(a) Only for those disembarking.
(b) One copy for the Post Office.
(c) When required.

Other Requirements:

The agency provides a landing permit for each crew member and passenger, which is stamped on board by the Captain of the Port.

Prior to Departure:

Clearance for the vessel is requested from the Captain of the Port on a special form. It is prepared in triplicate (original for the vessel, one copy for the Port Captain's file and one for the agency). The following documents accompany it:

1 Crew List.
1 Passenger List or "No Passengers" Declaration.
1 Ship's Stores List, and
1 Fuel Supply Declaration or negative

Request for Pilotage:

At least 2 hours before departure, a request for pilotage, clearance and unberthing crew must be submitted to the COLPUERTOS Maritime Section.

Port Authority Circular: July 1986.

Documentation Required:

The Maritime Agencies must present:

(a) Maritime Sector Discharge (imports and transit):

Up to date stevedoring plans showing the location of the cargo for the port and hazardous cargo.

List of Cargo per Discharge Hold.

List of Containers for the Port.

Sets of Bills of Lading.

Sets of Check Lists of Cargo with Manifest.

Tally Books.

List of Missing Cargo showing the ship which recorded them but did not load them, together with their Bills of Lading and Check Lists against the Manifest.

For cargoes in-transit, national or international, transhipment, Declaration of Final Destination, with presentation of the Memorandum of Authorisation of Customs.

Certificate of the draft survey of the port of shipment for bulk cargo.

(b) Maritime Sector Cargo (Exports):

List of Cargo for Shipment by Port of Destination.

List of Empty Containers to be Shipped.

Shipment Orders Authorised by the Customs.

Sets of lists checking loading against Manifest once loading has been completed.

CUSTOMS REGULATIONS: New Customs Regulations now in force from 1st July 1992.

The Customs Authorities now stipulate that:

(A) All cargo on board a vessel destined for Colombia must be manifested.

(B) The Manifest (cargo/freight) together with freighted copies of Bills of Lading must be given to Customs Authorities before vessel's arrival.

(C) Cargo not covered by Manifest may not be discharged. If discharged, same will be immediately confiscated by Customs.

Violations of the aforementioned regulations can result in fines of up to 100% of the cargo value as determined by Customs Authorities. Similar fines will be levied for discrepancies found in the Cargo Manifest, as well as for short-landed or overlanded cargoes, in cases where fault lies with the carrier and no reasonable explanation is provided. When the Cargo/Freight Manifest does not comply with all the requirements (as established by Customs Authorities) the carrier will be fined the equivalent of 20 minimum wages (about U.S.$ 3,000.00 as of July 1992).

Introduction of V.A.T.: The Colombian Government, under a Decree signed 30th June 1992, introduced a new tax reform which, inter alia, establishes Value Added Tax (VAT) of 12% on all port related services (i.e. wharfage, anchorage, lights/buoys, tugs, stevedoring, agency, etc.) with no exemptions.

V.A.T. at 12% came into effect as from 1st July 1992, and will be increased to 14% as from 1st January 1993.

PILOTAGE: Pilotage is compulsory for all vessels over 200 g.r.t. The Pilot must be requested by the Agent at least 24 hours in advance.

Berthing preference will be given as follows:

1. Warships.
2. Passenger vessels and Mail Boats on a fixed itinerary.
3. Vessels with livestock and perishable cargoes.
4. Passenger vessels not on a fixed itinerary.
5. Vessels loading cargo for export.
6. Vessels discharging cargo for import.
7. Tankers.
8. Coasters.
9. Vessels carrying explosives.

On sailing all vessels must fly the "P" flag.

Vessels at anchor can be authorised to work to lighters.

All Colombian ports are open 24 hours a day.

ARRIVAL ADVICE:

(1) The local Agent must advise Empocol 72 hours, 48 hours and 24 hours in advance the vessel's ETA.

(2) With the ETA pre-arrival advice, Owner or Master must advise the Agent the following:
   (a) Estimated arrival draft, forward and aft
   (b) Full vessel's particulars, including breadth
   (c) Vessel's side for which she must be docked (port side or starboard)
   (d) Cargo hatch distribution

(3) At least with 48 hours in advance, the Agent must receive in order to give to Empocol (together with others issued by the Agent according to the information supplied by the Master and Owner), the following documents:
   (a) 5 original copies (not photocopies) of each Bill of Lading, duly freighted and signed by the shipper
   (b) Stowage plan.

(4) Also 24 hours prior vessel's arrival, the Agent must pay to Empocol the proforma invoice which amounts to the estimated port expenses plus 25 per cent surcharge. Hence it is of paramount importance the Agent receives well in advance the funds required, in order to convert the U.S. Dollars into local currency and proceed to effect the corresponding payment.

It is important to point out that in case the above mentioned instructions are not fulfilled, or the documents are not presented and the proforma invoice is not paid in due time by the Agent, Empocol will not authorise docking and operations of the vessel.

FREE PRATIQUE: There is no Radio Pratique. The standard W.H.O. Health Certificate must be used.

As of May 1st 1992, Yellow Fever Vaccination Certificates are required by crew members visiting Colombia.

STEVEDORES: Supplied by the Port Authorities although it is often necessary to employ extra labour through the Agent, due to the fact that gangs are seldom complete. At week-ends, gangs required for Monday must be ordered by 1000 hrs. on Saturday. Masters should bear this in mind when sending their ETA.

Cargo in a damaged condition or showing signs of pilferage will not be handled until inspected by a Port Official and ship's officer, leaving on record the actual condition of the cargo.

Containers are discharged or loaded as all other cargo, though if they are stuffed or unstuffed immediately this must be done with the Port Labour provided.

Opening and closing of hatches, and the rigging of gear, is done by a gang of riggers. The ship's crew can do this work, but it is advisable to use Union Labour.

Rain tents are not supplied by the port.

All gear, slings, spreaders, etc., must be supplied by the ship.

Rat guards must be fitted on all mooring lines whilst in port.

PORT SECURITY MEASURES: All ports are rigorously patrolled by Port Police, and crew members are advised to carry Identification Cards at all times when ashore.

FUMIGATION: This can only be carried out alongside with the permission of the Port Authority.

GARBAGE: No garbage may be thrown overboard. This includes flakes of paint from vessels chipping or scraping the hull. No paint must be allowed to drop into the water or onto the quayside. Overboard discharges must be kept off the quay.

POLLUTION: The standard requirements for the prevention of oil pollution must be adhered to within the continental shelf off the Colombian coast.

All vessels calling at Colombian ports must have "Pollution Policy" onboard. If not onboard vessel will be heavily fined and clearance will not be granted by the Port Captaincy.

All vessels must ensure that the Oil Record Book is up to date prior to arrival, as it is likely to be inspected.

Fines can range from 50,000 to 500,000 Pesos, not including the cost of any clean up operation.

No vessel contaminating the waters of any port may sail until the corresponding fine has been paid.

Oil Tankers are not permitted to clean tanks within 60 miles of the Colombian shores. A vessel arriving in port with dirty ballast will be ordered to proceed to sea beyond the 60 mile limit, and take on clean ballast.

CREW: The authorities will not allow crew to be of unkept appearance or improperly dressed at any time while the vessel is in port.

FUEL: Requests for bunkers must be made to Agents at least 1 week in advance.

TIME: GMT minus 5 hours. Summertime is not observed.

STOWAWAYS: 70 stowaways were found on one vessel in 1988.

Likely hiding places are containers and palletised cargo.

SHIPMASTER'S REPORT: September 1990.

The ship was not troubled by thieves or other persons at any of the three ports visited (Santa Marta, Barranquilla, Cartagena), while normal precautions were taken, such as locking all, but one, accommodation doors; hanging light-clusters over the off-side bow and stern areas, and general vigilance. In turn, the ports seemed to maintain a strict watch at the gate against unauthorised persons. At Cartagena, the local watchman kept a strict watch by exchanging a pass card for the stevedores identity card on boarding, which was returned when leaving the vessel.

Anti-Drug Abuse: A day before arriving at the first port in Colombia, the crew were advised about the dangers of drugs and smuggling. In particular, their attention was drawn to the Company's notices as posted about the accommodation and the requirements of Paragraph 8 of the Sea Carrier Initiative.

BARRANQUILLA: 10.58 N. 74.47 W. (See Plan)

DOCUMENTS:

Clearance from Last Port.
Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Cargo Gear.
Oil Pollution Certificate – Policy of Insurance.
6 Crew Lists.
5 Crew Personal Effects Lists.
5 Provision Lists.
5 Store Lists.
6 Passenger Lists (In Transit).
6 Passenger Lists (Disembarking).
4 Declarations of Passenger Baggage.
4 Lists Port Mail.
1 Sanitation Declaration.
Sets of manifests covering port cargo.

PILOTAGE: Compulsory for all vessels over 200 g.r.t. The Pilot requires that the vessel's Agent advises them with at least 24 hours in advance, the best vessel's ETA, together with the estimated arrival draft (fresh water).

Therefore it is important that Masters of vessels advise Agent 72, 48 and 24 hours in advance the best ETA to the port, in order to avoid any delays because of unavailability of Pilot.

The Pilot will board and leave vessels at Bocas de Ceniza, 1 mile North of the Western Breakwater, and they are not authorised any more to pick up/leave vessels at either Cartagena or Santa Marta, except when the weather does not permit such operation at Bocas, in which case the Pilot Department will decide whether the Pilot must be picked up/left at any other place.

Radio telephone frequency of Pilot Station 2738 alternative 2638 or 2182 kHz and VHF Channels 16, 13 and 8. 2 pilot boats speed 7 – 9 knots. Sufficient depth to allow vessels wait for Pilot in boarding position, including trade wind season end November to beginning April.

ANCHORAGE: If awaiting Pilot, anchor 1 or 2 miles West of West Breakwater during non-windy season. After Pilot boards and when no berthing space at the quay, anchorage is made in the river, about 1,500 ft. off the dock in approximately 40 ft. of water. 3 shackles of chain required in good holding ground.

RESTRICTIONS: Depth at the river bar is being maintained at a minimum of 40 ft., however, the actual permissible draft has been curtailed to 30 ft. (check with Agent) on account of silting conditions of the river and low river levels, particularly around the area known as Siape, approximately 4 miles from the dock area.

MAX. SIZE: Recommended max. LOA 600 ft. due necessity for turning vessel before sailing. Also see "Restrictions". Rate of current 2.5 knots during dry season, 4 knots in rainy season.

HEALTH: On arrival port doctor boards vessel to inspect crew Yellow Fever Certificates, also Derat Certificate. If any crew members suspected suffering contagious disease Master to radio prior arrival advising Agents accordingly. Port doctor visits vessel even if previous port was in Colombia.

RADIO: Messages to and from Agents routed through station HKB. Ship's messages should include call letters.

VHF: Port on Channels 16, 9, 10, 12 and 14.

TUGS: Generally no tugs required for river entrance. Tug assists berthing and turning vessels before sailing. 1×1,225 h.p. tug available.

BERTHING: 6 berths. Total length of quay 1,058 m. (Berths No. 1 – 5: 600 ft. each and Berth No. 6: 470 ft.). Depth alongside 30 ft. Vessels berth starboard side alongside.

CRANES/EQUIPMENT:

Cranes: 1×200 tons, 1×115 tons, 1×100 tons, 1×80 tons and 2×15 tons.

1 Liebherr crane (Model LHM 1300) with a 45 m. boom and 104 tons lifting capacity. Spreader for 20 ft., 40 ft. and 45 ft. containers. Clams (10 cu.m. capacity) for bulk cargo. Two hooks for general and loose cargo.

Lift Trucks: 100 × 2 tons – 40 tons capacity.

Container Elevators: 5 top lifters.

Tractors: 25.

Heavy Load Trucks: 6×200 tons on level ground, 100 tons on inclined ground.

Trailers: 9×40 ft. and 5×20 ft.

Platforms: 5×40 tons, 12×20 ft. and 15×40 ft.

Hoppers: 2 × 4 m. × 4 m.; 4 × 3.5 m. × 3.5 m.; 4 for automatic packing.

Additional Equipment: Paper grabs, headclamps, automatic sackers, front lifters, spreaders for large bags, clams, unloading belts.

STEVEDORES: Agents should receive advance copies of stowage plan and adequate notice ETA order arrange gangs. Working hours: 24 hour working in shifts of 6 hours, 8 hours or 12 hours, depending on type of cargo handled. No work on Sundays.

MEDICAL: All facilities available.

TANKERS: No facilities.

FRESH WATER: Available. Rate about 20 t.p.h.

FUEL: Only small quantities of gas oil available.

FIRE PRECAUTIONS: No vessel requirements. Terminal has own fire-extinguishing equipment.

REPAIRS: Good facilities for mechanical or electrical and radio repairs.

DRY DOCKS: Only one dry dock for very small vessels.

GANGWAY/DECK WATCHMEN: Request watchmen through Agents.

CUSTOMS ALLOWANCES: No limitations for individual consumption.

REPATRIATION: Good facilities available.

AIRPORT: 6 km. from city. Airport served by major airlines.

TIME: GMT minus 5 hours.

HOLIDAYS: 1st January, 6th January, 8th April, 9th April, 1st May, 23rd May, 2nd June, 29th June, 20th July, 7th August, 15th August, 12th October, 1st November, 11th November, 8th December, 25th December.

POLICE/FIRE/AMBULANCE: Fire 411828, ext. 38. Ambulance 410736 or 319594. Police 411937.

TELEPHONES: Arrangements available for placing telephones on board.

SPECIAL RECOMMENDATION: Masters to warn crew to close and lock cabins.

IDENTIFICATION CARDS: Supplied by Agents.

REGULATIONS: No special facilities for discharging explosives.

If explosives on board vessel not allowed berth.

DEVELOPMENTS: Two more berths under construction. Dredging under way in access channel. Dry bulk storage silos to be constructed. Electronic surveillance and security system to be installed.

SHIPMASTER'S REPORT: April 1996.

Documents:

2 copies Ports of Call during last 6 months.
2 copies Stowage Plan.
2 copies Cargo Declaration.
6 copies Crew List.
4 copies Provisions List.
2 copies Personal Effects Declaration.
1 copy Vaccination List.

Tugs: Only 1 tug available in port. According to order of the Harbour Master it is used for turning the vessel for departure.

Stevedores: 24 hour working for loading/unloading vessel.

Deck Watchmen: Recommended. Master of ship to order watchmen from darkness till 0600 hrs. Watchmen are armed and should be provided with cabin and food.

Certificates: Representative of Harbour Master checks all ship's documents on arrival.

Shore Leave: No restrictions. Passes are supplied by ship's agent on arrival.

Provisions: Available through shipchandler, but crew must check quality when it arrives onboard.

Anchorages: Vessels usually load/unload in inner river roadstead between Lat. 11° 03.12' N., Long. 74° 49.82' W. and Lat. 11° 02.75' N. Long. 74° 49.36' W. Ships use 2 anchors, starboard 4 shackles in water and port 3 or 4 shackles in water.

Ferry: Master of ship may order ferry at any time by calling VHF Channel 16, 13, call sign "Aquamar Pilot". Taxi/ferry also available but payment of cash required.

Notices to Mariners: Dredging in the port under way continuously.

AUTHORITY: Sociedad Portuaria Regional de Barranquilla, Carrera 38, Calle 1a, Orilla del Rio, Terminal Maritimo y Fluvial de Barranquilla, Barranquilla, Colombia. *Tel:* (575) 37-99-555 (Switchboard), 37-99-545 (Commercial Office), 34-48-463 (General Management). *FAX:* (575) 37-99-557 (Commercial Office). 37-99-544 (General Management).

Contact: Ciro Avila V., General Manager. Hector Gonzales I., Operations Manager.

BUENAVENTURA: 03.53 N. 77.05 W. (See Plan)

DOCUMENTS: On vessel's arrival, Master must present following documents to Port Captain's Office:

Travel Memorandum.

Sole document or Consular despatch from the last port or ports where vessel disembarked or embarked passengers.

3 Crew Lists.

3 Provision Lists.

3 Lists Crew's Personal Effects.

3 Lists Passengers in transit (or negative).

3 Lists Disembarking Passengers (or negative).

3 Lists Port Mail (or negative).

1 Sobordo or Manifest of Cargo for the port.

2 Declarations of Passenger Baggage, if any.

Destined to Maritime Terminal:

3 Sets Sobordos or Manifests covering port cargo (or negative).

1 Set of Bills of Lading, covering discharge cargo.

20 Tally Books for discharge cargo.

Destined to the Custom House:

3 Sets of Sobordos or Manifests for cargo destined to the port.

1 Set of Bill of Lading for port of destination.

1 Tally Book for cargo to be discharged in port.

2 Declaration Lists for Passenger Baggage, if disembarking.

Destined to the Health Doctor:

Vessel's Travel Memorandum.

International Health Certificate.

1 Crew List.

List of Passengers in Transit (or negative).

1 Vessel's Fumigation Certificate (for presentation only).

1 Port Passengers List (or negative).

Certificate of Exemption of Derat (for presentation only).

Destined to Immigration Authorities:

1 Crew List.

1 List of Transit Passengers (or negative).

1 List of Port Passengers (or negative).

Destined to Agents:

1 Travel Memorandum as above mentioned.

9 Crew Lists for Consular despatch and handling of sailing permit.

6 Lists of Passengers in Transit (or negative), for Consular despatch.

6 Lists of Personal Effects for Consular despatch.

2 Mail Lists for the Port (or negative).

3 Sets of Sobordos or Manifests covering port discharge cargo (or negative).

4 Sets of Bills of Lading covering port discharge cargo.

10 Tally Books covering discharge cargo.

2 Lists of Passenger Baggage Declaration for the port, if any baggage.

PILOTAGE:

(a) Entry marked by Channel having minimum depth of 3.25 fathoms low tide. Advisable enter Channel or leave wharf 1 hour after low tide and 2 hours after high tide, restricting departure during any other periods, particularly when draft exceeding 20 ft. Pilot boards in vicinity of No. 1 Buoy (Position: Lat. 03° 50' 00" N., Long. 77° 10' 00" W.).

(b) 72, 48, 24 and 12 hours before reaching port, Master must cable separately to Agent and Port Captain confirming hour of arrival Punta Basan (Pilot Station). Message to Agency must indicate, in addition to ETA, quantity of cargo destined for the port, number of disembarking or in-transit passengers, number of gangs required for operations, draft, mail for the port, if fresh or running water is required; fuel-oil, cash to Master or any other special requirement; whether special side of wharf is required for berthing, and whether dangerous cargo (explosive) or inflammable cargo, and what quantity. Message to Port Captain must also indicate arrival time, quantity of cargo destined to the port, number of disembarking or in transit passengers, mail, whether dangerous or inflammable cargo is carried and in what quantity, and any other data that may be considered useful in accordance with International regulations.

Note: A Master has suggested that the "Arrival Telex" should state where pilot required (Punta Basan or Buoy No. 1).

(c) Radio beacon at Punta Soldado, characteristics: Frequency, 317 kHz. Letters, B.T. Time 0000 – 2400 hrs. every day and every 10 minutes with 20 minutes of rest during 30 minutes work. Flashes 12 seconds duration.

(d) Radio-telephone in Pilot Station of Punta Basan or La Bocana (opposite to Punta Soldado), characteristics: VHF Channels 11 and 16 every day from 0600 – 2400 hrs.

(e) Since Master's advice to Agency serves as notification to Pilot Station, Pilot will be at Punta Basan ready for vessel. In case of delay due to any circumstance, vessel may anchor and request Pilot by 4 short blasts.

(f) Port has 8 Pilots.

(g) Pilot ladder must be lowered a few feet from the surface. Vessel must proceed slowly in order facilitate boarding.

(h) Pilotage compulsory.

ANCHORAGE: Marked by Buoy No. 7, located Lat. 03° 53' 59" N., Long. 77° 04' 04" W.; depth from 33 ft. to 70 ft. and distance from wharves approximately 1,000 yards.

There are 3 additional anchorage zones and their use will be ordered by the Authorities.

RESTRICTIONS: Max. draft for crossing bar is 28 ft. one hour before/after HW. Bar is located in position 03° 48' N., 77° 19' W.

MAX. SIZE: No restrictions on the length of vessel, depth alongside wharf approximately 12 ft. – 30 ft. under terms "not always afloat but safely aground", low tide.

HEALTH: *(a)* As soon as vessel anchored by Pilot within bay, Port Authorities including doctor, will board by means of ladder which must be lowered when port area entered.

(b) In case of sickness on board, Master must advise in order doctor may determine whether vessel will be under quarantine or not. This will apply even if vessel arriving from a port of the same country.

(c) Time-table for meeting vessel: Ordinary or regular time – ordinary time: 0800/1200-1400/1800 hrs.; overtime – 0700/0800-1200/1400-1800/2200 hrs. Sundays and holidays, overtime.

(d) After 2000 hrs. and up to 0700 hrs. of following day it is not possible to make arrangements for meeting vessels, unless in emergency.

RADIO: (Also see "Pilotage"). Port has receiving-transmitting radio station Buenaventura/Colradio HKC. For listening and transmitting there are following frequencies:

Listening	*Transmitting*
8354 to 8374 kHz	8574 kHz
12531 to 12561 kHz	13087.5 kHz
6265 to 6280 kHz	6386.5 kHz

In emergency: Listening: 500 kHz. Transmitting: 441 kHz. Station operates 24 hours a day.

TUGS: Normally only required for berthing. Tug operation handled by Pilot. Generally tug service consists of pushing from stern or bow as required. When necessary to use ropes, they must be supplied by vessel. 2 tugs of 1,200 h.p. each and 1 of 350 h.p.

BERTHING: Main wharf 2,136 m. long, where import and export cargoes handled. There are 3 warehouses for the storage of export cargoes, including Colombian coffee.

Berthing arranged by turn according to time of anchoring in bay for each vessel. Tidal currents exist alongside berths.

Berth	*Length*	*Depth at LW*
Shed No. 1	202 m.	12 ft.
Shed No. 2 – No. 9	1,257 m.	23 ft. – 25 ft.
New Pier	80 m.	30 ft.
	597 m.	17 ft. – 20 ft.

Depth 25 m. off the quays is 30 ft. – 32 ft.

BULK HANDLING FACILITIES: The port is equipped with an automated bulk sugar loading installation which can load 12,000 tonnes in about 4 days.

STEVEDORES: Port has 80 gangs of 16 men each.

Working Hours: First Shift: Monday to Saturday and holidays from 0800 – 1700 hrs. Second Shift: Monday to Friday and holidays from 1700 – 0100 hrs. and Saturdays from 1700 – 2400 hrs.

No work from 2400 hrs. Saturday until 0800 hrs. Monday.

MEDICAL: Agent must be given advance notice of urgent medical attention. Properly equipped hospital.

TANKERS: *Ecopetrol:* Oil pier (Lat. 3° 54' N., Long. 77° 04.5' W.) with depth 33 ft. (25 m. off) with capacity to accommodate vessels of medium size. 4×8 in. hoses for discharge of petroleum products, and 2×6 in. and 1×4 in. hoses for unloading chemicals. Average rate of discharge of gasoline is 5,000 b.p.h. (approx.) Fuel oil and chemicals 1,500 b.p.h. Max. LOA 200 m. Max. beam 30 m. Max. draft 10.0 m. at LW.

It is important to note that Buenaventura is a tidal port, with variations up to approximately 4.0 m. Also at the entrance to the access channel of the port, there is a sandbar with a maximum draft of 7.0 m. at LW, which therefore restricts the entrance/departure times of vessels according to their drafts.

DENSITY: 1012 (approx.) average.

FRESH WATER: Drinking water unlimited quantity. Delivered through hose from end of wharf. Rate of delivery: 6 t.p.h.

FUEL:

(a) Two kinds of fuel, marine gas oil and bunker "C" fuel. Characteristics of gas oil: API gravity 33.0 at 60°F. Specific gravity: 0.8602. Characteristics of bunker "C" fuel: API gravity, 13.2 at 60°F. Specific gravity, 0.9779.

(b) To take bunkers vessel must berth between warehouse 2 to 9, and for delivery of gas oil between warehouse 1 to 5.

(c) Rate of delivery (approx.), 250 b.p.h. for bunkers and 700 b.p.h. for gas oil.

(d) Deliveries depend on quantity available when order placed, consequently Agent must know well in advance (10 – 15 days) vessel's requirements.

(e) Cash payment according to prevailing prices at time of delivery; otherwise, according to contracts between Shipowner and supplier.

FIRE PRECAUTIONS: Fire station within port installations with proper equipment. In city also another fire station, co-operating if necessary.

CONSULS: Panama Tel: 2 22 50. Most countries have consuls in Cali – approximately 120 km. from Buenaventura.

REPAIRS: According to port regulations vessels must at all times be ready with engines to sail, consequently repairs of engines not allowed when ship berthed at wharf. No prohibition against minor repairs on deck. When engine or deck repairs taking a long time are necessary, vessels not being loaded and/or discharged simultaneously with repairs must go to anchoring ground, since crowding of vessels at port does not permit vessel being inactive occupying space while other vessels are anchored waiting for berth.

WATCHMEN: Service necessary both by crew members' and Agents' personnel. There is an established body of watchmen named "Policia de Vigilancia Portuaria" (National Police); additionally, the steamship agencies carry out this work with their own personnel with previous request by Master. The port has a Port Police body and Custom House Guards which co-operate in vessels' watch.

Piracy: Mariners are advised to be alert to unusual, abnormal or hostile activities by pirates (especially during darkened hours) in the approaches to and in Buenaventura Harbour/Anchorage.

OPENING/CLOSING HATCHES: All Agents have special gangs to handle this operation and to fix the vessel's gear for discharge and/or loading. These personnel permanently stand by on board on account of climatic conditions of port with frequent and sudden rains. No prohibition against crew carrying out such operations when charter parties are involved and which stipulate that such operation must be done by crew. It is known from experience, however, that vessel's personnel are not, on occasions, sufficient to do this work.

CUSTOMS ALLOWANCES: No regulations establishing quantities which each crew member may have outside bond, but must not be excessive order avoid problems with authorities.

CARGO GEAR: Ship's gear used. Also see "General".

REPATRIATION: Authorities render co-operation for change of crew and arrangements of repatriation in co-ordination with ship's Agent.

AIRPORT: Located 18 km. from Buenaventura. Airport is small and is inactive. Agent in charge of the repatriation of a crew member must handle necessary connection in Cali or Bogota, where there are international airports.

TIME: GMT minus 5 hours. Permanent.

HOLIDAYS: New Year's Day; Good Friday; Workers Day (May 1st); July 14th and 16th (from 1200 hrs. to 2400 hrs.); December 24th and 31st (from 1200 hrs. to 2400 hrs.); Christmas Day (no working in the port). On Sundays there is no work in the port, but sometimes when required there is working, especially to finish loading or unloading vessels.

POLICE/AMBULANCE/FIRE: A voluntary firemen corps in the city. Alarm, Tel: 22222; Guard, Tel: 23720; Firemen, Tel: 15; Ambulance, Tel: 22830, 22638, 23708, 24475; Police, Tel: 22738.

BANKS: Colombia Republic Bank, Popular Bank, Bogota Bank, etc.

SHORE LEAVE: Permitted (with ID cards).

IDENTIFICATION CARDS: Agent will supply special cards to crew and passengers in transit so that they may go ashore. Cards valid for entering and leaving port installations and for identification with the Immigration authorities. Must be returned before vessel departure.

DELAYS: At anchorage in Bay average delay of 1 day while waiting for berth. On account of the rainy condition of the port, discharge or loading is at times stopped up to 12 hours.

GENERAL: Provisions available. Cable service to all parts of the world. Telephone and telex service inside country and to foreign countries through Bogota. Weather conditions: generally rainy. Explosives: if the vessel is transporting dynamite and detonating caps they are placed in separate lighters, and armed guards are required on board any vessel transporting explosives. In such cases, the vessel must anchor in front of Buoy No. 9 and discharge to lighters during daylight. No vessel can berth at the wharf if transporting explosives, and only permitted with dynamite in closed hatches, which will not be opened at the wharf according to government regulations. Port is equipped with following shore cranes and equipment: 2×80,000 lb. capacity (mobile), 1×60,000 lb. capacity (mobile), 3×20,000 lb. capacity (mobile), 2×14,000 lb. capacity (mobile), and 1×10,000 lb. capacity (fixed). New equipment includes 3×16 ton mobile cranes to work in yard operations only and 2×40 ton Hyster heavy lift trucks for container handling.

1×60 ton Hyster heavy lift truck has recently been purchased and is expected to arrive in the port in the near future.

Floating crane: 1×45 tons capacity.

Lighters available: 3 with following characteristics:

Size Length/width	Capacity	Type
24.40 m.× 9.45 m.	280 tons	Flat surface
34.40 m.× 7.60 m.	150 tons	Flat surface
38.80 m.×10.60 m.	150 tons	Flat surface

No refrigeration space available.

DEVELOPMENTS: Container and general cargo yards are being rebuilt and expanded to improve storage and other facilities. Sheds are also being constructed, and a general port modernisation plan is under way.

SHIPMASTER'S REPORT: May 1990.

Vessel's max. draft was 27 ft.

We tried to contact pilot 2 hours before arrival (ETA 0400 hrs.) but received no reply.

When we arrived at the Sea Buoy (Buoy No.1) a small boat approached, without navigation lights or pilot lights. We stopped the engine when we saw the pilot flag.

The pilot boarded and advised that we would berth at high water (1100 hrs.).

When vessel proceeded inward we passed 6 cables North of Buoy No.1 and headed for Buoy No.4 (sailing outside the channel). At high water we had at least 5.0 m. under the keel.

It was not possible to use the main channel as it was shifting.

SHIPMASTER'S REPORT: September 1992.

Chart: B.A. Chart No. 2319 (November 1991 Edition).

Pilotage: Available at Sea Buoy No. 1 (03° 47.75' N., 77° 19' W.) for deep draft vessels, but normally at Pta.Bazan, South of Buoy No. 13.

Anchorage: Vessels are warned not to anchor in the vicinity of Buoy No. 1 at night, daytime no problem. Vessels normally anchor at Pta.Bazan for waiting their turn to berth, but should request *watchmen* for *piracy*.

Buoyed Channel: All buoys are subject to change in positions without warning, due to either tidal current or maintenance made by authorities. Please refer to local Chart No. COL 153 (See "Plan").

Berthing: 24 hours service. Normally 12 to 13 ocean-going vessels berthed.

Stevedores: For grain cargoes 24 hours round the clock, 7 days a week.

Watchmen: Strongly recommend 2 watchmen throughout 24 hours through Agents. Victualling by vessel. No piracy if watchmen onboard. It is also useful for preventing stowaways and drug smuggling, both a big problem for vessels calling at this port.

Fresh Water: Available at berth by hose, at about 10 tonnes/hr.

Cargo Gear: Ship's gear used with shore grabs for grain cargoes.

Shore Leave: Allowed with shore pass, ID cards not required.

Repatriation: Possible through Agents with advance notice.

Airport: Nearest airport is at Cali, about 120 km. away, which has connections to Bogota for Intercontinental flights.

Class Surveys: Available locally. Advance notice required through Agents for Classification Surveys.

Supplies: Provisions and fresh items, including seafood, are all available at very reasonable prices. Bonded items can be supplied directly from shop inside port area. Stores items difficult to supply. MDO available.

AUTHORITY: Puertos de Colombia, Terminal Maritimo de Buenaventura, Apartado 570, Buenaventura, Colombia. *Tel:* 24421, 24425. *Telex:* 052371. *Cables:* Termarit. *Contact:* Edgardo Caicedo Rivas, General Manager. Victor Julio Gonzalez R., Operations Director.

CARTAGENA (Incl. Mamonal and Ecopetrol): 10.25 N. 75.32 W. (See Plan)

(A) GENERAL CARGO
(B) TANKERS

(A) GENERAL CARGO

LOCATION: Cartagena is located in the bay with the same name and is one of the most secure, large and deep ports of the Americas. The port is well protected from all winds and has plenty of water and few currents.

DOCUMENTS:

Pollution Policy Certificate.
Sanitary Certificate.
Load Line Certificate.
Cargo Ship Safety Radiotelegraphy and Radiotelephony Certificates.
Cargo Ship Safety Equipment Certificate.
Cargo Inspection Certificate.

The following documents are required on arrival:

3 copies Crew List.
2 copies Stores list.
1 copy Personal Effects List.
List of Vaccination dates with expiration dates (Yellow Fever).

PILOTAGE: Compulsory. Boarding position at sea buoy position: Lat. 10° 19' N., Long. 75° 35' W. Pilot can board vessel any time. Pilots ordered through ship's Agent. Several private companies of Pilots available. Pilot on VHF Channels 11 and 16 throughout 24 hours.

APPROACHES: *Channel:* Width of entrance channel is 152 m. and depth 41 ft. When entering the bay (Buoy No. 1), there is a depth of 36 ft.

ANCHORAGE: Anchorage is possible at any time 0.5 miles S.W. from Buoy No. 1 for vessels awaiting berth in the Bay of Cartagena (Sociedad Portuaria Regional de Cartagena and Muelles el Bosque), South from Punta Castillogrande. Tankers for Mamonal anchor West of the pier of Refineria Ecopetrol.

MAX. SIZE: Vessels up to 270 m. (890 ft.) length with a draft up to 33 ft.

HEALTH: Derat Certificate and Vaccination List required by doctor on arrival.

VHF: Port on VHF Channels 11 and 16.

TUGS: There are several private tug companies available to assist with berthing. Ship's Agent can make necessary arrangements.

BERTHING: The Terminal has 7 cargo berths and 2 berths for Ro-Ro vessels.

Berths No.	Length (m.)	Depth (m.)
1	176	6.4 (21 ft.)
2	202	9.7 (31.8 ft.)
3	182	9.1 (29.8 ft.)
4	130	8.4 (27.5 ft.)
5	202	11.5 (35 ft.)
6	182	8.4 (27.5 ft.)
7	258	11.5 (35 ft.)
Ro-Ro 1	40	9.5 (31.2 ft.)
Ro-Ro 2	40	10.6 (35 ft.)

There is year round permanent service for the vessels (24 hours a day, 7 days a week).

Storage: Warehouses with 29,000 sq.m., 120 reefer plugs.

STEVEDORES: Charges for the service of unloading and loading will be rendered against the vessel, their Owners or Agents. Working hours 24 hours a day, 7 days a week.

CRANES: The Gottwald crane HMK 280 started operation in 1994 with a maximum capacity of 100 tons. This crane is used for the operation of loading and unloading of vessels with efficient results.

Maximum Capacity	100 tons.
Reach	44 m.
Maximum Efficiency	25 TEU/hr.
Total Weight	400 tons.

The post Panamax gantry crane will start operations in March 1996. This crane can use spreaders of 20 ft., 40 ft. and 45 ft., if needed, to lift general cargo up to 50 tons.

Maximum Capacity	52 tons.
Reach	46 m.
Maximum Efficiency	44 TEU/hr.
Total Weight	980 tons.

Cargo Handling Equipment:

Front Loaders	5×40 tons Taylor.
	5×40 tons Hyster.
	5×40 tons Yale.
	5×40 tons Clark.
Yard Hustlers	45 (Capacity, Ottawa, Sisu, Mack).
Forklifts (2 ton – 12 ton)	40 (Hyster, Yale, Clark, Datsun, Nissan).

MEDICAL: Full hospital facilities available without prior notice.
TANKERS: See "Section B".
FRESH WATER: Available at all berths. Capacity of supplying 600 tons in 8 hours to a vessel (75 tons/hr.). Cost is $3.50 per ton.
FUEL: Available from Mobil, Exxon and Texas Petroleum by barges. All through Agent.
CONSULS:

Austria
Belgium
Brazil
Canada
Chile
Denmark
Dominican Republic
Ecuador
El Salvador
Finland
France
Germany
Greece
Honduras
Italy
Mexico
Norway
Panama
Peru
Portugal

Venezuela

DRY DOCK/REPAIRS: Shipyards available: Conastil, Ferrocem, Astilleros Cartagena.
SURVEYORS: The following cargo inspectors are available: Saybolt, Lloyd's Register of Shipping, American Bureau of Shipping, Societe Generale de Surveillance, Bureau Veritas and Germanischer Lloyd.
WATCHMEN: No requirement for watchmen, except for special security reasons as determined by the shipping line or shipping agency.
OPENING/CLOSING HATCHES: Undertaken by port stevedores.
CUSTOM ALLOWANCES: Colombia Customs Regulations apply.
REPATRIATION: Facilities available for crew changes.
AIRPORT: International airport 5 km. Regular airlines such as Avianca, Sam, Intercontinental, Viasa, Copa and charters. Daily international flights.
TIME: GMT minus 5 hours all year round.
HOLIDAYS: There are 18 holidays in Colombia, but at the Terminal, there is 24 hour service, 365 days a year.
POLICE/AMBULANCE/FIRE: Police Station Tel: 662-2004. Ambulance of terminal Channel 16. Firemen of terminal Channel 16. Available 24 hours a day.
TELEPHONES: Telephone service available at the terminal for crew member from 0800 hrs. – 1700 hrs.
BANKS:

Banco de Colombia.	Tel: 664-2116.
Banco Cafetero.	Tel: 664-4150.
Citybank.	Tel: 664-2169.
Banco Union.	Tel: 660-1052.
Banco de Bogota.	Tel: 664-0876.
Banco Antiqueno.	Tel: 664-6055.

SHIP SUPPLY SERVICE: The following ship chandler companies are available: Andrea Ship Chandlers, Tel: 666-0651. Ariza Heredia, Tel: 664-2067. Hector Silguero Ship Chandler, Tel: 665-0037. Humar, Tel: 662-0695. Inpromar, Tel: 664-3294. Jaime Rozo, Tel: 669-0750. Mansilca, Tel: 664-1141. Suministros Generales, Tel: 664-2866.
GARBAGE DISPOSAL: Restricted solid waste disposal. Liquid sludge to be notified in advance of vessel's arrival.
CURRENCY: Pesos. U.S.$ 1.00 = 1,000 Colombian Pesos (March 1996).
DEVELOPMENTS: Total investment of approximate 50 million dollars for the next 3 years.

Extension of the marginal wharf by 180 m. (600 ft.).
Dredging of the access channel and all of port berths to 44 ft.
Extension of the container yard.
3 Post Panamax gantry cranes.
2 Transtainers.
Electronic data information system.
Security system.

A total of 50 million dollars for a new cruise terminal for 2010. First stage and second stage cost $ 7 million, expected to be complte by 1999.
AUTHORITY: Sociedad Portuaria Regional de Cartagena, Manga Terminal Maritimo, Cartagena, Colombia. *Tel:* (575) 660-8071, (575) 660-7535. *FAX:* (575) 660-8071, (575) 660-7622. *Contact:* Alfonso Salas Trujillo, General Manager.

(B) TANKERS

LOCATION: Cartagena is located on the Bay of Cartagena, North coast of Colombia, Lat. 10° 19' N., Long. 75° 31' W.
DOCUMENTS: Documents necessary for a petroleum tanker arriving at Cartagena are as follows:

1 copy Clearance (Despacho) from Last Port (if vessel was directed while en-route, Master's affidavit). Consular visa unnecessary.
1 copy Consular Dispatch.
4 copies Crew List.
4 copies Personal Effects Lists.
2 copies Ballast Manifest (Manifiesto de Lastre).
4 copies Stores List.

PILOTAGE: Pilotage is compulsory. If, on arrival outside the entrance to the channel leading to Cartagena harbour, a Pilot does not meet vessel, vessel is to sound the whistle signal, 4 long blasts, and display International Code Flag "G" for a Pilot.

Vessels are not to pass each other in the channel leading into the harbour of Cartagena and inbound vessels are to give way to outbound vessels.

Vessels entering or leaving the port must have a Pilot on board, otherwise they might be subject to a fine for failure to comply with this regulation.

The vessel must sound 4 long whistle blasts so that it will be met by the Mooring Master inside the harbour and who will take it alongside immediately if berth is available. If the ship's Master sees that another ship is at the loading berth, he must anchor.

It will be necessary to deliver to the Mooring Master a report stating the exact time he arrived on board and left vessel outside the channel. If, when inbound, the Pilot does not meet vessel outside the channel, Master is to note this fact on the Pilot's Report.

NAVIGATION AIDS: For information pertaining to Navigation Aids, consult the latest edition of the Light List (H.O. III A) or equivalent British Light List; also the Sailing Directions covering the area.

RADIO: Masters of vessels proceeding to the Cartagena Terminals are to send a radio notice at least 48 hours prior to arrival to the Agent at Cartagena; this should be corrected promptly in the event of any change in the time of arrival.

The Agency, upon receipt of the arrival cable, will cable the vessel with pertaining instructions about the cargo, if not ready, or if the berth is occupied at the time of arrival by another vessel. In these instructions, the Agency will indicate the estimated docking time.

RESTRICTIONS/MAX. SIZE:

		Refinery Terminal Max. – Min.	*Nestor Pineda Terminal* Max. – Min.
Size of vessel that can safely berth:	Length (ft.):	853 – 492	853 – 577
	Beam (ft.)	125 – 65	125 – 82
	Draft (ft.):	37 ft. 6 in.	37 ft. 6 in.
	d.w.t.:	85,000 – 12,000	85,000 – 25,000
Location of Terminals South of the City of Cartagena:		7 miles	5 miles

	Refinery Terminal	*Nestor Pineda Terminal*
Latitude:	10° 19' 09" N.	10° 19' 39" N.
Longitude:	75° 30' 42" W.	75° 30' 54" W.
Distance from port entrance:	5.5 miles	6.5 miles
Least depth of water from Boca Chica Channel to Terminal:	44 ft.	44 ft.
Depth of water at Terminal at Mean Low Tides:	40 ft.	40 ft.
Mean Tidal Range at Terminal:	1.5 ft.	1.5 ft.
Nature of bottom at Terminal:	Mud	Mud
Docking and unloading:	Night and day	Night and day

Also see "Berthing".

BERTHING: Ecopetrol owns 2 terminals on the Bay of Cartagena:
Refinery Terminal: The dock of the Refinery Terminal consists of a "T" loading platform with trestle connection to shore, 4 breasting dolphins and 2 mooring dolphins. These facilities are used for receiving crude oil, gas oil and white products and shipping refined products and spent caustic in tankers up to 85,000 d.w.t., either empty or partially loaded to a maximum draft of 36 ft.
Nestor Pineda Terminal: Consists of an isolated loading platform, connected to the shore by 7 submarine pipelines, 3 breasting dolphins, and 2 mooring dolphins. These facilities are used for receiving crude oil and shipping fuel oil and aromatics in tankers up to 85,000 d.w.t., either empty or partially loaded to a maximum draft of 36 ft.

The size of tankers entering Cartagena's bay is limited by the depth of the entrance channel (Boca Chica), which is limited to ships with a maximum draft of 38 ft.

Vessels are supposed to berth alongside the dock with bow and stern lines from both the port and starboard bow and stern.

To dock vessels over 2,000 d.w.t., Maritime and Port Authorities request the use of tugs. Tug costs are on the ship's account. It is recommended that 2 mooring lines be bent together on the starboard quarter. The Mooring Master boards the vessel about 0.5 mile from dock and remains aboard during the entire stay of the vessel at the dock. The Loading Master is to be supplied with room and meals on board.

LOADING/DISCHARGING:
Name of grades handled at Refinery Terminal:

	No. and Size of F.M.C. Tubular Arms	*Diameter of Pipe-line (in.)*	*Max. Pumping Rate – Barrels Per Hour*	*Max. Pump. Pressure psig.*
Crude Oil	3 – 12 in. × 60 ft.	20	20,000	150
Fuel Oil	3 – 12 in. × 60 ft.	2 – 14	5,000	150
Gasoline	3 – 12 in. × 60 ft.	18	10,000	150
Kerosene-turbo	1 – 12 in. × 60 ft.	8 – 10	2,100	150
Diesel	2 – 12 in. × 60 ft.	12	7,000	150
Spent Caustic Soda	1 – 12 in. × 60 ft.	6	2,000	150
Ballast Water	3 – 12 in. × 60 ft.	16	20,000	150

Name of grades handled at Nestor Pineda Terminal:

	No. and Size of F.M.C. Tubular Arms	*Diameter of Pipeline (in.)*	*Max. Pumping Rate – Barrels Per Hour*	*Max. Pump. Pressure psig.*
Crude Oil	3 – 10 in. × 60 ft.	20	20,000	150
Combustoil	3 × 10 in. × 60 ft.	24	16,000	150
White Products (2)	2 – 10 in. × 60 ft.	6	15,000	150
Ballast Water	3 – 12 in. × 60 ft.	16	20,000 (1)	150

(1) From ship to shore facilities.
(2) Includes facilities for loading Aromatics (Benzenes and Xilenes).

LPG: *Location:* The pier is situated at Lat. 10° 19' N., Long. 75° 30' 05" W.

The land access is the same for the gas terminal as the refinery terminal.

Usage: The platform is being utilised for the gas transfer to ships up to 4,100 d.w.t. (max. LOA 110 m.) empty or partially full to a maximum draft of 6.0 m. aft and 5.0 m. forward. The minimum depth next to the platform is 8.0 m.

Note: The draft of the tanker is subject to the situation of the manifold itself. There will be harbour pilots to determine, in specific cases, if the tanker can berth at the terminal.

Characteristics: The platform is connected to the refinery by aerial pipelines arranged under the access platforms.

The connection system is a bridle of 6 in. diameter and ANSI 300. The distance between the bridle and the external part of the pier is 6.0 m.

The distance from the port entrance (Boca Chica) is 5.5 nautical miles.

The minimum depth of the water between the Canal of Boca Chica and the terminal is 44 ft.

Average tide at the terminal is 1.5 ft.
Depth at platform is 6.0 m.
Nature of bottom is mud.
Mooring and unmooring is possible day and night.

Cargo: Propane and butane handled through 6 in. line and 6 in. hose at 1,800 bbls./hr.

BALLAST: Vessels must arrive with sufficient ballast to permit safe handling in port. Vessels in ballast shall not have greater than 4 ft. trim difference between the fore and after draft. Dock Master requirements in this connection under normal weather conditions are interpreted as drawing approximately 14 ft. forward and 18 ft. aft.

The deballasting facilities are as follows:

In the Refinery Terminal the pipeline to the shore installations is 2,835 ft. long and 16 in. diameter, 3×12 in. loading arms are available to a maximum rate of deballasting of 20,000 bbls.p.h. In the Nestor Pineda Terminal the pipeline to the shore is 3,600 ft. long, and 16 in. diameter, also there are 3×12 in. loading arms to a maximum rate of deballasting 20,000 bbls.p.h.

No dirty or clean ballast, nor engine room, or pump room material must be pumped overboard while inside the port.

The Ship's Master should be fully aware of the Colombian laws and regulations pertaining to pollution of the environment and the sanctions derived from their infringement.

Extreme care must be taken to avoid spillage of oil or any other contaminants. In the occurrence of any spillage attributable to the crew's responsibility, immediate action must be taken in order to clean the affected areas. The costs of this action are on the ship's account.

There are strict legal regulations concerning pollution problems. Those responsible for this type of situation will be heavily fined by the Port Authority.

FRESH WATER: Fresh water is available only at Nestor Pineda Marine Terminal. This water is not recommended for drinking.

FUEL: Bunker C, Marine Diesel and Diesel Oil are available only in the tanker anchorage area, from local suppliers.

GANGWAY/DECK WATCHMEN: An accommodation ladder shall be lowered on the port side upon arrival at the port.

SHORE LEAVE: Shore leave is granted to members of the crews of vessels calling at Cartagena. Before granting shore leave, the Master must address a letter to the Port Authority requesting permission to grant shore leave and must assume all responsibility for his men.

Crew deserters will be arrested by the local police and the vessel in all probability will be fined. Every precaution, therefore, is to be taken to prevent members of the crew from going ashore without permission from the Master. The Port Authority restricts, under penalty of fine, the boarding of any tanker while at the loading terminal by all persons except those having official duties to perform on board. Masters are to make sure that no unauthorised persons are permitted to come on board their vessel while at the terminal.

REGULATIONS: Ecopetrol requires that all vessels loading or unloading at their terminals comply with the following regulations:

a. Tankers must arrive in port with hose derricks rigged and mooring lines on deck.
b. During the time the tanker is at the loading platform a sufficient number of the ship's crew must be on duty to properly attend the mooring and hose lines; so that necessary changes can be promptly made.
c. The tanker must furnish one member of the crew to operate the ship's winch, which operation, however, is to be under the direction of the Loading Master.
d. The tanker's crew must handle all ship's valves.
e. The ship's officers must follow the instructions, in all aspects, from the Loading Master as to all the signals to be given to the shore loading stations. When the tanker is about to be loaded, a "stand-by" signal is to be given. The "Slow-down" signal must be given at least 5 minutes before the "Shut-down" signal.
f. In order to facilitate the above, the crew should be on deck immediately following the "stand-by" signal and preparations must start to unberth the ship on completion.
g. No ship will be berthed except under the sole direction of the Mooring Master.
h. While the ship is berthed, the propellers must not be moved; engines shall be ready for immediate use and steam, or power must be available to work winches and windlasses to meet emergencies at all times.
i. All instructions from the Loading Master, whether contained in these regulations or not, must be followed by the ship's officers and if not, all operations will be discontinued, and, if necessary, the ship removed from the loading berth until such time as the ship's officers comply with orders of the Loading Master.
j. No maintenance, or repair to the ship, such as welding, or any other hot work will be undertaken, while at the berth and which will endanger the safety of the installations, or equipment, owned by Ecopetrol.
k. When loading/unloading operations are complete, the crew shall endeavour toward clearing the facilities in the shortest period of time possible.

SHIPMASTER'S REPORT: August 1979 (Updated 1986).

Approaches: Cape Santa Domingo shows up at 35 miles on radar. During Summer months May to September strong N.E. winds with heavy swell are prevalent in the approaches.

Thunderstorms and squalls are usual in Summer near the coast with a marked shift in wind.

Boca Chica Light and Fairway Buoy Light are conspicuous. Bancas Salmedina Light on wreck merges with shore lights from the West.

Generally even with strong N.E. winds in Summer it is fairly calm off Fairway Buoy, even if blowing strongly a few miles further seaward.

Pilotage: Pilot boards off Fairway Buoy, usually starboard side, using gangway/pilot ladder arrangement.

The Pilot Station is on Isla Draga on the South side of Boca Chica Channel, 24 hour service maintained.

The proper launch is a large black hulled craft but at present (August '79) it is being re-engined. A small pleasure type craft is being used at present of very low speed and light construction. In the bay the Pilots have a turbo craft, small but very fast. The Boca Chica Pilots are a Government service and dock vessels at public piers only, otherwise take vessels to area off private piers and hand over to private Pilot, same when leaving. Pilots speak some English.

The private Pilot at Mamonal Pier is good and speaks good English.

VHF: Appear to use Channel 16 only.

Boca Chica: The narrow entrance to Cartagena Bay Channel well lighted by buoys as per British Admiralty Chart. Max. draft 38 ft. accepted. Sometimes cross currents are Southerly across the entrance with strong Northerly winds. Course steered 086°.

Anchorages: For Mamonal Oil Pier, 1 mile S.W. of pier, with 3 shackles, whole of bay affords good shelter and all the bay is compulsory pilotage.

Berths: Mamonal Pier virtually due East of Boca Chica Channel. It is owned by Ecopetrol and leased to Amocar Refinery behind the berth. Both state owned. Max. size 75,000 d.w.t. (approx.).

Draft: Limited by Boca Chica Channel. This vessel's draft: 41 ft. 3 in. forward and 50 ft. aft.

Jetty: Vessel berthed heading North. A short jetty, length 50 m. with pipe gantry and dolphin each end connected by catwalk. Total length 100 m.

The pier ashore is for the pipes and has a narrow catwalk. No stores could be loaded along jetty. No fresh water on the berth. Gangway is a problem and is nearly impossible to land. Ships with long "B.O.T. type" can be landed on the jetty. We lowered ours to the water and used mooring boat which is on constant stand-by at jetty.

Fenders in a bad state of repair. The aft dolphin has no fender and vessel is kept off by port quarter buoy line. Fender is under repair.

Tugs: Generally two small tugs used for pushing, however, we used only one. A larger tug of 2,500 h.p. should be back in service after repairs.

Mooring: (See "Plan"). The first two lines fast each end are the springs, then the port quarter line aft to keep vessel off the damaged dolphin.

A line boat is used which goes backwards and forwards each end. The berth is approached from the South and port anchor is let go off the berth. Vessel eventually had 5 shackles in water. It takes about three hours from picking up Boca Chica Pilot to all fast.

Cargo: The pier handles gasoline, ammonia, propane and butane outward and crude oil inward. About 6,000 tonnes a month of ammonia is shipped for export.

About three 40,000 ton shipments of crude per month are brought in mostly from the Colombian Pacific coast but an occasional Nigerian shipment is also received.

Hoses: All flexible hoses, no Chicksan arms. Ammonia 8 in. 150 ASA with gate valve at ship's manifold, flexible wire braided with rubber covering. Joints liable to leak. Generally two connected ready, but we had to use three and P&O 'Galara' class have to use four due to high freeboard.

No vapour line. No Nitrogen purging. Shore labour connect. Can take up to 1.5 hours to connect/disconnect.

Rate: Maximum Ammonia rate 450 t.p.h. Four pumps at refinery, using two only seems to make 50 t.p.h. difference. Emergency stop – recirculates on jetty.

Survey: Bill of Lading on ship's tanks.

Loading Master: Speaks good English and very helpful. He requires a cabin as does a Pollution Inspector, Agent's runner and Surveyor.

Pratique: No radio pratique available.

N.O.R.: Signed by Pier Master on behalf of 'AMOCAR' refinery on arrival alongside or at anchor if waiting for berth.

Holidays: Public holidays with banks closed. 1st January, 1st May, 20th July, 7th August, 25th December.

Documents:
5 Crew Lists.
2 Personnel Effects.
2 Stores Lists.
Vaccination List.
Maritime Declaration of Health.
Ship's Papers.

Generally very good co-operation with four persons boarding, none on departure, Agent brings clearance. Require to sight register, load line certificate, radio certificate, safety certificate and DTI/P&I Pollution Certificate.

In some publications a document called 'SOLE' form is mentioned. The Agent said this was a form from Colombian Consul at last port to say all papers in order but no longer required. Shore passes valid for 3 days are issued, no photographs required. Passes are not returned.

Customs: Will only board between 0700 hrs. and 1900 hrs. If the vessel has not cleared before 1900 hrs. she cannot start cargo. This is a new law by the Port Captain since the end of July 1979, previously he used to issue a waiver and allow loading but some Agencies didn't apply to him and started before Customs came with waiver. A meeting is due to be held before the end of August 1979 on this subject between Agencies, Customs and Port Captain. This means, at present, that it is not advisable to pick up the Boca Chica Pilot between 1730 hrs. and 0530 hrs. as vessel will not be able to work cargo and will probably have to pay an extra day's port costs as they are on 24 hour arrival Pilot basis.

Communications: Barranquilla "HKB". Frequencies: 476; 6463.5; 8666; 13087.5. HF: Channels 5/6; 6, 8, 12 MHz.

Telex: Good.

Telephones: To Europe from Cartagena, 2 to 3 hours delay.

Bunkers/Fresh Water: At Bay piers, can easily be obtained by barge.

Agent: Did not seem aware of new Port Captain decree on not starting cargo at night which cost extra day's port charges, which could have been avoided, until he boarded with Customs.

Apart from the above, very good and attentive. Can be contacted on VHF Channels 16 and 6. A "runner" is on board all the time with a walkie-talkie.

I was told that crew changes are easily done as long as 24 hours notice is given for Immigration clearance. It is quite normal for ships to sail with crew members adrift and as long as Master gives Agent letter of authority for hotel costs and air ticket there are no problems with the Authorities. The nearest British Consul is in Bogota.

Shore Leave: It takes about 20 minutes from Amocar Refinery (At foot of Mamonal jetty) to Cartagena by bus. Rate of exchange: Pesos to Dollar = 200 (1986).

Thieving/Stabbing: All officials and Pilot advised us to make sure we had a very good deck patrol with no ladders overside, thieving at Bay Berths is rife. Also make sure you have some strong weapon with you and you lock yourselves in at night as people have been stabbed in bed when woken by thieves. Lock everything up.

Developments: Considerable developments have taken place in the area in recent years. Cartagena is a big tourist centre from Venezuela and the U.S.

Exports include coffee, fruit, lumber, tobacco, precious metals and petroleum products.

Good road and rail communications exist with Bogota the capital taking about 18 hours.

The Eastern shore of the bay is being developed as an industrial area. The following piers and sea island are in evidence.

ECOPETROL Sea Island (Nestor Pinead Terminal) takes up to 100,000 d.w.t. tankers, 54 ft. at the berth but limited by Boca Chica Channel. Chicksan connections. FW piped to berth, mooring to buoys. Used for export of fuel oil and other petroleum products. Situated just North of Brujas Island.

Cement Jetty	in position:	Lat. 10° 20.4' N., Long. 75° 30.9' W.
Soda Pier	in position:	Lat. 10° 19.9' N., Long. 75° 30.85' W.
Syncrolift	in position:	Lat. 10° 19.7' N., Long. 75° 30.8' W. 15,000 d.w.t.
LPG Barge Pier	in position:	Lat. 10° 19.4' N., Long. 75° 30.8' W.
Mamonal Pier	in position:	As charted
Industrial Berth	in position:	Lat. 10° 17.3' N., Long. 75° 30.4' W.
Products Pier	in position:	Lat. 10° 18.2' N., Long. 75° 30.55' W.
Products Pier	in position:	Lat. 10° 18.2' N., Long. 75° 30.7' W.

Considerable barge traffic with big pusher tugs use the River Dique, which comes out in the Southern part of the bay, this joins up with the River Rio Magdalena in the interior and to Barranquilla, etc.

SHIPMASTER'S REPORT: May 1987.

Manomal is the oil port for Cartagena. It consists of an industrial complex with several berths, mainly handling bulk cargoes. The tanker berth is a relatively small sea island about 600 ft. long. This vessel, (Panamax, Summer d.w.t. 61,391 tonnes, L.O.A. 738 ft. Beam 106 ft.) visited Manomal in May 1987.

Approaches: At a distance of 15 miles – 20 miles Isla Tierra Bomba Light is clearly visible. It is now equipped with a Racon (C) which shows clearly on both 3 cm. and 10 cm. radars. Land shows up clearly on radar, and is easily identifiable with topography shown on BA. Chart No. 2434. Light on Boca Chica Sea Buoy also very good and seen at 7.5 miles – 8 miles on this occasion. Vessel had to anchor to await berth, and did so in about 36 fathoms of water, 7 cables S.W. of the Sea Buoy. No difficulties experienced anchoring or weighing anchor. Government Pilot boards vessel in the vicinity of the Sea Buoy and takes vessel as far as the berth where a Mooring Master takes over. The Berth is marked on the Plan on BA. Chart No. 2434 in position Lat. 10° 20.63' N., Long. 75° 30.93' W. as a "Platform". Ships always berth starboard side to, the normal mooring pattern being 3 head and stern lines, 2 breast lines and 2 springs, each end. The berth is a fairly recently built Sea Island but is not really large enough for ships over about 500 ft. in length. All our lines with the exception of lines from the main deck mooring winches ended up as springs. The berth is well fendered, so no problems lying alongside. 2 tugs available for berthing, one of about 2,500 h.p. is quite useful, but second one is small, and not much help berthing, although it does help to keep the vessel alongside whilst mooring is in progress. Line boat available and linesmen seem quite competent. No shore Gangway, but vessel was able to use her accommodation ladder amidships with a little difficulty.

Facilities: 3 × 10 in. Chicksan arms available for loading. Informed by shore that berth is served from the shore by 3 × 24 in. lines. (1 for Crude, 1 for Fuel Oil and 1 for deballasting ashore.) Loading Rate (F.O.) is about 15,000 bbls./hr., although vessel told that 10,000 bbls./hr. would be maximum. All shore personnel found to be helpful and cooperative. 4 hours required for cargo documentation after the completion of cargo.

Informed by the shore that there is 55 ft. of water at the berth, but limiting factor is the Boca Chica Channel, where we were limited to 37 ft. 06 in. Outgoing Pilot informed that there is an absolute maximum depth of 39 ft. in this Channel. Range of tide only about 1.5 ft.

Security: KEEP A SHARP LOOKOUT FOR THIEVES. Strict security measures, everything locked up. Vigilant deck watch to be maintained. Very little security seems to be practised by Terminal personnel. Shore Watchmen are available, and should be employed. Also had trouble with a large number of women who tried to board the vessel soon after shore Authorities had cleared ship inwards. Master had to personally refuse access to vessel for these "unauthorised visitors". Suggest deck watch doubled when near the completion of loading when vessel has a small freeboard. This vessel kept a good deck watch at all times, even so, an after store was broken into and a small quantity of paint stolen.

Sailing: No difficulties experienced leaving the berth. Tugs used but not made fast, they just push. Mooring Master unberths ship and turns her round off berth, when Sea Pilot takes over. Under normal circumstances this Pilot leaves the ship when passing between the last channel buoys (outwards) in Boca Chica Channel.

Note: During night approach to the port, the Stranded Wreck in Position Lat. 10° 22.9' N., Long. 75° 38.7' W. was showing clearly on the radar, but the light was not seen, and therefore presumed unlit, either temporarily or permanently.

SHIPMASTER'S REPORT: August 1993.

Charts: B.A. Charts No. 1277 and 2434.

Pilot Books: NP 7A (9.102 and following pages).

Approaches: Approach was made from S.W. in near gale force conditions with poor to moderate visibility. At the time, both radars were performing poorly and erratically and the Satnav was out of use, so it made for interesting navigation.

Although the radars did get a weak echo, this turned out to be Cartagena itself, which thoroughly confused the officer on duty, as closer low lying features did not appear at all, and the navigation marks on offshore reef and islands were either destroyed or operating on reduced power.

Bancos de Salmedina Lt. is reported destroyed – not seen.

Isla de Tesoro Lt. operating on reduced power – very difficult to see.

Isla Tierra Bomba Lt. – visible only at 5 miles.

Isla Tiera Bomba D/F station – not operating.

Communications: Agents were informative prior to arrival and did warn about Bancos de Salmedina Lt. They laid great emphasis on security and the necessity of keeping unauthorised people off the ship.

Pilots were contacted in good time and responded well.

Pilotage: Pilot boarded from a very small slow boat by the outer buoy at Boca Chica. Agent had requested that the accommodation ladder be rigged for him, but I considered this unsafe as our rig is aft and leads aft, and would have required the boat to come right under the round-in of the stern by the propeller. Once on board, the passage through Boca Chica was taken slowly and carefully. Once clear of the entrance, the short run across the bay was taken slowly to allow time for a ship to leave our berth. The Agent's boarding officer boarded from a very fast, unlit boat, which was mistaken for some unauthorised approach, and he was lucky not to have been hosed down.

On departure, the Pilot left well inside Boca Chica. I think they do not relish long voyages on their boat.

Berthing: The oil berth at Mamonal is modern and well maintained. Two large tugs were used (tug's ropes), and berthing was accomplished starboard side to without any difficulties.

11,700 tonnes was loaded without incident. Shore personnel were efficient. Officials were pleasant and quick.

Agent's boarding clerk remained on board throughout loading and was very helpful.

Security: We arrived expecting trouble, but the berth is well guarded and secure and no one tried to board from boats.

The Agent's warnings about security are a routine addition to his normal communications and seem to refer more to the general cargo berths.

All in all a surprisingly pleasant and efficient berth and loading operation. No delays, no problems and no thefts.

AUTHORITY: *Operator:* Empresa Colombiana de Petroles, "Ecopetrol", Apartados Aereo 2778 and 1452, Cartagena, Colombia. *Tel:* 685400. *Telex:* 037726, 037858. *Contact:* Ramon Benavides.

COVENAS (Gulf of Morresquillo): 09.25 N. 75.42 W.

(See Plan)

OFFSHORE PETROLEUM TERMINAL – CRAVO NORTE ASSOCIATION

See "General" before first port.

LOCATION: Situated in the Gulf of Morresquillo approximately 56 miles S.S.W. of Cartagena. "Arrived Ship" position is Lat. 09° 33' N., Long. 75° 51.5' W. which is 4.5 nautical miles from the Floating Storage Unit (FSU). (See "Plan"). The Terminal loads one grade of crude oil (API 29.3°. Temperature 88°/90°F).

DOCUMENTS:
Clearance from Last Port.
9 Crew Lists.
9 Personal Effects Lists.
Health Declaration.
Vaccination Certificate.
Derat Certificate.
Copy of Communique of vessel's agency
Ships Register
Log Book
Marpol Compliance Certificate
Certificates – Load Line, Safety Construction,
Safety Equipment, Safety Radio, Oil Pollution
Insurance, Cargo Gear.

APPROACHES: Golfo de Morrosquillo is entered between San Bernardo (9° 42' N., 75° 42' W.), which is low and sandy, and Punta Mestizo 17 miles S.S.W., its shores are fringed by mangroves and wooded swamps.

The head of the Gulf is backed by a plain, skirted by extensive savannahs, rounded to the East by a mountain range. The highest peaks, standing 12 miles East of the town are Tetas de Tolu, which forms two easily identified hills.

A lighted buoy (flash every 6 secs.), is established on Roca Morrosquillo (9° 35.5' N., 75° 59.5' W.) and represents the mid entry point to the Gulf.

PILOTAGE: Compulsory except for anchoring. A company Mooring Master will board the incoming tanker approximately 4.5 nautical miles N.W. of the FSU. VHF Radio – Stand-by on Channel 16, shift to Channel 10 for manoeuvring – 24 hours' service, weather permitting.

ANCHORAGE: The recommended anchorage for export tankers and vessels having business with the off-shore terminal is within a radius of 1.5 nautical miles of position: Lat. 09° 33' N., Long. 75° 51.5' W.

RESTRICTED AREA: An area has been nominated as a Restricted Area. Within this area all activities which could endanger the subsea installations such as anchoring of vessels, dredging, mechanical fishing (trolling and trawling), disposal of refuse, etc. are forbidden.

The area is bounded by lines joining the following reference points:

1. Punta Bolivar:	Lat. 09° 25' 20" N.,	Long. 75° 43' 40" W.
2. Punta Piedras:	Lat. 09° 25' 25" N.,	Long. 75° 39' 05" W.
3.	Lat. 09° 32' 54" N.,	Long. 75° 47' 12" W.
4.	Lat. 09° 31' 36" N.,	Long. 75° 48' 30" W.
5.	Lat. 09° 32' 12" N.,	Long. 75° 43' 30" W.

RESTRICTIONS: Berthing night and day, weather permitting, in open water in the Gulf of Morrosquillo.

MAX. SIZE: *FSU:* 180,000 tonnes displacement with LOA 300 m.

Minimum Size: 55,000 tonnes displacement with LOA 220 m. for berthing alongside. Vessel can berth either side.

TLU: For berthing at the Tanker Loading Unit (TLU) 145,000 tonnes displacement with LOA 300 m.

Minimum Size: No minimum size providing vessel can handle the system equipment.

The max. draft at the FSU and TLU is 17.0 m. and the max. beam 40.0 m.

HEALTH: Port Authorities grant Free Pratique on clearing the vessel inwards. International regulations in cases of contagious sickness or epidemic are carried out.

RADIO: Radio Barranquilla, HKB.

Arrival Advice: All vessels arriving to load at Covenas Terminals should give following notice, which must be received through agent 72 hours, 48 hours and 24 hours prior to vessel's arrival:

AA Vessel particulars, year built, distance from manifold to bridge, number and diameter of manifold connections and if any reducers 12 in./16 in. available?
BB Arrival/sailing draft. Does your arrival draft keep propeller fully immersed with a trim not exceeding 8 ft.
CC Quantity of ballast. Position and specification (SBT-CBT) and expected deballasting time (hours).
DD Cargo to be loaded.
EE Max. loading rate and topping-off loading rate.
FF Grade of previous cargo. State your last port.
GG Destination port.
HH Is your IGS fully operational and oxygen content in the cargo oil tanks below 8%?
II Is your vessel's closed loading system operational?
JJ Does your vessel comply with OCIMF standards for oil tanker manifolds and associated equipment?
KK Does your vessel comply with OCIMF standards for equipment employed in the mooring of ships at SPM?
LL Your vessel has SWL 10 tons capacity cargo boom/crane operational and capable of handling 16 in. floating hoses?
MM Your vessel's fire fighting system/equipment is in good working condition?
NN Your vessels COW system is in good working condition?
OO Your vessel has closed fair leads for all mooring?
PP Vessel class and type of classification.
QQ Vessel P and I Club name and expiry date.
RR Type of oil pollution policy, expiration date.
SS Vessel ETA.
TT Please advise SDWT in long tons, number of crew members and Master's name, LOA, beam, NRT, GRT.

Note: Please be advised that cargo tanks must be fully inert on arrival. At Covenas 0_2 content below 8% Ecopetrol informs that failure to comply with the above might lead to the vessel being delayed until all are inert. Confirm if vessel has inert gas system.

VHF: Initial radio contact with FSU Covenas or with Covenas Control, Terminal Superintendent and Agents on Channel 16. Shift to Channel 10 for pilot boat, manoeuvring and for cargo operations. The loading vessel, either at FSU or TLU, will be attended on VHF Channel 10.

In case of 2 vessels loading simultaneously at FSU and TLU, the Cargo Loading Master will assign VHF communications channels to each one of them. One of the vessels will work on Channel 10.

RADAR: No port radar service.

TUGS: The use of terminal tugs (2) is at the Mooring Master's and/or Port Authorities' discretion. The mode of operation is made in conjunction with the vessel's Master.

BERTHING: The terminal can load 2 tankers simultaneously, one alongside the FSU and one at the TLU (See "Plan").

The FSU (Position: Lat. 09° 31' 45" N., Long. 75° 47' 11" W.) is a modified 384,000 tons ULCC, yoke-moored on a custom built catenary anchor leg mooring system with a 6 anchor pile spread. The installation is the principal unit in the terminal complex. The Terminal operations and control centre, communications network and accommodation facilities are housed on board. Water depth is 35 m. at the berth. Tankers can berth either side (preferably port side alongside) with 3×12 in. hard arm loading arms. Maximum loading rate 55,000 bbls.p.h. Max. height of manifold above sea level is 30 m.

The TLU (Position: Lat. 09° 29' 46" N., Long. 75° 44' 15" W.) is a catenary anchor, 6 legged, SPM functioning as a secondary tanker loading berth. Water depth is 25 m. at the berth. Loading is via 24 in. floating hose string with 2×16 in. connections on tanker port side, lifted by 10 ton S.W.L. ship derrick. Maximum loading rate 27,000 bbls.p.h. Max. height of manifold above sea level is 15.0 m. Max. distance bow to manifold 140 m.

BALLAST: No facilities for accepting dirty ballast or slops.

MEDICAL: Emergency medical services are available if needed but not on a routine basis.

DENSITY: 1015–1025, depending on state of Sinu River which empties into the Gulf.

FRESH WATER: Not available locally but could in an emergency be barged from Cartagena.

FUEL: Not available locally but can be barged from Cartagena.

FIRE PRECAUTIONS: See "Port Regulations" (copy placed on board on arrival).

CONSULS: Nearest at Cartagena (3 hours drive) or Barranquilla (4 hours drive).

REPAIRS: No dry dock facilities – minor repairs can be carried out through Cartagena or Barranquilla.

SURVEYORS: ABS, Lloyd's Register and Det Norske Veritas, available from Cartagena with sufficient notice.

Cargo Inspectors: SGS, Saybolt, Caleb Brett.

CARGO GEAR: Port derrick (10 tons S.W.L.) required at TLU.

REPATRIATION: Can be arranged but not encouraged.

AIRPORTS: Cartagena (3 hours drive) or Barranquilla (4 hours drive) to U.S.A. and Monteria (1.5 hours drive) to Bogota for connections worldwide.

TIME: GMT minus 5 hours all year round.

HOLIDAYS: Terminal loads 24 hours per day, 365 days per year.

SHORE LEAVE: Not permitted.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Colombian Peso.

GENERAL: *Prevailing Currents:* Currents off the North coast are set generally E.N.E. to N.E., being a continuation of the Caribbean counter current, and have rates of 0.5 knots – 1.5 knots.

In the entrance to the Gulf, the flow is affected by the coastal counter current, which is E.N.E.-going and attains a rate of nearly 0.75 knots.

Within the Gulf it is affected by tidal streams which are sometimes strong enough to cause a resultant W.S.W.-going flow. This reverse flow seldom exceeds 0.25 knots.

CHARTS: BA. Chart No. 1277. U.S. Chart No. 24512.

SHIPMASTER'S REPORT: June 1986 (Updated 1992).

Vessel: 36,800 g.r.t.

Operator of Terminal: Ecopetrol.

Pilotage: Compulsory within terminal area, except when proceeding to anchor.

A Company Mooring Master will board all vessels scheduled to occupy a loading berth at a position nominated by Mooring Master. At present 3 miles North of SPM (approx.). Mooring Masters are fully licensed Colombian Master Pilots. Mooring Masters remain on board throughout loading and require facilities complying with accepted standards.

Anchorage: At present 3.5 miles North of SPM. Actual position will be given by Covenas Control.

Max. Size: Vessels up to 145,000 tonnes displacement and not exceeding 300 m. LOA may be loaded at SPM. Mean sea level at berth is 25 m.

Tugs: 2 multi-service vessels, including tug capability (equipped with fire fighting and anti-pollution equipment). 2 personnel/pilot vessels. 1 fast boom layer. 1 oil-mop vessel/line handler. 1 hose and line handling vessel.

Medical: No facilities except in an emergency.

Shore Leave: Strictly forbidden.

Fuel: Available from Cartagena; 7 days' notice required.

Repairs: No dry dock available. Minor repairs may be carried out by local engineering firm in Cartagena. These services should be arranged through Agents.

Ballast: Discharge of dirty ballast into sea is strictly prohibited. No facilities for accepting dirty ballast or slops. Vessels must arrive with clean ballast. Ballast samples taken by shore Authorities (this vessel has segregated ballast and samples were taken).

Berthing: One SPM (Tanker Loading Unit) in position Lat. 09° 29' 46" N., Long. 75° 44' 15" W. is a catenary anchor, 6 legged, SPM.

Development – An FSU consisting of a converted 384,000 tons ULCC yoke moored on a custom built catenary anchor leg mooring with a 6 anchor pile spread, mooring in position Lat. 09° 31' 45" N., Long. 75° 47' 11" W. This installation will be the principal unit in the terminal complex as it is due for operation in August 1986. This unit will house Terminal Operations and Control Centre, communications network and accommodation facilities. The unit (FSU) will be capable of simultaneously receiving stabilised crude oil, and loading 2 export

Customs: Will only board between 0700 hrs. and 1900 hrs. If the vessel has not cleared before 1900 hrs. she cannot start cargo. This is a new law by the Port Captain since the end of July 1979, previously he used to issue a waiver and allow loading but some Agencies didn't apply to him and started before Customs came with waiver. A meeting is due to be held before the end of August 1979 on this subject between Agencies, Customs and Port Captain. This means, at present, that it is not advisable to pick up the Boca Chica Pilot between 1730 hrs. and 0530 hrs. as vessel will not be able to work cargo and will probably have to pay an extra day's port costs as they are on 24 hour arrival Pilot basis.

Communications: Barranquilla "HKB". Frequencies: 476; 6463.5; 8666; 13087.5. HF: Channels 5/6; 6, 8, 12 MHz.

Telex: Good.

Telephones: To Europe from Cartagena, 2 to 3 hours delay.

Bunkers/Fresh Water: At Bay piers, can easily be obtained by barge.

Agent: Did not seem aware of new Port Captain decree on not starting cargo at night which cost extra day's port charges, which could have been avoided, until he boarded with Customs.

Apart from the above, very good and attentive. Can be contacted on VHF Channels 16 and 6. A "runner" is on board all the time with a walkie-talkie.

I was told that crew changes are easily done as long as 24 hours notice is given for Immigration clearance. It is quite normal for ships to sail with crew members adrift and as long as Master gives Agent letter of authority for hotel costs and air ticket there are no problems with the Authorities. The nearest British Consul is in Bogota.

Shore Leave: It takes about 20 minutes from Amocar Refinery (At foot of Mamonal jetty) to Cartagena by bus. Rate of exchange: Pesos to Dollar = 200 (1986).

Thieving/Stabbing: All officials and Pilot advised us to make sure we had a very good deck patrol with no ladders overside, thieving at Bay Berths is rife. Also make sure you have some strong weapon with you and you lock yourselves in at night as people have been stabbed in bed when woken by thieves. Lock everything up.

Developments: Considerable developments have taken place in the area in recent years. Cartagena is a big tourist centre from Venezuela and the U.S.

Exports include coffee, fruit, lumber, tobacco, precious metals and petroleum products.

Good road and rail communications exist with Bogota the capital taking about 18 hours.

The Eastern shore of the bay is being developed as an industrial area. The following piers and sea island are in evidence.

ECOPETROL Sea Island (Nestor Pinead Terminal) takes up to 100,000 d.w.t. tankers, 54 ft. at the berth but limited by Boca Chica Channel. Chicksan connections. FW piped to berth, mooring to buoys. Used for export of fuel oil and other petroleum products. Situated just North of Brujas Island.

This vessel kept a good deck watch at all times, even so, an after store was broken into and a small quantity of paint stolen.

Sailing: No difficulties experienced leaving the berth. Tugs used but not made fast, they just push. Mooring Master unberths ship and turns her round off berth, when Sea Pilot takes over. Under normal circumstances this Pilot leaves the ship when passing between the last channel buoys (outwards) in Boca Chica Channel.

Note: During night approach to the port, the Stranded Wreck in Position Lat. 10° 22.9' N., Long. 75° 38.7' W. was showing clearly on the radar, but the light was not seen, and therefore presumed unlit, either temporarily or permanently.

SHIPMASTER'S REPORT: August 1993.

Charts: B.A. Charts No. 1277 and 2434.

Pilot Books: NP 7A (9.102 and following pages).

Approaches: Approach was made from S.W. in near gale force conditions with poor to moderate visibility. At the time, both radars were performing poorly and erratically and the Satnav was out of use, so it made for interesting navigation.

Although the radars did get a weak echo, this turned out to be Cartagena itself, which thoroughly confused the officer on duty, as closer low lying features did not appear at all, and the navigation marks on offshore reef and islands were either destroyed or operating on reduced power.

Bancos de Salmedina Lt. is reported destroyed – not seen.

Isla de Tesoro Lt. operating on reduced power – very difficult to see.

Isla Tierra Bomba Lt. – visible only at 5 miles.

Isla Tiera Bomba D/F station – not operating.

Communications: Agents were informative prior to arrival and did warn about Bancos de Salmedina Lt. They laid great emphasis on security and the necessity of keeping unauthorised people off the ship.

Pilots were contacted in good time and responded well.

Pilotage: Pilot boarded from a very small slow boat by the outer buoy at Boca Chica. Agent had requested that the accommodation ladder be rigged for him, but I considered this unsafe as our rig is aft and leads aft, and would have required the boat to come right under the round-in of the stern by the propeller. Once on board, the passage through Boca Chica was taken slowly and carefully. Once clear of the entrance, the short run across the bay was taken slowly to allow time for a ship to leave our berth. The Agent's boarding officer boarded from a very fast, unlit boat, which was mistaken for some unauthorised approach, and he was lucky not to have been hosed down.

On departure, the Pilot left well inside Boca Chica. I think they do not relish long voyages on their boat.

Berthing: The oil berth at Mamonal is modern and well maintained. Two large tugs were used (tug's ropes), and berthing was accomplished starboard side to without any difficulties.

11,700 tonnes was loaded without incident. Shore personnel were efficient. Officials were pleasant and quick.

Agent's boarding clerk remained on board throughout loading and was very helpful.

Security: We arrived expecting trouble, but the berth is well guarded and secure and no one tried to board from boats.

The Agent's warnings about security are a routine addition to his normal communications and seem to refer more to the general cargo berths.

All in all a surprisingly pleasant and efficient berth and loading operation. No delays, no problems and no thefts.

AUTHORITY: *Operator:* Empresa Colombiana de Petroles, "Ecopetrol", Apartados Aereo 2778 and 1452, Cartagena, Colombia. *Tel:* 685400. *Telex:* 037726, 037858. *Contact:* Ramon Benavides.

COVENAS (Gulf of Morresquillo): 09.25 N. 75.42 W.

(See Plan)

OFFSHORE PETROLEUM TERMINAL – CRAVO NORTE ASSOCIATION

See "General" before first port.

LOCATION: Situated in the Gulf of Morresquillo approximately 56 miles S.S.W. of Cartagena. "Arrived Ship" position is Lat. 09° 33' N., Long. 75° 51.5' W. which is 4.5 nautical miles from the Floating Storage Unit (FSU). (See "Plan"). The Terminal loads one grade of crude oil (API 29.3°. Temperature 88°/90°F).

DOCUMENTS:
Clearance from Last Port.
9 Crew Lists.
9 Personal Effects Lists.
Health Declaration.
Vaccination Certificate.
Derat Certificate.
Copy of Communique of vessel's agency
Ships Register
Log Book
Marpol Compliance Certificate
Certificates – Load Line, Safety Construction, Safety Equipment, Safety Radio, Oil Pollution Insurance, Cargo Gear.

APPROACHES: Golfo de Morrosquillo is entered between San Bernardo (9° 42' N., 75° 42' W.), which is low and sandy, and Punta Mestizo 17 miles S.S.W., its shores are fringed by mangroves and wooded swamps.

The head of the Gulf is backed by a plain, skirted by extensive savannahs, rounded to the East by a mountain range. The highest peaks, standing 12 miles East of the town are Tetas de Tolu, which forms two easily identified hills.

A lighted buoy (flash every 6 secs.), is established on Roca Morrosquillo (9° 35.5' N., 75° 59.5' W.) and represents the mid entry point to the Gulf.

PILOTAGE: Compulsory except for anchoring. A company Mooring Master will board the incoming tanker approximately 4.5 nautical miles N.W. of the FSU. VHF Radio – Stand-by on Channel 16, shift to Channel 10 for manoeuvring – 24 hours' service, weather permitting.

ANCHORAGE: The recommended anchorage for export tankers and vessels having business with the off-shore terminal is within a radius of 1.5 nautical miles of position: Lat. 09° 33' N., Long. 75° 51.5' W.

RESTRICTED AREA: An area has been nominated as a Restricted Area. Within this area all activities which could endanger the subsea installations such as anchoring of vessels, dredging, mechanical fishing (trolling and trawling), disposal of refuse, etc. are forbidden.

The area is bounded by lines joining the following reference points:

1. Punta Bolivar:	Lat. 09° 25' 20" N.,	Long. 75° 43' 40" W.
2. Punta Piedras:	Lat. 09° 25' 25" N.,	Long. 75° 39' 05" W.
3.	Lat. 09° 32' 54" N.,	Long. 75° 47' 12" W.
4.	Lat. 09° 31' 36" N.,	Long. 75° 48' 30" W.
5.	Lat. 09° 32' 12" N.,	Long. 75° 43' 30" W.

RESTRICTIONS: Berthing night and day, weather permitting, in open water in the Gulf of Morrosquillo.

MAX. SIZE: *FSU:* 180,000 tonnes displacement with LOA 300 m.

Minimum Size: 55,000 tonnes displacement with LOA 220 m. for berthing alongside. Vessel can berth either side.

TLU: For berthing at the Tanker Loading Unit (TLU) 145,000 tonnes displacement with LOA 300 m.

Minimum Size: No minimum size providing vessel can handle the system equipment.

The max. draft at the FSU and TLU is 17.0 m. and the max. beam 40.0 m.

HEALTH: Port Authorities grant Free Pratique on clearing the vessel inwards. International regulations in cases of contagious sickness or epidemic are carried out.

RADIO: Radio Barranquilla, HKB.

Arrival Advice: All vessels arriving to load at Covenas Terminals should give following notice, which must be received through agent 72 hours, 48 hours and 24 hours prior to vessel's arrival:

AA Vessel particulars, year built, distance from manifold to bridge, number and diameter of manifold connections and if any reducers 12 in./16 in. available?
BB Arrival/sailing draft. Does your arrival draft keep propeller fully immersed with a trim not exceeding 8 ft.
CC Quantity of ballast. Position and specification (SBT-CBT) and expected deballasting time (hours).
DD Cargo to be loaded.
EE Max. loading rate and topping-off loading rate.
FF Grade of previous cargo. State your last port.
GG Destination port.
HH Is your IGS fully operational and oxygen content in the cargo oil tanks below 8%?
II Is your vessel's closed loading system operational?
JJ Does your vessel comply with OCIMF standards for oil tanker manifolds and associated equipment?
KK Does your vessel comply with OCIMF standards for equipment employed in the mooring of ships at SPM?
LL Your vessel has SWL 10 tons capacity cargo boom/crane operational and capable of handling 16 in. floating hoses?
MM Your vessel's fire fighting system/equipment is in good working condition?
NN Your vessels COW system is in good working condition?
OO Your vessel has closed fair leads for all mooring?
PP Vessel class and type of classification.
QQ Vessel P and I Club name and expiry date.
RR Type of oil pollution policy, expiration date.
SS Vessel ETA.
TT Please advise SDWT in long tons, number of crew members and Master's name, LOA, beam, NRT, GRT.

Note: Please be advised that cargo tanks must be fully inert on arrival. At Covenas 0_2 content below 8% Ecopetrol informs that failure to comply with the above might lead to the vessel being delayed until all are inert. Confirm if vessel has inert gas system.

VHF: Initial radio contact with FSU Covenas or with Covenas Control, Terminal Superintendent and Agents on Channel 16. Shift to Channel 10 for pilot boat, manoeuvring and for cargo operations. The loading vessel, either at FSU or TLU, will be attended on VHF Channel 10.

In case of 2 vessels loading simultaneously at FSU and TLU, the Cargo Loading Master will assign VHF communications channels to each one of them. One of the vessels will work on Channel 10.

RADAR: No port radar service.

TUGS: The use of terminal tugs (2) is at the Mooring Master's and/or Port Authorities' discretion. The mode of operation is made in conjunction with the vessel's Master.

BERTHING: The terminal can load 2 tankers simultaneously, one alongside the FSU and one at the TLU (See "Plan").

The FSU (Position: Lat. 09° 31' 45" N., Long. 75° 47' 11" W.) is a modified 384,000 tons ULCC, yoke-moored on a custom built catenary anchor leg mooring system with a 6 anchor pile spread. The installation is the principal unit in the terminal complex. The Terminal operations and control centre, communications network and accommodation facilities are housed on board. Water depth is 35 m. at the berth. Tankers can berth either side (preferably port side alongside) with 3×12 in. hard arm loading arms. Maximum loading rate 55,000 bbls.p.h. Max. height of manifold above sea level is 30 m.

The TLU (Position: Lat. 09° 29' 46" N., Long. 75° 44' 15" W.) is a catenary anchor, 6 legged, SPM functioning as a secondary tanker loading berth. Water depth is 25 m. at the berth. Loading is via 24 in. floating hose string with 2×16 in. connections on tanker port side, lifted by 10 ton S.W.L. ship derrick. Maximum loading rate 27,000 bbls.p.h. Max. height of manifold above sea level is 15.0 m. Max. distance bow to manifold 140 m.

BALLAST: No facilities for accepting dirty ballast or slops.

MEDICAL: Emergency medical services are available if needed but not on a routine basis.

DENSITY: 1015–1025, depending on state of Sinu River which empties into the Gulf.

FRESH WATER: Not available locally but could in an emergency be barged from Cartagena.

FUEL: Not available locally but can be barged from Cartagena.

FIRE PRECAUTIONS: See "Port Regulations" (copy placed on board on arrival).

CONSULS: Nearest at Cartagena (3 hours drive) or Barranquilla (4 hours drive).

REPAIRS: No dry dock facilities – minor repairs can be carried out through Cartagena or Barranquilla.

SURVEYORS: ABS, Lloyd's Register and Det Norske Veritas, available from Cartagena with sufficient notice.

Cargo Inspectors: SGS, Saybolt, Caleb Brett.

CARGO GEAR: Port derrick (10 tons S.W.L.) required at TLU.

REPATRIATION: Can be arranged but not encouraged.

AIRPORTS: Cartagena (3 hours drive) or Barranquilla (4 hours drive) to U.S.A. and Monteria (1.5 hours drive) to Bogota for connections worldwide.

TIME: GMT minus 5 hours all year round.

HOLIDAYS: Terminal loads 24 hours per day, 365 days per year.

SHORE LEAVE: Not permitted.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Colombian Peso.

GENERAL: *Prevailing Currents:* Currents off the North coast are set generally E.N.E. to N.E., being a continuation of the Caribbean counter current, and have rates of 0.5 knots – 1.5 knots.

In the entrance to the Gulf, the flow is affected by the coastal counter current, which is E.N.E.-going and attains a rate of nearly 0.75 knots.

Within the Gulf it is affected by tidal streams which are sometimes strong enough to cause a resultant W.S.W.-going flow. This reverse flow seldom exceeds 0.25 knots.

CHARTS: BA. Chart No. 1277. U.S. Chart No. 24512.

SHIPMASTER'S REPORT: June 1986 (Updated 1992).

Vessel: 36,800 g.r.t.

Operator of Terminal: Ecopetrol.

Pilotage: Compulsory within terminal area, except when proceeding to anchor.

A Company Mooring Master will board all vessels scheduled to occupy a loading berth at a position nominated by Mooring Master. At present 3 miles North of SPM (approx.). Mooring Masters are fully licensed Colombian Master Pilots. Mooring Masters remain on board throughout loading and require facilities complying with accepted standards.

Anchorage: At present 3.5 miles North of SPM. Actual position will be given by Covenas Control.

Max. Size: Vessels up to 145,000 tonnes displacement and not exceeding 300 m. LOA may be loaded at SPM. Mean sea level at berth is 25 m.

Tugs: 2 multi-service vessels, including tug capability (equipped with fire fighting and anti-pollution equipment). 2 personnel/pilot vessels. 1 fast boom layer. 1 oil-mop vessel/line handler. 1 hose and line handling vessel.

Medical: No facilities except in an emergency.

Shore Leave: Strictly forbidden.

Fuel: Available from Cartagena; 7 days' notice required.

Repairs: No dry dock available. Minor repairs may be carried out by local engineering firm in Cartagena. These services should be arranged through Agents.

Ballast: Discharge of dirty ballast into sea is strictly prohibited. No facilities for accepting dirty ballast or slops. Vessels must arrive with clean ballast. Ballast samples taken by shore Authorities (this vessel has segregated ballast and samples were taken).

Berthing: One SPM (Tanker Loading Unit) in position Lat. 09° 29' 46" N., Long. 75° 44' 15" W. is a catenary anchor, 6 legged, SPM.

Development – An FSU consisting of a converted 384,000 tons ULCC yoke moored on a custom built catenary anchor leg mooring with a 6 anchor pile spread, mooring in position Lat. 09° 31' 45" N., Long. 75° 47' 11" W. This installation will be the principal unit in the terminal complex as it is due for operation in August 1986. This unit will house Terminal Operations and Control Centre, communications network and accommodation facilities. The unit (FSU) will be capable of simultaneously receiving stabilised crude oil, and loading 2 export tankers, 1 secured alongside and 1 at the TLU (SPM) at a maximum of 55,000 bbls.p.h. on FSU. Mean sea level at this berth is 35 m. At present the TLU (SPM) has a maximum loading rate of 27,000 bbls.p.h. and only 1×16 in. hose is connected; 2 will be available when complete complex in operation. Vessels arriving at TLU (SPM) should have port derrick rigged and a bow chain stopper capable of accepting a 76 mm. diameter chain. The vessel is also required to supply a good mooring rope on the forecastle head to use as a messenger for the buoy mooring. Bow fairlead(s) require an opening of 600 mm. × 450 mm. The complex is a joint venture between Ecopetrol, Occidental and Shell.

SHIPMASTER'S REPORT: September 1986 (Updated 1992).

The conventional buoy mooring no longer exists, it has been replaced by a Tanker Loading Unit (TLU) in position Lat. 09° 29' 46" N., Long. 75° 44' 15" W., which is in effect an SBM. There is also a Floating Storage Unit (FSU) in position Lat. 09° 31' 45" N., Long. 75° 47' 11" W., which is a 390,360 d.w.t. tanker permanently moored.

Documents: All ship's certificates sighted. Authorities mainly interested in vessel's Safety Certificates and Pollution Certificates. Shore personnel board vessel once on the SBM, sometimes at anchor if more than one ship being cleared. It would appear authorities only board vessels during daylight hours but this does not prevent commencement of cargo operations.

Pilotage: Vessel contacts FSU when 30 miles off port, FSU will pass on any information regarding berthing, etc. When due to berth Pilot will contact vessel on VHF Channel 16. Pilot usually boards when vessel passing North of FSU, actual boarding area is 2 miles - 292° from FSU (Lat. 09° 32.4' N., Long. 75° 49.1' W.).

Anchorage: Approximately 3 miles West of FSU centred on Lat. 09° 32.9' N., Long. 75° 51.1' W. with a radius 1.5 miles from this position.

Restrictions: None, 24 hour port operations.

Tugs: One small tug assists in berthing, pushing only as required.

Ballast: There are *no shore facilities for dirty ballast so vessels must arrive with clean ballast.*

Berthing: SBM. One chain through centre panama lead onto vessel's AKD stopper, shore able to provide mooring gear if vessel not fitted with AKD stopper. Pilot on forecastle head when approximately one mile from SBM, he is in radio contact with Master on bridge.

Loading: 2×16 in. hoses connected port side. Shore labour connects hoses. 1 crew member required to drive crane/winch. Loading rate 25,000 bbls.p.h. (4,000 cu.m.p.h.). Vessels can load directly from shore or from the FSU.

Points of Interest: Accommodation required for Pilot (who also acts as Loading Master), and 1 Cargo Surveyor. One person (clerk) arrives on board towards end of cargo operations, he completes Bills of Lading on board on completion of loading. Medical facilities are available, the largest town close to Covenas being Tolu.

SHIPMASTER'S REPORT: September 1986 (Updated 1992).

Documents: The officials (Immigration, Customs, Agent, etc.) board before the approach manoeuvre.

The following documents are required:

Crew Lists.
Stores Lists.
Crew Effects Lists.
Cargo Lists.

The authorities also checked the following certificates: Classification, Radio, Construction, Safety Equipment, Oil Pollution and Insurance, Cargo Gear Register (at least 10 tonnes SWL), Last Port Clearance, Derat Certificate.

Pilotage: The pilot boarding area is about 1.0 miles – 2.0 miles W.N.W. of the FSU. The Pilot (Loading Master) remains on board during the loading.

Restrictions: Mooring is carried out during daylight only, unmooring possible day and night.

VHF: VHF Channels 16, 10 and 13 used.

Tugs: There are 2 tugs (supply vessels) with sufficient power to moor and unmoor large vessels. Tugs lines are used.

Berthing: The conventional buoy mooring is no longer in operation and has been replaced by two new units:

Floating Storage Unit: Tankers up to 230,000 tonnes' displacement moor alongside on either side of the FSU. The FSU has 3×12 in. loading arms on each side and hydraulic cranes for the transfer of Loading Master, Assistant, etc.

Mooring consists of 4 headlines, 2 breast lines and 2 spring lines forward and aft. If the vessel uses wire moorings, nylon tails are required. The FSU has quick release hooks.

Tankers Loading Unit: This is a Single Point Mooring for tankers up to 145,000 tonnes' displacement and is equipped with two ADK bow stoppers and fairleads of 600 mm.×450 mm. (for 76 mm. chain).

Manifold connections are on the port side (2×16 in.). Ship's derrick/crane required for hoisting hoses.

IGS: Tankers are required to be inerted (less than 8% oxygen) and are checked prior to loading.

AUTHORITY: *Operator:* Ecopetrol, Distrito Cano Limon Covenas, Redoma San Mateo, Autopista Internacional, P.O. Box No. 1107, Cucuta, Norte de Santander, Colombia, South America. *Tel:* (975) 760260, 760673. *Telex:* 76636. *FAX:* (975) 760422. Contact: Luis E. Duarte, Cano Limon Covenas - District Manager.

FSU – Covenas, P.O.Box 1261, Monteria. *Tel:* (952) 880165. *Telex:* 6300. *FAX:* (952) 880166. *Contact:* Jairo Quintero, Terminal Superintendent.

Port Authority: Port Captain, Naval Base Covenas. *Tel:* (952) 880177. *Contact:* Captain Ruben Dario Sandoval.

POZOS COLORADOS: 11.09 N. 74.15 W. (See Plan)

LOCATION: The terminal is on the North coast of Colombia, approximately 6 miles S.W. of Santa Marta.

DOCUMENTS:

For the Port Captain:

1 Clearance for Last Port.
1 Voyage Report.
1 Crew List.
1 List of Passengers for Santa Marta.
1 List of Passengers in Transit.

Vessel Certificates: (These only need to be shown).

Registration Certificate.
Load Line Certificate.
Classification Certificate.
Safety Equipment Certificate.
Radiotelegraphy Safety Certificate.
Construction Certificate.
Cargo Handling Equipment Safety Certificate.
Oil Pollution Certificate (Insurance for U.S.$1,000,000).

For Port Health Authority:

Derat Certificate.
Maritime Health Declaration.
Toxic Element Certificate.
Crew List with dates of vaccination.
List of Passengers for Santa Marta.
List of Passengers in Transit.

For Customs:

3 Cargo Manifests.
3 Crew Lists.
3 Lists of Passengers for Santa Marta.
3 Lists of Passengers in Transit.
3 Lists of Crew Personal Effects.
3 Lists of Provisions.
3 Mail Lists.

For Agencies:

1 Voyage Report (these only need to be shown).
2 Crew Lists.
2 Lists of Passengers for Santa Marta.
2 Lists of Passengers in Transit.
2 Crew Personal Effects Lists.
2 Lists of Mail for the Port.
4 Cargo Manifests.
4 Bills of Lading.
2 Cargo Stowage Plans.

PILOTAGE: Mooring Master will meet vessels approximately 1 mile seaward of terminal location. He will remain on board throughout the vessel's stay and should be provided with accommodation.

ANCHORAGE: When vessels arrive at night, they anchor 1 mile out to sea from the Terminal.

RESTRICTIONS: Docking only during daylight 0500 hrs. – 1700 hrs. Undocking 0430 hrs. – 1800 hrs.

MAX. SIZE: Berth in approximately 52 ft. of water and can accommodate vessels up to 69,000 d.w.t., LOA 300 m., beam 33 m., max. draft 15.0 m.

HEALTH: Port Authorities board with Mooring Master to enter ship and attend all formalities.

RADIO: *Notice of Arrival:* Agent for the vessel must confirm arrival of vessel at the Port with a minimum advance notice of 24 hours, giving with this information the following information:

Name of the vessel
Name of the Master
Nationality
Last port of call
Destination of the vessel
Overall length
Draft forward and aft
Tonnage to be unloaded
Time at which Pilot is required.

VHF: Permanent communications Vessel-Terminal with VHF Channels 16 and 6. National and International communications through "Empresa Nacional de Telecomunicaciones (Telecom)" 0800 hrs. – 2200 hrs.

TUGS: Tugs are available if necessary for manouevring when berthing and unberthing.

BERTHING: The vessel will be berthed in the area surrounded by the 7 mooring buoys, in following order from for'd port side, passing round stern to for'd starboard side: No. 7, 1, 2, 3, 4, 5, 6. Vessels lie in berth on approximate due North heading; vessel's lines run by means of mooring launch to stern, quarter, and breast buoys. Vessels up to 20,000 d.w.t. require at least 5 good manila lines; vessels in excess of 20,000 d.w.t. require at least 12 good manila lines. These lines must be of not less than 120 fathoms in length each. Synthetic lines of equivalent strength may be used. Vessels equipped with wire mooring winches may use wires in lieu of fibre lines. The mooring requires use of both bower anchors, each having at least 150 fathoms of chain and be prepared to handle 5-ton lift on starboard side at ship's manifold. Because of rigidity of submarine hose, a small movement of vessel out of correct position could damage submarine equipment. Extreme caution must be exercised to ensure that vessel is correctly moored. During loading operation slack must be kept out of submarine hose by adjustment of vessel's anchor and lines.

TERMINAL REPRESENTATIVE: The Terminal has skilled personnel to represent its business on board and they will remain on board during all operations.

HOSES: Submarine hose 16 in. with 16 in. to 12 in. reducer for connection to vessel's 12 in. deck hose. For vessels not equipped with 12 in. deck hose, a 12 in. to 10 in. reducer is available. A 25 ft. length of 10 in. deck hose is also available for vessels not having a deck hose on board. Ship's crew perform all hose connecting, disconnecting, etc.

PUMPING: Pumping rate 23,000 b.h.p. Max. working pressure 150 p.s.i.

CARGO HANDLING: Terminal is designed for loading and unloading crude oil or products. Currently, it is used to unload white products (motor gasoline and virgin naphtha). The products must be transported and unloaded in segregated form. The total capacity of storage is 750,000 bbls. Distance to tanks 9,997 ft. Diameter of line 20 in.
FUEL: No bunkers available at terminal. Acquisition is possible at Cartagena (Colombia). See "General" before first port.
MEDICAL: Doctor and hospital located at Santa Marta, throughout 24 hours.
CONSULS: No consular office in vicinity of terminal.

The following countries have consulates in Santa Marta:

		Phone
Costa Rica	Avda. Libertador No. 33-47	32199
Dominican Republic	Cra. 21 No. 15-99	32962
Ecuador	Las Villas 2a. etapa, Villa No. 15, El Rodadero	27590
Finland	Edificio de bs Bancos Oficina No. 605	35317
France	Calle 17 No. 2-56, Of. 212	32014
Guatemala	Calle 11 No. 1C-23 P. 8	34048
Netherlands and Sweden	Calle 15 No. 3-94	33403
Norway	Calle 11 No. 1C-23 Dpto. 306	33501
Panama	Calle 17 No. 2-56 Of. 416	34253
Peru	Calle 16 No. 1-92	33420

Other Consuls located in Barranquilla, approximately 35 miles distant.
BALLAST: The utmost care must be exercised by all tankers to avoid any contamination of the terminal bay waters, since the entire area is a developing tourist resort. This means that absolutely no deballasting or disposal of bilge water must take place in the bay. Shore deballasting facilities can handle up to 84,000 bbls. if ship provides advance warning.
FRESH WATER: Not available.
REPAIRS: Limited repair facilities available in Santa Marta, approximately 6 miles from terminal.
SURVEYORS: There are 3 petroleum inspection companies.
SHORE LEAVE: Through the ship's Agent, shore leave can be arranged, but sufficient crew must remain on board to handle emergencies. Most Maritime Agencies own 2 safety launches for vessel-shore-vessel routine.
SHIPMASTER'S REPORT: November, 1984.

1. The Terminal is now used exclusively for the import of gasoline.
2. *Mooring:* Forward: 2 anchors and 1 starboard breast line to buoy.
Aft: Lines to 5 buoys, 3 of which require double lines (8 ropes in total aft).
N.B. All ropes require a 'long drift' as buoys are well away from ship. Wire ropes not suitable for this terminal.
(Mooring is a long procedure).
3. Pilot and 'Loading Master' joined at anchor – awaiting tide – and stayed on board throughout stay; in addition 10 personnel have to be fed.
4. *Port Papers:* All ship's documents required for sighting and expiry dates (except, in our case, Ship's Register).
Agents advised the following required:
4 Crew Lists (provided 12 copies and all 'required').
3 Personal Effects Lists (provided 9 copies and all 'required').
3 Stores Lists (provided 4 copies and all 'required').
3 Bonded Lists (provided 4 copies and all 'required').
N.B. Federal Police require at least 2 Crew Lists with complete names not just surnames and initials ('difficult' with Indian crew).
5. *Stores:* Fresh provisions.
6. *Shore Leave:* Shore Passes issued, no problems except for distance to shore. Passes to be returned prior to sailing.
7. No repairs possible – no fresh water – no bunkers.
8. *Discharge:* With 1×12 in. line but fitted with 10 in. reducer to 24 in. undersea line to shore, about 2 km.
Can accept 15,000 bbls./p.h. subject to 7 kg./sq.cm. pressure.
9. *Weather:* (November) Very heavy swell running but this was reported as being very unusual for this time of year. Vessel rolled heavily.

SHIPMASTER'S REPORT: March 1988.
Mooring: The following arrangement was used.

Starboard fo'c's'le shoulder	Two ropes of 150 m.
Starboard aft maindeck	One rope of 150 m.
Starboard quarter	One rope of 200 m.
Stern buoy	
Centre lead aft	Two ropes of 200 m.
Port quarter	One rope of 180 m.
Port aft maindeck	One rope of 180 m.
Port fo'c's'le shoulder	One rope of 200 m.
Port anchor	9.5 shackles
Starboard anchor	8.0 shackles

Vessel moored with a North-going current, in a freshening N.N.E. wind, which reached 30 knots by the end of the mooring. The trade wind is augmented by the sea breeze and blows from approximately 1300 hrs. to 0100 hrs., making conditions difficult for the mooring launch, which is underpowered. One 750 h.p. tug was used and proved effective in positioning the vessel by pushing.

Ship's head in berth was 020°, Pilot stated that 025° to 030° would have been preferable, in order to present less angle to the wind. Berth was originally configured for a ship's head of 000°. The buoy pattern has remained the same, but the ship is now aligned to starboard, which accounts for the differing lengths of moorings required. Winter months are stated to be worst weather conditions, especially February and March.
Cargo Discharge: Rate overall was 2,119 cu.m.p.h. and reached a maximum of 2,640 cu.m.p.h.

Estacion Pozos Colorados, Santa Marta, Colombia. Telex: 38 849. Tel: 7499, 7095.

PUERTO BOLIVAR: 12.16 N. 71.57 W. (See Plan)

LOCATION: Puerto Bolivar is at the entrance of Bahia Portete, a natural bay on the North coast of Colombia's Guajira Peninsula, located at Lat. 12° 16' N., Long. 71° 57' W. It is on the Caribbean, about 350 km. N.E. of Barranquilla.

DOCUMENTS:

1. According to the rules in force at the time these regulations were approved, the vessel's Master shall show the Authorities and the Port Cargo Inspector the following documents:
Register Certificate.
Classification Certificate. Cargo ships shall show the Certificate of Safety Construction for Cargo Vessels.
Load Line Certificate.
Pollution Certificate that must cover Colombian waters (See "Note").
Certificate of Radiotelegraphy and/or Radiotelephony.
Cargo vessel Safety Equipment Certificate with valid annual inspection carried out by an independent surveyor.
Derat Certificate.
Clearance from the Last Port.
Notwithstanding the above, the Master shall show the Port Authorities whatever other documents they may require.
Note: All vessels and marine craft that arrive in Puerto Bolivar shall comply fully with the International Convention for the Prevention of Pollution by Vessels of 1973 and its 1978 Protocol (Marpol 73/78) including all its amendments in force.
2. According to the rules in force at the time these Regulations were approved, the Master shall hand over the following documents to the Port Authorities:
5 Crew Lists containing the following information: name, capacity in which serving, I.D. Documents – class and number – or licence, nationality, date and place of birth.
4 Stores Lists; narcotics for medical use must be listed in detail as well as tobacco, alcoholic beverages and taxable goods according to the Customs General Directorship.
4 Mail Lists, if any.
3 Crew Curio and Personal Effects Lists.
3 Passenger Lists, if any.
2 Quarantine Declarations.
4 Stowage Plans.
Notwithstanding the above the Master shall hand over to the Port Authorities other documents that they may require.

APPROACHES: *Landmarks:* For vessels arriving from the Eastern Caribbean, Punta Gallinas (Lat. 12° 28' N., Long. 71° 40' W.) is approximately 20 miles E.N.E. of Puerto Bolivar.

For vessels arriving from the Panama Canal or ports to the West of Puerto Bolivar, Cabo de la Vela (Lat. 12° 13' N., Long. 72° 10' W.) is approximately 12 miles W.S.W. of Puerto Bolivar. Both Landmarks have prominent lighthouses which are shown in the appropriate light lists.

In addition there is a rotating beacon on the shiploader at Puerto Bolivar with the following characteristics:
Position: Lat. 12° 15.6' N., Long. 71° 58.9' W.
Description: Rotating white beacon.
Period: Flashing white every 2 seconds.
Height: 35 m. (115 ft.).
Visibility: 18.75 miles.
Fairway Buoy: The Port entrance is marked by Channel Buoy No.1 (Racon). Located in position Lat.12° 17' 30" N., Long. 71° 58' 54" W., flashing green every 2 seconds. Code (M) international code signal.
Aero Beacon: The company airport at Puerto Bolivar has an aero beacon located in position Lat. 12° 13' N., Long. 71° 58' W. with the following characteristics/frequencies: 400 kHz – "PTE" – Continuous. Also 415 kHz – "PB".
Channel: Vessels will enter and leave the port by a dredged channel 3.5 km. in length that connects the turning basin with the open sea. The channel's allowable ship's draft is 17 m. (max.). Minimum depth in channel and Berth Reach is 19 m.
Turning Basin: Allowable ballasted draft is 9.0 m. (max.). Vessels scheduled to load enter the circular turning basin, depth 11.5 m., where they are completely stopped, then turned by tugs to berth at the coal pier, port side to.

PILOTAGE: Compulsory. Pilot normally boards 2 miles North West of Buoy No.1 or at anchorage.
Pilot Ladder: Unless otherwise advised, the pilot ladder should be rigged on the starboard side of arriving ships.

The pilot ladder, should be of a SOLAS 1974 approved type. To meet those specifications it must have one-piece non skid steps equally spaced, about 14 in. apart with spreader bars five steps from the bottom and then at 9 ft. intervals.

Ships having a freeboard in excess of 30 ft. must have a suitable accommodation ladder rigged adjacent to the pilot ladder so that the Pilot can transfer to it when boarding. Ships' Masters may know this as "The Rotterdam Rig".

ANCHORAGES: Defined by Colombian Port and Maritime Directorship (DIMAR) as follows:

The anchorage area for vessels and marine craft that arrive in Puerto Bolivar shall be located within the following points and geographical co-ordinates:

Point A.	Lat. 12° 19' N.,	Long. 72° 02' W.
Point B.	Lat. 12° 19' N.,	Long. 72° 00' W.
Point C.	Lat. 12° 17' N.,	Long. 72° 00' W.
Point D.	Lat. 12° 17' N.,	Long. 72° 02' W.

The quarantine area for vessels and marine craft that arrive in Puerto Bolivar shall be located within the following points and geographicalco-ordinates:

Point A.	Lat. 12° 19' N., Long. 72° 04' 30" W.
Point B.	Lat. 12° 19' N., Long. 72° 03' W.
Point C.	Lat. 12° 17' N., Long. 72° 03' W.
Point D.	Lat. 12° 17' N., Long. 72° 04' 30" W.

The anchorage and quarantine areas established in the above articles are experimental and therefore all vessels and marine devices shall manoeuvre with care.

MAX. SIZE: The Port can accommodate vessels with the following dimensions:

LOA	300 m. (984 ft.).
Beam	45 m. (147 ft.).
Max. Loaded Draft	17 m. (55 ft.).
Max. Ballasted Draft	9 m. (30 ft.).

Minimum Acceptable Drafts for Manoeuvring in Puerto Bolivar:

Deadweight (tons)	*Forward Draft* (m.)	*Aft Draft* (m.)
10,000 – 30,000	3.04	4.87
30,000 – 50,000	3.65	5.48
50,000 – 70,000	4.57	6.40
70,000 – 100,000	5.49	7.31
Over 100,000	7.31	9.00

HEALTH: Radio Pratique is not granted and vessels arriving will have to be granted Pratique upon entering port or at anchorage. The standard World Health Organisation Certificate must be used.

RADIO: Coastal Station HKB may be used for routine messages.

Estimated Time of Arrival Notices: Masters should advise their ETAs upon receipt of orders to proceed to Puerto Bolivar. In addition, 72, 48 and 24 hour ETAs should be transmitted to INTERCOR with a copy to Agent.

ETA Message Text: (To be cabled with the first ETA, at least 72 hours before arrival).

R = Information requested.
NA = Information not requested because not applicable to vessel's type.

NOTES:

* Colombian local time 5 hours slow compared with GMT.

** Maximum segregated ballast possible provided maximum draft does not exceed 9.0 m., the propeller is acceptably immersed and the trim does not exceed 6 ft. by the stern. Double ballast tanks used to comply with draft requirements must be completely full or empty. Also top tanks used must be empty or measurable (completely full), so loading can commence as soon as draft readings are completed.

The boarding pilot will usually be accompanied by a draft surveyor. Masters are requested to provide a ship's officer or other qualified representative so that tank soundings, as part of the draft survey, can commence during the vessel's transit to the loading berth.

Lack of compliance with any of the above requirements may result in unnecessary delays in acceptance of the vessel to load. Serious misrepresentations could result in non-acceptance of the vessel.

The Master should be aware of government regulations on port operations (Res. 162. April 3rd 1995 of Superintendencia General de Puertos) before arrival. If not, he should consult with his agent to ensure his vessel's compliance.

Normal port handling rate for coal is average 3,000 – 5,000 tonnes/hour reaching peaks of 10,000 tonnes/hour.

VHF: VHF Radio Channels 14 and 16; call "Puerto Bolivar Marine" for anchoring or berthing instructions. Normal marine communications will be available.

TUGS: 3×4,000 h.p. and 1×3,000 h.p. to be located at the port. The use of tugs both entering and leaving is mandatory. Tugs will be utilised as deemed necessary by the Pilot. Tugs will normally be made fast prior to entering the channel for inbound ships. Tugs will utilise their own lines but ships should have crew standing-by with heaving and messenger lines to be used as directed by the Pilot.

BERTHING: *Cerrejon Coal Terminal:* The single coal berth is in operation 24 hours daily, year round, except December 31st (1200 hrs.) till January 6th (0600 hrs.). The berth has 3 breasting dolphins and is designed for a maximum ship size of 150,000 d.w.t., 300 m. LOA, 45 m. beam, and 17 m. draft.

Oversize vessels will be considered on an individual basic and will require special approval by Port Authorities and Port Operator prior to acceptance.

Access to the Port is via a dredged lighted buoy channel approximately 3.5 km. (1.9 miles) long and 225 m. (738 ft.) wide on a 327° – 147° true heading. The principal coal loading berth is located on the West side of the bay.

An additional pier designed for other commodities may be utilised for coal loading. Length of pier 280 m. Max. draft permissible 9.8 m. Tankers berth on East side and general cargo vessels on the West side.

After embarking the Pilot, vessel proceeds down the main ship channel past the coal loading pier. During transit and mooring tugs are used depending on vessels size. Vessel continues into turning basin where she is completely stopped and turned, to berth port side to. Smaller ships using the commodities pier may or may not be turned prior to berthing.

Vessels will normally load on a first come, first served basis.

Ships to load must arrive with clean ballast carried in segregated ballast tanks, with holds swept clean and, in the case of ore-oil or OBO vessels gas free.

At Pilot's discretion and with approval of Port Operator a vessel may be requested to ballast a cargo hold for manoeuvring and berthing purposes.

The maximum distance between the bottom of the shiploader spout and MLW is 23 m. The average tide is 0.35 m.

Mooring Line Arrangements: The number of lines or wires will depend on the d.w.t. and/or displacement of the vessel. In general, vessels will utilise head, stern and spring lines. The leads for the head and stern lines are almost perpendicular to the ship's side.

The number of lines and specific mooring arrangement will vary from ship to ship and will be reviewed by Pilot and Master, prior to mooring.

Should a vessel have insufficient or poor quality mooring ropes or wires to safely keep her properly berthed, the terminal will provide same as necessary. This determination will be made by the Pilot prior to berthing or by the loading supervisor after the ship is alongside. Charges will be assessed against the vessel for these services.

BULK HANDLING FACILITIES: *Railroad:* The 150 km. mine to port railroad is dedicated to handling Cerrejon coal.

Stockpile: Maximum storage is 1.7 million metric tons (tonnes), live storage is 1 million tonnes.

Weights: Will be determined by draft survey.

Sampling: The Ramsey automatic sampler operates according to ASTM standards.

Analysis: ASTM standards are applied.

Shiploader: One line loader can handle up to 10,000 tonnes/p.h.

Trimming: Spout trimmed.

Also see "General".

MEDICAL: First aid treatment is available, but not on a routine basis. Extreme emergencies must be handled at Barranquilla.

FRESH WATER: Not available.

FUEL: Not available. Nearest bunkering ports are Cartagena, Aruba and Curacao.

REPAIRS: No facilities for major repairs. Also see "General".

SURVEYORS: Exclusive surveyors for A.B.S. and Lloyds' are located at principal Colombian ports. These surveyors may or may not also act as non-exclusive surveyors for other classification societies.

Masters should be reminded that sufficient advance notice (at least 72 hours) should be given when requesting classification society services.

OPENING/CLOSING HATCHES: All hatches must be open in order to permit hold inspection before entering Puerto Bolivar Channel.

REPATRIATION: Because of the port's remoteness, it is suggested that seamen neither join or leave at Puerto Bolivar.

AIRPORT: The nearest international airport is at Barranquilla (326 km.).

TIME: Local time is GMT minus 5 hours.

WASTE OIL DISPOSAL: Available only via tanker truck. Any interruption to loading will be for vessel's account, and will be additional to truck charges which are under review at present. Service should be arranged through agent.

SEAMAN'S CLUBS: None at present. Shore leave not permitted.

GARBAGE DISPOSAL: Up to 20 tonnes of solid waste, bagged and segregated can be received under the conditions and tariffs included in the Port Manual.

CURRENCY: Colombian Pesos.

GENERAL: Port charges available upon Master's and/or Agent's request. Charges will be made for pilotage and tug service. Full agency service will be provided through a licensed Colombian Agent of Owner's and/or Charterer's choice.

Publications:

N.O. Chart No. 24460.
B.A. Chart No. 1529, 1966.
Colombian Chart No. 228.
Sailing Direction No. 144 (U.S.) and Coast Pilot No. 7A (British).

Weather: Puerto Bolivar is generally outside the hurricane belt. Prevailing winds are from the North East. In the area of the Port, winds may gust to 35 – 40 knots.

Months of high winds are December to March and July and August. Dry season is from November to May. The wet season is from May to November. This is in general for this area. At Puerto Bolivar, rain is infrequent.

Stores: Very limited amounts of stores of an emergency nature only will be available and can be expected to be expensive due to the remote location. Request must be advised with the first ETA and availability still cannot be guaranteed.

Bonded Stores: No bonded stores are available.

Navigational Publications and Charts: Navigational charts and/or publications are available on a very limited basis with prior radio request through the Agent (See "Publications").

Mail: Mail may be sent and received through vessel's local Agent. Owners should be advised that as all mail must be channelled through Barranquilla or Cartagena Agents, addresses in those respective cities should be used as no mail is received at Puerto Bolivar at this time.

Laundry: No laundry services are available at this time.

Transportation: As Puerto Bolivar is in a remote location it is suggested that crew members neither join nor be repatriated from Puerto Bolivar. However, should it be deemed necessary that this be done, the Agent can arrange same. As the closest international airport is in Barranquilla, approximately 326 km. away, the cost will be significant. Air transportation out of Barranquilla is not on a daily basis to all world points and costly delays could possibly be encountered.

Gangway: Terminal will normally provide gangway, ship's crew will be responsible for it's mooring and safety. If necessary, vessels will utilise their own gangway or accommodation ladder.

Emergency Towing Wires: Vessels while alongside piers shall have fire wires to enable the vessel to be towed from the pier should it become necessary. These fire wires will consist of at least 2 wires, one forward and one aft, hanging from the vessel on the outboard side. They shall be made fast on deck and small hang approximately 6 ft. from the water's edge when the vessel is in a light condition. They shall consist of wire of a diameter in proportion to the size of the vessel, however, the minimum acceptable fire warp shall be 1 in. wire. Each wire will have an eye at the end hanging over the water.

Notice of Readiness: Notice of Readiness shall be submitted by Master and will be accepted by the Loading Supervisor at such time when vessel has arrived at the loading port, is ready to load, and in Free Pratique whether at berth or not.

Cleanliness of Holds: All holds will be inspected prior to entering Puerto Bolivar Channel, by the Pilot.

Emergency Shutdown: If an emergency should occur making it necessary to immediately stop loading operations, the ship shall sound short blasts in groups of five blasts on the ship's whistle and immediately contact Puerto Bolivar Marine Operations on VHF Channel 14 or 16.

Ballast: The maximum ballasted draft for vessels entering Puerto Bolivar is 9.0 m. All ballast must be clean and carried in segregated ballast tanks. It is prohibited to pump any ballast overboard other than that which has been carried in designated ballast tanks and is clean. Vessels arriving at Puerto Bolivar should have all cargo holds clean and ready to receive cargo. Should ballast have been carried in the holds, it would be necessary for this hold to be cleaned and dried prior to entering port.

Prior to entering port the Pilot will inspect the vessel and may or may not request more segregated ballast to be pumped out or additional ballast be added to certain segregated ballast tanks should the trim of the vessel so require. Vessels down by the head or according to their size, trimmed excessively by the stern thus making their manoeuvrability unacceptable will not be allowed to enter port.

Trim: The terminal shall co-operate in every possible way with the ship to obtain the required trim. Masters are reminded that the responsibility to trim their vessel for sailing draft shall be their responsibility and the terminal shall load the vessel based on information submitted by the ship's Master.

Customs and Immigration: Puerto Bolivar is a Port of Entry and Colombian Government Customs and Immigration officials will board vessel either at anchor or when made fast alongside the pier. All formalities and necessary documents should be made available to them at this time. Masters are advised that they are expected to extend the usual common courtesies to visiting officials. However, gratuities in the form of liquor or cigarettes are neither necessary nor expected.

Swimming and Fishing: Swimming in the harbour is prohibited, either from the ship, pier or shore.

Fishing over the side or from the pier is also prohibited.

Firearms and Ammunition: The display, carrying or discharge of firearms is prohibited on board or within the port area.

Drugs and Alcohol: The purchase or sale of drugs is illegal and is strictly prohibited. Violation of this law may result in fines and/or imprisonment.

The sale of alcohol by ship's crew is also prohibited.

Fire Signal: Fire on board shall be indicated in the same manner as emergency shutdown – short blasts in groups of 5 on the ship's whistle for at least 1 minute or until acknowledged by shore side marine operations. Advice of fire should also be given by VHF on Channel 12 or 16.

Fire Fighting Procedures: Vessels while alongside or at anchor have the responsibility for fire fighting aboard their own vessels. Upon request, the terminal operator may join in fighting a shipboard fire by utilising the tug boat water/foam fire fighting capabilities.

INTERCOR reserves the right to fight fires and take other action as deemed necessary, even if not requested, including removal of the vessel from her berth to anchorage if it appears that the fire is a threat to the terminal.

Loading Supervisor: The Loading Supervisor shall be in charge of all cargo operations and in conjunction with the vessel's Chief Officer shall control the vessel's loading operation. Prior to commencement of loading, planned loading procedure and hatch sequence will be agreed upon between the Loading Supervisor and the Chief Officer. Prior to arrival, the Chief Officer should be requested to have drawn up a proposed loading plan for review.

Loading Rate: Normal loading rate is 10,000 t.p.h. Vessels must be able to discharge all ballast in time so as not to impede loading. Should a cargo loading shutdown be necessary because of vessel's inability to discharge her ballast in time to prevent exceeding her permissible draft, all time lost will be for vessel owner's account.

Overload Drafts: Prior to loading, the full amount of cargo to be loaded should be determined between the Chief Officer and the Loading Supervisor. Masters are advised that they are responsible for obeying all laws pertaining to International Load Lines and shall be held solely responsible for any overloading on their part. When topping off, the terminal shall in every way co-operate with the ship to assist in attaining their legal draft within Puerto Bolivar constraints. Should erroneous information be given to the terminal and should the vessel for some reason be overloaded, the costs of discharging any cargo shall be for the account of the vessel's Owners.

Repairs: Only repairs of a very minor nature can be effected at Puerto Bolivar. These must be proven to be of an emergency nature and necessary for the pursuit of the voyage. While every effort will be given to assist vessels in any way possible, Masters must keep in mind that no shore side facilities are available.

SHIPMASTER'S REPORT: August 1986 (Updated 1996).

Vessel: 107,000 d.w.t.

Location: Puerto Bolivar is situated at the entrance to the Bay of Bahia Portete approximately 350 km. N.E. of Barranquilla. The port is the outlet for coal mined at Cerrejon 150 km. away, the coal is transported from the mine by train.

Organisation: Marketing is handled by either of the two partners, Intercor or Carbocol, on a 7 day on 7 day off basis. The terminal is self sufficient in all services, electricity, fresh water, maintenance, etc.

Product:

Bituminous steam coal from El Cerrejon.
Density +0.8 to 1.0 tonnes/cu.m.
Stowage factor is given as 41/42 cu.ft./ton but as a practical guide we stowed at 41.5 cu.ft./tonne.
All cargo weights used are tonnes.
Particle size loaded: Max. 50 mm.
No methane gas is emitted from coal.
No history of spontaneous combustion. No ventilation is recommended, holds being kept sealed whilst under way.
Moisture content: 11.5%.

Maximum size of vessel: The largest ship to visit the port to date is 150,000 d.w.t. which is the maximum allowed at this time. Max. allowed sailing draft is 17 m., max. LOA 300 m. and max. beam 45 m.

Approach: No Radio Pratique is granted.

Two hours before arrival contact "Puerto Bolivar Marine" on VHF Channel 16 for berthing/anchoring instructions.

All vessels are allowed to berth 24 hours daily.

Channel Buoy No. 1 is fitted with racon (morse 'M'). (Also see "Shipmaster's Report" – September 1986).

Charts: Colombian chart COL. 228 issued by the Colombian Government and the United States Hydrographic Department. This chart is available from the Port Captain's Office at Puerto Bolivar. There is also a small chartlet issued by Intercor.

Anchorage: The anchorage is very exposed. Recommended anchorage is 3.5 nautical miles N.W. of Buoy No. 2 in 170 ft. of water. The prevailing winds are N.E. 25 to 35 knots. The prevailing current is S.W. going at a rate of 1 knot to 2 knots. We anchored with 8 shackles in the water and yawed between N.N.E. and East.

Pilot: The Pilots board from a tug in position 2.5 nautical miles N.W. of Channel Buoy No. 2. The Draft Surveyor also boards with the Pilots.

The pilot ladder was rigged on the starboard side 2.0 m. from the water. The Pilot carries out an inspection of the holds and issues a Hold Inspection Certificate if the holds are found dry and clean without mineral residues. Ballast holds are inspected after the vessel is alongside.

The Pilot will not berth the vessel if the wind exceeds 35 knots.

Draft Surveyor: The Bill of Lading weight is determined by draft survey carried out by independent Surveyor. The Surveyor determines the net lightweight of the vessel prior to loading then completes his survey on completion.

A Weight Certificate and Survey Report is provided for the ship.

Tugs: All 4 tugs make fast on the starboard side of the vessel using their own lines. 3 tugs make fast before the vessel enters the approach channel.

Channel: Well buoyed. Length of channel 4 km. Width 225 m. and depth 19 m. Maximum draft allowed 17.0 m.

Turning Basin: Width 600 m., depth 11.0 m. Max. allowable draft 9.0 m.

Masters should ensure that propeller is acceptably immersed, according to minimum acceptable drafts for manoeuvring in Puerto Bolivar (See "Max. Size").

Vessels are turned to port before berthing port side to the loading berth.

Coal Loading Berth: Maximum air draft allowed 21.0 m.

The Coal Berth operates throughout 24 hours.

The vessel berths against 3 large patent fenders with mooring lines being made fast to quick release bollards using shore capstans to heave the lines.

Springs are made fast first, then breast lines, then head/stern lines.

Shore gangway is usually rigged by shore gang. Once the gangway is secured on board, its safety and care is the ship's responsibility.

Three stacker/reclaimers now in operation. Exceptional case, loading rate usually between 6,000 t.p.h. - 10,000 t.p.h.

Most of the coal is reclaimed from the stockyard and only occasionally is coal sent directly from rail cars. The loading rate may reach peaks of about 10,000 t.p.h.

The stockpile can store a maximum of 1.7 million tonnes.

The loader stops work if wind exceeds 35 knots.

Officials on Arrival: 1 Port Captain, 3 Customs Officers, 1 Port Health Official, 2 Agents.

No Immigration Officials as shore leave is not allowed.

Arrival Forms: 6 Crew Lists, 1 Maritime Health Certificate, 2 Bonded Stores Lists, 2 Ship's Stores Lists, 2 Crew Effects Lists, 2 Vaccination Lists.

Certificates Required by Port Captain Prior to Clearance: Ship's Register, Clearance from Last Port, Derat Certificate, International Oil Pollution Certificate, Load Line Certificate, Safety Radio Certificate, Safety Equipment Certificate.

Shore Leave: Not allowed.

Repatriation: Not recommended due to the remoteness of the port.

Fresh Water: Not available.

Bunkers: Not available.

Ship Repairs: No facilities.

Chandler and Provisions: None available.

Medical: First Aid treatment is available only in emergency. Extreme cases must be flown to Barranquilla.

Time: Local time is GMT minus 5 hours.

Security: Watertight as no unauthorised persons are allowed on board and no shore leave is allowed.

SHIPMASTER'S REPORT: August 1986 (Updated 1996).

Vessel: 72,000 d.w.t. LOA 230 m. Sailing Draft: Forward 12.78 m. Aft 12.80 m.

ETA: Master to give 14, 10, 5, 4, 3, 2 and 1 days ETA to INTERCOR Barranquilla, INTERCOR Puerto Bolivar and ship's Agent.

Arrival: Pilots and tugs meet ships about 2 nautical miles N.W. off Buoy No. 1. Two tugs making fast with tug's ropes assist ship through the dredged channel. Having passed the loading pier, the ship is stopped, and the 2 tugs swing the ship assisted by 1 or 2 more tugs as appropriate. Vessels always berth port side alongside. This vessel (230 m. LOA) used 2 lines, 2 breasts and 2 springs each end.

After Pilot came on board, Master and Pilot exchanged information regarding ship's particulars and berthing procedure, etc.

A Vessel Inspection Report/Pre-Berthing delivered by Pilot and to be filled in before entering port. Puerto Bolivar Safety Regulations and Safety Check List also delivered.

Various regulations received from Agents by telex. The essence of the regulations is that the loading facility is very effective, and ship's officers are not allowed to stop loading for making draft surveys, etc. A stop can only be done *once,* and it should be for trimming purposes. The importance of having calculated a fixed and reliable loading rotation should be emphasised.

Approaches to Puerto Bolivar: Colombian Chart Col. 228 is available from the Port Captain's Office at Puerto Bolivar.

Anchorage: The anchorage is about 2 nautical miles N.W. of Outer Channel buoys, holding ground found to be good.

Ballast: It is recommended to have the ship well ballasted when passing through the dredged channel when current and wind are abeam of the ship.

Crew Changes: Crew change is difficult but possible. One crew member joined the ship and one was repatriated. They were transported from and to Barranquilla by car – a journey of about 6 hours.

VHF: Puerto Bolivar Marine (Port Control) and Agents listen on VHF Channel 16 around the clock, working on Channel 14.

Tugs: All 4 tugs are under Colombian flag and owned by the Port Operator.

Survey: A surveyor appointed jointly by the Shipper and Buyer carries out draft surveys, and will board outside the Entrance Channel with the Pilot.

Supplies: No people live in the port and surrounding area. All workers work for 4 days and then go home for 4 days. No shops or markets or ship's chandlers available. All necessary supplies have to come from Barranquilla which is costly and difficult. However, in the port area there is a small supermarket, where shore personnel can buy their daily needs. It may be possible for Agents to supply a very limited amount of fresh fruit and a few kilos of coffee.

Port: Port found to be very safe in spite of the wind constantly blowing against the pier with wind forces up to 40 knots. There was no swell at all, but very choppy sea made it difficult to read ship's draft.

SHIPMASTER'S REPORT: September 1986 (Updated 1990).

Vessel: 117,600 d.w.t.

Navigation: Buoy No. 1 (position Lat. 12° 17' 31" N., Long. 71° 58' 48" W.) in the Harbour Approach Channel has been fitted with Racon and bell.

No light exists on Point Coco.

Pilot boards about 2 nautical miles W.N.W. of Buoy No. 1.

Tugs: 4 good tugs work in this harbour.

General: Cargo holds are inspected by the Pilot while at anchor, and a Certificate of Cleanliness is issued if the holds are found acceptable.

Used St. Lys Radio (FFL) when in the Atlantic and when in the Carribean used Barranquilla Radio (HKB). All cables received at Agents main office in Bogota without delay.

Messages regarding ETA should also be cabled direct to Port Authorities in Puerto Bolivar, care of "INTERCOR Puerto Bolivar".

Shore Leave: Not permitted.

SHIPMASTER'S REPORT: January 1991 (Updated 1994).

ETA Message: See "Radio".

If the vessel does not send this message at least 72 hours before arrival the port operator can refuse to permit start of loading operations until the Master conforms with the regulations requested by the operator.

Information must be given by the Master to INTERCOR and the ship's agent with first ETA telex, at least 72 hours prior to arrival at Puerto Bolivar.

Ballast: Vessel should arrive with maximum segregated ballast such that maximum draft does not exceed 9 m., the propeller is accepably immersed and trim does not exceed 6 ft. by stern. Ballast tanks used to comply with draft requirements must be completely full or empty so that loading can commence as soon as draft readings are completed.

The boarding Pilot will usually be accompanied by a draft surveyor. Masters are requested to provide a ship's officer or other qualified representative to enable tank soundings and part of the draft survey to be completed during the vessel's transit so as to avoid unnecessary delay in acceptance of the vessel to load.

The Master should be aware of government regulations on Port Operations (Res. 1429 15 Nov-DIMAR) before arrival. If not, he should consult with his agent to ensure his vessel's compliance.

Loading: The shippers loading procedures allow a maximum of 2 rotations per hold. One stoppage of a maximum of 45 minutes is permitted for a draft check with additional stoppages being for the vessel's account. Trimming is restricted to 3 holds after draft check to obtain vessel's sailing draft.

Maximum quantity for final pour in any hold is 100 tonnes.

Any delay caused by vessel during loading operation will be charged by the shippers at U.S. $1,500 per hour.

In an emergency the belt can be stopped immediately.

Chart: New U.S.A.-DMA Chart No. 24469 has been published (Approaches to Bahia de Portete, Puerto Bolivar Approach Channel).

SANTA MARTA (Including Puerto Prodeco): 11.15 N. 74.14 W. **(See Plan)**

DOCUMENTS:

For the Port Captain:

1 Clearance from Last Port.
1 Voyage Report.
1 Crew List.
1 List of Passengers for Santa Marta.
1 List of Passengers in transit.
1 List of Provisions.

For Port Health Authority:

Derat Certificate.
Maritime Health Declaration.
Crew List with dates of vaccination.
List of Passengers for Santa Marta.
List of Passengers in Transit.

For Customs:

3 Cargo Manifests.
3 Crew Lists.
3 Lists of Passengers for Santa Marta.
3 Lists of Passengers in Transit.
3 Lists of Crew Personal Effects.
3 Lists of Provisions.
3 Mail Lists.

For Agencies:

1 Voyage Report.
6 Crew Lists.
6 Lists of Passengers for Santa Marta.
6 Lists of Passengers in Transit.
2 Crew Personal Effects Lists.
2 Lists of Mail for the port.
4 Cargo Manifests.
4 Bills of Lading.
2 Cargo Stowage Plans.

PILOTAGE: Pilot boarding station: Lat. 11° 14' 44" N., Long. 74° 13' 58" W. Information regarding ETA should be relayed to Agent, who will advise Port Authority. Pilotage compulsory for all vessels over 200 g.r.t.

ANCHORAGES: When it is not possible to come alongside a berth immediately, the vessel may anchor within the area included within the following coordinates.

Lat. 11° 14' 45" N., Long. 74° 13' 15" W.
Lat. 11° 14' 45" N., Long. 74° 14' 00" W.
Lat. 11° 14' 15" N., Long. 74° 13' 25" W.
Lat. 11° 14' 15" N., Long. 74° 14' 00" W.

Seabed is rocky and sandy, with depths about 120 ft.

Vessels should anchor in the lee of the Morro Grande and Morro Paqueno (large and small headlands), particularly during the months of December to March, when there is a strong N.E. wind.

RESTRICTIONS: None. Good visibility throughout year. Difference in tides negligible.

MAX. SIZE: 730 ft. length, 40 ft. draft. No limit to beam.

Oil carriers: See "Pozos Colorados".

PRATIQUE: Pratique granted by Port Captain who visits vessel immediately on arrival. Doctor also attends on this visit.
RADIO: Barranquilla Radio or Cartagena Radio; radio stations messages relayed by telex to Sta. Marta. Ship's Agents use same system. Terminal Office may be contacted on radiotelephone, 2738 kHz.
TUGS: Join vessels just before entrance to inner harbour; they may use own lines or vessels lines.
CRANES: 5×10 ton – 30 ton mobile cranes and 2 cranes 90 tons and 100 tons on rails. 1×42 ton Kalmar crane available.
BERTHING:

Quay	*Length*	*Minimum Depth*
No. 1	175 m.	38 ft.
No. 2	145 m.	33 ft.
No. 3	232 m.	45 ft.
No. 4	153 m.	40 ft.
No. 5	153 m.	60 ft.
No. 6	100 ft.	15 ft.

Facilities exist for container traffic. 30,000 tons silo for grain storage and discharge facilities for up to 5,000 tons per day.
BULK HANDLING FACILITIES: *Puerto Prodeco:*
Location: Lat. 11° 09' N., Long. 74° 13' W.
Depth: 18.0 m.
Loading: At anchorage 1 mile – 2 miles offshore.
Working: 24 hours a day, 7 days a week.
Facilities: 4×1,500 d.w.t. barges for carrying coal.
Barges loaded at pier at a rate of 8,000 tonnes per day.
STEVEDORES: ETA to be given 72 and 24 hours before arrival, indicating number of gangs required. Unloading rate of general merchandise 10 t.p.h., and homogeneous cargoes around 15/20 tons. *Working Hours:* First shift: Monday to Saturday and holidays, from 0800 to 1200 hrs. and 1400 to 1800 hrs. Second shift: Monday to Friday, from 1800 to 0200 hrs.
MEDICAL: Advance notice required whenever special medical attention needed on arrival; hospital available.
TANKERS: See "Pozos Colorados".
DENSITY: 1025.
FRESH WATER: Available alongside docks: delivery (approx.) 10 t.p.h.
FUEL: Not available.
CONSULS:
Costa Rica
Ecuador
Finland
France
Guatemala
Italy
Netherlands
Norway
Panama
Peru
Sweden
REPAIRS: Only minor welding.
GANGWAY/DECK WATCHMEN: Deck watchmen supplied by Agent.
OPENING/CLOSING HATCHES: By special gang ordered by Agent.
CERTIFICATES: (These only need to be shown)
Registration Certificate.
Load Line Certificate.
Classification Certificate.
Safety Equipment Certificate.
Radiotelegraphy Safety Certificate.
Construction Certificate.
Cargo Handling Equipment Safety Certificate.
Oil Pollution Certificate.
CUSTOMS ALLOWANCES: (Tobacco), 2 cartons of cigarettes per man. All other tobacco will be sealed by Customs. (Wine and/or Spirits), 1 open bottle of liquor permitted per crew member. All other spirits will be sealed by Customs.
REPATRIATION: Facilities available.
AIRPORT: 19 miles from town.
TIME: 75th Meridian time, Eastern standard time. GMT minus 5 hours.
HOLIDAYS: New Year (January 1st); Church Holiday (April 12th); Labour Day (May 1st); Local Holiday (July 29th); Church Holiday (December 24th); Christmas Day (December 25th); Church Holiday (December 31st). No work on New Year's Day, Labour Day, Local Holidays, Christmas Day. Work until 1600 on other holidays.
POLICE/AMBULANCE/FIRE: Police, Tel: 6079; Ambulance, Tel: 3116 – 5555; Fire, Tel: 6091 – 4545 – 6055.
SHORE LEAVE: Granted after quarantine cleared.
IDENTIFICATION CARDS: Given by Port Captain once quarantine is cleared.
DELAYS: Up to 12/14 hours because of shortage of docking space.
AUTHORITY: Captain Jaime Sanchez, General Manager. Captain Jaime Gaviria, Port Captain.

TUMACO: 01.49 N. 78.45 W. (See Plan)

DOCUMENTS:
5 Crew Lists.
5 Stores Lists.
5 Passenger Lists (local, in transit, or negative).
1 Sanitation Declaration.
12 Complete sets Manifests.
3 Mail Certificates (when not included in Manifest).
PILOTAGE: Compulsory. Entrance to the port can only be made during the day by vessels with a max. draft of 19 ft. – 20 ft., due to the bar between Buoy Nos. 2 and 3.
For the Tumaco Terminal vessels are boarded by the Pilot in position Lat. 01° 53' 00" N., Long. 78° 48' 35" W.
ANCHORAGE: Sufficient area available in depths of 25 ft. to 35 ft.
RESTRICTIONS: Entrance channel depth 20 ft. Height of tide varies from 8 ft. to 12 ft.
HEALTH: On arrival, port doctor boards vessel to inspect crew Yellow Fever Certificates, also Derat Certificate. If any crew members suspected suffering contagious disease Master to radio prior arrival advising Agents accordingly. Port Doctor visits vessel even if previous port was in Colombia.
RADIO: Ships must communicate with the Texaco Head Office in Bogota, who will then inform the Terminal. The Terminal can be reached using VHF Channel 16 at a range of up to 30 miles.
BERTHING: Wharf is 310 m. long. Depth alongside averages 22 ft. Berthing for two vessels of 4,000 – 5,000 tons. 1×5 ton and 1×10 ton crane available.
STEVEDORES: Stevedores work continuously with breaks at 1200-1400 hrs. and 1800-2000 hrs.
TANKERS: *Empresa Colombiana de Petroleos:* Vessels moor to 6 buoys, using both anchors. Ship's Head 255°T.
Manifold connections are 12 in., although 10 in. and 8 in. reducers are available. Hoses are connected on the starboard side.
The Mooring Master will remain on board throughout, and accommodation must be provided.
Location: Lat. 01° 50' 25" N., Long. 78° 49' 49" W.
Tidal Conditions: Range of tide: 12 ft. Currents: 2 knots.
Controlled depth in the proximity of the mooring is 110 ft. of MLT.
Maximum Size of Vessels: 100,000 tonnes d.w.t., LOA 250 m. and draft 20.0 m.
Class of Cargo and Pumping Rate: Crude. Maximum rate of pumping 22,000 bbls.p.h.
Ballast and Bunkering Facilities: There are no ballast facilities. No bunkers or water available.
Additional Information:
1. The discharge of dirty ballast is prohibited in Tumaco.
2. Berthing can only be carried out during daylight hours and on the rising tide.
3. Tankers can sail at night.
4. Customs documents are required for berthing.
5. Medical services available.
FRESH WATER: Available from wharf.
FUEL: Supplied by Esso Colombia, by barge.
CARGO GEAR: Terminal owns 3 cranes of 5 to 15 tons capacity.
AIRPORT: Suitable for DC.4 type aircraft, situated 4 km. from port.
DEVELOPMENTS: Programme for deepening the port to 33 ft. at HW.
AUTHORITY: Empresa Puertos de Colombia, Tumaco, Colombia. *Contact:* Vicente Marines Valencia, Manager.

TURBO: 08.06 N. 76.43 W.

ANCHORAGES: Anchorage 2.5 to 3 miles off mouth of Leon River, used for loading bananas from barges.
CLEARANCE: Vessel must first proceed to Punta las Vacas for official visit of Port Authorities to obtain clearance.
MOORING: With sea and wind from the North, loading operations are not possible unless vessel employs the "Baltic Moor".
On arrival at the Leon River Anchorage, vessels should let go a couple of shackles. After that, a 3 in. to 3.5 in. wire (or mooring line) is passed from the after leads on the poop, along the ship's side, outside and clear of everything. This wire is to be shackled to a number three chain shackle.
By heaving in the wire and slacking the chain as required (about a 60° angle) vessel will give the necessary shelter to banana barges, for normal cargo operations.
GENERAL: Drug smuggling, pirate attacks and stowaways are a problem at the port.

SHIPMASTER'S REPORT: 1976. *Chart used No. 24515 (American).*
Vessels ordered to Turbo first proceed for clearance off Turbo town and anchor in position about 1 mile West of Pta. las Vacas Lighthouse (Lat. 08° 04' N., Long. 76° 45' W.). The lighthouse, which is situated on the Southern end of Pta. las Vacas is not readily identifiable from the N.W. until within about 2 miles and the light is reported to be poor. The chart in the area of Pta. Turbo, about 4 miles Northward of Pta. las Vacas, does not correspond to the radar picture presented, and therefore a berth of at least 2 miles is recommended.
After clearance by Port Authorities at Turbo vessels should proceed to Pinchindi, about 7 miles W.S.W. of Pta. las Vacas, for loading during the period December to May. It is reported that during the season May to December vessels load off the mouth of the Rio Leon, about 7.5 miles S.S.E. of Pta. las Vacas. Approaches to this berth apparently pose no problems and the loading position is reported to be close to a buoy off the river mouth, the position of which could not be confirmed.
There is no Pilot available at Turbo.
Vessels loading at Pinchindi should steer to pass about 1.5 to 2 miles S.E. of Boca Pinchindi. When the black buoy, Fl. 3 sec. (marked on chart No. 24515) bears about 335°(T), but not less than 315°(T) course should be altered to bring the buoy right ahead and anchorage should be taken up as convenient on this bearing. The black buoy referred to above is very difficult to pick up against the land, and in February 1976 was extinguished. There are two mooring buoys to the Eastward of the black flashing buoy. These are unlighted and not marked on the chart. Positions of these mooring buoys are as follows, bearings and distances from the black Fl. 3 sec. buoy: BWVS 83.5° (T)×380 m. R 99.5° (T)×760 m. These mooring buoys are more readily identifiable from the offing than the Fl. 3 sec. buoy, particularly the red one, which is painted in "International Orange". However it should be borne in mind that this buoy may have just received a new coat of undercoat at the time this report was written. The red buoy may be seen over the land which lies on the Eastern side of the anchorage before course is altered

for the final approach. Vessels of draft up to 25 ft. may anchor up to within about 300 m. of the Fl. 3 sec. buoy in about 22 m. of water.

As the wind strengthens during the afternoon to about force 5/6 from between N. and N.E., and due to the proximity of other vessels in the anchorage, it was considered advisable to use two anchors; the vessel in fact used port anchor with 4 shackles on deck and starboard anchor underfoot. This prevented the vessel from yawing more than a maximum of about 15°, while other vessels moored with only one anchor were observed to be yawing considerably more during the afternoon breeze.

Winds, during the period while the vessel was at Turbo (February 2-4) were predominately from North to N.E. and no significant currents were observed in the anchorage described above.

Caution is advised while navigating in this anchorage at night, as vessels loading logs often have large unlighted timber rafts alongside. It should also be borne in mind that tugs, lighters and launches are often unlighted, and radar echoes from these might easily be mistaken for those of the buoys. While the radar echoes of the land in this anchorage are quite clear, they do not in any way correspond with the chart.

No opportunity presented itself for checking soundings, however, on the vessel's track arriving and sailing soundings on the whole agreed with charted depths.

Loading of bananas is carried out in the anchorage using mechanical conveyors from lighters through vessels sideports, and on the whole was found to be quick and efficient.

No fresh water or provisions are available at Turbo. Indeed no facilities whatever are available from ashore. There is no radio station, although banana shippers "Uniban" have VHF 16 in their office during office hours, Spanish language only. Agents for United Brands Company have VHF Channel 16, call sign is "Casanova".

Caution should be exercised when taking any navigational advice from Officials in Turbo as this may at times be misleading and it is questionable whether persons proffering advice regarding best anchorage position etc. are in possession of all facts necessary for safe navigation in the area.

Documents Required for Inward Clearance at Turbo:

1 Clearance from last port.
6 Crew Lists.
5 Passenger Lists (Nil passengers to be declared).
5 Disembarking Passengers.
5 Mail Lists (No mail to be declared).
1 Maritime Declaration of Health.
1 Vaccination List.
6 Manifests.

Ships Certificates for Inspection:

Register.
Safety Equipment Certificate.
Safety Radio Certificate.
Radio Station Certificate.
Cargo Gear Certificate.
Derat Certificate.
Ship's Capacity Plan.

In addition to above list of documents required, the following are also to be presented to Authorities on arrival:

2 Store Lists.
2 Crews Personal Effects.

SHIPMASTER'S REPORT: February 1979.
Pilotage: It is necessary to take a Pilot at Punta las Vacas for entrance to the bay. Thereafter, any movement inside the bay will also require a Pilot.

SHIPMASTER'S REPORT: July 1979.
Vessel arrived Pta. las Vacas Anchorage at 0207 hrs. 30th July. Cleared Port Officials and proceeded to R. Leon Anchorage where vessel anchored at 1010 hrs. to port anchor, 4 shackles in water. Rigging gangs boarded at 1330 hrs. 31st July and completed rigging hatches at 1900 hrs. Loading commenced at 2230 hrs. and completed at 1210 hrs. 2nd August. All gear and labour off vessel at 1220 hrs. At the start there was no co-operation from the stevedores and repeated requests for information regarding which side doors and how hatches and derricks were required to be rigged met with no response until such time as the riggers boarded. It was then expected that the vessel could do everything at one and the same time. To commence only starboard side doors were used but on completion of No. 5 hatch it was decided to work No. 2 hatch both sides, once again no mention of doubling No. 2 hatch was made although the question had been asked repeatedly, the stevedore assured the Chief Officer that the port side doors would not be required. No information regarding quantity of bananas to be loaded or number of Bills of Lading was forthcoming and there was a very definite language barrier until it was made clear that any Bills would be claused "mixed". From this point co-operation improved and the language problem became less difficult. During loading there were numerous delays for weather, machinery breakdowns on the barges and waiting for cargo to arrive alongside. Before cargo operations commenced vessel was requested to "point" the ship using a rope from the port quarter to the port anchor cable and this was attempted with varying amounts of cable paid out, before operation could be completed the wind died down and wind and tide were acting against one another with result that operation was ineffective.

Turbo must now be regarded as being on a par with "ports" regarding theft and all precautions taken, many horrific reports on theft were heard from other vessels; however, if vessel was obviously taking all precautions then generally after being looked over, vessel is left alone. One case concerning a crew member and radio took place but his property was recovered by Cargo Supervisor and Customs Official, although culprit was not apprehended.

SHIPMASTER'S REPORT: August 1981.
Pilots are now compulsory at Turbo and board with the inspection party off Pta. las Vacas. They also board after loading is completed and leave off Pta. Vacas.

The larger United Brands banana vessels now use overhead conveyors for loading instead of the sideports.

AGENT'S REPORT: September 1989.
Anchorage: Vessels should anchor for clearance 1.5 miles to 2.0 miles West of Punta de las Vacas.

For anchorage area or Pilot Station, please see Navigation Chart.

Arrival: Vessels can arrive at Pilot Station at any hour; for the entrance there are aids lights, all of which are marked on the Navigation Chart. It is compulsory to arrive at Pilot station at Punta de las Vacas; no other area of anchorage is permitted within territorial waters.

Ballast: While in Colombian waters vessel should not throw refuse overboard, or contaminate the Gulf with ballast or bilge residues.

Cargo Handling Facilities:

In the Uraba Zone there are 3 shipping enterprises:

C.I. Uniban S.A., C.I. Proban S.A. and C.I. Banacol S.A.

They all have the necessary infrastructure such as bongos (roofed barges) and zungos (floating docks with conveyor belts and tugs) to bring bananas to ships. Bananas are shipped in boxes or on pallets.

Capacity of each bongo: 8,500 banana boxes.
Capacity of each belt: 1,300 – 1,500 boxes per hour.
Bananas are also exported on pallets.

Warning: During night navigation it should be kept in mind that small craft, barges and long log rafts are often unlit in the anchorage. Also, the National Army Coast Guard may request information.

Communications:

Authority	*Mode*	*Call Sign*
Port Authority	VHF	Capitania
National Army	VHF	Apostadero
Maritime Agents		
Turbaduana	VHF-Telex-Fax	Turbaduana
United Brands Co	VHF-Telex-Fax	Almendros/Casanova
Colsemar	VHF	Colsemar
Colmares	VHF	Gamboa/Colmares
Shippers		
C.I. Uniban S.A.	VHF-Telex-Fax	Uniban
C.I. Proban S.A.	VHF-Telex-Fax	Casanova
C.I. Banacol S.A.	VHF-Telex-Fax	Banacol
Pilotage		
Copimur	VHF	Estacion Pilotos
Marcom	VHF	Estacion Pilotos

Customs:

Clearance takes place between 0800 hrs. and 1700 hrs. Ships arriving outside these hours may obtain Port Authority's permission to proceed to anchorage/loading place, and the official visit will take place the next morning.

Density: As a result of non-salt waters of Leon and Atrato Rivers that flow into the Uraba Gulf, the density is approximately 0.950. There are no fluctuations in draft caused by density.

Documents:

Clearance from last port.
5 copies Crew List.
5 copies Passenger List.
5 copies Provisions List.
3 copies Personal Effects List.
1 copy Vaccination List.
2 copies of List of No Passengers, No Arms, No Munitions, No Drugs.
3 copies of Manifest of Cargo in Transit.
6 copies of the Cargo Manifest.
The following valid certificates.
  Pollution Policy.
  Sanitary Certificate.
  Load Line.
  Cargo Ship Safety Radio and Radio Telephony Certificates.
  Cargo Ship Safety Equipment Certificate.
  Cargo Gear Inspection Certificate.

Entrance: The approach is said to offer no difficulty, but as the coastline extends further West than charted, a berth of at least 2 miles is recommended in the vicinity of Point Turbo and Southward.

Please take into account the small ships travelling through the Gulf and also "Punta Yarumal" similar to "Punta de las Vacas" as sometimes Masters have been confused and anchored there. See Navigation Chart.

ETA: Please advise ETA 72, 48, 24 and 12 hours prior to arrival.

Fire Fighting Tugs: At present time there are no facilities.

Harbour: Turbo is a natural port, there are no facilities such as docks or jetties.

Harbour Authorities: Harbour Master (Capitania de Puerto) and National Customs (Aduana Nacional).

Health and Medical: Only general medicine. In an emergency, cases may be sent to Medellin by plane.

Dental services available.

Ice: Not available in Turbo.

Obstructions: No difficulties with draft.

Pilotage: Compulsory for arrival and sailing. See Navigation Chart.

Location:

a. Pilot Station – Punta de las Vacas: Lat. 08° 04' N. Long. 76° 46' W.
b. Turbo (Village): Lat. 08° 05' N. Long. 76° 44' W.

Slop Reception: There are no facilities.

Supplies: There are no ship chandlers. The Agent can obtain some fruits, vegetables and some other provisions.

Towage: Only the Shippers have tugs.

Trade and Shipping: The main trade is banana export of about 43,000,000 boxes per year through the 3 enterprises Uniban, Banacol and Proban.

Another secondary activity is the transportation of wood between Turbo and Barranquilla.

Watchmen: On vessel's arrival, 2 Customs Officers come onboard on official duty, to control import and export cargo; they remain on board until the vessel sails. This service is compulsory and the Master is requested to provide meals and accommodation.

In order to prevent robbers, stowaways, foreign people, etc., it is possible to make a contract with a Private Security Firm "Vigilar de Uraba", which costs US $ 2.00 per man/hour. This service is requested by owners or charterers.

Vessels with cargo for USA, normally use 2 men per hatch to be loaded and vessels bound for Europe, normally use 4 men per vessel.

NOTES

Please also advise Shipping Guides Ltd.

Comoros

DZAOUDZI, Ile Mayotte: 12.50 S. 45.10 E. **(See Plan)**

SHIPMASTER'S REPORT: August 1982 (Updated 1988).

Mayotte Island is situated in position Lat. 12° 46' S., Long. 45° 13' E. in the Indian Ocean and known to be one of the Comoro group of Islands, but it is under the administration of French Government. It has no connection with the Comoro Government. Therefore, vessels calling "Zaoudzi" should hoist French National flag. Population is mostly Muslims. The island is surrounded by a barrier reef which is broken by many small passages but the main passage to arrive Dzaoudzi is via Passe Mount Zamboro. This passage is deep but very narrow with a width of 9 cables safe water in between the Eastern extremity of Recif du Nord and the N.W. extremity of Grand Recif du Nord-East. It leads to the anchorage off Ile Pamanazi and the Ile Dzaoudzi, where vessels work cargo on anchor moorings. The maximum draft permissible is 40 ft. The inhabitants of the island speak French, Arabic and a mixture of Somali and other African languages. There is nobody who can speak English, therefore care should be taken while arranging Pilot and entry to the Zaoudzi harbour.

DOCUMENTS: On arrival Harbour Master and Customs Officer boards the vessel.

Customs Officer Requires: 2 copies Cargo Manifest; 2 Crew Lists; Bonded and Provision Stores Declaration Lists. (2 copies).

Harbour Master Requires: 2 Crew Lists; 1 Vaccination List; 1 copy Cargo Manifest.

No other documents are asked for. Agent does not require any documents, not even ship's papers. Agents are only interested in ship's husbandry.

PILOTAGE: Pilotage is compulsory for vessels over 40 m. LOA. Messages to Agent or Pilot Office are to clearly indicate which Pass the vessel will use, ETA at Pilot Station, LOA and max. draft.

Pilot boards vessel about 1.5 miles off M'Zamboro Passage. Only one Pilot available.

Pilot available from sunrise to sunset in M'Zamboro Passage and throughout 24 hours via Baudele Passage for vessels with draft up to 5.0 m.

ANCHORAGES: Vessels should only call or enter the barrier reefs in daytime, that is from sunrise to 1 hour before sunset. Therefore daytime approaches should be maintained. There are no good anchoring grounds outside or inside Recif du Nord. Vessels arriving after hours have to keep on steaming until day breaks. However in case of emergency a temporary anchorage can be made on Banc de la Prudente, 2 miles N.W. of Ile M'Zamboro. This anchorage should be used with utmost care because of poor holding ground. In case vessels can cross barrier reefs and shallows from the Passe M'zamboro entrance to Bancs Jameaux (position: Lat. 12° 40' S., Long. 45° 08' E.), then she can anchor in depths where it is safe and sound, or she can make, if time permits, to arrive straight to Zaoudzi anchorage.

Anchorage Around Dzaoudzi: According to wind season, anchorages are fixed North or South of Dzaoudzi, near Dzaoudzi or Mamoutzou, according to freight destination.

MAX. SIZE: There is no restriction on the size of the vessel, because there are no berths. Every vessel has to anchor and work cargo, however drafts are taken into consideration. Max. draft permitted 40 ft. (12.19 m.). Vessel's engines and steering should be very reliable while navigating through passage to Zaoudzi.

HEALTH: All persons are required to have valid health certificates against Cholera. Yellow fever vaccination not required, but can be arranged if ship requires.

COMMUNICATION/ETA's: It is the vessel's duty to communicate ETA at Pilot Station 24 hours prior to arrival to Pilot Office (Telex No. 915807 MY) or to Agent (Telex No. 915811 MY) and confirm by VHF Channel 16 when 24 miles off.

Satellite Station permits direct contact by telephone or telex worldwide.

On arrival off M'Zamboro passage vessels can call "Zaoudzi Harbour Control" on VHF Channel 16. The range of their VHF is about 25 miles. Therefore vessels can call "Zaoudzi Harbour" when 25 miles off and arrange passage through barrier reefs to Zaoudzi. Pilots are always booked by cable, because it takes a long time for Pilot to arrive outside M'Zamboro Pass from Zaoudzi.

TUGS: One tug of 700 h.p. belonging to the French Navy. A tow boat is available for towing the barges and lighters.

BERTHING: There are no berths, all vessels have to anchor.

MEDICAL: Good hospitals are available in Zaoudzi and Momutzu. All kinds of cases are dealt with.

STEVEDORES/CARGO HANDLING: Agents work as stevedores, they arrange lighters and labour. There is no limit in ordering labour but lighters are limited. Therefore cargo discharging rate is affected.

If continuous flow of lighters is available then bagged cargo could be discharged at the rate of 100–150 tons per hook per day. There is no night work. During Ramadan they work from 0700 hrs. to 1600 hrs. and no work in the night. During normal days they work from 0700 hrs. to 1900 hrs. There is no floating crane. About 6 steel barges and remainder are wooden sail boats which carry 10 to 20 tonnes at a time.

DENSITY: 1025.

FRESH WATER: Abundance of fresh water on the island but no arrangements to supply to the ships. In case of emergency naval barge which has desalting plant can supply small quantity of evaporated water (up to 40 to 50 tonnes) provided it is arranged 7 days in advance. This is very expensive, therefore it should be avoided.

PROVISIONS: Very small quantities of meat, fish, vegetables and fruits are available. Ship's personnel can only go and buy it. There is little variety of vegetables or fruits. Vegetables: Lettuces, local spinach, French beans, local onions and potatoes, etc.

Fruits: Apples from South Africa, bananas, coconuts and when in season pineapples are available but in small quantities.

FUEL: Nothing can be arranged.

CONSULS: No Consulates. Difficulties if any, can be handled by Mayotte Administration.

REPAIRS: No workshop. No repairs possible by shore persons.

GANGWAY WATCHMEN: This is a very peaceful island, no pilferage, therefore watchmen are not kept or arranged.

OPENING/CLOSING HATCHES: It is normally done by ship but in case of frequent rains and with special cargo like rice or wheat, extra labour could be arranged with Agents.

CUSTOMS ALLOWANCES: No restrictions on any type of goods. Bonded stores are not sealed, therefore no limit on allowances.

CARGO GEAR: Only ship's gear is used, however rope slings are arranged by the stevedores.

SHORE LEAVE: No restrictions on shore leave and no passes are issued.

REPATRIATION: There are three flights a week from Ile Pamanzi Airport to Reunion Island only, i.e. on Tuesday, Thursday and Saturday. Repatriation can be arranged on these days.

TIME: GMT plus 3 hours. No variation in the time throughout the year.

HOLIDAYS: French administrative holidays i.e. 1st January, 1st May, and 25th December (Christmas Day), the local people enjoy Muslim rites holidays such as Eid-ul-Fitar, Eid-ul-Azha, 10th of Muharam holidays. The labour works on Saturdays and Sundays.

GENERAL: *Communications: While at Anchor:* Ships are allowed to use their transmitters for sending cables. However, cables can be sent through Agent. Ship to shore communication is by VHF Channel 16 for Port Control and Pilot Office and VHF Channel 12 with Agent's office, during office hours only.

Currency: French franc is the local currency. There are two banks: Banco de Franco, (one on Zaoudzi Island and other on Mamuzu). U.S. dollars can be changed either at the banks or direct at shops. No other currency is accepted in the shops.

SHIPMASTER'S REPORT: February 1989.

VESSEL: 18,700 g.r.t., 12,175 n.r.t., 31,275 d.w.t., 170 m. LOA, 26 m. beam, Summer draft 11 m., arrival draft 11 m.

APPROACHES: The vessel arrived off Ile Mayotte at 0100 hrs. and stopped engines about 10 miles off Recif du Nord and drifted till 0500 hrs. (daybreak), then steamed in towards the entrance and picked up pilot at 0600 hrs., about 2 miles N.E. of M'Zamboro Pass. At the original position of stopping the ship, the current set E.S.E. at about 1 knot. At the pilot boarding grounds the current set in the reverse direction, i.e. Westerly at 1.5 knots. This reversal of current is a regular feature in that area, and has to be kept in mind while approaching the pilot boat.

Charts: B.A. Charts No. 2110, 563 and 2741. Chart No. 2741 is not very accurate, and gives a false impression of the critical area around the Bancs Jumeau. The French Hydrographic Chart No. 6240 (Published May 1959; Edition No. 2 November 1968; large corrections: No. 1 February 1974; small corrections: 1988 - 2229) is a much more accurate and a larger scale chart, and is used by the pilot for reference.

DOCUMENTS: 4 copies Crew List, 1 copy Vaccination List, 1 copy Cargo Manifest, 1 copy Bonded Stores List, 1 copy Personal Effects List.

These were taken ashore by the pilot for the Harbour Master and the Customs.

No Customs, Port Health or Immigration Authorities boarded during vessel's stay of about 30 hours. The bonded stores were not sealed. Agents do not board unless the Master needs some service. They can then be contacted on VHF Channel 12, Call sign "Smart Dzaoudzi".

PILOTAGE: Pilotage is compulsory for vessels exceeding 35 m. in length. There is only one pilot there. He is a very good and experienced ex-Navy pilot, who works for the Harbour Master's office, and not the French Navy. If he is indisposed or away on leave, a French Navy Pilot Stationed on the island can substitute for him for short periods. For longer periods or whenever necessary, a pilot is flown from France.

Pilotage Movements: (A) Daily from 0600 hrs. to 1800 hrs. by M'Zamboro Pass. Deep drafted vessels are taken in and out at time of high water when passing the 8.8 m. and 10.0 m. patches off the Bancs Jumeau, E.S.E. of Cap Douamougno.

(B) 24 hours for small vessels using Bandele Pass.

The pilot boards from a blue-hulled launch with white superstructure, about 2 miles N.E. of the entrance between the reefs, with the beacon on Cap Douamougno in line with Dziani Bole peak, bearing 202° (T). If the vessel has arrived at night, the pilot boards at the break of dawn, otherwise at the next high water.

Note: The M'Zamboro Pass is well buoyed throughout, and according to the Pilot, not a single buoy has been carried away by rough seas or dragged out of position during the last six years, contrary to information given in the Sailing Directions (South Indian Ocean Pilot – 1971, page 205, lines 41, 42).

It is also not true that the beacon on Cap Douamougno is difficult to see, as reported in Supplement No. 11, 1987, to the above pilot (39S corrected to 21.3.87). All the beacons constituting leading marks are painted white and are placed in prominent positions, and are highly visible, at least in normal weather conditions.

There is no night pilotage as none of the beacons or buoys are lit at present. The local authorities are hoping to get a financial allocation from the government for installing the necessary lights within the next year, but it is unlikely that the work will be completed in less than 3 years.

MAX. SIZE: Max. draft 11.5 m.

RADIO/VHF: Agents: Smart Dzaoudzi. Telex No. 0935-915811. When near the island call on VHF Channel 12.

Pilot/Harbour Master: Telephone by SATCOM via Sans Lys Radio, No. 19269 60 19 16. Pilot also on VHF Channels 16 and 14.

TANKERS: Tankers of between 30,000 – 37,000 tonnes d.w.t. have been using the port. After arriving off Ile Pamanzi the vessel is turned around, heading outwards, approximately N.E.'ly and moored with both anchors down (4 shackles on the port anchor and 6 shackles on the starboard anchor in our case), and the stern made fast to 2 mooring buoys, one on each quarter, with 2 stern lines out from each quarter, passed through fairleads with a fore and aft separation of 10 m. to 15 m. between them.

This berth is just off the muddy beach fronting the Army Oil Terminal on the N.W. side of the Ile Pamanzi.

A small Navy tug of about 800 b.h.p. assists in pushing and holding the stern of the vessel in position between the buoys against the tide while a Navy mooring boat with Naval personnel runs out the lines.

The tug is very expensive, and the charge is made by the minute. We used the tug for only 14 minutes, but this depends entirely on the pilot, because he is the person who calls out the tug by VHF at the time he estimates that the ship will be in position for the tug to commence assisting.

DISCHARGING: After mooring is completed, Army personnel from the terminal board the ship to assist in connecting the hose. There is a submerged pipeline to the shore tanks, the outer end of which is kept buoyed near the berth. This is hoisted up on board by ship's derrick or crane (on either side, in our case it was on the port side), and connected to the ship's manifold. The flange size is 6 in. only, and we had to use our bunkering reducers to connect up to the cargo manifold.

The line can take a discharge pressure of max. 8 kg./sq.m. at the manifold. This gave us an average discharge rate of only 130 cu.m.p.h. for 3 grades of products.

An Army Loading Master attends on board during the discharging operation, and an Army soldier sits in the Cargo Control Room, watching the gauges throughout.

For discharging about 3,200 tonnes of products of 3 grades, the vessel stayed in port for about 30 hours.

After completion of discharge, the tanker has to give a water push to the last product to clear the submarine pipeline. This takes about 30 minutes.

MEDICAL: Excellent medical facilities are available if required.

SHORE LEAVE: The Agent has to obtain permission from the Immigration Authorities, and then arrange the necessary boat service.

GENERAL: *Population:* There is a total of about 60,000 inhabitants, mostly of mixed Asian and African origin, and about 5,000 French nationals.

Provisions: There were no ship chandlers in evidence. One has to do one's own shopping. Except for bananas and coconuts, everything else is imported from France, Madagascar, Reunion Island, etc., and therefore expensive, and available in small quantities.

SHIPMASTER'S REPORT: October 1994.

POSITION: Lat. 12° 45.62' S., Long. 45° 16.31' E.
BERTH: Sea berth.
VESSEL: 11,300 d.w.t.
ENTERING: By M'Zamboro Pass only. Pilot joins ship 2 miles from the entrance in daylight only.
CHANNEL: Very good buoy channel (day and night).
ANCHORING: Pilot advised that it is possible to anchor at Banc de l'Iris only (no swell or rough seas). We remained drifting.
TUGS: One tug assists with mooring and unmooring.
BERTHING: Vessel moored on a heading of 335° with Goumbe Doume Island ahead of the vessel. The starboard anchor was used with 5 shackles with 2 ropes to 2 quarter buoys.
CARGO HANDLING: 6 in. submerged hose used on the starboard side to discharge at 145 cu.m./hr. and 3 kg. maximum pressure. The distance to the shore tanks is 800 m.
CARGO: Discharged part cargo (3,000 tons).
FRESH WATER: Not available.
FUEL: Not available.
SHORE LEAVE: Allowed. Cost of boat U.S.$170.000 for 24 hours.
DEPARTURE: Possible anytime. We left at 1900 hrs.

AUTHORITY: Mr. Le Capitaine du Port de Dzaoudzi, Representation du Gouvernement, B.P. 20, 97610 Dzaoudzi, Comoros Islands. *Tel:* 19 (269) 60.10.33. *Telex:* 915810 MY.

AGENT: There is only one Agent at the moment who is M/S Societe Mohoraise d'Acconage de Representation et de Transit (short form SMART), Dzaoudzi Mayotte. Cable address: SMART Dzaoudzi. They work ship to shore communication via VHF Channel 12 – only during office hours i.e. from 0800 to 1600 hrs. If one wishes to communicate during night hours, one should call VHF Channel 16 and ask Port Control to inform "SMART" to call the ship on VHF Channel 12, then communications can be established.

MAMUTZA (Mamoutsou), Ile Mayotte: 12.47 S. 45.15 E.

SHIPMASTER'S REPORT: April 1996.

VESSEL: Cruise ship. GRT: 18,591. NRT: 6,719. LOA: 164.35 m. Extreme Breadth: 25.00 m. Draft: 6.20 m.

DOCUMENTS: Clearance documents were taken ashore by the Pilot. The following documents should be available:

5 copies Passenger List (for passenger ship only).
3 copies Crew List.
3 copies Staff List (for passenger ships only).
1 copy Health Declaration.
5 copies Nationality List.
2 copies Stores List.
2 copies Crew Effects List.

An Inward Clearance was not performed. For Outward Clearance, one agency official boarded the vessel. According to Pilot information, agency S.M.A.R.T. Dzaoudzi worked on VHF Channel 18. However, several calls were made, but no reply received.

APPROACHES: The vessel approached the pilot boarding ground 1.5 nautical miles N.E. off Passe M'Zamboro in order to pick up Pilot at 0900 hrs. Pilot station had confirmed vessel's ETA 1.5 hours earlier on VHF Channel 14. Excessive currents were not observed at the boarding ground (6 hours before high water at Dar Es Salaam). In fair weather conditions and good visibility, the approach and the passage of Passe M'Zamboro is without any difficulties. Cape Douamougno Lighthouse is a conspicuous leading mark for approach, and even Pointe Bandaboi leading lights in 174° direction (white beacons) are clearly visible at the pilot boarding ground.

PILOTAGE: For Pilot embarkation, speed had to be reduced to about 10 knots, as the pilot launch (black hull and white superstructure) is capable of steaming at about 8 knots – 10 knots. After boarding the vessel at exactly 0900 hrs., the Pilot, who is an ex-French navy officer, ordered a speed of about 15 knots for the lagoon passage. Contrary to former Master's Reports, the Pilot speaks fluently English and appeared to be a skilled and experienced Pilot.

Lagoon Passage: All courses to be steered during the passage are clearly marked by leading lights, buoys and beacons, all being lit (except 1 patch buoy, see "Anchorage"). All buoys and beacons appeared to be well maintained so that, contrary to former reports, passages during night-time are possible. The Pilot confirmed that 24 hour pilotage is provided.

ANCHORAGE: The vessel dropped anchor at the "W" Anchorage, position marked on the chart between Mamutzu and Dzaoudzi Island, 4 th shackle on deck. A 3.6 m. patch 0.5 nautical miles S.W. of I.Mogne Amiri is now marked by a white conical buoy, which is presently unlit. This buoy has not yet been charted on B.A. Chart No. 2744.

GENERAL: *Currents:* During the first part of the lagoon passage until passing Kongo Buoy, remarkable currents were not observed. During approach to the anchor position and during anchoring, partly strong currents in unpredictable directions were noted. The current set partly contrary to the indicated directions in the tidal stream table on B.A. Chart No. 2744 related to high water at Dar Es Salaam.

Remarks: The pilot station provided an excellent service during the whole stay. Support was given regarding tenderboat traffic and also for agency matters.

B.A. Chart No. 2744 appeared to be not very accurate. Differences between charted positions and reality were observed for several buoys and beacons. The Pilot informed that all relevant information regarding changes at Mamutzu port were given to the French Naval Office. Thus the French chart for this port may be more accurate.

MUTSAMUDA, Ile Anjouan: 12.09 S. 44.25 E. (See Plan).

SHIPMASTER'S REPORT: October 1994.

We attempted to berth at Moroni on Grande Comore, but it was not successful, due to closeness of reef to vessel when in the berthed position.

The Charterer decided to discharge all cargo (3,000 tons) at Mutsamuda. Previously all cargo had been delivered to Dzaoudzi and then transported to Moroni and Mutsamuda by small barges.

This was the first visit for a vessel of this size (11,300 d.w.t.).

DOCUMENTS:
5 copies Crew List.
2 copies Cargo Manifest.
2 copies Stores List.
2 copies Crew Declaration.
2 copies Arms and Ammunition List.
2 copies Passenger List.
2 copies Vaccination List.

PILOTAGE: Pilot not experienced to handle large vessels.
APPROACHES: B.A. Chart No. 563 is sufficient.
ANCHORAGES: It is better to drift.
RESTRICTIONS: Tankers berth in daylight only.
TUGS: Tug not available as it was being repaired.
BERTHING: (See "Plan").

There are two mooring buoys (Chart indicates 3 buoys). They are both small and very old.

It is not safe to moor in winds over Force 4.

Main engine should be ready at all times.

Vessel moored with 5 shackles on starboard anchor on heading 284° with lines to 2 buoys aft and one line to the oil jetty.

The depth at the buoys is 12.0 m.
The depth at the stern was 20 m. – 30 m.
The depth at the bow was 40 m. – 50 m.

Discharging: The 6 in. hose was connected on the starboard side. Average discharge rate 140 cu.m./hr. Maximum pressure 6 kg. for gas oil and Mogas, and 4 kg. for Jet A1.

MEDICAL: Hospital available.
FRESH WATER: Not available.
FUEL: Not available.
REPAIRS: No facilities.
CUSTOMS ALLOWANCES: 200 cigarettes, no alcohol.
REPATRIATION: Possible, but not advisable, as Immigration Visa takes a long time.
SURVEYORS: *Cargo Surveyor:* Societe Comorienne Des Hydrocarbones.
WATCHMEN: At least 3 watchmen, food to be provided.
SHORE LEAVE: Allowed.
GENERAL: *Currency:* U.S.Dollars and French Francs.
Language: French and English.

Republic of Congo

DJENO TERMINAL: 04.56 S. 11.54 E. (See Plan)

LOCATION: The loading point is located 3,800 m. from the coast in position Lat. 4° 56' 20" S., Long. 11° 54' 07" E., that is to say 9.75 miles S.S.E. of the main Pointe Noire Lighthouse.

NAVIGATION:

Djeno Lighthouse: Position Lat. 04° 55' 01" S., Long. 11° 55' 45" E.

The Terminal has a prohibited area which is covered by the red sector of light. No vessel may enter this area between depths of 50 m. and 70 m. as there are offshore production installations, underwater pipelines and the loading point within the red sector from approximately S. 3° W. to S. 73° W. Also vessels may not proceed inside 25 m. depth of the red sector without a Pilot on board.

The lighthouse has the following characteristics:

17 m. metallic tower, aluminium colour;

Light is regular occulting light at 4 second intervals, light 29 m. above MHWS.

Range of white light 18 miles and red light 15 miles.

SBM: Equipped with radar reflector and white light with 60 flashes per minute, range 3 miles. The floating pipe extending over a radius of 270 m. round the buoy is lit by small white intermittent lights.

PILOTAGE: Compulsory. Pilotage is carried out by Pilots from Pointe Noire (See "Shipmaster's Report"). The Pilot remains onboard for the duration of the vessel's stay at the buoy. The Pilot Station keeps a permanent watch on VHF Channel 16.

For vessels of 240,000 d.w.t to 270,000 d.w.t., a second Pilot assists for the approach to and mooring at the loading buoy.

The Pilot boards the vessel 2.3 miles to the West of the end of the Outer Dyke (Lat. 4° 46' 15" S., Long. 11° 47' 06" E.). Vessel to be stopped dead in the water, not anchored.

Limits of Pilotage Zone: South, parallel 5° 07' S.; West, meridian 11° 46' E.; North, parallel 4° 42' S.

During the day, when leaving the mooring, request for Pilot is to be made to the Port Commander's Office 3 working hours before the hour of departure. If vessel is ready to leave and the Pilot has not boarded, he may be called by means of the following signal, International flag "G" and at the same time 3 long blasts on the ship's whistle.

If departure should be during the night, request for Pilot should be made to the Port Commander's Office before 1700 hrs., indicating as near as possible the probable time of departure.

Should any changes take place in the time of departure the Port Commander's Office is to be advised at least 1 hour in advance in order that the vessel should not incur any surcharge. During these hours call for the Pilot shall be made at the Port Commander's Office by the ship's Master or his representative.

Sound Signals: The use of ship's whistle is forbidden between 1700 and 0600 hrs.

Should Pilot be required at any time on a Sunday, order should be placed before 1200 hrs. on Saturday. Should a Pilot be required on a public holiday, order should be placed by 1700 hrs. on the day prior to holiday.

ANCHORAGE: Vessels coming to load at Djeno can anchor in 26 m. of water within a radius of 0.5 miles, centred on the point located at 4.5 miles × 300° from the end of the Outer Dyke of Pointe Noire (Lat. 4° 44' S., Long. 11° 45' 05" E.).

MAX. SIZE: Maximum permissible draft 16 m. (52 ft. 6 in.). However, Elf Congo may reduce this draft if weather conditions are unfavourable.

Also see "Berthing".

For tankers from 240,000 d.w.t. to 270,000 d.w.t. (270,000 d.w.t. class), the maximum permissible draft shall be according to sea and weather conditions.

Also see "Berthing" – Loading of Tankers' of 240,000 d.w.t. – 270,000 d.w.t. (270,000 d.w.t.).

HEALTH: The Pilot may act for the Hygiene Department, Pointe Noire if instructed to do so by Pointe Noire.

RADIO/VHF: Call signal "TNA".

Permanent watch on 500-512-524 and 2182-2754 kHz from 0600 to 1800 hrs.

Transmits on 8,435 kHz	from 0930 to 0945 hrs.	(GMT)
	from 1030 to 1045 hrs.	"
	from 1330 to 1445 hrs.	"
	from 1530 to 1545 hrs.	"
	from 1730 to 1800 hrs.	"
on 12,682.5 kHz	from 0620 to 0645 hrs.	"
	from 0730 to 0745 hrs.	"
	from 0830 to 0900 hrs.	"
	from 1700 to 1715 hrs.	"

Elf Congo Terminal: Permanent watch on VHF Channels 14 and 11 whilst tanker at the loading point.

Pointe Noire Office: Call signal: "Echo Lima". Watch radiotelephony – 2182 kHz.

Port of Pointe Noire Management and Pilot Station: Permanent watch on VHF Channel 16.

Advice of Arrival: Tankers shall have their arrival at Djeno notified by their Agent 72 and 24 hours in advance.

Thereafter, they shall notify any appreciable change in their ETA.

TUGS: Two tugs available from Pointe Noire. 900 h.p. and 1,800 h.p. Request for tugs should be made at least 3 hours in advance and before 1700 hrs. if required during the night. For berthing, mooring boats will be supplied by Elf Congo.

BERTHING: The loading point of Elf Congo at Djeno is of an SBM type, with single mooring at the bow.

The vessel is moored by the bow to a buoy consisting of a cylindrical frame of diameter 10 m. and 4.35 m. high.

This buoy is moored by chains to 6 drilled piles. Anchor moorings extend over a radius of 265 m. around the buoy.

A 40 in. sea-line connects the tank farm with the loading point; the buoy is connected to the sea-line by 2 lines of flexible hoses 20 in.

The loading point is provided for the mooring and loading of tankers of approximately 40,000 d.w.t. – 240,000 d.w.t. with a draft limitation of 16.0 m.

Tankers of 240,000 d.w.t. to 270,000 d.w.t. can also be loaded, subject to application of the instructions and procedures laid down in the annex, setting out the restrictions concerning use of the buoy and the maximum drafts according to sea and weather conditions.

Depth of water at the buoy is 22 m.

Notice of Readiness: Shall be sent to Elf Congo.

Loading of Tankers of 240,000 to 270,000 d.w.t. (270,000 d.w.t. Class): *Loading Tanker:*

Loading in first port.

Draft complying with attached sheet according to sea and weather conditions.

Chain stopper compliant with O.C.I.M.F.

Response to questionnaire (See below) with acceptance of nomination (to be followed by DCI).

Reverse operational.

Support Staff and Resources:

Two Pilots.

One Loading Master.

One inshore pilotage team (3 divers).

One tug of minimum 80 tonnes bollard pull equipped with a bow pusher with inshore pilotage boat and vessel for divers, equipped according to the specifications for staying astern of the vessel during loading and the running of a towline when the vessel is released.

Means of measuring and forecasting sea and weather conditions.

A control system for approaching the buoy.

Permanent monitoring of stress on the mooring ring.

Procedure: The Pilots and Loading Master board the loading vessel.

The tug links up with the tanker in order to pass the inshore pilotage box.

The inshore pilotage boat lays out the flexible hoses beyond the line of approach of the tanker.

The divers' launch is connected to the end of the lead.

During this time, the vessel is dead in the water, but can move slow ahead or half ahead, in order to be dead in the water when 2 miles off and in line with the buoy.

At this distance, the following operations are carried out:

(1) Test of tanker's machinery, reverse the engine for a sufficient amount of time (refuse the vessel which has no reverse).

(2) Take the towline (of the tug) to the stern of the loading vessel along the axis if possible.

(3) Do not carry out deballasting during approach.

(4) The tanker shall not have more than 2.5 m. of trim (difference between draft forward and aft).

The final phase of the approach then begins. The Loading Master is with his team on the fore deck – the towline is taut enough to clear the propeller – the approach is made very slowly in order to arrive 200 m. from the buoy (place where the lead is taken aboard) almost at a standstill. Once the lead is aboard on the windlass, slow ahead is continued, following the indications of the Loading Master on the bow and the distance indicator.

At the final approach (200 m.), the tug is pulling at around 20% to 30% of its power. The tension required from the tug can be varied to serve as a brake, thus allowing the Pilot to move ahead in order to navigate without moving forward.

Once the chain is in place in the stopper, vessel is around 50 m. from the buoy. The tug pulls with between 20% and 30% power in order to make head against the mooring line. Once the running gear is connected, the tug extends its towline to 250 m. to establish a tension of 15-20 tonnes during all loading operations, the tension between the hawse pipe and the buoy is controlled by means of a stress-gauge shackle, the stress being monitored by the Djeno Loading Control Room and on the 80 tonne tug, the upper limit of this tension being 100 tonnes.

Criteria for tanker speed of approach: (Direction and speed of current permitting).

At 800 m. from the buoy slow ahead at around 150 cm./sec. (3 knots).

At 600 m. from the buoy, engine stopped, continue ahead.

At 200 m. from the buoy, very slow approach at 50 cm./sec. (1 knot) with towline taut at the stern.

Once mooring is completed, the diving team move to the manifold to connect the flexible hoses; the connection time for the hoses is 45 minutes on average and disconnection time is 30 minutes.

Restrictions regarding Use of Loading Buoy:

(1) Use of the stress-gauge shackle and datawell buoy:
Maximum permissible stress on the buoy is 100 tonnes.
During loading, the measurements of:
stress on mooring line
swell, as well as forecast development
shall be permanently monitored on board the tug and in the control room of Djeno Terminal.

(2) Use of the chart:
To ensure tha the sea and weather conditions recorded on the chart allow for loading in favourable areas of same.

(3) Tanker Loading List:
A list shall be completed by the Loading Master and the tanker's Master.

Loading and Release Procedure: F being the stress on the mooring line and SH the significant wave height.

If:

$O < F < 95$ tonnes, and $O < SH < 1.65$ m., the loading operation continues as usual.

If:

$95\ T < F < 100\ T$, stop loading crude oil. Close the valves.

Monitor the stress on the mooring in order to restart if there is a downward trend.

If the stress continues to increase:

(1) Disconnect the floating flexible hoses.
(2) Release the tanker with tug assistance.

According to the Pilot's instructions, the tug can be used either to push the vessel or by passing a towline.

If:

F > 100 tonnes for more than 15 minutes,
leave the mooring point.

In the event of disconnection and release of the tanker, the Loading Master shall attach a letter to the tanker files giving details of the sea and weather conditions and the loading lists.

By his signature, the Pilot shall confirm the validity of the figures given in the sea and weather reports at the time in this document.

In the event of disconnection of a tanker for reasons concerning sea/weather conditions, *the decision regarding re-connection shall be made on a case by case basis* after consultation with the parties concerned: Elf Congo (Terminal/Operations/Logistics) – Pilots – Tanker Master (Tug Captain).

This consultation shall allow for the definiton of any new conditions of approach and resources to be implemented.

Loading and Releasing Procedure: Normal operation: The operation is normal if the pressure on the moorings is between 0 and 95 tonnes and the operating point is within the blue area of the chart.

Stop Loading Crude Oil: Stop loading crude oil, close all valves and monitor pressure on moorings if mooring pressure is between 95 and 100 tonnes.

Release of Tanker: Leave the mooring point if the pressure on the moorings exceeds 100 tonnes for more than 15 minutes.

Flexible Hoses: Rough seas: SH > 1.65 m., ensure that stress borne by flanges of pipe manifold and flexible hoses is reduced to minimum by mooring flexible hoses firmly to the tanker by means of auxiliary straps.

Control of Tanker Manoeuvrability:

(1) Test tanker's machinery, reverse the engine for a sufficient amount of time prior to approaching buoy.
(2) The tanker shall not carry out deballasting during approach to the loading buoy.
(3) The propeller must be immersed to its maximum according to the permissible draft of around 13.5 m.
(4) The difference between draft forward and aft (trim) must not exceed 2.5 m.

Questionnaire:

From : Djeno Terminal Superintendent
To: Master of Tanker
Date:

Please answer a.s.a.p. following questionnaire:

(1) Ship's name / flag / call sign.
(2) Inmarsat number.
(3) Name of Master.
(4) Last port of call and destination.
(5) Voyage number after leaving Djeno.
(6) ETA at Djeno Roads.
(7) Previous names and date of building.
(8) Summer deadweight.
(9) (a) Quantity of clean and permanent ballast on board on arrival.
    (b) Maximum draft required at Djeno Buoy is 13.5 m., this draft to confirm.
(10) (a) Could loading be initiated while deballasting?
    (b) How long is required for deballasting?
(11) (a) What is the quantity/quality of slops on board?
    (b) Has the load-on-top procedure to be followed this voyage?
(12) Advise your loading rate:
    (a) With 1×16 in. hose.
    (b) With 2×16 in. hoses.
(13) Confirm ship in good order and operation for:
    (a) Inert gas system and all tanks inerted.
    (b) Engine ready at any moment for manoeuvring.
    (c) Heating coils not leaking.
    (d) Windlass, winches and derricks/cranes.
(14) (a) Give hose boom capacity and safe working load.
    (b) Are there cleats and bitts available in manifold area for tying of submarine hoses?
(15) Give dimensions and number of your forward Panama fairlead(s).
(16) Only tongue type chain stopper(s) will be used. Advise:
    (a) Number of stoppers (Vessel between 100,000 and 150,000 d.w.t. should have one tongue stopper of minimum 200 tons SWL, and between 150,000 and 280,000 d.w.t., two tongue stoppers of minimum 200 tons SWL).
    (b) Are stoppers positioned in correct alignment between fairleads and winch's drum end or pedestal lead?
    (c) Distance between fairlead(s) and stopper(s).
(17) Have you received Owner's instructions regarding insertion or special mentions to add on Bill of Lading?
(18) According to your instructions, when can loading be initiated (Date and time)?
(19) What is your vessel's experience factor? (Calculated as follows: Total of ship's figures for last 5 voyages divided by total of Bill of Lading quantities for the same voyage)?
(20) What is your cargo request?

MOORING: Mooring ropes supplied by Elf Congo. The vessel shall be ready to take aboard one mooring rope. The rope consists of 45 m. of nylon of 18 in. circumference and 9.0 m. of 3 in. anti-chafing chain with 4×2.5 in. links at the end.

This chain is intended to provide the nip for the fairlead; in addition, to facilitate embarkation, the mooring line is provided with a polypropylene lead of 10 in. circumference and length of 125 m.

The "Lead" is passed to the vessel by a motorboat. The vessel must prepare one messenger line, at least 150 m. long, to take it aboard.

Mooring is carried out during the day between 0600 hrs. and 1600 hrs., except for special time dispensations, sea permitting. A stress-gauge shackle between the buoy and the moorings permanently transmits to the Djeno Control Room and the support vessel the amount of stress on the buoy.

Departures take place both day and night.

The cargo derrick shall be rigged prior to arrival on the port or starboard side with a minimum hook SWL of 10 tonnes.

The vessel's manifold shall be ready on the port side for connection of the 2×16 in. flexible hoses.

LOADING: *Notice of Readiness:* The Notice of Readiness is to be addressed to "Elf Congo".

Flexible Hoses: Loading of vessels carried out through 2 lines of 270 m. of 20 in. flexible floating hose, terminating in 2×30 m. sections of 16 in. flexible hose. Manifold connections on board shall be 16 in. ASA flanges. The hoses are taken onboard on the port side.

During connection and disconnection of the flexible hoses, assistance by the crew is essential, in particular for the handling of the winches and derricks. During the whole stay of the vessel at the loading point, the Pilot shall maintain safety watch on board. The Elf Congo Loading Master takes responsibility for the part of the loading that concerns him and is in permanent contact with the Terminal.

After running the flexible hoses, Elf Congo's support vessel remains available to the Pilot and is under tow at the stern of the tanker to keep the buoy/loading tanker in line. It maintains continuous traction.

The towline used is provided by the tug.

A ladder shall be kept permanently in place along the side to allow access by the team connecting the flexible hoses.

The Elf Congo service vessel shall remain at the disposal of the Pilot and shall remain alongside the tanker or nearby. A ladder must be kept permanently alongside the vessel so as to permit access by the team in charge of the flexible hoses.

Loading: Loading may be carried out with a maximum flow of 7,500 cu.m./h. with two pumps or 5,500 cu.m./h. with one pump.

Inspection of tanks after deballasting and the ullages after loading shall be undertaken in the presence of the Loading Master representing Elf Congo.

The Terminal shall place on board the vessel sealed samples of the cargo.

30 minutes before the end of loading, the vessel shall warn the Loading Master in order to stop the pumping in time.

The ship's Master shall be fully responsible for the manoeuvring of the valves and safety of the cargo on board.

DEBALLASTING: The Djeno storage installation is not equipped to receive dirty ballast. The vessel shall, therefore, arrive with clean ballast.

Any vessel arriving with dirty ballast may be forced to leave the loading point and delay arising therefrom shall be fully incumbent on it. Acceptance of Notice of Readiness will be rectified accordingly.

It is forbidden to throw into the sea any cinders, burning materials, objects and waste of any kind.

The ship's Master shall be responsible for any leaks on board. Such leakage shall be stopped immediately.

Scuppers shall be plugged during the whole loading time.

SAFETY: The ship's Master shall be responsible for safety aboard the vessel at all times. Sufficient crew members must be aboard the vessel at all times for handling moorings and fire appliances. The vessels main engines must be kept ready at all times. A watch should be maintained to ensure that no undue stress is placed on the moorings and that the floating pipelines do not rub against the vessel. Also the vessel should not be allowed to come into contact with the single buoy mooring which may be caused by changes in current, wind direction or other reasons.

Smoking outside of authorised area, use of naked lights, or tools liable to cause sparks not allowed.

Vessel's anchors should be secured in the hawse pipe. No repairs allowed whilst at the mooring also no stores or equipment may be handled on the deck whilst at the mooring.

Whilst Loading: All hull valves shall be kept closed except those required for water circulation. The scuppers on the main deck shall be blocked. Two fire hoses shall be connected and placed one at each end of the vessel. The fire lines should be under pressure at all times.

If there is a fire aboard a vessel moored at the SBM, the following sound signal shall be given on the vessel's whistle: continuous short blasts. The Master of the vessel shall immediately take charge of fire fighting operations.

MEDICAL: There is one hospital, 2 clinics and several doctors.

FRESH WATER: Not available.

FUEL: Not available at Djeno. Vessels proceed to tanker berth at Pointe Noire.

CONSULS: At Pointe Noire: Angolan Consulate. Tel: 94.20.75.
Cuban Consulate. Tel: 94.15.37.
French Consulate. Tel: 94.00.02.
German Consulate. Tel: 94.05.07.

REPAIRS: Workshops at Pointe Noire. Facilities for repairing radar and radios.

WATCHMEN: Compulsory.

AIRPORT: 6 km. from the Port of Pointe Noire. 2 or 4 flights daily to Brazzaville. 1 or 2 flights daily from Brazzaville to Europe.

TIME: GMT plus 1 hour.

CURRENCY: CFA Franc.

GENERAL: *Charts and Publications:* Masters may usefully refer to the following documents:

French:

Charts: 6599 – Approaches to Pointe Noire.
6666 – from Gabon Estuary to Congo Estuary.
6132 – Port of Pointe Noire.

Documents: I.N.French Volume V, C Series, West Coast Africa.
2nd Volume List of Lights – Series C.

Annex entitled: "Loading conditions for tankers of 240,000 to 270,000 d.w.t. (270,000 d.w.t. class) at the Djeno Buoy.
Operational Conditions.
Chart allowing for linking of stress on the mooring line with sea and weather conditions.

British:
Charts: 604 – Cap Lopez to Luanda.
3206 – Bay of Loango to Rio Lucunga.
3285 – Approaches to Pointe Noire.

U.S.:
Charts: 57241 – Bay of Pointe Noire
Approaches to Pointe Noire.
57220 – Pointe Noire to Pointe Pedras
Congo/Gabon.
57240 – Pointe Noire to Cabeca do Cobra
(Omega) Congo River Entrance.

Stores: A ship chandler at Pointe Noire can supply vessels with any foodstuffs required.

Territorial Waters: The sovereignty of the Republic of Congo extends to 30 nautical miles as from the lowest sea watermark along the coast.

Boat Service: A motor boat can be rented through the consignee. Elf Congo motor boats must not be used by the tanker crew except for an urgent medical evacuation.

Meteorology: The rainy season extends from November to May with a maximum in February and March.

Visibility: Visibility can be reduced to less than 1 mile in June, July and August.

Sea: Mean density of the sea at the loading point is 1025. Sea temperature varies between 27°C in February (austral Summer) and 22°C in August (austral Winter).

Tide: Tide is of a semi-diurnal type. Mean amplitude of spring tides is 1.60 m.

Wind: S.S.W. generally less than 15 knots.

Swell: Generally S.S.W. less than 2.50 m. with periods of 10 to 12 seconds.

Current: Sector S. to S.S.E. generally less than 1.5 knots on surface. The current can change to the North without any apparent reason for a period rarely greater than 2 days.

SHIPMASTER'S REPORT: September 1984 (Updated 1994).

Documents: Documents required: 3 each of Crew Lists, Vaccination Lists, Stores & Crew Declaration. 2 each of Passengers (or Nil) List, Birds and Animals, Narcotics, Arms and Ammunition. 1 Notice of Readiness. All paperwork carried out by Loading Master.

On departure, vessel steams slowly back to Pointe Noire while calculations and papers are completed on board.

Pilotage: Pilot and Loading Master boarded from pilot boat which has speed of about 20 knots.

On departure, the Pilot, Loading Master and Cargo Surveyor left using an inflatable dinghy. They prefer the ladder on the starboard side. The tug carries 2 inflatable dinghies.

Anchorages: For tankers waiting to berth at Djeno the indicated anchorage off Pointe Noire was found to be good with thick grey mud. Gear for mooring and hose connecting put on board from tug at anchorage. The tug then goes to Djeno to standby.

Tugs: After mooring, the tug takes a tanker's rope and stays astern during loading.

Mooring: While mooring, tug is used to keep hoses clear.

Loading: Cargo Surveyor boarded while deballasting. Used combination accommodation ladder/pilot ladder on port side. Pilot, Surveyor and Loading Master stay on board.

OPERATOR: Elf Congo, Terminal de Djeno, B.P. 761, Pointe Noire, Congo. *Tel:* 94.20.41. *Telex:* Elfco 8239 Kg. and 8277 Kg.
Contact: Hubert Larche, Terminal Superintendent.

POINTE NOIRE: 04.47 S. 11.49 E. (See Plan)

PORT LIMITS: *Pointe Noire Pilotage area limits:*
South: 5° 07' S.
West: 11° 46' E.
North: 4° 42' S.

DOCUMENTS: On arrival, the Master must hand over to:

The Agents:
4 Crew Lists.
4 Lists of Crew Boys.
4 Passenger Lists or negative.
4 Lists of Ports of Call.
2 Lists of Crew Personal Effects.
2 Stores Lists.
5 copies of Cargo Manifest.
1 List of Narcotics.
1 List of Arms.
1 List of Ammunition.
1 List of Animals.
Master's copy of B/L.

Harbour Authorities:
1 Arrival Form issued by Port of Pointe Noire.
1 Departure Form issued by Port of Pointe Noire.

Health Authorities:
1 Vaccination List for crew members.
1 Declaration of Health (form issued by the port of Pointe Noire).
Vaccination cards for the whole crew.

APPROACHES: *Shipmaster's Report:*
The approach to Pointe Noire from the West using Chart 4105 Freetown to Luanda is clear of dangers as far as our experience goes. After crossing the 200 m. (100 fathom) line, the soundings are consistent with a gently shelving coast until there is 30 m. – 40 m., 3 miles West of Pointe Noire breakwater.

Approaching Pointe Noire from the West the radar picture of the coast about 20 miles North of Pointe Noire is very similar to Pointe Noire itself. This could confuse and lead one to think that the ship is further South than she really is, but the cluster of oil rigs should be a good guide.

There is a cluster of oil rigs with flares S.S.W. by 13 miles from Pointe Noire main lighthouse, with another cluster about due South by 17 miles, both good radar targets. Do not go in between these clusters. Watch out for numerous small dugouts, etc. fishing.

Oil rigs with 1 flare in position Lat. 4° 28.8' S., Long. 11° 15.4' E.

PILOTAGE: Compulsory. Telegraphic address: Harbour Master's Office of the Port of Pointe Noire. Pilot station can be contacted by VHF Channel 16; 24 hour service.

Boarding position: Pilot boards 1 mile North of the green channel light buoy.

Tankers awaiting a Pilot for the SBM at Djeno should wait 2 miles West of the main light at Pointe Noire.

RESTRICTIONS: Minimum draft allowed for ore-carrying vessels of more than 130 m. drawing alongside at Quay G: 20 ft. aft and 15 ft. forward. Max. draft allowed for all vessels: 31 ft. at any hour. Max. draft allowed for ore carriers leaving Quay G is 34 ft. 4 in. (1 hour before high tide). Tying to mooring buoy can be done only between sunrise and sunset.

Max. draft tankers 33 ft. 6 in. and max. LOA 230 m. Tankers to enter in same period as departing ore carriers (1 hour before high tide).

HEALTH: Port Health Officer boards immediately on berthing. Compulsory vaccinations: Yellow fever and cholera.

RADIO: Pointe Noire Radio, call sign TNA. Continuous service on 500 and 2182 kHz from 0600 to 1800 hrs. GMT. Transmission on 8722 kHz. TNA from 0930 to 0945, 1030 to 1045, 1330 to 1445, 1530 to 1545, 1730 to 1800 hrs. GMT; on 13101 kHz. TNA from 0630 to 0645, 0730 to 0745, 0830 to 0900, 1700 to 1715 hrs.

Shipmaster's Report: If vessel is coming from the South it is advisable to pass messages through Luanda.

RADAR/VHF: The Harbour Master's Office has a VHF set (call Channel 16) but no radar.

TUGS: 2 tugs 1,800 h.p. and 900 h.p. Tugs normally join the vessel as soon as it crosses the passage. The vessel's own lines are usually used.

BERTHING:

	Length	Draft Permitted
Quay D: Berth 1	720 m.	24 ft.
" 2		26 ft.
" 3		28 ft.
" 4		29 ft.
" 5		29 ft.
Quay G: Ore Berth	530 m.	34 ft. 04 in. (See "Restrictions")
Tanker Berth	—	33 ft. 06 in.
Mole 1: Timber Berths	350 m.	31 ft.
Lighter Berth	—	12 ft.

Potash Berth: 4 miles Southward of Pointe Noire. Max. draft 44 ft.

STEVEDORES: The Agent requires the following information 48 hours in advance, in order to arrange gangs: precise ETA; number of gangs required for unloading/loading; distribution per hold unloading/loading; draft, fore and aft – before 0600 hrs. in the morning on weekdays counting as overtime; before 0600 hrs. Saturday mornings for the weekend or day before holiday also counted as overtime.

MEDICAL: Notice for medical attention not needed. There are 2 private clinics.

TANKERS: Diameter of loading/unloading lines: 6 in.=aircraft fuel. 10 in.="white product". 12 in.=1500 fuel. Hoses=8 in.

Also see "Djeno Terminal".

DENSITY: 1025 on average. Only slight variations according to tides.

FRESH WATER: 2 hoses can be connected at each berth.
Rate: 20 t.p.h. per hose.

FUEL: Ordered from suppliers: Hydrocongo. Pipe-line supply to tanker berth and Berths No. 1 and 8.

FIRE PRECAUTIONS: The port must be informed of ETA of tanker 24 hours in advance.

CONSULS: France, Tel: 94.00.02–94.00.03. Germany, Tel: 94.00.10.

REPAIRS: Most repairs for the deck and engines are possible. Also facilities for electronic repairs.

DRY DOCKS: One slipway for vessels up to 800 tons.

GANGWAY/DECK WATCHMEN: Compulsory for tankers and gas carriers.

OPENING/CLOSING HATCHES: Usually the crew's responsibility. Can be carried out by the stevedore for payment.

CUSTOMS ALLOWANCES: No limit – must be stated on crew declaration, and quantities must be accurately stated.

CARGO GEAR: Derricks to be in good condition. There are 2 cranes at the new jetty.

REPATRIATION: Every facility for crews equipped with a crew card and passport.

AIRPORT: 6 km. from the port. 1 to 2 flights per day to Brazzaville. 1 to 2 flights per day from Brazzaville to Europe.

TIME: Local time is GMT plus 1 hour.

HOLIDAYS: 1st January (1 day's holiday); 1st May (2 days' holiday); 31st July (1 to 2 days' holiday); 15th August (2 to 3 days' holiday); 1st November; 25th December (1 day's holiday).

POLICE/AMBULANCE/FIRE: Police 17; Fire 94.00.49; Ambulance 94.00.49, 94.21.98.

TELEPHONE: Cannot be connected on board ship but there is one in the middle of Quay D for the use of vessels.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Seaman's cards or passport needed.
PORT REGULATIONS: In the event of congestion, vessels are obliged to work at night and on Sundays, and if they refuse to do this, they may be relegated to the roadsteads and thereby lose their turn to draw alongside.
DELAYS: *Shipmaster's Report:* Occasionally tankers are delayed for long periods as the shore tanks may be full.
GENERAL: As the Congolese Customs are very strict, the drawing up of the Store List and Crew Declaration should be carried out very carefully, as the slightest error is penalised and a fine imposed.

Stores are expensive and not easily obtainable. Fish available, also fruit and vegetables but not in the Rainy Season.

SHIPMASTER'S REPORT: Mail takes between 3 days and 7 days from Pointe Noire to Paris, and Pilot assures that it is reliable.

SHIPMASTER'S REPORT: March 1980.
Pilotage: Compulsory. Pilot boards in position 4° 45.5' S., 11° 45.9' E. 24 and 12 hours notice required.
Anchorage: Position 4° 47.2' S., 11° 49.4' E.
Restrictions: Vessels able to enter and leave at any stage of the tide day or night.
Max. Size: Max. draft 31 ft.
Health: Quarantine Authority require 12 hours notice of arrival.
Tugs: 1 tug available.
Radio: Luanda or Portishead. No replies locally.
VHF: Pilot and Port Authority on Channel 16.
Berthing: Position 4° 46' S., 11° 50' E. Distance from entrance to berth less than 1 mile. Nature of bottom sand and mud. Vessel able to dock and undock at any stage of the tide day or night. There are facilities for loading coal in bulk. No quay cranes available, ships gear used. There is no link span for Ro/Ro vessels. Usual precautions taken with regard to security, no losses suffered. There is sufficient equipment for handling palletised cargo. Ship's gear is used for handling containers and the necessary shore equipment is available.
Density: 1025.
Fresh Water: Available.
Fuel: Bunker fuel oil, diesel oil and lubricating oils available.
Medical: Doctor and hospital available.
Provisions: Fresh provisions available but expensive as they are flown in from South Africa. Meats and groceries also available.
Repairs: Small repair facilities and small machine shop available.
Airport: Local airport with flights to Brazzaville.

SHIPMASTER'S REPORT: July 1987.

When approaching the port from the N.W., vessel should steer 105° T directly towards Dique Exterieure Head Lt. When 5 miles off steer 090° T for 2 miles thence about 100° T, shaping towards the anchorage and keeping at least 5 cables off the land. We disregarded the 148° T leading line on BA. Chart No. 3285 due to shoaling taking place to the North and West of West Breakwater. Sight the green conical buoy on the starboard hand and stop the ship some 5 cables off the breakwaters, heading about 170° T, directly towards the entrance. The green buoy will be about 2 cables abeam to starboard at this position. The pilot will then board from a launch on the port side, manropes and bulwark ladder required.

The Petroleum Pier (P.P.) is situated 3 cables directly inside the harbour entrance. 2 tugs, pushing only, and 1 mooring boat, even though 2 mooring boats are normally available. Vessel berthed Port side alongside. No photography allowed.

Moorings: Forward: 4 headlines to shore, 2 forward head springs to dolphin. Aft: 2 aft back springs to dolphin, 2 stern lines to a hook buoy, 2 long stern lines to shore with lashings.

Berthing and sailing at any time during daylight hours on 31 ft. draft, or 3 hours before to 2 hours after HW on 33 ft. 06 in. maximum draft. Density 1025.

1 × 8 in. Chicksan connection, loading rate about 875 cu.m./h., temperature of fuel oil 140° F.

The Officials are French speaking and are courteous and obliging if all in order. The following boarded, 6 Customs Officers, 2 Immigration Officials (shore passes required), 2 Port Health Officers (vaccinations up to date), 1 Agent, 2 Harbour Masters, 1 Port Captain (Safety Check List and dates of SOLAS Certificates inspected), 1 Loading Master and 1 Charterer's Representative.

No port watchmen, firemen, security etc., and no extra meals required.

Loading Master advises that mugging, etc. prevalent on the shore.

Weather: Dry season from mid-May to mid-September, when cloudy and cool. The remainder of the year is hot, wet and humid.

AUTHORITY: Direction du Port de Pointe-Noire, P.O.Box 711, Pointe-Noire, Republic of Congo. *Tel:* 94.00.52.

AGENT: Socopao, BP 664/714, Pointe Noire, Republic of Congo. Cable address "Freight Pointe Noire". Tel: (242) 94.11.20, 94.11.21. Telex: 8300 and 8252. Fax: (242) 94.12.84.

YOMBO: 04.27 S. 11.06 E. (See Plan)

LOCATION: Yombo Oil Terminal is located in the territorial waters of the Republic of the Congo and consists of the following:

1. Production Platform "Yombo A" located offshore in position Lat. 04° 28' 50.27" S., Long. 11° 05' 36.85" E. and Production Platform "Yombo B" located offshore in position Lat. 04° 28' 16.67" S., Long. 11° 05' 26.68" E.
2. An offshore loading berth composed primarily of a Floating Production, Storage and Offloading Vessel, (FPSO), "Conkouati" (LOA 325 m., Beam 48.1 m., Max. draft 20 m., Min. draft 10.2 m. and D.W.T. 232,083 tons), permanently affixed by 12×21 ton anchor assemblies consisting of 3,290 ft. of 4 in. and 5 in. chain with 5 ton piggyback anchors extending beyond attached by 2.5 in. chain and 3 in. cable.
   The FPSO is located at Lat. 04° 27' 25" S., Long. 11° 06' 19" E. in approximately 325 ft. of water and is situated in open and unsheltered waters approximately 23.3 miles off Pointe Tchitembo, bearing 226° from it.
3. A submarine pipeline system connects the Production Platforms "Yombo A" and "Yombo B" to the FPSO.
4. A submarine electric power cable system connecting platforms "Yombo A" and "Yombo B", to the FPSO.

Company's Facilities: The Company's administrative offices are located in Pointe Noire. The Company's Terminal offices, storage facilities and laboratory for testing stock are located onboard the FPSO.

DOCUMENTS: The following documents are required when calling at Yombo Oil Terminal:
4 copies Crew List.
4 copies Crew Boy List.
4 copies Passenger List.
4 copies Ports of Call List.
2 copies Crew Personal Effects List.
2 copies Stores List.
5 copies Cargo Manifest.
1 copy Narcotics List.
1 copy Arms List.
1 copy Ammunition List.
1 copy Animals List.
1 copy Vaccination List and Vaccination Cards for entire crew.

PILOTAGE: *Mooring Master:* The Mooring Master will board in the anchorage area, unless otherwise agreed.

Lifting vessels will not be allowed to approach or depart from the loading berth without the assistance of the Company designated Mooring Master. The Mooring Master will advise the lifting vessel's personnel on the approach to the loading berth; the operations of mooring and unmooring and in all other operations within the loading berth area. The Mooring Master will be in direct charge of the portable VHF radiotelephone and all ship-to-tug and ship-to-launch communications will be by portable VHF radiotelephone. The lifting vessel's Oil Record Book shall be made available for inspection by the Mooring Master on his arrival at the lifting vessel. All manoeuvres of lifting vessels within the loading berth area shall be performed by the lifting vessel's personnel as directed by the lifting vessel's officer-in-charge and in accordance with the procedure advised by the Mooring Master. The vessel being manoeuvred shall remain solely responsible, on behalf of the lifting vessel's owners, for the safety and proper manoeuvring of the lifting vessel. The lifting vessel's Master must be on the bridge at all times while the lifting vessel is manoeuvring.

Lifting vessels are required to have a clean and efficient pilot ladder fitted with spreaders and manropes, safely and securely rigged, ready for the Mooring Master to embark and disembark on either side of the lifting vessel as advised by the Mooring Master and of sufficient length to reach the Mooring Master's launch. If at night, adequate lighting must be rigged overside for the Mooring Master to depart from the lifting vessel and to use the pilot ladder safely. A lifebuoy with safety line and self-igniting light together with a rope messenger for the Mooring Master's bag shall also be available on deck adjacent to the pilot ladder. Lifting vessels shall afford a "good weather lee" and shall reduce speed as directed by the Mooring Master in order to effect the safe embarking or disembarking of the Mooring Master.

Whenever, as in the case of large lifting vessels in light condition, the freeboard exceeds 30 ft., the accommodation ladder shall also be used in conjunction with the pilot ladder and shall be lowered to about 12 ft. above the water with the pilot ladder rigged immediately adjacent to the bottom platform of the accommodation ladder. A mechanical hoist of an approved pattern shall be considered an acceptable alternative to a conventional pilot ladder for use in conjunction with the accommodation ladder, but a mechanical hoist whose operation relies upon a single wire shall not be considered as an approved type. The rigging of the pilot ladder for the embarkation and disembarkation of the Mooring Master shall be supervised by a licenced deck officer of the lifting vessel and shall be positioned so that the ladder is well clear of any overboard discharge and so that each step of the ladder rests securely against the lifting vessel's side. If, in the opinion of the Mooring Master, the pilot ladder is not safe, the Mooring Master may refuse to board the lifting vessel and any delay caused by such refusal shall be for the lifting vessel's account.

Lifting vessels shall provide food for the Terminal and Government representatives as required while on board the lifting vessel and shall accommodate the Mooring Master, assistants and officials as required. Should the lifting vessel not be equipped with a pilot cabin, the Mooring Master shall be accommodated in a cabin equivalent to that required for an officer on the lifting vessel. The Mooring Master shall have access to the bridge and/or central area of the lifting vessel, including the cargo control room, and such areas shall not be locked or otherwise arranged to prevent immediate entry at any time by the Mooring Master.

APPROACHES: Caution is required when navigating near Yombo Oil Terminal since oil installations and marine activities may be encountered in the area. Mariners are recommended to pass to seaward of all such areas and are advised not to anchor or fish in the vicinity of such oil installations or their pipelines. Mariners are specifically cautioned that all navigation is restricted in the area bounded by Lat. 04° 25' S. and 04° 31' S. and the meridians of Long. 11° 03' E. and 11° 09' E. (See "Plans").

Restricted Zone: Lifting vessels are prohibited from navigating within the restricted zone at Yombo Oil Terminal at any time unless the Mooring Master is on board. The restricted zone is bounded by lines connecting the following points:

Point	*Latitude*	*Longitude*
1	04° 25' 00" S	11° 03' 00" E
2	04° 25' 00" S	11° 09' 00" E
3	04° 31' 00" S	11° 09' 00" E
4	04° 31' 00" S	11° 03' 00" E

ANCHORAGE: The customary anchorage area for vessels awaiting the loading berth is an area one mile in radius centered at Lat. 04° 16' 30" S., Long. 11° 12' 30" E. with FPSO "Conkouati" bearing approximately 210°×12.7 miles.

Anchorage within the Restricted Area (see above) is prohibited unless otherwise designated by the Company or the Mooring Master.

RESTRICTIONS: Mooring between 0600 hrs. and 1100 hrs. only.

MAX. SIZE: 155,000 d.w.t., LOA 280.15 m., Beam 53.60 m. and loaded draft 15.0 m. Also see "Mooring" and "Loading".

HEALTH: *Quarantine Regulations:* The rules governing the quarantine of lifting vessels are the same as those found in other parts of the world.

RADIO/VHF:

Initial Radio Communications: The radio station at Pointe Noire will handle the initial radio communications between lifting vessels and the Company. The station call sign is "TNA", and the station operates on 500 kHz and 2182 kHz from 0600 hrs. – 1800 hrs. daily. The "Conkouati", call sign "D5SI", is equipped with Marisat and maintains Marisat No. 1244274.

Advice of Arrival: It is important that lifting vessels establish radio contact with the Company when 3 days distant from the Terminal and maintain such contact until just prior to arrival at the Terminal. Lifting vessels should send an ETA message to the Company (telex 8216 KG) not less than 72 hours prior to arrival at the Terminal, providing the following information:

(1) The estimated time of arrival and name of local agent for lifting vessel.
(2) The estimated draft, fore and aft, upon arrival.
(3) The quantity of crude oil to be loaded and the grade of such.
(4) The estimated sailing draft.
(5) The last port of call.
(6) Whether the lifting vessel has a clean Bill of Health.
(7) The distance from the bow to the centre of the lifting vessel's manifold.
(8) Confirmation that hose handling gear and mooring equipment, navigation equipment, radars, steering gear and engine propulsion are in good order and condition, that the lifting vessel can accept 1×16 in. diameter cargo hose fitted with a 16 in. diameter flange.
(9) Confirm that any slops on board are isolated by double valve segregation.

The first ETA message should also include a definite statement of the details of any equipment required from the FPSO for connecting the cargo hose to the lifting vessel's manifold. Further ETA messages should be sent to the Company when the vessel is 48 hours and 24 hours distant from the Terminal confirming or giving notice of any change in the 72 hour ETA and at any other time after the 24 hour ETA message when a change by more than 2 hours occurs in the ETA. The 24 hour ETA message should include a positive statement regarding the lifting vessel's readiness to load on arrival and the number of hours prior to commencement of loading that will be required by the lifting vessel to discharge clean ballast.

Local time is G.M.T. plus one hour and daylight saving time (Summer time) is not applicable.

Ship-to-Terminal Communications: The FPSO is equipped with VHF radiotelephone using international frequencies and maintains a radio watch on VHF Channel 16. Not less than 12 hours prior to the lifting vessel's ETA at the Terminal, the lifting vessel is required to maintain a radio watch on VHF Channel 16. Masters are recommended to use this facility as soon as the lifting vessel is within range since such communications are the best means of avoiding delay in the mooring of the lifting vessel.

While the Mooring Master is on board the lifting vessel, the Mooring Master will be in direct charge of the portable VHF ship-to-terminal radiotelephone and all ship-to-terminal, ship-to-tug and ship-to-launch communications will be by VHF radiotelephone. The Mooring Master will advise the Master and officers regarding the emergency signals set up for use in the event the VHF radiotelephone units become inoperative. The use of the lifting vessel's H/F radio station and/or battery charging equipment is prohibited during cargo loading operations.

Radio Watches: While at the anchorage awaiting the loading berth, lifting vessels should maintain a listening watch on VHF Channel 16 with the FPSO.

TUGS: Available.

Also see "Mooring" – "Mooring Operation".

BERTHING: Tenders to load crude oil will normally be accepted and the loading berth will be assigned to a lifting vessel in the order of its arrival, provided the lifting vessel has a nomination for crude oil valid at the time and is in all respects equipped and ready to moor. In the event that mooring is delayed on account of weather, the lifting vessel will keep its position in line. Should the lifting vessel be required to leave the area on account of weather, the lifting vessel should keep in radio contact with the Terminal in order to make the lifting vessel available as soon as the weather moderates. The Company reserves the right to load lifting vessels "out of turn" following the return of good weather, to the extent that such loading "out of turn" does not materially delay the loading of other lifting vessels in line. For example, should weather make it necessary for a specific lifting vessel waiting at the loading berth or at the anchorage to vacate the area, the Company may load another lifting vessel which arrived at the anchorage after the specific lifting vessel but before the return of the specific lifting vessel which was waiting in line ahead of the other lifting vessel.

MOORING: Yombo Oil Terminal is operated by Walter International Congo, Inc. and is operated 24 hours a day, 7 days a week, weather and other circumstances permitting. Vessels are moored from 0600 hrs. to 1100 hrs. only, loaded at any hour, and unmoored at any time, weather and other circumstances permitting.

Mooring Facilities: The FPSO is permanently fixed by a 12 point spread system, with each point secured directly to the seabed by a 21 ton anchor. On the port side of the FPSO, the fore and after chains run through specially constructed fairleads at the vessel's bottom before terminating at the deck. On the starboard side, the chains run directly to the deck. Lifting vessels are moored alongside, starboard side to the port side of the FPSO by means of a terminal supplied 10 in. braided mooring hawsers. Seven primary and 7 secondary fenders will be deployed by the storage vessel. Upon the completion of mooring, 14 hawsers will be used; 3 headlines, 3 sternlines, 2 forward breastlines, 2 after breastlines, 2 forward springs and 2 after springs. The loading berth will accept vessels up to 155,000 d.w.t., with displacement not to exceed 182,000 metric tonnes and length not to exceed 280 m. overall. The FPSO is equipped with anchor lights and a red light (360°) displayed on its top mast.

Vessel's Gear: Prior to the berthing of any lifting vessel, the derrick of the lifting vessel should be raised and fully rigged. The derrick should be swung inboard so as to be clear of the manifold and ensure that it does not interfere with the operation of the FPSO's derrick. The warping winches and windlass should be in good working order and condition at all times while at the loading berth and must be adequate to handle mooring lines under heavy strain and efficient stoppers must be readily available to "stop-off" the mooring lines and transfer same from winch to the bitts. The vessel shall have 4 messengers of 4 in. circumference and 110 m. in length available, 2 forward and 2 aft, in way of head, stern and springline bitts.

On the sides, opposite the lifting vessel's manifolds, there must be equipment rated by an approved Classification Society and in accordance with O.C.I.M.F. "Standards for Manifolds and Associated Equipment" and capable of lifting the cargo hoses safely and efficiently from the FPSO over the rail to the lifting vessel's manifold. Lifting vessels must also have an adequate supply of nuts, bolts, gaskets and wrenches to connect the cargo hoses. If, in the opinion of the Mooring Master, the lifting vessel is not equipped with adequate mooring or loading facilities or lines or gear, the Mooring Master must so inform the lifting vessel's Master and in such event the lifting vessel will not be brought into the loading berth until the facilities or lines or gear are deemed satisfactory by the Mooring Master.

Mooring Operation: The Company will provide assist tug(s) to assist in the mooring and unmooring of the lifting vessel. The assist tug(s) will be based at the loading berth and will operate under the direct control of the Mooring Master.

Prior to approaching the FPSO "Conkouati" all anchors shall be secured.

When the mooring operations have been completed, 2 tugs will be standing-by in Yombo Field for the duration of the loading operations in case of an emergency.

Vessel's Alertness: The loading berth is in open and unsheltered waters; therefore, from the time the Mooring Master boards the lifting vessel until the lifting vessel has loaded her cargo and the Mooring Master has disembarked, full power must be available at all times on all deck winches and windlass and other gear of the lifting vessel. The lifting vessel's engines, steering machinery and other manoeuvring equipment must likewise be maintained in a constant state of readiness with full power for immediate use so as to allow the lifting vessel to manoeuvre in an emergency or so as to allow the lifting vessel to depart from the loading berth at any time following a request by the Mooring Master or the Company to do so.

The lifting vessel's personnel should be at their stations and alert at all times during mooring, unmooring, hose handling and cargo loading operations. Where lifting vessels are equipped with an electric clutch control to the propeller shaft, such lifting vessels must disconnect the electrical clutch control and the manual clutch so that there will be no possibility of the engine engaging the propeller shaft while the lifting vessel is moored. Turbine vessels will not be accepted. A constant watch in the engine room, control room, cargo control room and on the bridge shall be provided at all times aboard any lifting vessel while at or in the vicinity of the loading berth.

LOADING: Lifting vessels are loaded by means of 1×16 in. flexible cargo hose directly from the port side manifold of the FPSO. The FPSO is loaded by means of submarine pipelines which run from Production Platforms "Yombo A" and "Yombo B" and are directly connected by 2 fluid risers to the starboard quarter. The maximum draft allowed for lifting vessels is 15.0 m.

Rate of Loading: The crude oil flow is by pump and the maximum crude oil loading rate for lifting vessels using 1×16 in. hose is approximately 30,000 bbls./hr. or approximately 5,000 tonnes/hr. In order to save vessel time and make the loading berth available for other lifting vessels, it is required that only clean, oil-free ballast be pumped as fast as possible and that lifting vessels receive oil as fast as it can be delivered with both operations having due regard for safety. It is also requested that any impediments such as 'Y' pieces, strainers or mud boxes which may restrict the flow of crude oil into the lifting vessel be removed prior to arrival of the lifting vessel at the loading berth.

Hose Connection: After the lifting vessel has been securely moored, the cargo hose will be hoisted to the lifting vessel's rail amidships by the FPSO's equipment. The cargo hose is 1×16 in. hose fitted with a 16 in. valve and a 150 p.s.i. ANSI flange. The lifting vessel should have reducers and fittings onboard so as to enable such cargo hose to be connected to the lifting vessel's manifold. The raising and lowering of the cargo hose will be conducted by the FPSO. All hose connecting and disconnecting will be performed by the lifting vessel's crew as directed by the lifting vessel's officer-in-charge, under the supervision of the Mooring Master. The Mooring Master will remain onboard as Loading Master during the entire time the lifting vessel is at the loading berth. Particular care should be taken during all phases of operations to avoid damage to the cargo hoses and their fittings.

Loading Readiness and Arrival Time: Upon the arrival of the lifting vessel at the customary anchorage for the loading berth, the Master or his agent shall give the Company Notice by letter, telegraph, radio or telephone that the lifting vessel is ready to load. Laytime shall commence upon the expiration of 6 hours following the acceptance of such Notice by the Company provided that the lifting vessel has been nominated to load cargo and the Terminal holds such cargo nomination and further provided that the Mooring Master has deemed the lifting vessel to be in all respects ready to moor and load. This Notice of Readiness will be accepted only between 0600 hrs. and 3 hours before sunset, but will not be accepted at any time when the Terminal is closed. If, however, the lifting vessel is moved to the loading berth without delay after having arrived at any time and the lifting vessel is in all respects ready to moor and load in the opinion of the Mooring Master, the Notice of Readiness will be accepted at the time that the Mooring Master boards the vessel. Laytime shall continue until the cargo hose has been disconnected from the lifting vessel's manifold.

Responsibility: Prior to the commencement of any cargo loading operation, the Mooring Master and officers-in-charge of the loading operations for the lifting vessel and the FPSO "Conkouati" shall engage in a pre-loading conference to formulate a loading plan and to ensure that the lifting vessel is in all respects ready to load. No cargo loading shall take place without the permission of the Mooring Master, which permission shall not be given until the pre-loading conference and the lifting vessel Safety Check List have been completed. The lifting vessel's Master shall remain responsible for the safety of the lifting vessel and all operations on board the lifting vessel at all times. The Mooring Master will advise the officer-in-charge of the loading operations for the lifting vessel with respect to the loading pressures and hazards but the Mooring Master will not direct any aspect of the loading except as may be necessary to protect the loading berth and related facilities and equipment. The manipulation of the lifting vessel's valves is the direct responsibility of the lifting vessel's personnel. The Mooring Master shall have the right to suspend cargo loading operations or to require the lifting vessel to unmoor and depart from the loading berth at any time when the mooring plan, pre-loading plan or safety requirements and regulations are not being followed by the lifting vessel or at any time the Mooring Master believes or becomes aware of the existence of any other reason which in his opinion shall require the suspension of the mooring or the loading of the lifting vessel. All time lost in such circumstances shall be for the lifting vessel's account.

Oil Valve Control: The incoming oil stream is controlled on the FPSO and the lifting vessel's valves must not be closed at any time against the incoming oil stream. Such a procedure creates an excessive pressure which may damage the hoses or other Terminal facilities and could result in a pollution incident. Lifting vessels and their owners and charterers and Masters will be held legally liable for any damage resulting from the lifting vessel's failure to observe this precaution. Frequent checks of the cargo loading must be made by lifting vessel personnel during the loading operation so that a reduction in the loading rate, before topping-off the final tank or tanks, may be arranged through the Mooring Master by the officer-in-charge of the loading operations for the lifting vessel. A normal standby warning should be given about 20 minutes before the shutdown of the loading operations. Upon the request from the lifting vessel to shut down the loading operations, a minimum of 3 minutes will be normally required to stop the flow of crude oil. Lifting vessel's personnel shall be responsible for the call to stop the loading of the lifting vessel. When cargo has ceased to flow, the valves on the FPSO will be closed and the lifting vessel's manifold valves may then be closed.

Emergency Signal: The emergency signals employed at the Terminal shall be demonstrated prior to transfer. Should normal ship-to-terminal communications fail, the emergency signal, consisting of a continuous blast on the ship's whistle, must be sounded by the lifting vessel and all loading operations shutdown until communications can be re-established. Steam or air should never be shut off from the whistle of the lifting vessel during loading. For this reason, it is requested that lifting vessels in the area refrain from using their whistles for other than essential purposes and that the use of "continuous blast" whistle signal be reserved for emergency purposes only. All crew members who stand a deck watch during the transfer of crude oil are expected to know the emergency shutdown signal.

Code Flag: During all cargo loading operations, the International Code flag 'B' shall be displayed from a topmast signal halyard during daylight hours and a red light shall be displayed during the hours of darkness. The red light should be of a character as to be visible at a distance of at least 2 miles and show an unbroken light around the horizon.

Terminal Stops: Request for the Terminal to stop the flow of crude oil at a predetermined tonnage (shore stop) must be made in writing to the Company and will be deemed to include the statement and understanding that the Company will not be responsible for (1) any errors, costs or claims arising from such request and (2) any crude oil loaded in excess of that requested will not be pumped back aboard the FPSO. Some delays in stopping the flow of crude oil are always incurred when such a stop is made.

BALLAST: *Precautions and Rules:* There are no facilities for the off-loading of dirty ballast but clean oil-free ballast may be discharged overboard from the lifting vessel. It is the responsibility of the Master of the lifting vessel to see that no oil (crude, bunker, diesel, bunker C, slops, residues, contaminated water ballast or oily bilge water) is pumped or spilled overboard from the lifting vessel. All deck scuppers must be plugged tight and adequate drip pans with sand and sawdust must be provided where necessary on deck for use at all times, especially when disconnecting hoses, in order to prevent any such loss of oil overboard. The waters in and adjacent to the loading berth must not be polluted and only clean oil-free ballast may be discharged.

The discharge of oil mixtures from lifting vessels while enroute to the Terminal is prohibited except when the following conditions are all satisfied:

1. The instantaneous rate of discharge of oil content of the oily mixture does not exceed 60 litre/mile.
2. The total quantity of oil discharged on the ballast voyage does not exceed that quantity permitted by the "International Convention for the Prevention of Pollution from Ships Act 1973" as modified by the Protocol of 1978 thereto.
3. The lifting vessel is more than 50 miles from the nearest point on the coastline of the Republic of the Congo.

Masters are warned that when disposing of dirty ballast or bilge water 50 miles or more from the coastline of the Republic of the Congo, all pipelines, sea suctions, strainers and pumps which are later to be used to discharge clean ballast, must be flushed clean, so that there will be no chance of even a small amount of pollution when the clean ballast is pumped overboard.

Lifting vessels must have sufficient ballast or cargo (30% of their deadweight) for safe manoeuvring and, where practicable, should arrive at the loading berth with the propeller completely submerged and the vessel properly trimmed. The Mooring Master may refuse to permit the mooring of any lifting vessel not in compliance with these requirements until the vessel takes on sufficient ballast and/or alters her trim to meet these requirements.

As soon as practicable after arrival, lifting vessel's tanks will be inspected for evidence of oil in ballast and during the discharge of ballast a similar inspection will take place. If evidence of oil appears at either of these inspections, the lifting vessel must vacate the loading berth and discharge such dirty ballast more than 50 miles offshore. All time lost resulting from such condition shall be solely for the lifting vessel's account.

Any lifting vessel required to vacate the loading berth for the purpose of discharging dirty ballast, cleaning tanks or for any similar reason, automatically nullifies any Notice of Readiness already tendered and at the same time loses any priority held for loading. Lifting vessels must tender a new Notice of Readiness upon their return and the lifting vessel will be entered for loading upon the Company's acceptance of the new Notice of Readiness.

Lifting vessels must keep a constant watch on the side of the lifting vessel from which clean ballast is being discharged for any indication of water discoloration or oil sheen. Discharge of ballast must be immediately suspended should there be any indication of discoloration or sheen and the Mooring Master shall be immediately informed of such. An investigation of any such discoloration or sheen shall be carried out by the lifting vessel and the findings reported to the Mooring Master. Discharging shall not resume without permission of the Mooring Master.

In addition to the lights usually displayed, lifting vessels are required to illuminate the lifting vessel and the waters around the lifting vessel with all available and suitable searchlights and floodlights during the discharge of clean ballast and the loading of crude oil during the hours of darkness and restricted visibility. Such illumination must be to the satisfaction of the Mooring Master and must be undertaken so as to assist in the loading operations and in order that any oil on the surface of the sea may be readily detected and appropriate action taken. Lifting vessels unable to illuminate the sea satifactorily may not discharge ballast or engage in the loading of crude oil during the hours of darkness and any such delay shall be for the account of the lifting vessel.

Loading and Deballasting Simultaneously: Lifting vessels equipped with segregated ballast will be allowed to discharge segregated ballast and load oil simultaneously, subject to the approval of the Mooring Master.

Pollution Damage Liability: The lifting vessel, its Master, owners and charterers shall be liable for any pollution damage and fines/penalties applicable for any pollution caused by the lifting vessel in the waters and territory of the Republic of the Congo to the full extent provided under Congolese Law. Every lifting vessel, to be acceptable for berthing and loading, must possess a current and valid TOVALOP Certificate evidencing its enrollment in TOVALOP and the owners, charterers or purchasers of the cargo must be a member of CRISTAL Ltd., with full CRISTAL coverage to be applicable as evidence of financial responsibility in the event of a pollution incident.

MEDICAL: *Emergency Medical Assistance:* Lifting vessels requiring emergency medical assistance should contact the Terminal by VHF radio and supply the necessary pertinent information which will be passed on to the vessel's agent. Neither medical or hospital facilities are available at the Terminal, but private doctors and hospital facilities are available in the city of Pointe Noire.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: Consular or Diplomatic representatives for many nations maintain offices in Pointe Noire and Brazzaville.

REPAIRS: The Masters of lifting vessels loading at the loading berth are advised that the loading berth is located in open and unsheltered waters and under no circumstances may engines be shut down for repairs while the lifting vessel is at the loading berth or at the anchorage.

There are no facilities for making repairs to a lifting vessel at the Terminal and no repairs will be allowed at the loading berth. However, arrangements can be made through the vessel's agent to utilise the repair facilities at other ports.

REPATRIATION: There are no facilities for crew changes.

TIME: G.M.T. plus 1 hour. No Summertime.

SHORE LEAVE: Not allowed.

GENERAL:

Flag: Lifting vessels are required to fly the flag of the Republic of the Congo on the foremast during daylight hours while in the territorial waters of the Republic of the Congo. The territorial waters extend 30 nautical miles seaward from the coastline of the Republic of the Congo.

Government Officials: Governmental officials such as the Customs Officer, Quarantine Officer, Immigration Officer, Captain of the Port and the Police, are stationed in Pointe Noire. Should Customs guards be stationed on board the lifting vessel while at the loading berth, it is expected that the lifting vessel will provide food and accommodation for these guards and other governmental officials.

Agency: The Company does not perform any vessel agency functions. Lifting vessels calling at the Terminal must arrange for their own agent.

Supplies: Commissary supplies, stewards stores, laundry services and marine lubricants are not available through the Company and may not be loaded at the loading berth. Any questions concerning the availability of such items from other sources and the loading of such items elsewhere should be handled through the vessel's agent.

Contraband: The Company prohibits unauthorised craft from coming alongside lifting vessels while at the loading berth without the permission of the Mooring Master. To avoid the possibility of undesirable items getting aboard lifting vessels, it is recommended that Masters discourage any such craft from coming alongside while lifting vessels are at or in the vicinity of the loading berth.

Garbage: The dumping of garbage, sewage and refuse outside is prohibited and there are no facilities for receiving such at the Terminal.

WEATHER:

General: The Company can advise of the following general environmental characteristics for the area off the coast of the Republic of the Congo, but the navigator is referred to the published Sailing Instructions and Directions for the area for more detailed information on the climate, weather, wind, tide, current and sea.

Climate: The coast between Cape Lopez and the Congo River is dominated by the Basin of the Ogooue and is covered with a dense equatorial forest which is frequently subjected to heavy rainfall. The area exhibits a characteristic diurnal variation in cloudiness, and the climate along the coastline is heavily influenced by the heated continental interior, the extratropical storms and the cool Benguela current. The average annual rainfall is 123 in. and ranges from a maximum of 19.9 in. in November to a minimum of 0.04 in. in July. Temperatures seldom exceed 95°F and seldom fall below 65°F, and are moderately high throughout the year with an average annual temperature of 79°F and a mean maximum temperature of 86°F.

Weather Data Summary: January is the stormiest month because thundersqualls (combined thunderstorms and squalls) are frequent. Summarised wind data does not indicate strong winds during this month, but gusty winds occur during the thunderstorms, these being brief and irregular. In February and March, the weather is unsettled with occasional rain. In April weather generally improves, becoming cooler and drier. In May the weather becomes fair, but by the end of the month it again becomes more settled and a breeze blows steadily from a S.E'ly. direction. In June and July, the weather is very misty and gloomy, decreasing visibility significantly. In August, light breezes persist, generally cloudy and overcast conditions exist, by the end of the month, heavy mists clear away. In September, hotter weather and more S.W'ly. winds develop with frequent light showers. Sea breezes become stronger to the end of the month, and thundersqualls moving from the S.E. occur. In October, the wind is still more W'ly. with occasional small showers, and generally overcast skies until noon. In November and December, strong breezes move off the land, sometimes with rain, thunder and lightning.

Annual average rainfall	123 in.
Average daily maximum air temperature	84°F.
Average daily minimum air temperature	72°F.
Extreme highest average monthly air temperature	131°F.
Extreme lowest average monthly air temperature	54°F.
Average relative humidity (0600 hrs.)	92% – 96%.
Average relative humidity (1300 hrs.)	68% – 75%.

Winds: The prevailing winds off the Republic of the Congo are characteristically light and S'ly. the year round. Land and sea breezes dominate along the coast and generally blow between the S.W. and S.E. The highest offshore wind speeds occur during local thundersqualls. These thundersqualls may be violent, occur quickly and without warning, and are often accompanied by heavy winds, seas, swells and rain which may reduce visibility substantially.

Tides: The tides can be predicted with reasonable accuracy, through use of the Tide Tables for Takoradi, Ghana, with the appropriate correction factor for Pointe Noire applied.

Currents: The Benguela Current flows North along the West coast of Africa from the vicinity of the Cape of Good Hope to the Gulf of Guinea. The general direction of the current off the Republic of the Congo is parallel to the coast. The current is generally stronger during December and January when the current flows Southward at 10 miles to 20 miles off Cape Lopez, but during the remaining months of the year, the current generally sets in a N.W'ly. direction and sometimes attains a velocity of about 2 knots. The current is usually more rapid close to the coast than it is farther offshore, but its velocity is variable because of the effect of the winds.

Seas: The coast is influenced by swells from the South and S.W., but most of the higher waves occur in association with thundersqualls. The highest collection of waves can be expected during March and April and during October and December, but waves of 6 ft. or more do not occur more than 2.5% of the time.

SAFETY: *Lifting Vessel Preparedness – Hyrogen Sulphide Gas:* Walter International Congo Inc., Yombo field operations has hydrogen sulphide (H_2S) gas in concentrations significant enough to be a toxicity concern for personnel. It is therefore mandatory that lifting vessels be properly equipped and that all vessel personnel shall undergo training provided by Walter International Safety Personnel in H_2S safety, including the proper handling of breathing apparatus, prior to the vessel's berthing at the Terminal loading facility.

Although the crude is classified as sweet regarding sulphur content, H_2S gases remain entrained in the oil and offer concern during loading, hauling and unloading operations. Additionally, as vessels will be loading side-by-side, there could be an exposure to H_2S gas during an operational upset on the FPSO.

AUTHORITY: Walter International Congo Inc., P.O. Box 212, Pointe Noire, Republic of the Congo. *Tel:* (242) 94-24-70/75/77. *Telex:* 8216 KG. *Contact:* George Ross, Production Manager.

NOTES

Please also advise Shipping Guides Ltd.

Cook Islands

AVATIU, (Including Avarua) Rarotonga: 21.12 S. 159.47 W. (See Plan)

DOCUMENTS:

Health: International Maritime Declaration of Health.
1 Passenger List
1 Crew List

Customs: (Immigration)
2 Manifests of Cargo showing weight or measurement (basis on which freight calculated).
2 Crew Lists.
2 Passenger Lists (landing and transit).
Each disembarking passenger to complete a landing card and baggage declaration.
Clearance from Last Port.

Agent: 5 Manifests of Cargo.
1 Crew List.
1 Passenger List.

PILOTAGE: Not compulsory at present. However, Pilot available. Arrange through vessel's Agent 24 hours notice of ETA. Pilot boards from 35 ft. steel tug *Avatiu*. Craft painted blue hull, white superstructure. Tug equipped with VHF Channels 6, 12, 14 and 16. Pilot normally boards 0.75 miles off entrance Avatiu on line of leads.

ANCHORAGES: *Avarua:* As shown on Admiralty Chart No. 1264. Prevailing wind is S.E. and the anchorage is safe except in some instances when wind and/or sea are fresh from N.W. through N.E. 4 to 5 shackles of cable in the water has been found the most satisfactory in normal circumstances in 25 fathoms.

RESTRICTIONS: None. Anchorage, in 25 fathoms, is well defined with cross leads.

MAX. SIZE: No restrictions.

HEALTH: Vessel should radio "Porthealth Rarotonga" not less than 24 hours before arrival giving ports of call for preceding 3 weeks, number of crew, number of passengers, state of health and requesting Free Radio Pratique.

RADIO: Call sign ZKR continuous listening watch on 2182, 4125 and 8198 kHz, also Channel 16 on the VHF. Weather forecasts are broadcast daily by R/T on 2207 kHz, and 8291.1 kHz at 0615 hrs. GMT and 1815 hrs. GMT after a preliminary call on 2182 kHz.

VHF: Harbour Master has VHF for communication between vessel and office on Channels 6, 12, 14 and 16. Listening watch on Channel 16 between the hours 0800 – 1200 and 1300 – 1600 (local time) from Monday to Friday. Harbour Master can be contacted after hours by arrangement through vessel's Agent.

TUGS: Small tug available (1.25 ton bollard pull) to assist with mooring.

BERTHING: *Avatiu:* Vessels berth port or starboard side too as may be necessary, berth having a maximum depth alongside of 6.2 m. below MSL. Inner Overseas Berth, length 128 m. Outer Overseas berth, length 135 m. Swinging basin for vessels not over 120 m. in length. Draft 5.5 m. aft, 4.8 m. forward.

STEVEDORES: Arranged by ship's Agent or Waterfront Commission.

MEDICAL: Medical and hospital facilities available. International vaccinations/inoculations required depending on prior ports of call.

TANKERS: Small tanker from Fiji, using ship's 4 in. hose for discharge. The LPG shore manifold is sited at the Northern corner of No. 1 shed. The oil shore manifold is sited at the Northern corner of No. 3 shed in Avatiu Harbour.

DENSITY: 1025.

FRESH WATER: Available at berth.

FUEL: Available by delivery trucks.

CONSULS: France and New Zealand are represented.

REPAIRS: Only minor repairs possible such as welding and repairs to pumps and other auxiliaries.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: By crew or stevedores to vessel's convenience.

TOBACCO ALLOWANCE: 200 cigarettes, or half pound tobacco or 50 cigars.

WINE AND/OR SPIRIT ALLOWANCE: Allowance is 1 opened bottle of either wine or spirits, or a reasonable quantity of beer per person, for consumption on board. Under no circumstances may any wines, spirits or beer be brought ashore.

CARGO GEAR: Ship's gear for discharging and loading, 1×12 ton heavy lift crane available.

REPATRIATION: Confined to repatriation of crew landed for hospitalisation.

AIRPORT: Rarotonga International Airport is 2 miles away.

TIME: GMT minus 10 hours throughout the year.

HOLIDAYS: Cargo cannot be worked on any Sunday or on Good Friday and Christmas Day. Other Holidays: Boxing Day (26th December); New Year's Day; Easter Monday; ANZAC Day (25th April); Queen's Birthday (1st Monday in June); Constitution Celebrations (4th Monday in August).

POLICE/AMBULANCE/FIRE: Ring exchange operator or dial 999, 998 or 996.

TELEPHONES: No connection available at present. Telephone available at Wharf Gate for emergency services.

SHIP SUPPLY SERVICE: There are no ship-to-shore services available as a regular daily schedule. However, there are occasions when vessels are anchored off the Avatiu Harbour or in the 'Roads' that requests for boat transport are provided by the small tug of the Department of Transport after application by the Shipping Agent for its services.

The Agent is The General Manager of the Waterfront Commission. Fax No. (682) 21921. Rarotonga, Cook Islands.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Collection service available by arrangement with Department of Internal Affairs. Tel: 29370.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: New Zealand and Cook Island Dollars are of equal value.

GENERAL: Bananas available at times. Green vegetables are sometimes difficult to obtain. Oranges, lemons, mandarines available March-August, pineapples November-February.

NOTES

Please also advise Shipping Guides Ltd.

Costa Rica

GENERAL: (See Plan)

DOCUMENTS: *Prior to Arrival:* Arrival Notice: In practice, owing to the closeness of other ports of call, the shipping Agent notifies the Port Authority 48 to 72 hours in advance of the vessel's arrival. 24 hours before the vessel's arrival in the Pilot Waiting Zone, the Agency must report in writing to the Port Authority (Dockmaster) the vessel's time of arrival and the company that owns it. 12 hours before arrival, the time of arrival is confirmed, also in writing. One of these two written notices must contain the distribution list of the cargo to be unloaded, although failure to submit this information shall not delay docking. In addition, the number of longshoremen for loading and unloading, and if necessary, the number of launches or feluccas that will be required if the pier is occupied on both sides (Puntarenas) must be reported. Failure to confirm the time of arrival may result in losing the vessel's turn in docking.

Copies of the arrival notice should be sent to the Port Captain's Office, which performs the functions of Migration, Customs Administration, Customs Security, Delegate of the Ministry of Agriculture and Livestock (MAG) and the Veterinary Health Officer. In addition, copies must be submitted to the shipping agent and Customs for them to report to their clients on the arrival of the shipments and to initiate import procedures.

Information on cargo for the port:

It is recommended that the shipping Agency send by airmail 2 Cargo Manifests and 2 copies of the Bills of Lading; 1 copy of each document shall be kept for the Agency's internal use, and the other shall be used to report to the Customs Agents and the cargo consignees.

On Arrival:

Type of Documents	Number and Distribution of Documents					
Basic forms	*Captain of Port*	*Customs*	*Maritime Health*	*MAG*	*Port Authority*	*Total*
General Declaration	1	1	–	1	–	3
Cargo Manifest	12(a)	5	–	–	3	20
Crew List	3(b)	–	1	–	–	4
Passenger List	1	1	1	–	–	3
Ship's Stores List	–	1	1	1(d)	–	3
Crew Effects Declaration	–	–	–	–	–	–
Maritime Health Declaration	–	–	1	–	–	1
Mail Guide	–	–	–	–	–	1(e)
Additional Documents:						
Visaed Clearance Permit	1	–	–	–	–	1
Consular Manifest	–	2	–	–	–	2
Crew List (f)	–	1	–	–	–	1
Passenger List (f) (g)	1	1	–	–	–	2
Maritime Health Declaration (f)	–	1	–	–	–	1
Cargo Tally Books	–	15(h)	–	–	–	15

(a) To be distributed among Customs agents.
(b) A copy remains in the control booth at the exit of the port area.
(c) Sometimes checks vaccination certificates.
(d) Inspects meat in ship's stores (Ministry of Agriculture & Livestock).
(e) If there is a mail bag, the list is submitted to the ship's Agent.
(f) With consular visa.
(g) A visaed "no passengers" declaration is also required, when appropriate.
(h) For use of Customs and the Port Authority.

Other Requirements:

The Agency must provide a card to each crew member and passenger, which is stamped by the Captain of the Port and filled out on board. The card is used when passengers and crewmen go ashore and return on board the ship.

Prior to Departure:

The clearance permit is requested from the Captain of the Port 24 hours in advance of the ship's departure, or immediately upon itsarrival, if the ship is to remain less than 24 hours in the port.

The clearance permit requires Customs Clearance (certification that there are no charges pending) and remains in force up to 24 hours after the requested departure time.

CALDERA: 09.54 N. 84.43 W. (See Plan)

LOCATION: The Port of Caldera is located in the Gulf of Nicoya in position Lat. 09° 54' 44" N., Long. 84° 43' 14" W.

DOCUMENTS:

2 Certified copies of Clearance from Last Port.
2 Certified copies Crew Lists and 6 copies for distribution.
2 Certified copies Passenger Lists and 6 copies for distribution.
2 Certified copies Cargo Manifest and 25 copies for distribution.
2 Certified copies Stores/Provisions List and 6 copies for distribution.
3 Sets of Bills of Lading.
Construction Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Load Line Certificate.
Cargo Gear Book.

PILOTAGE: Pilots are available and compulsory, arranged by Agents.

ANCHORAGE: Anchorages are defined on a chart supplied by the Port Authority (approx. position 09° 55' N., 84° 45' W.).

RESTRICTIONS: None. Vessels can enter or depart at any time.

MAX. SIZE: Max. LOA 205 m. Max. draft 10 m.

HEALTH: Vessels must be in possession of a Maritime Sanitary Declaration signed by the Master. In case of any suspected disease or fever aboard, Master to notify by radio to Port Authorities and vessel to wait outside the limits of territorial waters until clearance is given.

RADIO: *Arrival Notice:* Agents must be advised 24 hours and 12 hours prior to ship's arrival, indicating amount of cargo to be discharged in metric tons. This information is required by the Port Authority.

Radio Station: "Puntarenas". Call sign: TEC (Tango Echo Charlie).
24 hours, working 8,291.1 kHz (J3E).
24 hours, working 12,429.2 kHz (J31).
On VHF 24 hours, working Channel 16.
On VHF 24 hours, working Channel 14.

TUGS: Compulsory for berthing and unberthing. 2 tugs available. 1×1,700 h.p. and 1×1,800 h.p.

BERTHING:

No. of Berth	*Length (m.)*	*Depth (m.)*	*Max. d.w.t.*
1	210	10.0	25,000
2	150	9.2	15,000
3	130	7.5	5,000

CARGO HANDLING FACILITIES: The port is equipped to handle general cargo, containers and solid bulk cargoes.

Cranes: Mobile cranes and stacker trucks of varying capacities, also other modern port equipment. See "Port Equipment".

Bulk Cargoes: The Port Authority operates a discharge system with pneumatic suction units.

Port Equipment: In its first stage, operations at Caldera will be supported by the following equipment:

Forklifts: 28×3 ton, 5×6 ton, 4×10 ton, 1×12 ton, 2×16 ton and 1×35 ton.
Top loaders: 2×40 ton.
Flat Beds: 20×8 ton, 5×30 ton.
6 Towing tractors.
4 Mobile cranes from 10 tons to 127 tons.
3 Trucks.

Containers: Container reefer station with capacity to handle 40 containers. Container storage area with capacity to handle 700 TEU's.

STEVEDORES: The Port Authority provides stevedores throughout 24 hours.

Gangs must be ordered at the following times: At 0700 hrs. to commence working at 0900 hrs., 1200 hrs. or 1500 hrs. At 1500 hrs. to commence working at 1800 hrs., 2000 hrs. or 0800 hrs. the following day.

MEDICAL: Medical services can be provided at a clinic in the port or at a hospital in Puntarenas.

TANKERS: *Caldera Bay:* Buoy mooring for tankers about 1,000 ft. offshore. Vessels moor using starboard anchor and lines to 3 buoys astern. Hoses connected on port side by ship's crew.

FRESH WATER: Provided by the Port Authority at all berths.

FUEL: Available by road tanker, arranged by Agents.

FIRE PRECAUTIONS: Vessels must comply with all the port requirements regarding fire prevention, contamination and safety to navigation within the port.

GANGWAY/DECK WATCHMEN: At the discretion of the Port Authority. All vessels anchored in the port must be adequately covered by watchmen service.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Distance 100 km. Served by KLM, LACSA, COPA, etc. Various flights daily.

TIME: Local time is GMT minus 6 hours.

HOLIDAYS: January 1st, March 19th, Holy Thursday and Good Friday, April 11th, May 1st, June 29th – Saint Peter and Paul, July 25th, August 2nd, August 15th, September 15th, October 12th, December 8th and December 25th. The port works throughout 24 hours, except Good Friday.

TELEPHONE: Telephones may be placed onboard on request. International and local telephone and telex services available on shore.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: On landing, crew members and passengers in transit must carry identity documents which are to be submitted to the Port Authority.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Local currency is the Colon. No restrictions placed on seamen. The Central Bank has been making weekly mini-devaluations recently.

REGULATIONS: The vessel, the Owner and his Agent must comply with all the arrangements set out in the Port Services Regulations and the General Tariff. The Port Authority will supply these regulations on request.

GENERAL: The new Port of Caldera commenced operating in 1982. Since commencing operations at Caldera, Puntarenas is considered as an extension of the port of Caldera. Caldera has a marginal wharf of 490 m. long consisting of three berths. The outer berth or Berth No. 4 at Puntarenas and the inner berth or Berth No. 5 are at Puntarenas. Both of these berths are out of service due to their poor condition.

Please note that Puntarenas is now strictly for handling bulk cargoes and Caldera is for break-bulk and container operations.

DEVELOPMENTS: In the medium term, the second stage of the port complex of Caldera will be constructed, with which the current capacity will be doubled to 1,200,000 tons per annum.

SHIPMASTER'S REPORT: October 1982

Draft: Forward 5.6 m. Aft 8 m.

Pilot: Pilot boards vessel 2 miles S.W. off end of breakwater.

Tugs: 2 tugs available, one is compulsory for berthing. We employed one pushing and the other as a line boat taking 2 stern lines ashore.

Berthing: Vessel let go port anchor to 2 shackles in water with view to it being used to draw vessel away from quay on leaving.

Line Gangs: Good – 4 men per gang.

Tie-up: 4 headlines and 2 springs each end. This proved sufficient throughout stay, even though moderate surge from swell was experienced.

Gangway: A shoreside gangway was available and used. Gangway/line watchman was provided by Port Authority.

Quay: Modern concrete construction 490 m. in length. 50 tonne bollards and good solid, non spring loaded rubber fenders – both placed every 20 m. along quay.

Electricity, telephone and water all supplied to wharf.

Cargo: Port has good lighting and good sized sheds. Container storage area under construction.

No shore side cranes at present – proposed 40 tonne capacity container gantry.

Fork lifts are plentiful and in good working order.

AUTHORITY: Instituto Costarricense de Puertos del Pacifico, Caldera, Costa Rica. *Tel:* 634-4169, 634-4441. *Telex:* 6046. *FAX:* 634-4137, 634-4112. *Contact:* Elias Enriquez Caruso, Operations Manager.

Institute Costarricense de Puertos del Pacifico, Apartado 001-5400, San Jose, Costa Rica.

GOLFITO: 08.37 N. 83.10 W. (See Plan)

DOCUMENTS:

2 certified copies of Clearance from Last Port.

6 certified copies of Crew List and 6 copies for distribution.

6 certified copies of Passenger List and 6 copies for distribution.

2 certified copies of Cargo Manifest and 25 copies for distribution.

4 certified copies of Stores Provisions List and 6 copies for distribution.

3 sets of Bills of Lading.

PILOTAGE: No Pilot in port. Cia. Bananera sends a launch to guide vessel to quay if requested. Arrival has to be notified at least 24 hours in advance.

ANCHORAGES: Anchorage area to S.E., diagonal towards end of quay. Depth: 35 ft. – 50 ft. Area 1,000 m. by 300 m. approx. Quay distance: approx. 500 m. Sufficient space for 4 vessels.

RESTRICTIONS: Vessel allowed to enter at any time, day or night.

MAX. SIZE: Length of quay is 1,040 ft., enough for two vessels to berth, one in banana berth and the other in cargo berth, each one of 450 ft. Depth 35 ft. alongside.

HEALTH: Any vessel that enters this port has to be in possession of a Sanitary Manifest (Sanitary Maritime Declaration) signed by Master of vessel. In case of any suspected disease or fever aboard, Master to notify by radio to Port Authorities and vessel to wait outside the limit of territorial waters until clearance is given.

RADIO: Station call sign TIM, frequencies 8478 and 500 kHz. Working hours 0400 – 1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival advising date and time of arrival, number passengers disembarking, if any, amount of cargo to discharge in metric tons, number of gangs required to work on board. This information is required by Port and Customs Authorities.

TUGS: No tugs. A launch from the Cia. Bananera takes lines from vessel to quay.

BERTHING: Vessels berth starboard side to. Vessels of Cia. Bananera have preference.

STEVEDORES: Cia. Bananera controls gangs. Advance notice required. Work possible 24 hours a day.

MEDICAL: Cia. Bananera has a hospital for its employees. They can give assistance if a request through the Agency has been made 24 hours in advance. On arrival of vessel a valid vaccination certificate of each member of crew has to be shown.

TANKERS: Can berth in cargo area if length is less than 450 ft., depth is 35 ft. Diameter of pipelines 8 in. and 6 in.

FRESH WATER: Cia. Bananera supplies any quantity at a rate of 50 t.p.h. through shore hoses.

FUEL: Diesel and fuel oil available from time to time.

CONSULS: Nicaragua, Honduras and Panama represented locally.

REPAIRS: Cia. Bananera of Costa Rica has a workshop that can do small repairs such as soldering or small winch repairs.

GANGWAY/DECK WATCHMEN: Available but not compulsory. Customs guard on gangway.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: No limit on board but only one packet cigarettes when going ashore. No alcohol may be taken ashore.

IDENTIFICATION CARDS: Required.

REPATRIATION: Can be arranged.

AIRPORT: Airport one mile from port. Serviced by two airlines "Lacsa Airlines" with two daily flights, one at 0700 hrs. and the other at 1030 hrs. "Ave Airlines" offer only one daily flight, Sundays included, at 0700 hrs. "Lacsa" has no Sunday flights.

TIME: GMT minus 6 hours.

HOLIDAYS: 1st January, no work can be arranged; 19th March, work at double time; Easter Thursday, no work can be arranged; Easter Friday, no work can be arranged; 11th April, work at double time; 1st May, no work can be arranged; Corpus Christi, work at double time; 29th June, work at double time; 2nd August, work at double time; 15th August, work at double time; 15th September, no work can be arranged; 12th October, work at double time; 8th December, work at double time; 25th December, no work can be arranged. Stevedores are not obliged to work Sundays and holidays if not voluntary.

POLICE/AMBULANCE/FIRE: It is sufficient to ask operator for connection with the desired department.

TELEPHONES: No facilities on board vessels.

SHORE LEAVE: Crew are allowed on shore.

DELAYS: Only when quay is occupied by vessels of Cia. Bananera de Costa Rica, which have preference.

SHIPMASTER'S REPORT: January 1980.

Documents: As per "Guide to Port Entry". Documents to be certified by Costa Rican Consul at last port.

Pilotage: No Pilot available.

Restrictions: It is advisable to berth and unberth during daylight hours. Vessel can enter and leave at any stage of the tide.

Max. Size: Safe draft in channel 30 ft. Mean tide range 10.5 ft.

Tugs: None available.

VHF: Agent on Channels 16 and 14.

Berthing: Vessel berthed at the Banana Wharf which is 2 miles from the entrance and is 1,000 ft. in length. There is a banana elevator at the N.W. end.

Docking: Starboard side alongside: Approached Golfito as per Pilot Book, steering North until leading marks bear 047° then steer on leading marks at dead slow speed to pass 2 cables S.E. of Beacon 'A'. With ebb tide running vessel sets to the S.E. when approaching Beacon 'B'.

Vessel stopped and way taken off when about 3 cables from wharf, then proceeded to a position between Beacon 'F' and shore to attempt to turn round to port with port anchor on the bottom, however anchor did not hold against engine, so hove up anchor and turned short to starboard. Final approach to wharf made at an angle of about 30°, let go port anchor when approaching close to wharf and canted stern well in to wharf to pass heaving line. No noticeable current when close to wharf. When in position, port anchor had 3 shackles in water.

Unberthing: Left on ebb tide with another vessel moored close astern. Singled up to headline and spring forward, tightened up on anchor cable and hove on headline to cant stern off. Very short ahead movements and full starboard rudder necessary to achieve this, as current had little effect. Anchor did not hold sufficiently to pull head off the wharf, so came astern on engine until sufficiently clear of wharf to make port turn to leave harbour.

Very little wind on docking or undocking.

Facilities: The following are available: Fresh water, fresh provisions, minor repairs, airport, telex, bunker "C", diesel oil, doctor and hospital.

No dry docking facilities, no laundry service and no lubricating oils available.

Consuls: Nicaragua, Honduras and Panama.

General: Cautions: Beacon 'G' destroyed (January 1980). Rear range lights/marks 047° have very little horizontal separation. There is a small buoy in the approximate position of Beacon 'G' but exact position not established.

If vessel is loading on the Banana Berth, the secondary leading marks will probably be obscured by that vessel's superstructure.

Poor holding experienced when anchoring off the berth.

SHIPMASTER'S REPORT: July 1984.

Documents: As per "Guide to Port Entry".

Pilotage: Not available.

Restrictions: Vessels may enter/leave at any stage of the tide day or night as long as the lights are working and they are familar with the port.

Max. Size: Max. LOA 680 ft. Max. draft alongside 30 ft. Tidal range 10.5 ft. Limiting conditions are the swinging room between Beacons "4-G" and "6-F" and the wharf.

Tugs: None available or necessary.

Radio: Limon Radio "TIM" and Slidell Radio "WMU".

VHF: Bananera on Channels 16, 14, 6 and 8.

Berthing: See "Report" below.

Density: 1010.

Equipment: 1 small mobile crane. 4 banana elevators. 2×3 ton fork lift trucks.

Report: Berthing at Golfito:

From a position 2.8 miles due South of Curupacha Point Light the vessel was turned onto the channel leading marks (047°T) and speed reduced to pass Beacon "H-2" at dead slow ahead, a course of 049°T was required to maintain the leads in line with Buoy "4-G". Beacons "4-G" and "6-F" have now been replaced with square white buoys, same light characteristic as the original beacons. S.S.W. of Beacon "B-3" turned onto leads 036°T. Both these leading marks are quite small and the front triangle is not easy to make out against the steel work of the shed.

A very small tidal stream was observed passing Beacon "4-G" setting approximately West.

Rounding Beacon "4-G" the ship was swung to starboard to bring the channel marks 2 points on the port bow then commenced swinging to port using engines and rudder the ship was brought to within heaving line distance and a head line landed, the vessel now lying at approximately 45° to the wharf. Despite several engine movements she would not swing any further to port. The line boat (an old ship's lifeboat) lacked power, and dedication of the crew to pull a rope ashore in an attempt to land a stern line and control the stern while using the engine to back against the tide.The tidal stream was noticibly stronger the closer the ship came to the wharf, running parallel to the wharf in a N.W.'ly direction. After the failure of the boat to land a stern line I decided to berth port side to. By the time the stern line was inboard the vessel was being carried rapidly N.W.'wards and lying bows on at 90° to the wharf. The head line was let go and the vessel backed off to about 300 ft. and commenced swinging to starboard with the engines. Due to the stronger current closer to the wharf the swing to starboard was checked on each astern movement. The starboard anchor was let go to one shackle to control the bows. The use of the anchor proved very effective and the ship was steered alongside dredging the anchor through the mud. Berthing safely port side to at 1310 hrs., nearly 3 hours after HW.

Departure: Sailing time was set for 2 hours after HW with the tide running diagonally out under the wharf. Singled up to after backspring, head line and for'd spring and with all lines slack I expected the ship to be set off the quay by the tide, but she remained alongside.

The after spring was let go and the stern canted off by heaving on the head line, finally the engines were used against the for'd back spring to cant her to approximately 60° to the wharf. Let go for'd and came astern until the poop as in a line between Beacons "7-D" and "5-C" then commenced turning short around to starboard, the tide carried the ship down to line up on the 036°/216° leads nicely and course was set down the channel to sea.

Conclusions: 1. The ebb tide sets N.W. along the wharf and is about 50% stronger than the flood.

2. Berthing starboard side to is preferred as sailing is much easier at any state of the tide, but should not be attempted after HW.

3. Considering the ease with which the ship dredged the anchor I would say that the holding ground is poor and due to the limited swinging room and the necessity to use a short scope cable I would not recommend waiting at anchor within the harbour.

A safe waiting anchorage can be found approximately 6 miles S.W. of the entrance channel in depths of 60 ft., firm mud and shell.

4. No reliance should be placed on the line boat.

5. Use of the anchor should be considered when berthing either side to, even under ideal conditions, as this would greatly reduce the number of engine movements and conserve engine starting air.

AUTHORITY: Instituto Costarricense de Puertos del Pacifico, 001-5400 Puntarenas, Costa Rica. *Tel:* 63-40-06 and 63-40-23. *Telex:* 6045 Incop Cr. *Contact:* Lic. Rodrigo Arauz Bonilla, Presidente Ejecutivo.

PUERTO LIMON: 10.00 N. 83.01 W. (See Plan)

PORT LIMITS: Limits considered as arrival are 0.5 – 1.0 mile distance from breakwater, anchorage is required.

DOCUMENTS: Required by Port Authorities at Port Limon:

2 certified copies of Clearance from last port. (Zarpe) (original and dup.)

Crew List, 1 original legalised copy. 5 copies not legalised.

Passenger List, 1 original, 1 copy. 5 additional copies not legalised (if no passengers carried, this must be stated on the same document).

Maritime Health Certificate, 1 original, 1 copy.

Provisions List, not legalised : 7 copies.

Stowage Plan, not legalised : Total cargo on board, 4 copies.

Hatch List, not legalised: Total cargo on board, 4 copies.

Cargo Manifest, legalised (manifiestos de carga): From each calling port. 1 original, 1 copy. 30 additional copies, not legalised.

Bills of Lading: 4 sets.

Local Agents or General Agents require the following documents urgently, by Air Mail (Special Delivery), from each calling port directly to address in San Jose, Costa Rica.

2 sets Cargo Manifest – copies
2 sets Ship's Declaration
2 sets Bills of Lading.

If there are Ocean Freight rates to be collected at destinations, please send Agent by Air Mail (registered), the 3 originals and 2 copies, in order to get the payment of the freight rates in time.

Data in every document must be in Spanish or with proper translation.

PILOTAGE: Pilot boards ship with Port Authorities about 1 mile from pier. Also see "Shipmaster's Report".

ANCHORAGES: All anchorages are South-West of "Isla Uvita" in depths between 34 ft. – 36 ft.

MAX. SIZE: See "Berthing".

HEALTH: In the event of contagious disease or fever being suspect on board, agency should be advised immediately.

RADIO: Call letters TIM, frequency 500 kHz and 8478 kHz – working hours 0400 to 1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival, advising date and time of arrival, length, draft, number of passengers disembarking (if any), amount of cargo to discharge in metric tons, number of gangs required to work on board. This information is required by Port and Customs Authorities.

VHF: Port Authority on VHF Channel 16. All vessels anchoring in the port must communicate with the Pilot office on Channel 16.

TUGS: Two tugs are available, each with a capacity of 850 h.p., these are required for berthing and unberthing.

BERTHING:

Berth No.	*Usage*	*Depth* *Fore* (ft.)	*Aft* (ft.)	*LOA* (ft.)
1	Conventional	32	29	600
2	Conventional	25	26	400
3	Conventional	29	30	450
4	For small craft			
5	Conventional	12	16	300
6	Ro/Ro	28	30	300
7	Conventional	29	35	500
8	Conventional	30	30	500
9	Conventional	18	28	200
10	Ro/Ro	32	30	800

Container Terminal:

Berth No.	*Usage*	*Depth* (m.)	*Length* (m.)
4/1	Ro/Ro	8.0	185
4/2	Conventional/Container	8.5	185
4/3	Conventional/Container	9.0	235
2/1	Conventional	6.3	170

Reduction in depths is due to earthquake in April 1991.

Note: Measurements are given in feet. Berths No. 1–2 have a length of 1,020 ft. In order to use Berth No. 2 Agents need to know or check LOA of the vessel at Berth No. 1, if it is less than 520 ft. it is possible to berth a vessel.

CRANES:

1 Portal Crane	10 ton capacity.
1 Grove Crane	30 ton capacity.
1 P & H Crane	50 ton capacity.
1 Liebherr Container Crane	45 tons, under hook, and 35 tons, under spreader.

STEVEDORES: ETA should be sent to Agent in due time. There are 2 stevedoring companies who work throughout 24 hours.

MEDICAL: No advance notice except in case of serious illness to be included in arrival notice, ample hospital facilities available.

TANKERS: See "Puerto Moin".

FRESH WATER: Available and obtained alongside pier delivered by hose, 1.5 to 2 t.p.h. cost $1.56 per ton.

FUEL: Any quantity can be obtained as there is a refinery at Limon.

CONSULS:

Colombia	Tel: 58.02.21	Nicaragua	Tel: 58.04.47
Ecuador		Norway	58.01.83
France	58.02.21	Panama	58.09.65
Honduras	58.03.13		

REPAIRS: Minor repairs only.

SURVEYORS: Lloyd's, ABS and Norske Veritas.

GANGWAY/DECK WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: One packet of cigarettes may be taken ashore. No alcohol may be taken ashore.

REPATRIATION: Facilities available.

AIRPORT: 5 miles from city. 2 daily flights (except Sundays) to San Jose International Airport. Also air taxi service to the whole country.

TIME: Local time minus 6 hours.

HOLIDAYS: Holidays and days on which the port will remain closed:

1st January from 1200 hrs. to 0600 hrs. following day; Holy Thursday and Good Friday from 0001 hrs. on Thursday to 2400 hrs. on Friday; 1st May from 0001 hrs. to 2400 hrs.; 15th August; 15th September; 12th October from 0001 hrs. to 2400 hrs.; 24th December 1800 hrs. – 26th December 0001 hrs.

The first Sunday in February every 4 years is a holiday for Presidential Elections.

POLICE/AMBULANCE/FIRE: Police Tel: 117; Red Cross Ambulance Tel: 580125; Fire Tel: 118.

BANKS:

Banco Popular.
Banco Nacional de Costa Rica.
Banco Anglo Costarricense.
Banco de Costa Rica.

STORING: Vessel can be stored by truck, which can proceed alongside the berth, local riggers can be employed.

SHORE LEAVE: Crew members are allowed to go ashore.

IDENTIFICATION CARDS: They are needed and supplied by the Agent.

GENERAL: There is a small surge alongside the berths in Port Limon, especially when winds coming from the South East, which occurs occasionally (August and September).

In Port Moin the surge occurs when winds come from the North, which occurs occasionally in the months of December and January.

DEVELOPMENTS: Old Railroad Pier is being removed and 2 Ro/Ro ramps are being built.

SHIPMASTER'S REPORT: May 1984.

Before leaving Gulfport I contacted Standard Fruit Company at Boca Raton, Florida. They confirmed that the Pilot boards off Limon breakwater. They also confirmed that there is a heavy surge alongside the berths in Moin Bay due to the prevailing swell and that shore springs are not normally available at the cargo berths although they are supplied to tankers.

This vessel possesses 2×6 in. nylon tails and 2×3.25 in. mooring wires and these were made ready.

A cable was sent to the Agent at Limon requesting information concerning berthing arrangements. A reply was received to the effect that the ship would berth at the "German Wharf". This conveyed nothing to me at the time.

It turned out that the "German Wharf" is, in fact, the new container berth in Puerto Limon. This berth does not appear on the navigational chart but is shown in the "Plan Section" of "Guide to Port Entry".

The old banana berth at Puerto Limon is no longer used and all banana loading takes place at Puerto Moin. The Pilot confirmed that there is a heavy surge at Limon/Moin and also that newcomers to the trade are boarded off Limon whilst regular traders are met by the Pilot off Moin fairway buoy.

The "German Berth" is not supplied with shore springs and there is a considerable surge alongside. We secured starboard side to using 4 lines and 1 spring at each end plus the 2 wires with nylon tails. It is considered that the latter are essential in this port as considerable chaffing of the polypropylene lines can be expected.

The berth is provided with very effective sprung fenders but these ensure that the ship is held several feet off the quay. No shore gangway is supplied and access was by way of the accommodation ladder which was landed on the quay at an angle of about 30° to the ship's side. To avoid damage to the ladder due to surge it is essential that particularly secure moorings be used.

A powerful tug is available at Limon and another at Moin.

AUTHORITY: Junta de Administracion Portuaria y de Desarrollo Economico de la Vertiente Atlantica (JAPDEVA), Administracion Portuaria, Apartado "T", Puerto Limon, Costa Rica, Central America. *Tel:* (506) 58-3229, 58-1041. *Telex:* 8518 (Port Operations Manager). *FAX:* (506) 58-3229. *Contact:* Captain Dennis G.Cavallini, Chief - Marine Operations Department.

PUERTO MOIN: 10.00 N. 83.05 W. (See Plan)

PORT LIMITS: See "Puerto Limon".

DOCUMENTS: Required by Port Authorities at Port Moin:

2 Certified copies of Clearance from last port (Zarpe original and dup).

Crew List: 1 original legalised copy, 5 copies not legalised.

Passenger List: 1 original, 1 copy, 5 additional copies; not legalised (if no passengers carried; this must be stated on the same document).

Maritime Health Certificate: 1 original, 1 copy.

Provisions List, not legalised: 7 copies.

Stowage Plan, not legalised: Total cargo on board, 4 copies.

Hatch List, not legalised: Total cargo on board, 4 copies.

Cargo Manifest, legalised (manifiestos de carga): From each calling port 1 original, 1 copy, 30 additional copies, not legalised.

Bills of Lading: 4 sets.

Local Agents or General Agents require the following documents urgently, by air mail (special delivery), from each calling port directly to address in San Jose, Costa Rica.

2 sets Cargo Manifests – copies.
2 sets Bills of Lading.
2 sets Ship's Declaration.

If there are Ocean Freight rates to be collected at destinations, please send Agent by air mail (registeres), the 3 originals and 2 copies, in order to get the payment of the freight rates in time.

Data in every document must be in Spanish or with proper translation.

PILOTAGE: Pilot boards vessel 1 mile North of Puerto Moin Sea Buoy (Fairway Buoy). Regular visitors take Pilot near Puerto Moin fairway buoy.

Also see "Puerto Limon" – Shipmaster's Report.

ANCHORAGES: One mile off piers.

MAX. SIZE: See "Berthing".

HEALTH: In the event of contagious disease or fever being suspected on board, Agency should be advised immediately.

RADIO: Call letters TIM, frequency 500 kHz and 8478 kHz; working hours: 0400 to 1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival, advising date and time of arrival, number of passengers disembarking (if any), amount of cargo to discharge in metric tons, number of gangs required to work on board. This information is required by Port and Customs Authorities.

VHF: Port Authority on VHF Channel 16. All vessels anchoring in the port must communicate with the pilot office on Channel 16.

TUGS: 3 tugs available. It is compulsory to use tugs for berthing.

BERTHING:

Berth No.	Usage	Depth Fore (m.)	Depth Aft (m.)	Length (m.)
5/1	Oil Terminal	9.6	9.6	190
5/2	Ro-Ro	9.6	9.0	190
5/3	Banana Dock	9.0	9.0	160
5/4	Banana Dock	8.5	9.0	160

Note: Additional berth building in progress (Container/Banana Dock).

STEVEDORES: ETA should be sent to Agent in due time. There are 3 stevedoring companies who work throughout 24 hours.

MEDICAL: Complete medical attention and hospital facilities available.

TANKERS: Berth No. 5/1 (oil pier). Max. depth 9.6 m.

Shore Lines:

Black/White: 2×20 in. lines and
2×10 in. hoses
Av. gas: 1×6 in. line and 1×6 in. hose.
LPG: 1×6 in. line and 1×6 in. hose.
Bunkers: 1×8 in. line and 1×8 in. hose.

FRESH WATER: Obtained alongside.

FUEL: See "Puerto Limon".

CONSULS:

Colombia	58 – 02 – 21	Ecuador	58 – 01 – 60
Honduras	58 – 03 – 13	Nicaragua	58 – 01 – 83
France	58 – 02 – 21	Panama	58 – 09 – 65
Norway	58 – 01 – 83		

REPAIRS: Minor repairs only.

SURVEYORS: Lloyd's, ABS, Niveritas and German Lloyd.

GANGWAY/DECK WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: One packet of cigarettes may be taken ashore. No alcohol may be taken ashore.

REPATRIATION: Facilities available.

AIRPORT: 5 miles from city, 2 daily flghts (except Sundays), to San Jose International Airport. Also air-taxi service to the whole country.

TIME: Local time GMT minus 6 hours.

HOLIDAYS: Holidays and days on which the port will remain closed: From 0001 hrs. to 2400 hrs. 1st January, Holy Thursday and Good Friday; 1st May, 15th August, 15th September, 12th October, 25th December. The first Sunday in February every 4 years is a holiday for Presidential Elections.

POLICE/AMBULANCE/FIRE: Police tel. 117; Red Cross ambulance tel. 58 – 01 – 25; Fire tel. 118.

SHORE LEAVE: Crew members are allowed to go ashore.

IDENTIFICATION CARDS: They are needed and supplied by the Agent.

GARBAGE DISPOSAL: Service available on request through Agent, prior to arrival in port.

WASTE OIL DISPOSAL: No service available.

SEAMAN'S CLUBS: None.

GENERAL See "Puerto Limon".

SHIPMASTER'S REPORT: August 1993.

Approach: The port was approached from N.E. in the late afternoon. The land was picked-up around 25 miles. But the coast between Punta Blanca and Punta Limon and the island of Isla Uvita could only be identified distinctly when about 14 miles off. The peaks of Cerros Lomas and Matama can be identified visually from a distance on a clear day.

Anchorage: The vessel was instructed to anchor upon arrival. The designated anchorage as shown on the plan of the B.A. Chart No. 1799 is 1 mile North of the Fairway Buoy. The vessel approached the port at nearly right angle to the depth contour, which was displayed on the echo sounder paper as a ridge while crossing the closely spaced contours. The vessel anchored 1.5 miles N.E. of the Fairway Buoy in depth of 16 fathoms. The holding ground is good and comprises of mud, sand and ooze.

Draft: Maximum salt water draft of 9.6 m. was permitted.

Notable Feature: The vessel experienced deep, long swells from E.N.E. throughout the 5 days' stay at the anchorage. But it appeared from the talks of the port officials that it was quite a normal feature at this time of the year (mid-August), and more pronounced in the months of November, December and January. The vessel was rolling on an average of 7° – 8° while at anchor, in spite of the vessel being loaded (30,000 tonnes of cargo on board).

While at anchorage, a tropical revolting storm passed North of the port. As the port is sheltered from N.N.W. to S.W., winds of only 15 knots were experienced. But the swell was quite deep. There was no need to pick-up anchor and start moving, as the vessel maintained position and was safe.

Berthing: Pilot boards near the Fairway Buoy. The vessel was turned around in the channel which was dredged to 12.5 m., with the assistance of 3 tugs. There is no turning basin inside the port.

There is a permanent cross current of 1.5 knots setting East, caused by the numerous rivers flowing out.

Vessel berthed port side to the Recope Terminal and made fast with 17 ropes and wires from the vessel and 5 wires from the shore.

Throughout the time alongside, the vessel was surging 4.0 m. – 5.0 m. This berth was quite unsafe, in spite of the breakwater, but insufficient to quench the swell from coming inside. Surging is quite a normal feature of the port, as stated by the Pilots.

Unloading: Only 1×12 in. flexible connection was provided by the Terminal for discharge of crude. The shore pipeline was 20 in., however a 6 in. connection is available for Mogas and gasoline products.

An average rate of 2,000 cu.m./hr. was achieved by the vessel.

The tanker berth is also used for fruit export and fertiliser export. There are also 2 berths for banana and pineapple export.

AUTHORITY: JAPDEVA, P.O.Box T, Puerto Limon, Costa Rica, Central America. *Tel:* (506) 58-3229, 58-1041. *Telex:* Port Operations Manager - 8518. *FAX:* (506) 58-3229. *Contact:* Captain Denis G.Cavallini, Chief-Marine Operations Department.

PUNTARENAS: 09.58 N. 84.49 W. (See Plan)

DOCUMENTS: See "Caldera".

PILOTAGE: Pilots are available and compulsory, arranged by Agent. Signal for Port Captain and other officials is 2 long blasts.

ANCHORAGE: Vessels should keep Eastward of four submarine cables originating at Puntarenas where suitable anchorage may be found in 6 – 7 fathoms depth. Vessels should anchor as near the pier as safety permits to facilitate boarding by port officials.

RESTRICTIONS: Recommended that vessels not equipped with radar enter in daylight only.

HEALTH: Any vessel that enters this port has to be in possession of a Sanitary Manifest (Sanitary Maritime Declaration) signed by Master of vessel. In case of any suspected disease or fever aboard, Master to notify by radio to Port Authorities and vessel to wait outside the limit of territorial waters until clearance is given.

RADIO: Station call sign TIM, frequencies 8478 and 500 kHz. Working hours 0400-1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival advising date and time of arrival, number passengers disembarking, if any, amount of cargo to discharge in metric tons, number of gangs to work on board. This information is required by Port and Customs Authorities.

TUGS: None available.

BERTHING: Vessels usually moor in daylight only. Unmooring night and day.

Muelle Nuevo: Pierhead runs East/West, connected to shore by 350 ft. gangway. One special heavy mooring line supplied from pier in addition to ship's ropes. Heavy surge experienced at the berth.

Berth No. 4 (outer berth): Length 140 m. Depth alongside 9.0 m. at LW.

Berth No. 5 (inner berth): Length 117 m. Depth alongside 7.5 m. at LW.

Berths No. 4 and 5 are out of service as they are in poor condition. All cargo operations handled at Caldera.

Also see "Caldera" – General.

There are lighters available for hire for vessels working cargo at the anchorage.

STEVEDORES: Available for work 24 hours a day.

MEDICAL: Facilities available at Puntarenas.

FRESH WATER: Available only from pier at Puntarenas.

FUEL: Not available.

TIME: GMT minus 6 hours.

TELEPHONES: No connection to vessels.

SHORE LEAVE: Allowed at Puntarenas.

IDENTIFICATION CARDS: Required.

SHIPMASTER'S REPORT: 1978.

Anchorage: Vessel originally anchored in the area marked (Pilots) on Chart B.A. 1931, but subsequently moved in to a position with the Light on the Pier bearing 332°(T) – 9 cables and lay to the starboard anchor, 3 shackles, in 6 fathoms of water. Other ships and draft permitting, it is safe to anchor 5 cables off the pier.

This is a quiet, safe anchorage. A Pilot is not used arriving and sailing from the anchorage, but is compulsory if berthing.

Berthing: There are two berths on the pier. As the port was very congested, we remained at anchor.

Communications: With the Charterer's Agents when at anchor, were by VHF, Channel 16. Long-range communication was by radio.

Documents: As per "Guide to Port Entry".

Cargo Work: Due to congestion, we waited 3.5 days to start work, although we only had a small quantity of cargo for discharge. When work did start, discharge was continuous and at a good rate.

I understand that ships loading export cargo receive preference for labour.

Pratique: Granted on arrival.

Provisions: Available, but great care is necessary with regard to price and quality.

Fresh Water: Normally available only when alongside the pier. As we were very short of water by the time we had been in port for a few days, we managed to obtain a minimum supply from a tug. This can only be obtained as an emergency measure.

Shore Leave: A launch service was arranged through the Agents for this purpose.

General: It was noted that the Light on the Pier was flashing letter "P" in the Morse Code and was not Gp. Occ. (4) as shown on the Chart.

AUTHORITY: Instituto Costarricense de Puertos del Pacifico, 001-5400 Puntarenas, Costa Rica. *Tel:* 61-06-28. *Telex:* 6045 Incop Cr. *Contact:* Lic. Rodrigo Arauz Bonilla, Executive President. Tom Winfield Lawrence, Operations Manager.

Also see "Caldera".

NOTES

Please also advise Shipping Guides Ltd.

Croatia

DUBROVNIK (Gruz Harbour): 42.38 N. 18.07 E. (See Plan)

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".
PILOTAGE: Compulsory. Pilot boards at a point situated approximately in centre of triangle formed by Kolocep Island, Daksa Island and Grebeni Rocks. Pilot boat is painted blue with large while "P" on hull, Length of boat about 13.0 m. Pilot boat may be contacted on VHF Channel 16, working on Channel 12.
ANCHORAGE: In about 22 fathoms in channel between Daksa Island and mainland. This anchorage is exposed to strong N.N.E. winds in Winter time.
Old Dubrovnik Harbour: Between Lokrum Island and the mainland. Depth in approaches 40 m. Diameter of anchorage 0.5 miles. Distance to the shore 0.5 miles.

The anchorage is used by large cruise ships only. It is exposed to strong Southerly winds in Winter time.
RESTRICTIONS: Only port of Gruz is open to commercial traffic, the old port of Dubrovnik (within the city walls) can accommodate only yachts and small craft drawing under 9 ft.
MAX. SIZE: Max. length 230 m., max. draft 37.7 ft. (11.5 m.), no limits on beam.
RADIO/VHF: Dubrovnik Radio, call sign 9AD, listens on Channel 16 throughout 24 hours, and works on Channels 7 and 63. Duplex channels available with connection to national and international telephone network.
TUGS: No permanently stationed tug boats, but can be ordered when necessary from other ports.
BERTHING:

Berth No.	*Length* (m.)	*Depth* (m.)
7	100	3.50
8	100	7.00
9	100	7.20
10	100	7.50
11	100	6.50
12	90	6.80
13	95	7.00
14	110	7.00
15	119	7.50
16	230	11.50
17	54	4.50

CARGO HANDLING FACILITIES: The port handles general cargo. 6 cranes with capacity 1.5 tons-25 tons.
STEVEDORES: The port enterprise "Luka Dubrovnik" is the sole stevedoring company. Work is done in 2 shifts: first 0600 – 1300 hrs., second 1400 – 2100 hrs.
MEDICAL: General hospital and medical facilities available.
FRESH WATER: Available from hydrants on quay, rate 25 t.p.h., and by barge with 250 tons capacity. Order through Agent.
FUEL: Not available. Only oil for diesel engines in limited quantities. Heavy fuel can be delivered by coastal tankers from Split.
CONSULS: Netherlands: 20000 Dubrovnik.

United Kingdom: 20000 Dubrovnik. Tel: 442-222, 412-916.
REPAIRS: Small repairs only.
SURVEYORS: Bureau Veritas, Rijeka. Tel: 051-37755.

Lloyd's Register Surveyor. Tel: 021-42773.
GANGWAY/DECK WATCHMEN: Available.
OPENING/CLOSING HATCHES: Performed by crew.
CUSTOMS ALLOWANCES: About 40 cigarettes and limited amount wine/spirits per man per day.
CARGO GEAR: Operations are usually performed with ship's gear. Shore cranes with 25 tons SWL are available at Quay No. 16 only.
AIRPORT: Airport "Cilipi" 25 km. from the Gruz Port. Served by regular airlines.
TIME: GMT plus 1 hour. Summertime. GMT plus 2 hours.
POLICE/AMBULANCE/FIRE: Dial 985 for all emergency matters.
TELEPHONES: Can be placed onboard. 72 hours' notice required.
BANKS: Dubrovacka Banka, Put Republike 5, 50000 Dubrovnik, Croatia. Tel: 431-366. Fax: 411-035. Four branch offices in town.

Privredna Banka Zagreb, Siroka Ulica 6, 50000 Dubrovnik, Croatia. Tel: 24847, 25938. Fax: 412-722. Two branch offices in town.

Exchange offices available.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Issued by local police.
GARBAGE DISPOSAL: Service compulsory. Drums/skips not available. A 7 tonne truck visits each berth collecting the garbage between 0600 hrs. and 2100 hrs. daily. Ships crew must move garbage off the ship. Daily charges as follows:

Cargo Ships g.r.t.	U.S.$	*Passenger Ships* g.r.t.	U.S.$
Up to 500	23	Upto 2,000	17
501 – 1,500	34	2,001 – 5,000	22

PLOCE: 43.03 N. 17.26 E. (See Plan)

LOCATION: The port of Ploce is a port of the Central Mediterranean at the position of 43° 03' N., 17° 26' E. It is a very suitable natural harbour situated in a bay; three kilometers from the mouth of the River Neretva in the Northwest direction. The bay is protected from the South and Southwest by the peninsula of Peljesac, which forms a natural breakwater for the port.
PORT LIMITS: Boundaries of the port anchorage (See "Anchorage").
DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".
PILOTAGE: (a) Port Pilotage compulsory for vessels over 500 g.r.t. Pilot boards vessel at entrance of the channel, about 3 miles Westward from Point Visnjica. Pilot station on VHF Channels 16 and 9.
(b) Coastal Pilotage compulsory for gas carriers (LPG, LNG) and chemical tankers with noxious liquid substances onboard.

Notice of ETA and request for Pilot must be made to the Pilots at least 4 hours before arrival at pilot's boarding position: Lat. 43° 05.0' N., Long. 17° 00.0' E. If no answer on VHF Channel 16, contact Pilots on landline (Tel: 020/678 846) via radio station (See "Radio").
ANCHORAGES: The area within the following points:
(a) Lat. 43° 02.5' N., Long. 17° 23.7' E.
(b) Lat. 43° 00.8' N., Long. 17° 22.7' E.
(c) Lat. 43° 03.2' N., Long. 17° 18.9' E.
(d) Lat. 43° 04.7' N., Long. 17° 21.0' E.
Also see "General".
RESTRICTIONS: Ships entering channel between Visnjica Point and embankment of right hand bank must keep in middle, leaving buoys to starboard. Recommended speed 5 – 8 knots. Also see "Tankers".
MAX. SIZE: Draft limited to max. 34 ft. 6 in., length limited to 220 m., maximum beam 30 m., max. airdraft 10.0 m.
RADIO: Nearest Radio Station Split Radio 9AS – 2182 kHz and 518 kHz (Navtex). Radio station Dubrovnik Radio 9AD – 2182 kHz and 2615 kHz and VHF Channel 16.
VHF: Channel 16 (156.8 MHz), Pilots VHF Channel 9, Harbour Master's Office VHF Channel 10 (156.500 MHz).
RADAR: No Port Radar service.
TUGS: 3 tugs available to assist with berthing. To request tugs, contact the Pilots on VHF Channels 16 and 9.
BERTHING: Bosanska Obala (Berths No. 7 and 8): Length 227 m., drafts up to 31 ft. – no shore cranes.

Biokovska Obala No. 1 and 2 (Berths No. 4, 5 and 6): Length 368 m., drafts up to 32 ft., 7×5 ton cranes.

Gat Oslobodenja: North Side No. 3 (Berths No. 1, 2 and 3): Length 410 m., drafts up to 32 ft., 1×7 ton crane and 3×5 ton cranes. Head: Length 250 m. South Side No. 5 (Berths No. 11, 12 and 13): Length 507 m., drafts up to 34.5 ft., 5×10 ton cranes.

One floating crane up to 100 tons capacity.
BULK CARGO FACILITIES: Grain, ores and minerals by shore cranes equipped for grab discharge at Quays No. 3 and 5. Grain through feeders to railcars. Alumina silo (capacity 20,000 tons) at Quay No. 1 – length 140 m., draft 30 ft., with loading facilities.

Coal handled by 5×10 ton travelling cranes, average discharge rate 250 tonnes p.h.

Loose load terminal, Berth No. 6, is used in reloading, storing and packing of cereals, oil crops (single full up capacity 45,000 tons, reloading capacity 400 t.p.h., bagging line capacity 1,000 bags/hr.).
SPECIALISED CARGO HANDLING FACILITIES: No berth specially equipped for handling containers, only by floating crane.
BRIDGES: No bridges to pass through.
STEVEDORES: Port Enterprise "Luka Ploce" is the sole stevedoring company. The recognised working hours of port are from 0600 hrs. until 1400 hrs. and from 1400 hrs. until 2130 hrs. Sundays and holidays excepted. Overtime possible. ETA advices required 2 hours in advance in order to arrange gangs (See "Authority").
MEDICAL: Medical service available. Nearest hospital at Dubrovnik (110 km.) and Split (110 km.). Dentists available during normal working hours. Inoculations and vaccinations can be carried out.
TANKERS: Oil Terminal – Channel Vlaska: one berth: vessel's length – no restriction, max. vessel's beam – 27 m., max. draft – 10.50 m. No slop/deballast facilities. When wind blowing over 10 knots direction North-South, and over 14 knots East-West, vessels are not allowed to sail through Channel Vlaska to oil terminal. Navigation through Channel Vlaska is allowed only during daylight with assistance of 2 tug boats. It is not allowed to berth or anchor vessels less than 41 m. out of marked line, while other vessels sailing through the channel.
DENSITY: 1010 – 1030.
FRESH WATER: Fresh water delivered to vessels at wharves by pipeline. Hoses can be supplied by port per tariff charges with prior arrangement through vessel's Agent.
FUEL: Gas oil only. "Energopetrol Ploce", 20340 Ploce, Neretvanskih Gusara. Tel: 020/679 942. Fax: 020/679 902. Telex: 26295 Epeplo Rh.

Request for fuel must be made at least 12 hours in advance. Delivery by tank trucks.
REPAIRS: Only small repairs by prior arrangement through vessel's Agent.
DRY DOCKS: None.
FIRE PRECAUTIONS: No specific precautions.

CONSULS: None.
SURVEYORS:
1. Cargo Superintendence Corporation "Adriainspekt Rijeka", Branch Office Ploce, 20340 Ploce, Trg Kralja Tomislava 22. Tel: 020/679 201. Fax: 020/679 974. Telex: 26464.
2. Lloyd's Register, 21000 Split, Kasiceva 21, P.O.Box No. 255. Cables: Regiser Split. Tel: 021/342-773. Fax: 021/591-595. Telex: 26151 RH Lloyds.
GANGWAY/DECK WATCHMEN: No requirement for watchmen, except for special security reasons as determined by Port Authority.
OPENING/CLOSING HATCHES: Normally by crew, otherwise by stevedores with extra payment.
CUSTOMS ALLOWANCES: 200 pieces cigarettes, 1 bottle of spirits and reasonable amount of wine and beer.
CARGO GEAR: Although the port is equipped with shore cranes and a floating crane of 100 tons capacity, ships must have efficient cargo gear and relative certificates.
REPATRIATION: Possible by bus. By plane from nearest airports, Split (110 km.) and Dubrovnik (110 km.).
TIME: GMT plus 1 hour. Summertime (from last Sunday in March till last Sunday in September) GMT plus 2 hours.
POLICE/AMBULANCE/FIRE: Police, Tel: 020/679-006, 020/679-278; Ambulance, 020/679-702; Fire, 020/679-143.
EMERGENCY CO-ORDINATION CENTRE: Harbour Master's Office (Lucka Kapetanija Ploce), 20340 Ploce, Trg Kralja Tomislava 24, Croatia. Tel: 020/679-008, 020/678-621. Fax: 020/679-008. Cables: Kapetanija Ploce. Contact: Captain Ivo Matkovic.

VHF Channel 16 (156.800 MHz) and VHF Channel 10 (156.500 MHz). Contact is also possible through Radio Station (See "Radio").
TELEPHONES: Not possible to place telephones onboard.
SERVICES: Special services available by prior arrangement through vessel's Agent.
BANKS: Neretvanska Gospodarska Banka d.d Ploce, Trg Kralja Tomislava 21, 20340 Ploce, Croatia. Tel: 020/679-109. Fax: 020/679-838. Telex: 26394.
STORING: Vessel can be stored by truck alongside at berth.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Shore pass issued by local Immigration Office.
GARBAGE DISPOSAL: Collection service is available using barges operated by the stevedoring company (See "Stevedores"). One collection is compulsory. Charges vary with g.r.t. from U.S.$ 36.00 to U.S.$ 493.00. Collection time is within the recognised working hours of port.
WASTE OIL DISPOSAL: Service available at oil terminal operated by Energopetrol, Ploce (See "Fuel"). Tanker trucks utilised for collection and removal. Maximum capacity of shore tanks 300 cu.m. Charges negotiated by agreement.
SEAMAN'S CLUBS: None.
CURRENCY: Hrvatska Kuna (KN). U.S.$ 1.00 = 5.5 KN (4.3.96).
REGULATIONS: According to State Rules and Regulations, prior to departure of ships carrying timber deck cargoes and ships carrying solid bulk cargoes, Harbour Master's Office must receive a copy of calculation for the ship's stability.
DELAYS: Only occasionally for bulk carriers.
GENERAL: Vessels are not allowed to anchor East of the line which connects Kunova Cove on Peninsula Peljesac with point Lat. 43° 03' N., Long. 17° 24' E. on the coast.
DEVELOPMENTS: See "Development Plan" in "Plan Section".

AGENT'S REPORT: October 1994.
The following is Agent's reply to questions from a vessel operator.
Terminal: Terminal Tekucih Tereta.
(1) Berth Operator/User: "Energopetrol Ploce" D.O.O., Ploce Neretvanskih Gusara BB.
(2) LOA: Unlimited.
(3) Max. Beam: 27.0 m.
(4) Max. d.w.t.: As much as possible within given parameters.
(5) Max. Draft: 10.50 m.
(6) Port Authority do no specify under-keel Clearance: Bottom is mud.
(7) Min. Depth in Approaches: 15.0 m.
(8) Water Density: Brackish water, density 1013 – 1023.
(9) Berthing allowed in daylight only from sunrise to sunset.
(10) Bunkers not available. Fresh water available at the oil berth.
(11) No limitations on freeboard, but limited by above given parameters.
(12) Concrete Quay: Length 120 m. Rubber fenders at intervals. Vessels' mooring lines to bollards ashore.
(13) —
(14) Lighterage not available.
(15) Cargo Handling: Fuel oil, all grades of diesel oil. All grades of gasolene.
(16) Dirty ballast facilities available, capacity 300 cu.m.
(17) Slops are not accepted.
(18) 3 tugs available, 1,350 h.p. each.
As per Harbour Master's rules, all types and sizes of tankers for mooring/unmooring are obliged to use 2 tugs.
(19) —
(20) Pilot Boarding Position: Lat. 43° 01' N., Long. 17° 23' E., about 1.5 miles Westward of Rt. Visnjica.

AUTHORITY: Port of Ploce, Trg Kralja Tomislava 21, 20340 Ploce, Croatia. *Tel:* 020/679-220, 020/679-601, 020/679-223, 020/679-806. *FAX:* 020/679-836. *Contact:* Captain Ivica Pavlovic, Port Director. Zdenko Jelavic, Deputy Port Director.

AGENT: Jadroagent – Ploce, Trg Kralja Tomislava 20, P.O.Box 111, 20340 Ploce, Croatia. Cables: Jadroagent Ploce. Telex: 26239 Rh Jadrag. Tel: 020/679-964. Fax: 020/679-118.

PULA: 44.52 N. 13.50 E.

DOCUMENTS/HEALTH/HOLIDAYS: Same as Rijeka.
PILOTAGE: 48 and 24 hours' notice of ETA must be given to Agent. Pilot boards vessel off the breakwater.
ANCHORAGES: Vessels waiting for berth or Free Pratique can anchor in the outer harbour at about 0.4 miles West of the island S. Andrija.
RADIO: Coastal station Rijeka-Radio (call sign "YUR").
VHF: Communications with Agents and Port Authority through VHF on Channel 16.
TUGS: Up to 600 h.p. available from shipyard "Uljanik", otherwise from Rijeka.
BERTHING:

Gat Rijeka: North side length: 138 m., depth 20 ft.
South side length: 150 m., depth 17 ft.

Obala Ugljen: Length 140 m., depth 26 ft.

Gat Ugljen: East side length: 160 m., depth 31 ft.
West side length: 140 m., depth 28 ft.

Obala Tv.Cementa: Length 146 m., depth 20 ft.

Obala Uljanik: Length 160 m., depth 22 ft., used only for discharge of steel plates.
CRANES: No shore cranes except one of 5 tons at Obala Tv.Cementa and one of 75 tons at Obala Uljanik.

A floating crane of 100 tons at shipyard "Uljanik".

Two mobile cranes of 17 tons and 20 tons respectively.
STEVEDORES: Port Enterprise "Luka" is the sole stevedoring company. Working 2 shifts: from 0700 to 1500 hrs. and 1500 to 2300 hrs. Saturdays, Sundays and holidays may be worked on overtime.
MEDICAL: Hospital and all kinds of medical assistance available.
FRESH WATER: Available from quay.
FUEL: Available by barge from Rijeka – advance notice required.
REPAIRS: Available from local shipyard "Uljanik" and "Pula".
SURVEYORS: Lloyd's Register and Norske Veritas.
GANGWAY/DECK WATCHMAN: Service available.
OPENING/CLOSING HATCHES: May be carried out by crew otherwise by stevedores on extra payment.
CUSTOMS ALLOWANCES: About 40 cigarettes and reasonable amount of wine/spirits per man per day.
CARGO GEAR: Loading/discharging by ship's own gear.
REPATRIATION: Possible by train, bus and air.
AIRPORT: At Pula.
TIME: GMT plus 1 hour. Summertime kept.
POLICE/AMBULANCE/FIRE: Police tel. 92; Ambulance tel. 94; Fire tel. 93.
IDENTIFICATION CARDS: Shore passes issued.
REGULATIONS: Speed limit: Within a line joining Prostina Point (Point Kristo) and Kumpar Point vessels must proceed at a speed not exceeding 8 knots and within a line joining Andrija Island and Sv. Petar Peninsula at a speed not exceeding 5 knots.
GENERAL: Lloyd's Agents: Jadroagent-Rijeka.
AUTHORITY: Lucka Kapetanija Pula, Obala 18, 52000 Pula, Croatia. *Tel:* 385-52-22037, 27646. *Cables:* Luckap Pula. *FAX:* 385-52-27646. *Contact:* Captain Lazaric Josip, Harbour Master.

AGENT: Jadroagent – Pula, Obala Marsala Tita 14, 52000 Pula, Croatia. Tel: 225-68-221878 Cables: Jadroagent Pula. Telex: 24710 Rh Jadrag. Fax: 211799.

RIJEKA (including Bakar, Omisalj, Urinj, Sepen and Rasa): 45.19 N. 14.26 E. (See Plan)

PORT LIMITS: Outer line of Anchorage area.
DOCUMENTS:
5 Crew Lists
5 Passenger Lists
3 Manifest of Dangerous Cargo (send cable before arrival with description)
3 Stores Lists
2 Private Declaration
2 Narcotics Lists
9 Cargo Manifests
3 Freight Manifests
2 Transit Manifests
2 Cargo Plans
2 Copies of Bill of Lading

Cargo and Freight Manifests and Cargo Plan with Hatch List if possible should be mailed to Agent from loading port.
APPROACHES: The access entrance to the Rijeka Port Basin is 270 m. wide and that of the Susak Port Basin is 45 m. wide.
PILOTAGE: Compulsory for vessels over 500 g.r.t. Pilot boards in the roads within anchorage area limit. Pilot on VHF Channels 8, 12 and 16.

For oil terminal at Omisalj, Pilot boards 5 miles south of Rijeka Main Light. On request, Pilot will board tankers over 200,000 d.w.t. in the Northern part of Kvarner at Lat. 45° 02' N., Long. 14° 14' E. approx.

Pilot available 24 hours. ETA to be sent 72 hours, 48 hours and 24 hours prior to arrival
ANCHORAGES: All vessels with exception of those loaded with dangerous or hazardous cargoes, must anchor in the zone enclosed by the following points:
(a) Lat. 45° 20.0' N., Long. 14° 22.7' E.
(c) Lat. 45° 15.1' N., Long. 14° 27.1' E.
(b) Lat. 45° 17.5' N., Long. 14° 20.0' E.
(d) Lat. 45° 18.4' N., Long. 14° 28.5' E.

Tankers and vessels with dangerous cargoes must anchor in the following zone:

(a) Lat. 45° 17.8' N., Long. 14° 28.0' E.
(c) Lat. 45° 14.1' N., Long. 14° 29.4' E.
(b) Lat. 45° 15.1' N., Long. 14° 27.1' E.
(d) Lat. 45° 16.1' N., Long. 14° 31.8' E.

HEALTH: To obtain Free Pratique 24 hours before arrival advise following details: number of crew and passengers, health conditions and possible infectious diseases. No person allowed to leave vessel until Free Pratique obtained.

RADIO: Rijeka Radio, call sign 9AR 500 kHz, Radio telephone on 2 metre band covering area of North Adriatic or by VHF Channel 16.

VHF: Port Authority on Channels 16 and 10. Tugs on Channels 16 and 9. Pilot on Channels 16 and 9.

TUGS: 1,400 h.p. to 3,000 h.p. available.

BERTHING: General Cargo Facilities:

Rijeka Basin:

De Franceschiev Gat (The De Franceschi Pier):

East: Length 150 m.
Depth alongside 7.30 m.
Head: Length 80 m.
Depth alongside 6 m.
West: Length 135 m.
Depth alongside 6.30 m.

The 32 ton crane has been installed for loading/unloading heavy lifts with the possibility of using grab for loading/unloading smaller quantities of bulk cargo in direct operation.

Equipment: 1×32 ton "Ganz" crane (east side)
1× 3 ton "Ganz" crane (west side)
for handling small lots of general cargo.

Becko Pristaniste (The Wien Quay):

Length 246 m.
Depth alongside 9.60 m. (31 ft. 6 in.)

By fitting appropriate quay fendering, this quay can accommodate vessels with maximum length of 200 m. and maximum draft 32 ft. 10 in.

It is mainly used for direct or indirect loading/discharge operations of larger lots of general cargo.

Equipment: 7 × 3 ton dockside cranes.

Orlandov Gat (The Orlando Pier):

East: Length 195 m.
Depth alongside 8.50 m.

This quay is mainly used for direct or indirect loading/discharge operations of larger lots of bulk or general cargo.

By fitting appropriate fendering vessels of max. length 195 m. and max. draft 31 ft. 6 in. can be accommodated.

Equipment: 3×5 ton dockside cranes.

Pier Head: Length 84 m.
Depth alongside 7.5 m.
West: Length 169 m.
Depth alongside 8 m.

This quay is mainly used for direct or indirect loading/discharge operations of general cargo and perishable goods by means of ship's cargo gear.

Visinov Gat (The Visin Pier):

East: Length 120 m.
Depth alongside 7.30 m.
Head: Length 79 m.
Depth alongside 7.20 m.
West: Length 120 m.
Depth alongside 7.30 m.

The Pier is mainly used for direct or indirect loading/discharge operations of general cargo.

Prasko Pristaniste (The Praha Quay):

East: Length 161 m.
Depth alongside 7.30 m.

This quay is mainly used for direct or indirect operations of general or bulk cargo lots.

West: Length 200 m.
Depth alongside 7.50 m.

This quay is normally used for loading/discharge of larger lots of general or small lots of bulk cargo by grabs (2×6 ton cranes). By fitting appropriate fendering a ship with max. length 180 m. and max. draft 31 ft. 6 in. can be accommodated.

Equipment: 4×3 ton and 2×6 ton "Ganz" dockside cranes.

Zagrebacko Pristaniste (The Zagreb Quay):

Length 158 m.
Depth alongside 6.25 m.

This quay is mainly used for direct or indirect/discharge operations of smaller lots of general cargo.

"Adamicev Gat" and "Gat Karoline Rijecke" (The "Adamich Pier" and the "Caroline of Rijeka Pier"): These two piers within the Rijeka Port Basin, with the total quay length 450 m. and max. depth about 6 m., are used for the accommodation of passenger ships, car-ferries, fishing vessels and other smaller craft.

Riva Boduli (The Boduli Quay):

Length 189 m.
Depth alongside 6.50 m.

This quay is mainly used for loading/unloading smaller volumes of general cargo, and is used occasionally for berthing and handling smaller Roll-on/Roll-off vessels.

Lukobran Rijeka (The Rijeka Breakwater):

Length 1,768 m.
Depth alongside 5.50 m. – 7.20 m.

A 10,000 d.w.t. floating dock is berthed along the breakwater quay. On the quay there is a port control centre with Pilot Station. The operational part of the quay is 700 m. long and is used for loading/unloading smaller lots of general cargo and for direct operations with bulk cargo and timber. A part of the quay is used for ship derat and for occasional minor repairs on ships.

Equipment: 4 × 5 ton dockside cranes.

Note: Almost all the quays and breakwaters are rail and road connected.

Susak Basin:

Senjsko Pristaniste (The Senj Quay):

Length 240 m.
Depth alongside 6.50 m.

This quay is mainly used for direct or indirect operations of general cargo and timber.

Equipment: 7× 3 ton dockside cranes.

Vinodolsko Pristaniste (The Vinodol Quay):

Length 132 m.
Depth alongside 7.50 m.

Mainly used for loading timber by means of the ship's own cargo gear.

Ruzicev Gat (The Ruzic Pier):

North: Length 106 m.
Depth alongside 8 m.
South: Length 106 m.
Depth alongside 6.70 m.

This pier is mainly used for the loading/discharge of smaller lots of general cargo or timber and for unloading smaller volumes of liquid cargo (wine, latex, etc.).

CRANES: Shore cranes with lifting capacities from 1.5 to 5 tons available at respective berths except at The Orlando Pier – West side, Visin Pier, Zagreb Quay, Boduli Quay, Vinodol Quay and Ruzic Pier, where vessel's own gear must be used. Floating cranes of 30 and 100 tons. At shipyard "3.Maj" berth (20 ft.) 1 bridge crane of 300 tons.

CONTAINER FACILITIES: *Kontejnerski Terminal (The Container Terminal):* The Container Terminal is located in the Eastern part of the Susak Port Basin at the mouth of the river Rjecina. It includes a quay with 2 berths, The Kostrena Quay (South and West), (244 m. and 163 m.) with depth alongside 12 m. and 10 m. respectively and a 60 m. wide Ro-Ro ramp at Riva Galioti. Max. draft 11.0 m.

Equipment: 2×40 ton container cranes, straddle carrier, side loader, trailers, tugmasters, fork lift trucks, etc.

The terminal has about 100,000 sq.m. stacking area and a special container repair workshop.

Total annual capacity of the terminal is 100,000 TEUs. The terminal area is being constantly extended.

Ro/Ro vessels handled at Bakar.

BULK CARGO FACILITIES:

Rijeka Basin:

Budimpestansko Pristaniste (The Budapest Quay):

East: Length 110 m.
Depth alongside 7.8 m.

The quay is mainly used for working vessels carrying general cargo.

West: Length 257 m.
Depth alongside 12.95 m.
Max. draft 42 ft. 6 in. (even keel).

The silo located on this quay has a 57,000 tons storage capacity for grain and oleiferous seeds and is equipped with 2 ship loaders/unloaders with a total capacity of 600 t.p.h.

Vessels of maximum length of 250 m. can be accommodated, provided that the ship lies 8 m.–10 m. distant from the quay, berthed by dropping port bow anchor, stern line being moored to the buoy.

Bratislavsko Pristaniste (The Bratislava Pier):

Length 160 m.
Depth alongside 7.90 m.

This pier includes a covered storage for fertilisers, single storage capacity 15,000 tons, and is equipped with the handling and bagging facilities for all types of fertilisers.

By fitting appropriate fendering vessels with max. length 180 m. and max. draft 32 ft. can be accommodated.

Susak Basin:

Lukobran Susak (The Susak Breakwater):

Length 320 m.
Depth alongside 6.50 m.

The breakwater quay is mainly used for loading/discharge of dry bulk cargoes and ships with max. length 180 m. and max. draft 31 ft. 6 in. can be accommodated. The ship must be berthed at a distance of 5 m. – 6 m. from the quay by dropping the port anchor with stern line moored to the breakwater.

Equipment: 6 × 5 ton dockside cranes.

Bakar:

Obala Podbok (The Podbok Quay):

Length 400 m.
Depth alongside 18.50 m.

Vessels with max. length 300 m. and max. draft 17.50 m. can be accommodated (170,000 d.w.t.). The quay is used for loading/discharging bulk cargoes such as iron ore, bauxite, coal, etc., rate up to 2,000 t.p.h. Max air draft 16.0 m.

Equipment: 3 ship unloaders (1 × 45 ton and 2 × 16 ton capacity). The stockyard storage capacity is 400,000 tons. An additional area for 200,000 tons has been reclaimed from the sea. A special conveyor system connects the bulk cargo terminal with the nearby Coke Plant on the West coast of the Bay of Bakar for unloading and delivery of coal to the Coke Plant.

Obala Goran (The Goran Quay):

Length 84 m.
Depth alongside 9 m.

This quay is used for loading coke into smaller vessels and for loading/unloading operations with general cargo stored in the Back-up Storage Facility "Skrljevo".

Ships of 160 m. length and max. draft 29 ft. 9 in. can be accommodated. To the West of the quay a new Roll-on/Roll-off berth is being constructed.

Equipment: 2 × 5 ton dockside cranes.

Also see "Shipmaster's Report" dated November 1979.

SPECIALISED CARGO HANDLING FACILITIES:

Sepen:

New terminal for gas and liquid chemicals carriers at Sepen-Krk Island (about 8 nautical miles S.S.E.'ly from Rijeka port) operated by Dina – Petrokemija. It consists of three berths: 2 "T" concrete jetties and one concrete multi-purpose berth. Jetty "A" is for gas carriers up to 15,000 cu.m., max. draft 10.5 m. Jetty "B" is for chemical tankers up to 60,000 d.w.t., max. draft 15 m. Length of multi-purpose quay is 90 m., max. draft 6 m., no shore cranes. Loading arms (8 in.) for ethylene liquid, ethylene vapour, VCM liquid and VCM vapour are on Berth "A". Loading arms (8 in.) for fuel oil, caustic soda solution and EDC liquid (plus EDC vapour 3 in.) are on Berth "B".

Srsica: Near Urinj tanker terminal. At Srsica there is a berth for loading LPG. Length of berth 68 m., depth alongside 10.0 m. Max. size 4,500 d.w.t. Loading rate 200 t.p.h. through 1×6 in. flexible hose.

Rasa: *Bazen Rasa (The Rasa Port Basin):* The Rasa Port Basin is located some 30 nautical miles S.W. of Rijeka in the naturally protected bay of Rasa which is 5 km. long, with the navigable channel about 40 m. deep.

The port facilities in the Bay include:

165 m. long quay, with 11 m. depth alongside, used mainly for loading/unloading sawn timber. The quay area includes about 150,000 sq.m. of open space and 40,000 sq.m. of covered storage space for timber.

Equipment: 3 × 5 ton dockside cranes.

Separate pier with a berth, 25 m. long and 7 m. deep enabling the accommodation of ships up to 100 m. in length; it is exclusively used for loading livestock. The livestock terminal also includes a stable for the acceptance of about 1,400 head of cattle at a time.

STEVEDORES: Port Enterprise "Luka" Rijeka is the sole stevedoring company. Working 2 shifts: 1st from 0630 to 1430 hrs., 2nd shift from 1430 to 2230 hrs. Saturdays, Sundays and holidays may be worked on overtime. Unloading of bulk cargo at the basin of Bakar during the first shift on Saturday is considered to be an ordinary working shift. Timber operations normally performed during first shift only.

MEDICAL: Three hospitals and all kinds of medical assistance.

TANKERS: At Bakar Basin, berths for tankers up to 80,000 d.w.t. stern to shore and up to 40,000 d.w.t. alongside quay (draft 32 ft.) loading refined oil products.

At Urinj – 5 miles East of Rijeka – 1 berth for tankers up to 200,000 d.w.t. discharging crude oil. Also used for loading of virgin naphtha shipments. Tankers moor stern to quay using both anchors. Depths of 17 m. marked by 2 buoys. Cargo hoses: 1 flexible floating hose of 20 in. with 2 ends of 12 in. each. For connecting hoses on ship's manifold a derrick or crane of minimum 5 tons S.W.L. required. Also see "Shipmaster's Report" dated February 1980.

At Omisalj (Krk Island) (Lat. 45° 13.4' N., Long. 14° 32.2' E.) – 7 miles S.E. of Rijeka – new oil terminal for tankers up to 350,000 d.w.t. (minimum size 40,000 d.w.t.) and with draft up to 27 m. Two "T" shape piers (steel platforms) for alongside berthing. Each berth is equipped with four unloading arms of 16 in. for crude oil discharge and 2 arms of 12 in. for bunker delivery. Fresh water available, rate 25 t.p.h.

DENSITY: 1020 to 1025 depending on place, season and weather.

FRESH WATER: Available from quay in any quantity.

FUEL: All grades of bunker available by barge – advance notice required.

FIRE PRECAUTIONS: If 2 tankers moored side by side in Bakar, tug required to stand-by. Tankers moored stern to quay must have towing line ready.

CONSULS: Austria, Denmark, Italy, Netherlands and Sweden.

REPAIRS: All kinds available.

DRY DOCKS: 3 Floating Docks: 5,600 tons, 12,000 tons and 25,000 tons lifting capacities.

SURVEYORS: Lloyd's Register, Bureau Veritas, American Bureau, Croatian Register of Shipping.

GANGWAY/DECK WATCHMEN: Service available.

OPENING/CLOSING HATCHES: May be carried out by crew, otherwise by stevedores for extra payment.

CUSTOMS ALLOWANCES: About 40 cigarettes and 0.5 litre wine and a reasonable amount of spirits daily per man.

CARGO GEAR: Although operations usually by shore cranes, ship must have efficient cargo gear and relative certificates.

REPATRIATION: Possible by train, bus and air.

AIRPORT: At Krk Island (28 km. from Rijeka).

TIME: GMT plus 1 hour. Summertime is GMT plus 2 hours.

HOLIDAYS: January 1st; May 1st; May 30th; June 22nd; August 15th; December 25th and 26th. Work can usually be arranged on Saturdays and Sundays from 0700 hrs. to 1400 hrs. on extra payment.

TELEPHONES: Connection possible upon special request.

SERVICES: Facilities for discharge of tank-washings at Bakar, compass adjusting.

IDENTIFICATION CARDS: Shore passes issued.

GARBAGE DISPOSAL: Collection of garbage is performed, in principle, every second day of vessel's stay in port. Charges: up to 500 g.r.t. U.S.$ 64, 501 – 1,500 g.r.t. U.S.$ 84, 1,501 – 5,000 g.r.t. U.S.$ 136, 5,001 – 10,000 g.r.t. U.S.$ 154, over 10,000 g.r.t. U.S.$ 158. Garbage services are provided by Cistoca, Tel: 39899.

WASTE OIL DISPOSAL: Collection of liquid wastes available by m/t "Ecomar", capacity 1,000 tonnes, managed by Adriatic Maritime Service, Rijeka, Tel: 214229, Telex: 24612, Fax: 31403. Charges for a single use U.S.$ 840.00 plus additional charge for each cu.m. of waste, 1 – 100 cu.m. U.S.$ 15, 101 – 200 cu.m. U.S.$ 13.20, 201 – 400 cu.m. U.S.$ 10.80, 401 – 600 cu.m. U.S.$ 9.60, 601 – 1,000 cu.m. U.S.$ 8.40.

SEAMAN'S CLUBS: None.

CURRENCY: Kuna (K). U.S.$ 1.00 = K 5.46 (8.3.96). Local currency restrictions on arrival/departure: 2,000 K.

DELAYS: Waiting for some specialised berth occasionally experienced.

GENERAL: Lloyd's Agents, Jadroagent – Rijeka.

SHIPMASTER'S REPORT: Bakar: November 1979.

Approaches: Entry to Rijeka Bay is made between mainland (Istra) and the island of Otok Cres. A small ferry runs between the two from a landing stage just North of Rt. Prestenice and another connects with Rijeka. A very conspicuous, red and white horizontal striped 700 ft. high chimney is situated about 1.5 miles West of Bakarski Zaliv and makes a good steering guide for the run across as the actual entrance is difficult to pick out being very narrow and blending in with the hills behind.

Anchorage: Initially we were ordered, by Port Authorities, to anchor 1 mile S.W. of the chimney but later requested to move closer to Rijeka for convenience in servicing vessel. Second anchorage 1.5 miles South of main breakwater. Depth of water both places 32 fathoms and we used 10 shackles cable on port anchor. Bottom is glutinous mud and despite Force 8, gusting 9 winds we held our position although many cargo ships dragged quite alarmingly. The normal winds for this time of the year (November) are the "bora", a cold strong N.E. wind which funnels down the mountains and can develop suddenly to gale force. We had unusually strong and prevalent S.E. winds during 10 days at anchor.

Communications: Pilot station listens on VHF Channel 16 and works Channel 8. Rijeka Radio was very easily contacted on VHF and proved of great help in connecting with Agents, Owners and Charterers. Rijeka Radio not quite as good for contact on W/T as does not seem to follow the times for listening as laid down. R/T proved difficult as well, due to his frequencies being same as other main radio stations.

Port Officials: Agent and boarding party boarded morning after arrival and cleared ship with very little difficulty, only normal representation required. Shore passes, made out by Agent, sent on board later same day. Permission to immobilise engines and lower lifeboats given by Harbour Master on arrival although this later cancelled due to approach of storm after 24 hours.

Shore Leave: It is possible to arrange for shore launches while at anchor to give shore leave but the service can be curtailed due to bad weather and in Winter could result in crew being stranded ashore. Last boat from the port being 2200 hrs. At the berth, no restriction on shore leave exists and there is an excellent bus service into Rijeka from the village of Bakar. Prices are comparable with U.K. and quality of goods similar. In Bakar itself is an excellent restaurant, family owned, which serves first class food in very nice surroundings. The Owner speaks perfect English.

Fresh Water: At anchor, limited water is available by tug but very expensive. On the berth, good quality water is readily available in any quantity required.

Bunkers: Both intermediate and diesel oil is available by barge, price unknown but thought to be above average. Normally ships taking large quantities of bunkers would bunker at Augusta, Sicily.

Stores: Storing poses a problem due to several points. The access to the ship on the berth is difficult for large lorries as the extension to the wharf carried out over the past 3 years has wrecked the approach road to the face of the wharf and also the lorries if they make it to the wharf cannot get close alongside due to the conveyor belt and rails.

Storing at the anchorage also poses problems as there are no barges suitable for carrying large amounts and launches were used to bring the stores out to the ship but these can only carry a small quantity at a time. We had to load some large and heavy pieces of engine spares which had been sent from UK by lorry and these were transferred to a pontoon barge for delivery to the ship.

Crew Changes: Personnel were routed through Zagreb* mainly and this entailed a 4 hour drive from the airport to the ship, although it is possible to send people via Trieste which is a bit nearer. On arrival at Rijeka they have to see Immigration and are issued with shore passes. Wives and children should be entered on a passenger list and not included on the crew list as they get a special pass for 90 day entry.

*Whether this is normal routeing or was Company's choice is not known.

Cargo Handling: Berth has been extended and depth alongside increased to allow vessels drawing 17.5 m. to safely lie alongside although the 48 ft. 6 in. rock which was found previously at the Eastern end of the berth is still there according to the Pilot. (Approximate position of rock about 50 ft. off wharf and about 250 ft. from Eastern end). Berth is left in a very broken down looking state and lacks decent mooring posts at the Western end. Cargo is handled by 3 grabs (although only 2 were in use this call) 1 very large and the other 2 much smaller. Discharge rate on this call was averaging 30,000 t.p.d. with the major share being done by the larger grab which is at the Western end of the wharf. Cargo is either taken directly away by ore trains (if iron ore) or dumped onto back of wharf, or, if coke is taken direct to a coking factory on the other side of the bay by a covered conveyor belt. Storage or dumping facilities are very limited and this has a controlling effect on the discharge. When discharging iron ore, if insufficient trucks arrive and the stockpile is full, then discharge is on a stop/go basis and slow and also fully dependent on the trucks arriving regularly. This ship discharged 149,320 tonnes in 6 days as against a previous call experienced when 118,100 tonnes were discharged in 6.7 days. Maximum air draft 16.5 m. on berth.

Stevedores were good and co-operation was good. Any damage caused was repaired before departure without causing any delay to the ship and the standard of repair was good.

Repairs: Besides the "3 MAJ" shipyard, there are quite a few smaller yards and workshops where repair work can be arranged.

Medical: There is a special clinic for seamen which opens at 1200 hrs. In attendance at that time is a general doctor who refers patients to the different specialists and usually entailed a visit next day to see those people.

Customs Allowances: On arrival, each man allowed 200 cigarettes and 0.5 litre wine/spirits during stay. Customs would allow an issue every 5 days of 200 cigarettes per man and 8 bottles of spirits for the ship.

SHIPMASTER'S REPORT: Urinj: February, 1980.

INA Petroleum Co. Berth: See "Plan".

Office: The Port of Urinj, telephone 761.011 ext. 250. Can be contacted via Rijeka Radio at any time.

Berth: The petroleum berth of Urinj (Lat. 45° 17' N., Long. 14° 31.7' E.) is situated 5 miles E.S.E. from the Port of Rijeka. Its position is marked by a buoy whose characteristic is Fl.W. 3 sec. It is open 24 hours a day for commercial activities. The depth of water at this berth varies from 45 m. to 20 m. below the level of mean tides. The bottom is mud. Because of this it can accept tankers up to 200,000 d.w.t.

Documents on Arrival: The following documents are required on arrival:
5 copies of a Crew List (full personal data, including birth place, date of birth, etc., are necessary).
5 copies of Passenger List – if any
2 copies of List of Ship's Stores
2 copies of Manifest of Dangerous Goods – if any
2 copies of Customs Declaration List
2 copies of Transit Cargo Manifest
1 Cargo Manifest with extra copy for Customs.

Notice of Arrival: Vessels should give notice of arrival to their Agents via Rijeka Radio 48 hours and 24 hours in advance.

Approaching Directions: After passing Cape Jablanac a course of 060° leads safely to the tanker anchorage. The Pilot will board at anchorage area from a tug if the vessel is to proceed to the berth immediately.

VHF: Vessels equipped with VHF radio telephone should contact "Rijeka Pilot" on Channel 8 or "Rijeka Radio" on Channel 16 for berthing instructions.

Tugs: For berthing of a vessel the use of tugs is obligatory.

Gangway: Vessels should use their own port side gangway.

Manoeuvring: When the Pilot boards the vessel and forward tug is secured, both anchors (with one shackle in the water) should be ready for use. The stern mooring lines are carried toward the shore by a mooring boat. Usually 9 to 10 lines are used (6 from the vessel, and 4 from shore).

Connecting Hoses: After mooring operations have been completed, the connecting hoses will be brought alongside the starboard side of the vessel by a workboat. There are 2×12 in. hoses available, one for crude oil and one for products. Connecting and disconnecting of the hoses will be done by INA personnel, supervised by the Port Captain. The assistance of the ship's crew in operating windlasses, winches, etc. is required.

Note:
(a) A minimum S.W.L. of 5 tons is required for the 12 in. hoses.
(b) The vessel is responsible for good condition and effectiveness of the equipment.
(c) Vessels are required to keep main engine on stand-by all the time during their stay in berth, therefore no repairs to the main engine of the vessel may be undertaken during berthing. Power must be kept on for possible adjustments of mooring lines, anchors, and derricks.

Discharging: When the connecting of the hoses is completed, and the Ullage Report completed, Chief Officer will report the readiness of the vessel for discharging operations. The vessel is required to discharge the cargo as quickly as possible. Max. discharging rate is about 6,000 t.p.h.

Sailing: After the discharging operation is completed, the vessel should leave the berth as soon as possible. The Master should keep in touch with the Port Captain who will despatch a Pilot and Authorities on time.

Deballasting: After arrival at anchorage or berth and Free Pratique has been granted, the Loading Master will take samples of the ballast water for quality checks. Permission to discharge ballast water overboard will be granted by the Port Captain only. If laboratory analysis is not accepted by the Port Captain, vessel must shift to the slop-discharging installation at Bakar. The "not accepted ballast water" must be discharged there through stern discharge line only. After tank cleaning and line-flushing, vessel will be returned to Urinj with or without ballast at Master's option.

Loading: INA Refinery produces several kinds of products.

Cargo Loaded: Clean unleaded virgin naphtha.
Density at 15° Centigrade −0.74.
Loading rate – average 1,500 cu.m.p.h.

Documents on Sailing: The following documents are required on sailing:
4 copies of Crew List.
4 copies of Passenger List.
2 copies of List of Ship's Stores.

Free Pratique: To obtain Free Pratique by radio, vessels should send the following information to their Agent 48 hours in advance via Rijeka Radio:
The number of crew and passengers,
Health conditions and possible infectious diseases.

Note: No one is allowed to leave the vessel until Free Pratique is granted.

Medical: There are 3 well equipped hospitals in Rijeka whose medical staff is capable of giving full medical protection.

Fresh Water: There is an unlimited supply of fresh water available. It is supplied by a floating pipeline attached to the Eastern signal buoy.

Fuel: All grades of bunker are available. Order must be placed 48 hours in advance.

Laundry: Laundry service has to be ordered immediately after arrival in order to ensure delivery of the clean laundry in time.

General: All kinds of repairs available by shipyard "Viktor Lenac".
There is a floating crane capacity up to 100 tons.
Dry docks accepting ships up to 60,000 d.w.t. also available.

Ship Supplies: In order to ensure timely supply of food and groceries vessel should place an order through the authorised stores (ship chandlers) immediately after or before arrival by radio.

Shore Passes: Shore passes are required for personal identification and serve as an entry permit to the terminal. Shore passes must be returned to the Immigration Office before sailing.

Transportation: During the time at the berth transportation of the crew and passengers from the vessel to the terminal is arranged by a shore launch from 0800 hrs. – 2400 hrs.

Lights: Manifold and poop mooring areas should be adequately lit to enable night mooring and discharging operations to be carried out with safety. Sea area around the ship also has to be properly illuminated.

Deck Watch: Deck watch must be maintained at all times while the vessel is in berth. In addition to its normal duties, the watch must inspect the hose connections and area around the ship against oil spillage, pollution, and to prevent unauthorised persons from boarding the vessel.

Action in Case of Emergency: In the event of a fire, oil spillage, or other emergency on the vessel, the emergency signal is 3 or more blasts of not less than 10 seconds duration each on whistle or siren supplemented by a continuous ringing of the general alarm bells.

SHIPMASTER'S REPORT: Rasa: October 1984.

Location: Lat. 45° 01.6' N., Long. 14° 03.2' E.

Documents: Same as Rijeka.

Pilotage: 48 and 24 hours' notice of ETA must be given to Agent. Pilot boards vessel off Traget Point (Lat. 45° 01' N., Long. 14° 03.5' E.). Sometimes Pilot boards off Ubas Point (Lat. 44° 56' N., Long. 14° 04' E.) by special arrangement. Pilot on VHF Channel 16.

Approaches: For obtaining Pilot off Traget Point, necessary to navigate through Zaliv Rasa Strait. This passage is easy during daytime, using the middle of the channel.

Anchorages: Off Traget Point with good sandy bottom and depths from 10 m. to 12 m.

Tugs: Not available.

Berthing: For berthing Pilot uses the starboard anchor for turning the vessel. There are 2 berths, 1 for loading livestock and 1 for loading general cargoes and special lumber from Austria. This berth is about 200 m. long with a depth of 10 m.

Cranes: 3 shore cranes of 5 tons and other equipment is available.

Stevedores: Port Enterprise "Luka" is the sole stevedoring company. Working 2 shifts from 0730 – 1400 hrs. and 1500 – 1900 hrs. Saturdays, Sundays may be worked on overtime. Loading rate 2,500 cu.m. of lumber per day. (approx.)

Fresh Water: Available from quay.

Cargo Gear: Stevedores use shore cranes and ship's gear together.

Repatriation: Possible by bus to Rijeka or Pula and then by air or train.

Airport: Nearest airport at Pula.

Time: GMT plus 1 hour.

Identification Cards: Shore passes issued.

Telephones: Near to the berth through telephone centre.

SHIPMASTER'S REPORT: Sepen: August 1987.

Port: Omisalj Products Terminal, Port Dina, Sepen Bay.

Chart: B.A. Chart No. 2719.

Location: The Terminal is located at Pt. Zaglau in Sepen Bay on Krk Island (near Rijeka).

Documents:
6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest.
1 copy Health Declaration.
1 copy Arms and Ammunition List.
1 copy Drugs and Narcotics List.
1 copy Passenger List.
3 copies Cargo Manifest.
All passports.

Shore passes are issued and have to be returned before departure. The Stores Declaration is required on departure showing stores used during vessels stay in port. The bond is sealed.

Anchorage: Vessel anchored in the pilot boarding area in a depth of 20 fathoms.

Pilotage: Pilotage is compulsory and available throughout 24 hours. Pilotage outward is optional but has to be paid for even if not used. Terminal personnel advised us that pilotage is rarely used outward as vessel has to wait a long time.

Pilot boards from a mooring boat in approximate position Lat. 45° 12.4' N., Long. 14° 31.6' E. Pilot may be contacted on VHF Channel 8.

Approaches: Two red buoys mark the shallow water to the South of Omisalj Peninsular.

Two green buoys are positioned about 3 cables to the South of the red buoy marking a 13.0 m. shoal.

Approach is made between the 2 sets of buoys. Departure can be made between the berths and the green buoys.

Tugs: Tugs available from Rijeka, but not normally used.

Berthing: There are 2 product berths. Berth A handles gases, maximum draft 11.5 m. (12.5 m. CD) and Berth B handles products, maximum draft 15.0 m. This berth being the most Southerly.

There is also 1 general cargo berth with a depth of 6.0 m. Length of quay 90.0 m.

Berth A has a total flat face length of 60.0 m., being made up 45.0 m. of pier face and 1 dolphin. The pier is of concrete construction and has good fendering. The mooring arrangements are good with dolphins each side of the pier. Moorings consisted of 2 head lines/stern lines and 2 springs each end. Mooring boats are used to run the lines. The pier is some 10.0 m. above the water level so the gangway is steep.

Vessel always berths port side to at both berths. Ship's gangway used.

There is a shore hydraulic crane with 2 tonnes capacity which is available for handling stores, etc.

Berth A is about 2 years old and is an extension of Omisalj Tanker Terminal and can handle vessels up to 20,000 d.w.t. and a length of 110 m.

The berth is very exposed to Northerly winds.

Cargo: Vinyl Chloride Monomer (VCM) is exported. Two arms (most Northerly) are available (8 in. 300 ASA) for liquid and vapour. Arms are nitrogen purged on completion. Storage consists of 3 tanks with a total capacity of 10,000 tonnes. 2 pumps are available to load at a rate of 120 tonnes per hour.

VCM is produced on site in a new plant. Ethylene is mixed with chloride to produce ethylene dichloride, this is then used to produce VCM. Production is about 450 tonnes per day.

Ethylene is imported. The 2 arms for vapour and liquid (8 in. 300 ASA) are located to the South of the VCM arms. Arms are nitrogen purged on completion. Storage capacity is 16,000 tonnes in 2 tanks. The plant requires 1,000 tonnes every 2 days. Most ethylene comes from Porto Maguerra.

Vapour recovery is by 2 old compressors.

At present they require discharge temperature of −101° C. Vapour is also returned to the vessel for recovery on board.

Two new compressors are being installed which will enable plant to handle at around −98° C to −99° C.

First foot samples taken when loading VCM. Samples take at least 3 hours to analyse.

On completion of loading VCM it is normal to allow 5 hours before sailing.

Fresh Water: Fresh water is available at both piers. They can supply at 9 Bar pressure if required.

Stores: The State ship chandler in Rijeka has a good range of stores at moderate prices.

General: The airport at Rijeka is about 5 miles away. The village of Omisalj is about 30 minutes walk from the Terminal main gate (transport is compulsory to the gate from the pier). There is a bank in the village which is open late in the Summer. European currencies and dollars may be exchanged.

AUTHORITY: Lucka Kapetanija (Harbour Master's Office), Senjsko Pristaniste 3, Rujna 3, 51000 Rijeka, Croatia. *Tel:* 214113. *FAX:* (051) 211660. *Cables:* Kapetanija Rijeka. *Contact:* Mr. Ivica Simic, Operations Security Chief. *Tel:* 214031. *Telex:* 24634 kapri.

Luka Rijeka (Port of Rijeka), Riva 1, P.O.Box 146, 51000 Rijeka, Croatia. *Tel:* (051) 213222 (Central), 211379 (Director General), 213302 (Commercial Director). *Telex:* 24165 Lukari RH. *Cables:* Luka Rijeka. *Contact:* Deputy Director General or Operations Manager.

AGENT: Jadroagent – Rijeka, P.O.B. 120, 51000 Rijeka, Croatia. Cable: Jadroagent Rijeka. Tel: (051) 214-444. Telex: 24153, 24189, 24354 Jadrag Rh. Fax: (051) 213-616.

SIBENIK: 43.44 N. 15.53 E.

DOCUMENTS/HEALTH/HOLIDAYS: Same as "Rijeka".

PILOTAGE: Compulsory for vessels over 500 g.r.t. Pilot Station located in position Lat. 43° 41.5' N., Long. 15° 52.3' E.

Pilot Station for vessels with dangerous cargo is in position Lat. 43° 38.7' N., Long. 15° 52.5' E.

ANCHORAGE: Small vessels coming from the West can anchor between Prvic Island and the shore.

Anchorage for Sibenik Port is within the following area:

(a)	Lat. 43° 40' 30" N.	Long. 15° 52' 45" E.
(b)	Lat. 43° 41' 25" N.	Long. 15° 52' 45" E.
(c)	Lat. 43° 40' 40" N.	Long. 15° 53' 30" E.
(d)	Lat. 43° 40' 00" N.	Long. 15° 53' 30" E.

RESTRICTIONS: All vessels over 50 g.r.t. must apply for permission to enter St. Ante Channel by using International Code Signal "Z" by flag during daylight hours and a white light above a red light visible 2 miles all round or a sound signal (letter "Z" of morse code) during night hours. Vessels may enter channel only when authorised by a signal, 2 black balls vertically disposed by day or 2 green lights vertically displayed by night, made by the signalling station at Jadrija. Signal Station on VHF Channel 71.

MAX. SIZE: Only draft limited. 33 ft. alongside in deepest berth.

VHF: Pilot has VHF available and maintains listening watch on Channel 14. Harbour Office on Channels 10, 16 and 84.

RADIO: None. Vessel may call Agent through Split Radio and Rijeka Radio.

TUGS: 1 of 750 h.p. Additional tugs ordered from Split.

All vessels over 2,500 d.w.t. have to use tug for berthing and unberthing, and all vessels over 20,000 d.w.t. transitting the St. Ante Channel require tug assistance.

BERTHING:

Obala RM: Length 274 m., draft up to 7 m. – no shore cranes.

Gat Vrulje: East side length 132 m., head 114 m., West side length 90 m. – Ferry Berth max. draft 7.0 m. – no shore crane. Equipped with conveyor belt for loading bulk fertilisers.

Obala Dobrika: Phosphate Terminal, length 225 m., depth 10 m.

Obala Rogac: Length 432 m., depth 10 m. Cranes: 2×7 tons, 3×5 tons.

Obala Sipad: Length 294 m., draft up to 7 m. – no shore cranes.

Obala Crnica: Length 120 m., draft 7.5 m. – 1 shore crane – 8 tons.

BULK CARGO FACILITIES: Ores and minerals (phosphate) at quays Rogac and Dobrika.

Obala Dobrika: Phosphate handling, capacity 400 t.p.h., storage capacity 120,000 tons.

STEVEDORES: Port Enterprise: "Luka" – Sibenik and timber stevedoring company "Sipad".

Port works in two shifts: 0700 – 1500 hrs. and 1500 – 2300 hrs. Overtime possible 2300 – 0700 hrs.

Timber operations normally performed during first shift only.

MEDICAL: Medical service available including hospitalisation.

DENSITY: 1005 – 1025, depending on place and weather.

FRESH WATER: Available from quay.

FUEL: Diesel and Gas oil in small quantities.

REPAIRS: Small repairs only.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: If not performed by crew, can be done by stevedores at additional charge.

CUSTOMS ALLOWANCES: About 40 cigarettes and 0.5 litre of wine/spirits per man per day.

CARGO GEAR: General cargo and timber are handled using ship's gear. Ore and minerals by shore cranes fitted with grabs.

REPATRIATION: By train or bus and by air from Split Airport nearby, or from Zagreb or Zadar.

TIME: GMT plus 1 hour. Summertime – GMT plus 2 hours (March-September).

POLICE/AMBULANCE/FIRE: Police, 92; Ambulance, 94; Fire, 93.

TELEPHONES: No facilities for placing telephone on board.

IDENTIFICATION CARDS: Shore passes given by local police.

GARBAGE DISPOSAL: Compulsory service provided daily by stevedores. Daily charges based on g.r.t., up to 500 g.r.t. U.S.$ 29, 501 – 1,500 g.r.t. U.S.$ 38, 1,501 – 5,000 g.r.t. U.S.$ 63, 5,001 – 10,000 g.r.t. U.S.$ 72 and over 10,000 g.r.t. U.S.$ 84.

WASTE OIL DISPOSAL: Can be facilitated by tanker truck.

SEAMAN'S CLUBS: None.

CURRENCY: Kuna (KN). U.S.$ 1.00 = 5,4551 KN (13.2.96).

GENERAL: Lloyd's Sub-Agents – Jadrcagent Sibenik.

SHIPMASTER'S REPORT: July 1986 (Updated 1992).

Pilotage is compulsory and available day and night. Pilot boards the vessel in the vicinity of red pillar light buoy (RF. 12s. 4M.) in approximate position Lat. 43° 42.8' N., Long. 15° 51.1' E. Pilots operate on VHF Channels 16 and 14.

The best anchorage is inside the South part of Sibenski Canal. We anchored in approximate position Lat. 43° 40.7' N., Long. 15° 53.1' E. The bottom is gravel, sand and algae.

There is a phosphate pier with silos on the quay (only one pipe available at present, plans to build another pipe during the next year) whose capacity is 6,500 tonnes per day. Maximum permissible draft for this pier is 32 ft. but it is especially important for Master and Chief Officer to know that on this pier, owing to insufficient depth, a vessel even with a draft of 30 ft., cannot be berthed alongside. Vessel normally 2.0 m. – 3.0 m. from the quay. Berthed vessel is partly aground so draft survey will show signifiantly less cargo than that actually loaded. It is therefore recommended that draft is checked before Pilot boards and thereby check the actual quantity of cargo on board. Also Masters and Chief Officers must bear in mind that water is very brackish and density varies, so during draft survey density must be checked at various depths (recommended to check the density at depths 2.0 m., 6.0 m. and 9.0 m.) and at different locations.

Draft survey is made by official control house (Adriainspekt or Isco or Zik) on arrival and on departure.

Fresh water is available at the pier.

AUTHORITY: Lucka Kapetanija Sibenik, Obala Oslobodjenja 8, 22000 Sibenik, Croatia. *Tel:* 022-24261 (Harbour Master), 36667 (Traffic), 37837, 37838. *Telex:* 27395. *FAX:* 27378. *Cables:* Kapetanija Sibenik. *Contact:* Captain Janes Lakos, Harbour Master.

AGENT: Jadroagent – Sibenik, Obala Oslobodjenja 9, 22000 Sibenik, Croatia. Cables: Jadroagent Sibenik. Telex: 27323 RH Jadrag. Tel: (022) 22570, 22571, 22789, 22789 (After hours). Fax: 22682.

SPLIT: 43.31 N. 16.26 E. (See Plan)

DOCUMENTS:

5 Crew Lists.
5 Passenger Lists.
2 Stores Lists.
3 Personal Effects Lists.
3 Cargo Manifests.
3 Bills of Lading.
1 Health Declaration.

PILOTAGE: Compulsory for vessels over 500 g.r.t. If vessel bound for Split, Dugi Rat or Trogir, Pilot will normally meet vessel 0.5 miles off the City Port Entrance, day or night, but on request Pilot will board a vessel S.W. of Razanj Lighthouse (Lat. 43° 19' N., Long. 16° 25' E.).

A vessel bound for Trogir may also take a Pilot 0.5 miles off Galera Light (Lat. 43° 28.4' N., Long. 16° 11.5' E.).

It is advisable to contact Pilot Station on VHF Channel 12, or via Split Radio on Channel 16, prior to arrival.

A vessel awaiting a Pilot can anchor South of City Port Breakwater.

ANCHORAGES: Vessels can anchor S.E. of City Port Entrance, 0.5 miles off the breakwater, in 40 m. depth, muddy bottom.

In case of very strong S.E. wind it is recommended to anchor in Southern part of Luka Milna (Lat. 43° 20' N., Long. 16° 26' E.) in 25 m. to 30 m. depth, sandy bottom.

RESTRICTIONS: Large tankers are handled in and out of the harbour during day time only. LPG carriers also enter port in day time only.

MAX. SIZE: No restrictions except draft. Maximum permitted draft for passenger ships in City Port (Southern Basin) 8.8 m.; in Northern Port for general/bulk cargoes 10.6 m. but for grain (Silo Quay) 11.3 m. and for oil tankers 11.9 m.

HEALTH: To obtain Pratique, Health Declaration required. In event of any disease or fever contact Agents.

RADIO: All messages to Agent via Rijeka Radio (on HF), or via other Coast Stations on MF radio telephony or MF radio telegraphy and VHF.

Answers to messages via Rijeka Radio only.

VHF: Split Radio on Channel 16 (permanent watch). Pilot station on Channel 12 (listening watch from 0700 hrs. to 2000 hrs. local time), Port Authority on Channel 10, tugboats on Channel 14.

TUGS: Only low power tugs available (500 KW declared by owner). Normally ship's lines used. If tug's lines used 10% extra is charged.

BERTHING:

Northern Basin:

Northern Port: Continuous quay of total length 870 m. divided into 5 berths with the following permissible ship drafts: Berth No. 1, 8.5 m., Berth No. 2, 9.7 m., Berth No. 3, 7.3 m., Berths No. 4 and 5, 10.3 m., where general and bulk cargoes handled, mostly by shore equipment.

Cement factory "Partizan", Kastel Sucurac, length of quay 222 m., draft 9.7 m., cement in bulk mostly loaded.

Cement factory "Prvoborac" Sv. Kajo, quay length 274 m., draft 8.2 m., cement in bags only loaded.

"Jugovinil" factory Kastel Sucurac, quay length (dolphins) 80 m., draft 9.7 m., for LPG carriers only.

Silo Quay, Vranjic, length 110 m., draft 11.3 m., discharging/loading grain by multiport.

A. Vucicic factory, Vranjic, quay length 262 m., draft 7.3 m., where discharging asbestos and loading asbestos products. Shore crane and ship's gear used.

Southern Basin (City Port):

Breakwater Quay, length 230 m., draft up to 8.3 m. Ro–Ro ramp available.

Gat Spanjolskih Boraca (ex-Sv. Duje), total quay length 465 m., draft up to 7.9 m.

Gat Proleterskih Brigada, total quay length 350 m., drafts from 3.9 m. to 7.0 m.

City Port serves passenger ships and car ferries only.

CRANES: *Northern Port:* 2×7 tonne bridge cranes and 4×5 tonne gantry cranes. Floating crane of 60 tonne lifting capacity also available.

BULK CARGO FACILITIES: One quay (Silo Quay, Vranjic), length 110 m., draft 11.3 m. Max. height of discharging gear above sea level is 8.0 m. Max. loading/discharging rates 3,000 – 5,000 tonnes.

SPECIALISED CARGO HANDLING FACILITIES: One berth for LPG carriers (Jugovinil Factory Berth).

STEVEDORES: "Lucki prekrcaj i skladista" is the sole stevedoring company. Work in two shifts from 0600 – 1300 hrs. and from 1300 – 2000 hrs.

MEDICAL: No advance notice except in case of serious illness to be included in arrival cable. Hospital facilities available.

TANKERS: Two discharging berths alongside the quay. Discharge lines 6 in., 8 in. and 10 in.

Berth for small tankers, length 80 m., draft up to 7.0 m.

The other quay, length 150 m. (dolphins) and permitted draft 11.9 m.

Depending on type of cargo, average load/discharge rate is from 300 – 600 tonnes per hour.

DENSITY: Average density 1025.

FRESH WATER: Available at all berths. Order through Agent.

FUEL: Obtainable. Advance notice required.

CONSULS: Denmark, Finland, Italy, Netherlands and United Kingdom.

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: One floating dock at Trogir, length 180 m. and one at Northern Basin, length 116 m.

SURVEYORS: Jugokontrola, Jugoinspekt, Jadroinspekt (Cargo Inspectors).

Lloyd's Register, American Bureau, Bureau Veritas and Jugoregister representing DNV, NKK and GL, Panama, etc.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Normally by ship's crew.

CUSTOMS ALLOWANCES: About 40 cigarettes and reasonable amount of wine/spirits for each crew member daily.

CARGO GEAR: Load/discharge mostly effected by shore gear.

REPATRIATION: All facilities available for crew changes.

AIRPORT: City centre to airport 23 km. 5 flights daily to Zagreb and 3 to Belgrade. Also direct flights to Rome, Paris, London, Munich, Hamburg and Zurich.

TIME: GMT plus 1 hour. Last Sunday in March clocks advanced 1 hour. Last Sunday in September clocks retarded 1 hour.

HOLIDAYS: January 1st, 2nd; May 1st, 2nd; July 4th and 27th; November 29th, 30th.

POLICE/AMBULANCE/FIRE: Police, 92; Ambulance, 94; Fire, 93.

SERVICES: Compass adjusting, radio/radar services and calibration of DF, divers for surveys/repairs, Lloyd's Sub-Agents (Jadroagent-Split), ship's laundries.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Shore passes issued.

AUTHORITY: Lucka Kapetanija, Obala Lazareta 1, 58000 Split. *Tel:* Split 48-062. *Telex:* 26496 (Yu Kap St).

"Luka Split", Gat Spanjolskih Boraca, 58000 Split, Croatia. *Tel:* Split 589-299.

ZADAR: 44.07 N. 15.14 E. (See Plan)

PORT LIMITS: A vessel is considered to be an "arrived ship" when arrived at one of the anchorages (see below).

DOCUMENTS:

7 copies Crew List.
7 copies Passenger List.
2 copies Manifest of Dangerous Cargo.
2 copies Dangerous Cargo Plan.
2 copies Stores List.
2 copies Private Declaration.
2 copies Cargo Manifest.
2 copies Transit Cargo Manifest.
2 copies Narcotics List.
2 copies Firearms List.
1 copy Health Declaration.

PILOTAGE: Compulsory for all vessels over 500 g.r.t. Pilot boards approaching vessels at the anchorage, about 0.5 miles West of the green port light on the North part of Zadar peninsula, or at separate anchorage allocated to tankers carrying dangerous cargoes. Pilot available on VHF Channels 12 or 16.

Coastal pilotage is compulsory for tankers carrying dangerous cargoes and pilot boards/disembarks from vessel in position Lat. 44° 23' 18" N., Long. 14° 34' 36" E., near Grujica Lighthouse, where anchoring not possible. 24 hours notice of ETA at Pilot Station is requested together with confirmation of ETA not later than 12 hours in advance. Coastal pilot available on VHF Channel 12 or 16.

ANCHORAGES: Anchorage (for all vessels except for tankers carrying dangerous cargoes) 0.5 miles × 245° from green port light on the North part of Zadar peninsula, in a depth of about 40 m.

Separate anchorage for tankers carrying dangerous cargoes in the area between the following positions: Lat. 44° 07' 12" N. to 44° 08' 36" N., and Long. 15° 08' 24" E. to 15° 10' 24" E.

RESTRICTIONS: Tankers with dangerous cargoes berth in daylight only.

MAX. SIZE: *Gazenica Cargo Port:*

Berth No. 1: Draft limit 6.6 m. forward, 11.0 m. aft.
Berth No. 2: Draft limit 8.5 m.
Soya Bean Berth: Draft limit 11.60 m.
Tanker Berth: Draft limit 8.7 m. forward, 10.7 m. aft.

Old Zadar Passenger Port: Max. draft allowed 6.4 m.

HEALTH: See "Rijeka".

RADIO: Rijeka Radio "9AR", or Split Radio "9AS".

VHF: Split Radio and Zadar Radio on Channel 16. Port Captain on Channels 16 and 10. Pilot on Channels 16 or 12.

TUGS: Two tugs, 1,200 h.p. and 710 h.p., available from shipyard at Lamjana. Additional tugs, if needed, available from Split with 10 hours notice.

BERTHING:

Berth No. 1: Length 160 m. Cargoes handled (by ship's gear): General cargo and fruit.

Berth No. 2: Length 145 m. Cargoes handled (by ship's gear): General cargo and timber.

Soya Bean Berth: 150 m. berthing face. Cargoes handled (by shore elevator): Soya beans, soya bean meal, grain and vegoil.

Tanker Berth: 60 m. berthing face. Cargoes handled: VCM, petroleum products, liquid chemicals, mineral and vegoil.

Also see "Max. Size".

CRANES: Generally, vessel is required to use her own gear, except at Soya Bean Berth. Several mobile cranes ranging from 7 tons – 100 tons capacity are available.

BULK CARGO FACILITIES: The Soya Bean Terminal on the North side of the Southern Basin has a marginal wharf with 150 m. berthing face and approximately 15.0 m. depth alongside with 11.6 m. max. draft allowed. Discharging is performed by means of shore elevator. Max. discharge capacity up to 400 t.p.h., but acceptable daily rate of discharge being 3,500 tons.

Loading capacity is slightly lower than for discharge.

Present storage capacity for soya beans is about 75,000 tons. Grains, maize, and other similar cargoes can also be handled as well as soya bean meal.

In the same berth, tankers with a draft up to 11.5 m. can be accommodated for discharge of vegoil only. Discharging rate 150 t.p.h. Storage capacity 36,000 tons.

SPECIALISED CARGO HANDLING FACILITIES: Liquified Gas Terminal facilities at the Tanker Berth. Four ASA connections with a discharging rate of 250 – 300 t.p.h. Storage capacity 9,000 cu.m. for vinyl chloride monomer.

The port is not specially equipped for handling containers or Roll-on/Roll-off traffic.

The Gazenica Basin is the main base for offshore drilling operations.

STEVEDORES: Number of gangs required to be stated in usual notice of ETA.

MEDICAL: Advance notice not necessary, hospital facilities available.

TANKERS: The Tanker Berth on the South side of the Southern Basin has a berthing face of 60 m. and depths of between 11.0 m. and 15.0 m. alongside. Tankers drawing up to 8.7 m. forward and 10.7 m. aft can berth alongside.

All tankers carrying dangerous cargoes up to about 10,000 d.w.t. are moored with the bow pointing seaward. If not, a fire fighting tug is compulsory while vessel alongside.

Floating barriers/booms compulsory for vessels loading/discharging liquid chemicals, mineral and vegoil.

The storage capacity is 25,000 cu.m. for vegetable oil, 20,000 cu.m. for fuel oil, 15,000 cu.m. for oil derivates and 12,000 cu.m. for chemicals.

The discharging rate is 100 t.p.h. – 300 t.p.h.

DENSITY: Average density in the port is 1,026.

FRESH WATER: Connections on piers, rate of delivery 8 t.p.h. – 15 t.p.h. Cost U.S.$ 2.10 per ton.

FUEL: Not available.

CONSULS: None.

REPAIRS: Deck and engine repairs possible.

DRY DOCKS: Brodoremont Zadar – Kali, Ugljan Island. Tel: 023/86422. Telex: 27180. Two floating docks with lifting capacity 8,600 tons and 2,600 tons respectively.

SURVEYORS: Cargo inspectors available.

Following surveyors available: Lloyd's Register from Split, American Bureau of Shipping from Split, Bureau Veritas from Rijeka.

GANGWAY/DECK WATCHMEN: Not compulsory.

OPENING/CLOSING HATCHES: Normally, but not compulsory, carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes per person. Tobacco and liquor sealed in bond.

REPATRIATION: Facilities exist for effecting crew changes and arranging necesary repatriation.

AIRPORT: Zadar Airport served by regular daily flights to Zagreb, with connections for international flights.

TIME: GMT plus 1 hour. Summertime kept.

HOLIDAYS: Same as Rijeka.

POLICE/AMBULANCE/FIRE: Police 92; Ambulance 94; Fire 93.

TELEPHONES: No telephones placed on board.

BANKS: Dalmatinska Banka, Trg sv. Stosije 3, 23000 Zadar. Telex: 27141, 27224. Tel: 023/436888.

SHIP SUPPLY SERVICE: Tankerkomerc – Zadar. Tel: 023/436888. Fax: 023/436756. Telex: 27251.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: Shore passes are issued by Immigration Office, and have to be returned before departure.

GARBAGE DISPOSAL: Garbage container of 5 cu.m. capacity available. Collection of garbage from ship and transport of container costs U.S.$. 130 per container. Service available on request through agent.

WASTE OIL DISPOSAL: Shore tank of 100 cu.m. capacity, 800 m. from tanker berth connected by pipeline. Cost U.S.$ 50 per tonne of waste oil received. Contact Tankerkomerc, Zadar. Tel: 023/312065. Telex: 27164.

SEAMAN'S CLUBS: None.

CURRENCY: Croatian Kuna (HRK). U.S.$ 1.00 = HRK. 5.4551. (4/96).

SHIPMASTER'S REPORT: September 1987 (Updated 1996).

Port: Gazenica

Charts: B.A. Charts No. 2775 and 2771.

Documents:

6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest.
1 copy Health Declaration.
3 copies Cargo Manifest.

Shore passes are issued and have to be returned before departure.

A Stores Declaration is required prior to departure showing stores used whilst in port.

Approaches: Approaches are through deep water down Zadar Kanal.

Most of the island passages are well charted and the navigation aids are good. The depths are as shown on the chart.

There is a shallow bank off the North Breakwater Buoy off Zadar/Gazenica cargo port.

Anchorage: Vessels bound for the industrial port of Gazenica (2 miles South of Zadar City) normally anchor and wait for clearance or berth off the old city as per anchorage indicated on B.A. Chart No. 2775 (position Lat. 44° 0.6' N., Long.15° 12.6' E.) in about 20 fathoms with mud bottom.

An alternative anchorage is off Gazenica in position Lat. 44° 05.2' N., Long. 15° 15' E.

Pilotage: Berthing is carried out in daylight hours only. Unberthing takes place between 0600 hrs. and 2400 hrs., depending on wind. Berthing does not take place if there is a southerly wind in excess of Force 5 blowing.

Pilot normally boards off the town from a launch. Pilot may be contacted on Channels 16 and 12, however VHF is not continously monitored.

Rimini in Italy also use VHF Channel 12 so some confusion can arise.

Tugs: Normally 1 tug is used for berthing using a ship's line from the stern. One tug comes from Lamjana Shipyard on Ugljanisl Island. Additional tugs if required come from Split. Pilot advises that use of tugs is costly.

No tugs used on departure.

Berthing: Vessel berthed on No. 3 Berth in Gazenica which is on the South side of the harbour. Oil and VCM handled at the berth.

Vessel berths stern first with the aid of a tug. Occasionally anchor is required when berthing port side to. If it is very windy the starboard anchor is dredged along the bottom.

Berth No. 2, the most Northern berth in the port, is for grain handling. The hulk indicated on B.A. Chart No. 2775 is for storing soya bean oil. The products berth, Berth No. 3, and a small berth for oil rig supply vessels, Berth No. 4, are both on the South side.

Berth No. 3 (for VCM) has a flat face of 60 m. The fendering is fair but widely spaced. Maximum draft permitted if berthing head out, which is normal, is 38 ft. or 42 ft. if berthing head in. It is normal to berth port side to. The water depth shoals to 29 ft. on Berth No. 4. Moorings at No. 3 Berth consist of 2 head/stern lines, 2 breast lines and 2 springs forward and aft. The pilot boat assists with running of moorings.

Berth No. 3 is very exposed to southerly winds but pilot reports that the berth is fairly sheltered from Northerly winds (Bora).

Cargo: Vinyl Chloride Monomer (VCM): No discharge takes place between 2200 hrs. and 0500 hrs. due to Port Fire Regulations.

3 × 4 in. rubber hoses are used from the shore manifold to the "pig" bolted on to the ship's manifold. Rate of discharge about 250 tonnes per hour to 300 tonnes per hour. Generally speaking, the shore authorities do not allow the vessel to "hot gas" to shore upon completion of cargo.

There are 2 shore tanks numbered R301 with capacity of 4,038 cu.m. and R302 of 5,225 cu.m. The tank working pressure is −10° C to +50° C at 2 to 3 kg/sq.cm. Maximum pressure 4.9 kg./sq.cm.

Samples take 45 minutes per sample to analyse.

Shore personnel connect and disconnect hoses.

Fresh Water: Fresh water available from shore hydrant at a rate of about 30 t.p.h. Shore hose and meter are used. Cost of water is U.S.$ 2.10 per tonne. The water man is ordered by the shore watchman and he attends quite quickly. Quality of water is good.

Ship Chandlers: The national chandler JTP Tankerkomerc gives good service at reasonable prices. Tel: 057-436888. Telex: 27251. Fax: 057-436756.

General: The old passenger port is a picturesque tourist town. All commercial ships except ferries use this port.

There is a new berth/basin at Gazenica for timber and oil rig vessels (position Lat. 44° 05.4' N., Long. 15° 16' E.). There is a new yacht/fishing harbour at Uvala Kalovare (position Lat. 44° 05.8' N., Long. 15° 15' E.).

The red buoy near Rt. Vitrenjak has been moved to position Lat. 44° 07.48' N.,Long. 15° 12.69' E.

AUTHORITY: Lucka Kapetanija – Zadar, Liburnska Obala 8, 23000 Zadar, P.P.182, Croatia. *Tel:* (023) 223-44, 433-778, 433-758. *Telex:* 27163 KAP ZD RH. *FAX:* (023) 437-825. *Cables:* Lucka Kapetanija Zadar. *Contact:* Captain Milivoj Maricic, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Cuba

GENERAL: (See Plan)

NOTE: Comments are made throughout the text by the Master who supplied us with an earlier booklet – such comments are reproduced in *italics.*

ARRIVAL ADVICE: ETA messages should be sent to Mambisa Havana when Havana is the first port of call, or to Mambisa (at port of call) and Mambisa Havana simultaneously, when the first port is other than Havana.

Mambisa Agency at the port where vessel was nominated for operation or call will advise Port Authorities and concerned parties, but this in no way relieves Masters from any specific obligation to advise other parties according to Charter Party, or orders received from Owners, Managers, Charterers, etc., to such effect.

The following list of Agencies is in geographical order, starting from the Westernmost port Head Agency on the North coast (Mariel) in an Easterly direction, and from East to West on the South coast, ending at the sub-Agency of Nueva Gerona.

Mariel:	(including Santa Lucia and Bahia Honda): Mambisa Mariel.
Havana:	Mambisa Havana.
Matanzas:	Mambisa Matanzas.
Cardenas:	Mambisa Cardenas.
Isabela de Sagua:	Mambisa Sagua la Grande.
Caibarien	Mambisa Caibarien.
Nuevitas:	(including Jucaro): Mambisa Nuevitas.
Puerto Padre:	(including Manati): Mambisa Puerto Padre.
Antilla:	(including Banes, Felton, Preston, Nicaro, Tanamo and Vita): Mambisa Antilla.
Moa/Punta Gorda:	(including Baracoa): Mambisas Moa.
Guantanamo:	Mambisa Caimanera.
Santiago de Cuba:	Mambisa Santiago de Cuba.
Manzanillo:	(including Pilon, Niquero, Media Luna and Ceiba Hueca): Mambisa Manzanillo.
Guayabal:	Mambisa Santa Cruz Del Sur.
Cienfuegos:	(including Casilda): Mambisa Cienfuegos.
Nueva Gerona:	Mambisa Nueva Gerona.

DOCUMENTS: Required on arrival at *every* port:

Sanitary Authorities:

1 Bill of Health.
1 Crew List.
2 Passenger Lists (if any).

Vaccination cards and Derat Certificate will be inspected by Authorities.

Immigration Authorities:

3 Crew Lists.
3 Passenger Lists (if any).

Customs Authorities:

3 Crew Lists.
3 Passenger Lists, including baggage (if any).
3 Crew Personal Effects Lists.
2 Provisions Lists.
2 Spares and Stores Lists.
3 Cargo Manifests (if any cargo on board).
3 In-Ballast Manifests (if no cargo on board).
3 Manifests of Cargo in care of the Master (if any).
1 Copy of Clearance from Last Port.

Agents:

4 Crew Lists.
3 Cargo Manifests
2 copies each Bill of Lading.
3 Manifests of cargo in care of the Master.
6 Hatch Lists.
6 Stowage Plans.

Shipmaster's Comment: One Crew List returned to vessel stamped by Customs/Immigration for next port.

Certificates Required:

Ship's Register.
Safety Equipment.
Load Line.
Safety Radio.
Safety Construction.
Derat.

Instructions for Master of Vessel: How to process Custom's Model Dirad-7, in connection with crew's money control and personal effects.

Custom's inspector when boarding the vessel besides carrying out their usual duties, should deliver to the Master duly legalized, as many of these forms as members of the crew are reported on Crew List.

Legalization of these forms consists of Customs Inspector's signature, Customs stamps and consecutive numbering which indicates quantity of forms delivered to Master.

2. Ship's Master or Officer in charge should fill in only those spaces of the form as: crew member's name, number of passport, as well as ship's name and date of arrival in port, on the first page of the card.

Besides amount of money delivered to the crew member, date of delivery and signature must be shown as evidence that the crew member has been provided with the money, with signature of the Master alongside, all of this information appears on page 2 of the form (card).

In case crew member requires additional amount during vessel's stay in port, notation should be entered following the first, in same way.

3. No crew members, except the Master, are allowed to come in or leave the Custom House premises without presenting this form to the Custom's Inspector at the gate, who will enter therein the pertinent notations.

All these forms legalized by Customs must be carefully kept for subsequent delivery to Customs upon vessel's departure, even those that might become useless.

Should a crew member require more than 1 form because of that previously delivered having been filled up, or become useless, Master will give a new one which the crew member will present, together with the previous one, to Custom's Inspector at the gate. Thereafter, notations should be entered in the new form, the previous one must be returned to Master for subsequent delivery to Customs.

If at any time more forms are required because those previously delivered have become exhausted, they should be requested from Ship Clearance Department of the Custom House, phone 61-8572. After 1800 hrs. these should be requested from Guard Room, phone 6-9698.

4. Upon ship's sailing, Master will gather all the forms from the crew, delivering same to Custom's Inspector who boards the vessel and will perform the following verifications:

(a) To see that none of the legalisation forms are missing.
(b) To verify that such forms have no alterations, erasures, etc.
(c) To add up total spent by all crew members and to verify it with amount settled with ship's Agents Consignatarias Mambisa.

5. Non-compliance with above instructions will subject the violator to corresponding penalty.

Director of Customs.

PILOTAGE: Pilotage is compulsory for all foreign and Cuban vessels at all Cuban ports.

LOCAL TIME: Official local time in all Cuban territory is that for the 75th West Greenwich Meridian and there is a difference of 5 hours compared to GMT, that is, 1200 hrs. GMT is equivalent to 0700 hrs. local time.

Approximately from March to October, Summer Daylight Saving Time is in effect and the difference then is only of 4 hours, that is, 1200 hrs. GMT is equivalent to 0800 hrs. local time.

HEALTH AND SANITARY REQUIREMENTS: Free Pratique is automatic for vessels coming direct from another Cuban port; from foreign countries, usual procedure of Sanitary Inspection applies.

In case of suspected disease or fever on board, Master must radio Mambisa Agency in order to advise the Health Office.

Vessels coming from countries affected by aphthous fever or bovine plague are subject to fumigation, including crew members'/passengers' clothes and shoes. Therefore, it is advisable to have clothes/shoes gathered in an appropriate space or cabin, in order to speed up fumigation.

Vegetable or animal products are subject to inspection before cargo is allowed to be discharged.

All crew members and passengers must have vaccination cards up to date.

Below is copy of warning sent to us by a Ship's Master. The words in italics are the Master's comments.

National Veterinary Medicine Institute
Warning
Master:

You are kindly requested to comply with and acknowledge this warning regarding veterinary sanitary regulations and also to inform your crew members of same.

One Green Vet. Form given to ship to take to next Cuban port, one copy for ship also.

1. Refrigerators of vessels which contain in their victuals meat and meat products originated in countries declared as being affected with foot-and-mouth disease, Rinderpest, Vesicular stomatitis, African swine fever and other diseases non existent in the Republic of Cuba, shall be sealed while remaining in our territorial waters.

Sealed.

2. Milk, butter, cheese, fish and poultry products, as well as canned meat, and meat and meat products from Australia, New Zealand and Canada, are not subject to this procedure for the time being.

All victuals of animal origin must be declared to the Frontier Veterinary Services Officer.

3. Prohibitions:

(a) Arriving in port with live food animals (cattle, swine, poultry, etc.) on board, unless duly authorised by the Animal Health Authorities of the Republic of Cuba;

If pets on board – not allowed ashore.

(b) Unloading or releasing of any species of pet animals. These animals (birds included) are subject to quarantine control on board;

(c) Unloading of victuals of whatsoever origin, including those not subject to sealing procedures;

(d) Arriving in port with compartments or receptacles containing garbage;

Dump rubbish at sea 6 miles out from Cuba.

(e) Scattering of garbage containing food scraps, portions or other wastes of animal origin, or throwing them overboard into the sea or onto shore.

Cover garbage drums.

4. Ratguards must be placed once the vessel has docked.

Fines if not done or if they fall off!

5. Footwear and clothing of the crew members of ship coming from countries known to be affected with diseases dangerous to the fauna of the Republic of Cuba shall be subject to fumigation with formaldehyde gas.

6. Non-compliance of the sanitary regulations, or any action aimed to prejudice or evade them, shall be regarded as an offence liable to a fine of not less than $500.00 (Cuban Official Currency), or to the implementation, at the expense of the transgressor, of appropriate quarantine measures intended to minimise the consequences resulting therefrom.

The following is reproduced from a booklet given to Masters of arriving vessels. The booklet is produced by the Ships' Agent and dated 1983.

PORT REGULATIONS: In order that you may be properly informed, on not only Port and Cuban Government Regulations, but also on various matters related to the loading and/or discharging operations of your vessel, we wish to bring to your attention the following:

1. Crew Regulations (Important Notice to Masters)

(a) The Customs Authorities have put into effect new Regulations which the Masters of all vessels arriving at Cuban ports are under obligation to observe. The regulations in question are as follows:

First: The Master must advise vessel's ETA at least 24 hours in advance and is obliged to deliver to the Customs Authorities at the port of arrival the complementary documents to the Cargo and Passenger Manifest, which comprise:

(a) Hatch List, Hazardous Cargo List, Stowage Plan, Provisions, Accessories and Spare Parts List, Narcotics List (crew's usage). Firearms List and Clearance Certificate (from previous Cuban port). Ship's Register must be exhibited.

(b) List of crew belongings including objects, property of each crew member which he maintains on board for his use, such as, for instance, electric shaving machines, watches, radios, soaps, etc. *(4 copies required at every port – Declare everything in personal possession).* See "Shipmaster's Report".

(c) Detailed list of all articles transported by crew members free of charge, including those which are for his use on board, or that may be destined to other persons (men, women or children), such as for instance perfume, umbrellas, dresses, ladies stockings and lingerie, cloth to make dresses, etc. *(4 copies every port – declare everything and place in bond.)*

(d) Foreign currency whether convertible or not, must be declared on a crew list. *(4 copies required every port – placed in ship's safe).*
Narcotics List – 4 copies morphine only. Provisions List – not listed but requested.

(e) Upon vessel's arrival the Master will be provided with money control cards for each crew member which must be carried by them when going ashore and shown to Custom House Inspector whenever requested.

(f) Each crew member must declare the articles referred to in paragraphs (b), (c) and (d) immediately upon vessel's arrival, since Harbour Officers may search the vessel at any time they should deem convenient.

Second: Each crew member may keep in his cabin up to 200 cigarettes and a bottle of spirits.

Third: The importation into, and the exportation from the Republic of Cuba of Cuban currency is forbidden, and no crew member may have in his possession any amount in excess of that delivered to him by Master from the cash advanced by the agency.
(Collected and sealed in safe).

Fourth: Each crew member is allowed to have in his cabin, only those articles which are for his use on board. Any article in excess (more than 1 radio, 1 shaver, etc.) should be kept in the bond store.

Fifth: Any article not declared, or possessed by the crew member in excess of the amount allowed, also Cuban and foreign currency not properly accounted for, will be confiscated and should circumstances warrant, the courts of law will be informed, the latter having the right to impose penalties, or fines, depending on the value of the objects found in the crew member's possession.
Immediately following the arrival of the vessel, the Master is under obligation to make these regulations known to each and every crew member, as the Customs Authorities will consider that the Master and the crew have been put on notice as to what is herein provided at the moment the vessel has been cleared through Customs, insofar as concerns any violation of the above referred to regulations.
Masters are likewise required to provide a place or space sufficiently ample to deposit the articles transported by the crew free of charge or, in other words, those articles referred to in paragraph (c) above.

Sixth:

(a) Crew members are not allowed to buy personal effects on shore, except in the sailors' or tourists' shops and the articles so obtained can not be sold to any other person.

(b) Except for the Pilots and the Public Health Officials, no other person can go on board and no crew member or passenger of vessels arriving at Cuban ports from abroad is allowed to disembark until the vessel has been cleared by the Immigration and Customs Authorities.

(c) Crew members, including Officers and Master, in addition to their standing Passports or Seaman's Books, must be provided with immigration passes (landing cards) to go ashore.

(d) Depending upon the characteristics and circumstances of the different ports there might be certain limitations in the hours the crew may remain ashore. Port Authorities, through the Agent will advise the Master accordingly.

(e) Shore passes are confined to the city limits of the port where the ship is lying and whenever a crew member requires to move away from the said area, the corresponding permit must be obtained from the immigration port authorities through the agent. Each territorial infringement is subject to a fine.

(f) Upon arrival at Cuban port of any vessel proceeding from foreign country, the Immigration Authorities will deliver to Master the Entrance Certificate which is valid for all Cuban ports and will be under custody and preservation of the Master until final sailing.

(g) If a vessel enters into or sails from any Cuban port without having fulfilled all requisites or procedures of clearance and inspection of the Immigration Authorities it will be subject to a fine.

(h) To take away or to violate the seals or straps fixed by the Customs Authorities means vessel will be subject to sanction or fine.

2. Sanitary Regulations

(a) Following docking, crew members are not allowed to go down to the pier to fix the ratguards or the gangway until the Sanitary Inspection (Free Pratique) has been completed and for non fulfilment of this regulation a fine of 2,000 pesos will be imposed on the Master.

(b) Thereafter, ratguards are to be kept in proper place otherwise the Master shall be liable to as many fines as there are ratguards missing.

(c) If any crew member should go down to the pier from a vessel which is under sanitary observation, the vessel will be penalised with a 5,000 pesos fine.

(d) Vessels proceeding from countries affected by animal diseases which do not exist in Cuba, are subject to full disinfection at the time when the sanitary veterinarian authorities of the Republic of Cuba deem it convenient.

Phytosanitary Regulations

(a) The Master has to deliver to the Phytosanitary inspectors the following documents:
– Phytosanitary Certificate of all vegetable origin or regulated cargo carried by the vessel.
– Fumigation Certificate, if said cargo was fumigated before arriving at Cuban port.
– Copy of cargo plan.
– Copy of Provisions List.

(b) It is forbidden to withdraw from the vessel while at Cuban ports, products of vegetable origin (fruits, fresh vegetables, plants, parts of plants and seeds), soil or organic materials, origin, of micro-organisms, insects, acarus and threadworm in any state of their biological cycle.

(c) The waste of vegetable origin must be hermetically packed in plastic bags and treated as instructed for garbage in Article 7 here below.

Veterinary Sanitary Control – Complete sealing of ships' refrigerators which contain dangerous victuals.

(a) It is hereby instructed that the refrigerators of Cuban and foreign flag vessels which contain in their victuals meats and cattle products originating in countries affected by bovine pest, vesicular stomatitis, African pork pest and other animal diseases not existent in Cuba, must be completely sealed.

Exempt from the above are cattle products industrially canned, salted butter and cured cheese destined to be consumed only aboard ship.

(b) Only ships' refrigerators which contain victuals of animal origin shall be sealed. Compartments where vegetables and other victuals are kept, will not be sealed.

(c) Ships' refrigerators will be opened under Veterinary supervision. *(U.S. $5.00 each time).*

(d) Meats and other animal products purchased in Cuba must be so placed in the refrigerator that they will not enter into contact with similar products purchased abroad.

(e) Sealing of ships' refrigerators will apply to vessels at berth as well as to vessels at anchorage.

(f) Sealing must be performed in an effective manner. To this end, it is necessary to verify that it was done correctly; a sufficient enough depression of the seal which makes it impossible to withdraw the wire.

(g) It is forbidden to have on board live animals for consumption and to fish using baits of animal origin.

(h) Any pets carried by the ship will be placed in quarantine aboard.

(i) For the breaking of the seal or the violation of any of these dispositions the Master will be brought to Court where according to the Law the corresponding penalty or fine will be imposed.

3. Labour Regulations

In accordance with Resolution of the Cuban Labour Ministry, it is forbidden for vessels' crews, during their stay in port, to do work that should be performed by port labourers, such as loading or discharging, rigging booms, driving winches, opening and closing hatches, (except MacGregor type or any other type of special mechanical system), laying wood or paper dunnage, construction of stalls, etc. Therefore you should apply to us in writing, so that arrangements can be made for the necessary port labour to perform such work.

Please note that if any of the work described were to be done by ship's crew, port labourers must be paid as if they had actually performed the services.

4. Bunkers

Should your vessel be bunkering at this port, it is necessary that we be notified in advance, so that appropriate arrangements can be made not only with the local suppliers, but also to comply with government regulations, which provide that funds to cover the cost of bunkers be received from the Owners *or Charterers* prior to delivery. Since this procedure takes a few days, it is suggested that any request for bunkers be made with due anticipation.

When delivery of bunkers is to be made in the port of Havana, the order or requisition must be sent to the suppliers at least 2 days in advance of the desired date of delivery, and 3 days in advance when delivery is to be made at a port other than Havana.

5. Galley Oil or Coal

The above requirements for bunkers do not, of course, apply to galley oil or coal as this item, if needed, is to be purchased directly by the ship from a shipchandler.

6. Cleaning

In accordance with Port Regulations, this work must be performed by local shore labour. The cleaning work done by shore labour is limited to only the sweeping of cargo compartments.

7. Garbage: *(Vessel needed 10 drums).*

Port and Customs Regulations forbid the throwing of garbage on to the pier or into the sea while the vessel is within the harbour limits.

According to Sanitary Regulations vessels must arrive at each Cuban port of call with the garbage deposits or tanks empty.

Garbage cannot be thrown into the sea inside Cuban territorial waters. While in port the garbage must be hermetically packed in plastic bags and kept in drums with fitted covers.

Drums, in clean and hygienic condition, are to be placed in a properly selected place in the vessel until the bags are delivered to the garbage collector.

The services of the garbage collector must be requested by the Master, who can apply for it through the Agent.

For the non compliance of this regulation the ship will be subject to a fine.

8. Cash to Master *(Owners must remit cash in advance).*

Cash advances authorised by Owners or Charterers will be supplied to the Master upon request. Such request is to be made during office hours and the money will be delivered at the Agent's place of business.

Upon completion of loading and/or discharging operations, any unused funds of Cuban Currency must be handed over to the Local Agent; in other words, Cuban Currency left over from a cash advance drawn at one port cannot be returned or used at any other port.

However, further cash advances may be requested at the next Cuban port of call.

9. Damage to Cargo

As you undoubtedly realise, it is necessary to establish with the utmost degree of accuracy possible with whom the responsibility for damage to cargo lies, whether for vessel's or stevedores' account.

To ascertain this, the Terminals in Cuba employ Damage Inspectors to take note of all cargo that is found on board in damaged condition prior to its discharge from the ship, and the Master or Chief Officer is asked to sign an acknowledgement. Therefore, we suggest that in order to avoid unnecessary discrepancies between the vessel and the Terminal, and to properly protect the Owners' interests, you please instruct your cargo officer to coordinate his work in this connection with that of the Terminal Damage Inspector. Upon completion of discharge operations, the Terminal will submit to the Master for signature the relevant Survey Report.

Should you Note Protest owing to bad weather on the voyage or any other reason whatsoever, since the note must be presented to Harbour Master within 24 hours after ships' arrival, it must be handed to the Agent with time enough to prepare translation. One copy of the Note of Protest should be delivered to the Agent for record purposes.

10. Stevedore Damage to the Ship *(Stevedores usually repair damage).*

Any damage caused to the vessel during the loading and/or discharging operation, should be reported immediately to the Head Discharging Foreman on the Terminal, followed by a written notice to us in duplicate. Such notice should be made out within 24 hours following the incident, otherwise the Terminal will not accept any claim.

11. Repairs for Vessel's Account

Any repair work to be done for vessel's account must be requested in writing, sufficiently in advance of vessel's estimated departure in order to obtain from the repair shop the budget for the work, in the event of course, that the job can be done locally.

12. Engine Repairs or Engine Overhaul while in port

In the event vessel requires engine repairs or an engine overhaul (usually performed by the ship's crew) even if berthed at a pier or dock in port, it is necessary that the Master so informs his Agents before undertaking such work in order that his Agents may, in turn, notify all parties concerned, and obtain necessary authorisation from Harbour Master.

Read Charter Party/"Baltime" usually 24 hours' notice for engine cleaning.

The reason for this is that it may be necessary to shift the vessel from one berth to another, for any reason whatsoever, and it is necessary to know in advance if the vessel can move with her own engines or whether tugboats will be required for the movement. In the latter case it is of course understood that the cost of tugboats will be for vessel's account.

13. Hull Repairs and Maintenance

It is forbidden to perform any repairs or welding work in the hull, without obtaining, through the Agent, the previous authorisation of the Maritime Safety Office.

14. Redelivery

If your vessel is to be re-delivered at this port, this should be made known to us as soon as possible after arrival here, for although we may be aware of this fact, there is a possibility we might be lacking the necessary details concerning the terms of re-delivery.

15. Lowering Boats *(Apply in writing).*

Port Regulations prohibit the lowering of boats except for fire drill or to do maintenance work of the ship (painting, etc.). For either of these purposes, a permit is required from the Harbour Master, and the crews of such boats are not allowed to land on any pier or board any vessel in the harbour. Please be informed that our Ministry of the Interior has issued the following instructions to be strictly observed by the Masters of all foreign vessels during their stay at Cuban ports:

(a) When a vessel is carrying out paint work or similar tasks while in port, at the end of the day's work the craft or boat used to perform the work should under no circumstances remain in the water, but must be hoisted aboard to be again lowered the following day or whenever the work is resumed.

16. Radio Communications

Vessels within harbour limits are not allowed to transmit messages by radio.

17. Port Expenses

The bills covering port expenses will be submitted for your approval and signature, prior to vessel's departure from this port, regardless of the fact that such expenses might be for Owner's or Charterer's account, as this can subsequently be easily determined by examination of the Charter Party. However, if we are to obtain reimbursement for the amounts expended to cover port expenses, it is necessary that your approval and signature be secured.

Mark Owner's account or Charterers' account.

18. Stowaways

(a) In the event of vessels arriving from foreign countries, carrying stowaways or persons without documents, the Master or the Shipowner must advise the Immigration Control of the port immediately, who in turn, will advise them of the respective regulations in force.

(b) Masters are kindly requested to instruct all ships' officers that every possible precaution should be taken to prevent stowaways.

(c) Whenever the Master of a vessel finds a stowaway on board, either in port or outside the port's limits but within Cuban territorial waters, he is under obligation to deliver same to the Port Unit and Harbour Master's Authorities of the Frontier Guard Troops. If the stowaway is found outside the port, the Master must report this by radio so that the stowaway may be picked up by Port Unit and Harbour Master's Authorities of the Frontier Guard Troops.

(d) At no time are the Masters of vessels allowed to lower rope ladders or ropes on the vessel opposite the dock where the ship is berthed.

19. Paper and Dunnage: (very important).

In the event that your vessel is scheduled to load sugar in bags, citrus fruits, cement, etc., in Cuba and should you require paper and/or wood dunnage, you must make known to us your needs in writing as soon as possible, bearing in mind that the suppliers require at least five (5) days for delivery.

20. Loading Sugar

Whenever your vessel is assigned to load sugar the following precautions are to be taken:

(a) Cleaning and Dunnaging of Hatches: You must be extremely careful to have the vessel's hatches thoroughly dry, clean and without odour, as well as properly dunnaged to the satisfaction of the shippers, before starting loading.

(b) Cleaning Holds: In order to avoid damage to the sugar cargo during the voyage, please make proper arrangements for the closing of holds before starting loading in 'tweendecks.

(c) Tally: With respect to the dispute that occasionally arises between the vessel and the shippers during the course of loading sugar shipments regarding the number of bags delivered on board, we wish to inform you that the only document with official validity is the tally sheet prepared by the shore tallyman assigned to each loading hatch, and that if you wish to verify the accuracy of said tallying you could hire a tallyman's service, through the Agency, in those ports where we have this service available, to count the cargo jointly with the shore tallyman, as this is the only possible way of avoiding discrepancies in the checking of the bags actually delivered on board.

Consequently, we request that you please keep the above in mind, as this will tend to reduce if not completely eliminate, the problems which are now being confronted.

21. Agency Office Hours

We list hereunder our office hours:

From Monday to Friday: 0800 to 1200, 1300 to 1700.

Saturday: 0800 to 1200.

Our representatives will call on the ship as regularly as possible to discuss with the Master any matter or problem he may have in connection with the operations of his vessel and to deliver the crew's mail; however, such calls are contingent upon the volume of work, for which reason we suggest that the Master calls at our office when any matter arises which requires immediate attention.

22. VHF Communication System

The VHF (150 MHz) communication system is officially established between most of our Agencies and ships in port or close to port. Normally, service will be provided during the Agency's regular office hours only, but this work schedule will be expanded in the near future, as is now at our Havana Agency, where service is granted 24 hours a day.

Havana Pilot Channel 16. Agent's Channel 12.

23. Medical and Dental Services

Any man requiring medical or dental attention should be sent to our office whenever possible, with a letter from Master containing full name and rank, at 0800 or 1300 hrs. from Monday to Friday, and we will see to it that he is promptly sent in a car to the hospital and back to the ship afterwards.

In the event of an accident or serious illness, please contact Mambisa Agency on the telephone, and an ambulance will be sent immediately to transport the man to the hospital.

24. Safety Measures

(a) Vessels are obliged to have on-board the manoeuvre and safety elements indicated in the International rules and regulations. Any vessel lacking or having in bad condition any of these elements (defective derricks, lack of electricity, etc.) will not be brought to pier and if berthed will be removed at vessel's expense.

(b) The Master must remove anything protruding from the vessel, like boats, anchors, booms, etc., or overhanging, like tackles and riggings whenever they constitute a risk or danger for the workers, port installations, other vessels, etc., or whenever they interfere with the operations.

25. Other Regulations

(a) Any exchange of provisions, films, spare parts or any kind of object, etc., between vessels in any port, requires the previous authorisation of the Customs House. Therefore, in order to apply for this permit, Masters are kindly requested to give a letter to the Agent detailing all articles that are to be transferred.

(b) It is forbidden, unless previously authorised by Customs House:
  to bring ashore any article or merchandise.
  to allow any boat, launch, tugboat or any other type of craft, to approach to the vessel at a distance of less than 25 m. except for the purpose of transferring passengers or to perform any service duly authorised.
  to lower ladders on any side of the vessel.

(c) All provisions, belongings and spare parts not declared in the corresponding documents, or found on board in excess of those declared, will be confiscated. This is valid also for the commercial stores of passenger vessels.

(d) Any mistake in the manifest must be amended within 48 hours after arrival of the vessel.

(e) All articles carried on board and destined for Cuban territory, must be declared in the cargo manifest or in the complementary documents.

1. Crew Regulations (Important Notice to Masters)

(a) The Customs Authorities have put into effect new Regulations which the Masters of all vessels arriving at Cuban ports are under obligation to observe. The regulations in question are as follows:

First: The Master must advise vessel's ETA at least 24 hours in advance and is obliged to deliver to the Customs Authorities at the port of arrival the complementary documents to the Cargo and Passenger Manifest, which comprise:

(a) Hatch List, Hazardous Cargo List, Stowage Plan, Provisions, Accessories and Spare Parts List, Narcotics List (crew's usage). Firearms List and Clearance Certificate (from previous Cuban port). Ship's Register must be exhibited.

(b) List of crew belongings including objects, property of each crew member which he maintains on board for his use, such as, for instance, electric shaving machines, watches, radios, soaps, etc. *(4 copies required at every port – Declare everything in personal possession).* See "Shipmaster's Report".

(c) Detailed list of all articles transported by crew members free of charge, including those which are for his use on board, or that may be destined to other persons (men, women or children), such as for instance perfume, umbrellas, dresses, ladies stockings and lingerie, cloth to make dresses, etc. *(4 copies every port – declare everything and place in bond.)*

(d) Foreign currency whether convertible or not, must be declared on a crew list. *(4 copies required every port – placed in ship's safe).*

Narcotics List – 4 copies morphine only. Provisions List – not listed but requested.

(e) Upon vessel's arrival the Master will be provided with money control cards for each crew member which must be carried by them when going ashore and shown to Custom House Inspector whenever requested.

(f) Each crew member must declare the articles referred to in paragraphs (b), (c) and (d) immediately upon vessel's arrival, since Harbour Officers may search the vessel at any time they should deem convenient.

Second: Each crew member may keep in his cabin up to 200 cigarettes and a bottle of spirits.

Third: The importation into, and the exportation from the Republic of Cuba of Cuban currency is forbidden, and no crew member may have in his possession any amount in excess of that delivered to him by Master from the cash advanced by the agency. *(Collected and sealed in safe).*

Fourth: Each crew member is allowed to have in his cabin, only those articles which are for his use on board. Any article in excess (more than 1 radio, 1 shaver, etc.) should be kept in the bond store.

Fifth: Any article not declared, or possessed by the crew member in excess of the amount allowed, also Cuban and foreign currency not properly accounted for, will be confiscated and should circumstances warrant, the courts of law will be informed, the latter having the right to impose penalties, or fines, depending on the value of the objects found in the crew member's possession. Immediately following the arrival of the vessel, the Master is under obligation to make these regulations known to each and every crew member, as the Customs Authorities will consider that the Master and the crew have been put on notice as to what is herein provided at the moment the vessel has been cleared through Customs, insofar as concerns any violation of the above referred to regulations.

Masters are likewise required to provide a place or space sufficiently ample to deposit the articles transported by the crew free of charge or, in other words, those articles referred to in paragraph (c) above.

Sixth:

(a) Crew members are not allowed to buy personal effects on shore, except in the sailors' or tourists' shops and the articles so obtained can not be sold to any other person.

(b) Except for the Pilots and the Public Health Officials, no other person can go on board and no crew member or passenger of vessels arriving at Cuban ports from abroad is allowed to disembark until the vessel has been cleared by the Immigration and Customs Authorities.

(c) Crew members, including Officers and Master, in addition to their standing Passports or Seaman's Books, must be provided with immigration passes (landing cards) to go ashore.

(d) Depending upon the characteristics and circumstances of the different ports there might be certain limitations in the hours the crew may remain ashore. Port Authorities, through the Agent will advise the Master accordingly.

(e) Shore passes are confined to the city limits of the port where the ship is lying and whenever a crew member requires to move away from the said area, the corresponding permit must be obtained from the immigration port authorities through the agent. Each territorial infringement is subject to a fine.

(f) Upon arrival at Cuban port of any vessel proceeding from foreign country, the Immigration Authorities will deliver to Master the Entrance Certificate which is valid for all Cuban ports and will be under custody and preservation of the Master until final sailing.

(g) If a vessel enters into or sails from any Cuban port without having fulfilled all requisites or procedures of clearance and inspection of the Immigration Authorities it will be subject to a fine.

(h) To take away or to violate the seals or straps fixed by the Customs Authorities means vessel will be subject to sanction or fine.

2. Sanitary Regulations

(a) Following docking, crew members are not allowed to go down to the pier to fix the ratguards or the gangway until the Sanitary Inspection (Free Pratique) has been completed and for non fulfilment of this regulation a fine of 2,000 pesos will be imposed on the Master.

(b) Thereafter, ratguards are to be kept in proper place otherwise the Master shall be liable to as many fines as there are ratguards missing.

(c) If any crew member should go down to the pier from a vessel which is under sanitary observation, the vessel will be penalised with a 5,000 pesos fine.

(d) Vessels proceeding from countries affected by animal diseases which do not exist in Cuba, are subject to full disinfection at the time when the sanitary veterinarian authorities of the Republic of Cuba deem it convenient.

Phytosanitary Regulations

(a) The Master has to deliver to the Phytosanitary inspectors the following documents:

– Phytosanitary Certificate of all vegetable origin or regulated cargo carried by the vessel.

– Fumigation Certificate, if said cargo was fumigated before arriving at Cuban port.

– Copy of cargo plan.

– Copy of Provisions List.

(b) It is forbidden to withdraw from the vessel while at Cuban ports, products of vegetable origin (fruits, fresh vegetables, plants, parts of plants and seeds), soil or organic materials, origin, of micro-organisms, insects, acarus and threadworm in any state of their biological cycle.

(c) The waste of vegetable origin must be hermetically packed in plastic bags and treated as instructed for garbage in Article 7 here below.

Veterinary Sanitary Control – Complete sealing of ships' refrigerators which contain dangerous victuals.

(a) It is hereby instructed that the refrigerators of Cuban and foreign flag vessels which contain in their victuals meats and cattle products originating in countries affected by bovine pest, vesicular stomatitis, African pork pest and other animal diseases not existent in Cuba, must be completely sealed.

Exempt from the above are cattle products industrially canned, salted butter and cured cheese destined to be consumed only aboard ship.

(b) Only ships' refrigerators which contain victuals of animal origin shall be sealed. Compartments where vegetables and other victuals are kept, will not be sealed.

(c) Ships' refrigerators will be opened under Veterinary supervision. *(U.S. $5.00 each time).*

(d) Meats and other animal products purchased in Cuba must be so placed in the refrigerator that they will not enter into contact with similar products purchased abroad.

(e) Sealing of ships' refrigerators will apply to vessels at berth as well as to vessels at anchorage.

(f) Sealing must be performed in an effective manner. To this end, it is necessary to verify that it was done correctly; a sufficient enough depression of the seal which makes it impossible to withdraw the wire.

(g) It is forbidden to have on board live animals for consumption and to fish using baits of animal origin.

(h) Any pets carried by the ship will be placed in quarantine aboard.

(i) For the breaking of the seal or the violation of any of these dispositions the Master will be brought to Court where according to the Law the corresponding penalty or fine will be imposed.

3. Labour Regulations

In accordance with Resolution of the Cuban Labour Ministry, it is forbidden for vessels' crews, during their stay in port, to do work that should be performed by port labourers, such as loading or discharging, rigging booms, driving winches, opening and closing hatches, (except MacGregor type or any other type of special mechanical system), laying wood or paper dunnage, construction of stalls, etc. Therefore you should apply to us in writing, so that arrangements can be made for the necessary port labour to perform such work.

Please note that if any of the work described were to be done by ship's crew, port labourers must be paid as if they had actually performed the services.

4. Bunkers

Should your vessel be bunkering at this port, it is necessary that we be notified in advance, so that appropriate arrangements can be made not only with the local suppliers, but also to comply with government regulations, which provide that funds to cover the cost of bunkers be received from the Owners *or Charterers* prior to delivery. Since this procedure takes a few days, it is suggested that any request for bunkers be made with due anticipation.

When delivery of bunkers is to be made in the port of Havana, the order or requisition must be sent to the suppliers at least 2 days in advance of the desired date of delivery, and 3 days in advance when delivery is to be made at a port other than Havana.

5. Galley Oil or Coal

The above requirements for bunkers do not, of course, apply to galley oil or coal as this item, if needed, is to be purchased directly by the ship from a shipchandler.

6. Cleaning

In accordance with Port Regulations, this work must be performed by local shore labour. The cleaning work done by shore labour is limited to only the sweeping of cargo compartments.

7. Garbage: *(Vessel needed 10 drums).*

Port and Customs Regulations forbid the throwing of garbage on to the pier or into the sea while the vessel is within the harbour limits.

According to Sanitary Regulations vessels must arrive at each Cuban port of call with the garbage deposits or tanks empty.

Garbage cannot be thrown into the sea inside Cuban territorial waters.

While in port the garbage must be hermetically packed in plastic bags and kept in drums with fitted covers.

Drums, in clean and hygienic condition, are to be placed in a properly selected place in the vessel until the bags are delivered to the garbage collector.

The services of the garbage collector must be requested by the Master, who can apply for it through the Agent.

For the non compliance of this regulation the ship will be subject to a fine.

8. Cash to Master *(Owners must remit cash in advance).*

Cash advances authorised by Owners or Charterers will be supplied to the Master upon request. Such request is to be made during office hours and the money will be delivered at the Agent's place of business.

Upon completion of loading and/or discharging operations, any unused funds of Cuban Currency must be handed over to the Local Agent; in other words, Cuban Currency left over from a cash advance drawn at one port cannot be returned or used at any other port.

However, further cash advances may be requested at the next Cuban port of call.

9. Damage to Cargo

As you undoubtedly realise, it is necessary to establish with the utmost degree of accuracy possible with whom the responsibility for damage to cargo lies, whether for vessel's or stevedores' account.

To ascertain this, the Terminals in Cuba employ Damage Inspectors to take note of all cargo that is found on board in damaged condition prior to its discharge from the ship, and the Master or Chief Officer is asked to sign an acknowledgement. Therefore, we suggest that in order to avoid unnecessary discrepancies between the vessel and the Terminal, and to properly protect the Owners' interests, you please instruct your cargo officer to coordinate his work in this connection with that of the Terminal Damage Inspector. Upon completion of discharge operations, the Terminal will submit to the Master for signature the relevant Survey Report.

Should you Note Protest owing to bad weather on the voyage or any other reason whatsoever, since the note must be presented to Harbour Master within 24 hours after ships' arrival, it must be handed to the Agent with time enough to prepare translation. One copy of the Note of Protest should be delivered to the Agent for record purposes.

10. Stevedore Damage to the Ship *(Stevedores usually repair damage).*

Any damage caused to the vessel during the loading and/or discharging operation, should be reported immediately to the Head Discharging Foreman on the Terminal, followed by a written notice to us in duplicate. Such notice should be made out within 24 hours following the incident, otherwise the Terminal will not accept any claim.

11. Repairs for Vessel's Account

Any repair work to be done for vessel's account must be requested in writing, sufficiently in advance of vessel's estimated departure in order to obtain from the repair shop the budget for the work, in the event of course, that the job can be done locally.

12. Engine Repairs or Engine Overhaul while in port

In the event vessel requires engine repairs or an engine overhaul (usually performed by the ship's crew) even if berthed at a pier or dock in port, it is necessary that the Master so informs his Agents before undertaking such work in order that his Agents may, in turn, notify all parties concerned, and obtain necessary authorisation from Harbour Master.

Read Charter Party/"Baltime" usually 24 hours' notice for engine cleaning.

The reason for this is that it may be necessary to shift the vessel from one berth to another, for any reason whatsoever, and it is necessary to know in advance if the vessel can move with her own engines or whether tugboats will be required for the movement. In the latter case it is of course understood that the cost of tugboats will be for vessel's account.

13. Hull Repairs and Maintenance

It is forbidden to perform any repairs or welding work in the hull, without obtaining, through the Agent, the previous authorisation of the Maritime Safety Office.

14. Redelivery

If your vessel is to be re-delivered at this port, this should be made known to us as soon as possible after arrival here, for although we may be aware of this fact, there is a possibility we might be lacking the necessary details concerning the terms of re-delivery.

15. Lowering Boats *(Apply in writing).*

Port Regulations prohibit the lowering of boats except for fire drill or to do maintenance work of the ship (painting, etc.). For either of these purposes, a permit is required from the Harbour Master, and the crews of such boats are not allowed to land on any pier or board any vessel in the harbour. Please be informed that our Ministry of the Interior has issued the following instructions to be strictly observed by the Masters of all foreign vessels during their stay at Cuban ports:

(a) When a vessel is carrying out paint work or similar tasks while in port, at the end of the day's work the craft or boat used to perform the work should under no circumstances remain in the water, but must be hoisted aboard to be again lowered the following day or whenever the work is resumed.

16. Radio Communications

Vessels within harbour limits are not allowed to transmit messages by radio.

17. Port Expenses

The bills covering port expenses will be submitted for your approval and signature, prior to vessel's departure from this port, regardless of the fact that such expenses might be for Owner's or Charterer's account, as this can subsequently be easily determined by examination of the Charter Party. However, if we are to obtain reimbursement for the amounts expended to cover port expenses, it is necessary that your approval and signature be secured.

Mark Owner's account or Charterers' account.

18. Stowaways

(a) In the event of vessels arriving from foreign countries, carrying stowaways or persons without documents, the Master or the Shipowner must advise the Immigration Control of the port immediately, who in turn, will advise them of the respective regulations in force.

(b) Masters are kindly requested to instruct all ships' officers that every possible precaution should be taken to prevent stowaways.

(c) Whenever the Master of a vessel finds a stowaway on board, either in port or outside the port's limits but within Cuban territorial waters, he is under obligation to deliver same to the Port Unit and Harbour Master's Authorities of the Frontier Guard Troops. If the stowaway is found outside the port, the Master must report this by radio so that the stowaway may be picked up by Port Unit and Harbour Master's Authorities of the Frontier Guard Troops.

(d) At no time are the Masters of vessels allowed to lower rope ladders or ropes on the vessel opposite the dock where the ship is berthed.

19. Paper and Dunnage: (very important).

In the event that your vessel is scheduled to load sugar in bags, citrus fruits, cement, etc., in Cuba and should you require paper and/or wood dunnage, you must make known to us your needs in writing as soon as possible, bearing in mind that the suppliers require at least five (5) days for delivery.

20. Loading Sugar

Whenever your vessel is assigned to load sugar the following precautions are to be taken:

(a) Cleaning and Dunnaging of Hatches: You must be extremely careful to have the vessel's hatches thoroughly dry, clean and without odour, as well as properly dunnaged to the satisfaction of the shippers, before starting loading.

(b) Cleaning Holds: In order to avoid damage to the sugar cargo during the voyage, please make proper arrangements for the closing of holds before starting loading in 'tweendecks.

(c) Tally: With respect to the dispute that occasionally arises between the vessel and the shippers during the course of loading sugar shipments regarding the number of bags delivered on board, we wish to inform you that the only document with official validity is the tally sheet prepared by the shore tallyman assigned to each loading hatch, and that if you wish to verify the accuracy of said tallying you could hire a tallyman's service, through the Agency, in those ports where we have this service available, to count the cargo jointly with the shore tallyman, as this is the only possible way of avoiding discrepancies in the checking of the bags actually delivered on board.

Consequently, we request that you please keep the above in mind, as this will tend to reduce if not completely eliminate, the problems which are now being confronted.

21. Agency Office Hours

We list hereunder our office hours:

From Monday to Friday: 0800 to 1200, 1300 to 1700.

Saturday: 0800 to 1200.

Our representatives will call on the ship as regularly as possible to discuss with the Master any matter or problem he may have in connection with the operations of his vessel and to deliver the crew's mail; however, such calls are contingent upon the volume of work, for which reason we suggest that the Master calls at our office when any matter arises which requires immediate attention.

22. VHF Communication System

The VHF (150 MHz) communication system is officially established between most of our Agencies and ships in port or close to port. Normally, service will be provided during the Agency's regular office hours only, but this work schedule will be expanded in the near future, as is now at our Havana Agency, where service is granted 24 hours a day.

Havana Pilot Channel 16. Agent's Channel 12.

23. Medical and Dental Services

Any man requiring medical or dental attention should be sent to our office whenever possible, with a letter from Master containing full name and rank, at 0800 or 1300 hrs. from Monday to Friday, and we will see to it that he is promptly sent in a car to the hospital and back to the ship afterwards.

In the event of an accident or serious illness, please contact Mambisa Agency on the telephone, and an ambulance will be sent immediately to transport the man to the hospital.

24. Safety Measures

(a) Vessels are obliged to have on-board the manoeuvre and safety elements indicated in the International rules and regulations. Any vessel lacking or having in bad condition any of these elements (defective derricks, lack of electricity, etc.) will not be brought to pier and if berthed will be removed at vessel's expense.

(b) The Master must remove anything protruding from the vessel, like boats, anchors, booms, etc., or overhanging, like tackles and riggings whenever they constitute a risk or danger for the workers, port installations, other vessels, etc., or whenever they interfere with the operations.

25. Other Regulations

(a) Any exchange of provisions, films, spare parts or any kind of object, etc., between vessels in any port, requires the previous authorisation of the Customs House. Therefore, in order to apply for this permit, Masters are kindly requested to give a letter to the Agent detailing all articles that are to be transferred.

(b) It is forbidden, unless previously authorised by Customs House:
  to bring ashore any article or merchandise.
  to allow any boat, launch, tugboat or any other type of craft, to approach to the vessel at a distance of less than 25 m. except for the purpose of transferring passengers or to perform any service duly authorised.
  to lower ladders on any side of the vessel.

(c) All provisions, belongings and spare parts not declared in the corresponding documents, or found on board in excess of those declared, will be confiscated. This is valid also for the commercial stores of passenger vessels.

(d) Any mistake in the manifest must be amended within 48 hours after arrival of the vessel.

(e) All articles carried on board and destined for Cuban territory, must be declared in the cargo manifest or in the complementary documents.

26. Important Notice

Pollution: Very strict regulations are in force and Port Authorities keep a close watch on this matter. It is absolutely forbidden to pump or throw out of the ship, oil, dirty water, wastes of animal origin, dunnage wood, or any kind of Liquid or substance into the sea, whether inside or outside the ports and any infringement will bring the Master to Court.

SHIPMASTER'S REPORT: April 1989.

1. The radio room is no longer sealed.
2. The restrictions on shore leave no longer exist. Crew may go ashore day and night.
3. Foreign currency still has to be declared but may be spent without restriction.
4. It is not recommended that mail be forwarded to vessels.

Other rules and regulations are still as outlined in "Port Regulations".

FROM INFORMATION BOOKLET COMPILED BY MAMBISA AGENCIES

USE OF SOUND SIGNALS IN PORT: It is prohibited to use sound signals except those internationally known for safe navigation, fire or emergency.

DRY DOCK: There is a dry dock at the port of Havana with berthing capacity of 440 ft. length and 91 ft. width which can accommodate vessels up to 23 ft. draft.

SURVEYORS: Following surveyors are established in Cuba:

Cuban Ship's Register, Cuban Maritime Regulation Surveyors, Bureau Veritas, Lloyd's Register, German Lloyd and Russian Ship's Register.

Above listed surveyors should be contacted through the Consignataria Mambisa main office.

EIGHT HOURS DAILY WORK: We wish to call attention to the fact that although the working periods observed at the various Cuban Ports vary considerably, as for example, the port of Jucaro where the period is from 0600 – 1000 hrs., 1200 – 1600 hrs.; Caibarien 0700 – 1100 hrs., 1200 – 1600 hrs.; Havana 0700 – 1300 hrs., 1300 – 1900 hrs. etc., and others from 0700 – 1100 hrs., 1300 – 1700 hrs.

Labour Legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

HOLIDAYS:

National Anniversaries	*Holidays*
January 1st.	July 25th.
May 1st.	July 27th.
July 26th.	Sundays
October 10th.	

REPATRIATION: There are good facilities and repatriation can be arranged through Mambisa Agency.

SHIPMASTER'S COMMENTS: Also see "Shipmaster's Report" for Nuevitas dated February 1984.

Fresh Water: Always take full fresh water. Water barges available at Havana and Santiago. No fresh water at Jucaro or Boca Grande.

Documents: Sample Crew Manifest to avoid confiscation: 2 Radios, packet of paints, tape recorder (Akai), gloves, speakers, star plotter, cassette tapes, set of ship plans, earphones, plastic mac, 3 prs. sunglasses, dress uniform, calculator, battle dress uniform, matchstick model ship, brown suit, plastic battleship model, blue coat, bridge coat, 10 packs glue, grey trousers, 1 pk. razor blades, 3 khaki shirts, 1 Fernox medicine, 1 Savlon cream, 3 khaki shorts, 3 balsa cement, 5 uniform shirts, 1 stop watch, 1 briefcase, 2 coloured shirts, 1 tee shirt, 1 knapsack, 6 uniform white shirts, 1 photographic bag, 3 white shorts, assorted films, 4 ties, 2 cravats, 1 brown cardigan, 1 pullover, 1 dressing gown, 1 pair longjohns, 1 pr. sandals, 2 alarm clocks, 1 sextant, 4 watches, 1 boiler suit, 3 plastic trays, 2 beakers, 1 belt, 2 toy engines, cellotape, 14 wagons, gold braid, 8 points, keys, 8 curved rails, tape recorder cords, 4 vests, swimming trunks, 5 pants, 1 blue socks, 5 brown socks, 6 white socks, 1 cap cover, 1 pr. pyjamas, 1 silk scarf, 1 pr. black shoes, 1 pr. brown shoes, toilet articles, 1 copy stand, 1 enlarger, assorted chemicals, powersaw, typewriter, calculator, adding machine, 4 packs tea, 4 cameras, 1 lens, 1 light meter, 3M duplicator, binoculars, Sanyo tape cassette, assorted perfumes and curios. 1 kitbag, 1 flip-flops.

200 cigarettes, 1 spirits, number cans of beer, number of bottles of wine.

If in doubt – put it in a suitcase and lock it in the bonded store!

SHIPMASTER'S REPORT: December 1983.

All foreign currencies must be declared and may be used freely ashore.

A landing pass and foreign currency pass is issued to each member of the crew and they are to be accompanied by Seaman's ID Card or Discharge Book when going ashore.

A cabin is to be set aside and marked Transit Room. Would advise that anything and everything that is not required during your stay in Cuba be put in a suitcase and lodged in the Transit Room which is sealed on arrival and then left alone. All cameras must be placed under seal on arrival (i.e. in the Transit Room). Permission is granted to use them in Havana but was not allowed in Nuevitas.

A strict Customs search usually follows arrival with every cabin and compartment thoroughly searched. This vessel was not searched by Customs at Havana but was at Nuevitas.

Prior to departure from each Cuban port the vessel is searched by Harbour Master Guards.

On the whole relationship between ship and Authorities was good. The Agents proved very helpful and telex communication was satisfactory.

Only meats of origin U.S.A., Australia and New Zealand are permitted to be used whilst vessel is at a Cuban port.

The Port Authorities are very strict regarding rat guards which must be checked at frequent intervals, also garbage which must be placed in sealed bags ready for collection by shore labour.

SHIP'S OFFICER'S REPORT: November 1991.

Documents:

14 copies Crew List.
4 copies Provisions List (Cuban Form).
3 copies Personal Effects List (Cuban Form).
1 copy Vaccination List.
1 copy Maritime Declaration of Health.
8 copies Passenger List.

Officials: Customs, Immigration, Port Doctor, Harbour Master, Police Security and Rummaging gang normally board on arrival.

Customs/Rummaging gang check all cabins and offices, etc. All the drawers, closets, wardrobes and fridges are checked thoroughly. A drug squad with dogs also boards and checks for drugs.

It is advisable to keep all new clothes, gift articles, cameras, electronic equipment and magazines in a locker which is sealed by Customs. It is also advisable to keep a bare minimum of personal items in the cabin, remainder should be put in a suitcase and locked in locker. All foreign currency should be properly counted and declared on Personal Effects List. It is advisable to keep money in Master's safe.

U.S. Dollars can be taken ashore but all have to be shown at gate and entered on money card. Any items not declared are liable to confiscation. All cabins to be kept locked at all times. All passports are stamped on arrival and prior to departure.

Repatriation: Crew changes are possible but should be avoided if possible, due to customs/immigration problems. Flights from Havana to Madrid by Iberia every alternate day and Havana to Canada every day.

Medical: Facilities available, arranged through "Mambisa Havana". Agent insists on cash payments in U.S. Dollars for launch service, postal charges, doctors charges, etc.

General: U.S. Dollars can be freely used ashore. Shopping can be done in seaman's club near pier (Havana) or in Havana Libre (hotel).

Cigars, whiskey and beer are very cheap.

Customs/immigration board again prior to departure, all passports stamped and all cabins checked again for stowaways, etc.

Gifts are often requested by authorities while checking cabins.

ANTILLA: 20.50 N. 75.44 W. (See Plan)
(and sub-ports of Felton, Nicaro and Preston)

LOCATION: The Port of Antilla is located on the North side of Nipe Bay, on the North Coast of Cuba: Lat. 20° 50' N., Long. 75° 44' W.

Nipe is the largest bay in Cuba and is considered among the biggest in the world.

Within Nipe Bay there are 3 ports: Felton, Preston and Antilla, Antilla being the head port of a region, and very important because of its natural resources in agriculture, mining, etc., as well as for sugar industries close to the port.

The Antilla Agency of Mambisa attends also at the following ports: Preston, Felton, Nicaro, Banes, Tanamo and Vita.

Nipe Bay is suitable for large vessels with maximum draft up to 22.86 m. and a length of 400 m.

Nipe Anchorage has a draft of 22.86 m.

ENTRANCE TO PORT: Entrance to Nipe Bay is safe and free of risks. Limitations as to length and draft of vessels are only those imposed by the places of operations or ports.

Entrance channel is ample (0.75 miles wide at its head and 0.33 miles at its narrowest point, located South of Pt. Caimanes), having a minimum depth of 45.72 m. up to Saetia Anchorage.

From Saetia up to Antilla piers the distance is 10 miles.

Navigating toward Western Nipe Bay, in the direction of Antilla, after Saetia is past, to the South can be seen: Cayagima Cove, Point Cobos, the mouth of Mayari River and the Port of Preston.

To the North can be seen after departing from Saetia: the town of Ramon, located on high lands at the back of Melilla Cove, Pt. Berraco, Pt. Las Chivas, Honda Cove, Pt. Salinita, Hermenegildo Cove, Pt. Negra, Felipe Cove, Pt. Carbonera and Pt. Salina.

From the latter onward, Antilla's piers channel is navigated, and to the North can be seen Pt. Barrancones, Marbella Cay and finally the town and port of Antilla.

PILOT: *Where Pilot should be taken and distance to place of operation:* The place where Pilots board the vessels nominated to perform operations at Antilla, Preston, Felton, Banes or Nicaro, is located at 1 mile N.E. of Point Mayari, that is in an East/West line from Pt. Mayari lighthouse on the course of the bearings indicated by the port chart.

The exact position where Pilots board vessels is: Lat. 20° 47' 46" N., Long. 75° 32' 15" W.

From this point the distances to the ports are:

	Miles to pier
Antilla	13
Preston	6.5
Felton	5
Nicaro	13
Banes	17
Saetia Anchorage	2.5

Point Mayari Lighthouse consists of a conical/cylindrical steel tower, painted aluminium, 12.19 m. tall and its light is visible up to 10 miles away.

As the Pilot Station is located in Antilla, upon receipt of an ETA message from an incoming vessel, Mambisa Agency immediately informs the Pilots who depart accordingly to Saetia to await the vessel.

When a vessel arrives to Point Mayari, it should contact Mambisa Agency and Pilot by VHF.

ANCHORAGES: Anchorages at Nipe Bay are used only when waiting for berth, or at Saetia, to await favourable tide to enter Banes.

Saetia Anchorage: Located about 1,000 m. West of Pt. Carenero (Saetia).

Limitations: Draft 15 m., Length: 170 m. Swinging area: About 300 m. 7 vessels (170 m. in length) can be accommodated at this anchorage.

The bottom is soft mud but anchors hold well, ships usually anchor with 4 or 5 shackles of chain.

In front of this anchorage is the small town and beach of Saetia.

Usually this anchorage is used by vessels destined for Felton or to await favourable tide to enter the ports of Banes or Nicaro.

La Chiva Anchorage: Located at about 1.25 miles from Pt. Berraco, to the North on the Melilla Heights, the small town of Ramon can be seen.

Limitations: Draft 18 m., Length: 300 m. Swinging area: About 438 m. The anchorage can accommodate one vessel.

The bottom is hard sandy mud with loose stones and anchor holding is good. It is sheltered from the winds by Melilla Heights.

This anchorage is used for similar reasons as Saetia.

Cajimaya Anchorage: Located just in front of the port of Felton.

Limitations: Draft 7.0 m. – 12.0 m., Length up to 170 m. Swinging area: About 300 m.

6 vessels can be accommodated at anchorage.

The bottom is soft mud but anchors hold well.

Sheltered from winds by Saetia mountains, ships usually anchor with 3 or 4 shackles of chain.

This anchorage is used by vessels awaiting berth at Felton.

Pt. Salinas Anchorage: Located about 500 m. S.S.W. of buoy marking Salina Grande Shoal; Antilla Town is about 3 miles to the N.W. and at a similar distance is Preston to the S.S.W.

Limitations: Draft 9.1 m. – 17.0 m., Length: Up to 170 m. Swinging area: About 300 m.

About 9 vessels can be accommodated at this anchorage with the above limitations.

The bottom is soft mud but anchors hold well.

It is not sheltered from winds, being located in a spot where, when there is bad weather, the sea becomes rough.

Usually vessels anchor with 3 shackles of chain.

This anchorage is used by vessels awaiting berth at Antilla.

Preston Anchorage: Located about 1,200 m. N.N.W. of the head of Preston pier.

Limitations: Draft 10.0 m., Length: 170 m. Swinging area: About 300 m.

8 vessels can be accommodated at this anchorage with the above limitations.

The bottom is soft mud but anchors hold well, anchorage is open to the winds.

Usually vessels anchor with 3 shackles of chain, depending on wind force.

This anchorage is used by vessels awaiting berth at Preston.

Corojal Anchorage: Located about 320 m. N.W. from Antilla pier head, just in front of Antilla town.

Limitations: Draft 6.09 m., Length 145 m. Swinging area: 300 m.

Anchorage can accommodate 3 vessels with above limitations.

Bottom is soft mud but anchors hold well.

Anchorage is open to the winds and vessels anchor with 2 shackles of chain, depending on wind force.

This anchorage is used to wait for Port Doctor visit in cases of incoming vessels from foreign countries and also to await berth at Antilla.

There is a launch service to and from all anchorages for crew members, if requested by Master.

Antilla Anchorage No. 2: Located about 700 m. from Antilla pier head.

Limitations: Draft 7.10 m., Length 152 m. Swinging area: About 300 m.

Anchorage can accommodate 1 vessel only.

Bottom is soft mud but anchors hold well.

It is open to the winds and vessels anchor with 3 or 4 shackles of chain. If strong winds do blow, then vessels drop another anchor to reduce the swinging action.

This anchorage has the same use as Corojal Anchorage.

MAX. SIZE: Vessels' maximum official draft and length allowed to enter or sail from Antilla are: Length 186 m., draft 6.71 m.

Tankers having a length of 185.9 m. have called at this port to load molasses.

Entrance to or sailing from Nipe Bay and Antilla can be effected either during day or night-time.

CLEARANCE: All Port Authorities, Port Doctor, Customs, Immigration and Captain of the Port have their offices at Antilla. Vessels may proceed directly to sub-ports without entering Antilla for clearance. Port Authorities clear ships at sub-port when necessary.

Launch service is the preferable means of transportation used by the Port Authorities to the various sub-ports under Antilla jurisdiction.

There are Custom House Delegations at sub-ports of Preston, Nicaro, but no Immigration. The Custom House Delegate at the sub-port of Nicaro also acts as Delegate for the Captain of the Port.

Although there is no Port Doctor Delegate at the sub-ports, the General Hospital Doctors may act as such, if requested, in order to give a quick entry to the ship.

Notwithstanding the above, in those cases when a ship is coming from a Cuban or foreign port, destined to Nicaro, and happens to lose the slack water tide, it will be necessary for the ship to anchor at Saetia (Antilla) and to wait the next tide. In these particular cases the Port Authorities give entry to the ship at Saetia anchorage, and it is not necessary for another Port Authority visit at the sub-port of Nicaro.

RADIO: At Antilla, means of communications are: Telephone, telex and Post Office.

The Antilla Agency is connected to the National Telex System, which is the quickest means of communication.

Vessels proceeding to Cuba can communicate with Mambisa Antilla Agency through "CLA" Havana Radio Station which immediately relays the messages to Antilla by telex.

Masters must send their ETA messages simultaneously on VHF Channel 16 to Mambisa Antilla and Mambisa Havana.

TUGS: Name, *Macabi;* length, 81 ft. 1 in.; width, 24 ft. 0 in.; gross tonnage, 183.53; net tonnage, 86.00; motor, one diesel; h.p., 750; speed, 8.5 knots. Also available is tug "Ruski" of 1,200 h.p.

BERTHING: The 3 berthing spaces of this port have standard gauge railroad tracks.

Each pier is connected with 1 railway which is independent of the others, but with no car outlet at end of piers, consequently, to perform any movement, it is necessary to take out the remaining cars. For that reason, there is no road connecting the piers, and since piers are not paved, trucking operations cannot be performed.

Pier No. 4

North Side: Maximum length vessel allowed 170 m., draft 4.88 m. at base and 6.71 m. at head.

South Side: Maximum length vessel allowed 170 m., draft 6.10 m. at base and 6.71 m. at head.

Both berth places of this port have a standard railroad track for each side, which make it possible for trains to enter with sugar directly alongside ship.

The construction of this pier is concrete, that is the platform and the piling. It is protected by hard wood fenders and has a fixed red light at the S.W. end.

Each pier is connected with one railway which is independent of the other, but with no car outlet at end of piers, consequently, to perform any movement, it its necessary to take out the remaining cars. For that reason, there is no road connecting the piers, and since piers are not paved, trucking operations can not be performed.

Operations which are performed by this pier, are loading of bagged raw sugar, molasses and discharge and general cargo.

Coast Pier: Length 136 m., draft 6.10 m. even keel.

This dock is only used for discharging oil, cereals and loading of molasses.

Bacaladera Dock:

(a) Draft: 3.05 m. (bow)
3.66 m. (stern).
(b) Length: 170 m.

Dock is used for discharging liquid asphalt. The deposit is located at 20 m. from the dock.

STEVEDORES: *Port Operational Capacity:* Presently the port has only 7 gangs for working two vessels simultaneously, one at each side of the dock.

Average rate for loading raw sugar in bags is about 1,200 tons in two working periods of 8 hours each, one per hatch vessel.

Cargoes handled by the Port:

Imports: General cargo, diesel oil and gasoline.

Exports: Sugar and molasses.

Coastal Trade: General cargo, diesel oil, gasoline and kerosene.

MEDICAL: There is a hospital where crew members may be hospitalised.

TANKERS: Average discharging rate for gasoline, kerosene and diesel oil is about 300 t.p.h. Connections: 1×4 in., 1×6 in. and 1×8 in.

Molasses pumping rate is at an average of 35,000 gallons per hour. Two connections – 1×8 in., 1×12 in. diameter.

WATER: *(Potable or for boilers):* Available at berth or anchorage from barge with 400 tons capacity.

FUEL: Available by truck or rail-car.

PAPER/WOOD DUNNAGE: It is advisable that vessels nominated for operations at Antilla, or any of the ports listed as attended by Antilla Agency, arrive with enough wood dunnage.

Wood dunnage, although not impossible to obtain, sometimes is hard to secure, and to avoid delays it is better to have the vessel supplied at a prior port of call.

Paper is supplied if ordered at least 3 days in advance.

REPAIRS: No repairs can be performed.

AGENT: Attending the port of Antilla, and the sub-ports of Preston, Nicaro and Felton, also the port of Banes.

Agency Address: Empresa Consignataria Mambisa, Agencia de Antilla, Avenida 28 de Enero No. 65, Apartado No. 33, Antilla, Prov. de Holguin. Telephone: 88248 and 88225 (office); 88586 and 88347 (night). Telex: 021124. Cables: Mambisa Antilla.

Agency VHF works on Channel 16.

Mail and Parcels: Should be sent to the Main Office at Havana from where it will be sent to Antilla by the quickest means possible.

SUB-PORTS:

Distance from Antilla to:

Preston (Guatemala) 7 miles.
Felton 11 miles.
Nicaro 14 miles.

To the port of Banes, which is attended by Antilla Agency, 50 km. Highway transportation is used from Antilla to Banes.

Time from Antilla to:

Sub-port	*Launch*	*Highway*
Preston	1 hour	1 hour 45 minutes
Felton	1 hour 30 minutes	2 hours 15 minutes
Nicaro	2 hours	3 hours

There is only a regular launch service from Antilla to Nicaro, leaving daily from coastal pier Antilla at 0900 hrs., arriving Nicaro at 1100 hrs.

(a) SUB-PORT OF PRESTON:

LOCATION: This port is located on the North coast of Cuba: Lat. 20° 46′ N., Long. 75° 40′ W.

Preston is one of the 3 ports located within Nipe Bay and is situated on the South coast of said bay, on a peninsula named "Punta Tabaco", S.E. of Antilla.

Traditionally this port has shipped the production of "Guatemala" sugar mill (formerly "Preston") which ranks among the biggest in the sugar industry.

Mayari River flows to the East and close to the port, and maintenance dredging is necessary alongside pier to preserve the depth required.

Dredging is effected at the West side of pier as the East side is not used.

PILOT: From the place where Pilots board the vessels to Preston pier the distance is 6.5 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: As is described under Antilla, up to Pt. Carenero (Saetia), the channel is common to the 3 ports located in Nipe Bay.

On reaching Pt. Carenero, vessels take a course Northwestward in the direction of the buoy marking "La Estrella" Shoal and then take a course W.S.W. up to Preston pier.

On the North side can be seen: Pt. Piedra, Melilla Cove and on the hills the town of Ramon. Pt. Las Chivas and the rest of coast of the bay up to Antilla port and town, which is clearly visible.

On the South side can be seen: The entrance to Cajimaya Cove and Felton town, Pt. Cobos, light buoy No. 5 marking "La Estrella" Shoal, the mouth of Mayari River and lastly the town and port of Preston.

Maximum draft and length allowed for vessels to enter/sail from Preston: Max. length 146 m., max. draft 6.10 m.

Entrance to or sailing from Preston can be effected during day or night-time.

TIDAL VARIATION: Tidal variation at this port averages from 2.25 ft. to 2.5 ft.

CLEARANCE: See "Antilla". Port Doctor, Immigration and Port Captain travel from Antilla to Preston to give ship's entry. Custom Delegation at this sub-port only occasionally, and in order to avoid delay Preston Hospital Doctor clears the ship.

Vessel can proceed directly to this sub-port, since Port Authorities come from Antilla to give ship's entry.

RADIO: See "Antilla".

TUGS: See "Antilla". No tug available, but can be obtained from Antilla.

BERTHING: *Preston Pier:* The pier (Length 170 m.) is located at the Northern extremity of Punta Tabaco. Its construction is entirely of hardwood, including its piling, and at the moment it is not in good condition and requires rebuilding.

Along the pier run double standard railroad tracks but there is no outlet at pier's end.

Manoeuvers are carried out during slack water with assistance of a tug, and wind Force 2 (maximum).

Operations handled by this port:

Exports: Bagged raw sugar and molasses.

Imports: General cargo and occasionally fuel oil.

Coastal Trade: Discharging of fuel oil.

MEDICAL: There is a hospital at Preston which offers very good service to ship's crew. In cases requiring special attention, patients can be taken to Holguin, where there are reliable specialists.

TANKERS: Molasses pumping rate average of 75,000 gallons per hour.

Fuel Oil: 2 connections – 1×8 in., 1×10 in. diameter.

Molasses: 2 connections – 1×8 in., 1×10 in. diameter.

WATER: *(Potable or for Boilers):* Delivered by pipeline to ships while docked to Preston Pier.

FUEL: Not available.

REPAIRS: No repairs can be performed at Preston.

TRANSPORTATION: Usually transportation between Preston and Antilla (and other nearby ports) is performed by launch and also by road.

From Preston there are the following distances and travelling time to:

	by launch	*by road*
Antilla	7 miles – 1 hour	1 hour 45 minutes
Nicaro	8 miles – 1 hour	1 hour 15 minutes
Felton	5 miles – 45 minutes	45 minutes

COMMUNICATIONS: Vessels cannot communicate directly with Preston. Means of communications between Felton and Antilla (and other nearby ports) is only by telephone.

Telephone communications are rather irregular.

PORT AUXILIARY EQUIPMENT: This port has no auxiliary equipment.

AGENT: See "Antilla".

(b) SUB-PORT OF NICARO (LENGUA DE PAJARO), LEVISA BAY:

LOCATION: Lat. 20° 43' N., Long. 75° 33' W. **(See Plan)**

The port of Nicaro is situated inside Levisa Bay, on a small peninsula named "Lengua de Pajaro", located at the Southwestern part of the bay.

Levisa Bay is landlocked, sheltered and moderately ample. Its shores are rather irregular due to numerous points, creeks, coves and inlets. The centre of the bay is free of cays, but close to the coast and around it, there are several cays.

Ample zones of shoals almost entirely cover its extension, except the channels and the anchorage zones.

Nicaro region is very rich in mineral fields and the port is used principally to export the production of the mining enterprise located there.

At the West side and next to Levisa Bay, Nipe Bay is located, and to the East, having a common entrance, which is divided as a fork by Pt. Dos Bahias, is Cabonico Bay.

PILOT: Distance from the place where Pilots board the vessels to Nicaro anchorage is 12 miles, to Nicaro pier 13 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: The entrance channel for the port of Nicaro is difficult for vessels over 107 m. length, due to its narrowness and because of having sharp turns, some of them forming angles of almost 90°. Also, its bottom and banks are rock and coral. Regarding draft it offers no obstacles as there are about 53 m. and 14.3 m. depths max./min. respectively.

To minimise all risks and perform a fairly safe crossing of the entrance channel, while entering to or sailing from this port, the following measures must be accomplished:

(i) Entrance or sailing to be effected only during daylight hours, at slack water.

(ii) Tug assistance is required for vessels exceeding 107 m. in length.

(iii) Vessel's length should not exceed 152.4 m., the extreme max. length allowed, if really necessary, being 156.37 m.

(iv) Simultaneous entrance or sailing of 2 or more vessels is not permitted.

Channel is navigable by only one course.

Max. draft allowed to vessels operating at Nicaro Pier is 28 ft. forward and 29 ft. aft. (at low tide).

The restrictions for vessels to sail or enter this port during night-time are due to the port conditions such as: lack of light buoys in the bay and the channel, as well as the inherent dangers in the channel due to its narrowness and its winding shape.

ANCHORAGES: There are two anchorages at Nicaro:

Anchorage No. 1: Located at about 1,200 m. S.W. of Pt. Gorda and 1,500 m. N.N.E. of Raton Cay.

Limitations: Draft: 9.14 m. – Vessel's length: 156 m.

Swinging area: About 200 m.

Can accommodate 1 vessel only.

Soft mud bottom but anchors hold well.

It is open to the winds. Usually vessels anchor with 2 or 3 shackles of chain.

Anchorage No. 2: Located at about 1,000 m. N.E. of pier's head.

Limitations: Draft: 9.14 m. Vessel's length: 156 m.

Swinging area: About 200 m.

Can accommodate 1 vessel only.

Soft mud bottom but anchors hold well.

It is open to the winds, usually vessels anchor with 2 or 3 shackles of chain.

At both anchorages launch service is available at Master's request.

RESTRICTIONS: Entry and sailing during daylight only. Port can handle two vessels at one time. One dry cargo vessel loading or discharging and one tanker.

MAX. SIZE: LOA 156 m. Max. draft 9.14 m.

TIDAL VARIATION: Tidal variation averages from 2.25 ft. to 2.5 ft.

CLEARANCE: Although Nicaro, under Cuban Customs Laws and Regulations, is a sub-port of Antilla, all Authorities are located at Nicaro (delegations).

RADIO: Vessels proceeding to Cuba can communicate with Antilla Agency through "CLA" Havana Radio Station which promptly relays the message to Antilla.

Vessels cannot communicate directly with the port of Nicaro.

Masters must send their ETA messages simultaneously to Mambisa Antilla and Mambisa Havana.

Means of communications at Nicaro are long distance telephone and telegraph.

Telephone communications are rather irregular and difficult, therefore any instruction or sudden change in previous instruction to vessels operating at Nicaro may not be delivered in time.

TUGS: Obtained from port of Antilla. Therefore it is recommended that when vessels are assigned to this sub-port, advice of their ETA be given with sufficient time prior to vessels' arrival. Particulars of tugboats are shown under "Antilla" information.

BERTHING: *Nicaro Pier:*

North side:

(a) Max. draft: 9.14 m. (b) Max. length: 156 m.

On this side are performed operations of general cargo, fuel oil, diesel oil and liquid ammonia.

South side:

(a) Max. draft: Base 6.71 m. (b) Max. length: 156 m.
Head 9.14 m.

On this side are performed operations of Anthracite coal, Nickel and general cargo.

At the South side, there is less water due to coal falling in water during discharge, which prevents vessels docking at the head with a draft over 5.71 m.

This pier was built of reinforced concrete, 210.31 m. long, of which, counting from the head of pier, 137.16 m. correspond to the berthing area, and the remaining 73.15 m. are the narrow part of the pier connecting with the shore, not used for operations.

Along both sides of pier runs a railroad track of standard gauge, and also trucks can operate.

At the South side of pier, mounted on rails, is a gantry crane.

The boom of the crane is about 15.24 m. long, and although mounted on the South side, can operate also at the North side, which is not often done, because it looses much of its efficiency and speed.

The crane is electrically powered, and it is equipped with a grab 1.5 tons and another of 3 tons capacity, steel slings, special slings for loading nickel, etc.

The above equipment, excluding ship's tackle, is the only equipment available for loading or discharging at this port.

Cargoes handled by the Port:

Imports: Anthracite coal, liquid ammonia, general cargo and occasionally diesel oil.

Exports: Nickel oxide, nickel sinter.

Coastal Trade: Fuel oil, diesel oil and general cargo.

STEVEDORES: Loading or unloading of general cargo, nickel, mineral coal, etc., is performed by port workmen of sub-port of Nicaro.

Raw sugar-loading rate. At present, average loading rate in a period of 4 hours per gang, is about 1,330 bags.

Bags per sling (Guatemala sugar): 6 bags of raw sugar (of 220 pound type) per sling. Nicaragua sugar: 6 bags of raw sugar (of 220 pound type) per sling. Sugar bags from sugar mills Guatemala and Nicaragua are transported from respective mills to Nicaro in railroad flat cars, already slung.

Refined sugar. No refined sugar is exported.

General cargo discharging rate. General cargo of a fragile nature and careful handling: about 5 tons per gang hour. General cargo of sturdy nature and easy handling about 20 tons per gang hour.

Bagged cargo: about 30 tons per gang hour.
Mineral coal: at present the shore crane is averaging 110 t.p.h.
Nickel: at an average of 800 bags (26 tons) per gang hour.
Bulk sugar: no bulk sugar equipment available. In those cases when bulk sugar operations are performed, the necessary equipment is obtained from sub-port of Preston.

Working Hours: Sugar: Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturday: 0700 – 1100 hrs.

Nickel loading and other cargoes: Monday to Friday: 0800 – 1130 hrs.,1230 – 1700 hrs. Saturday: Same periods.

On Sundays the port does not perform any work, except discharging of tanker vessels.

Labour legislation presently in force provides that the numbers of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

MEDICAL: Hospital at Nicaro offers good service to ships' crew members. In case of special attention, the patient can be taken to Holguin, where there are reliable specialists.

Dental care is available at Levisa, 6 km. distant.

TANKERS: Liquid Ammonia: 2×6 in. Fuel oil: 2×8 in. Diesel oil: 1×6 in.

WATER: *(Potable or for boilers):* It is supplied to vessels while docked to Nicaro Pier (both sides). Average delivery rate: 30 t.p.h.

FUEL: Not available.

REPAIRS: There is no repair shop at this port.

DISTANCES: The nautical distance between Nicaro and Antilla for vessels drawing over 6 ft. draft is 24 miles. For small craft drawing less than 6 ft. the distance is 14 miles. By highway, 130 km. from Nicaro to Antilla.

Sea transportation takes 1 hour 45 minutes, and highway 2 hours 30 minutes. There is a daily launch service between Nicaro and Antilla. Launch leaves Antilla 0930 hrs. arriving at Nicaro at 1130 hrs. and a launch leaves Nicaro at 0930 hrs. arriving at Antilla at 1130 hrs.

DEVELOPMENTS: Pier of 225 m. with berthing for 2 vessels and depth of 10.0 m. nearing completion.

SHIPMASTER'S REPORT: September 1990.

Documents:

12 copies Crew List.
3 copies Stores List (including narcotics, ship's cash, bonded stores and ship's stores).
3 copies Crew Declaration (including jewellery, cameras, electronic equipment, video and radio cassettes, cash and sun glasses).
1 copy Health Declaration.

Pilotage: Pilot boards about 1 mile N.E. of Pta. Mayari.

Restrictions: Vessels can only enter at slack water because of the current, twice a day. Sailing possible at any time.

Tugs: Use of tugs not compulsory.

General: The Authorities came on board as soon as the vessel berthed.

Crew members are issued with shore passes, and a form on which watches, cameras and money are entered, when crew member goes on shore leave.

Crew members are not allowed to take Cuban money back to the ship, or change it ashore with the local people.

The Master has to sign many bills for the Agent before departure, all should be inspected carefully.

Before entering port, vessel should check that it has sufficient dunnage and lashing materials, as it is in short supply, expensive and takes a long time to arrive. Dunnage costs U.S.$ 116.00 per cu.m. Wire clamps and steel wire are difficult to obtain, and vessel may only receive half the amount requested.

AUTHORITY: Sub-port of Nicaro is under Antilla Custom House jurisdiction. There is a Custom House Delegate at this sub-port, who acts as a Delegate of the Captain of the Port.

Vessels at Nicaro are handled by personnel of Antilla offices who visit Nicaro, and are located at Oficina de la Marina, Tel. 216. In case this office is closed, these personnel could also be contacted through Customs House telephone of Nicaro.

AGENT: Antilla Agency personnel attend. Agent has a small office, close to the pier, telephone number 96220.

(c) SUB-PORT OF FELTON:

LOCATION: Lat. 20° 44' 45" N., Long. 75° 35' 40" W. **(See Plan)**

Felton, as are Antilla and Preston, is located in Nipe Bay and is the closest port to the Bay entrance.

It is located 1.75 miles to the S.W. of Saetia, just in Cajimaya Cove and 3 miles East of Preston.

At the present time this port mainly handles the importations of raw materials for the fertiliser plant in the vicinity of the port.

PILOT: From the place where Pilot boards the vessel to Felton Pier there is a distance of 5 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: As described under Antilla, up to Pt. Carenero (Saetia), the channel is common to the three ports located in Nipe Bay.

On reaching Pt. Carenero, vessels alter course Southward towards Felton Channel and after four changes in the pilotage route the port is seen.

The most remarkable points of visual orientation after Pt. Carenero is sailed past, are:

On the East side: Saetia Cay, Points Campeador No. 1, 2 and 3; light buoys Nos. 1-A and 3-A (green light) and the unlit buoys indicating the port channel.

On the West side: Pt. Cobos, Pt. Largo, the town of Felton and the unlit buoys marking the channel.

Entrance to the port up to Cajimaya Anchorage can be effected either in day or night-time, but docking or undocking is performed only during daylight hours, if it is not windy.

Anchorage for this port is Cajimaya Anchorage, but Saetia Anchorage can also be used.

RESTRICTIONS: Manoeuvers are limited to daylight hours and with wind of Force 3 or less.

Vessels with LOA less than 153 m. can operate with draft up to 8.53 m.

MAX. SIZE: LOA 170 m. Max. draft 7.92 m.

TIDAL VARIATION: Tidal variation at this port averages from 2.25 ft. to 2.5 ft.

CLEARANCE: Vessels can proceed directly to Felton, as Port Authorities from Antilla are taken by launch to visit vessel at Felton Pier, or at sea in Cagimaya Anchorage.

RADIO: It is recommended that ETA messages be given to Mambisa Antilla and Mambisa Havana simultaneously.

The means of communication between Felton and Antilla are telephone and telegraph.

TUGS: 1×1,200 h.p. Use of tug is compulsory.

BERTHING: The place of operation of Felton is a solid coastal-pier built of concrete, although vessels are not docked directly at it.

Vessels are berthed to 4 solid steel dolphins, 20 m. apart.

Dolphins are located at about 15.24 m. from the side of the pier and therefore vessels are 15.24 m. off the pier.

Pier is located at the East side of that portion of land on Nipe Bay and runs from North to South.

Besides the four solid dolphins, vessels are secured also to two mooring buoys located 250 m. to the West, in front of and parallel to the pier.

There is an electric shore crane mounted on rails that runs along the pier, which is used mainly for the discharge of bulk raw materials for fertilisers, with a 4 ton grab. If the grab is removed the crane is capable of lifting up to 40 tons, and can be used for the discharging of heavy equipment, such as tractors, bulldozers, etc. This crane has a wide field of operation.

Also in operation at this port is a device called "Unicular", a kind of hopper-car, which runs on rails from the hatch of the vessel to the pier, and is loaded by ship's gear to its full capacity of 3 tons.

Cargoes handled by the Port:

Imports: Fertiliser raw materials in bulk, occasionally general cargo.
Coastal Trade: Discharge of fuel oil, occasionally general cargo.
Exports: None.

MEDICAL: There is a small hospital at Felton where crew members requiring medical and dental care are attended.

Cases requiring surgical or specialised treatment, are sent either to Mayari Hospital or Lenin Hospital, at Holguin.

TANKERS: 1×8 in. line for fuel oil.

FRESH WATER: Temporarily no water available at Felton.

FUEL: Not available.

REPAIRS: Cannot be performed at this port.

TRANSPORTATION: Usual means of transportation between Felton and Antilla, and other nearby ports, is by launch and also by road.

From Felton there are the following distances and travelling time to:

	By launch	By road
Antilla	11 miles – 1 hr. 30 min.	2 hrs. 30 min.
Nicaro	3 miles – 30 min.	50 min.
Preston	4 miles – 40 min.	1 hr.

DEVELOPMENTS: Mole for 6 vessels to be constructed.

AUTHORITY: The Port Authorities are located at Antilla and visit Felton as necessary.

AGENT: See "Antilla". Mail should be sent through Antilla's main office by registered mail. Spares by railway express to Antilla.

BANES: 20.54 N. 75.41 W.

LOCATION: Banes is located on the North coast of Cuba: Lat. 20° 53' N., Long. 75° 40' W.

Banes is a sheltered, land-locked port located next and to the West of Nipe Bay.

Traditionally this port used to ship raw sugar and molasses, that is, the production of "Nicaragua" sugar mill, formerly "Boston".

Due to limitations imposed by the characteristics of this port to the length of vessels, and the constant increase in size and tonnage of vessels operating currently in Cuba, gradually the port lost its use and importance, and nowadays is only used for coastal trade.

While approaching Banes, the points of visual orientation are:

Banes Bay Light, shown from a red iron skeleton structure, 9.14 m. above sea level, situated about 365 m. Southward of Pt. Fuerte; a small house located on the Southern side of the entrance to bay, and the port entrance itself, cliffs at both sides and forming a remarkable canyon.

Banes Lighthouse is located on the Western extremity of Caracolillo Beach, between Pt. Fuerte and Pt. Penasco.

At the extremity of Pt. Penasco there is a masonry house, visible up to 2 or 3 miles away.

PILOTAGE: Vessels should pick up Pilot at 20° 53' N., 75° 29' W.,1 mile N.E. of Banes Canyon Lighthouse. Pilot station located at Embarcadero (Banes). Agent informs Pilot of ship's arrival by means of local telephone. Distance from point where Pilot boards vessel to pier is about 6 miles.

ANCHORAGES: *Macabi Anchorage:* Located S.S.W. of Nicaragua Pier.

Limitations: Max. draft 9.45 m., max. length 109 m. Swinging area: About 620 m.

Anchorage can accommodate 2 or 3 vessels.

Bottom is soft mud but anchors hold well and vessels anchor with 3 or 4 shackles of chain.

RESTRICTIONS: Entrance is through narrow channel with sharp turns where there is a strong current. For this reason vessels can only enter and sail on slack water tide and during daylight. Assistance of tug necessary for entering and sailing. Bottom and banks are rock and coral. Depth about 18.29 m.

MAX. SIZE: Max. length due to characteristic of channel is of 106 m. Due to insufficient water at pier, and in bay, ships are limited to draft of 5.79 m.

Average of about 2 ft. 4 in. between high and low tides.

RADIO: Ships can communicate with port by wireless via CLA, but recommended that ETA message be sent to Antilla Agency, simultaneously advising Mambisa Havana.

TUGS: At present no tug available, but when needed same is requested from Antilla. Particulars of tug shown under Antilla information.

BERTHING: *Nicaragua Pier:* (formerly Banes Pier): Max. length allowed to vessels 106 m., draft 5.18 m. at base and 5.79 m. at head.

The pier is in very bad condition and is out of service.

TANKERS: Fuel oil: 1×8 in. diameter. No cargo operations performed at anchorage.

MEDICAL: There is a hospital where sick crew members may be hospitalised. Dental care is also available.

STEVEDORES: *Working Periods:* For discharge of fuel oil: 24 hours a day, 7 days a week.

Dry cargo vessels operate Monday to Friday: 0700 – 1100 hrs., 1300–1700 hrs. Saturday: 0700 – 1100 hrs. Sunday: No work performed.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday; and 4 hours on Saturday, for a total of 44 hours weekly.

FRESH WATER: Fresh water supplied, delivered by 3 in. diameter pipeline.

FUEL: Not available.

REPAIRS: No repairs can be effected at this port.

TRANSPORTATION: Transportation between Nicaragua Pier and Antilla or Banes is by road. From the pier to Banes there is a distance of 15 km. and to Antilla 50 km.

COMMUNICATIONS: Only means of communications between Antilla and Banes are telephone and telegraph.

PORT AUTHORITIES: All Port Authorities are located at Antilla except Port Captaincy which is located at Banes.

Authorities travel from Antilla to clear vessels at Banes.

AGENT: See "Antilla".

For information regarding ship's operations, Antilla Agency should be contacted. Antilla office personnel travel to Banes to attend vessels operating there. Any mail should be addressed to Antilla Agency. Spare parts by railway express.

CAIBARIEN: 22.32 N. 79.28 W.

LOCATION: This port is located on the North coast of Cuba: Lat. 22° 32' N., Long. 79° 28' W.

Port operations are effected at Cay Frances Anchorage, 16 miles from the City of Caibarien.

In rough weather, operations are generally suspended, because it is not possible for the lighters to remain alongside ship.

In spite of the fact that all cargo operations are effected by lighterage, this port is most efficient and very often surpasses the cargo rates of other ports.

PILOTAGE: Pilots board vessels 0.5 mile from Catalina buoy (entrance) of Cay Frances Anchorage. Pilot station is located at Caibarien. Usual means of communication is radio-telephone, which is available at Port Captain's Office in Cay Frances. Advice also given by motor-launch.

Distance from point where Pilots board vessels to:

Inner anchorage (La Caldera)	–	2 miles
Outer anchorage (La Poza)	–	0.5 mile
Outer anchorage (Port Buoy)	–	at same place where Pilots board vessels.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: The port is entered directly from open sea, and there is no entrance channel. Vessels must proceed to the first buoy of Outer Anchorage (Catalina Buoy), and at that point pick up the pilot.

Vessels can enter or sail from Frances Cay Anchorage with 200 m. length and with a maximum draft of 10.67 m.

When vessels draw less than 6.09 m., they proceed to the Inner Anchorage (La Caldera). When vessels draw 6.09 m. up to 7.92 m., they proceed to the Outer Anchorage (La Poza), and those drawing over 7.92 m. proceed to the third anchorage (Port Buoy).

The following regulations must be observed during vessel's stay at Caibarien Roads:

Vessels arriving with a draft of 5.94 m. or less:

(a) All ships arriving with a draft of 5.94 m. or less must proceed to the Inner Anchorage for loading or unloading, being compulsory to remain in this anchorage until reaching a draft of 6.10 m. even keel.

(b) If Master refuses to proceed to this Inner Anchorage with a draft of 5.94 m. or less, he incurs a penalty of extra charge of about seven cents on each bag of sugar to be delivered in this port, payable to the crew of the sugar barges employed in the transportation of cargo from shore warehouse to the anchorage of Frances Cay.

Shifting or changes of anchorage:

(a) Vessels must remain at the same place where the official pilot of the port anchored the vessel.

(b) It is not allowed, by the Port Authorities, to shift or change the vessel's place indicated by the official pilot of the port, without authorisation from Customs House official in charge on board the vessel. Also all shiftings and changes of anchorages will have to be done under the supervision and command of the local pilot.

(c) The Master of the vessel will notify the Customs House officer on board, when shiftings or changes of anchorages are required, then the Customs House officer will notify the pilot accordingly in proper time, as they are the official pilots and the only ones authorised to perform the shifting or change of anchorage places.

Please also note that in case the aforementioned orders are not followed or observed by the ship's Master and/or ship's officers, a penalty or fine of minimum $ 500.00 (five hundred dollars) will be charged to the vessel, which fine will have to be paid by Master prior to departure from the port. Besides the penalty, no cargo will be delivered to the ship if she is anchored in any place other than that indicated by the local pilot.

Careful attention should be paid to these important notices in order to avoid unnecessary expenses, responsibilities and loss of time during stay loading vessel in this port.

Frances Cay lights are visible at a distance of 8 miles away, and stand on a concrete square pyramid tower, painted white, in the following position: Lat. 22° 38' 21" N., Long. 79° 15' 12" W.

RESTRICTIONS: Entry and departure only possible during daylight hours.

MAX. SIZE: *Entering and Leaving Caibarien:* LOA 200 m. Draft 10.67 m.
Inner Anchorage – La Caldera: LOA 150 m. Draft 6.10 m.
Outer Anchorage – La Poza: LOA 170 m. Draft 7.92 m.
Outer Anchorage – Port Buoy: LOA 200 m. Draft 10.67 m.
Ponton San Pascual: LOA 150 m. Draft 5.10 m.

RADIO: Means of communications between Caibarien and Cay Frances is radiotelephony.

Several tugs operating at this port are also equipped with radiotelephony; likewise stevedores enterprise, Port Captaincy and the molasses reservoir (Ponton San Pascual).

The official radiotelephony hours of communication are: 0800 – 0900, 1100 – 1400 and 1600 hrs., but after these hours, other communications can be established, upon request.

At Caibarien there are the following means of communication: National wireless telegraphy, telegrams, long distance telephone and Post Office.

Mambisa Caibarien Agency is connected with the National Telex System and this is the best means of communication with this port.

Vessels navigating to Cuba can send their messages to Caibarien through "CLA" Havana Radio Station which relays the messages promptly to Caibarien.

Masters must send their ETA messages simultaneously to Mambisa Caibarien and Mambisa Havana.

Pilot VHF works on Channel 16.

TUGS/BARGES: The port has several barges and 3 tugs for towing the barges.

STEVEDORES: Sugar working periods: Monday to Friday 0700 to 1100 hrs. and 1300 to 1700 hrs. Saturdays 0700 to 1100 hrs. Sunday, no work is performed unless urgent.

Although bagged raw sugar is reported as an exportation product of the port, for the last 2 years no sugar has been exported through Caibarien.

Loading rate: About 1,000 bags of raw sugar per gang-period. For each gang, not less than 1,950 bags are placed alongside vessel for each 8 hours working period.

For vessel able to make faster reception, it is possible some days for about 3,000 bags to be loaded.

Bags per sling: 5 bags per sling loaded.

Work capacity: 2 vessels can be operated simultaneously.

General cargo: Only empty jute bags imported and discharging rate approx. 20 tons per gang hour.

MEDICAL: There is a hospital at Caibarien for sick crew members.

TANKERS: Only blackstrap molasses exported by this port. When tankers arrive drawing less than 6.10 m. or in ballast, they dock at Pontoon or Hulk *San Pascual,* which is located in 6.10 m. of water, proceeding then to complete at another port, or are shifted from this place to La Poza or Port Buoy Anchorages, where they complete the cargo, which is delivered by barges.

Average pumping rate 55,000 gallons per hour.

FUEL: No bunkers available.

FRESH WATER: Available.

DUNNAGE: No wood available, paper available if requested well in advance.

REPAIRS: Minor repairs only. Repair shops at Caibarien, but due to distance from Caibarien to Cay Frances, it is difficult and expensive to perform repairs.

TRANSPORTATION: Transportation means to and from Caibarien are poor, although railroad and bus services are available.

Best means of transportation is by train or bus to Santa Clara and from there transportation is available to any place or city.

AUTHORITY: All port authorities located at Caibarien 16 miles from Cay Frances anchorage, where they travel by launch or motor-boat to clear vessels.

AGENT: Empresa Consignataria Mambisa, Agency Caibarien, Avenida 9 No. 601, Apartado No. 72, Caibarien, Prov. de Las Vilas. Telephone: 3-3706 (office). Telex: 041224. Cable: Mambisa Caibarien.

As Caibarien has no air mail or air express service, all mail and parcels should be sent to the Havana main offices from where it will be relayed by the quickest means to Caibarien.

CARDENAS: 23.03 N. 81.12 W. (See Plan)

Cardenas is the Northernmost port of Cuba being in a large bay 9 miles wide N.W. to S.W. and from 6 to 10 miles long from West to East.

It is a shallow bay with muddy bottom.

PILOTAGE: Pilots board vessels in vicinity of Cayo Piedras.

Pilot station at Cardenas. Distance from where Pilot boards to the pier is 16 miles, and to Cayo Diana 7 miles.

APPROACHES: Entrance to port is effected between Monitos Cay and Piedras Cay or between Piedras Cay and Mono Cay.

The channel head is located at a point almost equidistant to Blanco Cay and the end of Hicacos peninsula, but closer to the latter.

It is an artificial channel but it has no narrowness and no turns.

Its bottom is rock, sandy at the head and for the first mile, and muddy all the rest of its course.

In front of the pier the channel opens in the shape of a funnel forming around it the inner harbour or basin.

Approaching Cardenas, the most conspicuous points of visual orientation are:

Piedras Cay lighthouse which stands 24 m. above high tide, a stone cylindrical construction on a white building, its white light visible up to a distance of 14 miles.

Southwestward of Piedras Cay the long ribbon of white sands of Varadero Beach can be seen, and in the background the hotels and buildings.

To the S.E. Diana Cay lighthouse, a 38 ft. high metal tower and the string of cays such as: Chalupa, Romero, Blanco, etc.

RESTRICTIONS: Considering that from the place where Pilots board the vessels up to the pier or vice-versa takes about 4 hours, including manoeuvres, vessels must commence manoeuvres to enter or sail from this port at least 3 hours before dusk. Vessels are allowed a maximum length of 170 m., max. draft of 5.2 m. Tidal variation averages 2 ft.

In case of large vessels, it is necessary to wait for slack water for crossing the channel stretch known as Buba Channel, about 2 miles long, between Buba and Diana Cays.

ANCHORAGES: *Quarantine Anchorage No. 1:* Located 0.5 miles E.S.E. of Mono Cay, draft allowed 8.0 m.

Triangulo Anchorage No. 2: Located between Piedras Cay, Mono Cay and Buoy No. 1, draft allowed 7.0 m.

Diana Cay Anchorage No. 3: Located about 7 miles from pier, draft allowed 6.24 m.

Bay Anchorage No. 4: Located 2 miles from pier, draft allowed 4.27 m.

Cayo Piedra Anchorage: Located 16 miles from pier in the open sea, swinging area unlimited, draft allowed 12.19 m.

MAX. SIZE: LOA 170 m. Draft 5.2 m.

RADIO: Vessels navigating to Cuba can communicate with Mambisa Cardenas through "CLA" Havana Radio Station which immediately relays the messages to Cardenas.

While navigating in Cuban waters approaching Cardenas, vessels can communicate by radiotelephone with "CLW" Cardenas Radio Station on 2760 kHz.

Masters must send their ETA messages simultaneously to Mambisa Cardenas and Mambisa Havana.

TUGS: Normally tug not required to assist berthing, but when vessels have to berth head to shore, assistance of tug is necessary.

BERTHING: The only place of operation at Cardenas is its pier.

It is of solid reinforced concrete construction having double standard railroad tracks along the length of pier, on each side. It is also well paved and trucking operations can be performed alone or in combination with railroad operation.

Railroad cars do not interfere with cargo operations, as once emptied they can be carried out by shifting them to the second track or by going around the pier by the opposite side.

Tankers discharging fuel can be operated at either side or at the pier head.

There are 3 fresh water intakes on each side and one at the head of the pier.

Pier is capable of operating 5 vessels at a time, that is: 4 regular size vessels, 2 at each side, and a tanker at the head.

Both sides of pier are of equal length and have same facilities, being at the N.W. and the S.W. sides.

Cardenas Pier:

Length 290 m., width 80 m. (262 ft.). Max. draft allowed for vessels' operations 5.2 m.

The dock has space to dock 4 vessels (2 at each side) (South side out of service), and a small size vessel at the head of pier, but personnel available at present time is enough for working only 1 dry cargo vessel and a tanker vessel loading national crude oil or discharging fuel oil. Dredging of the port has recently been completed and there is a plan to increase port personnel

No operations at bay or anchorage performed at this port.

Cargoes handled by the Port: Imports: General cargo, bagged fertilisers, flour, lumber and wood pulp, etc.

Exports: Bagged refined sugar.

Coastal trade: Loading national crude oil and discharging of fuel oil.

STEVEDORES: Export of refined sugar and alcohol. Port has the following auxiliary equipment: 1 shore crane, 3 fork lift trucks, 4 conventional tractors, 3 rail tractors.

Working periods: loading sugar from Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.; Sunday: no work performed.

When vessel does not achieve daily rate during regular hours, work is carried out from 1900 to 2300 hrs.

Raw sugar loading rate: about 1,138 bags (of the 220-pound type) loaded per 4 hours per gang. This is not a fixed rate but when exceeded stevedores to be paid extra. Bags per sling: 4 bags of raw sugar (of the 220-pound type) loaded per sling.

Refined sugar: about 2,500 bags (of the 100-pound type) or 2,272 bags of 50 kilos, loaded per 4 hours per gang period. This is not a fixed rate, but when it is exceeded an additional payment must be made. Bags per sling: 12 bags (of the 50-kilo type and 100-pound type) loaded per sling.

Bulk: Only grates are available for loading bulk sugar.

Equipment: One shore crane, 6 forklift trucks, 4 tractors and 3 rail tractors.

MEDICAL: Cardenas General Hospital and a clinic.

TANKERS: Discharge of fuel oil: There are 2 intakes at the pier: One at North side and 1 at South side.

Pipelines 8 in. and all connections 6 in. in diameter.

FRESH WATER: Pier has 7 water intakes connected to a water reservoir which is supplied by tank-trucks and/or railroad tank-cars.

Delivery rate: 20 t.p.h.

Daily delivery rate dependent upon transportation available.

FUEL: Not available.

REPAIRS: No repair shop at this port.

DUNNAGE: Wood, paper and cardboard available. Paper available if requested well in advance.

TRANSPORTATION: Transportation to and from Cardenas is good.

To Havana there are scheduled bus departures each hour, to Varadero every 30 minutes, and also several departures to Sagua la Grande, Isabela and other nearby cities.

AUTHORITY: All port authorities located at Custom House building.

AGENT: Consignataria Mambisa, Agencia Cardenas, Calle 2 entre Cespedes y Ave. 2da., Apartado No. 2847, Cardenas, Prov. de Matanzas. Telephone: 306 (office); 4840 (night). Telex: 052168. Cables: Mambisa Cardenas.

All urgent mail and parcels should be sent to our main offices at Havana from where it will be relayed to Cardenas by the quickest means possible to ensure prompt delivery.

Ordinary and non-urgent mail or parcels can be sent directly to Mambisa's Cardenas Office.

CIENFUEGOS: 22.09 N. 80.27 W. (See Plan) (including sub-ports of Casilda (Port Trinidad) and Tunas de Zaza)

LOCATION: Cienfuegos Bay, by its natural characteristics, offers ample protection for vessels within port premises. It is about 10 miles long, from North to South and 3 miles wide, from East to West, surrounded by high ground and mountains.

The Coastal outline is rugged inside the bay, due to numerous points and creeks and at the widest part of the bay, to the N.W., is the city of Cienfuegos and some of the port's installations, and further, to the North of the city, the remainder and most modern of the port installations.

PILOTAGE: The Pilot boards the vessel at 1 mile S.W. of Los Colorados lighthouse at the following geographical position:

Lat. 22° 01' 33" N., Long. 80° 26' 53" W.

Vessels head 350° when sea force does not exceed Force 3, over Force 3 the heading should be 080°, and the ladder should be placed on the Leeward side.

From this place to the different places of operation of the port there is a distance of 7 to 8 miles.

Pilot station is located at Jagua Castle, on the West coast of the bay, just in front of and to the West of Pasa Caballos Point.

Pilot service is available 24 hours daily and they have a 24 hours watch, and advice of arriving or sailing ships is announced by a semaphore station.

Pilotage service is stopped when the following meteorological conditions prevail. For entering/sailing: Over Force 4 and winds over Force 5 from the 2nd/3rd quadrant.

In the inner harbour, docking and undocking manoeuvers are stopped when there is Force 5 from 1st quadrant (for docking) and Force 6 from 2nd and 3rd quadrant (for undocking).

ENTRANCE TO PORT/CONDITIONS: Entrance to port is by a channel which begins between the points of Los Colorados and Sabanilla and runs for 3 miles up to La Milpa Point. From La Milpa the channel continues toward the interior of the bay firstly by the South and afterwards by the West of Carenas Cay up to the General Anchorage.

From the General Anchorage vessels can proceed either to the piers at the South of the port or to the North anchorage and the installations of the North Zone.

The bottom of the channel is muddy and its various depths are as follows:

From the head of the channel up to Las Milpas max. depth is 62.4 m. at lighted buoy No. 3 and minimum of 20.72 m. at the West of Pasa Caballos Point.

From La Milpa up to General Anchorage minimum is 14.6 m. and from then on up to the North Anchorage minimum of 12.2 m.

The channel has 2 sharp turns only, but adequate precautions must be taken when entering Cienfuegos harbour, always with Pilot on board, which is compulsory at all ports. The first turn of 68° is at Pasa Caballos Point and because this is the narrowest part of the channel where Tidal currents flow strongly, it is here where precautions should be exerted.

The second turn of 98° is at West of Carenas Cay, but due to the width of the channel at this point and the fact that tidal currents have no great effect, manoeuvres are easier at this turn.

The port of Cienfuegos can be entered at day or night time.

At the entrance to the port, at Los Colorados Point, there is a lighthouse also named Los Colorados which rises 25.33 m. above high tide, located at Lat. 22° 02' 04" N., Long. 80° 26' 29" W.

The lighthouse is painted in a white-yellowish shade and flashes white light every 5 seconds visible 21.8 miles away.

ANCHORAGES: The Bay of Cienfuegos has ample anchorage zones.

The most important are: General anchorage at about the middle of the bay and North anchorage, at the North part of the bay.

Regarding the capacity and conditions of Cienfuegos anchorages it can be said that they meet the requirements of the largest vessel which presently or in future could enter this port.

North Anchorage: Located on the North part of the bay, at the Zone N.W. of the city and South of Tricontinental Pier and Ramirez Cove.

This zone is located between: Lat. 22° 09' and 22° 09' 30" N. and Long. 80° 28' and 80° 28' 30" West.

Although the bottom is soft mud the anchors hold perfectly well and securely.

Minimum depth of anchorage is 12.19 m. and it can accommodate several large vessels with sufficient swinging area. Vessels anchor with 3 shackles of chain.

At this place vessels await berth, bunkers or water, etc. and also can discharge or load by means of barges.

General Anchorage: Located in the middle of the bay and covers a square space limited by Pt. Gorda and Jaragua Cove at the South and Pt. Majagua and Pt. Salinas at the North:

(Lat. 22° 07' N. – 22° 08' 15" N., Long. 80° 27' 15" W. – 80° 28' W.).

Maximum draft is 10.97 m. Bottom is soft mud but in spite of this anchors hold well and securely.

Usually vessels anchor with 3 shackles of chain.

At this anchorage vessels await berth, bunker, water, provisions, etc. and also can discharge or load by means of barges.

Quarantine and Explosives Anchorage: Located at 0.5 mile off Pt. Barril.

As indicated by its name, this anchorage is used in case of quarantine to vessel or when carrying explosive cargo. The bottom is soft mud having a depth of 15.25 m. Vessels anchor at this anchorage with 3 shackles of chain.

RESTRICTIONS/MAX. SIZE: Maximum length for entering or sailing from this port is 207 m. and maximum draft is 11.55 m.

Vessels up to 207 m., entering or sailing from Cienfuegos should take the following measures:

Only during daylight hours, during slack water and the assistance of 2 suitable tugs.

For entering/sailing up to 187 m. with slack water, for sailing with ebb tide and entering with flood tide with assistance of a tug, of not less than 1,200 h.p. Over 187 m., entrance daylight only, maximum draft is 11.55 m.

The entrance channel, from landfall buoy up to Buoy No. 15, allows one vessel to navigate at one time, preference given to the incoming vessel.

Also see "Berthing".

RADIO: Vessels navigating toward Cuba can communicate with Mambisa Cienfuegos Agency through "CLA" Havana radio station which relays the message to Cienfuegos immediately.

When navigating in Cuban waters and nearing Cienfuegos, vessels can communicate directly through "CLC" Cienfuegos radio station which immediately informs Mambisa Cienfuegos Agency of any message received and the Agency can answer through "CLC", which also have radiotelephony system.

Masters must send their ETA messages simultaneously on VHF Channel 16 to Mambisa Cienfuegos and Mambisa Havana.

There is complete telephone service: Local, long distance and International.

RCA System radiograms have national and international service.

There are also the Wireless Service, Government Public Telegraph Service and Post Office.

The Agency can communicate with Havana and the rest of the ports by telex, this service being the most reliable and quickest of the means of communication.

Cienfuegos telex number is 042118, 042109.

TUGS: 2×1,200 h.p., 1×168 h.p., 1×230 h.p. and 1×175 h.p.

BERTHING:

	Max. Draft (m.)	Max. Length (m.)
Tricontinental Pier:		
East Side (Bulk sugar)	10.52	207
West Side (Cereal)	10.52	207
Berth No. 3 (Portico crane) (Citric)	9.75	140
Berth No. 4 (Portico crane) (Citric/ General cargo)	9.45	140
Berth No. 5 (Portico crane) (Citric/General cargo)		
Pablo E.Guzman Pier (West Side) (bow)	8.84	186
(stern)	9.14

ICP Submarine Pipeline	11.58	207
Olimpia Medina Pier		
No. 1 General cargo	7.92	170
No. 2 General cargo and container		
East End	7.62	170
West End	7.92	
No. 3 Cement and General cargo	5.79	170
Fertiliser Plant Submarine Pipeline	9.45	162
Thermoelectric Plant Submarine Pipeline	10.97	207
North Anchorage	12.19	
General Anchorage	10.97	
Quarantine/Explosives Anchorage	15.24	

Tricontinental Pier: Located S.E. of Ramirez Cove.

In order to load to maximum draft, vessels have to move about 5.5 m. of berth.

It is a solid construction of reinforced concrete, 207 m. long and 43 m. wide. The East side of the pier is specially conditioned for loading bulk raw sugar and has 2 cranes, mounted on rails, that run along the length of pier, each capable of loading 600 tonnes/p.h.

Although the length of the pier is 207 m., at the East side, the berthing length is only 165 m., because at the shore end there are 2 resting bases for the cranes, where they remain when idle.

In direct line with the pier is the parabolical warehouse, which is capable of holding 90,000 tonnes of bulk raw sugar. Next to it is the receiving station of the plant, where a continuous flow of railroad hopper cars discharge the sugar coming from many sugar mills in Las Villas and Matanzas provinces.

The West side of the pier is presently used for discharging cereal. Fresh water available by pipeline.

Docking to this pier can be effected either in day or night-time because it is well lit.

All operations, except loading bulk raw sugar, must be effected by means of trucks because although railroad tracks reach the shore end of pier, there are no tracks alongside.

Vessels nominated to load bulk raw sugar at Cienfuegos, must arrive at Tricontinental Pier clean and ready to load and any undesirable dunnage material must be discharged at other ports, due to the fact that it has only sufficient personnel to attend the mechanical loading and there are no stevedores available.

Olimpia Medina Pier (Formerly Cacicedo Pier): Located on the South side of the city at Marsillan Cove.

There is settling in the dock line of Berths No. 1 and 2. Berth No. 3 shows landslide in dock which limits the draft.

Also see "Berthing".

STEVEDORES: Mondays to Fridays: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturdays: 0700 – 1100 hrs.

Although the above are the official working hours of the port of Cienfuegos, frequently 3 shifts of 8 hours each are worked, commencing at 0640 hrs. Also on Sundays a shift is worked from 0640 to 1100 hrs. This is done whenever all conditions, including personnel and weather, are favourable.

The port can operate 12 ships simultaneously as follows:

1 Loading bulk raw sugar.
2 Loading or discharging general cargo (docked).
1 Loading or discharging general cargo (on anchorage).
1 Loading molasses.
4 Tanker vessels discharging petroleum products.
3 Operating at Citric Docks.

Through this port all kinds of cargoes are imported.

Exports: Bulk raw sugar, molasses and occasionally general cargo.

Coastal trade: Discharge of petroleum products, and other kinds of coastal trade cargoes are seldom handled by this port.

The following equipment is owned and operated by the port:

9 Cargo Barges, 300 tons each.
2 Fuel Barges: 300 tons each.
1 Water Barge: 400 tons.
1 Floating Crane: 35 tons.
23 Shore Cranes: Capacity 6 tons – 80 tons.
27 Forklifts.

All bulk raw sugar is shipped by the Bulk Raw Sugar Shipping Plant by means of modern mechanical equipment and bulk raw sugar ex-bags is not shipped through this port.

MEDICAL: Sick crew members can be hospitalised at the General Hospital.

TANKERS: *Pablo E. Guzman Pier* (Formerly Ferrocarril Pier): Located on the N.W. side of the city, between Pt. Arenas and Pt. Verde. Berthing during daylight only.

It is only used to discharge clean petroleum products and for supplying diesel oil bunker to vessels.

West Side:

Cargo handled by this side: Discharge of diesel oil, kerosene and gasoline*. Connection diameter: 8 in.

Discharging rate: About 400 t.p.h.

*Although three different products are discharged, only one can be discharged at a time, as there is only one pipe-line to shore tanks.

East Side: Out of use.

Molasses Terminal Berth (Formerly Naticorp Pier): Located on the West coast of Pt. Majagua, this installation consists of a wooden narrow passage 549 m. long ending at a steel platform along which runs the pipelines, one 16 in. and other 12 in., and a catwalk.

Loading of molasses is performed through three connections, diameter 8 in. each.

Docking can be effected only during daylight hours.

Vessels berth to 4 solid dolphins, 2 mooring buoys aft, and 2 fore, across the head of the installation (they are not in good condition).

Loading rate: 350 t.p.h.

Water and bunkers not available by pipeline.

ICP Submarine Pipeline Anchorage (Formerly Standard Anchorage):

Located East of Point Majagua.

Orientation of moored ship: North – South.

Buoys are lacking maintenance.

The Submarine Pipeline is 12 in. × 884 m. long from the intake up to the deposit tanks. The connection is 8 in. in diameter.

Vessels berth to 3 mooring buoys aft and use both anchors.

The only product handled is fuel oil, at a rate of discharge of 420 t.p.h.

No water or bunkers available by pipeline.

Berthing operation performed only during daylight hours.

Fertilisers Plant Submarine Pipeline:

Located West of Buoy No. 3D.

Orientation of moored ship: E.N.E. – W.S.W.

According to the new pipeline installations for Naphtha and fuel oil, there is no capacity on the berth for ship with a length over 162 m.

It has been recommended that the stern mooring buoys be relocated further to the West, in order to operate vessels up to 207 m. length and the need to replace the missing bow buoy.

The fuel oil pipeline has a length of 2,310 m. and 16 in. diameter, with a 10 in. connection.

The Naphtha pipeline is 10 in. diameter and has a 10 in. connection.

Vessels berth to 3 mooring buoys aft and use the starboard anchor of the ship.

The bottom is soft mud.

Vessels discharging Naphtha must pump, after discharging same, about 200 tons of fresh water, and this must be taken at a port prior of call, as delay may result to vessel if Cienfuegos water barge is not able to supply the water.

Average rate of discharging:
Naphtha: 400 tons per hour.
Fuel Oil: 450 tons per hour.

Berthing operation to this place is performed during daylight only.

No water or bunkers available by pipeline.

Thermoelectric Plant Submarine Pipeline Anchorage:

Located S.E. of the Bifurcation Buoy.

Orientation of moored ship: N.W. – S.E.

The hooks of the mooring buoys are inverted. The bow mooring buoy has sank, and no buoy rope has been placed to mark it, and therefore to perform manoeuvre of casting port side anchor is difficult.

Pipeline is 14 in. in diameter and connection is 6 in. diameter.

Vessels berth to 3 mooring buoys aft, and to another mooring buoy at the port side forward, and use the starboard anchor.

Only product handled is fuel oil, which can be discharged at an average rate of 500 tons per hour.

Berthing operations can be performed only during daylight hours.

No water or bunkers available by pipeline.

FRESH WATER: *(Potable or for Boilers):* Delivered by means of barge, capacity 200 tons.

Water can be obtained at either side of Tricontinental Pier at an average rate of 10 t.p.h.

FUEL: Regular bunkers can be obtained at this port (whatever type of diesel oil or fuel oil may be stored in the shore tanks at the time of delivery).

Fuel oil is supplied to vessels by means of barge, capacity 325 tons which is towed to the place where ship is operating or berthed.

Diesel oil is supplied by docking at pier, by pipeline.

If any tanker vessel is operating at "Pablo E. Guzman" Pier, delivery must wait until tanker finishes operations and leaves pier.

Mixtures of fuel and diesel oil, IFO, (Intermediate fuel oil), cannot be obtained at this port.

DUNNAGE: This port has conditions and facilities to supply dunnage materials, but specially in the case of wood dunnage, requisition must be placed at least 5 days before delivery date.

REPAIRS: Minor repairs possible, advance notice required.

SHIPMASTER'S REPORT: May 1979.

Documents:

1 Copy Maritime Declaration of Health.
1 Copy Clearance from Previous Port.
Derat Certificate or Exemption.
1 Copy Cargo or Ballast Manifest.
10 Copies Crew Lists.
5 Copies Personal Effects (including new clothing). All individual Crew Lists must have Christian names as well as Surnames – initials not sufficient.
3 Copies Provisions Lists. Meats and weights to be separated by countries i.e. Beef (Argentina) 200 lbs., Beef (U.K.) 400 lbs., etc.
4 Copies Stores Lists.
1 Copy Vaccination List. Apparently no vaccination necessary for Cuba.
4 Copies Currency Lists. All currency placed in Master's safe together with jewellery, valuables etc., and sealed.

N.B. Crew only allowed: 1 watch, 1 radio, 1 tape-recorder and 6 cassettes, remainder to be bonded.

Officials: On arrival ship is boarded by Doctor who gives pratique, after which ship is boarded and sealed by Customs and Immigration. After this the Customs Control Board, and the ship is searched from stem to stern.

There is also a search when the ship sails although the search is not so thorough and they only seem to be looking for stowaways.

Meat and fish room are sealed throughout stay but sanitary inspectors board every day (and charge 5 pesos per visit) to take out sufficient selected stores for the day.

Pilotage: Compulsory.

Anchorage: Safe anchorage inside the bay only. Outside the entrance the water is too deep. There is sufficient room for anchorage of 15 vessels. Depth 8 fathoms. The bottom is soft mud which gives very good holding ground.

Restrictions: There is a whirlpool in the entrance at "Pasa Caballos Turn" at various states of the tide when navigation is not possible during a rising tide. Sailing is only possible between HW and LW when the tide is ebbing.

Max. Size: Max. permissible draft 38 ft., tidal range about 1.5 ft., max. LOA 207 m.

Radio: The radio room is sealed throughout the stay.

VHF: VHF Radio in Pilots and Agents office. The Pilots all seem to speak English. There is no VHF on pilot launches, they were expecting new sets.

Tugs: One tug available, 1,200 h.p.

Berthing: Tricontinental East Pier: Max. draft 31 ft. forward, 33 ft. aft. However the berth is being dredged to 38 ft. Max. LOA 200 m. Length of pier 555 ft. Tidal range approximately 1.5 ft. Density 1022.

Vessel loaded bulk sugar and with full ballast (except No. 3 deep tank) vessel had 5 ft. clearance at the ship's side rail.

Bulk sugar loaded from conveyor belt on the shore which is said to have a very accurate weightometer incorporated.

Loading rate with one loader 400 tonnes p.h. and with two loaders 1,000 tonnes p.h.

The warehouse on the quay is said to hold 30,000 tonnes.

Work carried out throughout 24 hours.

The stowage factor of the bulk raw sugar was 43.8 cu. ft./metric tonne.

The berth is very well fendered, however the after mooring points were poor.

Fuel: Available. Grade not known.

Fresh Water: Available. Rate 10 t.p.h. Also available by water barge.

Medical: Two hospitals and doctor available. Vaccinations by the port doctor were said to be free but ship was charged by the Agents.

Repairs: Engine work can be done with permission for immobilisation.

Repatriation: Possible.

Shore Leave: Shore pass not to be in any way defaced or shore leave for that person will be stopped. Ship's pass and Seaman's Discharge Book is handed to guard at bottom of gangway who issues another pass. This has to be exchanged for another pass further up the dock where all money is counted, all valuables are written on pass, time ashore is entered on pass and then one is free to proceed to the town by bus. There is no seaman's mission or any places of recreation, etc.

The same procedure has to be gone through on the return to the vessel.

General: The spare propeller must be sighted before loading can commence.

Flags: Courtesy flag must be higher than house flag.

Lifeboat: Lifeboats can be swung out.

Painting: Punt can be used for shipside painting.

Stores: Fruit and eggs very cheap and plentiful and of good quality.

Refuse: Garbage must be in covered containers which are sprayed together with the ship's fridges, storerooms, galley and pantries on vessel's arrival.

Ratguards: Ratguards must be on all ropes throughout vessel's stay and must not be allowed to fall or blow off or vessel is fined. Many rats were seen in the dock area.

AUTHORITIES: All port authorities are located at port of Cienfuegos.

From Cienfuegos to Casilda and Tunas de Zaza, following transportation can be used: railroad, trucks, barges.

It takes from 2 to 5 hours, according to transport conditions, to travel from Cienfuegos to Casilda or Tunas de Zaza.

Distance, by sea, from Cienfuegos to Casilda 45 miles; to Tunas de Zaza 80 miles. Suggested that railroad or highway be used to travel from Cienfuegos to Casilda or Tunas de Zaza. There is daily omnibus and auto service from Cienfuegos to Casilda and Tunas de Zaza.

There is a daily flight Havana – Cienfuegos which arrives at Cienfuegos around 1130 hrs. and departs for Havana at about 1200 hrs.

Also a daily departure of passenger railroad service Cienfuegos – Havana.

Bus line Cienfuegos – Havana has scheduled departures every 2 hours. Other bus lines have excellent service to Camaguey, Santa Clara and other cities.

Taxi service is available to any point within city limits or to any place or city and should be requested to our Cienfuegos Agency.

AGENT: Empresa Consignatarias Mambisa, Agencia Cienfuegos, Avenida 50 No. 2712, POB 420. *Tel.* 5718, 6422 and 5632 (Night: 6715 and 5332). *Telex:* 042118, 042109. *Cables:* "Mambisa Cienfuegos".

Recommended that all correspondence or instructions be sent through Havana main office. Cienfuegos Agency attends ships that operate at Casilda and Tunas de Zaza. For any information concerning vessels operating at these sub-ports, Cienfuegos Agency should be contacted.

Mail should be sent by airmail, parcels and spare parts by air express.

Any mail or parcels received at Havana by our Main Office, destination Cienfuegos, are sent daily by air express to Cienfuegos Agency, which use the same method from Cienfuegos to Havana.

(a) SUB-PORT OF CASILDA: 21.45 N. 79.59 W. (See Plan)

LOCATION: The Port of Casilda is located on the South coast of Cuba. Lat. 21° 45' N., Long. 79° 59' W.

This is the shipping port for Trinidad, distance 3 miles from Casilda.

The town of Casilda and the port are situated on the North shore of a safe, landlocked small bay, shoal over its greater part.

PILOTAGE: Pilot boards the vessel in position Lat. 21° 37' 36" N., Long. 79° 52' 32" W., that is, one mile Southwest of the lighthouse of Blanco Cay of Casilda, and from this place to Casilda Pier, the distance is 9 miles.

Blanco Cay is a small islet of 6.71 m. above sea level, having numerous palms and trees, and a lagoon in the centre.

Blanco Cay is located in position Lat. 21° 38' 28" N. – 21° 38' 14" N., Long. 79° 52' 53" W. – 79° 53' 29" W.

At the Eastern end of Blanco Cay, there is a lighthouse consisting of a metal structure 13 m. high with flashing white light.

During daytime, the tall palm trees are more conspicuous than the lighthouse.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Jobabo Channel is the main entrance to this port and runs East of Blanco Cay.

Channel bottom is soft mud and on its course has a difficult "S" shape turn where precautions should be taken, nevertheless a tug is not required for entering or sailing manoeuvres.

Entrance to and sailing from port can be effected only during daylight hours and Masters must take notice that if vessel arrives before daybreak and Pilot is required in order to anchor and wait for daylight, an extra charge will be incurred.

In the same manner, if vessel arrives at dusk, it is likely that she cannot enter port, because docking must take place during daylight hours.

ANCHORAGES: The port has several anchorages, such as: "La Poza", located at bay, 5.18 m. draft; "Bajo del Medio", an area 2.5 square miles, minimum depth 9.1 m. and length 170 m. "Jobabo" minimum depth: 11 m. and length 170 m.

Also N.E. of Blanco Cay there are anchorage areas, having 12.0 m. draft, and more.

MAX. SIZE: Vessels can enter and sail with max. draft of 7.62 m. and length up to 170 m. Tidal variation about 2 ft.

RADIO: Vessels navigating to Cuba can send their messages via "CLA" Havana Radio Station, which immediately relays the message to Mambisa Cienfuegos Agency.

While navigating in Cuban waters, Masters can contact "CLC" Cienfuegos Radio Coastal Network, which also relays the messages promptly to Cienfuegos Agency, and can answer them by the same system.

Station "CLC" also has radiotelephony.

Masters must send their ETA messages simultaneously to Mambisa Cienfuegos and Mambisa Havana.

TUGS: None.
BERTHING: *Casilda Pier:*
Berth No. 1 (West side):
(a) Draft: 7.62 m.
(b) Length: 170 m.
Cargoes handled by this side:
Imports: General cargo, wood pulp and caustic soda.
Exports: Bagged refined and raw sugar.
Berth No. 2 (South side):
(a) Draft: (bow) 7.01 m.
(stern) 7.32 m.
(b) Length: 170 m.
Only tankers operate on this side.
Cargoes handled by this side:
Imports: Fuel oil, crude oil and occasionally diesel oil.
Exports: Alcohol.
Coastal Trade: Fuel oil, crude oil and occasionally diesel oil.

Casilda Pier is built in the shape of a "L", the upright part of the "L" being the West side (158 m. length) and the inferior part, the South side (118 m. length).

The "L" shape of pier accounts for the West side being longer than the South side.

Railroad tracks are laid along its length and, at the paved West side, trucking operations can be effected.

South side is not paved, and is mostly used for operation of tankers.

Two vessels can operate simultaneously at Casilda, one at the West side of the pier loading sugar or discharging dry cargo, and another at the South side discharging petroleum products or loading alcohol.

STEVEDORES: Working periods:
Monday to Friday 0600-1000 hrs., 1200-1600 hrs.; Saturday 0600-1000 hrs., 1200-1600 hrs.; Sunday when necessary, same periods.

Raw sugar loading rate: 1,200 sugar bags, loaded per gang per day. Bags per sling: 6 sugar bags per sling. Operation capacity: only one vessel can operate.

Refined sugar loading rate: 1,500 bags per gang per day. Bags per sling: 12 bags loaded per sling.

Shore crane: No shore crane available.

Bulk sugar equipment: no bulk sugar equipment available.

Warehouses: 2 warehouses with capacity for storage of 70,000 bags of sugar. No. 1 (at the pier) 40,000 bags (250 lb.). No. 2 (at the Real Street) 30,000 bags.

TANKERS: Fuel/Crude Oil: 1×8 in. diameter.
Diesel Oil: 1×6 in. diameter.
Alcohol: 1×5 in. diameter.
Also see "Berthing".

MEDICAL: Sick crew members can be sent to Trinidad City Hospital.
FRESH WATER: Available by pipeline in limited quantities.
FUEL: Not available.
REPAIRS: Not available.
DUNNAGE: Wood dunnage is not available at Casilda. Paper dunnage is available if requested well in advance as there is a small stock in the port, and if vessel's requisition exceeds port's stock, difference can be brought from the paper mill nearby.

TRANSPORTATION: Transportation to or from Casilda is difficult.

Railroad system connects Casilda with Trinidad continuing to Cumbre, where it joins the Central railroad system, or to the city of Placetas, located on the Central highway system. From Cumbre railroad travel is available to any place in Cuba, likewise at Placetas by road.

There are also roads to Cienfuegos and Sancti Spiritus.

AUTHORITIES: Port Captain, Custom Authorities and Port Doctor travel from Trinidad to Casilda.

AGENT: If any information required regarding ships operating at Casilda, Cienfuegos Agency should be contacted. Agent in the port available, but difficult to contact. Telephone number 2077.

Crew mail or any other mail should be sent to Havana main office, from where it is sent to Cienfuegos.

(b) SUB-PORT OF TUNAS DE ZAZA: 21.37 N. 79.32 W. (See Plan)

LOCATION: Seaport of Sancti Spiritus. Port lies about 1.25 miles North of Point Ladrillo.

PILOTAGE: Pilot may board vessels either at Breton Channel or Tunas Channel.

Distance from point where Pilot boards vessel entering through Breton Channel to Tunas de Zaza anchorage is 8 miles. From place where Pilot boards vessel entering through Tunas Channel is 1.5 miles. Pilot station for Tunas Channel, located at Cayo Zaza de Fuera. For Breton Channel, entrance of Breton, that is, 8 miles from anchorage.

MAX. SIZE: Two channel entrances for this port; one through Breton Channel, which is with turns, but not dangerous. Vessels can enter or sail through this channel drawing up to 29 ft. The other one through Tunas Channel, has no turns. Vessels can enter and sail through this channel, drawing up to 22 ft. No length restrictions.

Tidal variation 1 ft. 6 in. Vessels can enter day and night.

RADIO: Via Radio Havana, for relay through Cienfuegos Agency.
TUGS: 3 tugs: *Arturo, Don Juan,* and *Tuinicu*, which tow up to 6 barges.
BERTHING: All operations are effected at anchorages.

Inner Anchorage: Located about 1.25 miles South-Westward of the town. Draft: From 24 ft. to 27 ft. Soft mud bottom.

Outer Anchorage: Located South of Pt. Ladrillos. Draft: 30 ft. (load only up to 29 ft.). Soft mud bottom.

Only one vessel at a time can be handled.

There are 9 barges available for loading sugar with total loading capacity of 7,500 bags. Sugar loading rate: 1,500 bags per gang daily. Bags per sling: 6 sugar bags loaded per sling.

Bulk sugar equipment: None.

STEVEDORES: Working periods – loading sugar: Monday to Friday 0600-1000 hrs., 1200-1600 hrs.; Saturday 0600-1100 hrs., 1200-1600 hrs.; Sunday: when necessary.

MEDICAL: For sick crew members, there is a general hospital at Sancti Spiritus.
FUEL/REPAIRS: None.
FRESH WATER: No water available.
DUNNAGE: None.
TRANSPORTATION: There are two daily car services, and also road transportation is possible by bus but car service is preferable.

AUTHORITIES: There are Custom House and Captain of the Port Delegations at this sub-port. Customs also acts for Immigration. Port Doctor located at Zaza del Medio.

Vessels can proceed directly to this sub-port where they are visited by port authorities. Means of transportation used by port authorities to give entry is by launch service.

At this sub-port Custom House and Captain of the Port have delegations, but not port Doctor.

AGENT: Vessels operating at this sub-port are attended by personnel from Cienfuegos Agency.

Mail should be sent to Havana for forwarding to Tunas de Zaza.

GUANTANAMO: 19.59 N. 75.10 W. (See Plan)

LOCATION: Guantanamo is an ample, sheltered, landlocked bay of an approximate extension of 11 miles.

The mouth of the port is formed by 2 points: Point Leeward on the West side and Point Windward on the East side. Point Windward is round shaped, drab olive coloured and with arid cliffs, where, on a grey painted building is located a lighthouse, the white light of which flashes twice every 20 seconds and is visible up to a distance of 26 miles. Point Leeward is low, having a landing field.

For description purposes, Guantanamo Bay may be divided into what could be considered outer harbour and inner harbour. The outer harbour is rugged having a number of creeks with several cays, mostly in the centre. This outer harbour is almost entirely occupied by the United States of America Naval Base and it is convenient to make clear that the merchant vessels nominated for operations at Boqueron, located in the inner harbour, do not need any permit or authorisation of said Naval Base.

The inner harbour is most ample, practically free of cays and widening out forms 2 bays, separated by Point Manati. The bay located at the N.E. is known as Joa Bay.

Guantanamo City is located at a distance of 23 km. inland, in the most important coffee-growing district of Cuba.

Guaso River flows into the Northwestern extreme of Guantanamo Bay and Guantanamo River at St. Nicolas Point.

APPROACHES: Wide entrance channel with mud bottom and free from navigational hazards.

PILOTAGE: Pilots board vessels at distance of 1 mile from Buoy No. 1 at port entrance.

Distance from where Pilots board vessels to: General anchorage: 7.5 miles. "Boqueron" Pier: 7 miles.

ANCHORAGES: Max. draft 25 ft. to 27 ft. Swinging area 400 m.
MAX. SIZE: Vessels can enter with max. draft up to 19 ft. and length 610 ft. (tankers), 558 ft. (cargo vessels). Tidal variation is from 1.5 ft. to 2.5 ft. depending on season.

RADIO: Vessels navigating toward Cuba can communicate with Mambisa Caimanera Agency through "CLA" Station at Havana and "CLN" Station in Havana, "CLM" Station in Santiago de Cuba, where message will be relayed to Caimanera by telegraph service or directly to the Agency, also through radio by the 6,810.0 kHz on U.S.B. calling "C.O.D. 81 Mambisa Guantanamo".

Masters must send their ETA messages simultaneously to Mambisa Caimanera and Mambisa Havana.

At Caimanera there are the following services:

Telephone, local and long distance, telegraph and Post Office.

There is also available telephone communication between Caimanera and Boqueron.

VHF: Caimanera Mambisa office works on Channels 16 (international call channel), 12, 13, 74 (as working channels) and 10, 11, 14, 71, 73, 68 and 9 (as coordination channels).

Harbour Master can be contacted by telephone No. 99-164 and by VHF through Channel 16. In Caimanera, where Pilot Office is located, they can be contacted by telephone No. 99-345 or by VHF on Channel 16.

Port of Boqueron: Terminales Mambisa del Oriente can be contacted by telephone No. 35085 or 91-186/187 and by VHF through Channel 16.

Bulk Maritime Terminal can be contacted by telephone No. 91-196/218 and 33512. No VHF available.

Customs House can be contacted by telephone No. 91-197.

TUGS: There are 2 tugs available for manoeuvring in the port, "Polar 7" – 750 h.p. and "Tercer Frente Oriental" – 1,340 h.p.

BERTHING: The pier is a solid concrete construction 504 ft. long and 60 ft. wide.

Along the pier and after construction of new bulk terminal for raw sugar, there will be 2 standard gauge railway tracks.

Molasses is loaded at the South side (operational side) due to construction of bulk terminal on North side.

Although the draft at either side of pier is 22 ft., vessels load only up to 19 ft., owing to the draft of the port channel.

Boqueron Pier:
(a) North Side:
Length: 504 ft. Draft: 22 ft.
Under development.

(b) South Side:
Length: 504 ft. Draft 22 ft.

Only one vessel can operate at present.

One vessel can load raw sugar by means of the bulk terminal crane (rate of cargo approximately 700 tonnes per hour) which runs alongside the pier or if a self-sustained vessel, by its own gear.

Also see "Shipmaster's Report" dated March 1993.

STEVEDORES: Sugar and molasses loading operations are carried out at this port.

Working periods at Terminales Mambisa for loading or unloading operations are: 0700 hrs. – 1100 hrs., 1300 hrs. – 1700 hrs. from Monday to Friday, and 0700 hrs. – 1100 hrs. on Saturday. Sunday work whenever necessary.

Working periods for Maritime Bulk Terminal are continuous since they load vessel until finished every day of the week during crop/exportation season.

MEDICAL: At Caimanera there is a modern hospital equipped for both medical and dental services, where crew members are attended when required.

In serious cases or when highly specialised medical care is required, the patients are sent by ambulance to Guantanamo Provincial Hospital.

TANKERS: Molasses pumping rate average of about 35,000 gallons per hour.

FRESH WATER: Can only be supplied by Boqueron Pier through 2.5 in. pipe-line. Delivery rate is 10 t.p.h. Vessel must furnish hoses.

FUEL/REPAIRS: Not available.

TRANSPORTATION: Transportation between Caimanera and Boqueron is effected only by means of launches.

Distance between Caimanera and Boqueron is 1.5 miles.

From Caimanera to Guantanamo, travelling could be effected either by railroad or paved highway and for both routes the distance is 23 km.

There are 3 daily scheduled trains, 2 bus departures and Agency car can also be used, travelling time being approximately 40 minutes.

From Guantanamo to Havana there is a scheduled bus service with several departures daily. Travelling time from Guantanamo to Havana by bus is 16 hours. Also there is a daily departure at 0830 hrs. of an airway service between Guatanamo and Havana.

There is a very efficient service of minibuses for the transportation of travellers to and from the airport.

From Guantanamo to Santiago de Cuba there is also bus service with limited departures daily, travelling time being 2 hours.

DUNNAGE: Although dunnage materials can be obtained at Guantanamo, if possible, it is preferable that vessel arrives supplied with same, because sometimes the requisition of the vessel may be higher than the port stock, and that could mean delays.

Whenever necessary to request dunnage materials at this port, the requisition should be made not less than 5 days in advance of vessel's arrival.

GARBAGE DISPOSAL: Service not available.

WASTE OIL DISPOSAL: Serivce not available.

SEAMAN'S CLUBS: None.

CURRENCY: Cuban Peso.

SHIPMASTER'S REPORT: March 1993.

Vessel:
Deadweight: 14,970 tons.
Arrival Draft: 19 ft. 00 in. (maximum).
Sailing Draft: 19 ft. 00 in. (even keel).
Cargo Loaded: Bulk raw sugar (6,357 tonnes).

Berth: Boqueron Terminal.

Location: The port is located on the East coast of the bay in approximate position Lat. 19° 58' N., Long. 75° 07' W.

Documents:
12 copies Crew List.
3 copies Crew Effects List (Cuban forms).
3 copies Ship's Stores List (Cuban forms).
3 copies Foreign Money List.
1 copy Health Declaration (Cuban form).
4 copies Stowage Plan.

Pilotage: Pilots board vessels at the entrance of the channel near Buoy No. 1 (red). To avoid delays/fines, vessels must report ETA to "Mambisas Caimanera", not less than 24 hours prior to arrival. Two hours prior to arrival, vessels can contact Agents and Pilots by VHF Channel 16.

Approaches: The main channel is well marked, but not wide. No difficulties in navigation or manoeuvres were experienced.

Restrictions: Vessels can enter and sail with max. draft up to 19 ft. Entry and departure is performed during daytime only, from 0600 hrs. to 1730 hrs.

Anchorages: The general anchorage is located South of Joa Bay, near and West of Boqueron Pier in depths of between 21 ft. – 24 ft.

Berthing: Boqueron Terminal: Only one vessel can operate at Boqueron port.

North Side: Draft 19 ft., length 500 ft.

Cargo handled: Presently none, but mostly molasses.

South Side: Draft 19 ft., length 500 ft.

Cargo handled: Bulk raw sugar. Mechanical loading at 600 tonnes per hour (approx.). Bagged raw sugar can also be loaded.

Tugs: One tug available at Boqueron Pier, assisting only.

Fresh Water: Available at both sides of the pier, rate approximately 5 t.p.h. – 6 t.p.h.

Transportation: From Boqueron to Caimanera, only launches can be used. Price about U.S.$ 40.00.

Communications: At Caimanera, there are telephone services for local calls at Mambisas office, and for international calls without difficulties at Caimanera Hotel.

Health: Free Pratique given by radio (procedure may be requested via local Agents), otherwise on arrival at general anchorage.

Authorities: All authorities located at Caimanera. Harbour Master, Police, Customs, Port Doctor and Agent boarded at general anchorage. Prior to sailing, vessels are normally searched by the authorities for any stowaways.

Shore Leave: Crew members are allowed to go ashore. Shore leave passes are not required.

AUTHORITY: Port Authorities are located in Guantanamo City and Caimanera where Mambisa Agency Office also is located. Caimanera lies across the bay, just in front of Boqueron Pier, at a distance of 1.5 miles.

The Harbour Master can be contacted by VHF Channel 16 or telephone No. 99-164.

AGENT: Empresa Consignataria Mambisa, Agency No. 11, Guantanamo, Linea No. 19, Entre Marina y Correos, Apartado No. 5, Caimanera, Provincia Guantanamo, Post Code 97-800. Telephone: 99-186 (Agency), 99-135/204 (Night). Telex: 062138. Cables: Mambisa Guantanamo/Caimanera or Boqueron.

Agency VHF works on Channel 16.

Mail and Parcels: Must be sent to the Main Office at Havana, because vessels loading sugar at Guantanamo usually load their cargo in a very short time and all mail and parcels received would be sent to Guantanamo or a second loading port, whichever is deemed to ensure delivery.

GUAYABAL: 20.42 N. 77.36 W. (See Plan)

PILOTAGE: The pilot boards the vessel at the entrance of Cuatro Reales Channel, in position Lat. 20° 27' 00" N., Long. 78° 00' 30" W.

At this place, the vessel is one and a half miles East of Carapacho Cay, where the lighthouse of the same name is located.

From this point to Guayabal Pier, there is a distance of 28.2 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: The entrance to the port is effected through Cuatro Reales Channel, which in its lower part is 13.72 m. deep and 310 m. wide.

In this narrowest part of the channel, there is a turn of about 20°, where precautions must be taken.

Transit of the channel may be performed during day, and there is no limitation as to the length or draft of the vessel, but the conditions and limitations of Guayabal Pier and Inner Harbour must be taken into consideration, and are fully explained under "Max. Size".

Tug assistance is required for mooring/unmooring.

From Guayabal Pier to the South, there is a dredged channel 2,474 m. in length and 60 m. wide. At about 80 m. from the pier head, the channel opens in the shape of a funnel and from Guayabal's Inner Harbour which is 255 m. wide.

The above mentioned channel was never racked, and due to that fact, its bottom is irregular, with loose stones and deep caves, which causes anchors to foul and affects the vessel's manoeuvers, but in the inner harbour there is no such problem.

ANCHORAGES: There is an ample anchorage area of hard mud bottom from the South of the buoys, marking the entrance to the dredged channel, which leads to the dock, up to about 3 miles to the Southwest. The average depth is 12.27 m. No length limitations for entering/sailing from anchorage.

RESTRICTIONS: Daylight only entering and sailing whilst repairs underway.

MAX. SIZE: Official draft for the port is 10.67 m., but Pilots advise max. draft with which vessels may sail from the berth is 9.9 m. at HW. There is no length limitation.

COMMUNICATIONS: All radiograms must be sent to Mambisa – Santa Cruz del Sur. All telephone communications between Santa Cruz del Sur and Guayabal, as well as with any port of the country are affected through the new automatic telephone system.

Master's ETA messages should be sent simultaneously to Mambisa Santa Cruz del Sur and Mambisa Havana. Mail should be sent to Mambisa main office Havana, from where it is forwarded to Santa Cruz del Sur.

TUGS: 1×1,480 h.p. and 2×150 h.p.

BERTHING: The West side of the pier is specially designed for loading bulk raw sugar mechanically and is the deepest side where vessels can be loaded up to 9.45 m. for sailing at high tide or up to 8.84 m. to sail at any time.

It must be understood that such draft of 9.45 m. is given only for sailing loaded, but does not indicate that an arriving vessel with 9.45 m. draft can dock, even at high tide.

This situation is originated by the dimensions of the manoeuvring area around the pier.

Max. draft allowable for vessels arriving to complete cargo at Guayabal (molasses, alcohol, or sugar) at the West side of pier is 7.62 m.

A tanker nominated for discharging fuel oil at Guayabal must arrive with a max. draft of 9.14 m. to be docked at the West side, bow facing shore, and must discharge until a draft of 7.62 m. or less is attained, in order to turn around and sail out.

At the East side of the pier vessels can dock bow facing shore, with max. draft of 7.32 m. forward and 8.23 m. aft.

Vessels nominated to load bulk raw sugar at Guayabal must arrive clean and ready to load.

Any undesirable material or any remaining dunnage materials, must be discharged at a previous port, because at Guayabal the only available personnel are those operating the equipment of the Bulk Raw Sugar Terminal and no stevedores are available.

Guayabal Pier: Some repairs are underway at the installation, official draft has been reduced to 9.45 m. (31 ft.), due to obstruction in the channel.

East side: Draft: 7.32 m. forward, 7.62 m. aft. Maximum length: 169 m. Maximum length will not exceed 169 m. until repairs are finished, when original length (190 m.) is returned to.

Usually docking manoeuver is bow facing shore, in which conditions vessels are permitted with a maximum draft of 8.23 m., provided that when undocking, maximum draft does not exceed 7.62 m.

Fuel oil, molasses and alcohol are handled by this side.

West side: Draft 9.45 m., length 170 m., breadth 25.0 m. Over 25.0 m. breadth, draft 8.84 m. For sailing only in high tide.

Usually docking manoeuver is bow facing sea, since vessels enter port to load bulk sugar, and a shallow of 7.62 m. limits the necessary swinging for vessels to sail, which compels vessels to enter the inner harbour in ballast. Vessels with a length up to 150 m. can dock with a draft of 9.14 m. Vessels with length 150 m. – 170 m. cannot exceed 7.62 m. draft.

Vessels with a length over 170 m., cannot enter with a draft exceeding 7.32 m.

While works of enlargements and repairs take place, manoeuvers for entering/sailing must be carried out during daylight, when meteorological conditions permit it, with special caution and 1st quadrant winds. In cases of 3rd and 4th quadrant winds (pushing), docking manoeuvers will not be carried out.

Manoeuvers must be supported by a 1,200 h.p. tug as minimum. On this side, the equipment for loading bulk sugar operates. The boom of the equipment can reach out up to 10.36 m. from the outer edge of pier.

Cargoes handled at this side: Bulk raw sugar, molasses and alcohol and oocasionally fuel oil, jute bales and spare parts for sugar mills.

Port Operational Capacity: Two vessels can operate simultaneously, one at the West side of the pier loading sugar, and another at the East side loading molasses or alcohol or discharging fuel oil.

Cargoes handled by the Port:

Exports: Raw bulk sugar, molasses or alcohol.

Imports: Fuel oil and occasionally empty jute bags or spare parts for the sugar mill of the vicinity.

Coastal trade: Fuel oil (discharge).

STEVEDORES: Sugar loading in bulk. Loading of molasses and alcohol takes place frequently. Fuel oil and general cargo discharge.

Working Hours: Monday to Friday: 0600–0800 hrs., 0830–1100 hrs.,1200–1530 hrs.

Saturday: 0600–0800 hrs., 0830–1030 hrs.

Sunday: When it has been necessary, work has been performed.

Sugar in bulk – at pier there is an installation operated by electric motor control which moves a convex-shaped conveyor and transports the bulk sugar from warehouse to the vessel. 2 thrower machines, 600 and 400 t.p.h. respectively. Average loading rate about 250 t.p.h. although occasionally average of 400 tons has been obtained. There is some time lost on account of shifting the crane. Occasionally shovellers are required, and work continues 24 hours a day.

General cargo – it is not customary to receive general cargo at this sub-port, although on occasion bales of empty jute bags have been received, destined to neighbouring sugar mills. At present there are no facilities for discharge of general cargo, and no shore cranes available.

TANKERS: Shipment of molasses and alcohol is quite frequent. Vessels discharging fuel oil may berth with max. draft of 27 ft. without touching bottom, which is of soft mud.

MEDICAL: Medical services can be rendered by medical consulting office at Guayabal. For X-rays or dental care, patients are sent to "Amancio Rodriguez".

In cases requiring a specialist, surgical attention, etc., or for hospital treatment, patients are sent by ambulance to Camaguey Hospital, 135 km. from Guayabal.

FUEL/REPAIRS: Not available.

FRESH WATER: Supplied at pier by pipeline.

TRANSPORTATION: Transportation to and from Guayabal is not difficult.

From Havana there is one daily bus to "Amancio Rodriguez" Sugar Mill. From "Amancio Rodriguez" to Guayabal Port, there are daily bus services from 0500 hrs. to 2030 hrs.

From Camaguey, there are 3 daily departures to "Amancio Rodriguez". Also there are railroad services between "Amancio Rodriguez" Sugar Mill and Guayabal Port, as well as taxi service.

A new highway has been constructed from "Amancio Rodriguez" Sugar Mill to Guayabal Port.

SHIPMASTER'S REPORT: 1978.

Pilotage: Pilots are arranged by the Agent at Santa Cruz del Sur, (Mambisas). The boarding station shown on charts and mentioned in Pilot Books is now non-existent. Instead the Pilot comes direct from Santa Cruz when a ship is expected and boards the vessel between No. 2 Buoy and No. 4 Buoy South of the entrance to Cuatro Reales Channel. Vessel then proceeds to Guayabal, where it is necessary to anchor off the port for clearance.

Approaches: The navigable width of the approach channel, is at present 50 m., the buoys being moved accordingly, with an average depth of 32 ft. The centre alignment of the approach channel is 011.5° T. This is indicated by two fixed leading marks. The forward one, a metal pole with a yellow triangle mark, apex up, at night a fixed red light. The rear mark is a yellow triangle apex up, attached to the top of a water tank (on a framework tower) at night a fixed green light. This leading line leads "down" the Eastern side of the one and only jetty, along the top of the elevated (roofed-over) conveyor belt.

Documents/Customs:

Crew Declaration (Manifest)	6 copies
Steward's Store List	6 copies
Deck/Engine Store List	6 copies
Maritime Declaration of Health	3 copies
Dangerous Drugs List	6 copies
Slop chest/Bonded stores	6 copies
Explosives List (Distress Rockets, etc.)	6 copies
List of foreign currency	5 copies
List of ship's equipment, i.e. films, binoculars, T.V.s, sextant, etc.	4 copies

All foreign currency, cameras, dangerous drugs, and crew presents to take home were all sealed up in the bond locker along with its contents. Meat room sealed up. Although all our meat is of Australian or New Zealand origin, some of the lamb had a USA wrapper on it which made it American meat and this is not acceptable in Cuba. As far as I can understand the meat from Australia, New Zealand, Japan, and Russia only is acceptable in Cuba.

SHIPMASTER'S REPORT: April 1984.

Vessel loaded raw sugar in bulk:

Documents:

9 copies Crew List.*
3 copies Animal List.
2 copies List of Ports.
4 copies Narcotics.
4 copies Arms and Ammunition.
5 copies Provisions.
3 copies Store List.
3 copies Bonded List.
1 copy Vaccination.
4 copies Crew Currency.†
4 copies Total Currency.‡
2 copies Crew's Effects .§

Notes:

*On sailing they requested another 6 Crew Lists.

†Crew Currency List – With all paper money that every crew has in his possession also the coins.

‡Total Currency List – With the total amounts of foreign currency held by crew and vessel. i.e. U.S. Dollar 4,525.00; German Mark 150.00; Greek Drachmas 25,500; Japanese Yen 15,000, etc., including total coins.

§Crew's Effects – Vessel is provided with special forms. Each form in duplicate is to be filled for each crew member.

Pilots: Pilot comes aboard at Canal de Cuatro Reales. Same Pilot berths the vessel and remains on board until loading completed to unberth and sail the ship.

Approaches: Dredged channel. Vessels can sail at high water with draft up to 32 ft. No night sailing, berthing or unberthing.

Max. Size: Vessels of about 210 m. length are handled.

Berth: Works in progress to lengthen the berth by about 40 m. Up until now the first 20 m. are in preparation.

Max. draft alongside West side of Pier, 35 ft. aft and 33 ft. for'd.

Equipment: 1 convex-shaped conveyor with trimmer machine. Average loading rate 600/650 tonnes/p.h. 24 hours continuous working. The boom extends about 35 ft. and is about 30 ft. – 32 ft. above sea level.

Sugar in bulk loading at about 300,000 tonnes per month. No sugar loaded in bags.

Fresh Water: Available ex-wharf, rate about 3 t.p.h. at a cost of about U.S.$2.70 per ton.

Doctor: Crew must go to another town, but usually no transportation, except emergencies.

Repatriation: Possible. Crew will travel by boat to Santa Cruz del Sur (about 3 hours), and then by car to Havana (about 12 hours), where the International Airport is located.

Ship Chandler: Comes from another port, charging about U.S.$100.00 for transportation.

Population: Population of this port about 1,500.

SHIPMASTER'S REPORT: March 1993.

Sub-Port of Santa Cruz del Sur.

Vessel:

Arrival Draft: 19 ft. (even keel).

Sailing Draft: 29 ft. 08 in. (even keel).

Cargo Loaded: 7,643 tonnes (bulk raw sugar).

Total Cargo Loaded: 14,000 tons (includes 6,357 tonnes loaded at previous port, Guantanamo Bay).

Documents: See Guantanamo Bay – Shipmaster's Report dated March 1993.

Pilotage: Pilot boards vessel at the entrance of Cuatro Reales Channel, 1.0 miles – 1.5 miles East of Carapacho Cay (position Lat. 20° 27' N., Long. 78° 00' W.).

Approaches: Precautions must be taken when approaching Cuatro Reales Channel with heavy rain, strong winds and poor shore radar targets.

Restrictions: Transit of the channel performed in daytime only.

Anchorages: Good and safe anchorages.

(1) At Cuatro Reales Channel in position Lat. 20° 28' N., Long. 77° 59.5' W. (approx.).

(2) At Guayabal area, South of the buoys marking entrance of the channel, depths 42 ft. (approx.).

Berthing:

East Side: Docking bow facing to shore. Max. length 199 m. (650 ft.).

Max. length of vessels: 179 m. (580 ft. – 590 ft.).

Max. berthing/sailing draft: 11.5 m. (37 ft. – 38 ft.).

Cargo handled: Fuel oil, molasses and alcohol.

West Side: Docking bow facing the sea. Max. length 199 m. (650 m.).

Max. length of vessels: 179 m. (580 ft. – 590 ft.).

Max. berthing draft: 7.30 m. – 7.40 m. (24 ft. – 25 ft.).

Max. sailing draft: 10.2 m. (33 ft. – 33 ft. 06 in.).

Cargo handled: Bulk raw sugar, molasses and alcohol.

Loading capacity of bulk raw sugar: Max. 700 t.p.h. at present, 2,500 tons per day, due to lack of cargo.

Tugs: One tug of 800 h.p. One boat of 200 h.p. (approx.), normally used for boat service to the anchorage.

Fresh Water: Can be supplied at both sides of the pier. Rate 6 t.p.h. – 8 t.p.h. Ship's hoses used.

Transportation: Boat service can be arranged from anchorage to shore. Prices: From 0700 hrs. to 1700 hrs., Monday to Friday, approximate U.S.$40.00 one way only. Saturday and Sunday, plus 50%. From 1700 hrs. to 0700 hrs. Monday to Friday, plus 50%.

Medical: In case of emergency, crew members sent to Camaguey Hospital 135 km. from Guayabal. In non-emergency cases, crew members sent to medical office at Guayabal or Amancio.

Health: See Guantanamo Bay – Shipmaster's Report dated March 1993.

Communications: ETA messages should be sent to "Mambisas Santa Cruz del Sur".

Local telephone services can be arranged at Mambisas office.

International calls, which must be paid for in cash, can be arranged from a private house near the port.

Bunkers/Repairs: Not available.

Fresh Provisions: Limited seasonal fresh provisions only can be supplied.

Shore Leave: Crew members are allowed to go ashore. No time limitation, and shore leave passes not required.

AUTHORITIES: Port Captain and Immigration's Delegations at Guayabal. Customs delegate travels from Santa Cruz to Guayabal to conduct clearance. Distance 24 miles (by sea) from Guayabal to Santa Cruz. By road 60 km. Time 3 hours by sea and 2 hours by road.

AGENT: Postal Address; Empresa Consignataria Mambisa, Agencia de Guayabal, Apartado No. 49, Santa Cruz del Sur, Prov. de Camaguey. Tel: 2547 (office), 2244, 2141 (night).

Office Address: Guayabal Bulk Sugar Terminal, 3rd Floor, Tel: Las Tunas 29 (office), 46 (night). Telex: 031285. Cables: Mambisa Santa Cruz del Sur.

HAVANA: 23.09 N. 82.21 W. (See Plan)

PILOTAGE: Compulsory. For requesting Pilot, in daytime or at night, ships shall use signals established in International Signal Code, also they can direct light signal to Morro semaphore and make sound signals at intervals.

Pilot service is compulsory for all foreign ships more than 40 gross tons.

Master must inform Pilot: Port of origin, illness of any person on board, or if ship is carrying explosive or easily inflammable materials, in which case the ship shall be anchored in special berths and shall be under control of port authorities.

Any ship in port requiring immediate Pilot services should either call telephone numbers: 62–3602 or 62–2896; or hoist "G" Flag, sound 2 prolonged blasts.

Pilots board vessels approximately 1 mile from port mouth, although in some cases, especially at night-time, they will go out about 3 miles to meet incoming vessels.

Distance from where Pilots board vessels up to port anchorage or wharves is about 1.25 miles.

APPROACHES: The port is entered through a straight channel with Morro Castle to the East and La Punta Castle to the West.

The bottom is muddy, with no narrowness, but at the entrance there is a strong current which is to be taken into consideration in the entry manoeuvres of any vessel.

Port can be entered to or sailed from, either in day or night time and it is not necessary to wait for slack or favourable tide, except tankers drawing 11.43 m. which can enter only at high tide.

While approaching Havana the most remarkable points of visual orientation are its tall buildings and Morro Castle, located on the East side of the entrance.

ANCHORAGES: There is an ample anchorage zone area where loading and discharging operations are performed.

MAX. SIZE: Max. LOA 230 m. Max. draft 11.43 m. Max. draft in channel at low tide is 12.8 m. Max. draft in main anchorage is 10.06 m., minimum depth throughout the bay (except the refinery) is 10.06 m. Tankers can enter drawing up to 11.43 m., as they take special course up to the Refinery Piers, once they are inside bay. Tidal variation about 45 cm.

RADIO: Vessels navigating to Cuba can communicate with Mambisa Havana through "CLA" Havana Radiotelegraphy Station which relays messages immediately by telex.

While approaching Havana vessels can communicate by VHF radiotelephony with:

Mambisa Agency: Channel 12.

Pilots: Channel 13.

Both, Agency and Pilots, are on the air 24 hours of the day.

Masters must send their ETA messages to Mambisa Havana.

The following means of communication are available at Havana:

Cable: C.L.A. International, Western Union.

Telephone: Local, long distance and international.

Telex: Local, National telex system and international.

Airmail and Air Express: National and international.

At the main office in Havana there are the following Telex Nos. 051-1197, 051-1148, 051-1890, 051-1829, and Telex No. 051-1668 for advance funds matters, and No. 051-2178 for control of ship's position, which is the quickest means of communication available.

TUGS: Supplied by Port Authority. 7×300 h.p. – 1,500 h.p.

BERTHING: The port is divided into numerous docks, which are detailed below.

Andres Gonzalez Lines Dock: This coastal dock is used for the discharge of fertilisers in bulk and coal. It is 332.2 m. long with drafts that vary from 6.8 m. to 9.0 m. There are railway connections and an overhead discharge crane.

Tallapiedra Dock: This dock used in discharge of lighters, has a length of 138.1 m., depth alongside 4.27 m. at N.E. end, 5.73 m. at centre and 4.57 m. at the S.W. end.

Sierra Maestra Terminal:

Pier	*Length of Pier* (m.)	*Max. draft with which vessels may perform operations* (m.)
Pier No. 1 (North Side)	201.8	8.84 – 9.75
Pier No. 1 (South Side)	201.8	9.14 – 9.75
Pier No. 2 (North Side)	201.8	9.14 – 9.75
Pier No. 2 (South Side)	183.5	9.14 – 9.75
Pier No. 3 (North Side)	190.5	9.14 – 9.75
Pier No. 3 (South Side)	171.3	8.23 – 9.75

There is one warehouse at each of these piers and all have rail connections. The terminal is used for loading and discharging general cargo.

Margarito Iglesias Terminal:

This Terminal consists of 3 concrete piers, which are in bad condition and are used exclusively by units of each owner.

Margarito Iglesias No. 4 (Havana Central Pier): This pier is used for discharge and loading of general cargo. It has a railroad siding connecting to the main tracks, and trucking operations can also be performed.

North side: Length 132 m., width 61 m. and depth 4.57 m. – 9.14 m.

South side: Length 146 m., width 61 m. and depth 7.3 m. – 9.75 m.

It is forbidden to dock vessels over 100 m. length, when there are vessels docked at South side of Margarito Iglesias No. 3 Pier, unless those vessels do not exceed 80 m. length.

Aracelio Iglesias Terminal: This terminal used in the discharge and loading of general cargo, consists of a dock and a pier. The dock is 174.6 m. long and 13.41 m. wide and depth alongside ranges from 6.70 m. to 8.53 m. Dock has one sheltered warehouse with capacity of 110,463 cu.m. Pier (North side), length 157.8 m., width 36 m., depth 8.23 m. – 10.05 m.

Pier (South side), length 137 m., width 32 m. with depth alongside 8.23 m. – 10.36 m.

Pier has a sheltered warehouse with a capacity of 30,880 cu.m.

Both dock and pier have railroad siding connecting with the main track.

Juan Manuel Diaz Terminal: The terminal used in discharge and loading of general cargo consists of two docks and one pier. Dock No. 3: Length 158.8 m., width 17.07 m. with depth alongside of 6.40 m. at the N.E. end, 6.70 m. at the centre and 7.92 m. at S.W. end. Dock has a sheltered warehouse with a capacity of 50,230 cu.m. Pier (North side) length 152.4 m., width 38.10 m., depth alongside 6.1 m. – 7.01 m. Pier (South side), length 161.5 m., width 38.10 m. with depth alongside 7.31 m. – 10.25 m. Dock No. 2: Length 146.6 m., width 9.45 m. and depth alongside 5.79 m. – 7.32 m. Pier has sheltered warehouse with capacity of 39,821 cu.m. while Dock No. 2 has a sheltered warehouse with capacity of 112,471 cu.m. Both docks and pier have railroad sidings connecting with main track.

Antonio Guiterras Dock: This dock, used in the discharge of lighters of heavy lifts, from vessels performing operations in Bay, is 258.1 m. long, depths alongside (from Tallapiedra Pier No. 2) 7.92 m., 6.40 m., 5.49 m. and 3.35 m. If no lighter is used, vessels drawing up to 7.01 m. only can berth at this dock.

Osvaldo Sanchez Docks: These docks used chiefly in discharge of lumber. Dock No. 1 (formerly Atares), is 130.5 m. in length, 9.14 m. wide. Max. draft on even keel is 4.88 m. Dock No. 2 (formerly Vaccaro) is 155.7 m. long, 9.14 m. wide. Max. draft on even keel is 5.49 m. Berth presently under repair. These docks have sheltered warehouses. There are no sidings.

Melones Dock: This dock has installation for discharge of fuel oil as well as an overhead crane for discharge of fertilisers and coal. Dock length 218.8 m., width 10.67 m. Depth alongside 5.49 m. at the N.E. end, 3.96 m. in centre, 3.05 m. at the S.E. end. Not in operation at present due to shallow draft. No sidings. Storage in open.

Puerto Pesquero de la Habana (Havana Fishing Port): This is a new installation owned and operated by the Cuban Fisheries Ministry and has modern and efficient facilities, including large refrigerated warehouse.

By coordinating with operators, these facilities are frequently used to handle import and export of refrigerated cargoes, other than fish.

Berth No.	*Length* (m.)	*Max. Draft** (m.)
1	260	7.92
1-A	137	7.92
2	130	7.92
3	200	7.92
3-A	89	7.92
4	160	7.32
Floating Dock		
East Side	127	6.71
West Side	128	6.70
5	137	7.92
6	137	4.79

* Max. draft on even keel.

Haiphong Terminal: (Formerly Maritima). This dock is used for the discharge and loading of general cargo. Length of dock 850 m. Max. draft 9.75 m. at Berths No. 1, 2, 3 and 4; 8.08 m. – 8.6 m. at Berth No. 5; 8.23 m. near Berth No. 2, due to shallow patch. This dock has 2 large warehouses and sidings, although at present only trucking operations are performed. It has 12 gantry cranes with lifting capacity of 5 tons – 8 tons and berthing space for 5 average sized vessels. Ro/Ro vessels dock at Berth No. 4.

Jose Antonio Echeverria Pier (Formerly Burrus Silos Pier): Dock used for discharge of bulk shipments of grain. Equipped with elevator and silos having storage capacity of approximately 20,000 tons. Permitted discharge rate of approximately 1,200 tons per day. Length of dock, 152 m., width 79 m. and depths alongside 8.84 m. – 9.75 m.

Manuel Porto Pena No. 1: This dock used in discharge and loading of general cargo, lumber, refrigerated cargoes, etc. There are also installations for the discharge of used lubricating oil and petroleum products. Length of berth 140 m., max. draft on even keel 7.62 m.

Also see "Shipmaster's Report" dated April 1993.

Manuel Porto Pena No. 2: This dock is used for loading and discharging sugar and general cargo. Length 165 m., max. draft on even keel 9.39 m. No warehouse, but is equipped with railroad sidings and has installations for discharge of fuel oil.

Turcios Lima (Grain Silo Dock). Installation for discharge of bulk shipments of grain. There are 36 grain silos and 18 part silos with a total capacity of 30,000 tons. Unloading rate 100 t.p.h. This dock has 1 sheltered warehouse and railroad sidings, and installations for the discharge of fuel oil and gasoline.

Extractora de Aceite Berth: This dock is not in use at present.

Quinto de Regla Pier: This pier used mainly for loading of sugar. Pier (South side) 189.6 m. long, 10.36 m. wide with depth alongside 8.23 m. at S.W. or Bay end, 7.62 m. at the centre and 5.18 m. at the S.E. end. Pier (North side), length 104.5 m. width 16.46 m., depth alongside 8.53 m. at N.W. or Bay end, 7.92 m. at centre and 6.70 m. at the N.E. end. Pier has railroad sidings.

Fresser Pier: This pier has installations for loading molasses. Pier (South side), 141.7 m. in length, 9.14 m. in width with depth alongside 8.23 m. at S.W. or Bay end, 7.62 m. at the centre and 7.01 m. at S.E. end. Pier (North side), 124.1 m. in length, 9.14 m. in width with depths alongside of 6.70 m. at N.W. or Bay end, 7.92 m. at the centre and 7.62 m. at West end. This side of pier used only for docking purposes.

Edificios No. 1 and No. 2: These docks used in discharge of fertilisers also have installations for loading/unloading molasses.

Edificio No. 1 Dock: Length of dock 157.2 m., width 7.62 m. with depths alongside 6.40 m. – 6.70 m. of water throughout whole dock.

Edificio No. 2 Dock: Length 115.8 m., with 32.91 m. with depth alongside 5.79 m. at N.E. end, 4.27 m. at the centre and 4.27 m. at S.W. end. No operations are performed at this dock due to its shallow draft. Sheltered warehouses with a total capacity of 64,645 cu.m.

Fertiliser processing plant.

Facilidades Maritimas Dock: This dock used chiefly for loading of molasses and discharge of tallow and chemical products, has lengtn of 248 m., width 7.92 m. and depth alongside 8.2 m. – 8.84 m. Dock has railroad sidings and is suitable for docking.

CONTAINER/RO-RO FACILITIES: Available.

EQUIPMENT: As the Port of Havana owns and operates a large number of auxiliary equipment, only the most important of those are listed here:

Four floating cranes: (1×100 tons) (3×35 tons) lifting capacity.

40 shore cranes: Ranging from 30 tons to 5 tons lifting capacity.

Six cargo barges: 125/150 tons cargo capacity.

STEVEDORES: Monday to Friday: working periods 0700 – 1300 hrs. and 1300 – 1900 hrs., although if necessary, 2 additional periods of 6 hours each may be worked. Saturday: Same as above. Sundays: No work performed.

Raw Sugar: Approximately 1,400 bags of raw sugar loaded per gang period. Six raw sugar bags loaded per sling. Loading raw sugar on 3 vessels simultaneously.

Refined Sugar: Approximately 3,800 bags of refined sugar (of 50 kg.) loaded per gang period. 12–15 bags loaded per sling.

General cargo: Approximate average discharging rate per gang hour:

General cargo about		10.0 tons
Bagged merchandise	up to 51 kg.	16.0 tons
Bagged merchandise	up to 92 kg.	17.0 tons
Bagged merchandise	more than 92 kg.	19.0 tons
Wood		8.4 tons
Fertilisers:		
Superphosphate		9.9 tons
Simple Superphosphate		8.1 tons
Ammonium		9.0 tons
Potash		9.9 tons
Muriate (Chloride)		10.5 tons
Sulphur		10.3 tons
Phosphoric Rock		11.9 tons
Triple Phosphate		8.0 tons
Sodium Silicate		9.0 tons
Ferromanganese		9.0 tons

Floating Cranes:

Pablo Sandoval	100 tons – boom 51 m.
Frank Pais	25 tons – boom 10 m.
Matilde	6 tons– boom 9 m.

MEDICAL: Crew members requiring medical attention are treated at "Cira Garcia" Hospital where they can be hospitalised if necessary.

Those cases requiring dental care are treated at "Enrique Saiz" Dental Clinic.

TANKERS: Average pumping rate of molasses is about 60,000 gallons per hour. Average pumping rate of fuel variable, from 3,000 up to 15,000 b.p.h. Also see "Berthing".

Nico Lopez Oil Terminal:

This Terminal is used exclusively for the discharge of crude oil and petroleum by-products and loading by coastal trade vessels of petroleum products for the outports.

Nico Lopez Pier No. 1 (Formerly Standard Oil Pier):
North side:
Length: 313 m.
(a) Draft even keel: 10.67 m.
(b) LOA: 200 m.
South side:
Length: 302 m.
(a) Draft even keel: 11.40 m.
(b) LOA: 245 m.

Although the pier admits vessels with length up to 245 m., the port only admits 230 m. LOA.

At the centre of the pier, there is a loading and discharging platform measuring 24 m. × 12 m. wide.

Nico Lopez Pier No. 2 (Formerly Shell Oil Pier):
North side:
Length: 302 m.
(a) Draft even keel: 11.43 m.
(b) LOA: 230 m.
South side:
Length: 302 m.
(a) Draft even keel: 11.43 m.
(b) LOA: 230 m.

At the centre of the pier, there is a loading and discharging platform measuring 24 m. × 12 m. wide.

Muelle Nico Lopez No. 3:
(a) Draft even keel: 4.0 m.
(b) LOA: 100 m.
- Connections at Pier No. 1: 10 in. and 6 in.
Connections at Pier No. 2: 8 in. and 6 in.
Reductors are available.

TELEPHONES: May be installed on board at Master's request.

FRESH WATER: Vessels can be supplied with fresh water alongside and by barge in the bay. Six barges available with capacities of 80 tons – 400 tons. Average rate of delivery about 100 t.p.h.

FUEL: Vessels can be supplied with bunkers at Havana, and following types are available:

Regular diesel oil, regular fuel oil, I.F.O. mixtures (intermediate fuel oil).

Diesel oil is supplied by a 350 ton capacity barge, and fuel oil by a 1,500 ton capacity vessel which is towed to piers or anchorage in order to fulfill deliveries. This vessel also delivers the I.F.O. mixtures and is named 'Playa Colorada'.

I.F.O. mixtures are prepared at the following viscosity degrees: 50 – 200 – 400 – 600 – 800 – 1,000 and 1,500 maximum. (Redwood International Scale, at 100°F).

I.F.O. mixtures are only available at the Port of Havana.

In addition, there are 3 barges with 500 tons, 465 tons and 80 tons capacity.

Note to Chief Engineers: It is advisable when ordering I.F.O. mixtures to specify always maximum and minimum allowable viscosity of the product.

REPAIRS: Reliable repair shop (Tel: 62.0009).

DRY DOCK: Dry dock operated by Empresa de Talleres Maritimos, an operating unit of Empresa de Navegacion Mambisa. Berthing capacity 134 m. in length and 27.73 m. width, and can handle vessels up to 7.01 m. draft.

East Lateral: Length 194.4 m., width 11.58 m., depth alongside 10.06 m. at Bay end, 8.84 m. at centre and 5.49 m. at shore end.

West Lateral: Length 225.5 m., width 11.58 m., draft 7.01 m. at Bay end, 7.62 m. at centre and 6.10 m. at shore end.

DUNNAGE: Dunnage materials are available at this port but must be requested 3 days in advance of intended delivery.

FIRE PRECAUTIONS: Port of Havana has a fire extinguishing ship, kept on permanent watch duty by Safety Corp. who can be reached through telephone number 6–0777.

AIRPORT: Jose Marti International Airport is 15 km. from the port.

HOLIDAYS: Liberation Day (January 1st), Labour Day (May 1st), Day of National Rebellion (July 26th), Commemoration of Wars of Independence (October 10th). July 25th and 27th are also holidays.

GENERAL: (1) The Port of Havana is approachable 24 hours a day, and dock Pilots keep permanent watch duty on their stations located in surroundings of harbour channel, very close to beacon marker of Pila de Neptuno.

(2) Any ship approaching port in daytime shall hoist national flag, merchant flag, and quarantine flag, not lowering the latter until granted "pratique" by doctors in charge of sanitary inspection. At night she shall show only quarantine lights as prescribed by International Sanitary Regulation.

(3) In case of emergency, ships at anchor shall immediately contact land through Official Radiophone Station CLT, available 24 hours a day, through 2260 kHz. In very urgent cases, CLT can be contacted through 2182 kHz CLT services are free of charge.

(4) Ships moored to piers standing off pier heads at night must keep visible red light at the ship's extremity facing the sea.

(5) Every moored ship must strengthen its lines on first warning from Port Authorities when deemed necessary due to bad weather.

(6) Small boats belonging to ships are not authorised to be used for crew or passengers' service within port limits unless otherwise duly authorised by Harbour Master.

(7) When berthing, ratguards must be placed on all mooring ropes.

(8) Port provides boats to dispose of ship's wastes. Services provided free of charge and can be requested through ship's Agent.

DEVELOPMENTS: There is a plan to build a new terminal for discharge of bulk cargoes such as fertilisers, coal, etc. between the area comprised by the piers Quinto de Regla and Facilida des Maritimas (Aguilera).

Under this plan, Quinto pier and Chemical dock will cease to operate, and Facilidades Maritimas (Aguilera) dock will be shortened in its actual length (814 ft.).

Construction of container terminal to be completed.

SHIPMASTER'S REPORT: November 1978.

Pilotage: Compulsory. Advise Agent of vessel's ETA. Pilot boards 1 to 0.5 miles N.W. of Pta. Barloventa.

Restrictions: Vessel is able to enter and leave during hours of darkness and at any stage of the tide.

Max. Size: Max. draft for cargo vessel 33 ft. and for tankers 37 ft.

Tugs: There are 3 large tugs and 7 small tugs available (145–860 h.p.). Vessel is able to dock and undock without the assistance of tugs.

Radio: Havana Radio "CLA".

VHF: Port Authority and Pilot operate on Channel 13. Agent on Channel 12.

Fresh Water: Available.

Fuel: Bunker fuel oil and diesel oil available.

Repairs: Facilities available.

Medical: Doctor and hospital available.

Facilities: Laundry services available, telex available but unreliable. Groceries and meat available but in limited quantity.

Berthing: Terminal Sierra Naestra Berth No. 3 South:

Position of berth: Lat. 23° 08' 25" N., Long. 82° 20' 42" W. Distance from entrance 1 mile. Max. size of vessel that can berth LOA 520 ft., beam no restriction. Max. draft 29 ft. Least depth of water in channel from sea to berth 40 ft. Range of tide 1.5 ft. Vessel is able to dock and undock at any stage of the tide day or night.

Bulk Handling Facilities: Two grain silos available.

Cranes: 1 quay equipped with 12 cranes, capacity unknown. 4 floating cranes available, 1×100 tons, 3×75 tons capacity.

Special Cargo Handling Facilities: Ro/Ro facilities available. There are facilities for handling palletised cargo and containers, also there is a reasonable amount of storage space for containers.

Stevedores: Stevedores are allocated by Port Authority and the vessel has no say in the number of gangs supplied. There are a limited amount of steel barges.

Density: 1014.

General: On arrival, vessel waited 2 hours outside for a Pilot then entered harbour where we waited another two and a half hours for a ship to sail, no ship sailed and no other reason given for delay.

Docked starboard side to Sierra Maestra No. 3 South, depth 24 ft. forward, 37 ft. aft, 1 tug pushing. Pilots good.

Officials boarded shortly after arrival, following documents required:

Port Health:	1 Health Declaration. 3 Crew Lists. 1 Vaccination List. All Vaccination Books.
Immigration:	All Discharge Books. (To be inspected) 5 Crew Lists.
Customs:	3 Personal Declarations. (In detail) Cargo Plan. 5 Crew Lists. Cargo Manifests. Pornography in bond.
Agriculture:	2 Crew Lists. 1 Provisions List. (Comprehensive) Cargo Plan.

Personal declaration must include watches, cameras, radios, tape recorders, presents, new clothes and money all of which must be placed under seal. One watch and 1 radio allowed to be retained by each Crew member and 1 camera by Master. Advisable to have all above collected prior to arrival.

Vessels normally searched by police and anything found, i.e., watch, radio, money, new clothes and cameras, etc., confiscated whether declared or not. To the surprise of officials this vessel was not searched.

All crew are issued with a shore pass with the exception of the Master. Shore leave extends from 0800 hrs. to 2400 hrs., extension may be obtained but only on special request to the Agent. Shore passes must show the money issued and must be signed by the Master.

On going ashore money and other articles are checked together with watches, jewellery and lighters, etc., and entered on the pass. Should any shortage or excess be found on return a fine will be imposed. On return money remaining is entered on the pass and anyone taking ashore more than the amount shown on the pass will have it confiscated (this actually happened in Isobela).

Communications outside Cuba are difficult, telexes are accepted by Agents but certainly not always sent the day handed in.

Incoming telexes can be delayed up to 6 days. Telephone calls may be made but usually take 3 to 5 hours by which time offices in Europe are closed. In an emergency British Embassy will transmit urgent messages via direct radio link. Embassy most pleasant and helpful. As will be seen by foregoing, it is essential that schedule made with Portishead and Charterers informed to send all messages via this station.

Stevedores very co-operative but due to uncertainty of transport and information on number of gangs, time of completion was uncertain until last day. All discharge was direct to trucks.

Agriculture Department demand that all garbage be placed in plastic bags with neck tied (they supply bags if none on board and charge vessel). Bags collected twice weekly and shore labour do all handling. All meats except New Zealand and Australian sealed. Daily issue of New Zealand and Australian meats given and fridges resealed, any other meats required must be purchased ashore.

Fuel oil, diesel oil and fresh water available by barge but time of delivery uncertain therefore water must be ordered well in advance of requirement. Agents advised fuel would arrive Thursday morning, eventually arrived Monday night. Diesel oil had arrived prior to the fuel with no advice given to the vessel that vessel was bunkering at all.

Fresh vegetables in very limited supply, though Chandler seemed keen to sell meats.

Repair firm and dock exist but after being promised labour for 3 days and none arriving repairs cancelled.

SHIPMASTER'S REPORT: April 1979.

Documents:

12 Crew Lists
3 Store Lists
3 Declarations
3 Currency Declarations
3 Vaccination Lists

Points of note:

(a) Anchorage is very close to coast and in cable area, recommend drifting about 5 miles from coast.
(b) Contact made via Morro Signal Station, VHF Channel 16.
(c) Pilot boards about 1 mile from entrance and they do not appear to work at night.
(d) The port is heavily polluted.
(e) When we sailed we had to wait for 5 hours till a tug was available.
(f) The vessel may lower its gangway for the Pilot to leave but it then must be raised until Port Officials arrive.
(g) All crew must be sighted by Immigration and are handed their discharge books.
(h) All cameras, gifts, items purchased during voyage and not in use, extra radios, watches, etc., and "magazines" must be placed in bond. All except the "magazines" should be declared.
(i) All currency must be declared and placed in safe and sealed. If cash purchases made from Chandler, e.g. Cigars, they must be paid for with Canadian or U.S. dollars. The Customs attend with Chandler and open safe for correct amount to be removed.
(j) Cuban pesos issued by Agent and any not used must be returned. Each person is issued with a card and the amount drawn is entered, then each time they return from shore the Immigration guard enters the amount remaining.
(k) Immigration guard issues passes. He is always on duty, crew member hands his Discharge Book to him and he gives him a pass. This pass has the time that he must be back onboard by, normally 2400 hrs., extensions may be obtained by advising Agent 24 hours in advance. Fines may be imposed for returning late. On return the guard takes the pass and Discharge Book is returned.
(l) Port Health insist that all rubbish be put in polythene bags and these bags put in bins with lids. The port maintains a garbage disposal service which attends on request.
(m) All meat, if not of New Zealand, Australian, Canadian or American origin must be placed under seal.
(n) The Agent can be contacted by VHF. Call "Mambisa" on Channel 12, office hours only.
(o) Postal service not recommended as very slow.
(p) Berthed at Turcios Lima. 33 ft. alongside. The discharger has two heads and moves the length of the berth. Wheat was discharged at an average of 60 tonnes per hour. Work was on a 24 hour basis.
(q) All hatches were inspected even though only one was to be discharged.
(r) The vessel was not searched but we were told that it could happen at anytime during our stay.
(s) The Officials who attended this vessel were all very friendly and helpful.

SHIPMASTER'S REPORT: December 1983.

Documents:

10 copies Crew List.
3 copies Stores List.
2 copies Deck and Engine Stores.
Personal Declaration Forms (1 copy plus 1 per individual crew member.)
Currency Declaration List.
Drugs List.

Accommodation ladder required for boarding officials.

Pilotage: Compulsory. ETAs should be sent via Agent 72, 48 and 24 hours prior to arrival. Pilot boards at entrance to harbour.

Anchorages: Only available inside harbour.

Vessels await entrance instructions 5 miles North of Morro Light.

Restrictions: Vessels may dock/undock day or night, at any stage of tide.

Max. Size: Max. length 280 m., draft 32 ft.

Radio: Havana Radio.

VHF: Havana Radio – Channels 16, 13 and 11. Pilots – Channels 16 and 11. Port Authority – Channel 16. Agents – Channel 16 and 10.

Tugs: 7 tugs of various sizes available.

Berthing: Vessel loading potatoes; berth 2.1 miles from Harbour entrance. Max. LOA 575 ft., max. beam 80 ft. Max. draft – for'd 22 ft., aft 32 ft. Nature of bottom at berth was mud. Depth in channel 33 ft.

There are no fenders on the quays at Havana. Ensure that there are ample fenders on board.

Cranes: No cranes at cargo quay. 1 floating crane available, capacity 175 tons.

Bulk Cargo Facilities: Silos available for grain. Grabs available for handling coal/coke.

Specialised Cargo Handling Facilities: Facilities available for Ro/Ro vessels.

Equipment to handle palletised/break bulk/20 ft. – 40 ft. containers available. Ample storage areas for containers, etc.

Steel lighters available for work at anchorage.

Stevedores: Satisfactory work carried out by stevedores.

Medical: Doctor and hospital facilities available.

Fresh Water: Available.

Fuel: Bunker fuel oil, diesel and lubricating oils are available.

Consuls: Majority of nations are represented.

Repairs: Can be undertaken.

Surveyors: Lloyds' and Salvage Surveyors available.

Services: Laundry service, telex, limited supply of fresh provisions, groceries and meats available.

All international telephone calls had to be made through the Merchant Seaman's Club.

SHIPMASTER'S REPORT: October 1987.

Vessel (34,000 d.w.t. bulk carrier) called at Havana and Santiago de Cuba to discharge 28,000 tons of wheat. Arrival draft Havana 32 ft. salt water even keel.

Havana was our first discharge port and one day prior to arrival at Havana, vessel was instructed by Agents to anchor at Caibarien Anchorage (BA. Chart No. 425; Lat. 22° 39' N., Long. 79° 14' W.) and await our turn to discharge in Havana.

This anchorage, so I understand, is increasingly used as a waiting anchorage for vessels bound to Havana. We anchored without a Pilot with Cayo Frances Lt. 140° at a distance of 0.9 miles from the same light and depth of water was 67 ft. – 75 ft. good holding ground, mud.

Total distance Havana to Caibarien 190 miles. Due to drafts available, this anchorage can only accommodate very few deep drafted vessels.

Consuls: Greek Embassy resides at the "Commodoro Hotel" in Havana. Tel. 225551 (room 422).

Customs Formalities; On arrival at Havana, Customs handed to us Customs Forms to be filled in by each crew member in duplicate. Original was kept by them and the second copy was handed back to us on sailing, in order to be given to the Customs at second port (Santiago de Cuba). Apparently no extra copy was required in Santiago de Cuba.

SHIPMASTER'S REPORT: March 1989.

Documents: As per "Guide to Port Entry".

Port Health officials were the first of the authorities to come on board and once the Quarantine Clearance was given, the Agent and the other officials came aboard.

The Veterinary inspection was thorough.

A timely warning was given by one of the officials and most of the crew valuables were locked in the "transit room" before the rummage gang boarded.

Although fully itemised Personal Effects Lists had been prepared prior to arrival, these were not accepted as they were not on official forms, so the Radio Officer spent all night typing the crew's effects on to proper forms.

When the rummage gang came on board an officer was required to accompany them to all cabins, where the Currency List and Crew Effects Declaration was consulted and items checked. Any discrepancies led to confiscation on the spot.

The Bond Locker was checked. Transit room was not checked.

A handler and his dog came aboard.

It took about 6 hours to clear the ship, during which time the whole crew were prevented from going about their normal business.

Regarding personal effects – EVERYTHING must be itemised on the proper form. To save loss, everything except the bare essential requirements should be put in a suitcase and locked in the transit room. This includes currency.

Charts: BA. Chart No. 414, Puerto de Habana, and BA. Chart No. 3867, Cuba – Western Sheet.

American charts give better coverage of the whole of Cuba – especially useful if contemplating passage through Old Bahama Channel.

Sailing Directions: NP. 70, West Indies Pilot Volume 1, page 182.

Approaches: The coast gives good radar echoes. There are plenty of visual marks to identify. The latest Cuban Radio Navigation Warnings are useful to plot naval exercises and firing areas. Normal approach from Florida Straits passes through one of these areas just to the East of Havana.

There were no problems in the approach. Pilots or Port Control were contacted at a range of about 35 miles. There was some confusion as to whether we were talking to Pilots, Port Control or Agents, and this was never really clarified. The Pilot boarded 1 mile North of the entrance from a large launch with orange hull and white superstructure.

Berthing: Passage through the harbour was taken very very slowly and berthing was assisted by 3 tugs which were poorly handled.

The berth is very poorly fendered and it would be advisable to put vessel's fenders out.

The harbour is extremely heavily polluted. The fuel oil floating around is only just visible against the water.

Berth: The berth is poorly maintained and with evidence of spills and burst joints. The berth appears to be set up to handle gasoline, gas oil and fuel oil. We took 200 tonnes of heavy oil which was blended to our requirement according to our company bunker specification. We await analysis to see if this was the case.

Berth Information:

Berth: Oil Berth No. 2 North.
Operator: State Oil Company.
Density: Salt.
Distance from Pilot to Berth: 3 miles.
Bridges: None.
Max. draft: Approaches 38 ft.
Berth 38 ft.
Restrictions: Berthing day and night.
Fresh Water: Available, rate not known.
Fuel: Available by pipeline and barge, also see "Berth" above.
Hoses: 1 × 8 in. for gas oil, pressure 8 kg./sq.m.

Surveyors: They accept the Mate's figures without question.

Departure: Two tugs used. Tugs accompany vessel out to sea.

SHIPMASTER'S REPORT: April 1993.

Also see Matanzas Report (first port of discharge).

Vessel arrived off Havana at 2000 hrs. and communications had been established through Morro Signal Station, which is situated at the Eastern Harbour Entrance in the old fortress. I was advised to remain in a position of about 2 miles N.W. of the Signal Station. Both wind and current resulted in a Westerly set of about 1 knot, and engines had to be used at minimum pitch to hold the position. Pilot should be boarding after 20 minutes, however from the conversation on VHF, it was obvious that no arrangements for berth or tugs had been made. The pilot finally boarded at 0030 hrs. next morning, and on making the approach, requested us to prepare the usual fendering which, of course, the ship did not have available. I was also advised that, although the B.A.Chart indicated only 23 ft. of water, the actual depth was considerably more. It was decided to defer the entry till daylight, and after confirmation had been received that at least some makeshift fendering would be available between the vessel and the mooring pontoon, which was to be situated between the pier and the vessel. This pontoon was necessary, as there would not be sufficient water to accommodate the vessel directly alongside.

In the morning, fendering was arranged by shore, and together with some additional materials from the ship, vessel proceeded to the berth. Entry into the port is straightforward, and no difficulties were encountered. The water in the port is completely covered with a thin oil slick that has also covered quays, craft and jetties with a black layer. This proof of some oil spills was however less in the part of the port where our assigned jetty was situated. At sea it was discovered, that in the dirty ballast tanks there was a slight clingage of blackish substance on the bulkheads. We did not experience any fouling of condensors or coolers with the extensive marine growth as is mentioned in "Guide to Port Entry".

In adverse weather, some of the ships anchored in the harbour may restrict room for navigation.

We were assisted by 2 tugs of 2,400 h.p. and 3,600 h.p. respectively, which like in Matanzas do not have any equipment, and ship's lines were used to secure them from the starboard main deck.

The assigned berth for this particular trade is situated in the deep Southern part of the port, and is actually a quay of the Container Terminal "Porto Pena", and is the last part of the quay next to the obsolete grain elevator facilities. This part of the harbour, like other parts, is occupied by a number of stern trawlers lying idle at anchor. However they do not hamper the manoeuvring of vessels. One 20 m. × 10 m. flat deck pontoon had been moored alongside the quay and medium size car tyres had been fitted as fenders. Prior to coming alongside this facilitiy, the pontoon had to be shifted some 30 m. forward, in order to clear the vessel moored astern of us and also to take the weight of the vessel approximately amidships. Vessel was secured with 2 head lines, 4 breast lines, 2 springs and 2 stern lines. Ship's gangway had to be used leading onto the pontoon. During the approaches, the least depth encountered was 10.2 m., which was at the stern just prior to berthing.

Formalities were identical to those described at Matanzas, but a full crew muster was not necessary. Gratuities again were very minor, and the few bottles and cartons of cigarettes were just as much appreciated as a few boxes of matches and bars of soap. Again the ship's meat room was sealed and all pertaining regulations extensively explained.

There is a protected area where a recessed manifold is located. This looked well maintained.

Sampling and lab testing was elaborate, and only after about 5 hours did discharge commence through 1×8 in. hose into 1×8 in. line. Bulk discharge rate achieved was 380 cu.m./hr. Knowledge of English was rather poor although workable. As indicated earlier, telecommunications are a problem, and the nearest telephone was at the Terminal gate some 500 m. away. Most external communications will be conducted via ship's VHF Channel 12.

Both in Matanzas and Havana, ship's copying machines were used for making enormous quantities of copies of each and every cargo document due to paper shortage in Cuba. Quite a number of documents are the old blue alcohol type of copies which after a while start to fade, and are not suitable for archiving purposes. It is recommended to make Xerox copies for ship's use. Most documents will be legal/foolscap size, and it is helpful if copying machines can handle this size of paper to reduce it to A4.

Identical to the Matanzas experience were the frequent visits by authorities, which are mainly Customs officials who invariably fail to make clear the true purpose of their visit, and a soft drink or cup of coffee sets them on their way again. The Veterinary Inspector will call daily to check the seal on the meat room and to supervise any withdrawal of frozen goods that might be required to prepare meals. Invariably these visitors will indicate, although not ask, for basic commodities like soap, washing powder, shampoo or a bit of rice.

No restrictions are imposed on shore leave, and although Passports should be carried, I do not know of any request that these be shown. Although tourist taxis are on call, it should be noted that this only means of transport is not readily available between midnight and 0900 hrs. A number of crew members had to walk considerable distances involuntarily through mainly unlit areas to return to their ship. Without exception, the people were friendly, well disciplined and extremely helpful in every respect. I do not have any indication that even the smallest of items were stolen from the ship.

On completion of cargo operations, the Outward Clearance Formalities were extremely thorough. Firstly, all Cuban nationals remaining on board must leave the vessel, and only then is a crew muster held. Passports are to be taken by each crew member, and crew must adjourn to their cabins, except those who are on duty. The vessel is inspected from top to bottom by Frontier Guards accompanied by a German shepherd dog. All stores, engine room and even chain lockers were searched. After this is completed, all cabins will be searched. Even drawers are opened as they are possible hideouts for stowaways. Having concluded this search, a certificate is issued and clearance given. Finally the pilot is ordered by the same officials, and he arrived after 2 hours.

The Agents had promised to obtain a chart of the port of Havana for me, but nothing arrived. Finally I spent most of an afternoon at the Instituto Hidrografico in Havana to learn on the arrival from the person responsible for sales that we had to go to the printers to have a new copy printed and collected.

I would like to mention that without the assistance of Petrometal, the Sitco representative in Cuba, all this would not have been possible.

We also discussed and suggested alternative arrangements for subsequent visits of the vessel:

1. Contemplate the use of a second product line and hose to increase the discharge rate, as precious money is lost on demurrage.
2. The use of 2 pontoons rather than one to improve the safe berthing of the vessel, as the load would be shared and facilitate access, since the use of the accommodation ladder would then be possible.
3. To investigate the possibility to equip the vessel with 2 small Yokohama type fenders, to enhance the safe mooring of the ship at this berth, which is to be used for this operation throughout the present contract.
4. Although gratuities in the form of cigarettes and whisky are accepted as they are in most ports, it may be considered to have a certain supply of the other above mentioned commodities at hand.

AUTHORITIES: Ministry of Transport.

All port authorities located at Custom House building. Means of transportation used by authorities to clear vessel is launch. Each authority has its own launch for these services.

AGENT: Empresa Consignataria Mambisa, Agencia Havana, Lamparilla No. 2, P.O. Box No. 1785, Havana, Cuba. Telephone: 61-6706, 62-3969, 61-3994. Cable: Mambisa Habana. Telex: 051-1577.

Agency VHF works on Channel 12.

ISABELA DE SAGUA: 22.52 N. 80.00 W. (See Plan)

Although the Port of Isabela is not located in a bay and lies on a small peninsula oriented S.W./N.E., it is a fairly protected harbour because a barrier of cays, lined from N.W. to S.E., forms a protective levee against the roughness of the sea and the force of the winds.

Behind the port and town of Isabela, to the S.E., and as if splitting the small peninsula in two, Sagua La Grande river flows into the sea.

Isabela is mostly a sugar shipping port but also handles a rather important amount of import cargoes.

In the vicinity of Isabela, besides several sugar mills, there is an Electro-Chemical Industry and a very important foundry.

PILOTAGE: Pilots board vessels about 1 or 2 miles out from Buoys No. 1 and 2. Pilot station located at Custom House building, Isabela de Sagua. Distance from place where Pilots board vessels to anchorage is 7 miles.

From seaward by stages, the bottom is sandy, coral reef and hard rock, mud and rock under mud, mud and clay.

Turns in channel are not dangerous but there are narrows with dangerous currents.

ANCHORAGES: *Inner Anchorage No. 1:* This anchorage is located about 300 m. N.W. from the piers and can be considered part of the manoeuvring basin.

Bottom is soft mud but anchors hold well with 3 shackles of chain.

Draft allowed: 7.31 m. – 7.62 m. depending upon vessel's length.

Swinging area: About 250 m.

Vessels load or discharge at this anchorage by means of barges.

Inner Anchorage No. 2: This anchorage is located close to and South of Palomo Cay.

Bottom is soft and mud but anchors hold well with 3 shackles of chain.

Draft allowed: 4.57 m.

Swinging area: Unlimited.

Several vessels can be accommodated.

Vessels load or discharge at this anchorage by means of barges, but it is chiefly used for vessels awaiting berth.

Outer Anchorage: Located East of Del Cristo Cay and about 8 miles from the port of Isabela, and also known as Ingles Anchorage.

Bottom is mud and coral reefs but anchors hold well with 5 shackles of chain.

This anchorage is marked with a well lighted buoy.

Vessels can load safely up to 10.06 m. draft with LOA 190 m.

Loading or discharging is effected by means of barges.

Operations can be performed at this anchorage when there are good weather conditions.

RESTRICTIONS: Entry and sailing only during daylight due to lack of lights in channel.

MAX. SIZE: Max. draft 7.62 m. Max. LOA 180 m. Tidal variation about 2.5 ft.

COMMUNICATIONS: Means of communications available at Isabela are local and long distance telephone and telex, the latter being the quickest for communication with the port.

Vessels navigating to Cuba can communicate with Mambisa Isabela Agency through "CLA" Havana Radio Station, which relays promptly the message to Isabela.

Vessels cannot communicate directly with Isabela de Sagua.

Masters must send their ETA messages simultaneously to Mambisa Sagua la Grande and Mambisa Havana.

The ship can communicate with the Agency during stay in port by VHF system.

TUGS: 2×250 h.p., 1×300 h.p. and 1×80 h.p.

BERTHING: Isabela operation places (piers) are located on the North coast of the peninsula previously mentioned.

Formerly 4 piers were operated by the port but due to shallowness alongside Begueristain Pier, nowadays the latter is used only for small craft and barges drawing 10 ft. maximum. Another berth, Garcia Pier, is out of service undergoing repairs, the date of completion of which has not yet been determined.

Amezaga Pier: N.E. side: Out of service.

S.W. side:

(a) Draft even keel: 6.71 m.

(b) LOA: 140 m.

Cargo handled: General cargo, bagged cargoes, bagged raw and refined sugar.

Alfert Pier: East side: Length 137 m. Draft allowed 5.49 m. – 6.1 m. Ship's max. length 170 m.

This pier consists of an all-hardwood construction not in good condition.

It has standard gauge railroad tracks connecting with the main tracks and is not suitable for trucking operations.

Tanker information: Molasses: 2 × 8 in. diameter connections.

Loading rate: 200 t.p.h.

Cargoes handled by this side: General cargo, molassses, bagged sugar.

West Side: Out of service.

Beguiristain Pier: Max. vessel's length 90 m. Draft (West side) 4.88 m. Length 165 m., width 9.0 m.

The pier is out of service due to shallowness alongside.

STEVEDORES: Raw Sugar loading rate: 1,300 bags of raw sugar (of 250-lb. type) loaded per 4 hour-gang period, or 1,490 (of 220-lb. type). From 4 to 5 bags loaded per sling. From lighters, 5 bags.

Refined Sugar: 2,360 bags of refined sugar (50 kg.) are loaded per 4 hour-gang period. 12 bags loaded per sling.

Operational capacity: Three vessels can be operated simultaneously.

Equipment for bulk sugar: Twelve grates available but trimming performed with shovellers.

Loading Raw Sugar – Working periods: From Monday to Friday 0700–1100 hrs., 1300–1700 hrs. Saturday 0700–1100 hrs.

General cargo operations occasionally performed at this port, for which above periods apply.

Barges: 6×200 tons and 3×400 tons capacity.

MEDICAL: Crew members requiring medical or dental care are treated at Sagua La Grande Hospital, where they can be hospitalised if necessary. At Isabela there is only a Polyclinic.

TANKERS: No fuel oil or ammonium discharging operations performed.

FRESH WATER: Fresh water can be supplied by means of 400 tons capacity barge. Water is delivered to vessels docked or at anchorages (Inner or/and Outer). Daily delivery quantity will be subject to the vessel's stay in port, and the quantity received at the shore tanks, since said tanks receive small quantity from the main line (Sagua la Grande).

FUEL: Small quantities of gas oil available by truck when vessel docked at Amezaga Dock.

REPAIRS: Minor repairs can be effected at Isabela de Sagua, larger repairs to be effected at Sagua la Grande, where two repair shops available: Fundicion Marfarlane Nacionalizada and Talleres Esponda Nacionalizado.

DUNNAGE: Dunnage material can be supplied if requested in advance by Master.

Paper dunnage can be obtained if ordered well in advance.

TRANSPORTATION: Means of transportation to and from Isabela are: train, bus or car.

From Isabela to Sagua La Grande is a distance of about 17 km. by road or train.

From Sagua La Grande to Santa Clara is a distance of about 50 km. by road.

From Santa Clara there are numerous means of communications to any place or city in Cuba.

There are bus lines Sagua/Cardenas, Sagua/Havana, Sagua/Santa Clara, Sagua/Isabela.

SHIPMASTER'S REPORT: November, 1978.

Pilotage: Pilot boards 1.5 miles N.E. Cayo Cristo lighthouse in position Lat. 23° 02' N., Long. 79° 59.4' W. Pilotage is compulsory. ETA should be sent to vessel's Agent.

Max. Size: Max. LOA 606 ft. Max. beam 75 ft. Max. draft 23 ft. I would suggest the max. size as being 520 ft. LOA, 70 ft. beam and 22 ft. max. draft. Tidal range 2 ft.

Tugs: 3 tugs available each approx. 140 h.p.

Radio: Havana Radio "CLA".

VHF: Not available.

Documents: 8 Crew Lists. 1 Vaccination List, Health Declaration, 4 Currency Lists (crew and ships). (Also see "General").

Consuls: Nearest are in Havana.

Medical: Doctor and hospital available in Sagua La Grande at a distance of 10 miles from the port.

Berthing: Espg. De Amezuga Berth: Position Lat. 22° 56' 54" N., Long. 80° 00' 40" W. Distance from berth to entrance 7 miles. Max. size of vessel that can be safely berthed, LOA 520 ft., beam 70 ft. and deepest draft 22 ft. Least depth of water in channel from sea to berth 25 ft. Vessel able to dock and undock at any stage of the tide also vessel able to dock and undock during hours of darkness at times. Special bulk facilities handled at the port include Molasses. There are no quay cranes, Ro/Ro facilities or floating cranes.

Stevedores: Believe there are a total of 8 gangs available for working of general cargo. There are steel and wooden dumb barges available (length 75 ft., beam 30 ft.).

Density: 1004.

General: Documents required: 3 Manifests (Crew Declarations); 8 Crew Lists; 4 Bonded Stores Lists; 4 Provision and Meats Lists; 4 Currency Lists (Crew and Ship's); Certificate of Sanitary/Veterinary Inspection (from last Cuban port); 1 Stowage Plan; Cargo Manifest.

Seals may be opened coastwise but advise not to, with exception of meats.

All conditions as Havana except shore leave only 1800 – 2200 hrs., except Master, extension granted for officers to 2400 hrs. if requested via Agent.

Only chandler 70 miles away.

Fresh water available at 8 t.p.h. (amount may be limited) but must be ordered immediately on arrival if required. We did not order until the last day as we believed we were bound for a U.S.A. Gulf Port, it took 8 hours to hook up and a lot of pressure on Agent.

Berth unsuitable for this size of vessel though using mooring buoys vessel lay securely moored. Concrete pier with wooden fendering slightly dilapidated in places but quite adequate. Pier 320 ft. long and 4 ft. high. Stern secured to 2 mooring buoys, one each quarter, distance approx. 200 ft., but buoy moorings are believed to be suspect. No cargo can be worked at No. 5 except by lighters. Harbour Master states largest vessel suitable for this berth 120 m. LOA. Depth alongside by soundings 22 ft. Forward, 26 ft. aft. Pilots good.

Gangway must be used, as companion ladder will not reach quay.

Channel requires local knowledge but it is well buoyed.

Cargo discharge depends on supply of trucks. Can only work one truck at each hatch therefore to speed up discharge last day two gangs No. 4 discharged into lighter offshore.

AUTHORITY: All port authorities located at port of Isabela de Sagua.

When vessels at anchorage awaiting berthing, authorities transported by tug-boat for clearing purposes.

AGENT: Empresa Consignataria Mambisa, Agencia Isabela de Sagua, P.O.Box 18, Isabela de Sagua, Prov. de Las Villas. Tel: 698122 (office) 698130 (night). Telex: 041222. Cable: Mambisa Sagua La Grande.

Cables, messages should be addressed "Mambisa Sagua la Grande", but recommended be sent through main office "Mambisa Havana". ETAs should be sent simultaneously to both.

JUCARO: 21.37 N. 78.51 W.
(including the sub-ports of Boca Grande, Palo Alto and Santa Maria)

DOCUMENTS:

10 Crew Lists.
10 Passenger Lists (if passengers on board only).
10 Manifests of Cargo (or ballast).
4 Customs Crew Declaration (including currency).
4 Ship's Provision Stores, including bonded and narcotics.
1 Health Declaration,
1 Vaccination List.
Clearance from Last Port.
Derat Certificate.

APPROACHES: Vessels proceeding to Jucaro sub-ports must call first at Jucaro for Port Authority's clearance.

Tidal variation 1 ft. 6 in. It is not necessary to await slack water before entering. Recommended that *(a)* vessels arriving from Cuban ports situated to the East of Jucaro, such as Caibarien, Puerto Padre, Manati, Vita, Banes, Antilla, Sagua de Tanamo, Moa, Baracoa, etc., or from foreign ports, should enter Jucaro Port through Breton Channel, and *(b)* all vessels not exceeding 22 ft. draft proceeding from those Cuban ports situated to the West of Jucaro, such as Havana, Mariel, Matanzas, Cardenas, Isabela de Sagua and Cienfuegos, should enter Jucaro port through Tunas Channel.

PILOTAGE: Pilots board vessels which enter through Breton Channel at Buoy No. 2, which is situated to East of channel entrance, 21° 08' 18" N. 79° 30' 24" W. with water depth 33 ft. Through this channel vessels can enter drawing up to 29 ft. with max. length 800 ft. Bottom is coral reef. There are dangerous turns at "pasa" of Baandra until Ana Maria Cays have been passed.

For vessels which enter through Tunas Channel, Pilots board at No. 2 Buoy which is situated to East of Channel entrance, Lat. 21° 31' N., Long. 79° 41' 21" W. Through this channel vessels can enter drawing up to 22 ft.

No Pilot Station. Pilots are to be notified of vessel's arrival 24 hours in advance. Distance from place where Pilots board vessels to Jucaro anchorage is 50 miles.

From Jucaro Anchorage to:

Boca Grande Sub-port	– 14 miles
Palo Alto Sub-port	– 5 miles
Santa Maria Sub-port	– 24 miles

ANCHORAGES: Loading places, ex-lighters. Three anchorages (very good holding ground), namely, No. 1 Anchorage – 6 miles from the port at South of Obispo Cay, depth 24 ft. No. 2 Anchorage – 7 miles from the port at S.E. of Obsipo Cay, depth 27 ft. No. 3 Anchorage: Anchorage 8 miles from the port and 1 mile to Eastward of No. 2 anchorage, depth 30 ft.

RESTRICTIONS: Vessels can enter and sail through both channels day and night.

RADIO: Call "Jucaro Radio" on 2182 kHz, will answer on 2760 kHz.

VHF: Pilot boat, Port Captain and Agency equipped with VHF and work on Channel 16.

LOADING: This port only exports bagged refined sugar in 100 kilos jute bags or 50 kilos cotton bags, molasses and fresh fruits.

Fuel oil is discharged either imported or by coastal trade.

Working periods: Monday to Friday 0600 – 1000 hrs., 1200 – 1600 hrs.; Saturday 0600 – 1000 hrs., 1200 – 1600 hrs. It is possible to work overtime, also possible to work Sundays and holidays, if required.

Work carried out on a piece-work basis, and at an average of 2,000 bags per gang-period. 6 sugar bags loaded per sling.

Refined sugar: Work is carried out on a piece-work basis and loading rate averaged about 4,000 bags of the 50 kilo type and 2,000 of the 100 kilo type per gang-period.

Sugar in bulk: Venezuela and Ecuador sugar mills have 5 thrower machines each for distributing sugar in vessels' hatches. Loading carried out by cutting sugar bags through grates placed on vessels' hatches.

Shore cranes: None.

MEDICAL: There are two hospitals at Ciego de Avila where sick crew members can receive attention. Distance between Jucaro and Ciego de Avila is 27 km.

TANKERS: Average pumping rate of molasses 20,000 g.p.h.

FRESH WATER: No water available.

FUEL/REPAIRS: Not available.

OPENING/CLOSING HATCHES: By crew.

PROVISIONS: Available, but expensive.

TRANSPORTATION: Distance between Jucaro Port and its sub-ports:

To Santa Maria	– 31 miles
To Boca Grande	– 15 miles
To Palo Alto	– 9 miles

Motor launches are used between port and sub-ports, and take 4.5 hours, 2.5 hours and 1.25 hours between Jucaro and Santa Maria, Boca Grande, and Palo Alto respectively.

By automobile, 3.5 hours to Santa Maria and 2 hours to Boca Grande. No highway from Jucaro to Palo Alto.

SHIPMASTER'S REPORT: 1977.

Lines to the barges to be provided with rat-guards.

Very strict regulations concerning crew declaration of effects, currency and pornography.

All personal effects of crew members will be sealed by Customs, even their used clothes, allowing them out only a couple of clothes changes, one carton of cigarettes and one bottle of spirits.

Advisable to instruct crew members to declare all currency and not to try to take any money ashore. They could not use or change it and could run into a great deal of trouble.

Vessel's deck, engine and accommodation will be searched by Port Authority party.

Cholera vaccination available on request.

Shore leave for crew allowed only from 1800 to 2200 hrs.

No kind of restrictions for the Master, whose shore leave is unlimited. Strict Customs regulations do not affect him.

No amenities available ashore.

Loading of oranges fast if available. About 200 tons per gang shift.

Pre-cooling of cargo chambers is not required. Oranges stowed in two tiers of four cartons with battens in between. Maximum height of eight cartons. Stowage factor about 95.

AUTHORITY: Custom House, Captain of the Port and Immigration, located at Jucaro. Port doctor located at Ciego de Avila.

AGENT: Empresa Consignataria Mambisa,
Agencia Nuevitas,
P.O. Box No. 350,
Puerto Tarafa, Nuevitas,
Prov. de Camaguey.
Telephone: 2779, 2107 (office),
3190 (night).
Telex: 3190.
Cable: Mambisas Nuevitas.

Mambisas Nuevitas Agency also attends at the port of Nuevitas.

Jucaro and Boca Grande are attended by Nuevitas Agency personnel.

Any information about vessels operating at Jucaro or Boca Grande should be requested from our main offices at Havana or to Nuevitas Agency because it is extremely difficult to communicate directly with the Agent attending the vessel. Agents at Jucaro and Boca Grande communicate periodically with Nuevitas Agency which relays the information to our main office.

SUB-PORT OF BOCA GRANDE:

SHIPMASTER'S REPORT: Port will not be operational after 1977.

LOCATION: About 15 miles East of Jucaro.

APPROACHES: See "Jucaro".

PILOTAGE: See "Jucaro". Distance from place where Pilots board vessels to Boca Grande is 64 miles. Entrance channel: same as for Jucaro. Tidal variation 1 ft. 6 in.

ANCHORAGES: Anchorage No. 1: Located 3 miles off Boca Grande Firth. Depth 24 ft. Anchorage No. 2: Located 5 miles off Boca Grande Firth. Depth 30 ft. Both these anchorages have soft mud bottom.

Kind of cargoes handled. Importation, fuel oil. Exportation, bagged refined sugar, molasses. Coastal trade, discharge of fuel oil.

LOADING: At present only refined sugar is exported. All sugar-loading operations are carried out at anchorage by means of lighters. Following lighters available:

Barges	*Capacity* (50 kg. bags)	*Capacity* (100 kg. bags)
Ana	4,900	2,500
Loretto	4,400	2,100
Mascot	4,400	2,100
F 55	4,400	2,100
Trusco 89	5,100	2,980
Angel	3,440	1,700

Working Periods: Monday to Friday 0600/1000 hrs., 1200/1600 hrs.; Saturday 0600/1000 hrs., 1200/1600 hrs. When working is performed on Sundays, same periods apply.

Work is performed on a piece-work basis, and average loading rate is about 2,000 bags, basis 6 bags per sling, and 100 kilo bags. Only one vessel can be worked at a time.

TUGS: Three tugs available.

TANKERS: Discharging operations at No. 1 or No. 2 anchorages. Discharging rate approximately 20,000 g.p.h.

There are also steel barges for transportation of molasses and/or sugar:

Guanales:	100 ft.×30 ft.×7 ft. Sugar capacity: 1,600 bags. Molasses capacity: 65,000 gallons.
Loreto:	100 ft.×30 ft.×7 ft. Sugar capacity: 1,600 bags. Molasses capacity: 65,000 gallons.

Each of these barges has 4 tanks measuring 15 ft.×36 ft.×7 ft. Capacity: 3,780 cu.ft. or 28,274 gallons each tank. Total capacity: 113,100 gallons. Each barge can load a max. of 400 tons of molasses and each is equipped with steam pump.

COMMUNICATIONS: Launch transportation. It takes 2.5 hours for travelling from Boca Grande to Jucaro or Santa Maria. Captain of the Port's radio-telephone is used as means of communication.

All communication and instructions for vessels operating at this sub-port must be given to Nuevitas Agency.

MANZANILLO: 20.20 N. 77.12 W. (See Plan) (and sub-ports of Ceiba Hueca, Media Luna, Niquero and Pilon (Ensenada de Mora).)

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: The entrance to the port can be accomplished by two different routes, depending on vessel's draft.

Madrona Channel: This channel has some turns and some of them are sharp and narrow. In the South Channel's mouth is where precautions should be taken, because "windward shoals" have a marked inclination to the Channel.

The bottom is soft mud and sand.

Minimum depth of the Channel is 10.67 m., precisely at the South Channel's mouth, and customarily the draft for entering/sailing is 9.14 m., being maximum draft for entering/sailing 9.14 m., although vessels drawing up to 10.06 m. have entered/sailed from this port, leaving in those cases 0.61 m. as a safety margin.

Palomino Channel: This is an intermediate channel which leads either to Madrona Channel or Coloradas de Afuera Channel.

This channel also has turns, but some are less sharp because the channel is wider than Madrona Channel and manoeuvering is easier. The average depth is 22/25 fathoms (40/46 m.), but draft of vessels is limited by depth of Madrona or Coloradas de Afuera Channels.

The bottom is rocky.

Coloradas de Afuera Channel: This channel reduces the distance to Manzanillo to only 55 miles, but can only be crossed by vessels drawing 6.1 m. or less.

Presently, due to lack of navigational signals and marks, this channel is temporarily out of use.

The transit of above described channels can be performed without tug assistance.

There is another channel in this port which is listed as a matter of information.

Balandras Channel: This is an intermediate channel leading to Coloradas de Afuera Channel, but can only be crossed by vessels drawing maximum 4.26 m.

Because of the large tonnage of vessels presently operating in Cuba, and also due to lack of proper navigational signals, this channel is not used.

Entrance to the Port of Manzanillo: From Cay Perla, vessels drawing 7.31 m. or less enter the Gua Passage (between Cay Perla and Gua Cays), and those drawing more than 7.31 m. enter outside of Cay Perla.

For both routes the string of Manzanillo Cays, about 6 miles long, can be used as a visual orientation point.

PILOTAGE: The pilot boards vessel at Cabo Cruz, located at Lat. 19° 50' 33" N., Long. 77° 43' 33" W. On the cape there is a small town, the Pilot Station and a lighthouse.

The lighthouse rises to 34 m. above sea level, and its light is visible up to a distance of 17 miles.

The Pilot Station communicates with Manzanillo by radiotelephony.

The distance from where the pilot boards the vessel to Manzanillo is 68 miles through Madrona Channel, or 55 miles through Coloradas de Afuera Channel, first and next Palomino Channel.

The exact place where pilot should be taken is Lat. 19° 49' 12" N., Long. 77° 45' 12" W. In this position, vessel is about one mile off the crown of reefs of Cape Cruz.

All vessels calling at Manzanillo or any of its sub-ports (including Pilon), should take pilot at this place.

ANCHORAGES: *Inner Anchorage No. 1:*

This anchorage is located at Lat. 20° 21' 54" N., Long. 77° 08' 24" W. Max. LOA 180 m., max. draft 6.4 m.

Distance from shore is about one mile, and the transportation means are the tugs of stevedore enterprise "Terminales Mambisa".

The cargoes handled are:

Imports: General cargo.

Exports: Bagged raw sugar.

Outer Anchorage No. 2:

This anchorage is located at Lat. 20° 22' 36" N., Long. 77° 08' 40" W. Max. LOA 180 m., max. draft 8.53 m.

Distance from shore is about 2 miles, and the transportation means are the tugs of stevedore enterprise "Terminales Mambisa".

The cargoes handled are:

Imports: General cargo.

Exports: Bagged raw sugar.

Outer Anchorage No. 3:

This anchorage is located at Lat. 20° 23' 30" N., Long. 77° 09' 18" W. Max. LOA 180 m., max. draft 10.06 m.

Distance from shore is about 3.5 miles, and the transportation means are the tugs of stevedore enterprise "Terminales Mambisa".

The cargoes handled are:

Imports: General cargo.

Exports: Bagged raw sugar.

RESTRICTIONS: Due to present conditions of channel lights and distance, vessels enter and sail only during daylight.

MAX. SIZE: LOA 180 m., draft 9.14 m.

EQUIPMENT: The port has 6 barges of 200 tons cargo capacity, 2 of 140 tons and 1 of 100 tons, this last one having a derrick capable of lifting up to 2 tons.

There are 3 tugboats servicing the port:

"Punta Morrillo" the biggest and most powerful, capable of towing 5 barges, "Aracelio Iglesias" and "Cdte. Turcios Lima" which can tow 3 barges each.

These tugboats are also used to transport shore/vessel personnel from shore to anchorage or vice versa.

There are no cranes or pay loaders in the port.

LOADING: Sugar-loading operations performed at anchorage by lighters.

At sugar mill "La Demajagua", town of Calicito, at a distance of 2 km. from the sugar mill, there is a small pier with a draft of 3.05 m. where the barges are loaded with bagged raw sugar for vessels operating at Manzanillo.

At sugar mill "Francisco Castro Ceruto", town of Campechuela, at 500 m. from the sugar mill there is a pier with a draft of 6.6 m. where barges are loaded with bagged raw sugar for vessels operating at Manzanillo.

For the discharge of barges with import cargoes the coastal pier of Manzanillo Fishing Port is used, about 3 km. distance from the city.

Bulk cargoes are not handled by this port except the discharge of petroleum products.

Docks are suitable for reception and handling of import and export cargo (bulk cargo excepted). They have railroad tracks of non-standard gauge, which connect with warehouses.

Sugar and general cargo: Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

2,000 raw-sugar bags loaded per gang per day of 8 hours.

DISCHARGING: Rates:

Bagged cargo (of 100 lb.)	approx. 25 t.p.h.
Bagged cargo (of 200 lb.)	approx. 35 t.p.h.
Iron	approx. 7 t.p.h.
Wood	approx. 8 t.p.h.
Jute bags	approx. 15 t.p.h.

TANKERS: *ICP Submarine PipeLine Anchorage:* The submarine pipeline anchorage is located as follows:

Lat. 20° 21' 12" N., Long. 77° 10' 21" W.

Max. LOA 147 m., max. draft 8.53 m.

Distance from shore is about 2 miles and the means of transportation are the tugs of the stevedore enterprise "Terminales Mambisa".

The vessel is secured to 4 buoys and the mooring is performed by Terminales Mambisa tugs and personnel.

The pipeline is 8 in. (203 mm.) in diameter and connection is 6 in. (152 mm.).

The cargo handled is: Discharge of kerosene, gasoline and diesel oil.

The prevailing winds are those of the first quadrant.

FUEL/FRESH WATER: Not available.

REPAIRS: Mechanic and foundry shop under control of Industry Ministry, where light repairs of machine parts can be performed.

TRANSPORTATION: Distance from Manzanillo to:

Ceiba Hueca: 15 miles by sea, 32 km. by highway

Media Luna: 23 miles by sea, 45 km. by highway

Niquero: 45 miles by sea, 79 km. by highway

Pilon: 90 miles by sea, 130 km. by paved highway, which reaches up to 15 km. from Niquero whereafter a dirt road must be used to reach Pilon. Dirt road distance of 40 km. During rain season a jeep is used to travel by this road.

Car is used to travel from Manzanillo to above sub-ports, and takes: to Ceiba Hueca 1 hour; to Media Luna 1 hour; to Niquero 2 hours and to Pilon 3 hours (in rainy season about 5 hours).

Daily car services from Manzanillo to Niquero; to Pilon there are trucks specially prepared for this service.

COMMUNICATIONS: There is direct communication between Manzanillo and its sub-ports by telephone or telegraph.

In Manzanillo there is a long distance telephone service, radiograms, telegrams and Post Office.

Vessels navigating to Cuba can communicate with the Agency by radiotelegraphy, contacting "CLA Havana" station, which relays the messages to Manzanillo by telex.

Vessels navigating in Cuban waters can communicate any message to Manzanillo Agency by means of radiotelephony, contacting "CLM Coastal Network", Manzanillo. CLM station relays the messages to Manzanillo Agency by direct telephone call.

The Manzanillo Agency is connected to the National Telex System and the Manzanillo number is 063121. This is the quickest method of communication with Manzanillo Agency.

ETA messages should be given simultaneously to "Mambisa Manzanillo" and "Mambisa Havana".

MEDICAL: There is a hospital at Manzanillo where sick crew members can receive attention.

DUNNAGE: Vessels nominated for loading sugar in Manzanillo or any of its sub-ports must arrive supplied with wood dunnage because in the Manzanillo area it is extremely difficult to obtain wood dunnage.

Dunnage paper can be supplied if requested in advance.

AUTHORITIES: All Port Authorities, Custom House, Immigration Port Doctor, Port Captain are located at Manzanillo.

Vessels can proceed directly to any of the sub-ports, where Manzanillo Port Authorities travel to give clearance, but advance information must be given to these Authorities for the corresponding permit, as Manzanillo regulations provide that vessels must enter Manzanillo as Custom Official Port.

AGENT: Empresa Consignataria Mambisa, Calle Bateria No. 2, Manzanillo, Province Granma. Cable Address: Mambisa Manzanillo. Telex: 063121. Tel: 2533, 2535.

(a) SUB-PORT OF CEIBA HUECA: (See Plan)

Vessels may proceed direct to sub-ports (see Manzanillo under "Authorities").

LOCATION: This port is located on the South coast of Cuba, at a distance of 15 miles Southwest of Manzanillo in position Lat. 20° 13' 24" N., Long. 77° 19' 26" W.

Through this port, the production of three sugar mills is exported ("Indio Diaz", "Francisco Castro Ceruto" and "La Demajagua").

Distance to Manzanillo by road is 32 km.

APPROACHES: See Manzanillo information. For operations at Ceiba Hueca it should be noted that the pier has a depth of only 19 ft. towards the sea end for loading. Tidal variation about 1 ft. 6 in.

PILOTAGE: Pilots board vessels in the vicinity of Cape Cruz at following position Lat. 19° 49' 12" N., Long. 77° 45' 12" W.

Also see "Manzanillo".

From the place where pilots board vessels to Ceiba Hueca Pier, there is a distance of 46 miles through Madrona Channel.

ANCHORAGE: *Ceiba Hueca Anchorage:* Located one mile to the Northwest of the pier. Maximum draft allowed is 10.05 m. Bottom is soft mud.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Entrance to port is effected through Madrona Channel. After passing Fustete Bank, Point Martillo and the sugar mill stack are the best reference points.

Limitations to vessels are in keeping with the operations to be performed.

Vessels loading sugar have no other limitations than those imposed by Madrona Channel, which are LOA 170 m. and max. draft 9.45 m.

RESTRICTIONS: Entering and sailing only possible during daylight hours.

BERTHING: *Sugar Pier:* Max. LOA 170 m. Max. draft 9.45 m.

Cargoes handled by the Port:

Exports: Raw bulk sugar and molasses.

Coastal Trade: Discharge of fuel oil.

MEDICAL: Crew members requiring medical attention are treated at the Polyclinic of the nearby town of Campechuela.

When hospitalisation or specialised medical care is required, patients are sent to Manzanillo Hospital.

TANKERS: Vessels are loaded with molasses at Ceiba Hueca Pier and average pumping rate is 25,000/30,000 g.p.h. Tankers with fuel oil are also operated.

FRESH WATER: Only small quantities available due to low pressure.

FUEL/REPAIRS: Not available.

COMMUNICATIONS: Government telegraph communication between Manzanillo and Ceiba Hueca up to 1800 hrs. however, there is a telephone line which communicates by means of relay with "La Demajagua" sugar mill, which has direct telephone communication with Manzanillo. This communication is only during sugar-mill office hours, and it is very poor due to above relay.

SHIPMASTER'S REPORT: October, 1984. (See Plan).

Vessel loaded sugar in Bulk.

A new berth (constructed 1981) consisting of the following:

1. A long passage way from land to seaward having a length of about 500 m. containing the belt which carries the sugar.

2. Seven square dolphins 5 m.×5 m. constructed of cement with rubber fenders and 1 bollard on each. Distance between the first and seventh dolphins is about 250 m.

3. One semi-circle cement construction about 40 m. length containing the movable conveyor.

The conveyor has a capacity of about 500 tonnes p.h. – 600 tonnes p.h. Loading operations can be done only into 3 cargo holds and then vessel has to shift by means of warping. No tug available or shore mooring men. It is best to leave a seaman ashore for any rope moving.

The berth is affected by strong Northeasterly – Southeasterly winds and precautions must be taken during vessel's shifting.

Max. sailing draft allowed 32 ft. The channel is marked with 3 pairs of buoys. No night mooring or unmooring. All other details as per "Guide to Port Entry".

AGENT: Vessels operating at this sub-port attended by Manzanillo Agency Personnel.

(b) SUB-PORT OF MEDIA LUNA: (See Plan)

Vessels may proceed direct. (See Manzanillo under "Authorities").

LOCATION: The port is located on the South coast of Cuba, about 23 miles S.W. of Manzanillo in position Latitude 20° 10' 30" N., Longitude 77° 26' 25" W.

For description purposes, Media Luna ia located between the port of Niquero at the Southwest and Ceiba Hueca to the Northwest and loading at anchorage is effected at about 1.75 miles off Point Cocal.

It is an open bay and sometimes the winds and swells interrupt the loading operation, especially in the afternoon, when there are scanty tropical storms.

Through this port is exported the production of the sugar mill "Juan Manuel Marquez", the largest in the Manzanillo region.

Also, on occasions, sugar mills "Indio Diaz" and "Francisco Castro Ceruto" ship some of their production through Media Luna.

APPROACHES: See "Manzanillo".

PILOTAGE: Pilots board vessels at Cabo Cruz. Distance from place where Pilots board vessels to Media Luna via the Madrona Channel is 40 miles.

ANCHORAGE: *Media Luna Anchorage:* Max. LOA 170 m., max. draft 9.45 m.

The anchorage is located between Point Cocal and Point Manacal, but closer to the former and about 1.25 miles from the shore.

Transportation means from anchorage to the shore and vice-versa is by launches and tugs of the stevedores enterprise.

Sugar is loaded on railroad car (non standard gauge) at the sugar mill, which is less than 1 km. distant from the barge pier, located at Point Cocal.

RESTRICTIONS: Entrance to or sailing from Media Luna port is only effected during daylight.

MAX. SIZE: Max. draft for vessels to enter and carry out loading operations at this sub-port is 10.05 m. Tidal variation 1 ft. 6 in.

LOADING: Loading operations are carried out at anchorage. Only one vessel can be operated because the sugar mills which ship through this port are able to transport to Media Luna only 800 to 900 tons daily (600/650 tons from "Juan Manuel Marquez" and balance from sugar mills "Indio Diaz" and/or "Francisco Castro Ceruto").

Cargoes handled: Only bagged raw sugar in 100 kilo bags.

MEDICAL: There is a hospital and also a polyclinic at Media Luna where sick crew members receive medical or dental care.

Whenever hospitalisation or specialised medical care is required, patients are sent to Manzanillo Hospital.

TANKERS: No facilities.

FUEL/FRESH WATER/REPAIRS: Not available.

COMMUNICATIONS: There is direct telephone service with Manzanillo, also telegraph and post office.

AUTHORITIES: See "Manzanillo".

(c) SUB-PORT OF NIQUERO: (See Plan)

Vessels may proceed direct. (See Manzanillo under "Authorities").

LOCATION: The port is located on the South coast of Cuba, about 45 miles southwest of Manzanillo.

The port lies 5 km. S.W. of the town of Niquero and the pier is located at Point Cachones.

From the pier to the sugar mill "Roberto Ramirez Delgado", 5 km. inland, runs a non-standard railroad track by which flows all the sugar cargo to the pier.

Although Niquero mainly ships the sugar produced by sugar mill "Roberto Ramirez Delgado", occasionally some import cargoes are handled.

PILOTAGE: Pilot boards the vessel in the vicinity of Cape Cruz at position: Latitude 19° 49' 12" N., Longitude 77° 45' 12" W.

From this place to Niquero there is a distance of 36 miles (through Madrona Channel).

Vessels can enter and sail during daylight hours only.

LOA 147 m., max. draft 6.83 m.

Niquero Pier: Max. LOA 147 m., max. draft 6.83 m.

Berth is out of service at present. The ship's length which operates there is limited to 147 m., due to the present condition of the installation. Previously ships with a length up to 170 m. used to perform operations there.

The pier is geographically oriented from East to West, and vessels berth on the North and South sides.

Although Niquero Pier is capable of working 2 vessels, one docked on each side, the sugar delivery capacity of the sugar mill is only sufficient to operate one vessel, unless overtime is worked, both at the sugar warehouse and at the pier.

The port personnel consists of 3 gangs, but when required extra personnel are sent from Manzanillo.

Cargoes Handled: Mostly raw bagged sugar (100 kilo jute bags) and on some occasions import cargo, such as bagged fertiliser, jute bales, railroad sleepers, etc.

FRESH WATER: Can be delivered at pier by means of tank cars at an average of 40/50 tons daily.

As water delivery sometimes interfers with loading operations, delivery must be arranged to take place at times when vessel is not working.

FUEL/REPAIRS: Not available.

TANKERS: No facilities.

MEDICAL: All crew members requiring medical or dental attention are treated at Niquero Hospital, where they can be hospitalised if necessary.

COMMUNICATIONS: Long-distance telephone communication between Manzanillo and Niquero sugar-mill office. Distance from sugar-mill office to pier is about 5 km.

AGENT/AUTHORITIES: See "Manzanillo".

(d) SUB-PORT OF PILON (ENSENADA DE MORA): (See Plan)

Vessels may proceed direct to sub-ports (See Manzanillo under "Authorities").

LOCATION: The port is located on the South coast of Cuba in position Latitude 19° 54' 28" N., Longitude 77° 18' 58" W.

This port is located at Ensenada de Mora and is known by either name but mostly as Pilon.

The port is used for the export of the production of sugar mill "Luis Enrique Carracedo", formerly known as Cabo Cruz or Pilon.

APPROACHES: From Cabo Cruz to Pilon mouth entrance is open sea. From Pilon mouth to the pier is through channel, with rocky bottom and turns.

PILOTAGE: Pilot boards vessel at Cabo Cruz (Lat. 19° 49' 12" N., Long. 77° 45' 12" W.) Distance to Pilon Pier is 34 miles.

ANCHORAGE: *Pilon Anchorage:* Located 0.5 miles from Pilon Pier. Max. Draft 7.01 m.

Loading operations are performed by means of barges.

Vessels can enter and sail from Pilon only during daylight hours.

Max. LOA 137 m. – 143 m. Max. draft 6.10 m.

Tankers: LOA 152 m.

Operations at this port are performed at the pier and occasionally at anchorage.

The pier is of wood construction, (out of service since February 1984, due to its condition).

Vessels docking alongside the pier cannot work all their hatches at one time, and it is necessary to turn the vessel around to complete the loading to an allowable draft.

It has double non-standard gauge railroad tracks which run up to the sugar mill, located less than 0.5 miles from the pier.

The docking capacity of the pier is about 91 m., so vessels overhang and moor to a solid dolphin and a mooring buoy.

Maximum length for tankers is 152 m. and they effect the loading operations at the head of the pier.

MEDICAL: Medical attention and dental care rendered at Pilon Hospital.
TANKERS: Molasses average pumping rate is 25,000 – 30,000 g.p.h. One connection 8 in. diameter, 12 in. pipeline.
FRESH WATER: Can be delivered at berth by pipeline. Average delivery rate about 1 t.p.h.
FUEL: Not available. No facilities.
COMMUNICATIONS: There is a telegraph service and telephone service, local and long distance.

ETA messages should be given simultaneously to Mambisa Manzanillo and Mambisa Havana.
AGENT/AUTHORITY: See "Manzanillo".

MARIEL: 23.01 N. 82.46 W. (See Plan)
(and sub-ports of Cabanas, Bahia Honda and Santa Lucia)

PILOTAGE: Pilots board vessels about 1 mile off Buoy No.1 which marks the entrance of the port.

Vessels nominated for operations at Bahia Honda and Cabanas must pick up pilot at this location.

Pilot station is located at Cayo Lenin (former Cayo Mason), No. 6911, Mariel.

Pilots telephone 9-2419.(Manager: 9-2131).

Distance from position where pilots board the vessel up to the places of operation are 1.25 miles to 2.75 miles.

Pilot works on VHF Channel 16.

ANCHORAGES: General anchorage – swing area 450 m., depth 29 ft.

Punta Gorda anchorage – swing area 340 m., depth 36 ft.

Cargo operations do not take place at anchorages.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: The entrance channel, where Buoy No.1 is situated, is over a sand bank with 15.24 m., 16.76 m. and 18.25 m. depths and vessels steer with only one course continuing up to Buoy No.3, which is situated in 9.14 m. of water on rocky bottom, but having close by a depth of 28.88 m. This channel is 60 m. wide, approximately. Maximum draft with which vessels can enter/sail through channel is 9.45 m. and length 177 m.

It is not necessary to wait for slack or favourable tide to enter or sail from port.

No tug is required, except in case of tankers measuring between 162 m. – 186 m., in which event tug is required.

RESTRICTIONS: Vessels can enter and sail during day and night hours, but this should be checked in each case prior to vessel's arrival as on occasions the buoys are missing.

MAX. SIZE: Max. draft with which vessels can enter and sail through channel is 30 ft. and max. length of 610 ft. Tidal variation 16 in. Also see "Berthing".

BERTHING: All places of operation at this port are located on the East coast of the bay: Unit No. 1 close to the port entrance; Cement Plant pier located just in front of Pt. Gorda and Unit No. 2 located at the North of the town of Mariel.

All operations at Mariel piers are effected by means of trucks.

(a) Unit No. 1, Berth No. 2 (N.W.): Length 134 ft., max. draft allowed 22 ft. Used mostly for general cargo and bulk fertiliser.

(b) Cement Plant Pier: Length: 544 ft. Draft: Vessels with a length under 500 ft. can dock with a draft of 29 ft. even keel.

This pier is used only to discharge fuel oil destined either for the Cement or the Thermoelectric Plants.

Vessels over 500 ft. and up to 610 ft. can enter with a draft of 27 ft. fore and 29 ft. aft. Assistance of a large tugboat (850 h.p.) or 2 smaller ones is necessary for vessels exceeding 532 ft. and up to 610 ft. length. Tanker information: Fuel Oil: 1×8 in. diameter.

(c) Unit No. 2: This installation is located at the North side of the town of Mariel.

It consists of 3 berthing spaces, that is, a pier 607 ft. long by 267 ft. wide, built of concrete, but earth filled and not properly paved.

Berth No. 5 (N.E.): Draft: 21 ft. fore and 23 ft. aft. Length: 607 ft.
Berth No. 6 (N.W.): Draft: 25 ft. fore and 27 ft. aft. Length 267 ft.
Berth No. 7 (S.E.): Draft 29 ft. even keel – Length: 607 ft.

Cargo handled by this unit: Bulk fertilisers, general cargo and lumber. Water available by tank-truck.

(d) A new plant for shipping bulk raw sugar is operating at new pier, draft 30 ft.

STEVEDORES: Working periods: Monday to Saturday 0700 – 1300 hrs., 1300 – 1900 hrs., 1900 – 0100 hrs.

Raw sugar: 845 bags loaded per gang-period. 9 bags per sling. Only one sugar vessel can operate at a time.

General cargo: discharging rate: from 6 to 9 tons per gang hour.
Bagged merchandise: about 13 tons (100 lb. bag type).
Iron: about 18 tons (fluctuates according to type of iron).
Wood: 12 tons (approx.).
Fertilisers: Muriate of potash: 10 to 13 tons.
Sulphate of ammonia: 8 to 10 tons.
Superphosphate simple: 15 to 18 tons.

Shore cranes: There is one caterpillar (PH movable crane with boom of 80 ft. length, and which can lift 12 tons).

FRESH WATER: Can be supplied at Unit No. 2 berth by means of tank-truck with capacity of 5 tons. In dry season supplied only during night time.

FUEL/REPAIRS: Not available.

MEDICAL: No hospital. Crew members requiring medical attention are sent to Havana.

TRANSPORTATION: Distance from Mariel to:

Cabanas (anchorage):	25 km.	45 minutes by car.
Cabanas (pier):	57 km.	1 hour 47 minutes by car.
Bahia Honda:	73 km.	2 hours by car.
Santa Lucia:	250 km.	4 hours by car.

Car is hired for transportation to above sub-ports. There is daily transportation only between Mariel and Cabanas anchorage.

AUTHORITIES: Located at Mariel as follows:

Customs House and Immigration: Ave. 65. 126 Street and 128 Street.
Captain of the Port: Playa "La Boca" at the entrance of the port.
Port Doctor: 128 Street. Ave. 67. and Litoral.

AGENT: Consignataria, Mambisa, Agencia Mariel, Ave. 65 No. 12411 entre 124 y 126, Apartado No. 5, Mariel. *Tel:* 92305, 92183 (office), 922326 (night). *Telex:* 05740. *Cable:* "Mambisa Mariel".

Mariel Agency also attends the ports of Bahia Honda, Cabanas and Santa Lucia.

(a) SUB-PORT OF CABANAS: (See Plan)

Vessels assigned to Cabanas do not have to enter Mariel for clearance, but must pick up Pilot at Mariel port entrance.

APPROACHES: Entrance channel has sandy bottom on Eastern side, and rocky bottom on Western. It is about 70 m. wide.

PILOTAGE: See "Mariel".

Distance from position where Pilots board vessels to Cabanas is 12 miles.

ANCHORAGES: Excellent anchorage is available about 620 m. S.E. of Pt. Mangle, with draft well above port's operations draft.

This is a very desirable anchorage as it offers protection in all weathers.

There is another anchorage about 4.5 miles distant from Gloria Rock.

RESTRICTIONS: Vessels should enter and sail only during daylight.

MAX. SIZE: Max. draft permitted for entry and sailing is 19 ft., and max. length 574 ft. Tidal variation 1 ft. 4 in.

BERTHING: Present name: ECA "Pablo de la Torriente Brau". Former name: "Almacenes de Cabanas". Length 360 ft. (max. length permitted 450 ft.), depth 20 ft.

This dock is commonly known as "Orozo Dock", which is used in shipments of raw sugar. There are railroad tracks of standard gauge.

If for any reason a tugboat is required, tugboat 'Caharata' is available, if requested in advance.

LOADING: Working periods: raw sugar: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

845 bags are loaded per gang-period. 6 bags loaded per sling.

FUEL/FRESH WATER/REPAIRS: Not available.

MEDICAL: Crew members requiring medical care are attended at Cabanas Polyclinic. In those cases requiring hospitalisation or specialised medical treatment, they are sent to Havana.

AGENT/AUTHORITIES: See "Mariel". There is a Port Captain and Immigration at Cabanas.

(b) SUB-PORT OF BAHIA HONDA: (See Plan)

Vessels assigned to load at Bahia Honda do not have to enter Mariel for clearance, but must pick up Pilot at Mariel port entrance.

APPROACHES: The entrance channel has sandy bottom on Eastern side, and rocky bottom on Western and is approximately 150 m. wide up to Corojal Anchorage.

PILOTAGE: See "Mariel". Distance from position where Pilots board vessels to Bahia Honda is 21 miles.

ANCHORAGES: Draft 28 ft. Swing area 300 m. Max. length permitted 623 ft. Anchorage used for completion of sugar loading by means of barges that are brought from Havana.

RESTRICTIONS: Entry and sailing only during daylight and necessary to await favourable tide.

MAX. SIZE: Length 450 ft. and max. ship draft for proceeding up to Corojal anchorage is 28 ft. Tidal variation 1 ft. 4 in.

BERTHING: Dock: "Central Harlem" (formerly "Bahia Honda"):

Length 260 ft., draft 19 ft. Dock is commonly known as Sugar Dock of Harlem Sugar Mill. It has railroad track of standard gauge.

LOADING: Sugar working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

845 bags of raw sugar are loaded per gang-period as minimum (more than the above stipulated amount is always loaded). Only one vessel can load at a time.

BUNKERS/WATER/DUNNAGE/REPAIRS: No facilities.

MEDICAL: Crew members requiring medical care are attended at Bahia Honda Polyclinic. Those cases requiring hospitalisation or specialised medical treatment are sent to Havana.

AGENT/AUTHORITY: See "Mariel".

(c) SUB-PORT OF SANTA LUCIA: 22° 44' N. 83° 59' W.

Vessels assigned to Santa Lucia do not have to enter Mariel for clearance, nor to pick up Pilot.

APPROACHES: Channel approximately 200 m. width, rocky bottom. It has two turns with dangerous narrows. Tidal variation averages 18 in.

PILOTAGE: Pilots board vessels at Pasa Honda, 2 miles off the phosphorescent buoy. No Pilot Station. Advice of ships' arrival is given to Custom House Delegation by cable. Distance from place where Pilots board vessels up to first anchorage is 4 miles.

LOADING: There are the following anchorages:

1st Anchorage: Has depth of 30 ft., but vessels are limited for sailing to max. draft of 15 ft., and length 500 ft.

2nd Anchorage: Has depth of 20 ft., but vessels are limited for sailing to max. draft of 18 ft.

3rd Anchorage: Open sea without draft limitation.

Working periods: Work is performed all day (during daylight) including Saturday and Sunday.

Average loading rate is about 900 tons daily, but rate might be improved in the following cases:

1. Vessels with more than 3 hatches available.
2. Vessels with booms (not of the crane type) since loading is performed by grabs which are to be rigged in order to perform quick loading.
3. Provided only one vessel performs operations (2 vessels may be loaded simultaneously but above rate cannot be complied with).

Loading at this sub-port is by means of grabs rigged to vessel's boom. In cases where vessel has no booms, but cranes, the loading is carried out very slowly as buckets are used in such cases, and having to shovel mineral into buckets delays loading operations.

There are 6 barges for loading mineral with a capacity of 150 tons each.

TUGS: 2 tugs, *Adis* and *Julita* which can tow 2 barges each.

FUEL/FRESH WATER/REPAIRS: Not available.

MEDICAL: Crew members requiring medical care are attended at Santa Lucia Polyclinic. Those cases requiring hospitalisation or specialised medical treatment are sent to Pinar del Rio Hospital, distance 80 km. from Santa Lucia.

AGENT/AUTHORITIES: See "Mariel".

Port Authorities use launches for clearing vessels. Agents use a car to travel from Mariel to Santa Lucia which takes 4 hours.

There are Custom House and Port Captain Delegations at the sub-port of Santa Lucia.

MATANZAS: 23.03 N. 81.34 W. (See Plan)

Matanzas Bay is open and most ample, being about 5 miles long and 2.75 miles wide.

Its waters are deep and only start losing depth at about 150 yds. from shore; for this reason it is most suitable to accommodate large vessels, regardless of length or draft.

Occasionally the prevailing winds affect and interfere with docking and undocking manoeuvres.

Within bay limits, 3 rivers flow:

San Juan and Yumuri Rivers, which empty into the South-Western extreme of the bay, after crossing the city of Matanzas; and Canimar which drains into the S.E. of the bay.

APPROACHES: There are three entrance channels:

(i) North Channel: 50 ft. minimum depth with muddy bottom.

(ii) South Channel: 80 ft. minimum depth with rocky bottom.

(iii) Middle Channel: 22 ft. maximum draft. Because of the limited draft of this channel, it is seldom used.

The most remarkable points of visual orientation while approaching Matanzas are:

Point Maya Lighthouse, which rises 58 ft. above high tide, flashing white light visible up to 13 miles away, located on the East side of the port mouth.

To the West the Pan de Matanzas mountain and to the East the mountain range known as Tetas de Camarioca, 7 miles inland, with three distinct summits.

While entering the port at night-time, on the West side of the entrance, there is a huge brightly illuminated building of a tannery which can be used as a landmark to determine where to pick up Pilot, as the location is 700 m. after sailing past the building.

Tidal variation at this port averages 1 ft. 6 in.

PILOTAGE: Pilots board vessels about 3 miles after passing the port entrance, in front of Electrical Plant and close to Empresa Consolidada del Petroleo Pier (Texas). Pilot station located at Reynold Garcia Pier (Terminal Maritima). Tel. number 2688.

Pilots board tankers in position Lat. 23° 05.6' N., Long. 81° 30.2' W.

ANCHORAGES:

Indio Anchorage:	depth 17 ft.; swing area 120 m.
South Anchorage:	depth 30 ft.; swing area 230 m.
Del Medio Anchorage:	depth 27 ft.; swing area 200 m.
West Anchorage:	depth 21 ft.; swing area 150 m.
North Anchorage:	depth 25 ft.; swing area 150 m.
Casacajales Anchorage:	depth over 30 ft.

RESTRICTIONS: Vessels can enter or sail at night but Port Authorities should be advised in advance.

BERTHING: At Matanzas Port there are 5 separate berthing installations of which Jesus Menendez Pier, formerly known as Texas Pier, has been out of use for some time.

All port installations are located on the N.W. shore of the bay.

Jose Luis Dubrocq Pier was enlarged and rebuilt in 1970 and all piers and the bay have been recently dredged, these works having been completed at the beginning of 1973.

Jesus Menendez Pier (formerly Texas Pier): Length 794 ft., draft 28 ft. Used to discharge fuel oil.

Presently no operations are performed at this pier due to the bad condition of its solid dolphins. Pier itself is in good condition and may be used as soon as solid dolphins are replaced.

Frank Pais Pier (formerly Armour Pier): It is a solid construction of concrete and stones.

Although it has two sides, only the West side is used, the East side being out of use. Length 350 ft., draft 22 ft.

Cargo handled by this pier: Only coastal trade discharge of: Fuel oil, diesel oil, gasoline, kerosene and occasionally cement or general cargo.

Reynold Garcia Pier (formerly Terminal Maritima Pier): The pier is of solid concrete construction at the entrance of which the Pilot Station and the stevedores' office are located.

North Side: Length 450 ft., draft 32 ft. Cargo handled by this side: Exportation: Bagged refined sugar, dextrana, rayon, liqueurs, etc. Import: Occasionally dry cargo (general cargo), liquid ammonia.

South Side: At this side of pier are the mechanical installations of the bulk raw sugar shipping plant. Length 529 ft., draft 32 ft.

Cargo handled by this side: Exportation: Bulk raw sugar, occasionally bagged refined sugar, dextrana, rayon, liqueurs, etc. Importation: Can be used if no sugar is scheduled to be shipped.

Morales Bayona Pier (formerly Cubadist Pier): It is a steel and concrete construction, consisting of a long narrow passage along which run the molasses and water pipelines, and a catwalk.

At this installation tankers berth to 2 solid dolphins and 2 mooring buoys fore and aft. Max. length permitted to vessels 615 ft., draft 32 ft.

Cargo handled by this pier: Exportation of molasses and alcohol.

Jose Luis Dubrocq Pier (formerly Fomento Maritimo Pier):

Section No. 1: Recently enlarged and rebuilt; at this time 2 heavy overhead cranes are being installed for discharging of bulk fertilisers. This installation is a coastal pier. Length 600 ft., draft 32 ft.

Cargo handled by this Section: Import: General cargo, bulk fertilisers, bagged cargoes, lumber, etc. Export: General cargo.

Section No. 2: Length 532 ft., draft 27 ft.

Cargo handled by this Section: Similar to Section No. 1.

Trucking operations are usual at this pier.

STEVEDORES: Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturday: 0700 – 1100 hrs. Sundays: No work performed unless in special cases.

Raw sugar: 855 raw-sugar bags loaded per gang-period. 5 bags loaded per sling.

Refined sugar: 2,004 refined-sugar bags (50 kg. type) are loaded per gang-period (797 of 100 kg. type).

12 bags of 50 kg. type per sling; 6 bags of 100 kg. type.

General cargo: average rate of discharge of other kinds of cargo varies depending on the type.

Average rate of fertiliser discharge about 11 tons per gang-hour.

Crane: one steam crane with a boom of 60 ft. which can lift about 40 tons. Crane is mounted on railroad tracks and is used only at Jose Luis Dubrocq Pier.

Bulk sugar: The installation of bulk sugar throwers operated by Empresa Consolidada del Azucar, at Reynold Garcia Pier, is by system of conveyor and distribution crane which runs from Parabolicos warehouses up to the end of the pier. A special structure protects the conveyor.

The crane runs on special rail throughout the pier (fore and aft) stopping at each vessel's hold. In cases where the vessel has projecting superstructure, she has to be separated from the pier.

Average loading rate is about 350 t.p.h., depending on the type of vessel. On vessels without tweendecks, an average of 43 t.p.h. has been attained.

Weights of shipment estimated on draft and information provided by Master. Notations are entered in Bill of Lading declaring quantity as subject to amount discharged at destination, which is supervised by Cuban Producers' Representative.

MEDICAL: Following hospitals where sick crew members can receive attention: Civil Hospital, Army Hospital, Clinica Moderna, Clinica Villar, Clinica Matanzas.

TANKERS: Discharge of fuel oil: 1 connection 6 in. diameter.

Discharge of gasoline/kerosene/diesel oil: 1 connection 6 in. diameter.

Alcohol: Pipe-lines 10 in. diameter, 2 connections 8 in. diameter.

Molasses: Pipe-lines 12 in. diameter, 4 connections 8 in. in diameter.

Also see "Shipmaster's Report" dated April 1993.

FRESH WATER: Water available by pipeline only while docked to the underlisted piers:

Reynold Garcia: Delivery rate: From 7 to 10 t.p.h.

Morales Bayona: Delivery rate: From 10 to 12 t.p.h.

Jose Luis Dubrocq: Delivery rate: From 5 to 7 t.p.h.

FUEL: No bunkers available.

REPAIRS: Can be performed by Cearra y Trabazo.

COMMUNICATIONS: Long-distance telephone, Corporacion Inalambrica Cubana, Press wireless, Government telegraph, postal communication, railroad and buses.

Vessels can communicate through CLA via Cardenas and/or Havana.

DEVELOPMENTS: Specialised fertiliser unloading equipment to be introduced at the port.

SHIPMASTER'S REPORT: April 1993.

Vessel loaded 25,000 tonnes of jet fuel at Punta Cardon for discharge at Matanzas and Havana.

Although frequent attempts were made to get in contact with the Agents, Mambisa, no acknowledgement of communications was obtained at any time during the passage.

I was given to understand that Cuba is not a signatory to Inmarsat, and for that reason I was unable to communicate with telex or telephone via the Satcom. Finally we were able to get in contact with another company vessel who called at Cuban ports earlier, and the information obtained was rather alarming, especially with respect to rummaging and personal effects. We prepared the entry documents as stipulated in the "Guide" and were prepared for the worst. Only at 1.5 hours prior to arrival was the first contact obtained with Matanzas Port Control, who did not communicate more than one sentence "Berthing on arrival".

The Pilot Station for Matanzas is not as charted, but about 3 miles more North in accordance with the ALRS.

The 2 pilots boarded in the indicated position, and vessel approached the old but still fully operational T-head jetty "Muelle Juan Bayona" very cautiously.

Assistance of 2×3,600 h.p. tugs with 80 tons bollard pull was obtained. Ship's lines were used to secure tugs, as they have no other equipment than mooring lines for their own use. The pilots apologised for this situation. Finally the vessel was secured with 3 head lines, 2 springs forward and 3 stern lines, 2 springs aft. There is no facility for breast lines. Head and stern lines run at about 45° to two large dolphins for about 100 m.

During mooring, the first two officals boarded the vessel (the Port Health Official and the Port Control Officer). They inspected the vessel thoroughly and checked Log Books and Oil Record Books. All were found in order and Free Pratique was given. Only when vessel completed berthing could gangway be lowered and the remainder of the officials (Medical Officer, Veterinary Inspector, Customs, Immigration officials, etc.), Agent and Cargo Receivers Representative were allowed to board. The formalities were conducted in an utterly friendly atmosphere and took about 1.5 hours. A full crew muster was held but only to compare faces with the Passport pictures. All cargo overboard valves and sea suctions are sealed and a document of this is presented. On every inspection a document is made out and presented for signature and ship's stamp.

The total amount of gratuities is minor compared to some other ports. We were also advised that the extensive Personal Effects List was not necessary at all, and a simple list stating only the luxury goods like watches, radios, cigarettes, spirits, etc., required entry on the form. Customs officers enquired a number of times whether we would like to withdraw some extras from the bond for our own use prior to sealing. Subsequent withdrawals are easily arranged at their frequent visits without any problems.

Veterinary inspection is strict, and only meats from the U.S.A., Australia and New Zealand may be used during the stay in port. The meat room is then sealed. We were at an advantage to have a large domestic freezer in the lobby of the domestic fridges, so we could store the withdrawn food there. Finally the vessel was cleared and other interests were allowed to board and conduct their business.

After about 2 hours another party of Customs officers boarded the vessel and requested to be shown around the crew's quarters. Only cabins of crew that were on board and not sleeping or working required inspection.

Agents were found to be extremely polite and helpful in every respect. Foreign currency may be freely spent, and no restrictions on shore leave are imposed. Public transport however is virtually non-existent, and the "Tourist taxi" is not readily available in this area. Walking is the only alternative.

Because of the poor communication facilities in Cuba, a number of telephone calls were made on the ship's Satcom by the Cargo Receivers and SWS Representative to facilitate matters and generally expedite procedures.

Documents required:

3 Personal Effects Lists (only luxury goods).
12 Crew Lists.
3 Foreign Currency Lists.
3 Provisions Lists.
2 Narcotics Lists.
1 Maritime Declaration of Health.
1 Vaccination List (only if available).
Cargo Documentation.

All documents are made out on plain paper, and except Crew Lists, are not studied but merely collected. Paper in Cuba is still a very scarce commodity, and the amount of copies made on ship's copying machines is enormous.

Discharge was commenced through 1×8 in. hose after lab tests had been completed. Average discharge rate achieved was 600 cu.m./hr.

Although the jetty is fitted with an old sprinkler system along the pipelines, I am not sure whether this is operational. Certainly there is no possibility to connect the shore fire main to the ship's main in case of emergency.

We found that the people visiting the ship were all very pleased with minor attentions like a soft drink and some sandwiches, although complete meals were also greatly appreciated.

After completion of cargo operations, the exit procedures again took about 2 hours to complete. All Passports are now inspected against Crew List, and Exit Passes issued and put into Passports.

After departure, all stores may be opened even if the next port is in Cuba.

AUTHORITIES: Located as follows:

Port Doctor:	Milanes St. No. 2. Tel. 2672 (home tel. 2338).
Immigration:	Santa Teresa St. No. 19. Tel. 2695.
Port Captain:	Muelle del Real. Tel. 2469.
Custom House:	Versalles St. e/Navia and Riech St. Tel. 2269 (home tel. 2339). (Chief of Custom House watching services.)

AGENT: Empresa Consignataria Mambisa, Agencia Matanzas, Milanes No. 28002, Apartado No. 245, Matanzas. Telephone: 2519 and 3079 (office), 3081 (night). Telex: 52132. Cable: Mambisa Matanzas.

Ocean going vessels navigating to Cuba can communicate with the Matanzas Agency by radiotelegraphy, contacting "CLA" Havana Station, which relays the messages immediately to Matanzas.

The Matanzas Agency is connected to the National Telex System and its number is 05232. This is the quickest method of communication with Matanzas Agency.

Masters must send their ETA messages simultaneously to Mambisa Matanzas and Mambisa Havana.

Matanzas Agency VHF works on Channel 16 during office hours.

MOA: 20.41 N. 74.52 W. (See Plan)
(And Sub-Ports of Baracoa and Punta Gorda)

LOCATION: The port of Moa is situated in the rear part of Yaguasey Bay, where in an artificial inner harbour lies the pier of Moa, and at the entrance of the inner harbour a small coastal trade pier.

Both the port of Moa and the sub-port of Punta Gorda mainly handle the imports and exports of the huge mining enterprise, Major Pedro Soto Alba.

PILOTAGE: Pilots board vessels at Moa Port mouth which is distant about 2 miles from entrance. Pilot station located at Punta Gorda at distance of about 5 miles from port entrance. Distance from point where Pilot boards vessel to Darsena de Moa (pier) is about 4 miles; to Moa Anchorage about 2 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Entrance channel to Moa is almost straight having two very slight turns, minimum depth on its course is 40 ft. and length and draft limitations to enter to or sail from this port are those imposed by Moa pier and inner harbour:

Draft: Vessels drawing 28 ft. 6 in. can enter/sail at any tide, those drawing more than 28 ft. 6 in. up to 30 ft. only at high tide.

Length: 500 ft.

Channel bottom from its head up to the pier is as follows: From the head to Grande or Del Medio Shoal, coral and rocks; then up to Yaguasey Bay, coral and mud; and on its final stretch to the pier, hard red mud.

Length of channel: 1,560 m.; minimum width 200 m. and maximum 720 m.

For both, Moa and Punta Gorda, entrance to or sailing from, can only be performed during daylight.

As tidal currents average only 1.25 knots, and since the inner harbour is almost devoid of currents, it is not necessary to wait for slack water for entering, sailing or crossing the channels.

Approaching the port of Moa, at both sides of port entrance, strings of breakwaters can be seen.

Behind the Western side breakwater, Moa Grande Cay is conspicuous and a lighthouse rises at about the middle of its North coast.

ANCHORAGES: Moa: *Anchorage No. 1:* Located Northward of Fabrica River and S.E. of Pt. Pajaros: Lat. 20° 40' 38" N., Long. 74° 53' 10" W.

Minimum depth: 38 ft. Swinging area: 250 m.

Anchorage No. 2: Located Northward of Fabrica River and South of the Eastern extreme of Moa Grande Cay: Lat. 20° 40' 35" N., Long. 74° 53' 28" W.

Minimum depth: 37 ft. Swinging area: 250 m.

Anchorage No. 3: Located N.W. of Del Medio Shoal: Lat. 20° 40' 32" N., Long. 74° 54' 04" W.

Minimum depth: 68 ft. Swinging area: 300 m.

Anchorage No. 4: Located Northward of Del Medio Shoal: Lat. 20° 40' 43" N., Long. 74° 52' 30" W.

Minimum depth: 41 ft. Swinging area: 250 m.

Although above anchorages are listed under the port of Moa, they can be used if necessary, for shipping or unloading cargoes destined to Punta Gorda.

TIDAL VARIATION: Tidal variation at these ports averages 30 in.

RADIO: There is a Government Radio Station at Moa.

Vessels navigating to Cuba can communicate with Mambisa Moa through "CLA" Havana Radio Station and the message will be relayed to Moa by telegraph or telex.

Masters must send their ETA messages to Moa or Punta Gorda, simultaneously to Mambisa Moa and Mambisa Habana.

TUGS: Tug used at Moa for docking. Tug operated by Mining Enterprises.

BERTHING: *(a) Moa Pier* (Also known as Moa Darsena): It is a solid concrete construction in an artificial inner harbour. Berthing length: 308 ft. Max. length permitted to vessels: 500 ft. Draft: Vessels drawing 28 ft. 6 in. can enter/sail at any tide, those drawing more than 28 ft. 6 in. up to 30 ft. only at high tide.

Due to pier dimensions, only 4 hatches can be worked at a time, but despite above limitations, occasionally larger vessels have been operated.

Cargo handled by this pier: Importation: Bulk sulphur, empty ore containers, occasionally general cargo.

Exportation: Nickel and cobalt concentrate in containers and drums.

Coastal trade: Discharge of fuel oil, diesel oil, kerosene, gasoline, sulphuric acid.

Tanker Information: Mining Enterprise: Gasoline/kerosene: one connection 6 in. diameter. Fuel oil: 4 connections 8 in. diameter.

ICP: Gasoline/kerosene/diesel oil: one connection 6 in. diameter.

(b) Coastal Trade Pier: It is a small coastal pier for small vessels, located at the entrance of the inner harbour. Constructed of piles and filled with earth.

Cargo handled by this pier: Coastal trade, general cargo.

No cargo operations in the bay.

STEVEDORES: *Working Hours:* Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs. Saturdays 0700 – 1100 hrs.

EQUIPMENT: 1 shore crane 30 tons with 3 ton grab; 4 contact grabs; 2 trucks 30 tons capacity each; 1 pay loader; 2 fork lift trucks; 1 stationary crane; 1 steel barge 500 tons capacity; 1 tugboat (2 diesel engines 180 h.p. each).

Loading/discharging operations: Raw material for the nickel plant is imported as well as fuel oil. Nickel concentrate is exported.

Loading/discharging rate – Nickel (in containers): loaded at a rate of approximately 30 tons per hour-gang.

MEDICAL: Industrial Hospital where crew members can be hospitalised. General Hospital at Baracoa.

FRESH WATER: Delivery at rate of about 10 t.p.h.

FUEL: Not available.

REPAIRS: There are machine shops at nickel plant where small emergency repairs can be performed.

SHIPMASTER'S REPORT: September 1990.

Documents:

12 copies Crew List.

3 copies Stores List (including narcotics, ship's cash, bonded stores and ship's stores).

3 copies Crew Declaration (including jewellery, cameras, electronic equipment, video and radio cassettes, cash and sun glasses).

1 copy Health Declaration.

Pilotage: Pilot boards 0.75 miles off Buoy No. 1.

It is difficult to make contact with the Pilot Station at night.

Approaches: On entering, keep Buoy No. 1 close on the port side and approach on a heading of 211°.

Restrictions: Daylight navigation only.

Officials: Vessel goes to anchorage and is visited firstly by the doctor, after which all other officials board. The ship and crew cabins are searched.

Meat is sealed in freezers, if produce is from Argentina, Brazil or Uruguay. Fish and chicken is not sealed.

General: According to the Pilot, a tug is compulsory but it is a waste of money. On some occasions, vessel will need a tug, especially if turning when empty. If possible, refuse a tug when not needed, because the cost is high (500 h.p. tug – U.S.$ 259.00, 501 h.p. – 1,000 h.p. tug – U.S.$ 447.00 and 1,000 h.p. – 1,500 h.p. tug – U.S.$ 755.00). There was only one tug of over 500 h.p., and we had to pay U.S. 447.00 for about 10 – 15 minutes service. The Agents will bill every single move, and great care should be taken before signing the bills, which the Master has to sign before sailing. Ship and cabins will be searched before departure in case of possible stowaways.

Before entering port, vessel should check that it has sufficient dunnage and lashing materials, as it is in short supply, expensive and takes a long time to arrive. Dunnage costs U.S.$ 116.00 per cu.m. Wire clamps and steel wire are difficult to obtain, and vessel may only receive half the amount requested.

AUTHORITY: Port Doctor, Customs and Port Captain Delegations at this sub-port. Immigration Delegate is the same one who attends vessels at Baracoa and other sub-ports. Vessels can proceed directly to Moa where they are cleared by Port Authorities. Means of transportation from Baracoa to Moa or other sub-ports are: air, launch and overland (jeep). Customs House inspectors travel from Moa to Baracoa.

Baracoa to Moa about 32 miles distant. Following services used: by plane, 20 minutes; by launch, 6 hours; by jeep, 5 hours. Daily flights and regular bus services.

AGENT: Empresa Consignataria Mambisa, Agencia Moa, Reparto "Rolo Monterrey" No. 163, Moa, Prov. de Oriente. Telephone: 7527 (day) 7105 (night). Telex: 021123. Cable: Mambisas Moa.

(a) SUB-PORT of BARACOA: 20.21 N. 74.30 W. (See Plan)

LOCATION: This port is located on the North coast of the extreme Eastern portion of Cuba in Oriente Province:

Lat: 20° 21' N., Long: 74° 30' W.

Its bay is fan shaped and is almost in its entirety sand and mud bottom, 297 m. in width at its entrance, and opens out to 1,051 m. in a N.W. and S.W. direction, and 732 m. in breadth.

Its shores are bordered by sand banks.

"Buren", an isolated rock visible only at low tide, lies about 30 yds. North-Westward of Pt. Barlovento; the sea always breaks on it; it is steep-to and constitutes the only danger.

S.W. of the town is Miel Bay where excellent anchorage is available.

PILOTAGE: Pilots board vessels 2 miles off Moa. Pilot station located Moa port. Distance from point where Pilots board vessels to operation place (anchorage) is about 2 miles.

RESTRICTIONS: Vessels can enter port only during daylight.

MAX. SIZE: Entrance channel straight – without turns. Vessels up to 100 m. length and 6.10 m. draft can enter through Channel. 2 ft. to 3 ft. rise of tide.

TUGS: One tug available.

RADIO: Vessels navigating to Baracoa can communicate with the Port Agency through "CLA" Havana Radio Station which relays the messages promptly to Moa.

Masters must send their ETA messages simultaneously to Moa Agency and Mambisa Havana.

STEVEDORES: No pier at this port. Vessels anchor in bay for operations. Several barges, capacity 100 tons.

Only one vessel can be handled at a time.

Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

Discharge rate: about 80 tons daily per gang.

MEDICAL: There is a general hospital for sick crew.

FUEL/FRESH WATER/REPAIRS: Not available.

TRANSPORTATION: Transportation to and from Baracoa is difficult.

There is daily air service and also bus service to Moa, but best advisable means of travel is by car.

AUTHORITY: Port Authorities located at Baracoa. They have Delegation at Sub-port of Moa.

AGENT: See "Moa".

(b) SUB-PORT OF PUNTA GORDA: 20.38.30 N. 74.51.15 W. (See Plan)

LOCATION: Punta Gorda is located at about 3.5 miles East of Moa and consists of an anchorage where loading is effected by means of barges.

APPROACHES: Entrance channel to Punta Gorda is the same as for Moa, and once the first stretch of it up to Del Medio Shoal is sailed past, it turns to the East, following a winding course, having four turns. The turns themselves are difficult but what makes them really dangerous is the lack of proper buoying and navigational signals.

Maximum width of channel is 300 m. and minimum 200 m. Maximum length and draft to enter to or sail from Punta Gorda are as follows: Length: 442 ft.; Draft: 28 ft.

PILOTAGE: Pilots board vessels at Moa port mouth. Pilot station located at Punta Gorda at a distance of about 5 miles from port mouth.

Distance from point where Pilot boards vessels to the anchorage (loading place) is about 4.5 miles.

ANCHORAGES: Located North of Punta Gorda and East of Pt. Yagrumage.

RESTRICTIONS: Vessels can enter only during daylight.

TUGS: One tug which tows 1 or 2 barges as necessary. Work performed day and night.

LOADING: *Punta Gorda Anchorage:* Located North of Punta Gorda and East of Pt. Yagrumage: Lat. 20° 38' 55" N., Long. 74° 51' 13" W.

Minimum depth: 31 ft. Max. draft allowed to vessels: 28 ft. Max. length allowed to vessels: 442 ft. Swinging area: 300 m.

Vessels operating at Punta Gorda load their cargo by means of barges.

Only cargo handled at this anchorage is loading of bulk refractory chromium.

RADIO: Through Simon – Baracoa by Inalambrica (cable).

STEVEDORES: Chrome, at average loading rate of 1,000 tons (approx.) per day of 24 hours. Loading operations carried out at anchorage. There are 2 wooden barges 130 tons capacity each; 1 tugboat; 2 trucks 10 tons capacity each; 1 pay loader; 1 shore crane.

MEDICAL: No hospital at Punta Gorda. Crew members can be attended to at Moa or Baracoa Hospital.

FUEL/REPAIRS: Not available.

FRESH WATER: No water available at anchorage but can be supplied at Moa Pier (Darsena).

AUTHORITY: Customs Delegation at this sub-port. Vessels can proceed directly to Punta Gorda. Port Authorities from Baracoa travel to Punta Gorda for clearance. Moa Port Doctor clears vessels at Punta Gorda. From Baracoa to Punta Gorda, following ways of transportation used: air, launch and overland, which takes 20 minutes, 5 hours and 4.5 hours respectively. No regular transportation.

AGENT: See "Moa".

NUEVA GERONA (Isla de Pinos): 21.58 N. 82.56 W. (See Plan)

Isla de Pinos is the largest island of Los Canarreos Archipelago, located on the South coast of Cuba, just in front of Batabano Gulf and the boundary between Pinar del Rio and Havana provinces.

Isla de Pinos is 54 km. long from North to South and 58 km. from East to West. (2,200 sq. km.). The North coast is 229 km. long and the South coast 98 km.

Nueva Gerona Anchorage lies in front of the mouth of Las Casas River.

APPROACHES: Entrance channel or passage from the Gulf to the bank is about 2 miles wide. Bottom throughout the 34 miles is mud (from entrance to anchorage in front of Las Casa River). No dangerous turns or narrows.

PILOTAGE: Pilots board vessels at Punta Frances. Distance from place where Pilots board vessels to loading berth is about 34 miles. No Pilot Station. Chief Pilot is located at No. 3 St. Mo. 612 e/ 6 and 8 Streets, Nueva Gerona, Isla de Pinos.

ANCHORAGES: Gerona Anchorage: Located just in front and close to the mouth of Las Casas river. Draft 19 ft. No limitations regarding length. Swing area is 600 ft.

Loading of fruits at anchorage is performed only when shipment is effected in vessels whose draft does not permit them to enter through the river.

Auxiliary equipment for exportation of fruits: 2 barges, 1 tugboat.

Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.

Whenever sufficient cargo is supplied by the packing plant, the loading rates should be about 120 tons per gang in 8 hours.

RESTRICTIONS: Entry and sailing only during daylight.

MAX. SIZE: Max. draft up to which vessels can load out of the river is 19 ft. Tidal variation 1 ft.

BERTHING: Nueva Gerona Pier: Located about 2 miles up river. Length 200 ft. Max. length allowed to vessels, 90 m. (295 ft.). Draft 14 ft. 6 in.

FRESH WATER: Available only at berth.

FUEL/REPAIRS: Not available.

MEDICAL: General hospital "Heroes de Baire", where sick crew members can receive attention.

COMMUNICATIONS: There are telephone, telegraph and cable (Inalambrica) communications, also air postal service.

AUTHORITIES: Port Authorities are located at Nueva Gerona.

It is strongly recommended that when vessels are assigned to this port, all measures be taken for perfect co-ordination between Agents, Pilots and Port Authorities, and Masters should give ETAs in advance.

SUB-AGENT: Empresas Nacional de Cabotaje, Calle 31 y 22 (Terminal Maritime), Nueva Gerona, Isla de Pinos. Tel.: 2467, 3300. Telex: 054118. Cable: Mambisa – Nueva Gerona.

NUEVITAS: 21.33 N. 77.16 W. (including sub-ports of Pastelillo, Puerto Tarafa, and Bufadero): (See Plan)

The port lies on a peninsula orientated from West to East, and all port installations are located on the North of said peninsula: Tarafa on the Western extreme, Bufadero and Cement Pier at about 0.5 miles East of Tarafa, and Pastelillo at the Eastern extreme.

The city of Nuevitas is located about 4.5 km. to the S.W. of Tarafa. The city spreads widely from the shores of Guincho Bay.

Neuvitas Bay has an extension of 57 square miles, but despite its extension, owing to its geographical configuration, is fairly well sheltered and can accommodate vessels of large tonnage. Bottom of the bay is mostly hard mud, but there are areas of sand and others where it is sandy/muddy.

(a) SUB-PORT OF PASTELILLO: (See Plan)

APPROACHES: Entrance to or sailing from this port is only effected at slack water in order to avoid tidal currents.

Usually entrance or sailing from port is performed during daylight hours but incoming vessels, which have advised their ETA well in advance and draw 30 ft. or less can enter during night-time at slack water, if all the navigational signals and marks are in good order. If any lighted buoy is out of service, night entrance or sailing are not performed.

Channel bottom is rocky/sandy along most of its entire course but if crossing the channel with official draft allowed to vessels, there are no difficulties regarding draft as there is ample depth.

Limitations as to draft and length to enter to or sail from Nuevitas are as follows: Draft 33 ft., length 650 ft.

Limitations as to draft for crossing the bay interior channels are:

Entrance channel up to Botijuela Anchorage: 35 ft.
La Estrella Channel up to Pastelillo: 33 ft.
Channel between Pastelillo and Tarafa: 26 ft. 6 in.

PILOTAGE: Pilots board vessels at Punta Practicos, 1 mile from Buoy No. 1.

The following are the distances from the place where Pilot boards the vessel up to: Pastelillo: 8 miles; Bufadero: 10 miles; Tarafa: 10.75 miles.

Pilot Station is located at Nuevitas and usual means of communications with it are telephone or car.

ANCHORAGES: *La Poza Anchorage:* Located near Pt. Practicos. Geographical position: Lat. 21° 36' 46" N., Long. 77° 05' 11" W. Limitations: Draft 38 ft., length none. Swinging area: Unlimited. Can accommodate one vessel. Distance from shore: 400 m.

Botijuela Anchorage: Located S.E. of Ballenato Grande Cay. Geographical position: Lat. 21° 31' 34" N., Long. 77° 10' 39" W. Limitations: Draft 35 ft., length 650 ft. Swinging area: 400 m. Can accommodate 15 average type vessels. Distance from shore: 2 miles.

Pastelillo Anchorage: Located East of Pastelillo. Geographical Position: Lat. 21° 32' 34" N., Long. 77° 12' 38" W. Limitations: Draft 20 ft., length 500 ft. Swinging area: 200 m. Can accommodate 2 vessels. Distance from shore: 0.25 miles.

Guincho Anchorage: Located East of Pt. Guincho. Geographical Position: Lat. 21° 31' 57" N., Long. 77° 14' 00" W. Limitations: Draft 16 ft., length 250 ft. Swinging area: 100 m. Can accommodate 1 small vessel. Distance from shore: 1.25 miles.

Tarafa Anchorage: Located to the N.W. of "D" Pier. Geographical position: Lat. 21° 34' 30" N. Long. 77° 14' 45" W. Limitations: Draft 22 ft., length 525 ft. Can accommodate 1 vessel. Distance from shore: 400 m.

MAX. SIZE: Up to 575 ft. length – 33 ft. draft. Up to 610 ft. length – 31 ft. draft. Tidal variation 1 ft. 6 in.

BERTHING: *Pastelillo Pier:* North Side: Length 458 ft., width 55 ft., max. draft 33 ft.

Depths alongside from shore end to pier head: 31 – 35 – 37 – 37 – 37 – 36 – 37 ft.

Cargo handled by this side: General cargo, equipment, machinery, bagged raw and refined sugar, molasses, etc.

South Side: Length 458 ft., width 55 ft., max. draft 33 ft.

Depths alongside from shore end to pier head: 24 – 33 – 34 – 33 – 36 ft.

It is well cared for and recently underwent complete repairs, being the topping-off berth for sugar and molasses loading of the port, as well as the deep draft berth for vessels with import cargoes.

Petroleum products (fuel oil, diesel oil, gasoline and kerosene) for the use of the whole Camaguey Province, are discharged at this pier.

The pier has railroad sidings connecting with the main tracks but is not suitable for trucking operations.

STEVEDORES: Working periods: Monday to Friday, 0700–1300 hrs., 1300–1900 hrs.; Saturday, 0700–1300 hrs., 1300–1900 hrs.; Sunday, no work is performed.

Raw Sugar: loading rate: max. 1,800 bags per gang in 6 hours. Minimum fixed rate 975 bags in 4 hours or equivalent in 6 hours. 6 bags loaded per sling.

Loading Capacity: 2 sugar vessels can perform sugar loading operations simultaneously.

Refined Sugar: this type of shipment is not regularly performed.

Loading rate: 3,300 bags of 100 lb. each are loaded per gang in a 6 hour period.

General Cargo: discharging rate is about 11 to 12 t.p.h.

EQUIPMENT: The port owns and operates the following equipment: 6 fork lift trucks; 7 tractors; 3 trailers; 6 tow motors; 5 shore cranes (from 5 to 20 tons lifting capacity); 2×300 ton capacity cargo barges; 1 (1,200 h.p.) tugboat.

MEDICAL: There is a municipal hospital where sick crew members can receive attention.

TANKERS: Molasses pumping rate about 85,000 g.p.h.

FUEL: Currently the only bunkers available at Nuevitas are Regular Fuel Oil, which is the type of fuel oil stored at shore tanks.

Deliveries are effected only at Pastelillo Pier by pipe-line gravity from the deposit tanks and due to the method used, are slow.

Bunkers must be requested well in advance.

FRESH WATER: Can be supplied at No. 4 pier. Delivered by means of railroad tank cars, each with capacity of approximately 34 tons. Delivery rate about 20 t.p.h.

REPAIRS: Repair Shop "Boga" incorporated in the Industry Ministry.

COMMUNICATIONS: Vessels navigating to Cuba can communicate with Mambisa Nuevitas Agency through "CLA" Havana Radio Station which relays the message promptly to Nuevitas.

When navigating in Cuban Waters nearing Nuevitas, vessels can communicate directly with "CLK" Coastal Radio Network Nuevitas by radiotelegraphy at 500 kHz, general call, 446 kHz, for working. Radiotelephony frequency 2760 or 2182 kHz.

This Coastal Network Station rapidly relays any message to Mambisa Nuevitas Agency.

Masters must send their ETA messages simultaneously on VHF Channel 16 to Mambisa Nuevitas and Mambisa Havana.

SHIPMASTER'S REPORT: August 1985.

See "Sub-port of Tarafa".

SHIPMASTER'S REPORT: March 1989.

Charts: BA. Chart No. 3197, Bahia Nuevitas. BA. Chart No. 3865, Cuba – Eastern Sheet.

Sailing Directions: NP. 70, West Indies Pilot, Volume 1.

Officials: This was second port in Cuba, so no difficulties were expected, however after the Agent and Veterinary Inspector had boarded and sealed the meat room a squad of 14 customs officials arrived and searched the accommodation and store rooms. Bond had been sealed in Havana but was opened just in case and then resealed.

If the officials asked to see something on the Crew Effects Declaration they seemed satisfied if told that it had been put in the "transit room", so that it would appear that the safest course is to pack everything except the essentials into a suitcase and place it in the transit room.

When alongside, Customs officials carry out an inspection and require a signature on their check sheet every day.

As noted in "Guide to Port Entry", the meat room is sealed, but they seem to be fairly pragmatic about this and allow reasonable stocks to be removed each day.

Approaches: From the West, Pta. Maternillos Lt. is easily visible and there are no difficulties. Pilot was contacted at about 35 miles on VHF Channel 16 and gave clear instructions. Passage through the narrow winding channel into the bay has to be done at slack HW, although there was still some flood running as we entered. Larger heavier ships are taken through in daylight and have a tug escort (this vessel 171 m. LOA with 27 ft. draft.)

Pilot: The Pilot boards from a launch (black hull, white superstructure), 1 mile North of Buoy No. 1.

Anchorage: In a quiet area S.S.W. of Cayo Ballenato Grande, inside the bay, holding ground is good.

Tugs: There are 4 tugs available and the port regulations require 2 tugs for berthing. One seems to be on permanent water barge duties, one in dry dock in Havana, one was away on salvage duty and the remaining tug assisted with berthing and was well handled.

The tugs are registered in Malta and are on long term charter.

The regulations also require large deep draft vessels to be escorted in and out of the entrance. This can interfere with berthing schedules.

Berth: The oil berth is fairly new and is close to the old molasses berth at Puerto Pastelillo. It is well fendered and sheltered. It has lines for gasoline, gas oil, kerosene and fuel oil. A new loading arm and line for LPG is being fitted to serve 2 tanks about 2.5 km. away on the North shore of Peninsula del Guincho.

Gas oil and kerosene tanks are 50 m. above sea level and are about 1.5 km. away.

Berth Information:

Berth Operator: State Oil Company.

Density: Salt.

Distance from Pilot to Berth: 11 miles.

Bridges: None.

Restrictions: Night time berthing/unberthing permissible but passage to sea is dependent upon length of vessel and draft.

Fresh water: Available by barge.

Hoses: 4×8 in., also see "Berth" above. Max. pressure 8 kg./sq.cm.

Slop facilities: None.

Repair facilities: None.

Surveyors: None.

Shore Leave: Passports, shore passes and currency reports were needed. Launch took crew to Puerto Tarafa. No taxis or buses available at Nuevitas. Small Seamen's Club available.

Telephones: Telephone calls to Norway at 2000 hrs. GMT on a weekday took about an hour to arrange. The delay appears to be due to lack of lines between Nuevitas and Havana.

AUTHORITIES: Located at Nuevitas.

Authorities travel from Nuevitas to clear the vessels for whichever of the 3 berths they may have been assigned, i.e. Pastelillo, Tarafa or Bufadero.

Means of transportation for port authorities from Nuevitas to the loading/discharging berths is automobile or launches.

AGENT: Empresa Consignataria Mambisa, Agency Nuevitas, P.O.Box No. 350, Puerto Tarafa, Nuevitas, Prov. de Camaguey. Telephone: 2779, 2107 (office), 3109 (night). Telex: 031151. Cable: Mambisa Nuevitas.

Mambisa Nuevitas Agency also attends the port of Jucaro and sub-port of Boca Grande.

(b) SUB-PORT OF TARAFA: (See Plan)

APPROACHES: See "Pastelillo".

PILOTAGE: See "Pastelillo". Distance from place where Pilots board vessels to Tarafa is about 10.75 miles.

RESTRICTIONS: Vessels can enter or sail only during daylight and should wait for slack water.

BERTHING: *Tarafa Terminal:* This terminal consists of 3 solid concrete piers, each with railroad sidings connecting with the main tracks and also suitable for trucking operations.

It is capable of operating 7 vessels simultaneously: 6 average size vessels and 1 medium or small.

Cargo handled at Tarafa Terminal: General cargo, equipment, machinery, bagged cargoes, fresh and canned fruits, sugar, etc.

Tarafa Pier "B": North Side: Length 480 ft., width 65 ft., max. draft 19 ft.

Depths alongside from shore end to pier head: 19 – 23 – 25 – 25 – 25 – 28 ft.

South Side: Length 480 ft., width 65 ft., max. draft 19 ft.

Depths alongside from shore end to pier head: 14 – 21 – 20 – 22 – 22 – 24 – 25 ft.

Tarafa Pier "C": North Side: Length 437 ft., width 61 ft., max. draft 26 ft.

Depths alongside from shore end to pier head: 26 – 25 – 26 – 29 – 31 ft.

South Side: Length 437 ft., width 61 ft., max. draft 26 ft.

Depths alongside from shore end to pier head: 23 – 23 – 25 – 25 – 25 – 26 – 27 ft.

Tarafa Pier "D": North Side: Length 768 ft., width 65 ft., max. draft 27 ft.

Depths alongside from shore end to pier head: 28 – 29 – 31 – 32 – 33 – 34 – 33 – 34 ft.

South Side: Length 477 ft., width 65 ft., max. draft 26 ft.

Depths alongside from shore end to pier head: 19 – 27 – 29 – 29 – 30 – 30 – 29 – 28 ft.

STEVEDORES: Working periods – raw sugar, loading rate, refined sugar, general cargo, etc., same as for Pastelillo. 6 sugar vessels can operate simultaneously. No crane available.

FRESH WATER: Can be supplied at Pier "B", "C", and "D".

FUEL: No bunkers usually supplied at this terminal, but in special cases bunkers have been supplied at Pier "B".

SHIPMASTER'S REPORT: March 1980.

General Cargo: There are 3 piers for handling general cargo, all in the same place at Tarafa. All about the same length, and ships can moor both sides.

Fresh Water: Fresh water can be supplied at anchorage and at all piers by barges (about 200 tons).

Agent: The Agent "Mambisa" has an office just outside the gate (large green house) and listens on VHF Channel 12 from 0900 – 1100 hrs. and 1500 – 1700 hrs.

SHIPMASTER'S REPORT: November 1981.

Pilotage: Compulsory. 12 hours' notice required.

Restrictions: Vessel can enter and leave port during hours of darkness. Vessel can only enter and leave at slack water due to narrow entrance.

Max. Size: Length 511 ft., beam 70 ft., max. draft 24 ft.

Tugs: Available and should be used.

Radio: CLK.

VHF: Pilot on Channels 16 and 13. Port Authority on Channel 13. Agent on Channel 12.

Berthing: Location: Lat. 21° 34' N., Long. 76° 14.5' W.

Vessel berthed at Berth B. Distance from entrance to berth 12 miles. Least depth of water in channel from sea to berth 8.0 m. Max. tidal range at berth 1 m. Nature of bottom mud. Density 1025.

Facilities Available: Limited bulk handling facilities, no Ro-Ro, no floating cranes. Equipment available for handling palletised cargoes. No facilities for handling containers.

Anchorage: The anchorage is 6 miles from the berth. Vessels with draft of over 20 ft. have to anchor in channel.

Barges: Fresh water barge available.

Tankers: Tanker terminal available.

Consuls: None.

Services: The following services are available: Fresh water, fresh provisions in small quantities, laundry service, telex, bunker fuel oil, diesel oil, lubricating oil, doctor and hospital.

Agents: Nearest Agent in Havana.

SHIPMASTER'S REPORT: December 1983.

Documents: See Havana "Shipmaster's Report: December 1983".

Pilotage: Compulsory. 24 hours' notice should be given via Agent. Pilot boards at No. 1 Buoy (entrance to bay).

Distance from entrance to berth is 12 miles through a very narrow channel with sharp bends. This channel may only be transited at slack water during daylight.

Charted depth in channel was 4 fathoms but we found at least 30 ft. Tidal range 0.5 m. Currents of 2 – 4 knots are experienced 2 hours after HW or LW.

Anchorages: Available in centre of bay at Lat. 21° 31' N. Long. 77° 11.5' W.

Restrictions: See "Pilotage".

Max. Size: Max. LOA 650 ft., max. draft in channel 33 ft.

Radio: Neuvitas.

VHF: Pilot and Port Authority use Channel 16.

Tugs: At least 3 tugs available.

Berthing: Vessel berthed at Tarafa "B" Pier (Lat. 21° 34.2' N., Long. 77° 14.7' W.). This vessel (length 575 ft.) was very much the maximum size for this pier. Max. draft at East end – 19 ft. Mean tidal range at berth was 18 in.

Nuevitas has 3 piers for receiving and exporting general cargoes. The 3 piers are "B", "C", "D", with berths on North and South sides of each. Lengths of piers are said to be "B" 480 ft., "C" 437 ft. and "D" 766 ft. The South side of "B" Pier is silted up limiting the draft to about 17 ft.

We were offered "C" Berth 437 ft. which I rejected as being unsafe for this size of vessel. The Pilot and Port Officials agreed with me.

The vessel berthed North side of "B" Pier. Only 470 ft. of pier was usable as heavy boulders and mud extended from the East end of the berth consequently 110 ft. of the vessel overlapped the jetty into the stream where a current of from 1 to 2 knots can be experienced. Every use was made of bollards and horn cleats on the quay, some of which were very dubiously secured to the wharf. All available leads on the vessel were used, even so there are no means or facilities for breasting the stern in. During a heavy squall the ship was about 12 ft. off the jetty.

"D" Berth is the only suitable berth for this size of vessel. Unfortunately it is used only for receiving bulk fertiliser.

Other berths off the Port are only used for the export of sugar and cargoes moved by rail trucks.

Vessel must depart berth 2 hours prior to slack water in order to transit channel at slack water.

Bulk Cargo Facilities: "D" Pier is for discharge of bulk fertiliser; ship's gear used.

Stevedores: Available and satisfactory.

Medical: Doctor and hospital facilities available.

Fresh Water: Available.

Fuel: Limited quantities of bunker fuel, diesel and lubricating oils available.

Consuls: Nearest at Havana.

Surveyors: Salvage Surveyor available.

Airport: Local airport.

Services: Telex facilities. Limited supplies of fresh provisions, groceries and meats.

SHIPMASTER'S REPORT: February 1984.

We recently loaded a cargo of bagged sugar in Nuevitas, Cuba. Thanks to your publication, all crew had made out complete Personal Effects lists, and most of their valuables had been placed in cases and placed in the bond.

On berthing, I was presented with a set of Customs Regulations which stated what had to be placed in bond during the ship's stay in Cuba. This says (in English) Quote: "On arrival Cuban port all Masters of any ships must put under transit room that not be of personal use such as toys, guns, ammunitions, spirits, cigarettes, narcotics and kinds of pornographic pictures". No mention is made of cameras.

The day after berthing, the ship was searched by the Port Captain, who confiscated two cameras belonging to crew members, even though these had been declared. According to the Agent in Cuba, these people had no right to take these articles, and he was certain he would get them back. However, despite numerous requests and letters, they were not returned on sailing.

The above may prove of assistance to other ships.

See "Shipmaster's Comments" in "General" before first port.

SHIPMASTER'S REPORT: August 1985.

Notices: The required notices and ETA messages were sent to "Mambisa – Havana" and once the loading port was declared contact was established with "Mambisa – Nuevitas" – the local Agents, all messages were then directed through them.

Response of Havana Radio (CLA) on HF was poor, all messages had to be sent through U.S. coast stations, however, once the vessel was in MF range all traffic was directed through Havana Radio and the local station Nuevitas Radio (CLK).

Approaches: 2 hours prior to time of arrival the vessel was informed by the Pilots (on VHF) that the Pilot would board at 1130 hrs. which meant a delay of 2 hours. We went up close to the Pilot Boarding Ground to register and report the time of arrival and then went out to drift. We then sent message to Agents to tender Notice of Readiness on Master's behalf with time to be stated as 0930 hrs. (it was a Saturday).

All entrances to the bay are made when tide is slack at No. 1 Buoy, ETA to be timed accordingly. Pilots prefer to enter between Slack Water and Flood Tide. All sailings are timed for 1 hour before Slack Water, the idea is to be at No. 1 Buoy at Slack Water.

Limitations: If draft less than 30 ft. then vessel can enter and leave the port by day or night provided the above conditions are met. If draft is more than 30 ft. then the vessel can enter and leave the port at HW – Slack Tide by day only. Max. draft 33 ft. There is a strong currrent in the channel and at the neck of the bay of up to 4 – 5 knots.

Anchorages: No safe anchorage with good holding ground is available outside the bay near the entrance, so it is advisable to drift. Vessel must be well out as there is a strong set. Pilots advise that if it is necessary to anchor then the vessel can anchor in a position bearing 000° (T) × 4 cables from Pta-de-Cos Practicos, but for an hour or so only.

We understand that if a vessel has to anchor for longer periods then one can anchor on the Great Bahama Bank as shown (See "Plan"). Vessels have been known to anchor here for hatch cleaning, etc. I personally feel it is not a very good proposition. Inside the bay there are good and safe anchorages available. There is no safe anchorage off Pastelillo Pier. Off Tarafa there is an anchorage to the N.W., max. draft 22 ft., it is used only as a temporary holding ground during manoeuvres.

Pilotage: Pilots board 1 mile North of No. 1 Buoy. Pilots and tugs communicate – using walkie-talkie. If wind is more than Force 4, the Master has to issue a letter before Pilots undertake any docking/undocking operations, especially if in light draft and with high windage area.

Tugs: This port has experienced many tug breakdowns and delays. We were given to understand that on one occasion (March 1985) all docking and undocking operations were delayed for 6 days, all for the want of one tug. At some berths Pilots require 2 tugs.

For our departure from Pastelillo Pier, we were also delayed due to tug breakdown. Master had to request the Port Officials for special permission and only after overnight consultation and delay did they permit undocking with one tug, provided the Master issued a written request. This was done and the vessel undocked.

Density: We observed a dock water density of 1027 at both Tarafa and Pastelillo. This high figure is due to the fact that the area had experienced an unusually long dry season. As per the Surveyors average figure is 1023 – 1024.

Berths at sub-port of Tarafa: There are 3 piers 'B', 'C' and 'D' with berths on each side designated North and South berths.

Pier 'B' is generally used for reefer and smaller general cargo vessels.

Pier 'C' is used for sugar and general cargo.

Pier 'D' is used for fertiliser and other bulk cargoes.

Official drafts and depths are not to be relied upon as there is heavy silting at all berths mainly attributed to the bulk operations.

We berthed at Pier 'C' – South berth, starboard side to, head in, with the stern protruding well out beyond the pier. This is due to the progressive silting at the forward end. Depths at this pier were sounded and are as per plan (See "Plan"). Max. draft at Pier 'C' – South berth as per the Pilots is 24 ft. forward and 26 ft. aft. Vessel can load up to 25 ft. 03 in. max. (aft) and sail at any state of tide. If over this draft vessel must sail at HW only.

If draft exceeds 25 ft. 03 in. when transiting the Tarafa-Pastelillo Channel one tug is required to assist the vessel to round the bend at No. 41 Buoy.

Max. draft allowed in the Tarafa-Pastelillo Channel is 27 ft. at HW. For docking/undocking Pilots require 2 tugs but use only one. This is mainly due to the lack of manoeuvring space when there is a vessel at the adjacent berth.

Berths at sub-port of Pastelillo: The berths at this pier are considered the topping-up berths. Generally vessels load part cargo at Tarafa and then shift to Pastelillo.

There are 2 berths at this pier designated North and South. The North Berth is for tankers and the South Berth is for sugar loaders. Cargo to this berth is fed by rail road.

The knuckle on the Southern side has been badly damaged and has some irregular blocks of concrete and steel jutting out, necessitating extreme caution during the approach and positioning of the vessel.

We berthed at Pastelillo – South Berth, starboard side to, head in. The berthing operation can be a little tricky, especially if there is a slight wind, this is made more so by the channel which turns sharply at the head of the pier.

The official maximum draft allowed at this berth is 33 ft. Hand lead soundings showed depths in excess of 36 ft., on the off-shore side and 33 ft. on the in-shore side.

With a draft of 30 ft. a vessel can undock at any state of tide, by day or night. However, with a draft in excess of 30 ft. undocking is during the day only, with the max. draft of 33 ft. only during the daytime and at high tide.

Tidal restrictions for departure from the bay still apply, so the vessel may be required to anchor in the bay to await tidal conditions. Pilots and Port Officials require 2 tugs for all docking/undocking operations at Pastelillo.

Documents:

Crew List	9 copies	Any format.
List of Ports of Call	4 copies	Any format.
Declaration of Health	1 copy	Special format.
Vaccination List	4 copies	Any format.
Foreign Currency Declaration	4 copies	Any format.
Narcotics List	4 copies	Any format.
Firearms & Weapons List	4 copies	Any format.
Cargo/Ballast Manifest	4 copies	Any format.
Stores List, Deck, Eng., Radio, Catering	5 copies	Any format.
Provisions List	6 copies	Any format.
Bonded Stores List	6 copies	Any format.
Personal Property Declaration	2 copies	Special format.
Currency Card	1 copy	Special format.
Shore Pass	2 copies	Special format.

Vessel should make a fairly detailed declaration of ship stores with special attention to electrical, electronic equipment and new (unused) items.

Crew Personal Property Declaration has to be *very detailed* with all items listed. All new items and those not in use should be packed up in a bag and put away in a spare cabin. This spare cabin is sealed by the Customs.

Each crew member is allowed: 1 bottle of alcohol, 1 carton of cigarettes, 1 watch, 1 radio. Beer is not considered a bonded item. No cameras allowed for the crew.

The Master is permitted to keep: 5 bottles of alcohol, 5 cartons of cigarettes and 1 camera. (We had kept the Polaroid camera out of bond to use during cargo operations).

The Customs seal can be opened upon request every 5 days for a fresh issue to the crew.

Inspections: Pratique, Veterinary, Agriculture, Sanitary, Harbour Master (Ministry of Interior – Guards), Customs:

Pratique: Doctor and assistant board the vessel with the Pilot when inward bound. They clear the vessel and issue the Free Pratique chit.

Veterinary: A veterinarian from the Institute of Veterinary Medicine will inspect the holds and dunnage wood and see if spaces are fit to load sugar. Also if the wood is free of termites. He will then issue a "Fit to Load Sugar" Certificate. The Veterinary Inspector will also check the meat room to see if all the meat onboard is clean and fit for consumption. He will be looking out for the stamp of approval. Chinese sausages are not permitted. If any non-approved items are found then the meat room will be sealed and they will board every day to enable removal of rations for 24 hours. The charge for this service is CPeso 5/– per visit.

Agriculture: An Inspector from the Department of Agriculture will board the vessel to check the dry provisions and the vegetable room. They will take samples of fruit, garlic, some vegetables away for testing and they may recommend some items to be sealed up in plastic bags. It is advisable to keep dry-fish 'ikkan billis' and preserved Chinese vegetables well out of sight.

Sanitary: Inspector from the Department of Public Hygiene will check the galley, all cabin stores in the accommodation and on deck, also check the garbage drums, etc. They are mainly looking out for mosquitoes, as there was a very severe epidemic of malaria resulting in a large number of deaths. The Sanitary Inspector will board every 5 days.

Harbour Master (Ministry of Interior Guards): They can search the vessel at any time, for any reason, any number of times. They searched our vessel twice on arrival and prior to departure. The shore passes are issued by them. Everyone is expected to stand-by their cabins during the initial and final search. They appeared to be looking out for 'literature', objectionable to the government, and stowaways. This Department will issue a "Permission to Sail" Certificate.

Customs: The Customs Officials are mainly looking for U.S.$ and Cuban Pesos in excess of the declared amount. Any *news items* or any item they *feel* is in excess of personal requirement will be confiscated whether declared or not, if found in the cabin. All crew should be advised to keep only the bare minimum and all other items should be put away to be sealed. Currency Declaration cards for all crew are given by them. Customs will, prior to departure, issue a "Clearance".

Agents: Empresa Cosignataria Mambisa – Nuevitas are the local Agents with the main office in Havana. The Agents board the vessel on arrival and thereafter every day. They can be contacted on VHF (call – Mambisa) Channel 12 and 16 between 0800–1130 hrs. and 1400–2100 hrs. The office is located very close to the main gate at Tarafa. Working hours are up to 1700 hrs. However, there is an Agent on duty until 2100 hrs. All telex messages are sent through Havana. International telephone calls can be made from the Agent's office. Even with 24 hours prior notice there are delays. Agents are attentive and helpful.

Shipchandler: There is one company, arranged through the Agents. The chandler supplies fresh and dry provisions and dunnage material. The chandler claimed to have fresh vegetables, fresh fruit, meats, etc. Prices of seasonal local fruits and vegetables are very reasonable. When the order was placed they were able to supply only one or two items as all fresh vegetables and fruits were out of stock.

Medical: Arranged through the Agent. The Protocol Officer will take the crew member to the local hospital, for medical attention. Cost Cuban Pesos 20/– per consultation, transport and medication extra.

Fresh Water: Available by barge. We did not take water at this port.

Shore Leave: The crew is permitted to go ashore any time. There is no curfew in force. While at Tarafa the most convenient mode of transportation to and from town is by bus. Taxis are available but difficult to come by. From Pastelillo the crew is not allowed to go ashore, by road transport. Boat service has to be arranged. Pastelillo-Tarafa is a 40 minute ride one way, cost per round trip is C. Peso 46/–. However, if anyone is to go to the doctor then the Agent will arrange a car and boat service is not required.

General: The crew should be warned against Black Market transactions in U.S. Dollars as there are plain clothes policemen on the look-out. Crew are permitted to take U.S.$ ashore but they must be changed at a bank. Apparently the incidence of STD (sexually transmitted diseases) is quite high and the crew should be warned accordingly. There were some indications that drugs are quite freely available and in use, so one must be more vigilant as some of the crew may be tempted or misled. At the time when the vessel called the exchange rate was U.S.$ 1.00 = 0.96 Cuban Peso.

Stevedores: The regular working periods at this port are:

Monday to Friday	0630 hrs. to 1350 hrs.	1st shift.
	1420 hrs. to 2140 hrs.	2nd shift.
Saturday	0630 hrs. to 1350 hrs.	1st shift only.
Sunday and Holidays	No work.	

The above are the times of regular work. However, cargo can be worked on Saturday 2nd shift and Sunday if required. Stevedore Supervisor will enquire, as to the number of gangs vessel requires to work. Vessel must ensure that at no time to commit less than 4 workable hooks as per Charter Party. Sometimes they bring less gangs to suit the availability of cargo. Ship's crew are to rig derricks but stevedores will assist. Opening and closing hatches by ship's crew. Stevedores are fast and efficient, did not experience any problems.

The 2 areas to be wary are:

(a) Stacking of bags when the head room decreases, in the under coaming spaces.

(b) Covering up all the steel work, and the top tier with kraft paper.

At Tarafa sugar in bags is fed to the wharf by covered wagons and also on trucks.

The average weight of cargo per wagon is 57 tonnes. Usually there are 12 bags per sling and 1 sling per lift. If there is sufficient supply of cargo and wagons, one gang can average 2,400 – 3,000 bags per shift. Provided the rate is maintained, on a 4 gang/2 shift basis the total lifting per day can be in the region of 19,000 – 24,000 bags which is 1,880 tonnes – 2,300 tonnes per day.

At Pastelillo the sugar is fed to the wharf by rail wagons only. Here the normal system is 6 bags per sling and 2 slings per lift. Due to the height of the wharf and the positioning of the rail tracks the production at this pier is much greater than at Tarafa.

The above figures are on the basis of regular supply of sugar and wagons. During our stay there were times when cargo had to be stopped or slowed down and the number of gangs reduced due to non-availability of cargo. The production figures for our port stay are as follows:

	Tarafa	*Pastelillo*
Time alongside	4 days 22 hrs. 18 min.	5 days 20 hrs. 36 m.
Time workable as per port working hours after berthing (Sundays & Holidays inc. if worked)	3 days 23 hrs. 50 min. (10 shifts)	3 days 13 hrs. 14 min. (12 shifts)
Deductions from workable time		
– Rain	00 hrs. 35 min.	—
– Preparing for loading	01 hr. 30 min.	—
– Waiting for cargo	—	11 hrs. 50 min.
– Waiting for shifting/sailing	—	16 hrs. 00 min.

	Tarafa	*Pastelillo*
Time actually worked	2 days 21 hrs. 45 min.	2 days 09 hrs. 24 min.
Total cargo lifted	81,530 bags	60,167 bags
Total gangs worked	35	24
Cargo/gang/shift	2,329 bags	2,507 bags
Average cargo/day of 24 hours (basic time alongside)	1,620 tonnes/day	1,006 tonnes/day

Tally: Tally by shore personnel quite accurate and in addition independent tally by ship's staff (used deck cadets, and crew when more than 4 working gangs). Did not experience any serious discrepancy.

Vessel must instruct ship's tally cadet and shore tally clerk to compare figures at the end of each wagon or truck, and note any discrepancy before commencing the next wagon or truck. This way there is no squabbling at the end of the day when the figures are presented to the Chief Officer and there appears some large and mysterious discrepancy. Due to the presence of the ship's staff the shore tally personnel are more attentive.

Cargo Condition: The general cargo condition was satisfactory as could be judged from the appearance of the bags and by feel. Some of the bags were wet and or stained. There were also some bags which were hard when touched. All wet, stained, torn, seeping and hard bags were rejected. The rejected bags were re-loaded onto the wagons. Ship's staff on tally duty checked and rejected the bags. There is an organisation called Empressa Cubana de Control short 'Cubacontrol' Surveyors/checkers from Cubacontrol check the cargo quantity and quality. They have one representative per gang and in addition there is one person who collects samples at random. From experience gained on the voyage, we noted that this cargo is prone to heavy sweating. There is considerable amount of inherent moisture and heat in the sugar crystals/granules.

Cargo Weight: The cargo of granulated raw brown sugar in bags is fed to this port from 5 factories. In spite of standardisation there is a difference in bag weight and condition. The rail wagons are weighed, at random, before and after handling to obtain the cargo weight and thus the average bag weight. This average is used to compute the cargo quantity being loaded. The averages range from as low as 94.1 kg./bag to 101.9 kg./bag. For our shipment the general average bag weight worked out at 98.993 kg./bag. The shippers Cubazucar (local representative Marcos Allen) advised that from past experience *all* sugar ships to China have experienced a shortfall per the receivers. To safeguard their interest the shippers request a Draft Survey on Shipper's Account. The Draft Survey was carried out by Cubacontrol.

By shore tally cargo quantity worked out to 14,020.072 tonnes gross, 13,879.755 tonnes net.

By draft survey cargo quantity worked out to be 13,903.395 tonnes gross.

B/L was signed on basis of shore tally weight, gross and net. Freight basis net weight. Master had requisitioned/nominated for 14,020 tonnes of cargo. Issued Letter of Protest and Right to Claim Deadfreight.

Dunnaging Material: Laying of dunnage done by stevedore gangs, separate dunnage men employed per working hatch.

Flat dunnage wood is very difficult to obtain and when available, is very expensive. It is customary to use cardboard cartons and kraft paper. Transportation charges are unreasonably high so it is advisable to order your requirement in large amounts. However, returning is not permitted.

Flat dunnage wood at CPeso 110.2/cu.m. + 18% and transport
– None ordered

Cardboard cartons 122 cm.×61 cm.×0.35 cm. at CPeso 350 per bundle of 100 pieces
– Total used 12 bundles

Kraft paper 122 cm. wide ×100 m. per roll at CPeso 16 per roll
– Total used 107 rolls

We had 12 cu.m. of flat dunnage left over from the previous voyage, this was used in the lower holds – double dunnage, i.e. fore and aft and athwartships, this was then covered with kraft paper. Where no wooden dunnage was used cartons were placed which were then covered with kraft paper before cargo was loaded. All steel surfaces were covered with kraft paper to prevent contact with the bags. The top tier was covered with kraft paper. In the square of the hatch the top tier was covered with kraft paper and then with cardboard cartons.

Stowage Factor: The smaller holds (1 & 3) gave a stowage factor of 48 – 48.5 cu.ft./long ton whereas the larger holds had a stowage factor of 46.7 – 47.7 cu.ft./long ton. The average stowage factor for the full load worked out to be 47.5 cu.ft./long ton.

No. 3 Hold – Tween deck had some empty space – 13,457 cu.ft. (i.e. additional 284 tonnes).

No. 4 Hold – Tween deck had empty space – 3,200 cu.ft. (i.e. additional 68 tonnes) which with the stowage factor obtained gives a possible full load of 14,372 tonnes after making due allowances for bunkers, etc.

Sealing of Hatches: On completion of loading each hatch was sealed in the presence of the Ministry of Interior Guards and Customs. The sealing was carried out by Cubacontrol the locally based recognised company, in the absence of a P&I correspondent. The services of Cubacontrol for the sealing were ordered through the Agents on Owner's Account.

All hatch covers, hatchways and ventilators were closed and sealed using copper wire and snap-on seals. In all 24 seals were used. The Surveyors issued a Certificate and Plan on completion of sealing with all the seal locations and numbers.

AUTHORITIES: See "Pastelillo".

(c) SUB-PORT OF BUFADERO:

APPROACHES: See "Pastelillo".

PILOTAGE: See "Pastelillo". Distance from place where Pilots board vessels to Bufadero is 10 miles.

RESTRICTIONS: Vessels drawing over 25 ft. 3 in. should await high tide for shifting to anchorage.

For entering/sailing, vessels should wait for slack water and only during daylight.

MAX. SIZE: Max. draft with which vessels can enter/sail to/from Bufadero is officially up to 25 ft. 3 in. but actually up to 25 ft. 6 in. Length 600 ft. Tidal variation 1 ft. 6 in.

BERTHING: Pier, length 557 ft.; draft, North side, 25 ft.; draft, South side, 25 ft.

This pier is only used for molasses and fuel oil. Average pumping rate of molasses is 70,000 g.p.h. Only South side is in operation.

Cement Dock: This is a concrete coastal dock where bulk cement is shipped by means of silo-trucks. It is located West and close to Bufadero Pier. Length 275 ft., width 31 ft. Depths alongside from East to West: 14 – 16 – 18 – 16 – 16 ft.

FUEL/FRESH WATER/REPAIRS: Not available.

AUTHORITIES: See "Pastelillo".

PUERTO PADRE-Cayo Juan Claro: 21.17 N. 76.32 W. (and sub-port of Manati) **(See Plan)**

It is a safe, sheltered and ample port, situated at one of the richest and important sugar cane zones of the nation.

In the neighbourhood of the port there are 2 sugar producing colossus: Antonio Guiteras sugar mill, 8 km. away and Jesus Menendez sugar mill, distance 18 km. Both of these mills are among the biggest and most modern in Cuba.

The port itself is located on the West coast of Cayo Juan Claro and is named Puerto Carupano.

Cayo Juan Claro is connected with the mainland at its extreme Southern tip by a narrow gauge railroad and parallel to the tracks runs a road recently built.

Both the railroad and the road communicates with the city of Puerto Padre, sugar mills of Antonio Guiteras and Jesus Menendez.

Cayo Juan Claro and Cayo Puerco, divide the bay into two parts. The part located at the West is Puerto Padre bay and that at the East is known as Chaparra Bay.

APPROACHES: Funnel-shaped at entry. 2 turns, but the one to take into consideration when manoeuvring vessels over 525 ft. is "Careneoro" turn. Vessels with a length of 565 ft. have entered this port. Bottom is rocky in entrance channel and muddy in bay.

PILOTAGE: Pilots board vessels at entrance, not less than 1 mile from mouth of port. Distance from place where Pilots board vessels to pier is about 2.5 miles.

RESTRICTIONS: Vessels can enter only during daylight and must wait for slack water for entering/sailing due to current in the channel.

ANCHORAGES: *Official Anchorage:* Located at Puerto Padre Bay at following position: Lat. 21° 14' 46" N., Long. 76° 33' 34" W.

Max. length permitted 170 m.

Vessels usually anchor by 3 or 4 shackles of chain but there is enough swinging area for 8 or 9 shackles.

Draft allowed to vessels 25 ft. Anchorage bottom is mud and shells.

Quarantine Anchorage: Located East of Cayo Juan Claro at Chaparra Bay, about 2 miles from the piers.

Max. length permitted is 170 m. and depth is over the port official draft.

Vessels usually anchor by 3 or 4 shackles of chain, but there is enough swinging area for 10 shackles. Anchorage bottom is mud and shells.

MAX. SIZE: Vessels can sail with max. draft of 25 ft. up to length of 500 ft. Over 500 ft. length with draft up to 24 ft. Max. length permitted 557 ft. Tidal variation 2 ft. 3 in.

BERTHING: Pier Nos. 1 and 2 are located on the West side of Cayo Juan Claro.

Salt Mill Pier is located on the East coast of the entrance channel, just in front of Pt. Gracia, and about 1.75 miles from Pier Nos. 1 and 2.

(a) Pier No. 1 (Formerly known as Sugar Pier): It is a coastal pier built entirely of hard wood.

Two narrow gauge railroad tracks run along the length of the pier.

Loaded cars enter by the North end of pier and after discharging are taken out by the South end.

Trucks can operate at this pier, but are not used for sugar cargoes.

Length 523 ft., max. length permitted to vessels 557 ft. Width 32 ft.

Draft 27 ft. – 28 ft.

Cargo handled by this pier:

Importation: Occasionally general cargo or jute bales.

Coastal trade: Occasionally general cargo.

Water available by railroad tank-cars.

Berthing operation performed only during daylight hours.

(b) Pier No. 2 (Formerly known as Molasses and Oil Pier): It is a steel and hard wood construction 271 ft. long, of which 235 ft. corresponds to a passage 7 ft. wide along which run the pipelines and a catwalk, ending in a platform 36 ft.×36 ft.

Vessels operating at this pier, berth across it, forming a "T" shape.

Length 271 ft., max. length permitted 557 ft. Draft 26 ft. – 28 ft. Width 7 ft.

Platform 36 ft.×36 ft.

Cargo handled by this pier:

Export: Molasses.

Coastal trade: Discharge of fuel oil.

Berthing operation performed only during daylight hours.

(c) La Salina Pier: Located at the entrance channel East coast, just in front of Pt. Gracia.

It is a small coastal pier built to ship coastal trade cargo of salt.

Berthing length 44 ft. Width 22 ft. Max. length allowed 192 ft.-200 ft. Draft 12 ft.

STEVEDORES: Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

Raw sugar: loading rate max. 1,430 raw sugar bags loaded per gang period. Minimum is 650 bags. 5 bags loaded per sling. Only one vessel can operate at a time. Empty jute bags have been discharged and average discharge rate is about 45 metric tons per gang period. No crane available.

Sugar in bulk: 5 thrower machines for loading sugar in bulk.

MEDICAL: General Hospital at Puerto Padre where sick crew members can receive attention.

TANKERS: Molasses average pumping rate 50,000 g.p.h. Fuel oil, discharging rate 45,000 g.p.h. Gas oil discharging rate 35,000 g.p.h.

Puerto Padre Pier No. 2: Fuel Oil: One connection 8 in. diameter. Diesel Oil: One connection 8 in. diameter. Molasses: Two connections 8 in. diameter.

FRESH WATER: Can be supplied at No. 1 pier by pipeline. Delivery rate 17 t.p.h.

FUEL: Not available.

REPAIRS: Port has no repair shop, but in event winch damage or any other light repairs, this work can be carried out at the Sugar Mill "Central Antonio Guiteras" Repair Shop.

IMPROVEMENT OF PORT FACILITIES: At the present time new deposit tanks for petroleum products are being built to increase greatly the port storage.

Also a water reservoir and an above ground tank will be built, and in the future it will be possible to supply water by pipeline to vessels docked at Pier No. 2.

TRANSPORTATION: Distance from Cayo Juan Claro where all cargo operations are performed to Puerto Padre is 3 miles. Means of transportation between Puerto Padre and Cayo Juan Claro: motor-boat, railroad, and automobile.

From Puerto Padre to Cayo Juan Claro it takes: by motor boat 30 minutes; by automobile 5 minutes; railroad 20 minutes.

COMMUNICATIONS: Means of communications available at Puerto Padre: telephone, cable (Inalambrica), telegraph and postal service. Vessels can communicate with Puerto Padre via CLA Havana.

AUTHORITIES: Port Doctor and Custom House are located at Puerto Padre. Immigration at Chaparra. Port Captain at Cayo Juan Claro.

AGENT: Office Address: Calle 3 No. 12, Cayo Juan Claro, P.O.Box 38, Central "Antonio Guteras, Tel.: 52565 (Puerto Padre), 210-2 (office), 108-2 (night). Cable: Mambisa Puerto Padre. Telex: 024118.

Agency works VHF on Channel 16.

Postal Address: Empresa Consignataria Mambisa, Agencia Puerto Padre, Apartado No. 38, Central Antonio Guiteras, Delicias, Prov. de Oriente.

Puerto Padre Agency personnel also attends the Port of Manati.

SUB-PORT OF MANATI: 21.24 N. 76.48 W. (See Plan)

The Port of Manati lies on an arm in the sea, through the centre of which runs a narrow and deep channel, leading to the shallow bay of Sabanalamar or Manati.

This arm in the sea is about 3 miles long and 800 m. wide at the entrance mouth, between Pt. Roma and Pt. Jesus, and 700 m. at its end, when it reaches Sabanalamar Bay.

Manati is located on the West coast of the arm in the sea, at about 2.5 miles from Pt. Roma and 0.5 miles from the end of it.

The Port of Manati exports the production of sugar mill Argelia Libre formerly known as Manati.

APPROACHES: Narrow channel, very deep (minimum depth 38 ft.) Bottom is irregular, parts where it is sandy and others rocky.

PILOTAGE: Pilots board vessels about 1 mile from entrance. No Pilot Station. Pilots located at Manati and ETA notice to be given to them well in advance. Distance from place where Pilots board vessels to pier is about 3 miles.

RESTRICTIONS: Not necessary to await slack water for entry/sailing; but considering large tonnage of vessels presently entering port for topping-off, if there is a strong current Pilots wait until current loses strength in order to avoid accidents. Vessels can enter and sail only during daylight.

ANCHORAGES: Swing area 600 ft. (approx.). Owing to reduced space, this anchorage is not safe for anchoring vessels drawing over 26 ft.

MAX. SIZE: Incoming vessels draft limitations:

	Vessel length	*Max. draft*
Vessels up to	500 ft.	26 ft.
Vessels up to	525 ft.	20 ft.
Vessels up to	560 ft.	17 ft.

In some exceptional cases 560 ft. length vessels have entered this port but it is advisable to nominate this type of vessel to operate at any other suitable port because at Manati the max. advisable length allowed to vessels is 525 ft.

Tidal variation, 2 ft. 6 in.

BERTHING: Manati Pier has the shape of an "L" and projects from the West coast of the arm of sea toward the centre of it seeking the border of the deep channel.

It goes straight out and then turns Northward in a 90° angle.

The 90° angle constitutes its South end, and from there to the head of pier, or North end, it is 465 ft. long, having at this end a fixed red light.

As is clear by the above description, pier has an East and a West side, but only the East side is used because the West side does not have enough water to operate vessels.

It is a hard wood construction supported by concrete piles. Bottom alongside pier is soft (mud and sand) along three-quarters of its length from North to South except at the South end where it becomes shallow, hard and rocky, which renders worthless about 70 ft. of docking space.

Pier has double standard railroad tracks and a single narrow gauge track. It is not possible to operate trucks at this pier.

Manati Pier (Also known as La Gloria Pier): Length 465 ft. Max. length allowed 525 ft. Max. draft 30 ft. 6 in.

Tanker Information: Molasses: 2 connections 8 in. in diameter. Fuel Oil: 1 connection 8 in. in diameter.

STEVEDORES: Loading sugar: working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs., 1300–1700 hrs. When necessary, work is performed at night. Sunday is also worked when required. 1,040 sugar bags loaded per gang period; 6 sugar bags loaded per sling. Only one vessel can operate at a time. No refined sugar operations performed. No shore crane available. Sugar mill has 5 grates and 3 machines for spreading sugar in hatches.

MEDICAL: Crew members requiring medical attention are treated at Manati Polyclinic, but the majority of cases are treated at Argelia Libre Hospital, where there is also a Dental Clinic.

Cases requiring surgical or specialised treatments are sent to Lenin Hospital at Holguin.

TANKERS: Molasses pumping rate 25-30,000 g.p.h. Fuel oil pumping rate at average of 1,700 b.p.h.

FRESH WATER: Supplied by pipeline at pier. Pipe-line 2 in. in diameter and delivery at an average rate of 15 – 16 t.p.h. Amount that can be delivered depends on supply at sugar mill. Supply not to be depended upon.

FUEL: Not available.

REPAIRS: Sugar mill repair shop for minor repairs. Welder available.

COMMUNICATIONS: Long-distance telephone communication between Manati and Puerto Padre; although difficult owing to fact that there are only two lines from Manati and they are almost always congested. There are some occasions when an entire day is spent trying to obtain communication without result. Victoria de las Tunas telephone operator serves on occasions as "relay".

Vessels cannot communicate by radio with this port.

AUTHORITIES: Under Cuban Custom laws and regulations, Manati is a sub-port of Puerto Padre, therefore all Authorities are located at Puerto Padre, nevertheless vessels nominated for operations at Manati can proceed directly to the port, where authorities clear the vessels.

AGENT: Manati is attended by Mambisa Puerto Padre Agency personnel and there is no office at Manati, however, the Agent attending a vessel at Manati can be reached at Minaz office, tel. 146. At night and for urgent matters he can be reached at Manati Chief Pilot tel. 144-15.

SANTIAGO DE CUBA: 19.50 N. 75.52 W. (See Plan)

APPROACHES: The entrance, up to a distance of 0.5 mile, has a rock bottom. Thereafter, for a distance of 1 mile muddy bottom, and remaining 2.5 miles is soft mud. There are some turns, and the channel and entrance to the port are narrow.

PILOTAGE: Pilots board vessels 1 mile from mouth of port. Pilot station located in small Cay at entrance of bay known as Gramma Cay (formerly Smith Cay). Launch service is only means of communication available between Santiago de Cuba and Gramma Cay. Pilots also have office located at Custom House building with telephone communication. Distance from place where Pilots board vessels to: Piers 5 miles; Anchorage 4.5 miles; Refinery Pier 2.5 miles.

RESTRICTIONS: Vessels can enter and sail only during daylight from 0600 to 1800 hrs.

ANCHORAGES: *Inner Anchorage:* Located from the North of Ratones Cay up to the West of Buoy No. 20. Can accommodate several vessels.

Limitations to vessels: Draft 30 ft., length 702 ft.

Outer Anchorage: Located West of Pt. Gorda and just in front of refinery piers. Can accommodate 1 or 2 vessels and is used mainly by tankers. Max. draft: 36 ft. Max. length allowed 702 ft.

Also see "Shipmasters' Reports".

MAX. SIZE: Vessels with a length of 702 ft. and a draft of 36 ft. can enter up to the refinery, provided they arrive during early morning hours. Tidal variation 1 ft. 3 in.

VHF: Santiago Servicios Maritimos, Channels 16, 11 and 71.

Santiago Consignataria Mambisa (Agent), Channels 16 and 12.

Santiago Terminales Mambisa, Channels 16 and 71.

BERTHING:

Luis F. Mena Gil Dock (Formerly Malecon): This installation comprises the whole zone known as Malecon del Puerto and consists, mainly, of a docking area 1,345 ft. long, which, being able to operate three vessels, are regarded as West, Centre, and East berths, but there is no mark or boundary between any of the berths.

West of the Western berth is under construction, but already in operation, a new berth, temporarily known as Western extreme berth and, East of the Eastern berth is a berthing space for barges.

This dock is built of concrete, and was rebuilt and paved recently. As standard gauge railroad tracks run along the length of dock, operations can be performed either by railroad or trucks, or a combination of both.

The particulars of each berth are:

Western Extreme Berth: (New Berth): (Known as Malecon Extremo Oeste):

Max. length allowed: 100 m. Draft: 18 ft.

Cargo handled at this berth: General cargo, cement, etc.

Western Berth: (Known as Malecon Oeste):

Draft allowed: 24 ft. fore, 25 ft. aft.

Cargo handled at this berth: Bagged raw sugar, general cargo and occasionally lubricating oil.

Centre Berth: (Known as Malecon Centro):

Draft allowed: For Loading: 28 ft., leaving pier at high tide. Under these conditions, vessels rest in 1 ft. of almost liquid mud but this does not interfere with sailing manoeuvres.

For Docking Loaded: 27 ft. even keel. Cargo handled at this berth: bagged raw sugar, general and heavy cargoes.

Eastern Berth: (Known as Malecon Este):

Draft allowed: 23 ft. fore, 26 ft. aft.

Cargo handled at this berth: light general cargo, molasses and petroleum products.

Ferrocarril Pier: This pier out of use since 1972 but rebuilt recently. It is a concrete construction ending in a small platform but vessels do not moor directly to the dock but to 4 solid dolphins; first and last dolphins being 400 ft. apart. Vessels are also secured to belaying cleats situated on shore.

This installation is used for shipping molasses but there is a possibility that pipelines for petroleum by-products will be installed, although this has not been confirmed.

Length: 240 ft. Draft allowed: 26 ft.

Rolando Roca Pacheco Pier (Formerly La Maritima): This pier is a complete concrete construction, (both platform and pilings) rebuilding of which was finished in 1973; the installation is in very good condition in all respects, permitting truck and trailer operations alongside vessel, as well as railroad operations, because tracks cross just in front of the pier shore entrance.

North Side: Length: 650 ft. Max. length allowed: 600 ft.

Draft allowed: 25 ft. fore, 26 ft. aft.

Cargo handled at this side: General cargo.

South Side: Length: 650 ft. Max. length allowed: 600 ft.

Draft allowed: 26 ft. fore, 27 ft. aft.

Cargo handled at this side: General cargo.

Romero Pier: This pier is a concrete construction, and although in rather fair condition, needs repairs.

All cargo handled at this pier is on the basis of a trucking operation only.

It is used chiefly for coastal trade vessels but also by medium size vessels, such as refrigerated ships.

East Side: Length: 492 ft. Max. length allowed: 400 ft.

Draft allowed: 14 ft. fore, 19 ft aft.

Cargo handled at this side: general cargo, bagged cement, etc.

West Side: Length 492 ft. Max. length allowed: 400 ft.

Draft allowed: 20 ft. fore, 23 ft. aft.

Cargo handled at this side: General cargo, bagged cement, refrigerated cargo such as lard, butter, frozen fish, etc.

Frank Pais Pier (Formerly La Molinera): This installation consists of a long narrow passage, at the end of which the vessel is berthed across the installation to 4 solid dolphins. It is used for the discharge of bulk grain (wheat and maize) by mechanical means through conveyors and pipelines.

There is no limitation as to length of vessels. Draft allowed: 30 ft.

Cement Plant Pier (Known as Muelle del Cemento): This berth is a coastal pier that can accommodate one vessel.

It is used only for loading cement, either by silos/truck depending upon whether bulk or bagged cement is involved. This installation is well paved and all operations are performed by means of trucks.

As the pier is not long enough, there are solid dolphins at each end of pier, in order to berth securely vessels up to 460 ft. long.

Length: 290 ft. Max. length allowed: 460 ft.

Draft allowed: 22 ft. fore, 23 aft.

Refinery Pier: This pier is located at a small peninsula on the West coast of the bay, its orientation being from North to South and therefore its sides are West and East.

It is a solid, well cared for, concrete construction, having similar facilities at both sides.

Length: 789 ft. Max. length allowed: 702 ft.

Depth: 40 ft. Max. draft allowed: 36 ft.

STEVEDORES: Working periods: Monday to Friday 0700–1300 hrs., 1300–1900 hrs.; Saturday the same; Sunday worked only if vessel completing cargo.

Raw Sugar: Loading rate about 1,200 bags loaded per gang period; 6 bags loaded per sling. 2 vessels can load sugar simultaneously.

General Cargo – approximate discharging rates:

General cargo	7–8 tons per gang hour
Bagged cargo	15 tons per gang hour
Iron	7 tons per gang hour
Wood	3 standards
Fertilisers	15 tons per gang hour

Shore Crane – there is movable crane with boom of 75 ft. length and lifting capacity about 19 tons.

Bulk sugar – 5 thrower machines available.

EQUIPMENT: One floating crane: 35 tons lifting capacity; 10 shore cranes: ranging from 16 to 5 tons lifting capacity; 40 tractors; 21 fork lift trucks: 70 h.p.; 13 trucks.

Besides, there are several tugs ranging from 1,200 to 150 h.p., also several cargo barges and other minor port auxiliary equipment not listed.

MEDICAL: Sick crew members can be attended at Santiago Provincial Hospital.

TANKERS: Average pumping rate: Molasses 30,000 g.p.h. Fuel oil 13,000 b.p.h.

COMMUNICATIONS: Radio telegrams, radiotelephony, telegraph and telephones. R.C.A., Inalambrica. All-American, Prewi, radio and Government telegraph. Also air, railroad and bus services.

Vessels can communicate with Santiago de Cuba through CLM and RCA.

FRESH WATER: Can be supplied docked/anchored.

FUEL: Fuel oil and diesel oil available. Delivery rate about 7,000 b.p.h.

REPAIRS: Following repair shops: Joaquin Lamas, Giron.

DEVELOPMENTS: Since 1973 all port facilities admitting repair or rebuilding are included in a plan in order to improve port facilities.

Through this plan several installations have already been rebuilt and others are undergoing repairs.

This plan also includes the installation of water pipelines to all piers where possible, in order to supply the vessels while operating.

Luis F. Mena Gil Wharf will be the first to have water installation to supply vessels.

There is a plan for the dredging of the port in the very near future.

SHIPMASTER'S REPORT: April 1979.

Also see "Shipmaster's Report" from Havana dated April 1979.

Documents:

12 Crew Lists.
5 Store Lists.
5 Declarations.
5 Currency Declarations.
5 Vaccination Lists.

These were all required even though the vessel had only come from Havana. Also a large number of transit documents were issued in Havana for entry here. Bond and safe seals may be opened whilst vessel at sea.

Points of Note:

a. No anchorage, recommend drifting about 5 miles from coast.
b. See Havana Report.
c. See Havana Report.
d. Port reasonably free of pollution, but large amount of constructionin progress in harbour area.
e. No tugs appeared when we berthed.
f. At grain elevator shore gangway used.
g. No crew inspection.
h. See Havana Report.
i. See Havana Report.
j. See Havana Report.
k. Same system as Havana but shore leave from 1800 to 2200 hrs.and travel to town by launch. Also only allowed in area shown on pass. In this port fines are imposed for being late back or going outside area of pass. First time 25 peso, second time 50 peso and third time pass revoked. Only ten persons allowed ashore at any one time and a list of those going ashore must be presented to the Immigration guard before 1000 hrs. that day.
   On Saturday and Sunday 16 persons are allowed ashore till 2400 hrs. and 2300 hrs. respectively.
l. See Havana Report.
m. See Havana Report.
n. As Havana, except Channel 16.
o. See Havana Report.
p. Berthed at grain elevator. 30 ft. alongside. The discharger has2 heads and is fixed, the ship has to be warped up and down the quay. Wheat discharged at average 50 tonnes p.h. Work on a 24 hour basis.
q. All hatches again inspected.
r. As Havana, vessel was searched here 4 days after arrival. The search was carried out by the police and was very thorough. It included checks on money and goods declared and under seal. The radio room was sealed at the time.
s. See Havana Report.
t. Customs issue may be obtained every 3 days if required. I believethis applies in Havana as well.
u. In light of this vessel's experience I would advise any vesselproceeding to Cuba to carry at least one month's reserve provisions.

SHIPMASTER'S REPORT: April 1981.

VHF: Santiago Pilots and the Agents "Mambisa Santiago" are both available on VHF Channel 16 at all hours.

Restrictions: There are no restrictions as to the times for entry and departure of vessels. Pilots are available 24 hours and I believe it has been so for the last two years.

Awaiting Pilot: Owing to the large depths, bad holding ground (rocky bottom) and frequent fresh winds, it is not advisable to anchor outside the harbour entrance. This was my opinion which the local Pilots have confirmed and have definitely advised against anchoring. If there is any delay in embarking the Pilot, the vessel should keep steaming.

SHIPMASTER'S REPORT: October 1987.

Vessel called at Santiago de Cuba after call at Havana (See "Havana – Shipmaster's Report" dated October 1987).

Vessel berthed alongside "Frank Pais" Silo. Crew can only go ashore by either motor launch or bus. Both services have to be arranged by Agent. No walking in the premises of the silo is allowed which is guarded by army units. There are no restrictions regarding the times crew can go ashore.

Fire/Boat Drills: Port Authorities did not allow us to carry out routine drills.

Berth "under construction" at Pta. Duany: This berth is now fully operational for refrigerated cargoes. No drafts were available, however I understand extensive dredging was done on both sides of the pier for berthing/turning.

Presently there is a shortage of water both at Havana and Santiago due to very prolonged dry years (last 5 years). No fresh provisions were available at both ports except limited amounts of pineapples.

AUTHORITIES: Located at Custom House building.

AGENT: Empresa Consignataria Mambisa, Agencia Santiago de Cuba, Avenida Jesus Menendez No. 658, Apartado No. 522, Santiago de Cuba, Prov. de Oriente. Tel: 22834 – Night: 4524. Telex: 061120, 061238. Cable: Mambisa Santiago de Cuba.

Agency VHF works on Channel 16.

TANAMO: 20.44 N. 75.20 W. (See Plan)

LOCATION: Tanamo Bay is moderately ample, landlocked, having numerous cays dispersed within. High ground surrounds the bay, except by the East and S.E. It is 3.5 miles long by 1.25 miles wide.

Tanamo is mainly a sugar shipping port, but also exports molasses and receives coastal trade shipments of fuel oil.

Tanamo exports the production of Frank Pais sugar mill, formerly Tanamo. At about 12 km. from the port are the town of Cayo Mambi and Frank Pais sugar mill.

PILOTAGE: Pilots board the vessel at about 1 mile off the port entrance. From this place to Punta Corda Pier, where vessels operate, there is a distance of 5 miles and to Cay Mambi Pier, 7 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Entrance to port is effected through a channel in the form of an "S" with turns up to 90°.

The bottom is rock and sand, its maximum width being 175 m., located between the shoals at both sides of the entrance, and its minimum width 160 m., located in the vicinity of Pt. Gitana.

Channel tends to narrow in the middle of its course and it is here where precautions should be exerted, because it is considered dangerous. In its deepest part the channel is 49 m. deep, and its minimum depth is 20.12 m.

Limitations as to length and draft of vessels to enter to or sail from this port are those imposed by the place of operation.

ANCHORAGES: Del Medio Cay Anchorage:

Located at about 500 m. West of Bruja Cay.
Draft 8.53 m., max. length allowed 163 m.
Swinging area: About 350 m.
Soft mud bottom but anchors hold well.
It is sheltered from the winds, except those from the S.E.
In the rainy season, when rivers overflow, currents can be felt.

RESTRICTIONS: Due to the strong tidal currents it is necessary to wait for slack water, to enter to or sail from this port, which can be effected only in daylight.

MAX. SIZE: Max. size for entering/leaving Tamano: LOA 180 m., draft 10.67 m.

Max. size at Punta Gorda Pier: "See Berthing".

TUGS: Vessels over 157 m. require tug assistance.

BERTHING: *Punta Gorda Pier:*

North side:
(a) Max. draft: Base 4.17 m.
Head 6.10 m.
(b) Max. length: 157 m.
South side:
(a) Max. draft: Base 5.79 m.
Head 6.71 m.
(b) Max. length: 157 m.

Operational Capacity: There is berthing space for two vessels, but due to lack of port personnel, it is advisable to operate only one vessel at a time.

Cargoes handled at the Port:

Exports: Bagged raw sugar, refined sugar and molasses.
Imports: None at the present time.
Coastal Trade: Discharge of fuel oil.

STEVEDORES: Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.; Sunday no work performed.

Raw sugar: 975 sugar bags loaded per gang period. 6 sugar bags loaded per sling.

Refined sugar: 1,875 bags of 100 lb., loaded per gang period. 12 bags of 100-lb. type loaded per sling.

General Cargo: Working periods same as for sugar.

MEDICAL: Crew members requiring medical care are treated at Cayo Mambi. If specialised treatment or hospitalisation is required, patients are sent to Mayari Hospital or Lenin Hospital at Holguin.

TANKERS: Molasses average pumping rate: 20,000 g.p.h. Fuel oil average pumping rate: 11,750 b.p.h.

Tanker vessels up to 163.07 m. can enter and operate at pier.
Fuel oil: 1 connection 12 in. in diameter.
Molasses: 1 connection 8 in. in diameter.

COMMUNICATIONS: Only means of communication at Tanamo is telephone service. However this service is not to be depended upon and it is advisable to notify Antilla Agency well in advance of any instructions or changes pertaining to vessel's operations.

TRANSPORTATION: Transportation means to and from Tanamo are rather poor. Transportation between Tanamo and Antilla (and other nearby ports) is performed by car.

Last 4 km. of road to reach Tanamo are embankment roads in very bad condition which can be transited only by jeep or truck.

There is a rail car service up to Cayo Mambi.

Best advisable means of travelling is to travel to Nicaro by road and from there fly to Santiago or Havana.

FRESH WATER: Can be supplied at Punta Gorda, delivery by pipeline by gravity.

FUEL/REPAIRS: Not available.

AUTHORITIES: Under Cuban Customs laws and regulations, Tanamo is a sub-port of Antilla. Some of the Authorities have delegations at Cayo Mambi, others are located outside of Tanamo, but if ETA message is given sufficiently in advance, all Authorities travel to Tanamo, where they wait to clear the vessel.

AGENT: Tanamo is attended by Antilla Agency personnel.

VITA (sub-port of Gibara – Oriente Province): 21.05 N. 75.57 W. (See Plan)

LOCATION: Vita is a small, sheltered, landlocked bay on the North coast of Oriente province.

Vessels within its premises are well protected against all kinds of weather.

This port handles the export of the production of Rafael Freyre sugar mill, formerly Santa Lucia. As it is close to the town of Santa Lucia and due to the former name of the sugar mill, this port is also known as Santa Lucia, Oriente.

APPROACHES: The entrance channel is narrow, with some turns which become risky due to the narrowness of the channel, and precautions must be taken for the crossing of all its course.

While approaching Vita, on the East side of port entrance, Pt. Barlovento lighthouse can be seen, located: Lat. 21° 06' 01.1" N., Long. 75° 57' 39.4" W., 13.72 m. high, above high tide, white light which flashes twice every 6 secs., visible up to 10 miles away.

PILOTAGE: Pilots board vessels 3 miles from entrance channel. Distance from place where Pilots board vessels to dock is 5 miles.

ANCHORAGES: Vita anchorage is located at about 190 m. from the pier, but as there is insufficient swinging area, it is only recommended as suitable for medium sized vessels.

RESTRICTIONS: Entry and sailing only during daylight.

MAX. SIZE: Max. draft with which vessels can enter/sail is 7.92 m. Tidal variation averages 2.9 ft. Max. length 150 m.

BERTHING: The pier is located at a village named Vita on a peninsula which projects from the South shore of Vita Bay.

The pier lies across the end of the mentioned peninsula, orientated from East to West; the berthing space is the North side since the South side is partially attached to shore.

Along the length of the pier and connected to Rafael Freyre sugar mill, runs single narrow gauge railroad tracks.

Vita Pier: (North side): Length 300 ft. Max. length allowed: 150 m. Draft allowed: 7.92 m.

Imports: Jute bales, bagged fertilisers.
Exports: Bagged raw sugar, molasses.
Coastal Trade: Discharge of fuel oil.
Only 1 vessel can be operated.

South side of pier is for small craft. All cargo handling takes place directly ship/truck as there is no warehouse in port.

STEVEDORES: Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.

800–1,100 sugar bags loaded per gang period. Four sugar bags are loaded per sling.

MEDICAL: Crew members requiring medical attention are treated at Santa Lucia Hospital or Lenin Hospital at Holguin.

TANKERS: Average pumping rate (molasses) 25,000 g.p.h.

COMMUNICATIONS: Means of communication of Vita are telephone and telegraph.

Vessels navigating to Cuba can communicate with Antilla Agency through "CLA" Havana Radio Station which relays the message promptly to Antilla.

Once vessels have arrived in front of the port, they can communicate with the port by means of VHF.

Masters must send their ETA messages simultaneously to Mambisa Antilla and Mambisa Habana.

FRESH WATER: Can only be supplied in exceptional cases and in limited quantities by tanker truck of 4.5 tons capacity.

FUEL/REPAIRS/DUNNAGE: Not available.

TRANSPORTATION: There is no transportation difficulty since the port is connected with the highway for travelling to any place.

At distance of 16 km., there is a beautiful tourist beach where crew members can go, once proper arrangements have been accomplished.

AUTHORITIES: All Port Authorities are located at nearby towns, but travel to Vita in order to clear vessels.

Under Cuban Custom laws and regulations, Vita is a sub-port of Gibara.

AGENT: The port of Vita is temporarily attended by Mambisa Antilla Agency personnel.

Cyprus

AKROTIRI: 34.34 N. 33.02 E. (See Plan)

SHIPMASTER'S REPORT: January 1994.

CHART: B.A. Chart No. 849 – Ports in Western Cyprus.
DOCUMENTS: Vessels are to proceed to the anchorage 1.5 miles off the old port at Limassol for clearance by Cypriot authorities.

The following documents are required:
6 copies Crew List.
1 copy Crew Declaration.
2 copies Bonded Stores List.
1 copy Cargo Manifest.

PILOTAGE: On completion of formalities, vessel proceeded to Akrotiri with Limassol Pilot on board.
VHF: Pilot on Channel 10.
BERTHING: Vessel approached the mooring from North. A boatman in a mooring boat drops a rubber balloon into the water to indicate exact position for dropping of port anchor. A tug will assist by pushing on the port side. When in moored position, vessel has 6-8 shackles out on port anchor, headline to buoy on starboard bow and lines to 3 mooring buoys aft.
CARGO OPERATIONS: Cargo to be discharged was 8,000 cu.m. of Jet A1 for the R.A.F. at the Sovereign Base Area at Akrotiri.

Cargo was discharged through 2×8 in. sealines at 800 – 850 cu.m./hr. at 100 p.s.i.

6 – 8 R.A.F. personnel assist with sampling and hose connection. Three mooring boatmen remain on board to assist with vessel's requirements.

DEPARTURE: Vessel left berth without Pilot and tug.

Mooring launch in attendance to let go lines.

A Customs officer from Akrotiri comes on board to check seal on bonded store.

AUTHORITY: The Commander, R.A.F. Akrotiri, Sovereign Base Areas (Cyprus), Akrotiri, Cyprus.

DHEKELIA "B": 34.58 N. 33.45 E. (See Plan)

Sovereign Base Area
DOCUMENTS:
3 Crew Lists.
4 Passenger Lists.
1 Arrival Declaration.
1 Crew Declaration.
1 Store List (for cigarettes, spirits, etc.).
2 Manifests (Customs forms).

PILOTAGE: Compulsory for berthing. The tanker berth is situated in open roadstead. Pilot available through Harbour Master at Larnaca (5 miles).
RESTRICTIONS: Vessels may dock in daylight only.
MAX. SIZE: Tankers up to 735 ft. length with max. draft 41 ft.
HEALTH: Pratique granted by Health Authorities after boarding on arrival. No Pratique necessary when vessel arrives from another port in Cyprus.
RADIO: Walkie-talkie.
TUGS: Available and necessary for docking. Not required for undocking.
BERTHING: Three conventional buoy moorings for tanker discharging fuel oil to Dhekelia "B" Power Station. Connection made amidships on the port side. No slop facilities available. Terminal crew connect and disconnect hoses. Ship's gangway required. Diameter of line 12 in. Distance to tanks 2,136 ft. Max. pressure 140-145 p.s.i. Depth of water 15.85 m.
MEDICAL: Necessary for Agent to receive advance notice of medical attention required. Hospital facilities available.
DENSITY: 1025.
FRESH WATER: Not available.
FUEL: Not available.
REPAIRS: Light machine shop.
CUSTOMS ALLOWANCES: See "Limassol".
TIME: GMT plus 2 hours. GMT plus 3 hours from last Sunday in March until last Sunday in September.
IDENTIFICATION CARDS: When on shore leave, Seamen's Books required.
AUTHORITY: Electricity Authority of Cyprus, 15 Photis Pittas Street, P.O. Box 4506, Nicosia. *Tel:* (02) 462001. *Telex:* 2432 Grid Cy. *Cables:* Grid, Nicosia. *FAX:* (02) 457658. *Contact:* The General Manager.

FAMAGUSTA: 35.07 N. 33.57 E. (See Plan)

DOCUMENTS:
1 Arrival Declaration Form.
1 Maritime Declaration of Health.
4 Crew Lists.
4 Passenger Lists.
1 List of Ship's Stores.
1 Personal Declaration of Crew (wines, spirits, tobacco, cigarettes, cigars, jewellery, cameras, watches, arms and ammunition, etc.)
1 Appointment of Agent Form.
1 Cargo Manifest (If not forwarded by airmail).
1 Dangerous Cargo List.

PILOTAGE: Masters to cable ETA 24 hours before arrival to Agents so as to enable them to arrange berthing and pilotage. Pilotage is compulsory for ships in excess of 300 g.r.t.

In normal weather conditions Pilot boards vessel at Turning Buoy or at anchorage. In rough weather conditions, Pilot may advise Master to proceed to entrance of Outer Harbour, where Pilot will board the vessel. Communications between Pilot Stations and vessels approaching port and/or anchored at roadstead by VHF Channel 16.

Pilot Boat: Open motor launches, light grey colour, flying Pilot's flag, light and sound signals for Pilot.

Requirements: International signals apply.

ANCHORAGES: Vessels not berthing on arrival, to anchor at roadstead; East of flashing buoy (Lat. 35° 08′ 55″ N., Long. 33° 56′ 06″ E.) which marks the entrance to the channel.

Exposed to: N.E., E. and S.E. winds. In case of very bad weather, a safe anchorage to be sought further North, near Boghaz area.

Small vessels may anchor within the breakwater in depth of 5.5 m. to 7.3 m.

RESTRICTIONS: Passenger vessels (Vessels built to carry more than 12 passengers) allowed to enter port up to 2300 hrs., provided such vessels will be at Turning Buoy by that time and also if berth space is available.

Cargo vessels allowed to berth until sunset provided berth space is available.

No tide restrictions, but for vessels entering Inner Basin max. draft 22 ft. and for Outer Basin max. draft 30 ft.

MAX. SIZE:

Inner Harbour:	Max. permissible draft 6.7 m. (22 ft.) Max. permissible LOA 131 m. (430 ft.)
Outer Harbour:	Max. permissible draft 9.15 m. (30 ft.) Max. permissible LOA 220 m. (722 ft.)

Height of quay above sea level is 1.8 m.

The approach channel to the Outer Harbour is 10.30 m. deep and mean width of entrance 183 m. Range of tide: 0.45 m.

HEALTH: Pratique is required only at first port of call in Northern Cyprus. Pratique is granted either before or after berthing as appropriate.
RADIO/VHF: "Northern Cyprus Radio" R/T 2182, VHF Channel 16. Famagusta Pilots equipped with VHF radio-telephone operating on Channel 16 and 14 during office hours.
TUGS: 3 tugs, 150 h.p., 650 h.p. and 1,300 h.p. available. Ship's lines are used. Tugs join vessel at entrance of Outer Basin and ship's lines are used. Use of tugs is at the discretion of Pilot. No charges made for the use of first tug. If more than one tug is required they may be hired on hourly basis.
BERTHING: According to rotation of ships with exception of passenger and citrus ships. Vessels may berth alongside between 0600 hrs. and sunset, unberthing of ships between 0600 hrs. and midnight including weekends and official holidays.

Inner Harbour Quay: Length: 540 m.
Outer Harbour Quay: Length: 655 m.

Ro-Ro vessels may berth either bows on or stern to the quay.

CRANES: A floating crane lifting 60 tons at 20 m. 1 Tower crane 36 tons. 21 mobile cranes of different lifting capacities.
BULK CARGO FACILITIES: Vessels up to 3,000 d.w.t. discharged with mobile grab cranes.

Average discharge rate for ore and bulk cargoes is 450 tonnes per day.

Two pneumatic conveyors of 60 t.p.h. capacity also available.

STEVEDORES: Gangs to be ordered by 1500 hrs. previous day. For Saturday and Sunday work, gangs to be ordered by 1500 hrs. Friday. It is also possible to apply for gangs during the weekdays a.m. and/or p.m. subject to gangs available.

Average rate of discharge: General cargo, 10 – 15 tons, bagged cargo, 15 – 20 t.p.h. per gang.

Working hours weekdays 0800 – 1200 hrs., 1300 – 1700 hrs., overtime work until 2300 hrs. is possible, but with extra charge.

MEDICAL: Advisable for Masters to include in ETA message to Agents if any medical attention required; hospital and private clinic facilities available. Inoculations or vaccinations according to prevailing circumstances.
DENSITY/TIDE: Mediterranean salt sea water. Difference of 1 ft. – 2 ft. between low and high water.
FRESH WATER: Water hydrants installed alongside quay, both at Inner and Outer Basins and delivery through hoses; rate of delivery 10 tonnes – 15 tonnes per hydrant per hour.

Note: Certain limitations to quantities deliverable can be possible during Summer months (June-September) owing to general shortage of water.

FUEL: No bunkering facilities alongside quay. Limited fuel deliveries to vessels alongside quay can be made by lorry tankers of 8 – 10 tons each.
REPAIRS: Repairs possible at the shipyard. Divers available.
DRY DOCKS: No dry docks. 2 slipways operate at South end of port, and can take vessels up to 1,000 tons light displacement and LOA up to 80 m.

SURVEYORS:
(1) Cargo surveyors available.
(2) Refet L. Egemen & Co., Nicosia. Sub-Agent of Catoni Agents, Mersin, Turkey, who are the representative of Lloyd's in Mersin, Turkey (for insurance purposes but not for classification).

GANGWAY/DECK WATCHMEN: Not obligatory, but may be used if Master requires.

OPENING/CLOSING HATCHES: Carried out by ship's crew; stevedores on board are sometimes willing to assist but they are not obliged to do so.

CUSTOMS ALLOWANCES: 200 cigarettes or 250 grams tobacco, and 0.75 cl. spirits, 0.75 cl. wine per man per week.

For reasons of administrative convenience, issues of high duty goods for use by crew on board is being made every week.

The Master, Chief Officer and the Chief Steward of ocean going vessels may be granted more quantities of the above high duty goods as may be considered reasonable by Customs Authorities, on request.

The above allowances are in force in all Northern Cyprus ports.

CARGO GEAR: Mostly supplied by shore stevedores or other contractors against payment. Any gear supplied by the vessel should be certified to the effect that it is tested and found to be suitable for the purpose used.

AIRPORT: Ercan Airport, 30 miles from Famagusta. Connections to U.K. and Middle East countries via Turkish airports.

TIME: GMT plus 2 hours.

HOLIDAYS: Recurrent official port and Customs holidays:

First weekday of January, 23rd April, 1st May, 19th May, 20th July, 1st August, 30th August, 29th October, 15th November, Ramazan Bairam (1st, 2nd and 3rd days), Kourban Bairam (1st, 2nd, 3rd and 4th days), Birthday of Prophet.

All ports closed for work with the exception of shipping traffic on New Year's Day and on 1st May.

POLICE/AMBULANCE/FIRE: Police Headquarters Tel: 036-65310, 036-65321. Ambulance Tel: 036-65328, 036-62876. Fire Brigade Tel: 036-65389.

EMERGENCY CO-ORDINATION CENTRE: Not specially available, but Famagusta Pilot Station Tel: 036-65388, 036-64790 and/or Port Headquarters Tel: 036-62626, 036-62627, 036-62951 may be of assistance.

TELEPHONES: Public telephone boxes available on the quayside.

SERVICES: Compass adjusting; radar repairs; scraping and painting ship's sides.

BANKS: Messrs., Midland Bank (Overseas Branch) Ltd., in the U.K. is the official correspondent of the following local Banks:

Name	*Address*	*Telex:*
Turkish Bank Ltd.	Famagusta	57138 Trba Tk 57103 Otaf Tk
Is Bank (A.S.)	Famagusta	57179 Isbm Tk
Credit Bank Ltd.	Famagusta	57246 Kklb Tk

STORING: See "Prelims".
1. Vessel can be stored by barge or truck.
2. No regulations concerning barge storing. Customs Stores Regulations applicable.
3. Trucks can proceed alongside at the berth from a close distance of 2 ft. from the edge of the quay walls.
4. Fork lift trucks can be used on the jetty to handle storing.
5. Customs storage charges in force.
6. Local Riggers can be employed to assist with storing.
